

Changes for the Better

Mitsubishi Graphic Operation Terminal

Graphic Operation Terminal
900
series

GOT-A900 SERIES

*What extends from here is
the field called the future*

GOT-F900
series

Mitsubishi Electric Corporation Nagoya Works is a factory certified for ISO14001 (standards for environmental management systems) and ISO9001 (standards for quality assurance management systems)

What extends from here is the field called the future

From machine to factory - from factory to Global Web.

In the Information Technology (IT) age, the fields surrounding the Human Machine Interface (HMI) have unlimited possibilities. What is really demanded of the HMI at each site?

Increased efficiency of design time by "comfortable development environment", operation to maintenance of various devices by "Factory Automation integration", operation between fields beyond the space and time by "IT utilization", —

Mitsubishi's HMI, the GOT, that implements such future has gone through new evolution.

With the GOT900 series, we extend your fields to the future.

Graphic Operation Terminal 900 series

Advanced multimedia functions in a slim body

HMI software for personal computer
GT SoftGOT2 P.16

MELSOFT is a general name of Mitsubishi's integrated FA software that plays an important role in all processes of design, operation and maintenance. The MELSOFT products include the GT series that supports design work from GOT drawing to debugging and the GX series for PLC programming.

New drawing software

MELSOFT MITSUBISHI TOTAL FA SOLUTION

GT Designer2

Integrated screen development software

NEW

Reduction in screen drawing time by **half**

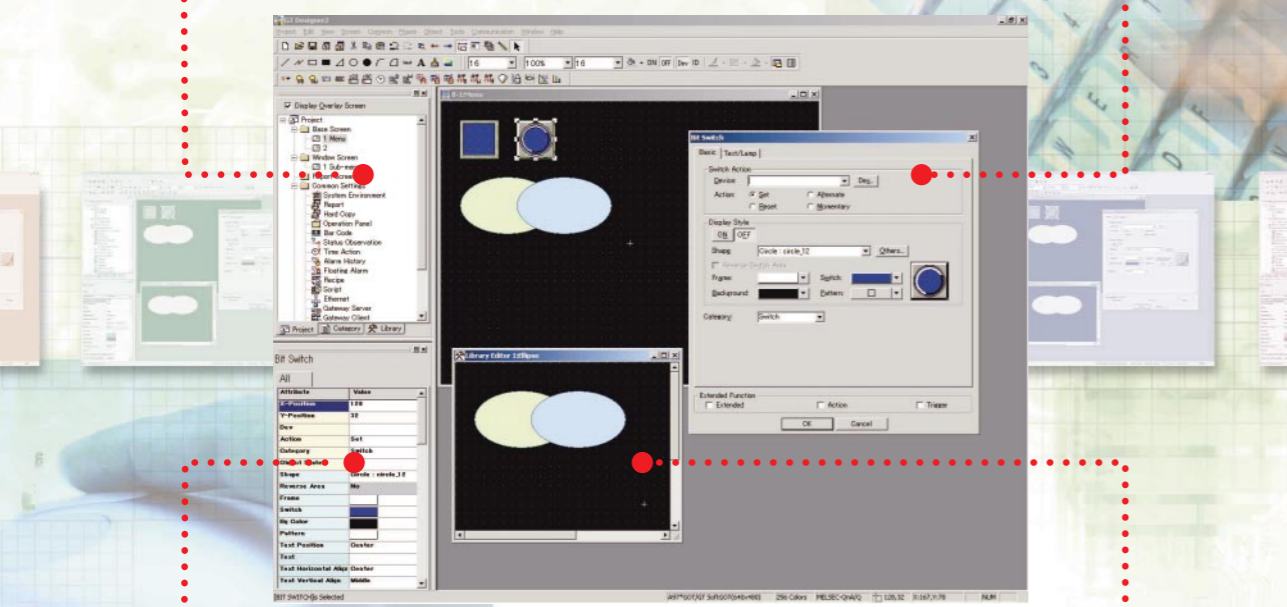

- ### Features
1. Reduction in screen drawing time by **half**
 2. Windows® standard operability and menu configuration
 3. Data compatibility with GT Designer

WORK SPACE

- The entire screen's configuration can be viewed in tree format, and the screens can be added, deleted, copied and moved.
- A project unit, category unit or library unit can be selected by changing the tabs.

DIALOG BOX

- This screen is used to set object or figures' display attributes.
- This screen opens when the object or figures are double-clicked on.
- Each setting item can be customized.

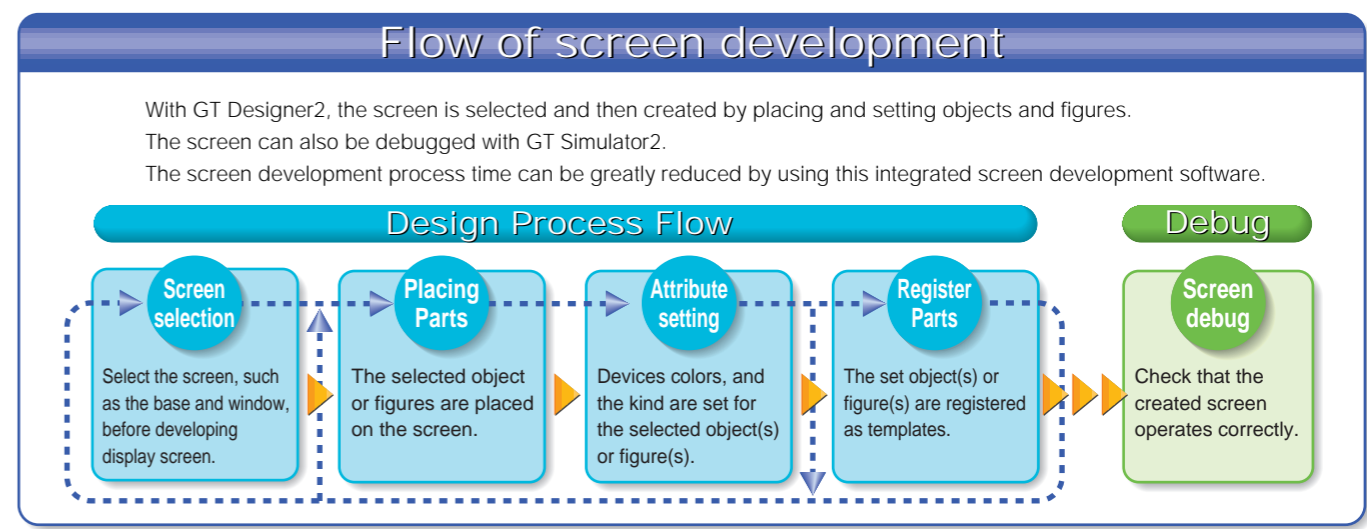

PROPERTY SHEET

- Attribute setting for the selected object or figures are displayed.
- Various settings can be modified on the property sheet.

LIBRARY EDITOR

- This screen is used to edit template.
- The user-created library can be reedited easily.

Screen development process	Function name	Features
Screen selection	Project Workspace	Easy to select required editing screen <ul style="list-style-type: none"> It's easy to see the entire project so the screen to be edited can be selected right away. System settings can also be changed right away with common settings.
Placing Parts	Library Workspace	Easy to select, quick to place <ul style="list-style-type: none"> The entire project can be seen easily and the required figures or object can be selected quickly.
Attribute setting	Property Sheet	Fast setting without opening dialog boxes <ul style="list-style-type: none"> Figure and object attributes can be set without opening the object setting screen.
	Property Sheet	Set similar objects attributes together <ul style="list-style-type: none"> Similar objects can be selected, and the color and font size can be set in one go.
Register Parts	Category Workspace	Batch change of parts arranged on multiple screens <ul style="list-style-type: none"> Devices/colors/graphics can be batch-changed for each screen or category (where objects and graphics are grouped by purposes).
	View Change directly	Direct color change reduces setting mistakes <ul style="list-style-type: none"> Settings can be confirmed on the property sheet or dialog. Result of setting change is displayed instantly.
Screen debug	Library Editor	Modifying parts is easier! <ul style="list-style-type: none"> Editing a part couldn't be more simpler, just double-click on part to enter the library editor. Part contents are automatically updated after editing is completed.
	Simulation Debugging ^{*2}	Debugging on the personal computer <ul style="list-style-type: none"> GOT screens can be simulated on the personal computer and debugged. The PLC program and GOT screens can be debugged simultaneously.

*1: Refer to Operating Environment on page 30 and List of Products on page 59 for GT Designer2 and GT Simulator2.
 *2: GT Simulator2 and GX Simulator are required for simulation debugging.
 *3: Applicable for the Mitsubishi PLC and Mitsubishi motion controller only.

Special report 2

FA integrated functions

Integrate FA products information with the GOT

Fully compatible with PLC

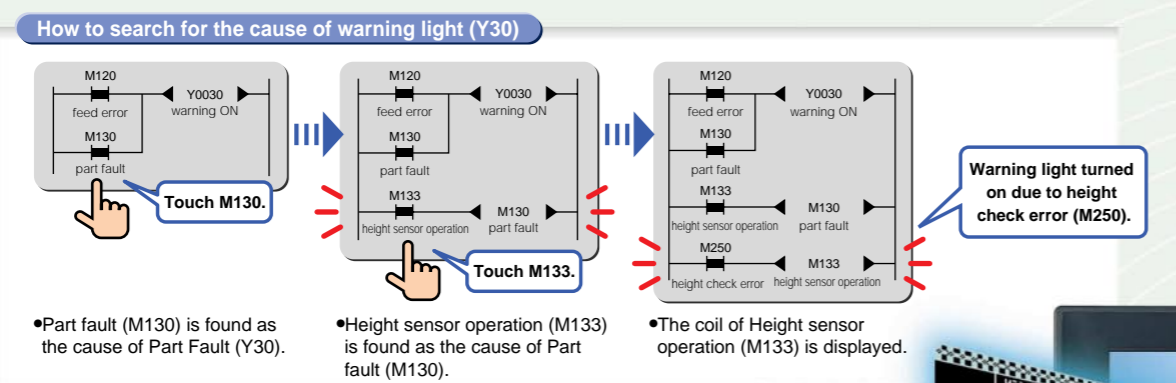

Support servo amplifier

Fast cause search with GOT in an event of machinery malfunction

MELSEC-Q ladder monitor - Touch search function **NEW**

Touch search function is added to the MELSEC-Q ladder monitor function!!
The GOT identifies a cause of error quickly and with accuracy.

What is touch search?
By touching coils on the ladder monitor, corresponding contacts are found quickly. The touch search realizes quick cause search just tracing back from coils to contacts.

Components

[Hardware]	[Software]
A985GOT(-V), A97GOT, A960GOT, A956WGOT	GT Works2
Memory board(A9GT-QFNB(□M))	GT Designer2
Various communication units/boards	

*1: Either one of the above software programs is required.

Ladder monitor function **NEW**

PLC CPU programs can be monitored in ladder format.

Applicable GOT: A985(-V)/A975/A970/A960/A956WGOT^{*2}
Connected to: Mitsubishi PLC^{*20}
^{*2}: A956WGOT is compatible with Q series only. **P.36**
Refer to "Ladder monitor function".

List program edit function **NEW**

Program changes can be made in instruction list format.

Applicable GOT: GOT A900 series^{*3}
Connected to: Mitsubishi PLC^{*4,20}
^{*2}: Only M3 type is available for A95GOT
^{*4}: MELSEC-A series only **P.37**
Refer to "List edit".

Network monitor function **NEW**

The network status of MELSECNET/10, (II) or /B can be monitored.

Applicable GOT: GOT A900 series^{*5}
Connected to: Mitsubishi PLC^{*6,20}
^{*5}: Only M3 type is available for A95GOT
^{*6}: MELSEC-Q/QnA series only **P.37**
Refer to "Network monitor function".

System monitor function **NEW**

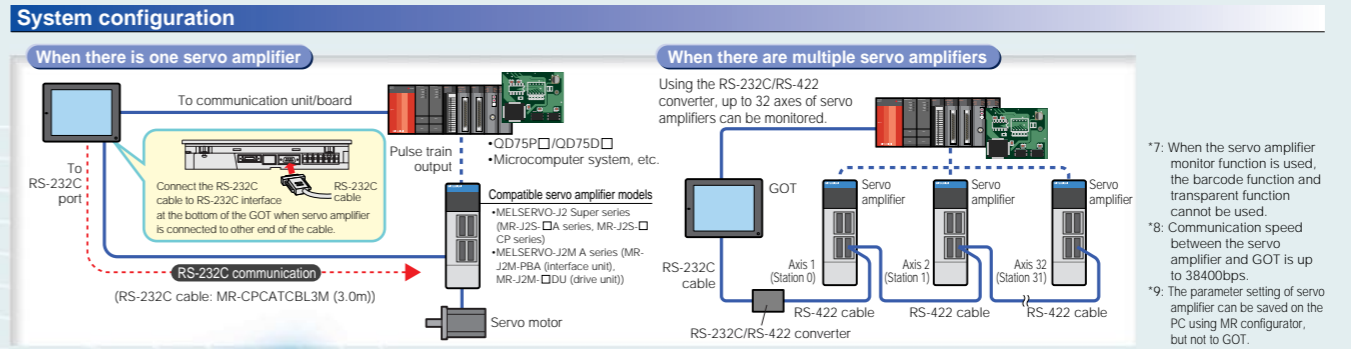

The devices of the PLC CPU and the buffer memory of the special function module can be monitored/changed.

Applicable GOT: GOT A900 series
Connected to: Mitsubishi PLC^{*20} **P.36**
Refer to "System monitor function".

Pulse train output

Setting a servo amplifier using the GOT! Servo amplifier monitor function **NEW**

By connecting the GOT to the servo amplifier, the parameters can be set and an error history can be browsed/diagnosed. The servo amplifiers can be monitored and set from GOT without using any programming software.

*13: The following functions are not available.

System setting	Automatic operation	Parameter setting	ParaTuning / change list display / device setting
Monitor	High speed display / multi-station display / graph	Test operation	Programmed operation / 1-step feed
Alarm	Alarm occurrence	Point data	Point table
Diagnosis	Unrotated reason / power-on cumulative display / tuning data display / VC automatic offset display / axis name setting	Advanced function	Machine analyzer / gain search / machine simulation

SSCNET

Monitoring servo amplifier and parameter setting of Q series motion controller Motion monitor function **NEW** **P.37**

Monitoring servo amplifier and parameter setting of the Q series motion controller (Q172CPU(N), Q173CPU(N)^{*17}) can be performed on the GOT screens.

Components

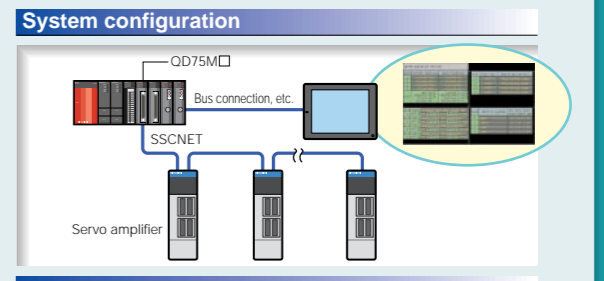

[Hardware]
A985GOT(-V), A97GOT, A960GOT, A956WGOT
Memory board(A9GT-QFNB(□M))
Various communication units/boards

[Software]
GT Works2
GT Designer2

*14: Only M3 type is available for A95GOT.
*15: Either one of the above software programs is required.
*16: Refer to pages from 59 to 61 for the names and the connection cables.
*17: Refer to page 56 for restriction on the CPU models.

Monitoring/changing buffer memory data of QD75M Special module monitor function **NEW** **P.37**

The QD75M buffer memory can be monitored and changed on the GOT dedicated screen.

Components

[Hardware]
A985GOT(-V), A97GOT, A960GOT
Memory board(A9GT-QFNB(□M))
Various communication units/boards

[Software]
GT Works2
GT Designer2

*18: Either one of the above software programs is required.
*19: Refer to pages from 59 to 61 for the names and the connection cables.

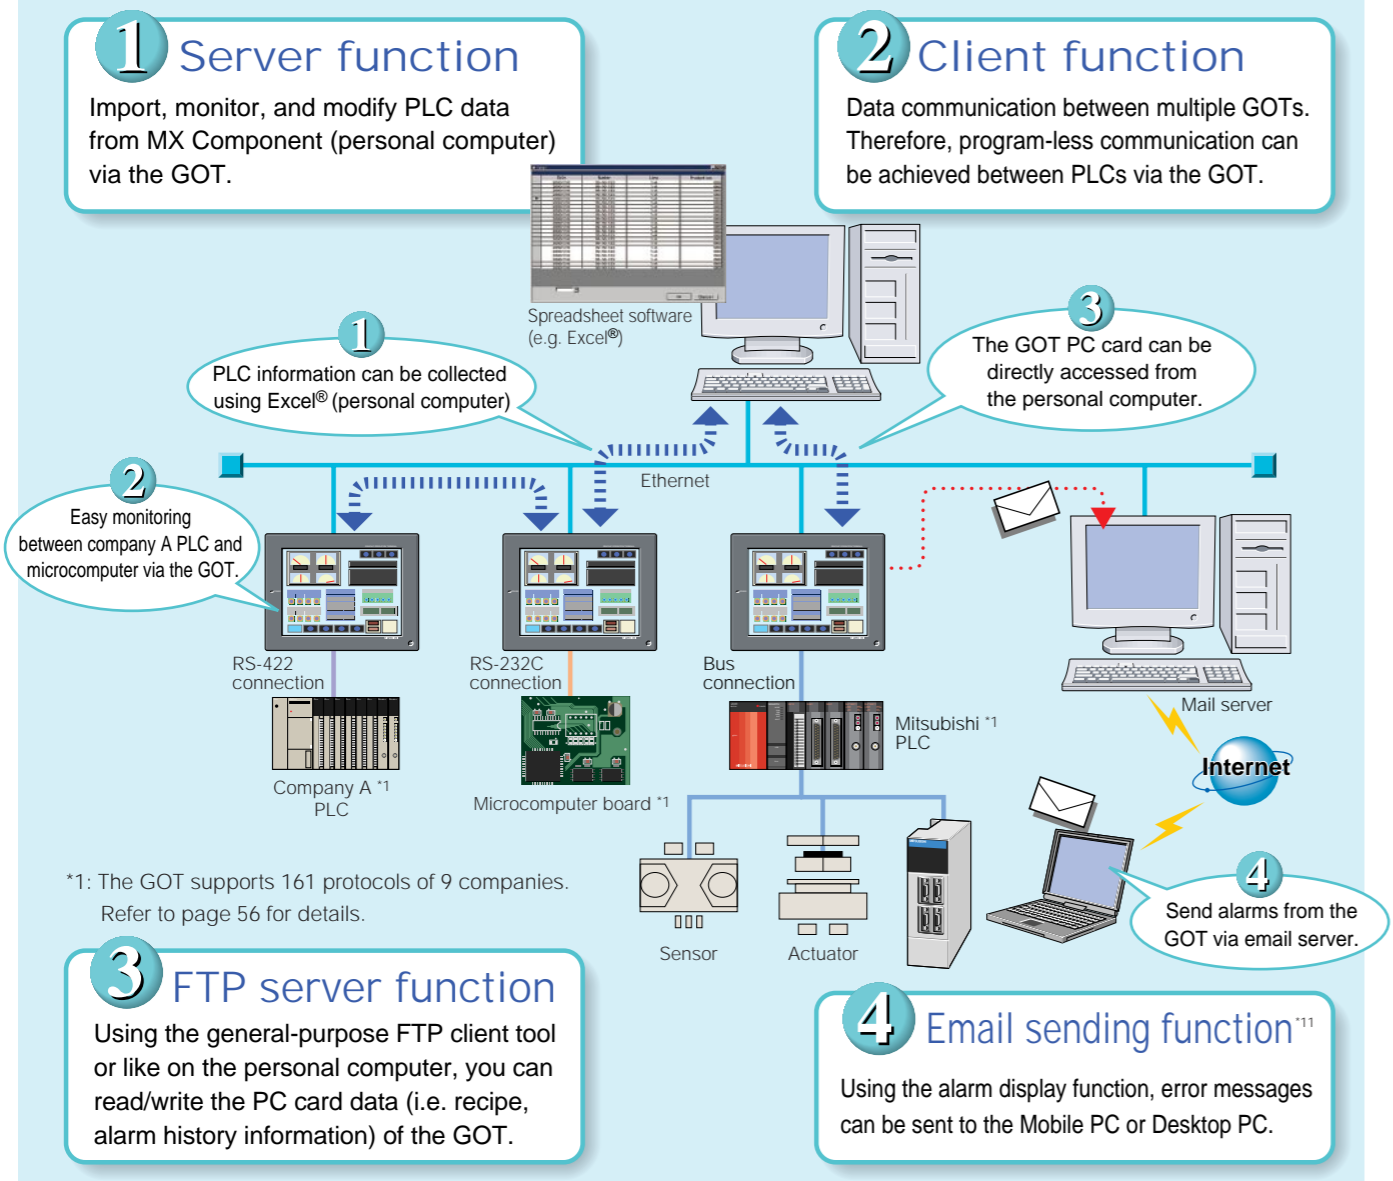

*20: Functions may not be available depending on the connection configuration. Refer to page 58 for details.

*20: Functions may not be available depending on the connection configuration. Refer to page 58 for details.

Special report 3

Gateway functions **NEW**

The GOT can handle data transfer between host computer and PLCs, and data and alarm notice can be remotely collected from an office.

*1: The GOT supports 161 protocols of 9 companies. Refer to page 56 for details.

GOT-900 series and connection configuration where you can use the gateway functions

Connection form	A985 GOT(-V)	A97□ GOT	A960 GOT	A956W GOT	A956 GOT-M3
Bus connection	○	○	○	○	○
CPU direct connection	○	○	○	○	×
Computer link connection	○	○	○	○	×
MELSECNET connection	×	×	×	×	×
CC-Link connection	×	×	×	×	×
Ethernet connection	×	×	×	×	×
Other manufacturer's PLC connection	○	○	○	○	×
Microcomputer connection	○	○	○	○	×

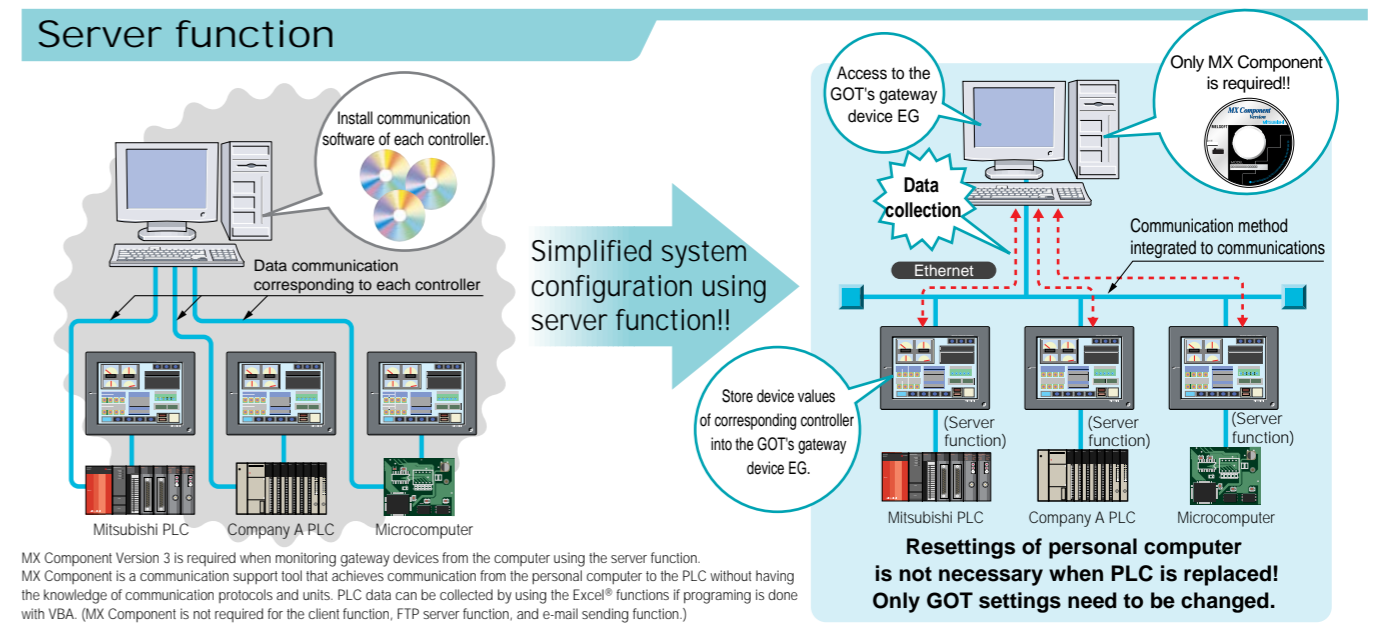

Equipment/software necessary for the gateway functions

Application	Necessary equipment/software	A985GOT(-V)	A97□GOT	A960GOT	A956WGOT	A956GOT-M3
Connect GOT to Ethernet system (required)	Ethernet communication unit	A9GT-J71E71-T (10BASE-T) hardware version E or later				
	Bus connection (QCPU (Q mode))	A9GT-QBUSS or A9GT-QBUS2S ^{*5,6}				
Connect GOT to PLC (required)	Bus connection (QnA/CPU)	A9GT-BUSS or A9GT-BUS2S ^{*5,6}				
	RS-232C communication	A9GT-RS2 or A9GT-RS2T		A9GT-50WRS2		Cannot be connected
	RS-422 communication	A9GT-RS4		A9GT-50WRS4		Cannot be connected
Execute gateway functions with GOT	Memory board	A9GT-QFNB (4/8M) or A9GT-FNB (1/2/4/8M)		Not required		
	Drawing software	GT Designer2 or GT Works2				
Use server function (Collect PLC information by PC)	ActiveX library for communication	MX Component Version 3 or later ^{*10}				
	SRAM PC card	JEIDA Ver 4.2 compliant (PCMCIA 2.1 compliant) SRAM PC card ^{*7}				
Use FTP server function	Flash PCcard	A9GTMEM-10MF, A9GTMEM-20MF, A9GTMEM-40MF		Unusable		
	Compact flash PC card	Compact Flash TM compliant compact flash PC card ^{*8,9} Unusable				

*2: When A985GOT(-V), A97□GOT, A960GOT or A956WGOT is used, an expansion memory board (A9GT-FNB (1/2/4/8M) or A9GT-QFNB (4/8M)) is required to the GOT.
 *3: A956GOT-M3 (Internal memory built-in type) is required for A956GOT.
 *4: GT SoftGOT, the A950GOT, A951GOT(-Q), A953GOT, A95□ handy GOT and GOT-F900 series does not support Gateway functions.

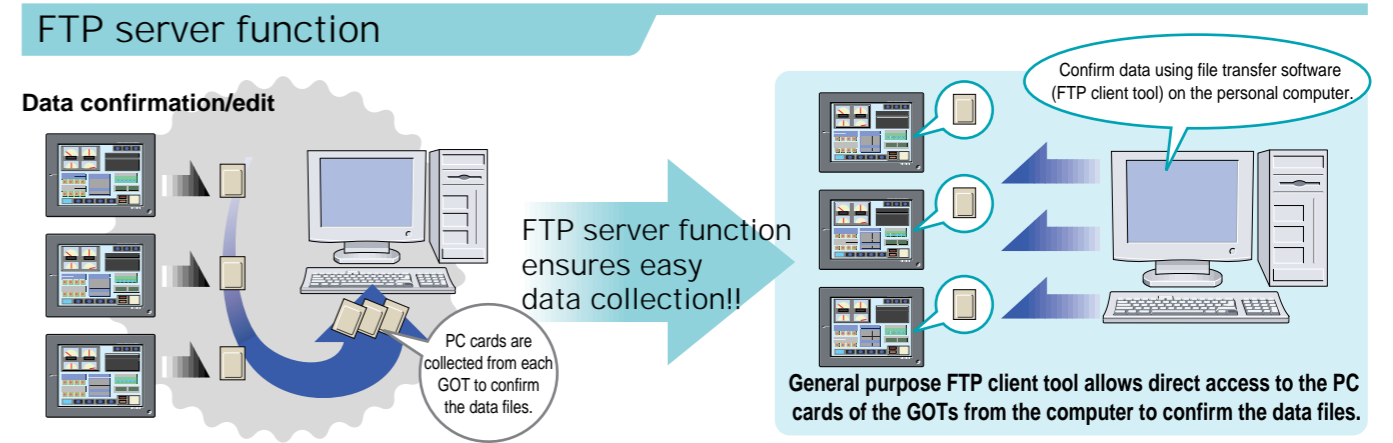

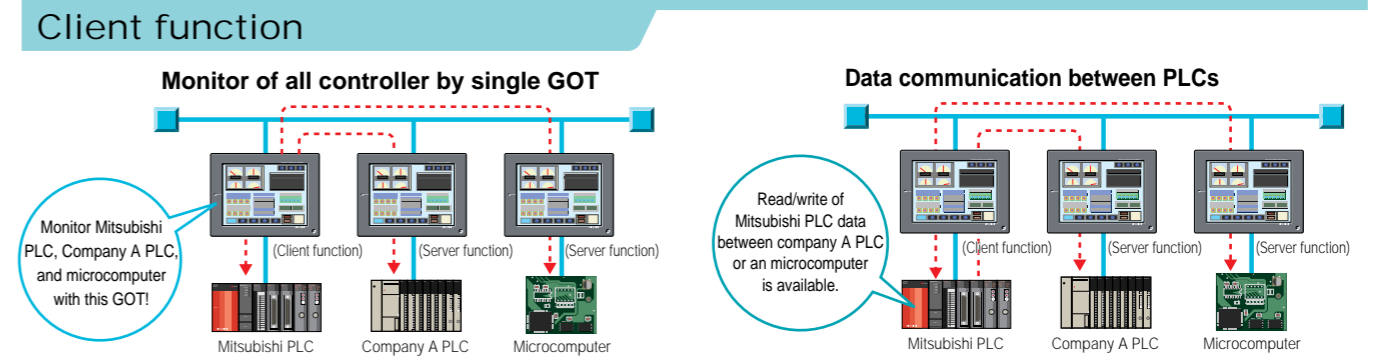

*5: The bus connection unit (A9GT-(O)BUS(2)SU) is unavailable for the gateway functions. Use the above bus connection board (A9GT-(O)BUS(2)S) when making Bus.
 *6: The bus connection board dedicated to the A956WGOT (A9GT-50WQBUSS, A9GT-50WBUS) does not support the gateway functions. Use the above bus connection board (A9GT-(O)BUS(2)S) when connecting A956WGOT via Bus.
 *7: A memory card interface unit is required to use the SRAM type PC card with the A956WGOT or A956GOT.
 *8: For other than the A956WGOT, a conversion adaptor (compact⇔Type II conversion adaptor) is required.
 *9: A985GOT-TBA/TBD and A985GOT-TBA-EU does not support Compact Flash PC card.
 *10: Applications (for example, MX Sheet) that operates on MX Component are available.
 *11: Mail sending function operates within the range of SMTP server specification.

Integrated information system between controllers!

MX Component Version 3 is required when monitoring gateway devices from the computer using the server function. MX Component is a communication support tool that achieves communication from the personal computer to the PLC without having the knowledge of communication protocols and units. PLC data can be collected by using the Excel® functions if programming is done with VBA. (MX Component is not required for the client function, FTP server function, and e-mail sending function.)

Resettings of personal computer is not necessary when PLC is replaced! Only GOT settings need to be changed.

Introduction

Graphic Operation Terminal
900 series

We recommend the GOT with confidence

Recommended for the operator

Improve workability and reduce running costs

Quick response

The GOT can be viewed and operated without stress

If a machine's operation or monitor's response is bothering, the HMI cannot be used comfortably.

When you use the GOT

Quick response is made due to bus connection or direct PLC CPU connection. The responses of the monitor display and operation are also quick.

•Applicable GOT... GOT-A series, GOT-F series, SoftGOT *1

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Unusable	Unusable

*1: The GOT-F900 series supports direct CPU connection only.

Recipe

Initial values for material blending, processing dimensions and positioning can be easily set

A controller (PLC or microcomputer) program (transfer instructions) is normally used to set initial values for material blending, processing dimensions, positioning, etc.

When you use the GOT

The settings (initial values) of different patterns can be saved in the GOT internal memory, and only necessary data can be transferred to the controller as appropriate by the specified condition (trigger), reducing the controller loads (programs and devices). Controller data can be read and saved, so the process control and production control information saved on a PC card can be read and used on a personal computer (e.g. Spreadsheet software).

•Applicable GOT... GOT-A series, GOT-F series, SoftGOT *2*3

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Usable	Usable

*2: The functions of the AGOT are different from those of the GOT-F900 series. Refer to this catalog and the GOT-F900 series catalog for details.
*3: A memory board is necessary.

Refer to "Recipe" on page 35.

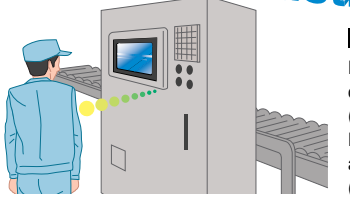

Human sensor

Energy conservation with Human sensor

The energy saving law was revised in April, 1999, and more efforts must be made to save energy.

An industry first

■ Energy saving effect
Energy is saved by 20% in error detection display.
(Actual work time 0.5 hours/day)
Energy is saved by 8% in an assembly instruction process.
(Actual work time 5 hours/day)

When you use the GOT

Using the industry's first person sensor, the HMI can be turned on automatically when a person approaches it. When the HMI is not used, turning the backlight off increases its life, achieving both energy saving and running cost reduction.

•Applicable GOT ... A985GOT(-V)

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Usable	Usable

Refer to "Human Sensor" on page 34.

Multi-language

A single GOT can display various languages

Local plant workers can use the GOT as it can display Chinese (Simplified Chinese (China), Traditional Chinese (Taiwan)) and Korean.

When you use the GOT

The drawing software GT Designer2 allows users to create screens in various languages using the multi-language function of Windows®. Adopting the Unicode, the GOT can display various languages.

*GOT-A series ... Generic term for A985(-V), A97□, A960, A956W and A95□GOT
GOT-F series ... Generic term for handy GOT, ET-900, F940, F930 and F920GOT(-K)
SoftGOT ... Abbreviation for GT SoftGOT2

Graphic Operation Terminal
900 series

We recommend the GOT with confidence

Recommended for the maintenance personnel

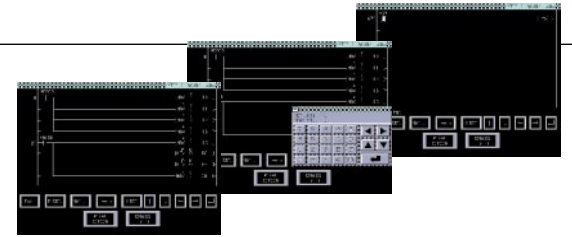

Improved maintainability and reduced running costs

NEW

Ladder monitor
Faultfinding
Touch search
List program edit

Improved maintainability

The maintenance personnel should solve problems as fast as possible when a machine malfunctions or fails.

When you use the GOT

•Ladder monitor *3 *4
You can monitor circuits in a ladder diagram format.

•Fault cause search/touch search **New** *3 *5
The cause of failure is easily detected by tracing back contacts to coils with Q series PLC. (Touch search)

•List program edit *3 *6 *7
Read/write of list programs (instruction word) format enables users to edit easily on the site.

•Applicable GOT ... GOT-A series, GOT-F series *4*5*6*7

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable *4*5*6*7	Unusable	Unusable

Refer to "Ladder monitor" and "List edit" on pages 36 and 37.
*Ladder monitor programmed on GX Developer can be monitored via the GOT when the GOT is connected via Bus and CPU direct connections. (Transparent function) Refer to "Transparent" on page 34 for details.

NEW

Motion monitor
Servo amplifier monitor

Startup and maintenance of motion controller can be performed easily

Previously to monitor/modify motion controller, Servo amplifier and parameter values needed a separate PC on-site.

When you use the GOT

•Motion monitor **New** *3 *8 *9
Q series motion controller can be monitored and parameters can be done easily on the GOT.

•Servo amplifier monitor **New** *3 *8
Pulse train output of servo amplifiers and parameters can be monitored.

•Applicable GOT ... GOT-A series *8

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Unusable	Unusable

Refer to "FA integration functions" on pages 8 and 9.
Refer to "Motion monitor", "Servo amplifier monitor" on page 37

**System monitor
Special module monitor
Network monitor**

Improve machine startup and debugging efficiency

The machine and line startup operation can be streamlined.

When you use the GOT

•System monitor *10
The GOT alone can monitor device values and change current values and timer/counter settings.

•Special module monitor *3*11
The special module operation (buffer memory monitor/change) can be checked easily.

•Network monitor *3*12
The GOT alone can check the network communication status.

•Applicable GOT ... GOT-A series, GOT-F series *10*11*12

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Unusable	Unusable

Refer to "System monitor", "Special module monitor" and "Network monitor" on pages 34 and 35.

The GOT has many other specifications and functions.

Graphic Operation Terminal 900 series

We recommend the GOT with confidence

Recommended for the designer

Design time and initial costs can be reduced

Main unit functions

Connection configuration that meets your needs

The GOT can be connected to any device

When a machine is designed, a controller is selected first. If an HMI can only be connected to a limited number of devices, it cannot be used even if it is a good one.

When you use the GOT

The GOT can be connected to the MELSEC or any of the PLCs and microcomputer boards made by other manufacturers.

•Applicable GOT ... GOT-A series, GOT-F series, SoftGOT *

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Usable*1	Usable

Refer to "Various connection configurations" on page 34.

*1: The GOT supports 161 protocols of 9 companies.

OS installation

The function and performance can be upgraded without changing hardware

If the HMI must be replaced whenever new functions are added, costs increase.

When you use the GOT

The function or performance can be upgraded simply by installing the OS with new drawing software without changing the HMI that you purchased. (PC card reduces OS or screen data transfer time.)

•Applicable GOT ... GOT-A series

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Usable	Usable

Refer to "OS Installation" on page 34.

Scripting function

Load on the controller can be reduced

If complicated data is displayed, the HMI control software affects machine control.

When you use the GOT

By executing display related controls on the GOT with the script (GOT-original program similar to C language program), load on the controller (PLC CPU, microcomputer, etc.) can be sharply reduced, improving the controller performance and design efficiency. This function also makes system maintenance easier.

•Applicable GOT ... GOT-A series, SoftGOT

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Usable	Usable

Refer to "Script" on page 35.

Development environment

NEW

GT Designer 2

Reduction in developing time by half

When a screen is created, the operability of the drawing software greatly influences design time.

When you use the GOT

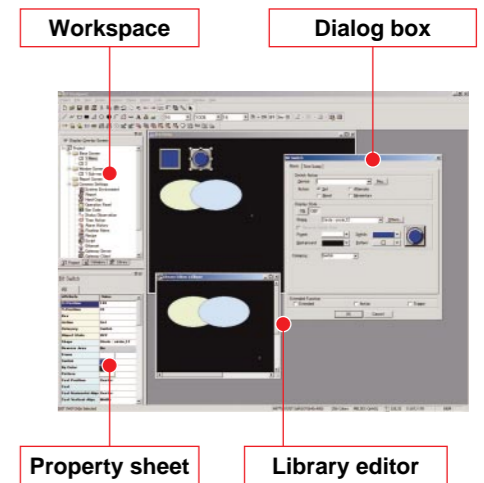

- View screen configuration in tree format on the Workspace.
- Object settings without opening each dialog box on the Property sheet.
- Batch edit of multiple parts on the Property sheet.
- Easy parts editing on the Library editor.

•Applicable GOT ... GOT-A series, GOT-F series, SoftGOT

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Usable	Usable

Refer to "GT Designer 2" on pages 6 and 30.

*2: Screen data created by the conventional drawing software GT Designer can also be used as-is.

Simulation debugging

Easy debugging without connecting a PLC

It is inconvenient to connect the GOT with a PLC during debugging.

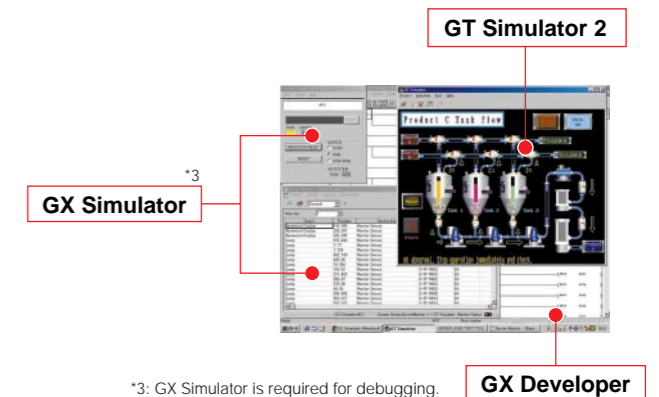

When you use the GOT

A single personal computer can make drawings and perform debugging with GT Works2.

•Applicable GOT ... GOT-A series, SoftGOT

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Unusable	Unusable

Refer to "GOT Simulation debugging" on pages 31 and 37.

*3: GX Simulator is required for debugging.

Data conversion

Existing data can be fully utilized

By enabling existing drawing data to be used, the design time required for drawing can be reduced and work can be streamlined.

When you use the GOT

The data given on the right can be used for the GOT-900 series.

•Applicable GOT ... GOT-A series, GOT-F series*4, SoftGOT

Connected to:	Mitsubishi PLC	Other manufacturer's PLC	Microcomputer
	Usable	Usable	Usable

Refer to "Converter" on page 37.

- Monitor data of FX-PCS-DU/WIN
- BMP format data
- Monitor data of GP series
- Monitor data of conventional drawing software (GT Designer)
- Monitor data*5 of conventional display (GOT-A800 series/A77GOT(-S□)/A64GOT/AD57G-S3)

*4: The GOT F series can use only DU data.

*5: To upload monitor data from the GOT, the drawing software is necessary. However, note that monitor data cannot be uploaded from A77GOT(-S□) (except S5), A64GOT, and AD57G-S3.

The GOT has many other specifications and functions.

*GOT-A series ... Generic term for A985(-V), A97□, A960, A956W and A95□GOT
 GOT-F series ... Generic term for handy GOT, ET-900, F940, F930 and F920GOT(-K)
 SoftGOT ... Abbreviation for GT SoftGOT2

Graphic Operation Terminal

series
GT SoftGOT2

MELSOFT **GT SoftGOT2** New

How about using your personal computer as a GOT?

Display colors
256 colors

Resolution
1280 x 1024 dots (SXGA)
1024 x 768 dots (XGA)
800 x 600 dots (SVGA)
640 x 480 dots (VGA)

GT SoftGOT2 is the HMI software that implements the GOT functions on a personal computer.

GT SoftGOT2 operating environment

Item	Description	
	When DOS/V personal computer is used	When PC CPU is used
Personal computer	Personal computer on which Windows® runs	Contec's MELSEC-Q series compatible PC CPU unit *1
OS	Microsoft® Windows® 98 operating system Microsoft® Windows® Millennium Edition operating system *2 Microsoft® WindowsNT® Workstation 4.0 operating system *3 Microsoft® Windows® 2000 Professional operating system	Microsoft® Windows® XP Professional operating system *4,5 WindowsNT® Workstation 4.0 operating system *3 Windows® 2000 Professional operating system
CPU	Pentium 200MHz or higher (Pentium 300MHz or higher recommended)	Pentium 300MHz or higher (Pentium 450MHz or higher recommended)
Required memory	GT SoftGOT2 only: 64MB or more (96MB or more recommended) When GX Developer is used simultaneously or when multiple GT SoftGOT2's are started: 96MB or more (128MB or more recommended)	128MB or more (192MB or more recommended)
Free hard disk space	For installation: 200MB or more For operation: 100MB or more *6	
Disk drive	CD-ROM disk drive	3.5 inch (1.44MB) floppy disk drive, CD-ROM disk drive
Display colors	256 colors	
Display	Resolution 800 x 600 dots or more (640 x 480 dots or more when full screen display function is used)	
Required software	GT Designer2 *7 or GT Designer Version 5 (Ver. 5.03D or later)	
Drawing license key/license FD *8	A9GTSOFT-LKEY-P *9	SW5D5F-SGLKEY-J (Japanese version) SW5D5F-SGLKEY-E (English version)

*1: Refer to the MELSEC-Q Series Catalog (L(NA)-74108153E) for the PC CPU unit.
*2: The remote device monitor function is not supported by Windows® Millennium Edition.
*3: Windows NT® Workstation 4.0 of Service Pack 3 or later.
*4: "Compatibility mode", "User account", and "desktop appearance" functions are not supported.
*5: Administrator authorization is necessary to use Windows® XP Professional or Windows® XP Home Edition.
*6: When multiple GT SoftGOT2's are started, "the number of started GT SoftGOT2's x 100" MB is required.
*7: When the monitor screen data size is large, 200MB or more (30MB or more as a guideline) may be required.
*8: GT SoftGOT2 does not support the GT Designer2.
*9: When GT SoftGOT2 without its license key/license key FD operates for only about 10 minutes.
*10: To use A9GTSOFT-LKEY-P, the DOS/V personal computer must have a parallel port (Centronics printer connector).

Main functions (Refer to GOT dictionary on page 34 and Function list for each model on page 54 for details.)

Features/hardware

- OS installation
- Various connection configurations
- 256 colors display
- Audio output
- Human sensor
- Analog RGB output
- Analog RGB input
- Video input
- Transparent
- Backlight replacement

Maintenance functions

- Ladder monitor
- List program edit
- System monitor
- Special module monitor
- Network monitor
- Motion monitor
- Servo amplifier monitor

Main unit functions

- Recipe
- Gateway function
- Script
- Security
- Time action
- Alarm history
- Alarm flow display
- Alarm list
- Status monitor
- Screen call

Drawing software (including GT Simulator)

- Simulation debugging
- Device monitor
- Documentation assistance
- Data conversion

Remote monitoring

Remote monitoring by intranet LAN

Production site conditions can be monitored from the office.

Effective utilization of the Internet by combination with general software

Alarms and on-site status are collected at any time from remote locations (mail function). Alarm occurrence/recovery, alarm history data, recipe data and screen image can be sent by e-mail.

Remote monitoring by the Internet (remote device monitoring function)

The device status being monitored by GT SoftGOT2 can also be monitored on personal computer.

<Example of remote monitoring via the Internet>
By installing the remote control software *10 (commercially available) on the host side (production site) and remote side (office) respectively, host side GT SoftGOT2 can be monitored/operated if GT SoftGOT2 is not installed on the remote side.
*10: The remote control software confirmed by Mitsubishi to operate properly is pcAnywhere 10.0. The firewall setting must be changed depending on the connection.

Reduced design time

Reduced design costs by utilizing screen data

Design costs can be reduced since the screen data of the production site can be shared on all layers from higher-level personal computers to lower-level GOTs.

Monitoring screens can be created simpler and cheaper

A monitoring operation screen can be created more easily and cheaply on the personal computer than the monitoring software such as SCADA or VisualBasic®.

User friendly applications

The memory capacity of the main unit has been substantially increased **New**

The memory capacity of the main unit has been substantially increased from 9M bytes to 32M bytes *11. Drawing data using many bit maps can also be displayed.
*11: When the screen data is large (30MB or more), a 200MB or more free hard disk area is required for operation.

Easy numeric input and ASCII input

Numeric/ASCII input function entries can be made directly from keyboard.

Full screen display

By hiding the title bar and menu bar, a full screen can be displayed. The menu bar is displayed by right-clicking the mouse.

When A985GOT screen is displayed on 800 x 600 dots display

Supporting panel computer without mouse or keyboard!!

As a small dialog and GOT internal device (GS500.b0 ON) displayed on-screen can be used to close GT SoftGOT2, GT SoftGOT2 can also be used on a panel computer without a mouse or keyboard.

Turn on GOT internal device (GS500.b0) with touch switch to close GT SoftGOT2.
Either dialogs can be selected and displayed.
The dialogs can be used for the following operations.
Open: Opens a project.
On Line: Starts monitoring. (Cannot be selected while monitoring is executed.)
Min: Minimizes GT SoftGOT2.
Exit: Close GT SoftGOT2.

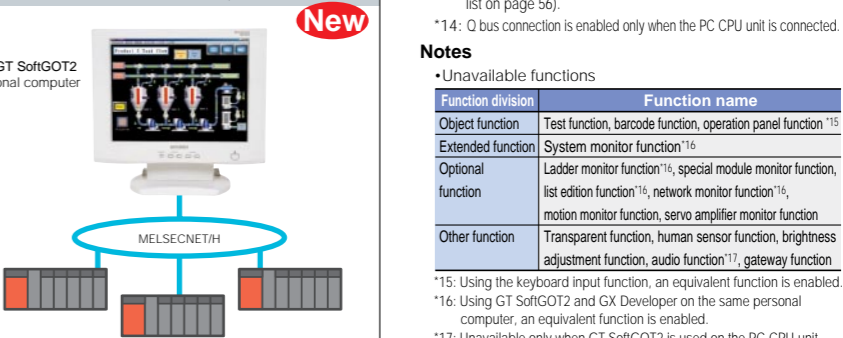

SoftGOT is more user-friendly

Multiple programs *12 of the GT SoftGOT2 can be displayed on a PC **New**

*12: Up to 99 (4 or less recommended)

Supporting MELSECNET/H, /10 *13 **New**

Devices that can be connected:

- Mitsubishi PLC, Mitsubishi A series motion controller *13, CPU direct connection, Ethernet connection, MELSEC/10(H) connection, computer link connection, Q bus connection *14
- *13: For details of connectable models, refer to Connectable model list on page 56.
- *14: Q bus connection is enabled only when the PC CPU unit is connected.

Notes

• Unavailable functions

Function division	Function name
Object function	Test function, barcode function, operation panel function *15
Extended function	System monitor function *16
Optional function	Ladder monitor function *16, special module monitor function, list edition function *16, network monitor function *16, motion monitor function, servo amplifier monitor function
Other function	Transparent function, human sensor function, brightness adjustment function *17, gateway function

*15: Using the keyboard input function, an equivalent function is enabled.
*16: Using GT SoftGOT2 and GX Developer on the same personal computer, an equivalent function is enabled.
*17: Unavailable only when GT SoftGOT2 is used on the PC CPU unit.
• Refer to page 59 when purchasing the product.

Drawing software (including GT Simulator)

- Simulation debugging
- Device monitor
- Documentation assistance
- Data conversion

Video/RGB screen display supported by one GOT!

Vision CRT and personal computer CRT can be integrated into GOT to achieve space saving and cost reduction

- When using the video input function, either video/RGB composite input interface unit (A9GT-80V4R1) or video input interface unit (A9GT-80V4) should be mounted on the A985GOT-V.
- For RGB function, either video/RGB composite input interface unit (A9GT-80V4R1) or RGB input interface unit (A9GT-80R1) should be mounted on the A985GOT-V.

^{**2}: Video/RGB composite input interface unit (A9GT-80V4R1) is used.

Video input function

Full screen display

Up to 4 video windows can be displayed at the same time.

- Up to 4 video cameras can be connected and shot images can be displayed simultaneously.
- Viewing images simultaneously, you can grasp the conditions of the whole system in a short time.

720 x 480 dot wide images can be displayed.

- The video window display size can be varied in three steps as required.
- 720 x 480 or 640 x 480 dot wide images can be displayed at 100%, 50% or 25% size.

^{*}720 x 480 dots and 640 x 480 dots cannot be used at the same time. Four channels are set in the same manner.

160 x 120 dots 25% display	320 x 240 dots 50% display	640 x 480 dots 100% display
-------------------------------	-------------------------------	--------------------------------

The display size can be changed one step at a time every time the screen is touched.

Partial display in clip mode **An industry first!**

You can display a selected part of an image you want to see.

- By displaying a portion of the image, this function is useful when the display area is small.

Required part of an image can be displayed!

Only one video window can be displayed in the clip mode.

Hidden object can be displayed in transparent mode

You can specify a transparent color to display the object or figure under a video window.

- You can use the touch switch or numeric/ASCII input function under the video window.

Touch switch under video window can be displayed and operated!

Video image can be paused in freeze mode

Video image can be paused to display a still image.

- This function is useful when checking the situation at the instant when a problem occurs.

^{*}When several video windows are displayed, the images on all the windows stop.

Images are saved as JPEG format

Images can be saved on a PC card as the JPEG format.

- This function, for example, is useful for checking the immediate condition of production equipment when it fails.
- Since the memory size necessary for saving a file on a PC card in this format is smaller than the BMP format, more images can be saved on the PC card.

^{*}Example (640 x 480 dot image)
JPEG format: Approx. 90K bytes, BMP format: Approx. 900K bytes
(The compression ratio depends on the image.)

RGB input function

The personal computer screen can be displayed as-is.

- The SVGA (800 x 600 dots) or VGA (640 x 480 dots) personal computer screen can be displayed unchanged on the GOT.
- The monitor screen is normally displayed, and it can be switched to the personal computer screen only when necessary.

^{*}When the personal computer CRT and the GOT are placed side by side, the GOT screen can act as a CRT, reducing CRT costs and saving space.

The screen is switched by turning the RGB display control bit ON/OFF.
OFF: The monitor screen is displayed.
ON: The personal computer screen is displayed.

The personal computer screen and GOT monitor screen cannot be displayed simultaneously.

Model name	Power supply voltage	100~240VAC 24VDC	A985GOT-TBA-V A985GOT-TBD-V
Display device	TFT color display		
Display colors	256 colors (screen display: 65,536 colors)		
Intensity (cd/m ²)	350 (8-step intensity adjustment)

Panel cut dimensions (mm)	302 ⁺⁰ ₀ W x 228 ⁺⁰ ₀ H		
Regulation compliance	UL/cUL	○	
	CE	×	

Notes on the Video/RGB input function

- The A985GOT-V does not have the CRT output interface.
- A985GOT does not support the external input/output unit (A9GT-70KBF).
- Though the video/RGB composite input interface unit (A9GT-80V4R1) can be used for the video input function and RGB input function, it cannot display a video camera image and personal computer screen on the GOT simultaneously.

- Drawing software (including GT Simulator):** Simulation debugging, Device monitor, Documentation assistance, Data conversion

Recommended points

Human sensor incorporated

Energy conservation with the GOT **An industry first!**

- The industry's first human sensor is turned on when a person approaches it. When the interface is not used, turning the backlight of increases its life, achieving both energy saving and running cost reduction.

20% less
(Assuming that the actual work time is 0.5 hours/day for error detection display)

Analog RGB output interface incorporated

- An 12" GOT image screen can be displayed on a larger CRT screen.

Larger screen!

Compact size

Compact size control panel

- Industry's smallest and thinnest. (See the table below for details.)

User-friendly, multi-media functions

256 colors display

Multi-color vivid display

- The high-intensity (350 cd/m²) TFT display can show 256-color vivid and high-quality images.
- 256-color bitmap (BMP) file data can be read and digital photographs of machines and parts can be displayed clearly.

Audio output

The machine operating status is vocally reported **Convenient!**

- Messages and warnings can also be vocally output, so information can be provided audibly.
- An audio message can be created easily by using a Windows® WAV file.

Maintenance function

Improved maintainability and reduced running costs **Compatibility with FA device**

Improved maintainability and reduced running costs

- The GOT has various maintenance functions to troubleshoot and maintain the FA system and streamline maintenance work.
- When the system is connected to a network, all the maintenance functions can be performed on remote terminals from the GOT. (The GOT can perform remote maintenance.)

Motion monitor function **New**

- Q series motion controller monitoring and parameter settings can be done easily on the GOT. (Refer to Special report 2 on page 8 for details.)

Ladder monitor function

- The PLC CPU program can be monitored in ladder format.
- The search and comment display functions are available.
- The fault cause search function can be used to investigate the cause of trouble easily. (MELSEC-QnA series ladder monitor doesn't support.)
- Touch search is also available for MELSEC-Q series ladder monitor. **NEW** (Refer to Special report 2 on page 8 for details.)

* The figures show the GOT-A975 screen images.

Servo amplifier monitor function **New**

- Pulse train output of servo amplifiers and parameters can be monitored. (Refer to Special report 2 on page 8 for details.)
- When the servo amplifier monitor function is used, barcode function and transparent function are not available.

The following functions are also available

- List program edit function (For MELSEC-A series)**
Read/write of Instruction list programs can be done easily on a production site.
- System monitor function**
The GOT alone can monitor device values of PLC CPU and monitor/change current values of buffer memory at the special module.
- Special module monitor function**
The special module operation (buffer memory monitor/change) can be checked easily.
- Network monitor function**
The GOT alone can check the network communication status of MELSECNET/10, (II), or /B.

- Printer interface **Built-in**
- Barcode reader interface **Built-in (RS-232C)**

256 colors display

Multi-color vivid display

- The high-intensity (350 cd/m²) TFT display can show 256-color vivid and high-quality images.
- 256-color bitmap (BMP) file data can be read and digital photographs of machines and parts can be displayed clearly.

Compact size

Compact size control panel

- Industry's smallest and thinnest. (See the table on page 23 for details.)

Recipe function Convenient!

Initial values, including machine working conditions, can be easily set

- The initial values, such as material blending and processing conditions, can be saved in the GOT memory or on a PC card and can be transferred to a PLC by one operation, conditions can be easily changed.
- The data transfer sequence program is no longer necessary.
- Up to 256 types can be set and the number of words that can be registered is 8K (words/type).

Quick response The industry's fastest!

Stressless display and operation

- Quick response is realized by bus connection or CPU direct connection.
- Since touch switches, like pushbuttons, can make a quick response, they can be used for inching operation.
- The screens are changed so quickly that it is not irritating during operation.

Maintenance functions

Improved maintainability and reduced running costs

- The GOT has various maintenance functions to troubleshoot and maintain the FA system and streamline maintenance work.

- Quick response is realized by bus connection or CPU direct connection.
- Since touch switches, like pushbuttons, can make a quick response, they can be used for inching operation.
- The screens are changed so quickly that it is not irritating during operation.

The industry's fastest!

Maintenance functions

Improved maintainability and reduced running costs

- The GOT has various maintenance functions to troubleshoot and maintain the FA system and streamline maintenance work.
- Ladder monitor
 - Network monitor function
 - Fault cause search / Touch search **NEW** function
 - Motion monitor function **NEW**
 - List program edit function
 - Servo amplifier monitor function **NEW**
 - System monitor function
 - Special module monitor function

Recommended

Audio output

The machine operating status is vocally reported

- Messages and warnings can also be vocally output, so information can be provided audibly.
- An audio message can be created easily by using a Windows® WAV file.

Convenient!

A960GOT

Large size (9") A960GOT
Inexpensive model

- Display device
High-intensity EL
- Display colors
Monochrome (black/yellowish orange)
- Resolution
640x400dots
- Printer interface
Built-in
- Barcode reader interface
Built-in (RS-232C)

High-intensity EL display

Clear screen displays are provided at a reasonable price

- Monochrome (black/yellowish orange or black/white).

Compact size

Compact size control panel

- Industry's smallest and thinnest. (See the table below for details.)

Recipe function *Convenient!*

Initial values, including machine working conditions, can be easily set

- The initial values, such as material blending and processing conditions, can be saved in the GOT memory or on a PC card and can be transferred to a PLC by one operation, conditions can be easily changed.
- The data transfer sequence program is no longer necessary.
- Up to 256 types can be set and the number of words that can be registered is 8K (words/type).

Quick response

Stressless display and operation

- Quick response is realized by bus connection or CPU direct connection.
- Since touch switches, like pushbuttons, can make a quick response, they can be used for inching operation.
- The screens are changed so quickly that it is not irritating during operation.

Graphic Operation Terminal 900 series A956WGOT

Medium size (7") A956WGOT

The industry's first wide and convenient HMI

- Display device: **TFT display**
- Intensity: **300cd/m²**
- Display colors: **256 colors**
- Resolution: **480x234 dots**
- Barcode reader interface: **Built-in (RS-232C)**

Communication unit

- Bus connection board
- Serial communication board for CPU direct connection/microcomputer/computer link connection
- CC-Link connection unit
- Ethernet communication unit **NEW**
- Bus connection unit
- MELSECNET/10 network unit
- MELSECNET(II)/B data link unit

Optional unit (Refer to Options on page 32 for details.)

- Memory board
- Protection sheet
- Stand
- Compact flash PC card ¹
- External input/output interface unit ²
- Printer interface unit ²
- PC card interface unit ^{1,2}

¹: When using the compact flash PC card, the PC card interface unit cannot be used.
²: Only one of them can be installed.

Main functions (Refer to GOT dictionary on page 34 and Function list for each model on page 54 for details.)

- Features/hardware:** OS installation, Various connection configurations, 256 colors display, Audio output, Human sensor, Analog RGB output, Analog RGB input, Video input, Transparent, Backlight replacement
- Maintenance functions:** Ladder monitor ³, List program edit, System monitor, Special module monitor, Network monitor, Motion monitor, Servo amplifier monitor
- Main unit functions:** Recipe, Gateway function, Script, Security, Time action, Alarm history, Alarm flow display, Alarm list, Status monitor, Screen call
- Drawing software (including GT Simulator):** Simulation debugging, Device monitor, Documentation assistance, Data conversion

³: Available for ladder monitor of QCPU (Q mode)

Main features

1.5 times larger than the 6" display!

The industry's first wide 7" display

- Higher resolution (480 x 234 dots) compared with the 6" display

The industry's first wide display!

Effective use of the screen

Utilization of extra space on the 6" control panel

- Since the A956W is a wide type, 6" screen leaves an extra space on either side. Numeric and ASCII keys can be created on the extra space as a fixed screen, therefore window screens and external I/O are not needed. (Numeric and ASCII keys are registered in a template.)

An industry first!

Compact flash PC card interface as standard

Commercially available compact flash PC cards can be used

- When a compact flash PC card is used, screen data and OS can be transferred to the GOT at high speed.
- If the screen needs to be changed at a remote site, it can be done by a compact flash PC card.

Convenient!

High-intensity 256 colors display

Small but vivid display

- The industry's first, high-intensity (300cd/m²), 7" wide, 256-color TFT display can show more vivid and high-quality images.
- 256-color bitmap (BMP) file data and digital photos such as machine parts can be displayed.

The most advanced multi-color display in the industry

Maintenance function *Compatibility with FA device*

Improved maintainability and reduced running costs

Improved maintainability and reduced running costs

- The GOT has various maintenance functions to troubleshoot and maintain the FA system and streamline maintenance work.
- When the system is connected to a network, all the maintenance functions can be performed on remote terminals from the GOT. (The GOT can perform remote maintenance.)

Motion monitor function **New**

- Q series motion controller monitoring and parameter settings can be done easily on the GOT.

(Refer to Special report 2 on page 8 for details.)

Ladder monitor function

- The QCPU (Q mode) program can be monitored in ladder format. ³

- The search and comment display functions are available.
- The fault cause search function can be used to investigate the cause of trouble easily. (Unavailable for QnA ladder monitor.)
- Touch search is also available. **NEW**

(Refer to Special report 2 on page 8 for details.)

Servo amplifier monitor function **New**

- Pulse train output of servo amplifiers and parameters can be monitored.

(Refer to Special report 2 on page 8 for details.)

¹ When the servo amplifier monitor function is used, barcode function and transparent function are not available.

The following functions are also available

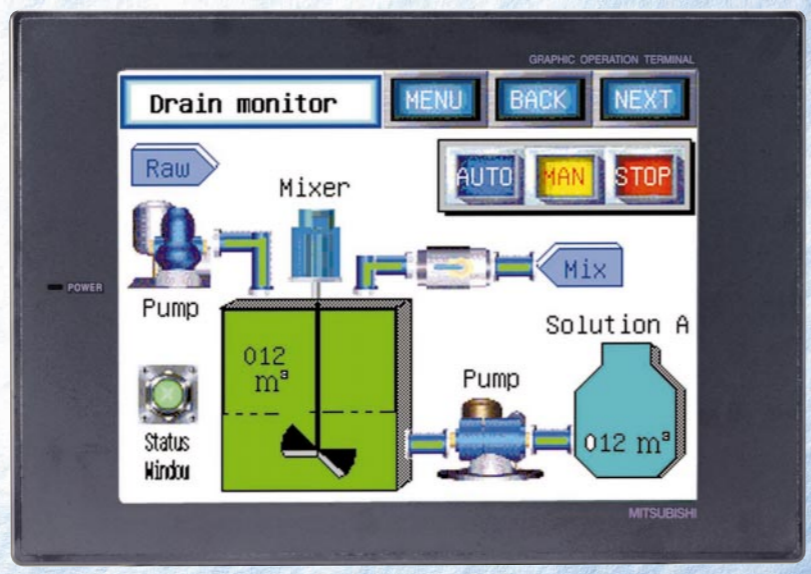

- List program edit function (For MELSEC-A series)**
Read/write of list programs can be done easily on a production site.
- System monitor function**
The GOT alone can monitor device values of PLC CPU and monitor/change current values of buffer memory at the special module.
- Network monitor function**
The GOT alone can check the network communication status of MELSECNET/10, (II), or /B.

SCREEN DEVELOPMENT SOFTWARE

SOFTWARE

Supporting design tasks ranging from GOT screen creation to debugging

Integrated screen development software

GT Works2 **NEW**

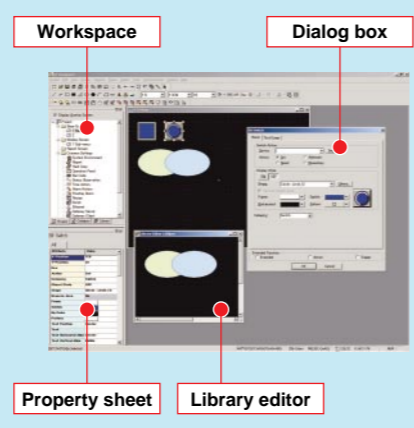

GOT drawing software

GT Designer2 **NEW**

GT Designer is a drawing software package for all GOT900 series, and can be used for drawing with the GOT-A900 and GOT-F900 series.

Main features of GT Designer2

- Reduction in screen drawing time by half**
 - GT Designer2 cuts drawing time approximately by half compared to that of GT Designer by using new functions, Workspace, Property sheet and etc. The number of mouse clicks has also reduced.
- Windows® standard operability and menu configuration**
 - GT Designer2 offers high-performance operability including easy menu configuration, multi language support, and more intuitive operator control.
- Data compatibility with GT Designer**
 - Screen data created on GT Designer can be used on GT Designer2 so that the resources can be fully utilized.

GT SoftGOT2 operating environment

Connection cable (Cable for connection between GOT and DOS/V personal computer) *2

*2: Refer to the "Operation manual (compatible connection system)" for other PC connection cables.

Refer to page 59 for purchasing the GT Designer2.

GT Works2 is an integrated screen drawing software package containing GOT-900 series drawing software, GT Designer2, GOT simulation software, and GT Simulator2. The requirements, such as drawing time reduction

and development efficiency improvement, can be satisfied by integrating the reinforced drawing environment for GT Designer2 and the ultimate debugging environment for GT Simulator2.

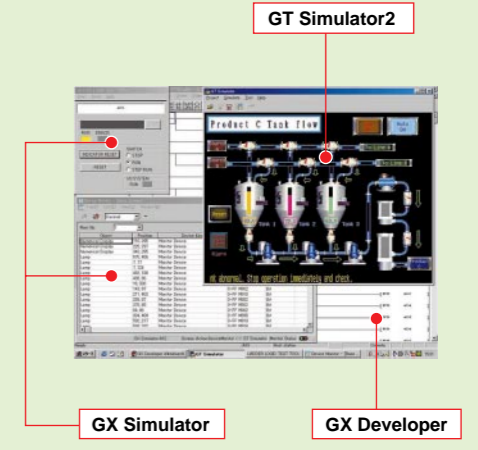

GOT simulation software

GT Simulator2 **NEW**

The GOT-A900 series screen can be simulated on a personal computer to debug the screen. If the screen needs to be modified as a result of debugging, it can be done with GT Designer2 and the result can be checked with GT Simulator2 immediately, so debugging time can be reduced drastically.

Main features of GT Simulator2

- Debugging similar to the actual image can be performed on a personal computer**
 - Device value changes are displayed during simulation of a created sequence program with GT Simulator2 and GX Simulator (ladder logic test tool).
 - The device value change function of GT Simulator2 can be used to change device values forcibly and check screen display changes.
- Touch switch input simulation with a mouse**
 - The input to a touch switch is simulated by clicking on the touch switch on GT Simulator2 with the mouse.
 - The result of input to the touch switch can be confirmed by a display change on GT Simulator2, the device monitor screen on GX Simulator, or the ladder monitor of GX Developer.
- Manual document and application requirement with screen image shots**
 - Using GT Simulator2, base and window screens can be saved as a bitmap format. This helps finish the complete operation manuals in short time.
 - GT Simulator2 allows users to monitor images just as they appear in the software. This incorporates users application requirements in the debugging of drawing development and reduces editing time later.

Item	Description										
Personal computer	Personal computer on which Windows® runs

Product overview

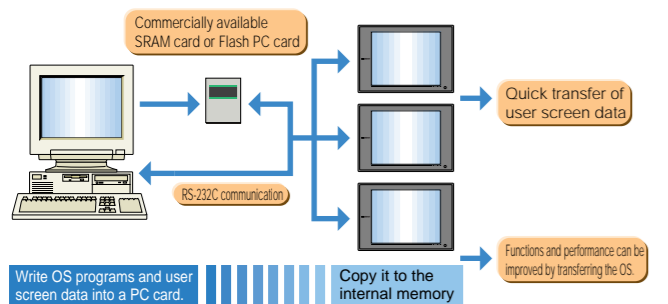

Graphic Operation Terminal 900 series

GOT Dictionary

Advanced features increase your satisfaction!

Features / hardware

OS installation
OS/screen data transfer to PC card
In addition to data transfer using RS-232C communication, a PC card (Flash PC card or SRAM card) can be used to replace screen data and OS programs, reducing data transferring time greatly. This allows users to edit or replace data without having personal computers and cables connected to the GOTs. The PC card interface unit is required for the A95□GOT.)
•Download screen data into a PC card on a personal computer, and transfer screen data quickly to the GOT by inserting the PC card into it.
•Download OS programs including basic OS, communication drives, expanded OS, etc. to PC card. This enables quick data transferring of different settings. (OS programs and screen data can be saved on a single PC card.)

Various connection configurations
Bus connection/CPU direct connection/computer link connection/Ethernet connection/MELSECNET connection/CC-Link connection
The GOT supports high-speed display and quick response for inching, which is indispensable for control panel operation.
•The fastest bus connections with MELSEC-Q/QnA/A PLCs.*
The Q series connects up to 5 GOTs, and the QnA/A series, up to 3 GOTs. Also, high performance maintained even when the maximum number of GOTs are connected.
•Quick response with MELSECNET cyclic as same as bus connection.

* For information on features of each connection configuration, the maximum number of GOTs connected, and the maximum connection distance, see pages 38 to 41. For connectivity with third party PLCs, see Connectable model list on page 57.

Compact size
The industry's smallest size by downsizing the control panel, saving space and cost.

256 colors display
Full 256 and beautiful screen display.

Audio output
Windows® WAV files supporting by connecting a speaker with a built-in amplifier*1 to the standard audio output connector. (Not supported by the A95□/A956WGOT.)

Printer output
Built-in printer port (Centronics parallel interface, 20 pins, half pitch). (A9GT-50PRF is required for the A95□/A956WGOT.)

The following printer functions are supported.
•Alarm history printing
•Daily/monthly report output
•Display screen color hard copy
•Bitmap data output to PC card (snapshot)
The following printers*1 can be connected:
•ESC/P24-J84 printer (ESC/P commands, color)
*ESC/P is a control code system standardized by Seiko Epson.

•Hewlett-Packard printer (PCL commands, color)
•Chinese printer (character code GB or BIG5)

Human sensor
Screen is automatically displayed when a user approaches to it, and the backlight of interface is turned off when no one nearby. This function extends the life of the backlight and save energy also.
*A985GOT(-V) only

Analog RGB output
The GOT screens can be displayed on an external CRT.
*A985GOT only

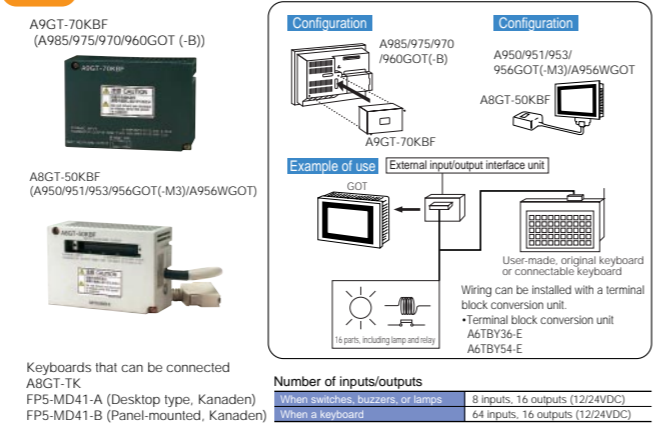

Analog RGB input
Support screen display on SVGA (800 x 600 dots) and VGA (640 x 480 dots) resolutions of a personal computer. An extra personal computer is needed.
*A985GOT-V only (RGB input interface unit (optional) is required.)

Video input
Up to 4 video animations are displayed on the GOT, simplifying system configuration.
*A985GOT-V only (Video input interface unit (optional) is required.)

Transparent
The GPP function software can be used when the GOT is connected directly with the PLC CPU.
*Via Bus connection (GX Developer **New** Version 8.00A or later)
*Via CPU connection

Barcode reader
Data read with a barcode reader*1 is stored in a specified device as ASCII code.
*The barcode reader*1 requires an external power supply.

External input/output interface
When the external input/output unit allows I/O control and keyboard operation on the GOT. The keyboard can be created by users.

Backlight replacement
The backlight can be replaced easily. The EL has no backlight, so replacement is not required. See the Product List on page 60 for backlight replacement.

Protection sheet (IP67F)
(Set of 5) The logo on the sheet can be removed. (The A985 (-V) / 975 / 970 / 960GOT(-B) / A95□GOT/A956WGOT has no logo.) Be sure to use the protection sheet for screen. The GOT is supplied with a protection sheet.

IP67F*3
The front panel supports the IP67F, so it can be used safely in dusty, humid, or oily places. (However, it may not guarantee any environment of kind.)

Attachment
The attachment is used when replacing A77GOT or GOT800 series with GOT-A900 series: the installation opening does not need to be changed. Refer to the optional parts on page 33 for the attachment types.

Main unit functions

Multi-language
Windows® based universal language **New**
GT Designer2 supports Windows based universal language on the following OS.
New
•Windows®2000 Professional
•Windows®XP Professional
•Windows®XP Home Edition
When using the other OS, start GT Designer2 English version on Windows® of a corresponding language and create screens in desired language. (i.e.) When creating a screen in Korean, start GT Designer2 English version on Korean Windows® and enter Korean.

Universal language using Unicode
•The GOT displays various languages, including Japanese, Korean, Simplified Chinese (China), Traditional Chinese (Taiwan), English, German, French, Portuguese, Polish, and Spanish. International standard, Unicode (ISO/IEC10646), is adopted as character sets.

Recipe
*A memory board is required.
•The GOT stores and transfers several kinds of process data (device values) such as material blending and procession conditions. Thus, the sequence program for data transfer is not necessary.
•Reuse of data read from PLC on another GOT and spreadsheet is available using PC card. This is useful for process control and production management. Users can modify the values on a spreadsheet and transfer to the PC card.
•When only device data is being transferred from the GOT to the PLC, no PC card is required. (Data including initial values is stored in internal memory (flash ROM) of the GOT as screen data)

[PC card selection example]

Monitor condition	Read condition bit
Maximum number of settings	256 files (A PC card with 4M bytes or more is required.)
Maximum number of data items registered per file	Number of devices: 8K words

[Example of PC card selection]
Select the PC card that fulfills the following conditions depending on number of data files and capacity.

- Available PC card depends on the number of recipe files.

Number of recipe files	PC card
Up to 128	1M bytes or more
Up to 256	4M bytes or more
- Calculation formula for data capacity stored in PC card
 Data capacity = 117 x number of recipe files + 9 x total number of 16-bit devices in each recipe file + 14 x total number of 32-bit devices in each recipe file
 When the number of recipe files is 200 and the number of 16-bit devices in each recipe file is 1000 points
 1. As the number of recipe files is 200, a PC card of 4M bytes or more can be used.
 2. Calculation formula for data capacity stored in PC card
 Data capacity = 117 x 200 + 9 x 1000 x 200 = 1,823,400 (bytes) ≈ 1.8M bytes
 The data capacity is 1.8M bytes, however, since the number of files is 200, a PC card of 4M bytes or more can be used.

Gateway function
*A memory board is required.
•Data acquisition (server function), read and write PC card data including alarm history and recipe files (FTP server function), are available.
•Multiple GOTs can be monitored (server/client function) and error messages can be sent to Mobile PC or Desktop PC. Refer to Special report 3 on page 10 for details.

Script
The GOT-original program, C language allows users with little knowledge program difficult-to-describe arithmetic/logical operations easily. The C language program can be used under complicated conditions whose device display and control types differ. Using a script on the GOT, load on the PLC CPU, microcomputer, etc. can be sharply reduced, improving the controller performance and program design efficiency. The function also makes system maintenance easy.
•Supporting various commands
•Control statement (if, while, switch statement, etc.) Logical, arithmetic.
•Arithmetic operation, assignment operation, etc.
•Device offset specification **New**
•Like index qualification of the PLC, a device can be specified indirectly with a script.
•Integer ↔ real number conversion function **New**

Security
This function offers controlled operator access by assigning 16 levels of security classifications. (A password is required to change security level.)
Screen level security
•Security level can be applied to full and partial screens, system monitor function, special module, and monitor function.

System level security
•Switching to system screens (utility function), such as setup screen, is protected.
•Reading ladder with the ladder monitor function is protected with a keyword that is registered with the GX Developer.

Project level security
•Screen data is protected from uploading.

Time action
Since an action can be carried out at a specified time on a specified day of the week, machine operation instruction and audible communication can easily be performed.

Alarm history
•The dates and time, the descriptions, the recovery and confirmation times are displayed that alarms occurred.
•Either history mode or accumulative mode (time/frequency) can be selected.
•Timing of alarm reset can be specified.
•Up to 3,072 alarms can be stored on alarm history.
•There are two ways to process the 3,073th alarm.

•Erasing the oldest alarm and collect the 3,073th alarm.
•Not collecting the 3,073th or later alarms.
•The number of alarms in the history is reported to the CPU. (The number of alarms can be monitored numerically.)
•Alarm history data can be stored to PC card even if the power of GOT is switched off. (A PC card stores up to 3,072 alarm data generated right before GOT is powered off.)
•Alarm history data is stored to hard disk of personal computer when GT SoftGOT2 is used.
•PC card capacity is as follows:

Alarm history mode (CSV format)	Approximately 72 (360) K bytes
Cumulative mode (CSV format)	Approximately 97 (400) K bytes

Alarm flow display
•Alarms are displayed in the order in which they occurred.
•Monitor devices can be registered for all screens, and whether to display them can be specified on each screen.
•The number of current alarms is reported to the CPU. (The number of alarms can be monitored numerically.)

User alarm
•The dates/times alarms occurred and its descriptions are displayed.
•Only current alarms are displayed. Restored alarms are automatically cleared from the screen.
•The ascending or descending order can be selected.
•The order in which alarms occurred or order of alarm numbers can be selected.
•The number of current alarms is reported to the PLC. (The number of alarms can be monitored numerically.)
•Row number of alarm can be specified indirectly **New**

*1: For the cutting-edge information on the models that have been confirmed to operate properly, please contact your local Mitsubishi representatives.
*2: Among the A95□GOTs, only the A95□GOT-M3 is available.
*3: Equivalent to IP65F depending on the GOT hardware version. Refer to the technical news for details.

Graphic Operation Terminal
900 series

GOT Dictionary

Advanced features increase your satisfaction!

System alarm

- PLC CPU or network connection errors or GOT errors are displayed by only specifying a display area.
- Predefined error messages are displayed.

- Data can be displayed as lists.
- Five elements can be displayed on a single line. (Up to 128 lines)
- Data is sorted and displayed in the order of device values to be monitored. Data can be displayed in either the descending order tool using frequency, or failure frequency.

Example of setting 5 elements

Data list

Status monitor

- If a combination of ON/OFF conditions for two devices is valid, it is reported to an external unit or PLC CPU. Audio output, bit ON/OFF, bit inversion, momentary, or data set (fixed value/indirect value) can be selected.
- All screens and an individual screen can be used at the same time.
- It is effective as background processing for display conditions, write conditions, or report print conditions.

Display condition specification

- Continuous trigger : The display is always updated.
- Periodical trigger : A display interval can be specified (in seconds).
- Edge trigger : ON/OFF display
It can be displayed when a specified device is turned on or off. It can be displayed forcibly when the screen is switched.
- Level trigger : ON/OFF display
It is always displayed when a specified device is ON or OFF. Whether to retain or clear the display can be specified when a trigger is invalid.

Display switching

- Switching by bit (2 combinations) The display is switched when a monitor device is ON or OFF.
- Switching by word (63 combinations)
Display color, etc. can be specified by setting a range of values using a comparison equation (inequality).
A constant or word device can be specified for a comparison term.

Indirect specification (offset device)

- Since several data items can be displayed or input in one location, a setting can be input to multiple devices.
- An offset device can be set for each object.

PLC station number switching

- The PLC station number can be switched and a remote station can be monitored on a screen, so the screen does not need to be changed for each PLC station number. (Effective during transient communication.)
- Since the station number is switched by changing the station number device value, it can be done easily with a touch switch or a sequence program.

Screen call

- Since the common parts of several screens can be created and displayed as a separate screen, screen data can be reduced.
- Several screens being used can be changed by modifying the call screen only.

A variety of touch switches

- Downloading time can be reduced by transferring screens one at a time.
- There is no limit to the number of screens that can be called.

Time delay switch function

ON delay: This switch works when it is kept pressed for a specified period of time. This protection function prevents a switch from being activated when it is touched by mistake.
OFF delay: This touch switch continues output for a specified period of time after the switch is released. (The time can be set from 1 to 5 seconds.)

Operating condition (trigger) specification (interlock function)

- Operation protection can be set easily for the touch switch or numeric input function by specifying operating conditions.
- Works when a bit device is specified (ON/OFF).
- Works when a word device is within a specified range.

Touch switch area specification

- The area of touch switch can be set 16-dot interval, so wrong input of an adjacent touch switches can be avoided.

Offset specification

An offset (index qualification) can be specified by writing a word for a touch switch.
Write device: D100
Offset device: W0
If W0 is 0, data is set at D100.
If W0 is 1, data is set at D101.

Previous screen switch function

To use the previous screen switch function, a screen switch (switch target: upper layer) works as a previous screen switch when its internal device of GS450.b14 is set ON.
PC card is necessary when the power is switched ON again, otherwise the previous screen switch function is lost.

- *1: The front screen switch allows to return up to nine previous screens.
- *2: This function can be applied only to base screens.
- *3: Previous screen switch cannot be saved to PC card.

Maintenance functions (when MELSEC Q/QnA/A/FX CPU or motion controller or Servo amplifier is connected)

System monitor

- Since device values (including timer/counter settings) can be monitored and changed easily, a separate device check maintenance screen does not need to be created.
- You can toggle between decimal and hexadecimal display, between 16-bit and 32-bit display, and comment display.
- Different PLC devices can be displayed on 4 windows at the same time. The registration monitor, batch monitor, timer/counter monitor, and BM (buffer memory) monitor can be displayed and changed (including timer/counter settings) together with each window.
- This function can be disabled by setting a password.
- The A956W/A95□(W)GOT displays a window screen.

Quick test display (The device value/bit setbit RST can be changed by a single operation.)

Ladder monitor

A memory board is required

- PLC program can be monitored in ladder format. (Either one or Q, QnA, A, FX ladder is shown) A95□GOT does not support the ladder monitor. A956WGOT does not support QnA/A/FX ladder monitor. (Q ladder monitor only)
- Setting and changing of device values/timer/counter.
- Searching includes device search, step searching, contact, coils, etc.
- Device comments of GX Developer are displayed.
- The cause of problems can be investigated easily by the fault cause search function. (QnA ladder monitor does not support.)

Special module monitor

A memory board is required

- Module configuration is automatically determined and a menu is displayed. Information of special module such as I/O information and buffer memory values can be displayed on the GOT, and special XY and buffer memory data can be modified.
- It is not necessary to create a screen for I/O check and special function module maintenance.
- It can be used to start a machine or check special function module operation.
- It can be read from the user screen and used freely as a screen library.
- This function can be disabled by setting a password.

- [Special function modules that can be monitored]
- A series module
 - <Positioning modules>
 - For large modules: AD75², AD70, AD70D, AD71, AD72
 - For small modules: A1SD75, A1SD70, A1SD71
 - <Analog modules>
 - For large modules: A68AD, A68ADN, A616AD, A616TD, A68RD, A62DA-S1, A616DAV, A616DAI, A64AD
 - For small modules: A1S64AD, A1S62DA, A1S62RD, A1S63ADA, A1S68DAV, A1S68DAI, A1S68AD
 - Q series unit
 - <Positioning modules>
 - QD75M□, QD75F□, QD75D□
 - <Analog modules>
 - Q64AD, Q68ADV, Q68ADI, Q62DA, Q64DA, Q62E, Q62D

List program edit

A memory board is required

Sequence programs can be edited as lists. (The key layout and operation are the same as for the A8UPU.)

Applications

- Minor changes can be made to programs in the field. Sequence programs can be edited easily without using peripheral equipment. The customer who used to ship a machine with the A8UPU (programming unit) can reduce costs.

Functions and operations

- List: 4-line display
- Applicable PLCs: MELSEC-A series
- Program edit: Editing is possible when the PLC stops.
- List programs are displayed in the window of the ladder monitor, and on the base screen of the monitor screen.
- The keyword set for the sequence program is checked, and if it is correct, lists can be edited to assure security.
- Lists can be displayed in English.
- The list program edit screen can be hard copied and stored as history.

Note 1) unavailable for Q/QnA/motion controller/computer link connection.
A sequence program cannot be read with dedicated instructions specified.
Note 2) The photo shows this function used with ladder monitor. (On the A956W/A95□GOT, this function cannot be used with ladder monitor.)

Drawing software (including GT Simulator2)

Simulation debugging

The GOT-A900 series screen can be simulated on a personal computer to debug the screen. If the screen needs to be modified as a result of debugging, it can be done using drawing software (GT Designer2) and the results can be checked immediately with the GT Simulator2, so debugging efficiency can be greatly improved. Refer to GT Simulator2 in Product overview on page 31 for details.

Device monitor

Started from GT Simulator2. A list of devices being used on the screen currently displayed by GT Simulator are displayed. Since GOT internal devices (GB, GD, GS) can also be monitored, debugging efficiency can be further improved.

Documentation assistance

- Screen captures for documentation
- Screen images are printed to several formats.
- Screen images are copied to a BMP and TEXT formats. This allow uses to finish complete operating manuals or documentations in short time.

*1: Supported by the A95□GOT-M3 among the A95□GOTs.
*2: GT Designer is included in SW□D5C-GOTR-PACK(E)/V. SW3NIW-A8GOTP is not included in GT Designer2/GT Works2.

Motion monitor

A memory board is required

The servo monitor and parameter setting of the Q series motion controller (Q172CPU(N), Q173CPU(N)) can be performed on the GOT screen. Parameter setting/monitoring is enabled for up to 3 Q172CPU(N)s or Q173CPU(N)s on the base.

- [Function list]
- Motion monitor
 - Current value monitor
 - Positioning monitor
 - SFC error history
 - Servo monitor
 - Error list
 - Current value history monitor
 - Error list (axis specification)

Parameter setting

- Servo parameters (basic parameters, adjustment parameters)
- Monitoring of current value history is not supported by the A95□GOT.
- Servo amplifier version B1 or later supports servo parameter setting for the MR-J2S.
- In a multiple CPU system, Q series CPU needs to be used as PLC No.1. Also, Q series PLC CPU should be mounted to the left of the Q172CPU(N) or Q173CPU(N) on the base unit.
- JOG operation, servo test, etc. are not supported. Refer to Notes for Use on page 58 for the Q series motion controller CPU versions.

Servo amplifier monitor

A memory board is required

Connecting GOT to servo amplifier in a pulse train output system, parameter setting, error history, and diagnosis functions can be used on the GOT. Without having a programming software, servo amplifiers can be monitored and set from on-site GOT. Refer to Special report 2 on page 9 for details.

Network monitor

A memory board is required

- Supporting MELSECNET/10, (II)/B
- Since the line status of each MELSECNET is displayed clearly, the communication status can be easily checked.
- Details on lines and information about local and remote stations is provided from various points of view.
- This function can be disabled by setting a password.
- The A956W/A95□GOT displays a window screen.
- The MELSECNET/H cannot use this feature.

Shape and model name	Serial communication board (RS422) A9GT-RS4		Serial communication board (RS232) A9GT-50WRS2 (Dedicated to A956W)	
Maximum number of GOT's connected	1 unit		1 unit	
Maximum connection distance	Depending on connection target specifications		Depending on connection target specifications	
Connected to	Personal computer, microcomputer board, PLC, etc.			

Connection configuration	Other manufacturer's PLC connection			
	RS422		RS232	
Communication interface installed on GOT side	A985(V) A975 A970 A960		A956W	
Shape and model name	Serial communication board (RS422) A9GT-RS4		Serial communication board (RS232) A9GT-50WRS2 (Dedicated to A956W)	
Maximum number of GOT's connected	1 unit		1 unit	
Maximum connection distance	Depending on connection target specifications		Depending on connection target specifications	
Connected to	Compatible with the following other manufacturer's PLC CPUs (For details of computer link unit, refer to page 57.) •OMRON •SHARP •YASKAWA •TOSHIBA •HITACHI •Rockwell Automation (Allen-Bradley) •SIEMENS AG •Matsushita Electric Works			

Connection configuration	Computer link connection	
	QCPU (Q mode/A mode)/QnACPU/ACPU	Motion Controller CPU (A series)
Communication interface installed on GOT side	GT SoftGOT2 + DOS/V PC	
Shape and model name	Built-in PC or Commercially available RS232 board is needed to be mounted	
Maximum number of GOT's connected	1 unit	
Maximum connection distance	15m	
Connected to	QnACPU (large type) *2 ACPU (small type) Motion controller CPU (A series) (large type) (Computer link unit)	

Connection configuration	Network connection			
	MELSECNET/H		MELSECNET/10	
Communication interface installed on GOT side	GT SoftGOT2 + DOS/V PC		GT SoftGOT2 + PC CPU	
Shape and model name	PC MELSECNET/H board		PC MELSECNET/H board	
Maximum number of GOT's connected	63 units (optical loop type)		63 units (optical loop type)	
Maximum connection distance	30km (optical, 2km between stations; Qi cable)		30km (optical, 2km between stations; Qi cable)	
Connected to	Network unit			

Connection configuration	Ethernet connection		Q bus connection
	GT SoftGOT2 + DOS/V PC	GT SoftGOT2 + PC CPU	GT SoftGOT2 + PC CPU
Communication interface installed on GOT side	Built-in PC or Commercially available Ethernet board is needed to be mounted		Built-in PC
Shape and model name	10BASE-T cable, etc.		(Cable not required)
Maximum number of GOT's connected	128 units (suggested less than 16 GOTs) (Depending on the specifications of Ethernet network system)		1 unit
Maximum connection distance	1000m *3 (Maximum segment length)		
Connected to	Ethernet module/board/card		Network unit

*1: User fabricates the cable if it exceeds 30 m.
*2: computer CPU module of different base can be connected.
*3: 10 Base-T cable.

Bus connection

Bus connection is one way to connect multiple GOTs using extension connector of base unit and to achieve the highest speed response with Mitsubishi PLC's CPU. It allows multiple GOTs to be located away from PLC since computer link module is not required. (Refer to Notes for bus connection on page 48.)

When connected with QCPU (Q mode) / Motion controller CPU (Q series) Up to 5 GOTs can be connected. For connectable CPU modules, refer to Connectable mode list on page 56.

*1: When extension base units are used, the extension cable length is also included.
 *2: Length between PLC base unit and last extension base unit should be within 13.2 m. (PLC CPU restriction)
 *3: For the cable type between PLC base units and extension base units, refer to PLC MELSEC Q series catalog
 *4: If the length between base unit and first GOT is longer than 13.2 m, use bus extension connector box (A9GT-QCNB) by fitting only one box to the extension connector of the main or extension base unit. Bus extension connector cannot be used on base unit when QCPU/CPU is used. (can be used on extension base unit.)
 *5: When extension base units are used, fit the bus extension connector box (A9GT-QCNB) to base unit, and if not, amount it to extension cable connector of extension base unit just before GOT.
 *6: Length between last extension base unit and first GOT.
 *7: Cable model name (example) QC□B 06: 0.6m, i.e. Model name: QC06B
 *8: No communication interface is required.
 *9: Use the value of the A8GT-C□EXSS to calculate the cable length of the A8GT-C□EXSS-1.
 *10: When extension base units are used, the total cable distance between main and extension units should be within 6.6m.

Bus connection

When connected with QnACPU (small type) or ACPU (small type) Up to 3 GOTs can be connected. For connectable CPU modules, refer to Connectable mode list on page 56.

*1: When using extension base unit(s), make sure that the total length of the main cable and extension cables (between base units) is within 3m.
 *2: (Example) A cable of 0.7m for A1SC□B is A1SC07B.
 *3: No communication interface is required.
 *4: Use the value of the A8GT-C□EXSS to calculate the cable length of the A8GT-C□EXSS-1.
 *5: Use the A168B extension base unit.
 *6: Only the A173UHCPU(-S1) is applicable.
 *7: When using extension base unit(s), make sure that the extension cable length (between base units) is within 3m, and the total length of all cables is within 33m.

Notes for bus connection

When using Q CPU (Q mode)

Only Q CPU (Q mode) supports bus connection, but Q CPU (A mode) does not. GOT is recognized as an intelligent communication module by QCPU (Q mode), requiring 16 I/O points. GOT cannot be connected anywhere between the base unit and extension base unit. GOT should be connected to the last of the extension base units and be included within the maximum allowable number of extension base units. In addition, GOT needs to be assigned to I/O slots of the last extension base unit, but not to the base unit. It occupies one full extension base (16 points X 10 slots), thus cannot share the same extension base unit with others. However, it can be shared with other GOTs. Although GOT is usually connected to the last of extension base unit, it is assigned as the second from the last when extension base OA1S6□B is used, with OA1S6□B being the last extension base unit. (See the diagram below.) If 10 slots cannot be left open for GOT, the number of slots can be reduced by using GX Developer. Up to 5 GOTs can be connected.

When using QnA/ACPU/A series motion controller

GOT is recognized as an intelligent communication module by QnA/ACPU/A series motion controller, requiring 32 I/O points. GOT cannot be connected anywhere between the base unit and extension base unit. GOT should be connected to the last of the extension bases and be included within the maximum allowable number of extension base units. In addition, GOT needs to be assigned to one slot of the extension base, but not to the base unit. The extension base unit cannot share with I/O module, special function module, or the kind. <For Q4A(R)CPU, Q3ACPU, A3□CCPU, A4UCPU> When maximum number of the extension base units (7 base units) is connected, vacant slots are necessary. <For A0J2HCPU> GOT is assigned as follows: Number of extension base units: 1, I/O slots: 0 to 3 <Others> GOT can be connected within the range of I/O points even if maximum extension base units (2 or 3) are installed and there is not vacant slot. i.e. ACPU (small type) Number of extension base units: 2, I/O slots: 0

Restrictions on the number of GOTs that can be connected

Restrictions on the number of GOTs that can be connected depends on the PLC CPU and the number of special function module to be installed.

	QnA(R), QnAS(H)CPU	AnU, AnA, A2US, A2USHCPU	CPUs not shown on the left
Number of GOTs that can be connected	Up to 3 units	Up to 3 units	Up to 2 units
GOT + number of special function units to be installed	No limit when GOT + special function units as shown in *4	Up to 6 units when GOT special function units as shown in *5	Up to 2 units when GOT special function units as shown in *5

	A0J2HCPU	A series Motion controller A173UH(-S1), A273U, A273UH(-S3), A373U(-S3)CPU	A series Motion controller CPUs not shown on the left
Number of GOTs that can be connected	Up to 1 units	Up to 3 units	Up to 2 units
GOT + number of special function units to be installed	Up to 2 units when GOT special function units as shown in *5	Up to 6 units when GOT special function units as shown in *5	Up to 2 units when GOT special function units as shown in *5

*4: The special function unit with the following model is shown. *5: The special function unit with the following models are shown. AD51(S3), AD51H(S3), AD51FD(S3), AD57G(S3), AJ71C21(S1), AJ71C22(S1), AJ71C23, AJ71C24(S3/S6/S8), AJ71E71(-S3), AJ71UC24, A1S71C24(-R2/PRF/R4), A1S71UC24(-R2/PRF/R4), A1S71E71-B2/B5(-S3), AJ61BT11, A1S71BT11

Notes for when power is switched on

Make sure to power on the PLC CPU and GOT as instructed below. When multiple GOTs are connected, they may be powered on in any sequence. <For the Q/QnA/ACPU/A series motion controller (Except the Q4ARCPU)> (a) Switch the power on of the PLC CPU and GOT simultaneously. (b) Switch the power on of the PLC CPU first, then GOT. When multiple GOTs are connected, the PLC CPU starts to run when all the GOTs powers are switched on. <For the Q4ARCPU> Power on the GOT first. Then, switch the power on of the Q4ARCPU redundancy system after 1 or 2 seconds.

Notes for system configuration

When multiple GOTs are connected, switch the power on of all GOTs first. Then, power on the Q4ARCPU redundancy system after 1 or 2 seconds. For bus connection, the PLC power unit supplies the amount of current equivalent to that consumed by the connected GOTs. When calculating the current consumption, make sure to include the current to be consumed by the GOTs. Note that the current consumption must not exceed the amount of the current supplied by the PLC power supply unit. The following shows the current consumed by one GOT. •When connected to the QCPU (Q mode): 255mA per GOT •When connected to other than QCPU (Q mode): 220mA per GOT

Rush current		40A or less (264VAC, maximum load)	
Permissible instantaneous failure time		20ms (100VAC or more)	
RUN/OUTPUT pin		Transistor output 12/24VDC, 0.1A, 1 point	

*1: Equivalent to IP65F depending on the hardware version of the GOT main unit. Refer to the technical news for details.

*2: The screen save/backlight OFF function helps prevent monitor from burn-in and extend backlight life.

*3: On the liquid crystal panel, bright dots (dots normally lit) and dark dots (dots not lit) occurs as its characteristic. Therefore it is impossible to completely prevent bright and dark dots from occurring since there are many display elements on the panel. Note that the occurrence of bright and dark dots is not a product fault or failure but a characteristic.

Panel cut dimensions

GOT main unit type	A	B
A985GOT(-V)	302	228
A975/970GOT(-B)	289	200
A960GOT	258	183
A956WGOT	205.5	123.5
A95□GOT(-M3)	156	123.5

Product installation interval

When a GOT is installed, the spaces must be provided between other equipment as shown below.

GOT main unit type + communication interface	A
A985GOT(-V) + communication board	140mm or more
A975/970GOT(-B) + communication board	130mm or more
A960GOT + communication board	140mm or more
A985GOT(-V)/A960GOT + A9GT-BUSSU/(Q)BUS2SU	30mm or more
A975/970GOT(-B) + A9GT-BUSSU/(Q)BUS2SU	15mm or more
A956WGOT/A956GOT(-M3)	130mm or more
A950/951(-Q)/953GOT(-M3)	(When MELSECNET fiber-optic cable is used: 165mm or more)

- Dimension of part A: Leave the space required for connection cable's routing radius shown on the table above.
 - Dimension at part B: When a memory card or audio output is used, leave 100 mm or more clearance for connecting cables and install/remove memory cards. (Otherwise, 50 mm or more is required.)
 - Dimension at part C: Leave a minimum of 80 mm or more clearance above the unit to ensure proper ventilation.
 - Dimension at part D: Leave 100 mm or more for back and 50 mm or more for each side clearance to provide proper ventilation and prevent noise from interfering when equipment, which generates much radiation noise, is nearby.
- * Install the GOT at ambient temperature of 55 °C or less.

• There are two different bus connection communication interfaces, bus connection board and bus connection unit.
• The bus connection board (A9GT(-Q)BUSS, A9GT(-Q)BUS2S) is a depth-saving type communication board interface. (Fig. A)
• The bus connection unit (A9GT-BUSSU, A9GT(-Q)BUS2SU) is a cable space-saving type communication unit interface, and has the same shape as the network connection unit.

*1: Only when connected with PC CPU
 *2: A951GOT(-Q) only
 *3: A950/A953GOT only
 *4: A956GOT only
 *5: A95□GOT-TBD only
 *6: The type of the built-in interface varies depending on the model. See page 28 for details.
 *7: Compact Flash PC card interface
 *8: Except A95□GOT-TBD
 *9: The A9GT-50PRF printer interface unit (option) is required.
 *10: The A1SD59J-MIF PC card interface unit (option) is required.
 *11: Only when connected with MELSEC-Q series CPU (Q mode)
 *12: A95□GOT-M3 only
 *13: The expansion memory board is not required for GT SoftGOT2.
 *14: The capacity of the expansion memory board varies depending on the PLC CPU when ladder monitor is performed.
 MELSEC-Q series CPU (Q mode)/QnACPU ... A9GT-QFN□(□M)
 MELSEC-Q series CPU (Q mode)/QnA/A
 A series motion controller /FXCPU ... A9GT-FNB(□M)
 *15: Enabled by dedicated software.

Notes for Use

- (1) Some functions are unavailable depending on the GOT models. See Product overview on page18 and later and Function list on page 54.
- (2) There are some functions and restrictions unavailable depending on the connection target and connection configuration. For details, refer to the following "Restrictions on maintenance functions" or the following manuals.

Maintenance functions	GOT-A900 Series Operating Manual (Extended Functions/Option Functions: SH-080244)
Gateway functions	GOT-A900 Series Operating Manual (Gateway Functions: SH-080352)
Object functions	GOT-A900 Series Reference Manual (SH-080242)

Restrictions on maintenance functions

AGOT (A985(-V)/A97/A960/A956W/A95GOT)

The restrictions on the maintenance functions are as indicated below. (Refer to page 56 for the restrictions on versions.)

Connection configuration	Bus connection						CPU direct connection						Computer link connection					
	MELSEC-Q series (Q mode)	Motion controller CPU (Q series)	MELSEC-Q series (A mode)	MELSEC-QnA series	MELSEC-A series	Motion controller (A series)	MELSEC-Q series (Q mode)	Motion controller CPU (Q series)	MELSEC-Q series (A mode)	MELSEC-QnA series	MELSEC-A series	Motion controller (A series)	MELSEC-Q series (Q mode)	Motion controller CPU (Q series)	MELSEC-Q series (A mode)	MELSEC-QnA series	MELSEC-A series	Motion controller (A series)
System monitor	○ ^{*1}	○	○	○	○	○	○ ^{*1}	○	○	○	○	○	○ ^{*1}	○	○	○	○	○

(Touch search)	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○
List program edit	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○
Network monitor	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○
Special module monitor	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○
Motion monitor	○ ^{*2}	○	○	○	○	○	○ ^{*2}	○	○	○	○	○	○ ^{*2}	○	○	○	○	○

- Ladder monitor** When any timer/counter set value was changed by the test function of the ladder monitor, the new value is not reflected on the display. Therefore, read it to the PLC again. Fault cause search and touch search cannot be used simultaneously.
- List program edit** When the A2USH-S1/A2SH-S1/A2SH/A1SH/A1SJHPCPU is used, there are the following restrictions on the list program edit range.
 - When A2USHCPU-S1 is used: Within the A3UCPU range
 - When A2SH/A1SH/A1SJHPCPU is used: Within the A3NCPURange

- System monitor** When using the MELSEC-QnA series to monitor or change the timer/counter settings or display device comments, use the CPU of version B or later. (Except the Q4ARCPU)
- Special unit monitor** The AD75M/A1SD75M special module can be monitored in the AD75P/A1SD75P range.
- Servo amplifier monitor** The servo amplifier monitor function can be used regardless of the connection configuration. Refer to Special report 2 "FA integrated functions" on page 8 for details.

SoftGOT (GT SoftGOT2)

The maintenance functions cannot be used on GT SoftGOT2. For ladder monitor, list program edit, and network monitor, equivalent functions can be executed by using GX Developer on the same personal computer.

Selection of memory board

A memory board should be mounted when using the optional function or increasing the user area. As monitor data and special data (necessary when the special module monitor, motion monitor or servo amplifier monitor function is used) are stored into the user area, it may be necessary to increase the user area according to the amount of data. Confirm the capacity of monitor data/special data on the drawing software when they are

•When A985(-V)/A97/A960/A956WGOT is used

Requirement of the memory board is shown on table A①

- When using the memory board required functions**
 - When the memory board required functions are used, a memory board must be mounted regardless of the free user area.
 - Calculate the total number of extended function OS installations in [Table A]②, and confirm the free user area in [Table B].
 - * The extended function OS must be installed to use the functions given in [Table A].
 - Installation of the extended function OS reduces the free user area that stores monitor data.
 - Consider the free user area and the monitor data + special data capacity, and select the memory board type.

- When not using the memory board required functions**

After confirming the free user area on table B, check whether a memory board is required or not, and when it is required, select the memory board type according to the monitor data capacity.

*Note 1: When using the QCPU (Q mode)/QnACPU ladder monitor function, use the A9GT-QFNB(□M). The A9GT-FNB(□M) cannot be used. For the other functions, both the A9GT-QFNB(□M) and A9GT-FNB(□M) are available.

*Note 2: The A9GT-QFNB and A9GT-FNB are memory boards for the optional functions. Note that the free user area will not be added by mounting memory board.

[Table B]

Total number of extended function OS installations	Free user area (k bytes)											
	A985(-V)/A97/A960/A956WGOT						A95GOT

[Table A]

Functions	① Memory board required/not required	② Number of extended function OS installations
Video input/analogue RGB input or external I/O	Not required	
Printer output (including file output by hard copy function)	Not required	
Barcode reader input	Not required	1
Alarm history when CSV file is used	Not required	1 installation in all
Recipe function when CSV file is used	Required	
Audio output function	Required	
Recipe function	Required	1
Special module monitor function	Required	1 installation in all
Gateway function	Required	2
Ladder monitor function (for QCPU (Q mode))	Required	2
Ladder monitor function (for QnACPU)	Required	2
Ladder monitor function (for ACPU)	Required	1
Ladder monitor function (for FXCPU)	Required	1
List program edit function (for ACPU)	Required	2
System monitor function	Not required	1
Network monitor function	Required	1
Motion monitor function	Required	2
Servo amplifier monitor function	Required	2

•When A95GOT is used

- When using the memory board required functions, use the A95GOT-□BD-M (equivalent to memory board mounting) regardless of the free user area.
- When not using the memory board required function, select either the A95GOT-□BD-M3 (3M byte user area) or A95GOT-□BD (1M byte user area) according to the monitor data capacity.

²⁾ GT SoftGOT2 License key is required for every DOS/V computer, and GT SoftGOT2 license key FD is required for every computer CPU unit.

List of products

Communication interface

Product name	Model name	Specifications			Regulation compliance ¹
Bus connection board	A9GT-QBUSS	QCPU (Q mode) bus connection	For A985(-V)/975/970/960GOT	1 connector	
	A9GT-QBUS2S			2 connectors	
	A9GT-50WQBUSS		For A956WGOT	1 connector	
	A9GT-BUSS	QnA/ACPU bus connection	For A985(-V)/975/970/960GOT	1 connector	○
	A9GT-BUS2S			2 connectors	○
Bus connection unit	A9GT-50WBUSS		For A956WGOT	1 connector	○
	A9GT-QBUS2SU	QCPU (Q mode) bus connection	For A985(-V)/975/970/960/956(W)GOT	2 connectors	
	A9GT-BUSSU	QnA/ACPU bus connection		1 connector	○
Serial communication board	A9GT-BUS2SU			2 connectors	○
	A9GT-RS4	RS-422 connection (QnA/FXCPU direct connection, computer link connection, microcomputer connection)	For A985(-V)/975/970/960GOT	Without clock function	○
	A9GT-50WRS4		For A956WGOT		○
	A9GT-RS2	RS-232C connection (QCPU direct connection, computer link connection, microcomputer connection)	For A985(-V)/975/970/960GOT		○
	A9GT-RS2T	RS-232C connection (microcomputer connection)	For A985(-V)/975/970/960GOT	Built-in clock function	○
Network connection unit	A9GT-50WRS2	RS-232C connection (QCPU direct connection, computer link connection, microcomputer connection)	For A956WGOT	Without clock function	○
	A7GT-J71LP23	MELSECNET/10	Inter-PC optical loop		
Data link connection unit	A7GT-J71BR13		Inter-PC coaxial bus		
	A7GT-J71AP23	MELSECNET (II)	Optical loop		
	A7GT-J71AR23		Coaxial loop		
CC-Link connection unit	A7GT-J71AT23B	MELSECNET/B	Twisted pair bus		
	A8GT-J61BT13	CC-Link (intelligent device station)	Twisted pair		○
Ethernet communication unit	A8GT-J61BT15	CC-Link (remote device station)			○
	AJ65BT-G4-S3	CC-Link peripheral connection	RS-422 + CC-Link		○
	A9GT-J71E71-T	Ethernet	10BASE-T		○

*1: Some combinations of GOT main unit and communication interfaces do not conform to safety standards (UL/cUL/CE).

Options

Product name	Model name	Specifications		
Video/RGB composite input interface unit	A9GT-80V4R1 New	For A985GOT-V (Required when using the video display function, RGB display function)	Video display function: NTSC/PAL input system, 4CH RGB display function: Analog RGB input system, 1CH	
Video input interface unit	A9GT-80V4	For A985GOT-V (Required when using the video display function)	NTSC/PAL input system	
RGB input interface unit	A9GT-80R1	For A985GOT-V (Required when using the RGB display function)	analog RGB input system	
Backlight	A9GT-80LTT	For A985GOT(-V)	TFT color LCD HMI replacement backlight (1)	
	A9GT-70LTTB	For A975/970GOT-TB□-B For A975/970GOT-TBA (hardware version D or later) For A975/970GOT-TBD (hardware version B or later)		
	A9GT-70LTT	For A975/970GOT-TBA (hardware version C or earlier) For A975/970GOT-TBD (hardware version A)		
	A9GT-70LTS	For A970GOT-SB□/LB□	D-STN color/monochrome LCD HMI replacement backlight (a set of 2)	
	A9GT-50LTT	For A95□GOT-(Q)SBD/(Q)LBD(-M3)	STN color/monochrome LCD HMI replacement backlight (1)	
Memory board (For A985(-V)/975/970/A960GOT(-B)/A956WGOT)	A9GT-FNB	Memory for optional function (Without expansion memory)		
	A9GT-FNB1M	(A/FX ladder monitor compatible)	1MB expansion memory	
	A9GT-FNB2M		2MB expansion memory	
	A9GT-FNB4M		4MB expansion memory	
	A9GT-FNB8M		8MB expansion memory	
	A9GT-QFNB	Memory for optional functions (Without expansion memory)		
Protection sheet	A9GT-QFNB4M	(Q/QnA/FX ladder monitor compatible)	4MB expansion memory	
	A9GT-QFNB8M		8MB expansion memory	
	A9GT-80PSC	For A985GOT(-V)	A Set of 5 (logo removable, The HMI is supplied with one)	
	A9GT-70PSC	For A975/970GOT(-B)		
	A9GT-60PSC	For A960GOT		
Stand	A9GT-50WPSC	For A956WGOT		
	A9GT-50PSC	For A95□GOT(-M3)		
	A9GT-80STAND	For A985GOT(-V)		
	A9GT-70STAND	For A975/970/960GOT(-B)		
Flash PC card	A9GT-50WSTAND	For A956WGOT		
	A9GT-50STAND	For A95□GOT(-M3)		
	A9GTMEM-10MF	Memory capacity 16MB	For A985(-V)/A975/A970/A960GOT(-B)	
PC card interface unit	A9GTMEM-20MF	Memory capacity 32MB	JEIDA Ver. 4.2 compliant (PCMCIA2.1 compliant)	
	A9GTMEM-40MF	Memory capacity 64MB		
	A1SD59J-MIF	For A95□GOT(-M3)/A956WGOT	For SRAM PC card (optional)	
External input/output interface unit	A9GT-70KBF	For A985/975/970/A960GOT(-B)	Proximity input/output: 8 DC inputs or	
	A8GT-50KBF	For A95□GOT(-M3)/A956WGOT	Keyboard: 64 DC inputs, 16 transistor outputs	
Numerical keypad	A8GT-TK	For external input/output interface unit connection		
Printer interface unit	A9GT-50PRF	For A95□(-M3)/A956WGOT	For parallel printer connection (1CH)	
Attachment	Conventional models		Replaceable models	
	A87GT-97ATT	A870GOT-TWS/SWS	A97□GOT(-B)	
		A8GT-70GOT-TW/TB/SW/SB		
	A87GT-96ATT	A870GOT-EWS, A8GT-70GOT-EW/EB	A960GOT	
		A77GOT-EL-S5/EL-S3/EL		
	A77GT-96ATT	A77GOT-CL-S5/CL-S3/CL/L-S5/L-S3/L		
	A85GT-95ATT	A85□GOT(-M3)	A95□GOT(-M3)	

Cables

Product name	Model name	Cable length	3rd party products ¹	Applications	
Q bus connection cable *2 (For QCPU (Q mode))	Q extension cable	QC06B	0.6m		For connection between QCPU and GOT
		QC12B	1.2m		For connection between GOT and GOT
		QC30B	3m		
		QC50B	5m		
		QC100B	10m		
	Inter-GOT connection cable	A9GT-QC150BS	15m		For connection between QCPU and GOT (A9GT-QCNB is required)
		A9GT-QC200BS	20m		For connection between GOT and GOT
		A9GT-QC250BS	25m		
		A9GT-QC300BS	30m		
		A9GT-QC350BS	35m		
Bus extension connector box	A9GT-QCNB	-	-	*Used for QCPU long-distance bus connection	
A bus connection cable *2 (For QnA/ACPU/motion controller (A series))	Large CPU extension cable	A8GT-C12NB	1.2m		For connection between QnA/ACPU/motion controller (A series/extension base) and GOT
		A8GT-C30NB	3m		
		A8GT-C50NB	5m		
		AC06B	0.6m		For connection between QnA/ACPU/motion controller (A series/extension base) and A7GT-CNB
		AC12B	1.2m		
	Small CPU extension cable	AC30B	3m		For connection between QnA/ACPU/motion controller (A series/extension base) and A7GT-CNB (one-end right angle connector)
		AC50B	5m		
		AC12B-R	1.2m		For connection between QnA/ACPU/motion controller (A series/extension base) and A7GT-CNB (one-end right angle connector)
		AC30B-R	3m		
		AC50B-R	5m		
	Small CPU long-distance connection cable	A370C12B-S1	1.2m		For connection between motion controller (A series/main base) and GOT
		A370C25B-S1	2.5m		
		A370C12B	1.2m		For connection between motion controller (A series/main base) and A7GT-CNB
		A370C25B	2.5m		
		A1SC07B	0.7m		For connection between QnAS/AnSCPU/motion controller (A series) and GOT
Inter-GOT long-distance connection cable	A1SC12B	1.2m		For connection between GOT and GOT	
	A1SC30B	3m			
	A1SC50B	5m			
	A1SC05NB	0.5m		For connection between QnAS/AnSCPU and A7GT-CNB	
	A1SC07NB	0.7m			
A0J2HPCPU connection cable	A1SC30NB	3m			
	A1SC50NB	5m			
	A8GT-C100EXSS-1	10.6m		For connection between QnAS/AnSCPU/motion controller (A series) and GOT	
	A8GT-C200EXSS-1	20.6m		For connection between A7GT-CNB and GOT	
	A8GT-C300EXSS-1	30.6m		*Combination of A8GT-EXCNB and A8GT-C□BS	
Bus connector conversion box	RS-422 cable	A8GT-C100BS	10m		For connection between GOT and GOT
		A8GT-C200BS	20m		
		A8GT-C300BS	30m		
		A9GT-J2C10B	1m		For connection between A0J2HPCPU power supply unit (A0J2-PW) and GOT
		A7GT-CNB	-	-	*Used for QnA/ACPU long-distance bus connection
	FXCPU direct connection cable	A8GT-EXCNB	0.5m		*Can be used with A8GT-C□BS as A8GT-C□EXSS-1.
		AC30R4-25P	3m		For connection between QnA/ACPU/motion controller (A series/extension base) and GOT, for connection between FX-2PIF and GOT, for connection between FX-422AW0 and GOT, for connection between AJ65BT-G4-S3 and GOT, for connection between AJ71QC24(N)-R4 and GOT, for connection between AJ65BT-G4-S3 and GOT
		AC100R4-25P	10m		
		AC300R4-25P	30m		
		FX9GT-CAB0-150	1.5m		For connection between FXCPU (FX0, FX0s, FX0N, FX1s, FX1N, FX2N, FX2NC) and GOT, for connection between FXCPU extension board (FX1N-422-BD, FX2N-422-BD) and GOT
	FX function extension board connection cable	FX9GT-CAB0	3m		
		FX9GT-CAB-10M	10m		
		FA-CNV2402CBL	0.2m		For connection between QCPU and AC□R4-25P
		FA-CNV2405CBL	0.5m		
		FX-422AW0	1.5m		For connection between FXCPU and AC□R4-25P
2PIF connection cable	FX-422CAB0	1.5m		For connection between FXCPU and FX-2PIF	
	AC006-25PEXT	6cm		For junction connection (horizontal extension) between GOT (D-sub 25 pins: male) and RS422 cable (D-sub 25 pins: female)	
	FX-2PIF	-	-	*Used for FXCPU direct connection	
	QC30R2	3m		For connection between QCPU and GOT	
	AC30R2-9SS	3m		For connection between FXCPU extension board (FX1N-232-BD) and GOT	
Junction adaptor	FX-232CAB-1	3m		For connection between personal computer (drawing software) (D-sub 9 pins: female) and GOT (D-sub 9 pins: female)	
	AC30R2-9P	3m		For connection between personal computer (drawing software) (D-sub 25 pins: male) and GOT (D-sub 9 pins: female)	
	F2-232CAB-1	3m			
	AC30R2	3m		For connection between personal computer (drawing software) (D-sub 25 pins: male) and GOT (D-sub 25 pins: male) *25 pin-9 pin converter is required	
	AC30N2A	3m			
Printer cable	AC006-9PEXT	6cm		For junction connection (horizontal extension) between GOT (D-sub 9 pins: female) and RS232C cable (D-sub 9 pins: male)	
	AC30PIO-20P	3m		For connection between GOT and parallel printer	
	A85GT-C05H	0.5m		For connection between GOT and PC card interface unit (A1SD59J-MIF)	
	AC50VG	5m		For connection between GOT and CRT	
	AC300VG	30m			
A800 series → A900 series conversion cable	A7GT-CNB-BUS-1 New	0.3m		Bus connector conversion cable package (connector conversion module A7GT-CNB-BUS and conversion cable A8GT-C03BS)	
	A7GT-CNB-RS4-1 New	0.1m		RS422 connector conversion cable package (connector conversion module A7GT-CNB-RS4 and conversion cable A9GT-C01R4-25P)	

*1: Recommend products are available at Mitsubishi Electric System Service. Please contact your local sales office for details.
*2: Confirm the connector dimensions/shapes of the bus connection cables on page 52 "Bus connection cables".

Precautions for Choosing the Products

This catalog explains the typical features and functions of the GOT900 series and does not provide restrictions and other information on usage and module combinations. When using the products, always read the user's manuals of the products. Mitsubishi will not be held liable for damage caused by factors found not to be the cause of Mitsubishi; machine damage or lost profits caused by faults in the Mitsubishi products; damage, secondary damage, accident compensation caused by special factors unpredictable by Mitsubishi; damages to products other than Mitsubishi products; and to other duties.

For safe use

- To use the products given in this catalog properly, always read the "manuals" before starting to use them.
- This product has been manufactured as a general-purpose part for general industries, and has not been designed or manufactured to be incorporated in a device or system used in purposes related to human life.
- Before using the product for special purposes such as nuclear power, electric power, aerospace, medicine or passenger movement vehicles, consult with Mitsubishi.
- This product has been manufactured under strict quality control. However, when installing the product where major accidents or losses could occur if the product fails, install appropriate backup or failsafe functions in the system.
