# 1. General Description

This manual describes the programming methods that should be created by the user for monitoring measurement value of Energy Measuring Unit (called Measuring Unit from here on) with the CC-Link (in remote net ver2 mode or remote net additional mode).

In programming, read the following related manuals in addition to this manual.

Table 1.1 Related Manual

Manual Name	Manual No.
CC-Link System Master/Local Module User's Manual type QJ61BT11N	SH-080394E (13JR64)
MELSEC-L CC-Link System Master/Local Module User's Manual	SH-080895ENG (13JZ41)
User's Manual for Measuring Unit	Supplied with product or download.

**NOTICE**

When using EcoMonitorLight (EMU4-FD1-MB), Optional Plug-in Module "EMU4-CM-C" is necessary. CC-Link communication is not available without the optional plug-in module. In this manual, EcoMonitorLight (MU4-FD1-MB),

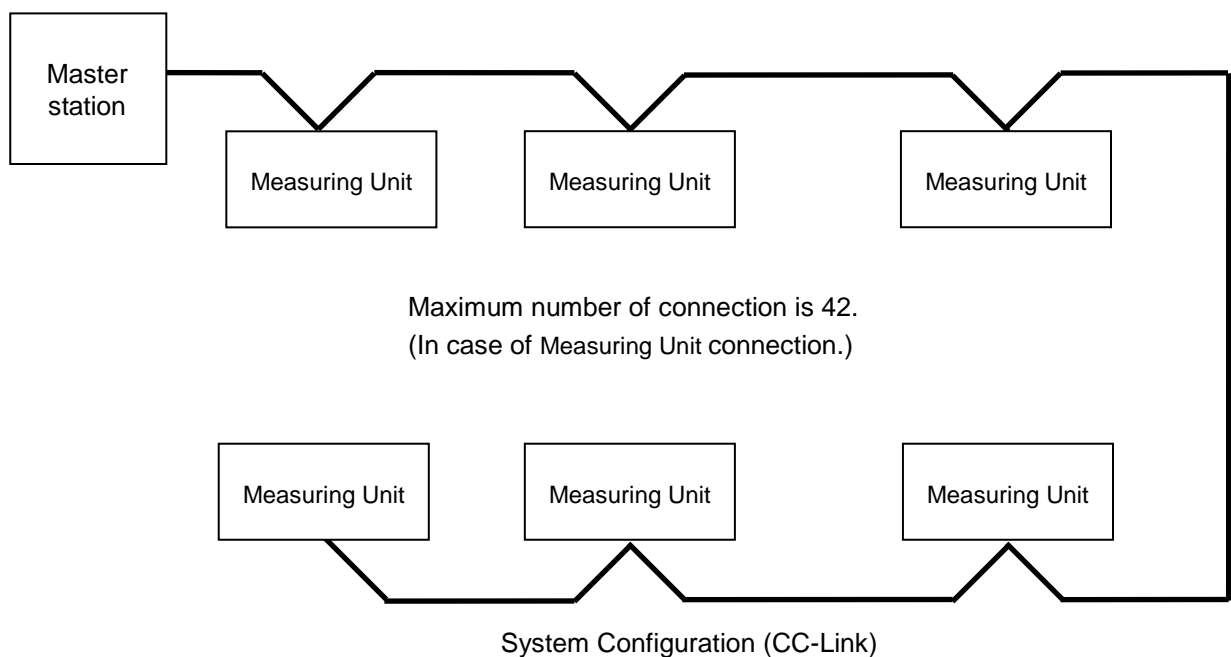

<b>POINT</b>	
The EMU4-FD1-MB must be handled after setting of the remote device station version. Set the remote device station version with the "Setting Menu 7" of the EMU4-FD1-MB	
Use the following as a guideline in setting the remote device station version and set the version at Energy measuring unit.	
Mode select setting	Guideline for selection
Ver.1 remote device station (Ver.1 compatible slave station)	Select this when utilizing the conventional program, because of compatibility with Measuring unit previous EMU4.
Ver.2 remote device station (Ver.2 compatible slave station)	Select this when configuring a new system or the being newly added to the existing system in combination with the applicable master module.
This programming manual is for ver.2 remote device station.	
For use in the ver.1 remote device station (Ver.1 compatible slave station), refer to the following manual.	
•Energy Measuring Unit Programing Manual (CC-Link)(For ver.1 remote device station)..... LEN160602	

## 2. Specification

CC-Link specification is shown in Table 2.1 when Measuring Unit is set the "Ver2.00" (ver.2 remote device station).

Table 2.1 CC-Link Specification (For Ver2.00)

Item	Specification
CC-Link station type	Remote device station (ver.2 remote device station)
Number of occupied stations	1 station (Expanded cyclic setting: Octuplet)
Maximum number of stations per master station	42 stations (In case of connecting only remote device station occupied by 1 station (Octuplet).)
Transmission speed	156kbps/625kbps/2.5Mbps/5Mbps/10Mbps
Remote I/O (RX, RY)	128 points each
Remote register (RWw, RWr)	32 points each

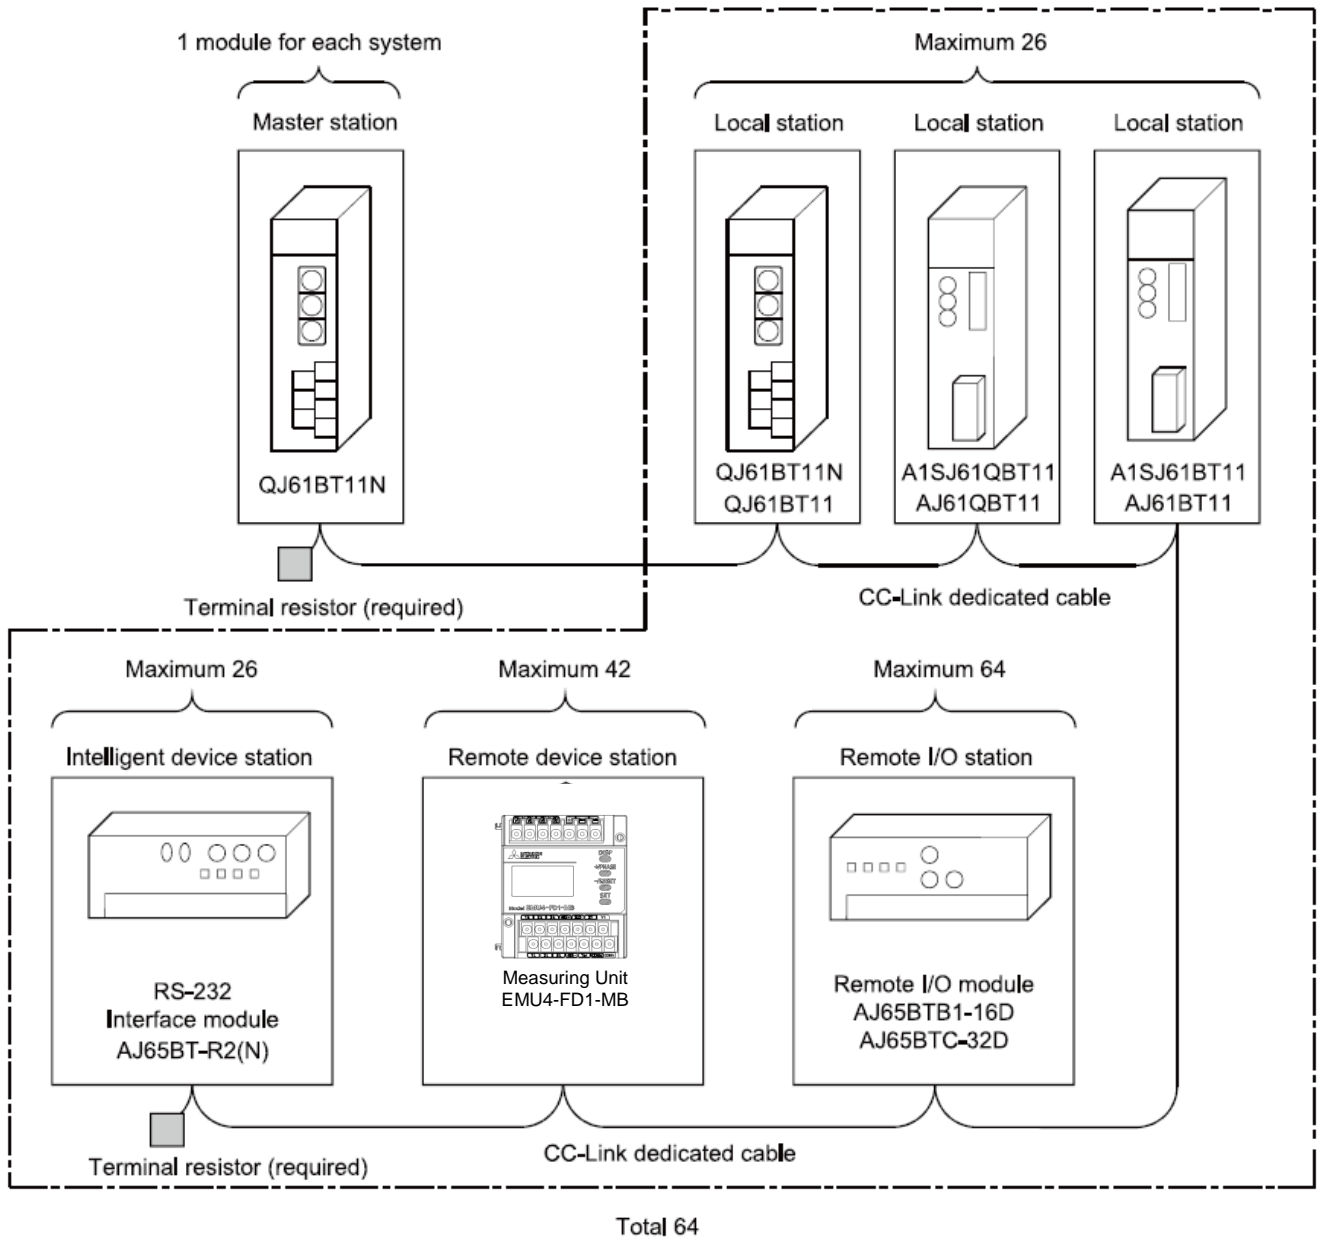

### 3. Configuration Conditions of CC-Link System

#### 3.1 Remote net ver.2 mode, remote net additional mode

A total of 64 remote I/O stations, remote device stations, local stations, standby master stations, or intelligent device stations can be connected to a single master station.

However, the following conditions must all be satisfied.

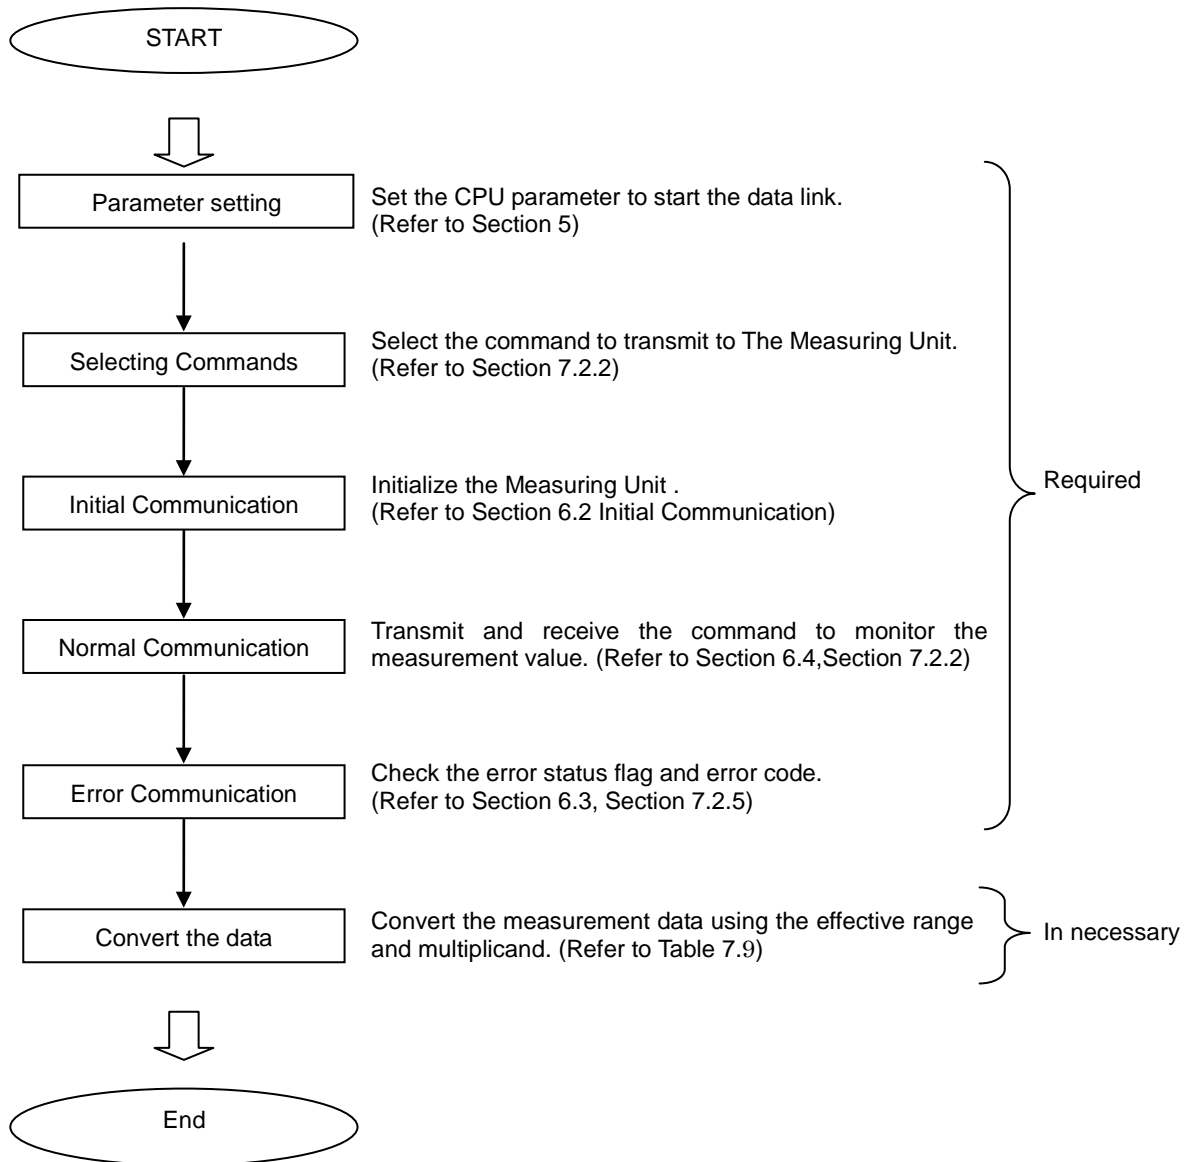

Condition 1	$\begin{aligned} & \{(a+a2+a4+a8) \\ & + (b+b2+b4+b8) \times 2 \\ & + (c+c2+c4+c8) \times 3 \\ & + (d+d2+d4+d8) \times 4\} \leq 64 \end{aligned}$	<p>a: The total number of ver.1 compatible slave stations that occupy 1 station, and ver.2 compatible slave stations that occupy 1 station which are set to "Single".</p>
Condition 2	$\begin{aligned} & [ \{(a \times 32) + (a2 \times 32) + (a4 \times 64) + (a8 \times 128)\} \\ & + \{(b \times 64) + (b2 \times 96) + (b4 \times 192) + (b8 \times 384)\} \\ & + \{(c \times 96) + (c2 \times 160) + (c4 \times 320) + (c8 \times 640)\} \\ & + \{(d \times 128) + (d2 \times 224) + (d4 \times 448) + (d8 \times 896)\} ] \\ & \leq 8192 \end{aligned}$	<p>b: The total number of ver.1 compatible slave stations that occupy 2 stations, and ver.2 compatible slave stations that occupy 2 stations which are set to "Single".</p> <p>c: The total number of ver.1 compatible slave stations that occupy 3 stations, and ver.2 compatible slave stations that occupy 3 stations which are set to "Single".</p> <p>d: The total number of ver.1 compatible slave stations that occupy 4 stations, and ver.2 compatible slave stations that occupy 4 stations which are set to "Single".</p>
Condition 3	$\begin{aligned} & [ \{(a \times 4) + (a2 \times 8) + (a4 \times 16) + (a8 \times 32)\} \\ & + \{(b \times 8) + (b2 \times 16) + (b4 \times 32) + (b8 \times 64)\} \\ & + \{(c \times 12) + (c2 \times 24) + (c4 \times 48) + (c8 \times 96)\} \\ & + \{(d \times 16) + (d2 \times 32) + (d4 \times 64) + (d8 \times 128)\} ] \\ & \leq 2048 \end{aligned}$	<p>a2: The number of ver.2 compatible stations that occupy 1 station which are set to "Double".</p> <p>b2: The number of ver.2 compatible stations that occupy 2 stations which are set to "Double".</p> <p>c2: The number of ver.2 compatible stations that occupy 3 stations which are set to "Double".</p> <p>d2: The number of ver.2 compatible stations that occupy 4 stations which are set to "Double".</p> <p>a4: The number of ver.2 compatible stations that occupy 1 station which are set to "Quadruple".</p> <p>b4: The number of ver.2 compatible stations that occupy 2 stations which are set to "Quadruple".</p> <p>c4: The number of ver.2 compatible stations that occupy 3 stations which are set to "Quadruple".</p> <p>d4: The number of ver.2 compatible stations that occupy 4 stations which are set to "Quadruple".</p> <p>a8: The number of ver.2 compatible stations that occupy 1 station which are set to "Octuplet". (Energy measuring unit is applied)</p> <p>b8: The number of ver.2 compatible stations that occupy 2 stations which are set to "Octuplet".</p> <p>c8: The number of ver.2 compatible stations that occupy 3 stations which are set to "Octuplet".</p> <p>d8: The number of ver.2 compatible stations that occupy 4 stations which are set to "Octuplet".</p>
Condition 4	$\{(16 \times A) + (54 \times B) + (88 \times C)\} \leq 2304$	<p>A: Number of remote I/O stations <math>\leq 64</math></p> <p>B: Number of remote device stations <math>\leq 42</math> (Measuring Unit is applied.)</p> <p>C: Number of local stations, standby master stations and intelligent device stations <math>\leq 26</math></p>

## 4. Programming

### 4.1 Programming Procedure

Create a program which executes the "Monitoring of the measurement values" by following the procedure below:

## 5. Parameter Settings

### 5.1 Procedure from Parameter Settings to Data Link Startup

The following explains the procedure from setting the parameters to starting the data link.

#### 5.1.1 CPU Parameter Area and Master Module Parameter Memory

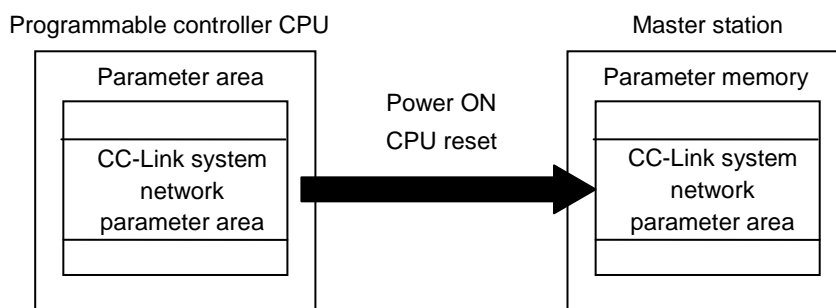

(1) CPU Parameter Area

This area is used to set the basic values for controlling the programmable controller system and the network parameters that control the CC-Link system.

(2) Master Station Parameter Memory

This area stores the network parameters for the CC-Link system.

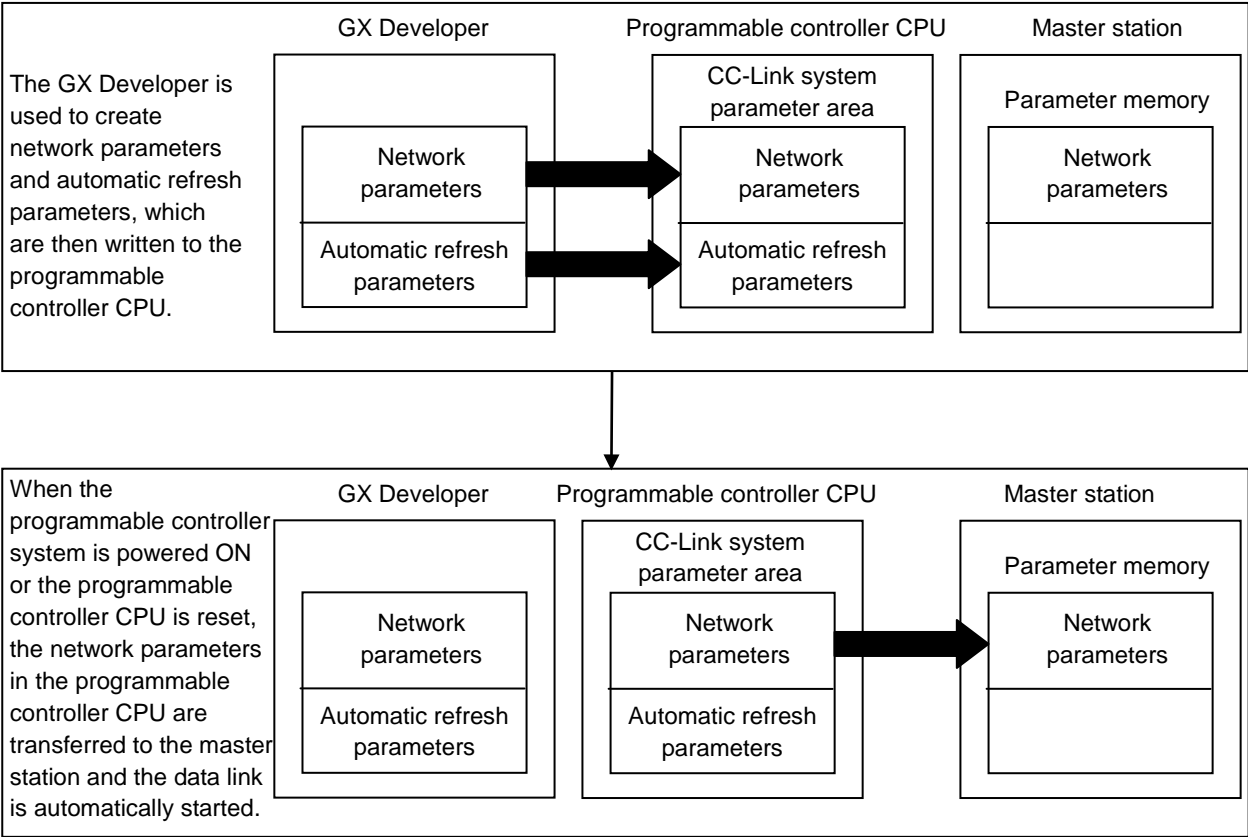

When the module is powered OFF or the programmable controller CPU is reset, the network parameters are erased.

5.1.2 Procedure for Parameter Settings to Data Link Startup with GX Developer

Follow the procedure below for parameter settings to data link startup:

## 5.2 Example of Parameter Settings with GX Developer (Remote net ver.2 mode)

This section explains the parameter settings using the GX Developer. For more details on the GX Developer operation, refer to the GX Developer Operating Manual. The explanations in this section are based on the following example of the system configuration.

### 5.2.1 Master Station Network Parameter Settings

- 1) Double-click on the "Network param".
- 2) Click on the "CC-Link" on the "Network parameter" screen.
- 3) Set the parameters as required.

The following describes an example of the parameter settings.

The screenshot shows the MELSOFT GX Developer interface. The 'Network parameters Setting the CC-Link list.' window is open. In the left-hand tree view, 'Network param' is highlighted with a red box and labeled '1'. In the 'Network parameter' dialog box, 'CC-Link' is selected with a red box and labeled '2'. The main window displays a table of parameters for two boards (1 and 2). A red oval highlights the 'Operational settings' section of the table, labeled '3'.

	1	2
Start I/O No	0000	
Operational setting	Operational settings	
Type	Master station	
Master station data link type	PLC parameter auto start	
Mode	Remote net(Ver.2 mode)	
All connect count	2	
Remote input(RX)	X1000	
Remote output(RY)	Y1000	
Remote register(RW/r)	w0	
Remote register(RW/w)	w1000	
Ver.2 Remote input(RX)		
Ver.2 Remote output(RY)		
Ver.2 Remote register(RW/r)		
Ver.2 Remote register(RW/w)		
Special relay(SB)	S80	
Special register(SW)	SW0	
Retry count	3	
Automatic reconnection station count	1	
Stand by master station No.		
PLC down select	Stop	
Scan mode setting	Asynchronous	
Delay information setting	0	
Station information setting	Station information	
Remote device station initial setting	Initial settings	
Interrupt setting	Interrupt settings	

Setting Item	Description	Example for settings	Remarks
No.of boards in module	Set the "No. of boards in module " for which the network parameters are to be set.	1	
Start I/O No	Set the "Start I/O No." for the master station.	0000	Set the same setting of Start XY in PC parameters setting.
Operational settings	Set the following: ·Parameter name ·Data link err station setting ·Case of CPU Stop setting ·Block data assurance per station	Refer to next page.	Even if the Parameter name is not set, this will not affect the operation of the CC-Link system
Type	Set the station type.	Master station	
Mode	Set the CC-Link mode.	Remote net (Ver.2 mode)	"Remote net ver.2 mode " and "Remote net additional mode" can be also used in case of the QJ61BT11N.
All connect count	Set the total number of connected stations in the CC-Link system including reserved stations.	2 (modules)	Set the total number of connected stations in the CC-Link system including reserved stations.
Remote input (RX)	Set the remote input (RX) refresh device.	X1000	Device name - Select from X, M, L, B, D, W, R or ZR. Device number - Within the range of the device points that the CPU has.
Remote output (RY)	Set the remote output (RY) refresh device.	Y1000	Device name - Select from Y, M, L, B, T, C, ST, D, W, R or ZR. Device number - Within the range of the device points that the CPU has.
Remote register (RWr)	Set the remote register (RWr) refresh device.	W0	Device name - Select from M, L, B, D, W, R, or ZR. Device number - Within the range of the device points that the CPU has.
Remote register (RWw)	Set the remote register (RWw) refresh device.	W1000	Device name - Select from M, L, B, T, C, ST, D, W, R, or ZR. Device number - Within the range of the device points that the CPU has.
Special relay (SB)	Set the link special relay (SB) refresh device.	SB0	Device name - Select from M, L, B, D, W, R, SB or ZR. Device number - Within the range of the device points that the CPU has.
Special register (SW)	Set the link special register (SW) refresh device.	SW0	Device name - Select from M, L, B, D, W, R, SW or ZR. Device number - Within the range of the device points that the CPU has.
Retry count	Set the number of retries for "Retry count", when a communication error occurs.	3	
Automatic reconnection station count	Set the number of modules that can return to system operation by a single link scan.	1	
Standby master station No.	Set the station number for the standby master station	Blank	Blank: No standby master station specified.
PLC down select	Set the data link status for "PLC down select", when a master station programmable controller CPU error occurs.	Stop	
Scan mode setting	Set whether the link scan for the sequence scan is synchronous or asynchronous.	Asynchronous	
Delay information setting	Set for the link scan delay time.	0	Unit:50 $\mu$ s
Station information settings	Set the station data.	Refer to the next page.	

POINT
<p>(1) For the automatic refresh parameter setting, set the start device only. Devices are automatically assigned until the last station number including reserved stations and occupied stations.          In the example of the system configuration in this section, the last station number is "2". Therefore, total of remote I/O points is 256 points (128 x 2 = 256) and total of remote registers points is 64 points (32 x 2 = 64). If refresh device of remote input (RX) is set to "X1000" and that of remote registers (RWr) is set to "W0", the end devices will be "X10FF" and "W3F" respectively.</p> <p>(2) When setting X, Y, B, W, SB and SW as refresh devices, make setting so that they do not overlap with the device numbers used on the other networks, etc.</p>

《Example for Operational settings》

Setting Item	Description	Example for settings	Remarks
Parameter name	Set the Parameter name.	"SAMPLE"	Even if the Parameter name is not set, this will not affect the operation of the CC-Link system
Data link disorder station setting	Set the input status for the data link error station.	Clear ("Hold input data" not checked)	
Case of CPU Stop setting	Set the slave station refresh/compulsory clear setting at programmable controller CPU STOP.	Refresh ("Clears compulsorily" not checked)	
Block data assurance per station	Set the block guarantee of cyclic data per station.	Disable ("Enable setting" not checked)	

《Example for Station information settings》

CC-Link station information. Module 1

Station No.	Station type	Expanded cyclic setting	Exclusive station count	Remote station points	Reserve/invalid station select	Intelligent buffer select(word)		
						Send	Receive	Automatic
1/1	Ver.2Remote device station	octuple	Exclusive station 1	128 points	No setting			
2/2	Ver.2Remote device station	octuple	Exclusive station 1	128 points	No setting			

Default    Check    End    Cancel

Setting Item	Description	Example for settings	Remarks
Station type	Set the station data.	Ver2. Remote device station	Set the "ver2.00" in Setting Menu 7 of Measuring Unit.
Expanded cyclic setting		octuplet	Measuring Unit cannot use other than "octuplet".
Number of occupied stations *		Occupies 1 station	Set the "Occupies 1 station" in case of the Measuring Unit.
Remote station points		128 points	Set the "128 points" in case of the Measuring Unit.
Reserved/invalid station select		No setting	

\* "Number of exclusive stations" on the screen is described as "Number of occupied stations" in this manual.

"Exclusive station 1" on the screen is described as "Occupies 1 station" in this manual

## 6. Communication Between the Master Station and Measuring Unit

### 6.1 Communication Guideline

There are three communication statuses (Initial Communication, Normal Communication, and Error Communication) between the Master station and Measuring Unit.

In the normal communication, alarm status and digital input status of Measuring Unit can be monitored using bit data (remote input RX). Furthermore, the following can be performed by using remote input, remote output and remote registers.

- Monitoring by Pattern
- Monitoring by Command (1H).
- Setting by Command (2H).

For a monitoring by pattern, some measuring values can be monitored by selecting a bit of RY. Measuring values which can be monitored have been already grouping in Measuring Unit in advance. Please select the necessary group in a bit of RY.

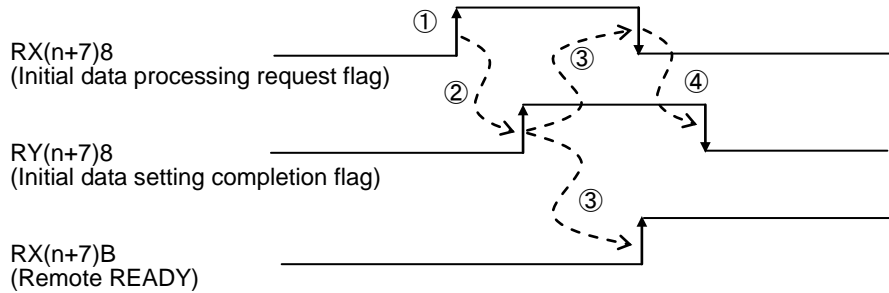

For a monitoring by command (1H), you can select any measurement items to be monitored. Measuring Unit has unique codes (called unit No., group No. and channel No.) for each measurement items. You can monitor the selected measurement items by writing these codes to the remote registers.

For a setting by command (2H), you can set for Measuring Unit settings.

\* All measuring items can be monitored even when it is not displayed in Measuring Unit.

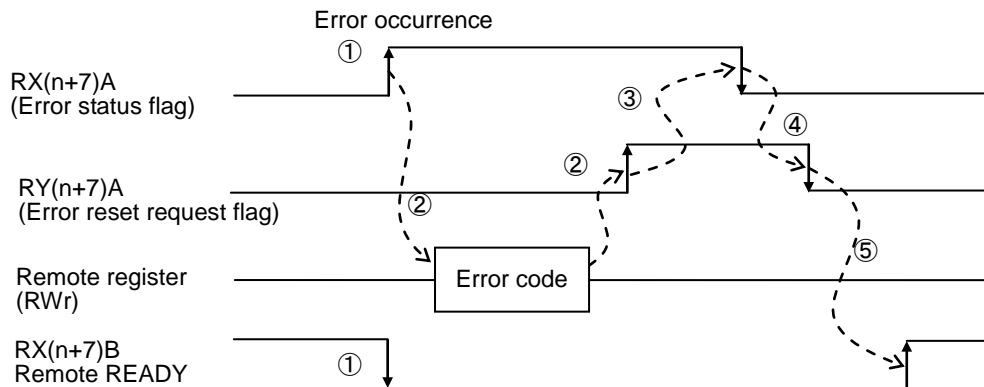

## 6.2 Initial Communication

Initial communication is performed at the beginning after the power supply is turned on or hardware is reset. Refer to section 7.1 about the remote input RX and the remote output RY.

- ① After the power supply is turned on, or hardware is reset, the initial data processing request flag is turned on by Measuring Unit.
- ② After the initial data processing request flag is turned on, turn on the initial data setting completion flag.
- ③ After the initial data setting completion flag is turned on, the initial data processing request flag is turned off and the remote READY is turned on.
- ④ After the initial data processing request flag is turned off, turned off the initial data setting completion flag.

## 6.3 Error Communication

- ① When an error occurs in Measuring Unit, error status flag is turned on and the remote READY is turned off.
- ② When the error status flag is turned on, read the error code from the remote register RWr. Eliminate the cause of the error while referring to the red error code. When resuming communication with Measuring Unit, turn on the error reset request flag.
- ③ After the error reset request flag is turned on, the error status flag is turned off.
- ④ After the error status flag is turned off, turn off the error reset request flag.
- ⑤ After the error reset request flag is turned off, the remote READY is turned on and normal communication is resumed.

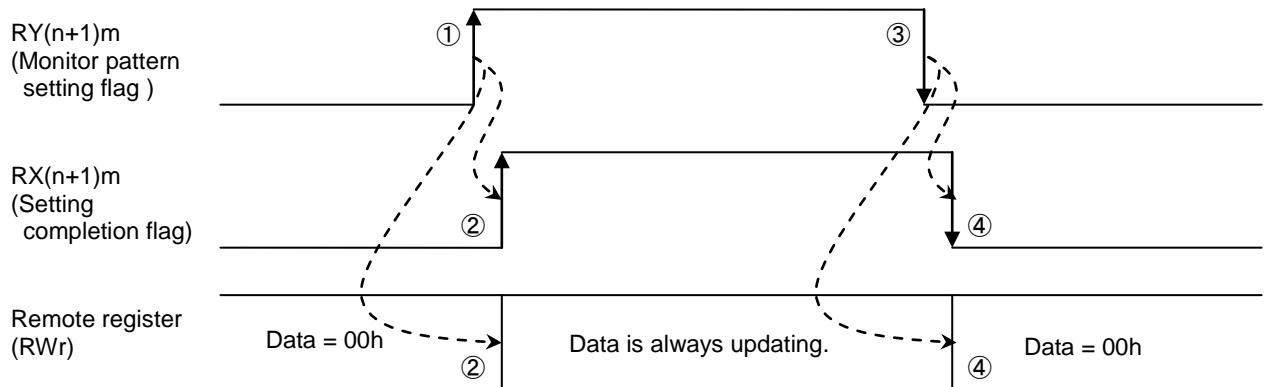

Note: Refer to "7.2.5 About error occurrence" for error code.

## 6.4 Normal Communication

After initial data processing is complete, allows the monitoring by pattern, monitoring by command (1H) and setting by command (2H).

### 6.4.1 Monitoring by Pattern

Up to 16 measuring values can be monitored by setting a bit of RY. Measuring values which can be monitored have been already grouping in Measuring Unit in advance. Therefore, select the necessary group in a bit of RY. (Refer to section 7.1.2)

#### (1) Start of monitor

① Turns on monitor pattern setting flag(RY(n+1)m) which will be monitored.

② Corresponding setting completion flag(RX(n+1)m) is turned on when the measuring values can be monitored at Measuring Unit. At this time, Measuring values are stored in remote registers (RWr) each time the measuring data of Measuring Unit is updating.

#### (2) End of monitor

③ Turns off monitor pattern setting flag(RY(n+1)m).

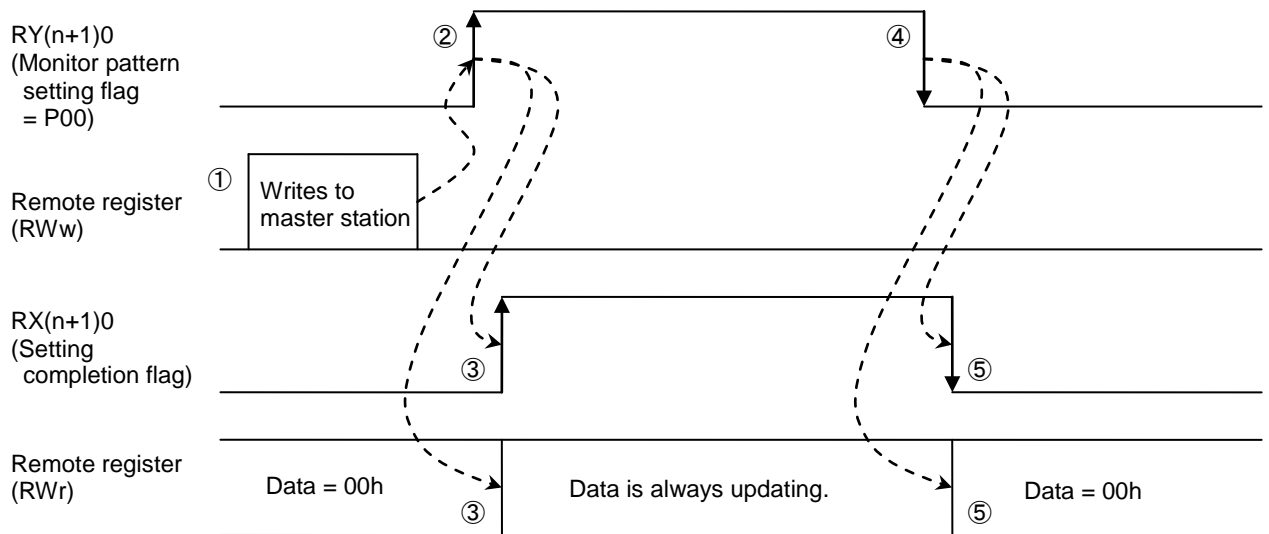

④ Corresponding setting completion flag(RX(n+1)m) is turned off and remote registers are 00h.

Note: When turns on multiple monitor pattern setting flag (RY (n+1)\*), setting completion flag is not turned on. At this time, error status flag (RX (n+7)A) is turned on, and remote READY (RX (n+7)B) is turned off.

## 6.4.2 Monitoring by Command (1H)

Up to 8 measuring values can be monitored by setting the unique codes (called unit No., group No. and channel No.).

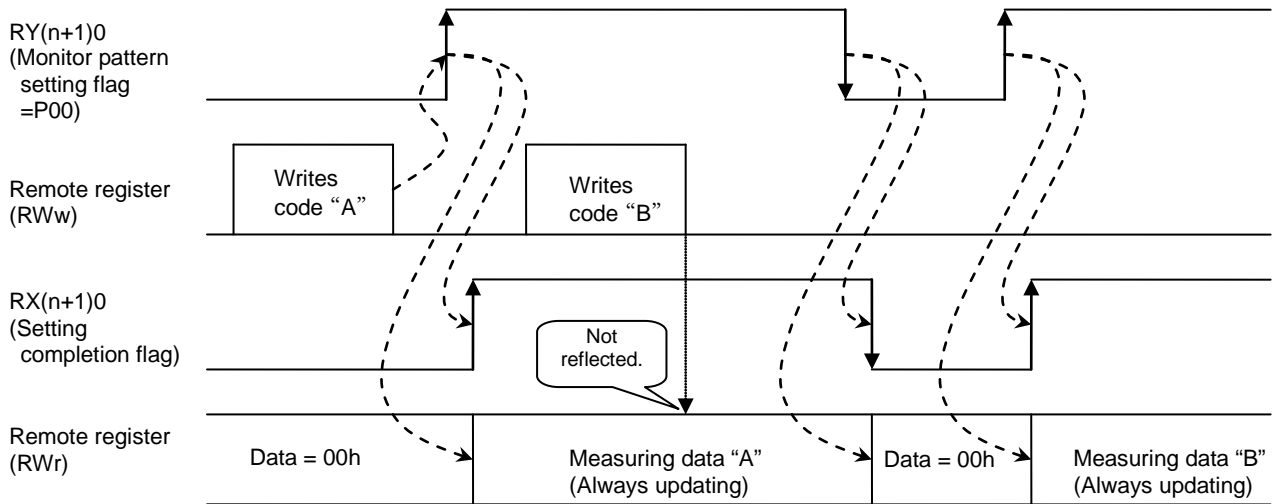

### (1) Start of monitor

- ① Writes the Unit No., group No. and channel No. for measuring items to be monitored to remote registers(RWw).
- ② Turns on monitor pattern setting flag(RY(n+1)0).
- ③ When the measuring values can be monitored with Measuring Unit, corresponding setting completion flag(RX(n+1)0) is turned on. At this time, Measuring values are stored in remote registers (RWr) each time the measuring data of Measuring Unit is updating.

### (2) End of monitor

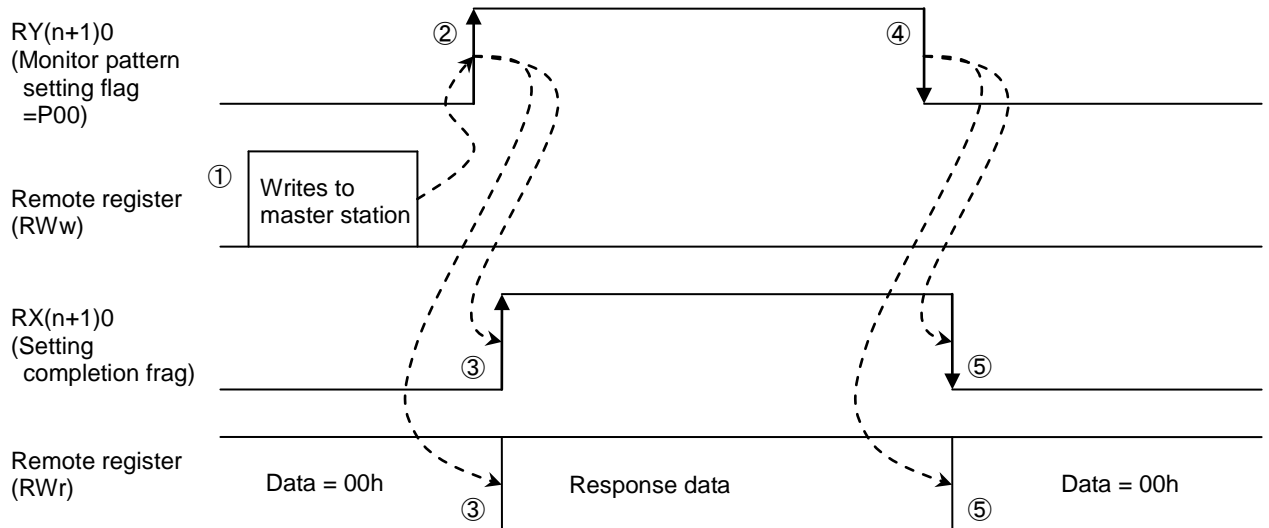

- ④ Turns off monitor pattern setting flag(RY(n+1)0).
- ⑤ Corresponding setting completion flag(RX(n+1)m) is turned off and remote registers are 00h.

Note: When monitor pattern setting flag (RY(n+1)0) remains on, measuring items in remote registers(RWr) is not reflected if remote registers (RWw) is changed. To change measuring items, turns on monitor pattern setting flag (RY (n+1)0) after changing remote registers (RWw).

### 6.4.3 Setting by Command (2H)

A setting item of Measuring Unit can be set by setting the unique codes (called unit No., group No. and channel No.) and setting data.

#### (1) Setting

- ① Writes the Unit No., group No, channel No. and setting data to remote registers(RWw).
- ② Turns on monitor pattern setting flag(RY(n+1)0).
- ③ After checking for data at Measuring Unit, corresponding setting completion flag(RX(n+1)0) is turned on. At this time, response data are stored in remote registers(RWw).

#### (2) End of setting

- ④ Turns off monitor pattern setting flag(RY(n+1)0).
- ⑤ Corresponding setting completion flag(RX(n+1)m) is turned off and remote registers are 00h.

Note: When monitor pattern setting flag (RY (n+1)0) remains on, setting data of Measuring Unit is not reflected if remote registers (RWw) is changed. To change setting data, turns on monitor pattern setting flag (RY (n+1)0) after writing remote registers (RWw).

## 7. Remote I/O and Remote Register

### 7.1 Remote Input RX, Remote Output RY

The remote input RX and remote output RY are used to communicate for bit data between the master station and Measuring Unit.

#### 7.1.1 Remote input RX

The allocation of the remote input RX of Measuring Unit is shown in the table below.

Device No.	Signal name	EMU4-FD1-MB	Description		Note
			OFF(0)	ON(1)	
RXn0	Alarm of Pulse	○	Non-Alarm state	Alarm state	Note2 Note3
RXn1	Reserved	—	—	—	
RXn2	Alarm of Demand current	○	Non-Alarm state	Alarm state	Note 2
RXn3	Alarm of Demand Active power	○	Non-Alarm state	Alarm state	Note 2
RXn4	Contact input	○	OFF(OPEN)	ON(CLOSE)	Note 4
RXn5	Alarm (total)	○	Non-Alarm state	Alarm state	Note 2
RXn6	Reserved	—	—	—	
RXn7	Reserved	—	—	—	
RXn8	Alarm of Voltage	○	Non-Alarm state	Alarm state	Note 2
RXn9 to RXnC	Reserved	—	—	—	
RXnD	Alarm of Power factor	○	Non-Alarm state	Alarm state	Note 2
RXnE	Reserved	—	—	—	
RXnF	Reserved	—	—	—	
RX(n+1)0	Setting completion flag P00	○	Not receiving	Receiving	
RX(n+1)1 to RX(n+1)7	Reserved	—	—	—	
RX(n+1)8	Setting completion flag P08	○	Not receiving	Receiving	
RX(n+1)9	Setting completion flag P09	○	Not receiving	Receiving	
RX(n+1)A	Setting completion flag P10	○	Not receiving	Receiving	Note 5
RX(n+1)B	Setting completion flag P11	○	Not receiving	Receiving	
RX(n+1)C	Setting completion flag P12	○	Not receiving	Receiving	Note 5
RX(n+1)D to RX(n+7)7	Reserved	—	—	—	
RX(n+7)8	Initial data processing request flag	○	Power OFF, remote READY ON, or error status flag ON	Power supply is turned ON or hardware reset	Note 1
RX(n+7)9	Reserved	—	—	—	
RX(n+7)A	Error status flag	○	No error occurrence	Error occurrence	Note 1
RX(n+7)B	Remote READY	○	Monitoring or setting are not possible	Normally communication status	Note 1
RX(n+7)C to RX(n+7)F	Reserved	—	—	—	

Note 1: For the details, refer to "6.Communication Between the Master Station and Measuring Unit".

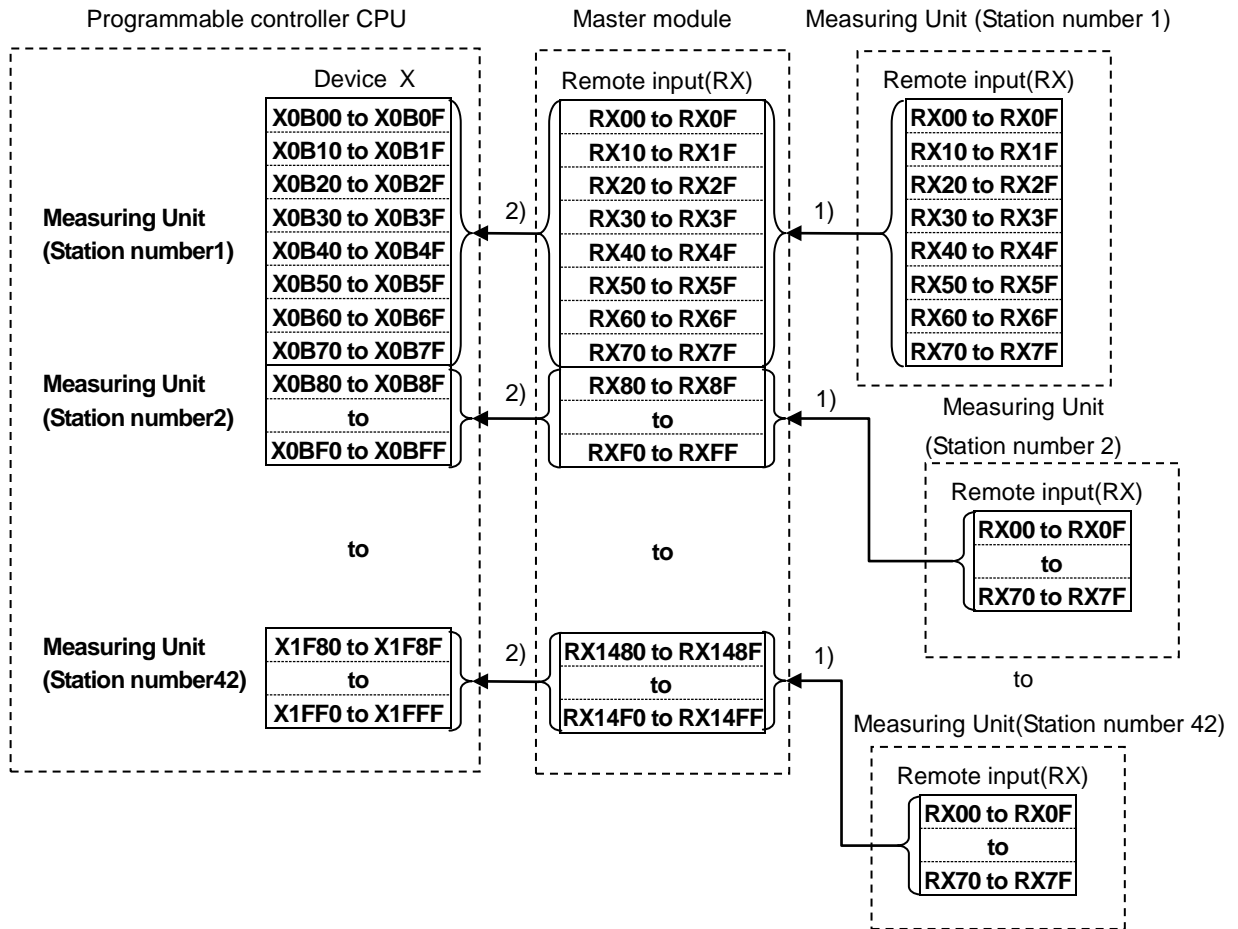

Note 2: This is only output when alarm use in measuring unit.

Note 3: Alarm of Pulse count is available only when Setting of external input signal of EMU4-FD1-MB is setup Pulse input. .

Note 4: Contact Input is available only when Setting of external input signal of EMU4-FD1-MB is setup Contact input.

Note 5: This is only available when phase wire system is 3P4W in EMU4-FD1-MB.

- (1) Relationships between programmable controller CPU, master module and Measuring Unit(RX)
- 1) The input status of Measuring Unit is stored automatically (for each link scan) in the master station's "remote input RX" buffer memory.
  - 2) The input status stored in the "remote input RX" buffer memory is stored in the CPU device set with the automatic refresh parameters.

Station number	Device No.	Station number	Device No.	Station number	Device No.
1	X0B00 to X0B7F	15	X1200 to X127F	29	X1900 to X197F
2	X0B80 to X0BFF	16	X1280 to X12FF	30	X1980 to X19FF
3	X0C00 to X0C7F	17	X1300 to X137F	31	X1A00 to X1A7F
4	X0C80 to X0CfF	18	X1380 to X13FF	32	X1A80 to X1AFF
5	X0D00 to X0D7F	19	X1400 to X147F	33	X1B00 to X1B7F
6	X0D80 to X0DFF	20	X1480 to X14FF	34	X1B80 to X1BFF
7	X0E00 to X0E7F	21	X1500 to X157F	35	X1C00 to X1C7F
8	X0E80 to X0EFF	22	X1580 to X15FF	36	X1C80 to X1CFF
9	X0F00 to X0F7F	23	X1600 to X167F	37	X1D00 to X1D7F
10	X0F80 to X0FFF	24	X1680 to X16FF	38	X1D80 to X1DFF
11	X1000 to X107F	25	X1700 to X177F	39	X1E00 to X1E7F
12	X1080 to X10FF	26	X1780 to X17FF	40	X1E80 to X1EFF
13	X1100 to X117F	27	X1800 to X187F	41	X1F00 to X1F7F
14	X1180 to X11FF	28	X1880 to X18FF	42	X1F80 to X1FFF

Device No. is determined to "X0B00 to X1FFF" if refresh device of remote input (RX) is set to "X0B00".

## 7.1.2 Remote Output RY

The allocation of the remote output RY of Measuring Unit is shown in the table below.

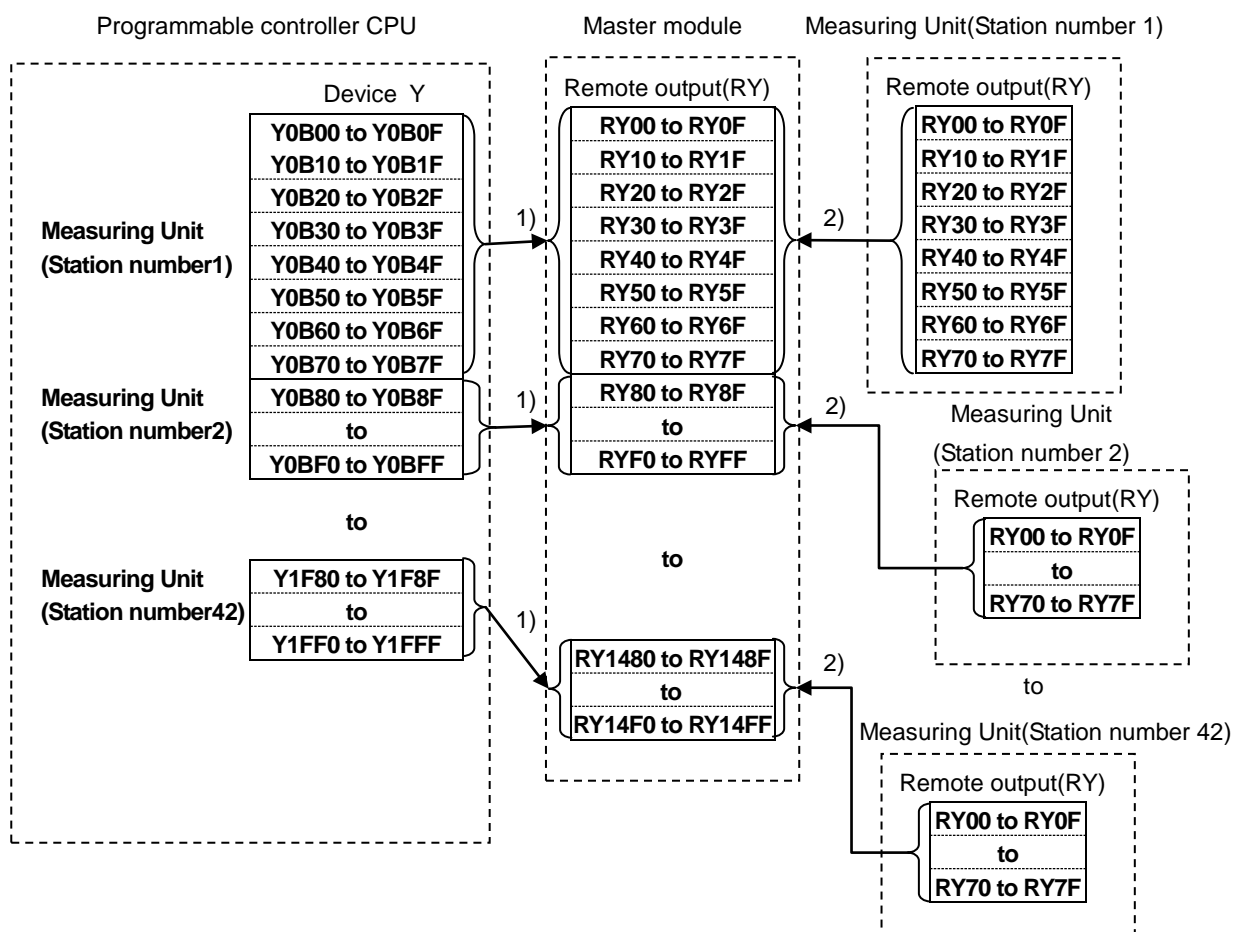

Device No.	Signal name	EMU4-FD1-MB	Description		Note
			ON (1) → OFF (0)	OFF (0) → ON (1)	
RYn0 to RYnF	Reserved	—	—	—	
RX(n+1)0	Monitor pattern setting flag P00	○	Not setting	Setting	
RY(n+1)1 to RY(n+1)7	Reserved	—	—	—	
RY(n+1)8	Monitor pattern setting flag P08	○	Not setting	Setting

Note 1: For the details, refer to “6.2 Initial communication”, “6.3 Error communication”

Note 2: This is only available when phase wire system is 3P4W in EMU4-FD1-MB. .

Relationships between programmable controller CPU, master module and Measuring Unit (RY)

- 1) The on/off data of the CPU device set with the automatic refresh parameters is stored in the "remote output RY" buffer memory.
- 2) Remote output RY is automatically set to on/off (for each link scan) according to the output status stored in the "remote output RY" buffer memory.

Station number	Device No.	Station number	Device No.	Station number	Device No.
1	Y0B00 to Y0B7F	15	Y1200 to Y127F	29	Y1900 to Y197F
2	Y0B80 to Y0BFF	16	Y1280 to Y12FF	30	Y1980 to Y19FF
3	Y0C00 to Y0C7F	17	Y1300 to Y137F	31	Y1A00 to Y1A7F
4	Y0C80 to Y0CfF	18	Y1380 to Y13FF	32	Y1A80 to Y1AFF
5	Y0D00 to Y0D7F	19	Y1400 to Y147F	33	Y1B00 to Y1B7F
6	Y0D80 to Y0DFF	20	Y1480 to Y14FF	34	Y1B80 to Y1BFF
7	Y0E00 to Y0E7F	21	Y1500 to Y157F	35	Y1C00 to Y1C7F
8	Y0E80 to Y0EFF	22	Y1580 to Y15FF	36	Y1C80 to Y1CFF
9	Y0F00 to Y0F7F	23	Y1600 to Y167F	37	Y1D00 to Y1D7F
10	Y0F80 to Y0FFF	24	Y1680 to Y16FF	38	Y1D80 to Y1DFF
11	Y1000 to Y107F	25	Y1700 to Y177F	39	Y1E00 to Y1E7F
12	Y1080 to Y10FF	26	Y1780 to Y17FF	40	Y1E80 to Y1EFF
13	Y1100 to Y117F	27	Y1800 to Y187F	41	Y1F00 to Y1F7F
14	Y1180 to Y11FF	28	Y1880 to Y18FF	42	Y1F80 to Y1FFF

Device No. is determined to "Y0B00 to Y1FFF" if refresh device of remote output (RY) is set to "Y0B00".

## 7.2 Remote Register (RW<sub>r</sub>, RW<sub>w</sub>)

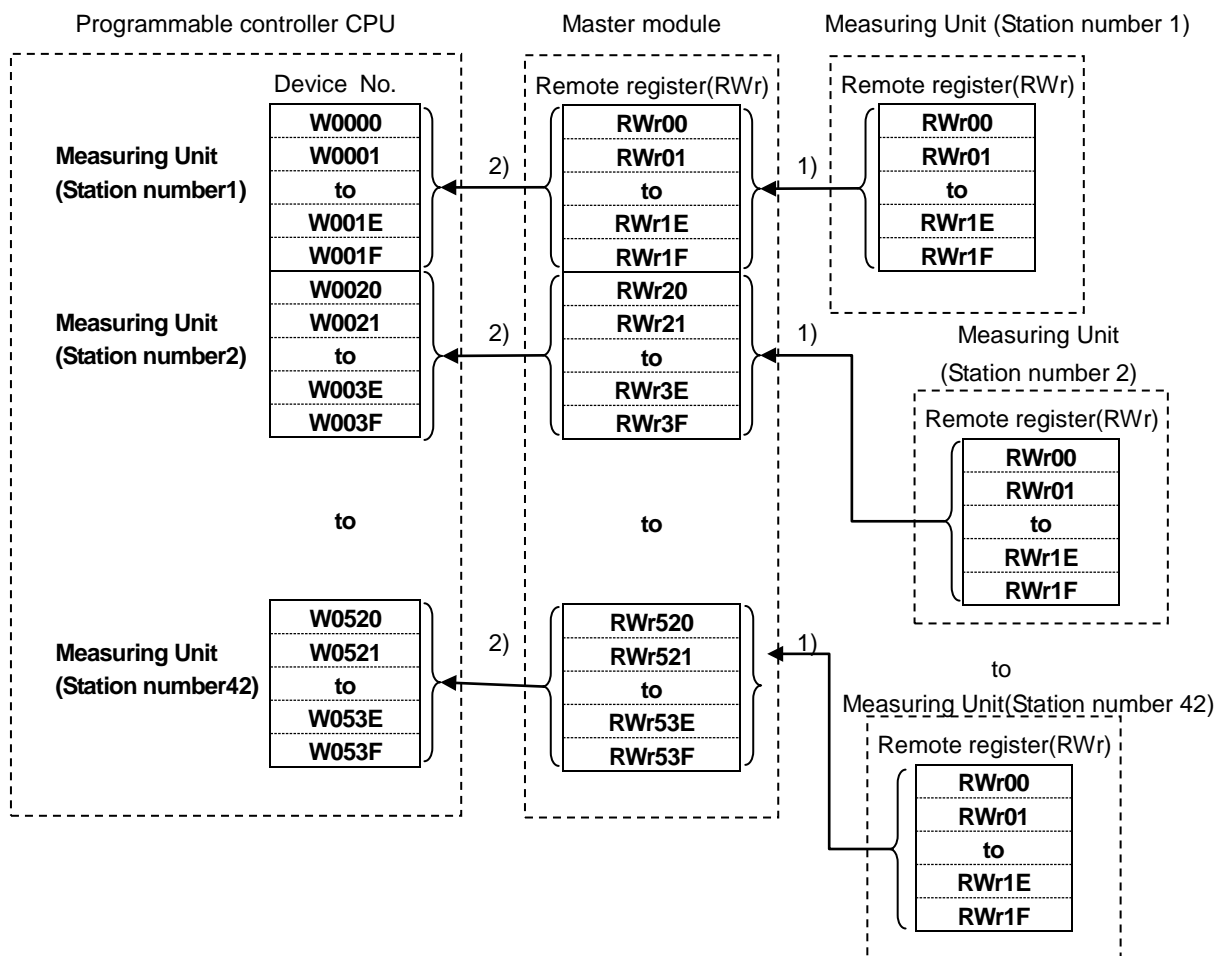

The remote registers RW<sub>r</sub> and RW<sub>w</sub> are used to communicate word data between the master station and Measuring Unit. Because it occupies 1 station (Expanded cyclic setting: octuplet), the remote registers RW<sub>r</sub> and RW<sub>w</sub> each have 32 words in length.

For monitoring by pattern, it is not necessary to use remote registers (RW<sub>w</sub>). Selected measuring values which are set a bit of RY are stored in remote registers (RW<sub>r</sub>).

For monitoring by command (1H) and setting by command (2H), it is necessary to use remote registers (RW<sub>w</sub>). Measuring Unit has unique codes (called unit No., group No. and channel No.) for each measurement items and setting items. It becomes possible to monitor each measurement values or set each parameter by writing into the remote registers (RW<sub>w</sub>) of the master station command and the related data allocated to the item you want to monitor or set.

(1) Relationships between programmable controller CPU, master module and Measuring Unit(RWr)

- 1) The remote registers RWr data of a remote device station is automatically stored in the "remote registers RWr" buffer memory of the master station.
- 2) The remote registers RWr data of Measuring Unit stored in the "remote registers RWr" buffer memory is stored in the CPU device set with the automatic refresh parameters.

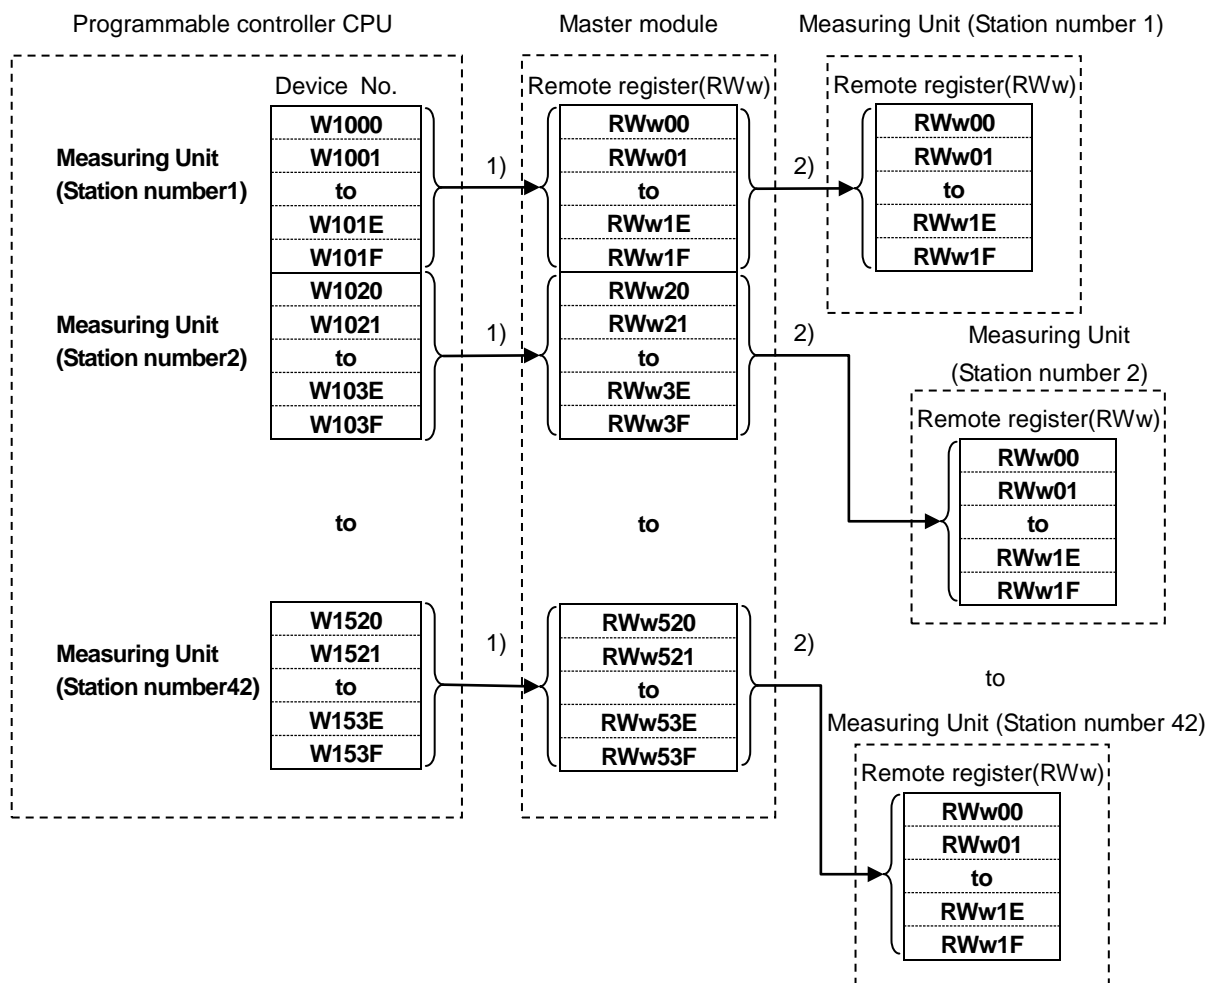

Station number	Device No.	Station number	Device No.	Station number	Device No.
1	W0000 to W001F	15	W01C0 to W01DF	29	W0380 to W039F
2	W0020 to W003F	16	W01E0 to W01FF	30	W03A0 to W03BF
3	W0040 to W005F	17	W0200 to W021F	31	W03C0 to W03DF
4	W0060 to W007F	18	W0220 to W023F	32	W03E0 to W03FF
5	W0080 to W009F	19	W0240 to W025F	33	W0400 to W041F
6	W00A0 to W00BF	20	W0260 to W027F	34	W0420 to W043F
7	W00C0 to W00DF	21	W0280 to W029F	35	W0440 to W045F
8	W00E0 to W00FF	22	W02A0 to W02BF	36	W0460 to W047F
9	W0100 to W011F	23	W02C0 to W02DF	37	W0480 to W049F
10	W0120 to W013F	24	W02E0 to W02FF	38	W04A0 to W04BF
11	W0140 to W015F	25	W0300 to W031F	39	W04C0 to W04DF
12	W0160 to W017F	26	W0320 to W033F	40	W04E0 to W04FF
13	W0180 to W019F	27	W0340 to W035F	41	W0500 to W051F
14	W01A0 to W01BF	28	W0360 to W037F	42	W0520 to W053F

Device No. is determined to "W0000 to W053F" if refresh device of remote registers (RWr) is set to "W0".

(2) Relationships between programmable controller CPU, master module and Measuring Unit(RWw)

- 1) The transmission data of the CPU device set with the automatic refresh parameters is stored in the "remote registers RWw" buffer memory.
- 2) The data stored in the "remote registers RWw" buffer memory is automatically sent to the remote registers RWw of each remote device station.

Station number	Device No.	Station number	Device No.	Station number	Device No.
1	W1000 to W101F	15	W11C0 to W11DF	29	W1380 to W139F
2	W1020 to W103F	16	W11E0 to W11FF	30	W13A0 to W13BF
3	W1040 to W105F	17	W1200 to W121F	31	W13C0 to W13DF
4	W1060 to W107F	18	W1220 to W123F	32	W13E0 to W13FF
5	W1080 to W109F	19	W1240 to W125F	33	W1400 to W141F
6	W10A0 to W10BF	20	W1260 to W127F	34	W1420 to W143F
7	W10C0 to W10DF	21	W1280 to W129F	35	W1440 to W145F
8	W10E0 to W10FF	22	W12A0 to W12BF	36	W1460 to W147F
9	W1100 to W111F	23	W12C0 to W12DF	37	W1480 to W149F
10	W1120 to W113F	24	W12E0 to W12FF	38	W14A0 to W14BF
11	W1140 to W115F	25	W1300 to W131F	39	W14C0 to W14DF
12	W1160 to W117F	26	W1320 to W133F	40	W14E0 to W14FF
13	W1180 to W119F	27	W1340 to W135F	41	W1500 to W151F
14	W11A0 to W11BF	28	W1360 to W137F	42	W1520 to W153F

Device No. is determined to "W1000 to W153F" if refresh device of remote registers (RWw) is set to "W1000".

## 7.2.1 Monitor Pattern

The following table shows correspondence between RY and grouped measuring items.

Table 7.1 Correspondence between RY and grouped measuring items.

(Model: EMU4-FD1-MB)

Device.	P08	P09	P10	P11	P12		
	RY(n+1)8	RY(n+1)9	RY(n+1)A	RY(n+1)B	RY(n+1)C

RWr1G				Reactive energy import lag [kvarh]	00h (No items)		
Group format	①	①	①	②	②		

Inst.: Instantaneous value

Note:[] shows the unit of measuring element in upper table.

Note: Phase 2 current (demand), Phase 3 current (demand), 2-3 Voltage, 3-1 Voltage are turned to 00h when phase wire system is 1P2W in EMU4-FD1-MB.

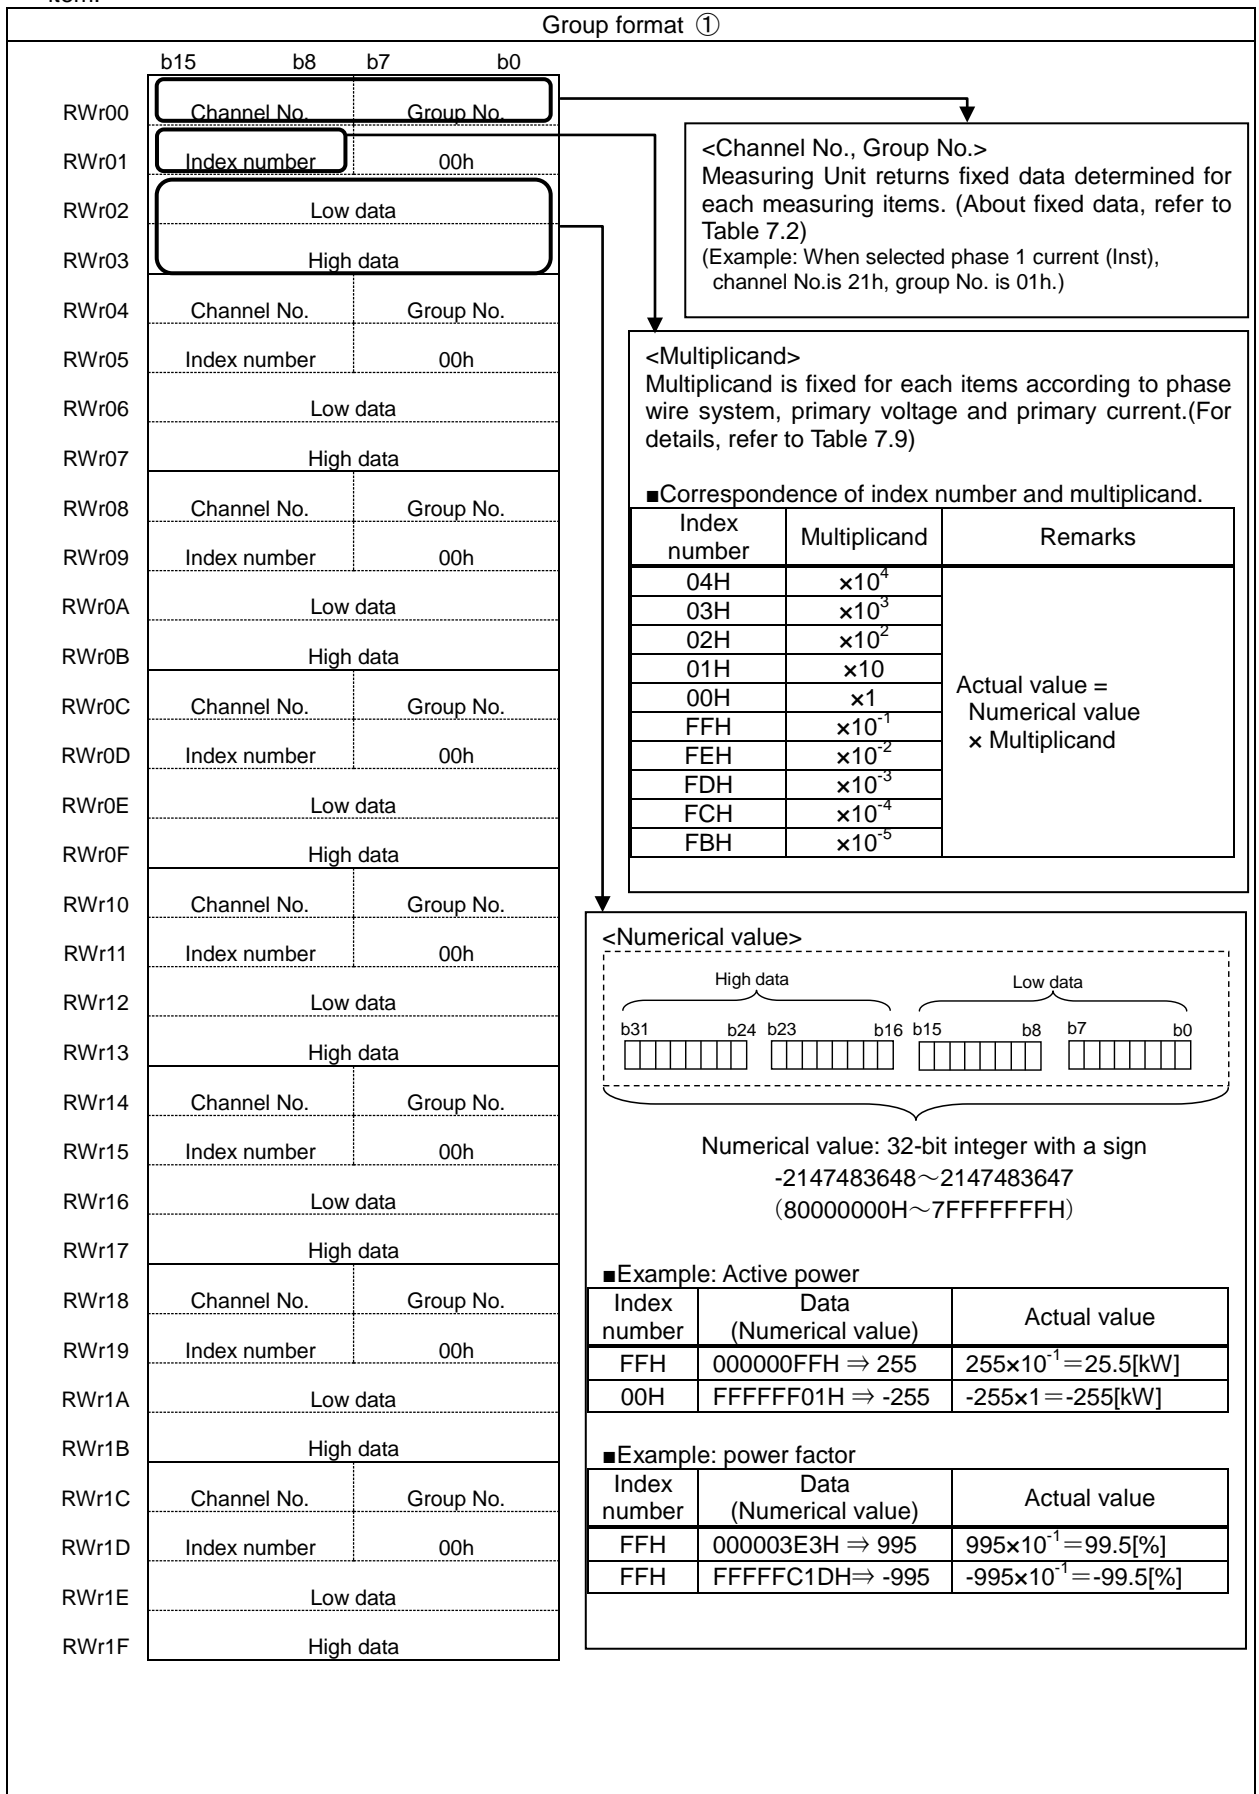

Note: For the power factor, "+" is showed lag, "-" is showed lead as with Measuring Unit's display.

\*1: P10,P12 is available only when phase wire system is 3P4W.

Error state flag RX(n+7)A turn to ON and RWr00~RWr1F turn to 00h when phase wire system is not 3P4W.

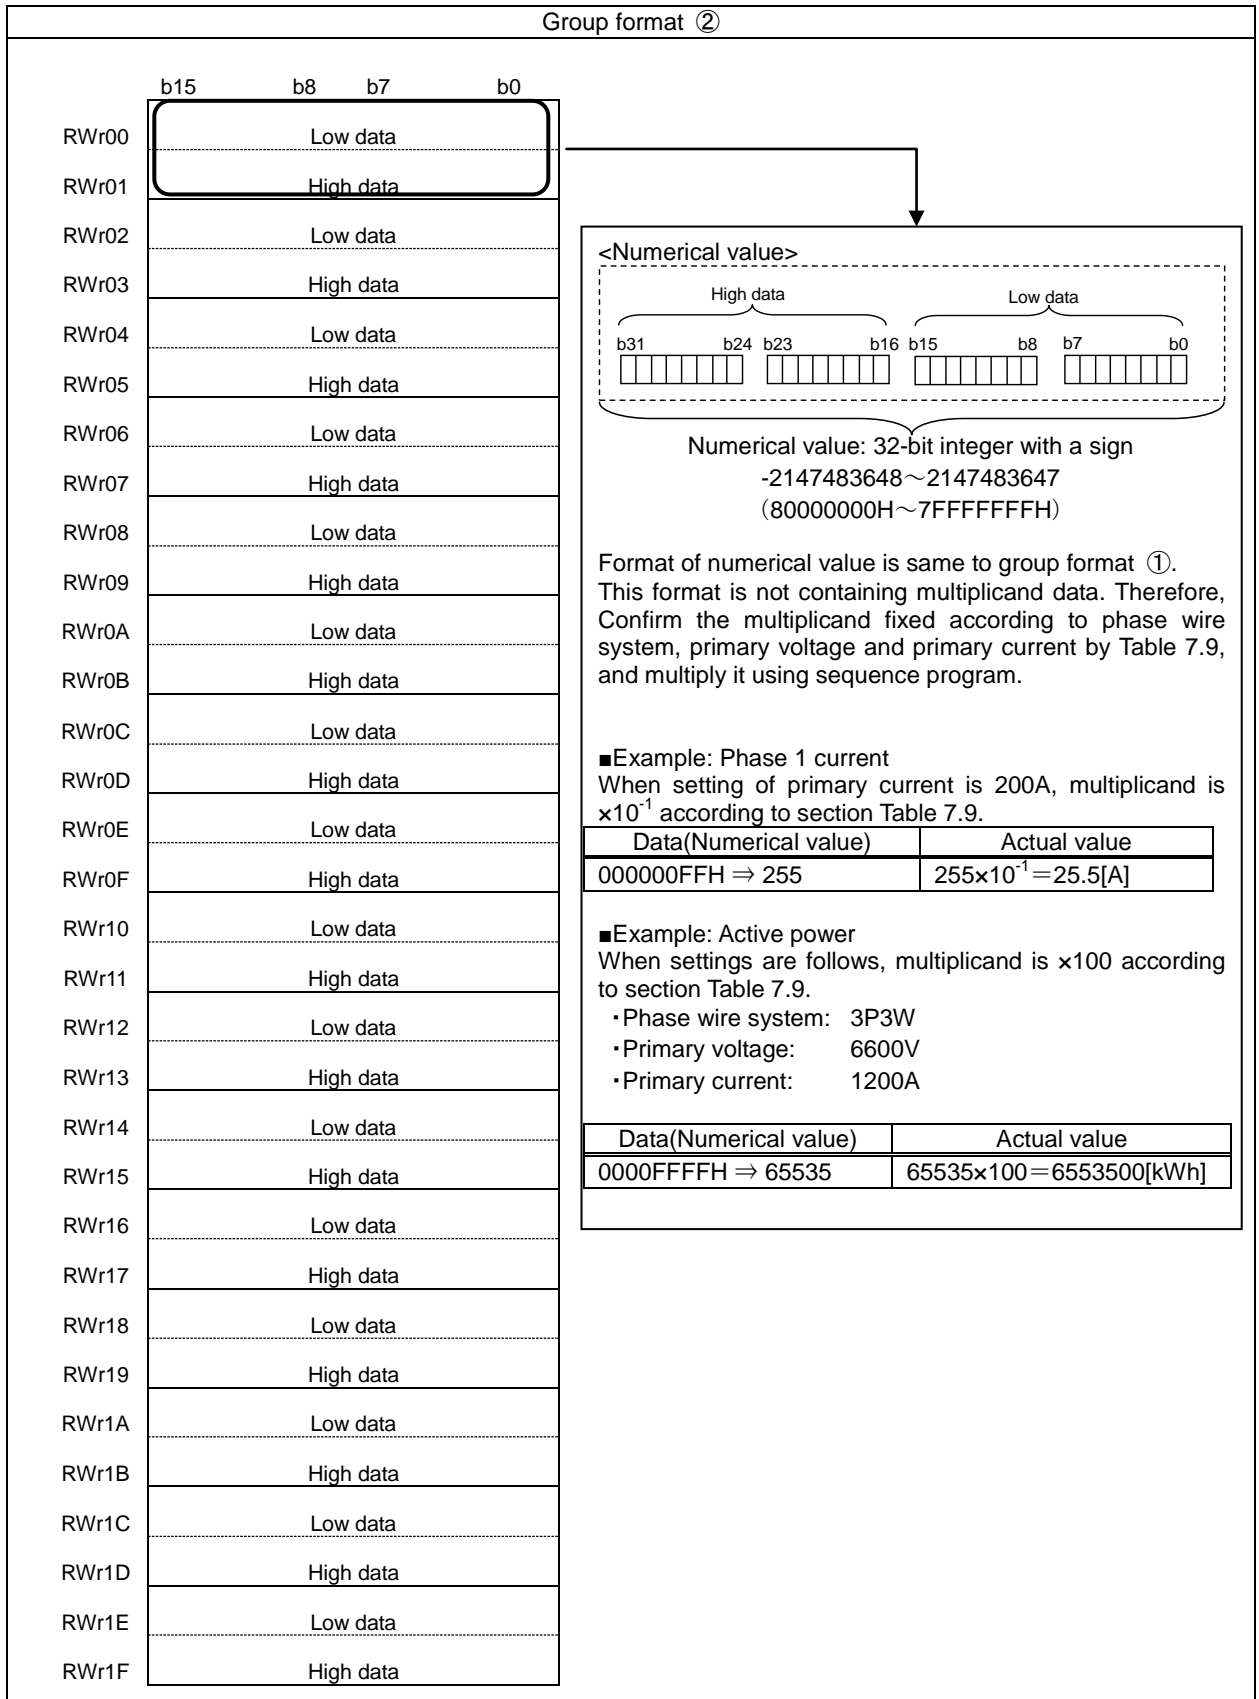

(1) Group format ①

For group format ①, Up to 8 measuring items can be monitored per a group. 4 words are used per measuring item.

(2) Group format ②

For group format ②, Up to 16 measuring items can be monitored per a group. 2 words are used per measuring item. However, it is necessary to be multiplied by using Table 7.9 because there is no multiplicand data .

### 7.2.2 When Monitoring by Command(1H)

Up to 8 measuring values can be monitored by setting the unit No., group No. and channel No. to remote registers (RWw). Monitor pattern setting flag (RX (n+1)0) is used to send the command. (For details, refer to section 6.4.2)

The command can be sent only when the remote READY (RX (n+7)B) is ON.

Remote register RWw (Programmable controller→Measuring Unit)				Remote register RWr (Measuring Unit→Programmable controller)					
	b15	b8	b7	b0		b15	b8	b7	b0
RWw00	Group No.		Unit No.	1H	Item 1	RWr00	Channel No.		Group No.
RWw01	00H		Channel No.			RWr01	Index number		(Error code)
RWw02	00H		00H			RWr02	Low data		
RWw03	00H		00H			RWr03	High data		
RWw04	Group No.		Unit No.	1H	Item 2	RWr04	Channel No.		Group No.
RWw05	00H		Channel No.			RWr05	Index number		(Error code)
RWw06	00H		00H			RWr06	Low data		
RWw07	00H		00H			RWr07	High data		
to	to				to	to			
RWw1C	Group No.		Unit No.	1H	Item 8	RWr1C	Channel No.		Group No.
RWw1D	00H		Channel No.			RWr1D	Index number		(Error code)
RWw1E	00H		00H			RWr1E	Low data		
RWw1F	00H		00H			RWr1F	High data		

\* At normal communication, Error code is 00h.  
About the other error code, refer to Table 7.10.

\* It is described as 8 bits data by combining the unit No. (high 4 bits) and the command (low 4 bits)

Command: Data range is 0H to 7H  
Unit No.: Data range is 1H  
Unit No. is 1H when use EMU4-FD1-MB

For example. When the unit No. is 0H and the command is 1H, it becomes "01H".

- Measuring Unit can monitor the value of measurement items which are not displayed.
- The measurement items are assigned Unit No., Group No. and Channel No. (Refer to Table 7.2)
- Store the unused space to 00H when monitoring items are fewer than 8.
- The details of data format are shown in the Table 7.2 to 7.2.4 Data format of Monitoring by Command (1H) and Setting by Command (2H)
- The monitoring items are changed with the setting of phase wire system.(Refer to Table 7.2)
- When combined command(2H), an error occurs.
- In case of monitoring the present value and its maximum continuously according to the renewal data timing of Measuring Unit, the maximum may be smaller than the present value.

### 7.2.3 When Setting by Command (2H)

Settings of Measuring Unit can be set by communication.

Monitor pattern setting flag (RX (n+1)0) is used to send the command. (For details, refer to section 6.4.2)

The command can be sent only when the remote READY (RX (n+7)B) is ON.

Table 7.3 Group Channel List for Data Set Command (2H)

Hex		Content name	EMU4-FD1-MB		Data format
Group	Channel		Range	Setting unit	
E0	11	Primary current	1.0A to 6000.0A	(Note1)	④
E0	12	Primary voltage (L-L)	1V to 6600V	(Note2)	④
E0	1B	Primary voltage (L-N)	1V to 6600V	(Note3)	④
E0	1C	Secondary voltage (L-L/L-N)	1V to 220V	1V	④
E0	13	Phase Wire system	1: 1P2W 2: 1P3W 3: 3P3W 4: 3P4W	—	⑤
02	E0	Time constant for DA	0 to 1800s	(Note4)	⑤
08	E0	Time constant for DW	0 to 1800s	(Note4)	⑤
80	01	Active energy (import)	0 to 999999×Multiplicand (Note5)	1×Multiplicand	②
80	63	Active energy (export)	0 to 999999×Multiplicand (Note5)	1×Multiplicand	②
81	01	Reactive energy (import lag)	0 to 999999×Multiplicand (Note5)	1×Multiplicand	②
A1	3A	16bit set register	Refer to 7.2.4	—	⑦

Note 1: From the most significant digit to 3 digits can be freely setting in the range from 100.0A to 6000.0A.

Note 2: Effective value of primary voltage (L-L) is follows.

- 3P3W or 1P2W

From the most significant digit to 3 digits can be freely setting in the range from 1000V to 6600V..

When setup 110V, 220V or 440V, Setup is Direct setup(Not use VT) in EMU4-FD1-MB.

- 1P3W

110V is valid only.

- 3P4W

From the most significant digit to 3 digits can be freely setting in the range from 1000V to 6600V.

Set value	Direct voltage	Set value	Direct voltage
110V	63.5/110V	400V	230/400V
173V	100/173V	415V	240/415V
182V	105/182V	420V	242/420V
190V	110/190V	430V	250/430V
199V	115/199V	440V	254/440V
208V	120/208V	460V	265/460V
220V	127/220V	480V	277/480V
380V	220/380V		

\*From the most significant digit to 3 figures can be freely set up in the range.

Note 3: Setup of phase voltage is only available in 3P4W.

From the most significant digit to 3 digits can be freely setting in the range from 1000V to 6600V.

Setup is Direct setup (Not use VT) when setup in below value.

Set value	Direct voltage
63.5V	63.5/110V
100V	100/173V
105V	105/182V
110V	110/190V
115V	115/199V
120V	120/208V
127V	127/220V
220V	220/380V
230V	230/400V
240V	240/415V
242V	242/420V
250V	250/430V
254V	254/440V
265V	265/460V
277V	277/480V

Note 4: The set value is the second unit value. (For example of 2 minutes, set as 120 seconds.) About setting range, please refer to each user's manuals.

Note 5: Multiplying factor differs according to settings of phase wiring, primary voltage and primary current. For details, refer to 7.2.4.

Note : 2 digit means two decimal places ( $\times 10^{-2}$ ) and 1 digit means 1 decimal places ( $\times 10^{-1}$ )

Note : x1 means integer $\times 1$  and x10 means integer $\times 10$  and x100 means integer $\times 100$ .

(3) Voltage and Harmonics voltage data format

Primary voltage	EMU4-FD1-MB
Less than 300V	Decimal 1 digit
300V or more	Integerx1

Note: This value is primary voltage (phase voltage) when wire phase system is 3P4W.

(4) Current, demand current, harmonics current data format

Primary voltage	EMU4-FD1-MB
Less than 40A	Decimal 3 digit
40A or more Less than 400A	Decimal 2 digit
400A or more Less than 4000A	Decimal 1 digit
4000A or more	Integerx1

## 7.2.5 About Error Occurrence

When the command and related data transmitted to Measuring Unit is improper or Measuring Unit is in H/W error, RX (n+7)A (Error status flag) becomes 1 (ON), the error code shown in Table 7.10 is returned as reply data.

Table 7.10 Error Code

Error Description	Error Code (Hex.)
Illegal command or packet length	40h
Invalid group number	41h
Invalid channel number	42h
Measuring Unit is in set-up mode	43h, 44h
Invalid unit number	45h
Invalid data for set-up	51h

If an error occurs, the error code is written into the RW<sub>n</sub> as shown in the figure below, and RX(n+7)A (error status flag) is turned on (error occurrence) and RX(n+7)B (remote READY) is turned off (normal communication stop).

For the error resetting method, refer to "6.3 Error Communication".

## 8. Abbreviations and Special Terms

Abbreviations and special terms used in this manual are shown below:

Abbreviation and Special Terms	Description
Master station	Station which controls remote stations and local stations. One station is required for one system.
Local station	Station with the CPU which can communicate with master station and other local stations.
Remote I/O station	Remote station which deals with bit information only.
Remote device station	Remote station which deals with bit information and word information.
Remote station	General name for remote I/O station and remote device station. Controlled by a master station.
Intelligent device station	Station that can perform transient transmission.
RX	Remote input
RY	Remote output
RWw	Remote register (write area)
RWr	Remote register (read area)
Demand value	The demand value is an approximate average value during the demand time period. When it is set to 0, each demand present value becomes equivalent to the present value.
Command	Identification code allocated to items to be monitored or set. Energy measuring unit uses a special-purpose command that is transmitted to monitor each measurement value or set each parameter.

## 9. Program Example

### 9.1 Sample program 1

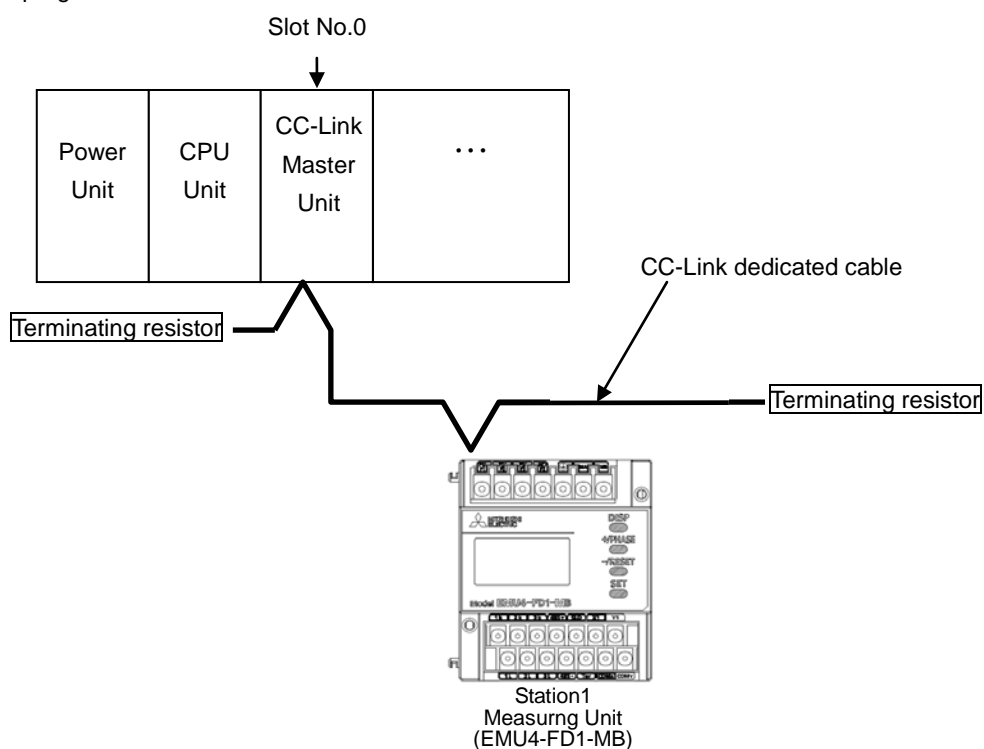

#### (1) Program Content

This program example is assumed the system configuration in below.

- CC-Link master unit: Mounting in Slot No.0.
- CC-Link master unit: First XY: 0000.
- CC-Link parameter setting: Please refer to (3) Parameter Settings.
- No. of Measuring unit (EMU4-FD1-MB): 1
- Station No. of Measuring unit (EMU4-FD1-MB): 1

#### (2) System Configuration

Q series programmable controller

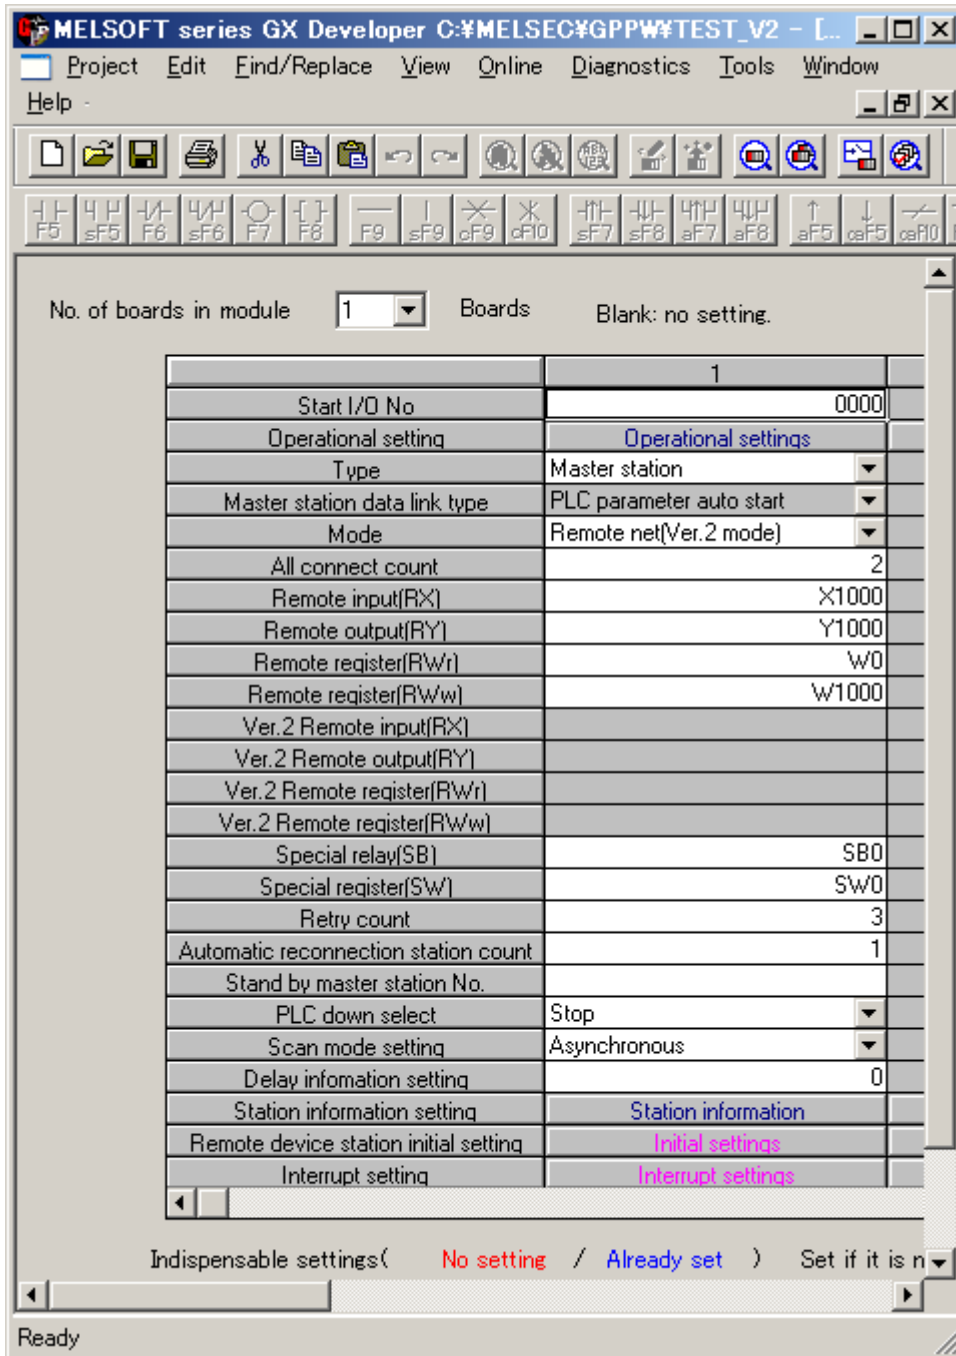

### (3) Parameter Settings

Parameter settings are set as following with GX Developer.

#### 9.1.1 Network Parameter Settings and Auto Refresh Parameter Settings

The following is shown CC-Link network parameter settings and auto refresh parameter settings.

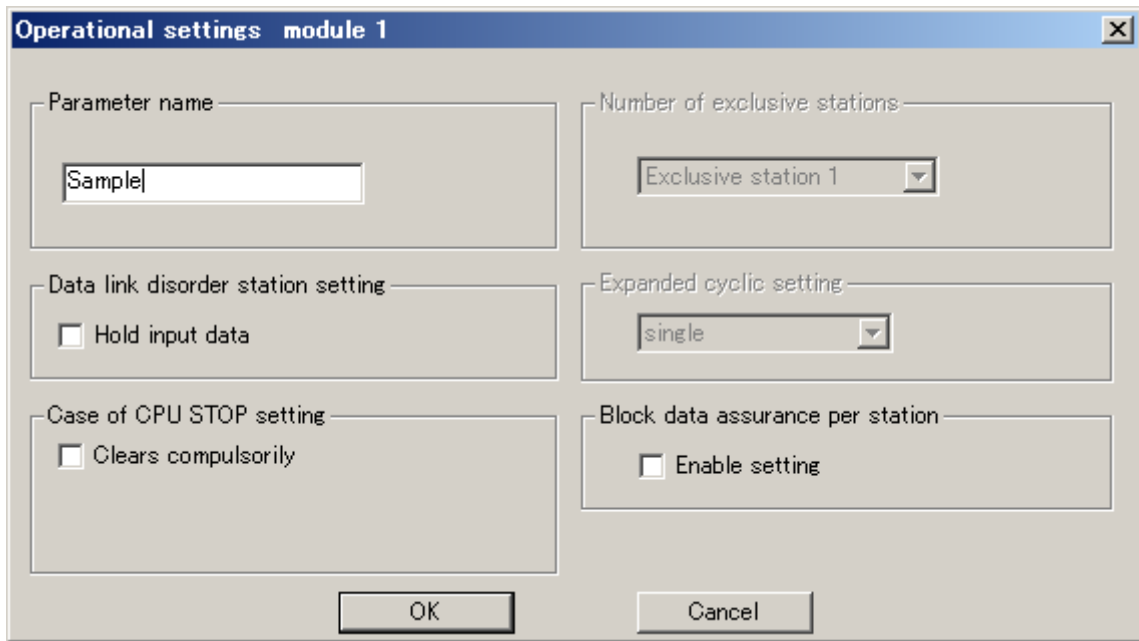

Setting Item	Description	Example for settings	Remarks
No.of boards in Module	Set the "No. of boards in module" for which the network parameters are to be set.	1	
Start I/O No	Set the "Start I/O No." for the master station	0000	Set the same setting of Start XY in PC parameter setting
Type	Set the station type.	Master station	
Mode	Set the CC-Link mode.	Remote net (Ver.2 mode)	"Remote net ver.2 mode" and "Remote net additional mode" can be also used in case of the QJ61BT11N.
All connect count	Set the total number of connected stations in the CC-Link system including reserved stations	1	
Remote input (RX)	Set the remote input (RX) refresh device.	X100	Device name - Select from X, M, L, B, D, W, R or ZR. Device number - Within the range of the device points that the CPU has.
Remote output (RY)	Set the remote output (RY) refresh device.	Y100	Device name - Select from Y, M, L, B, T, C, ST, D, W, R or ZR. Device number - Within the range of the device points that the CPU has.
Remote register (RWr)	Set the remote register (RWr) refresh device.	W300	Device name - Select from M, L, B, D, W, R, or ZR. Device number - Within the range of the device points that the CPU has.
Remote register (RWw)	Set the remote register (RWw) refresh device.	W400	Device name - Select from M, L, B, T, C, ST, D, W, R, or ZR. Device number - Within the range of the device points that the CPU has.
Special relay (SB)	Set the link special relay (SB) refresh device.	SB0	Device name - Select from M, L, B, D, W, R, SB or ZR. Device number - Within the range of the device points that the CPU has.
Special register (SW)	Set the link special register (SW) refresh device.	SW0	Device name - Select from M, L, B, D, W, R, SW or ZR. Device number - Within the range of the device points that the CPU has.
Retry count	Set the number of retries for "Retry count", when a communication error occurs.	3	
Automatic reconnection station count	Set the number of modules that can return to system operation by a single link scan.	1	
Standby master station No.	Set the station number for the standby master station	Blank	Blank: No standby master station specified.
PLC down select	Set the data link status for "PLC down select", when a master station programmable controller CPU error occurs	Stop	
Scan mode setting	Set whether the link scan for the sequence scan is synchronous or asynchronous	Asynchronous	
Delay information setting	Set for the link scan delay time.	0	50μs

### 9.1.2 Operational Settings

Operational settings are as follows.

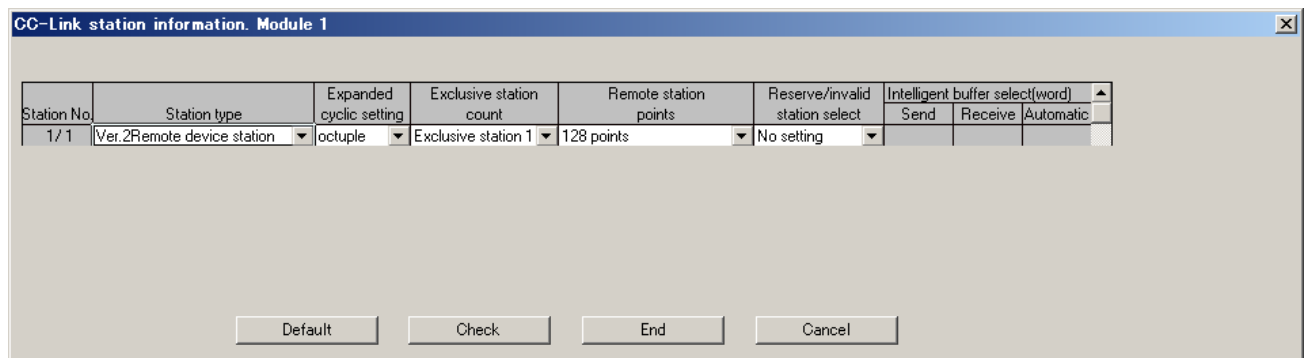

The 'Operational settings module 1' dialog box contains the following fields and controls:

- Parameter name:** A text input field containing 'Sample'.
- Number of exclusive stations:** A dropdown menu set to 'Exclusive station 1'.
- Data link disorder station setting:** A checkbox labeled 'Hold input data' which is currently unchecked.
- Expanded cyclic setting:** A dropdown menu set to 'single'.
- Case of CPU STOP setting:** A checkbox labeled 'Clears compulsorily' which is currently unchecked.
- Block data assurance per station:** A checkbox labeled 'Enable setting' which is currently unchecked.

At the bottom of the dialog are 'OK' and 'Cancel' buttons.

### 9.1.3 Station Information Settings

Station information settings are as follows.

The 'CC-Link station information. Module 1' dialog box displays a table with the following data:

Station No.	Station type	Expanded cyclic setting	Exclusive station count	Remote station points	Reserve/invalid station select	Intelligent buffer select(word)		
						Send	Receive	Automatic
1/1	Ver.2Remote device station	octuple	Exclusive station 1	128 points	No setting			

At the bottom of the dialog are 'Default', 'Check', 'End', and 'Cancel' buttons.

## (4) Parameter Settings

### (a) Initial communication sample program

Sample program measuring unit turn ON or initial processing after reset.

#### Measuring unit data link status

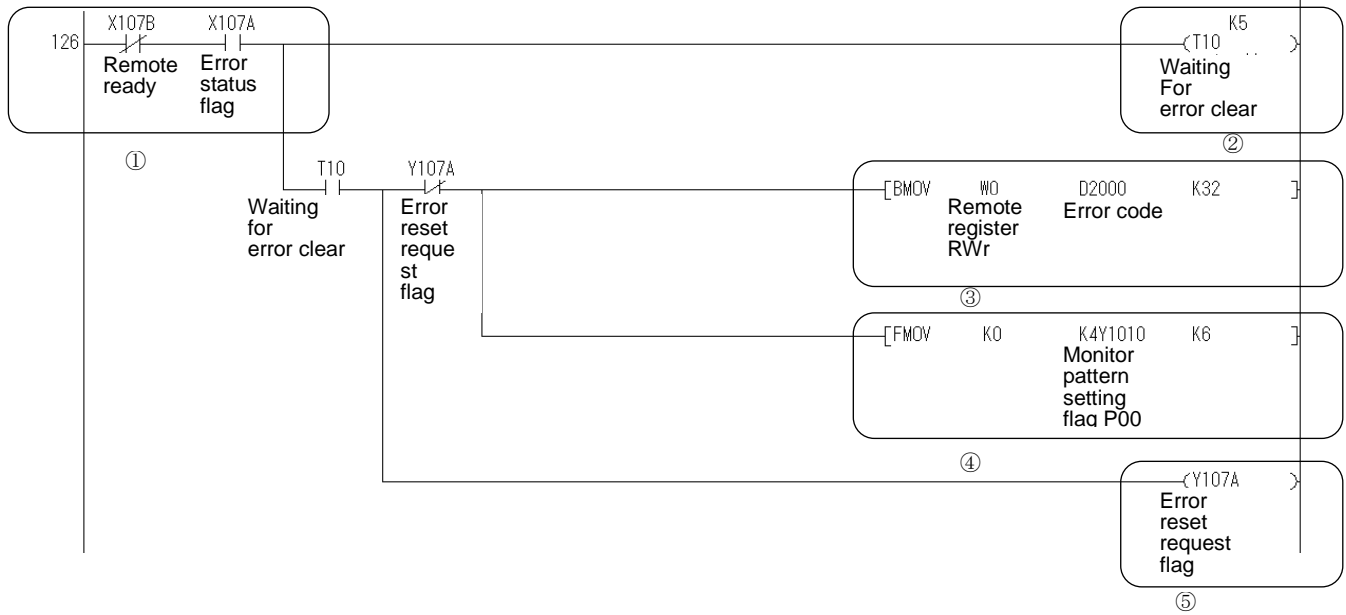

- 1) Check data link status in each station.
- 2) Initial data setting completion flag (Y1078) turns to ON after Initial data processing request (X1078) turns to ON.
- 3) Initial data processing request (X1078) turns to OFF after Initial data setting completion flag (Y1078) turns to ON.

#### Device allocation

Device No.	Contents	Note																														
X0	Status of CC-Link master station OFF: Unit normal ON: Unit error	Device No. is changed by the input number of CC-Link master unit. <Example> When Input No. is "X/Y30"Of CC-Link master unit. X0 → X30, X1 → X31, XF → X3F																														
X1	Data status of CC-Link master station OFF: Data link stop ON: Data link																															
X0F	Unit ready of CC-Link master station OFF: 1) Error in setting of SW in Unit. 2) When the Unit error signal (Xn0) turns to ON. ON: It is turns to ON automatically when unit is moveable.																															
X1078	Remote input: RX(n+7)8 Initial data setting completion flag	It is changed by the setting of the remote input (RX) refresh device (CC-Link parameter setting) and station No. of leak current monitoring device. Please refer to 7.1.1 for more details.																														
Y1078	Remote output: RY(n+7)8 Initial data processing completion flag	It is changed by the setting of the remote output (RY) refresh device (CC-Link parameter setting) and station No. of leak current monitoring device. Please refer to 7.1.2 for more details.																														
SW80 to SW83	Data link status 0: normal 1: data link error <table border="1" style="margin-left: 20px;"> <thead> <tr> <th></th> <th>b15</th> <th>b14</th> <th>~</th> <th>b1</th> <th>b0</th> </tr> </thead> <tbody> <tr> <td>SW80</td> <td>16</td> <td>15</td> <td>~</td> <td>2</td> <td>1</td> </tr> <tr> <td>SW81</td> <td>32</td> <td>31</td> <td>~</td> <td>18</td> <td>17</td> </tr> <tr> <td>SW82</td> <td>48</td> <td>47</td> <td>~</td> <td>34</td> <td>33</td> </tr> <tr> <td>SW83</td> <td>64</td> <td>63</td> <td>~</td> <td>50</td> <td>49</td> </tr> </tbody> </table>		b15	b14	~	b1	b0	SW80	16	15	~	2	1	SW81	32	31	~	18	17	SW82	48	47	~	34	33	SW83	64	63	~	50	49	It is changed by the setting of link relay (SW) refresh device (CC-Link parameter setting). Please refer to manual of each CC-Link system.

SW80	16	15	~	2	1																											
SW81	32	31	~	18	17																											
SW82	48	47	~	34	33																											
SW83	64	63	~	50	49																											
M0 to M63	Data link error in each station OFF: normal ON: data link error	Device																														

## (b) Error communication sample program

### Error communication

- ① Confirming remote ready (X107B) turns to OFF and Error status flag (X107A) turns to ON when error occurred in measuring unit.
- ② Waiting time from error occurred to error reset.
- ③ Error code is received to remote register (RWr) W000 to W001F. Read received error code to device D2000 to D2031.
- ④ Monitor pattern setting flag (Y1010 to Y106F) after error occurred.
- ⑤ Turn ON the error reset flag (Y107A) after reset.
- ⑥ Error status flag turns to OFF after error reset. Error reset flag (Y107A) turns to OFF.  
Restart communication to measuring unit after error reset flag (Y107A) turns to OFF and remote ready (X107B) turns to ON.

#### Device allocation

Device No.	Contents	Note
X107A	Remote input of measuring unit: RX(n+7)A Error status flag	It is changed by the setting of the remote input (RX) refresh device (CC-Link parameter setting) and station No. of measuring unit. Please refer to 7.1.1 for more details.
X107B	Remote input of measuring unit: RX(n+7)B Remote READY	
Y107A	Remote output: RY(n+7)A Error reset status flag	It is changed by the setting of the remote output (RY) refresh device (CC-Link parameter setting) and station No. measuring unit. Please refer to 7.1.2 for more details.
W0000 to W001F	Remote register: RWr Data for reading	It is changed by the setting of the remote register (RWr) refresh device (CC-Link parameter setting) and station No. measuring unit. Please refer to 7.1.2 for more details.
D2000 to D2032	Error code for receiving	Device (Selectable) Refer to table 7.2 error code for more details.

**(c) Normal communication sample program**

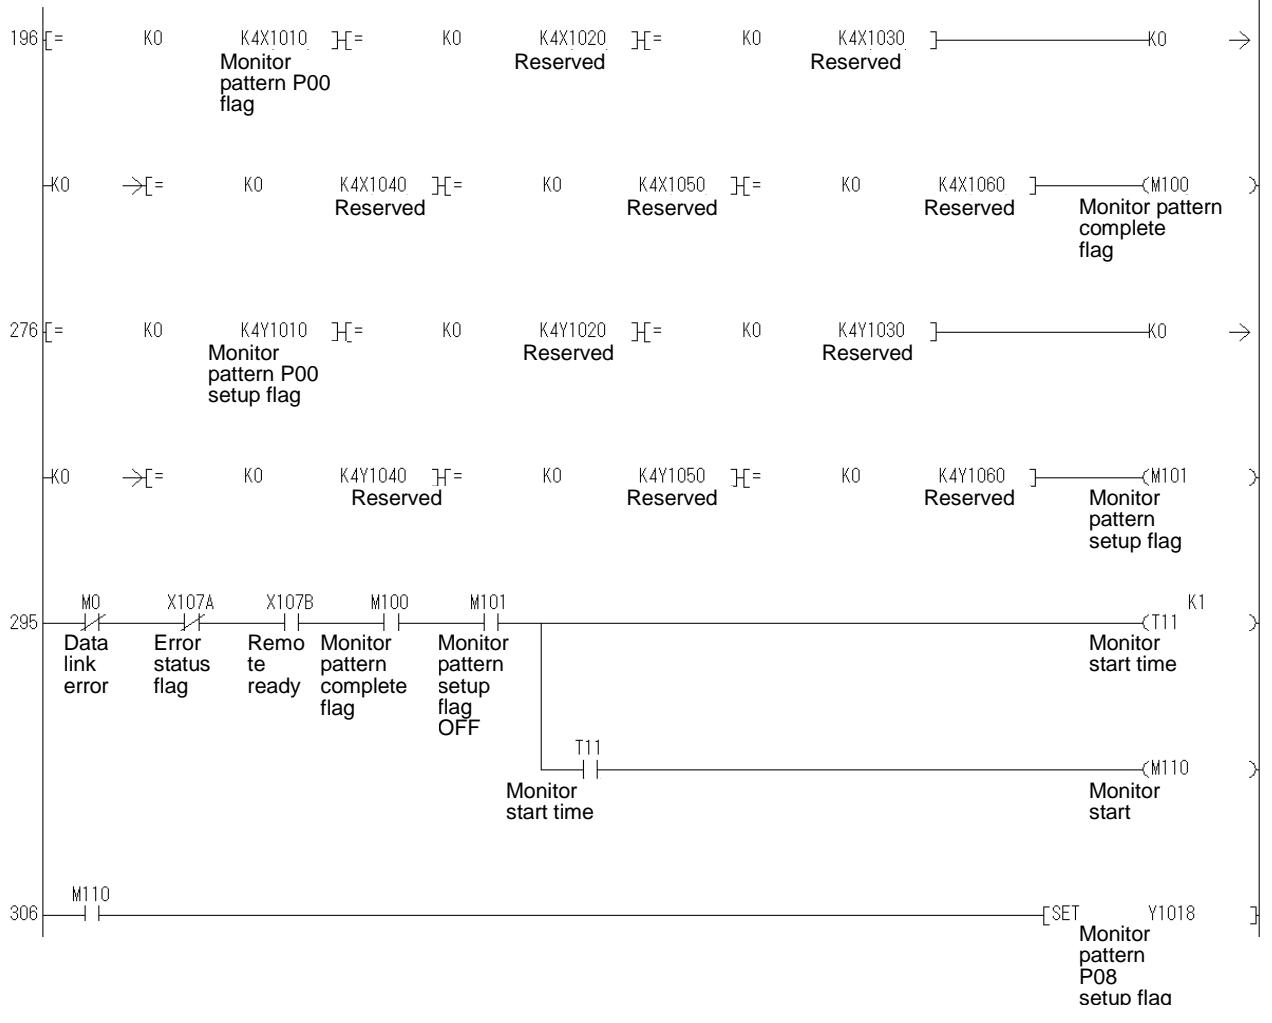

After initial communication, you can monitor the measured value and setup the setting value when normal communication status is normal (Remote ready is ON)

Describing following 3 programs as a sample program.

	Note	Measuring items	Page
Monitoring example by pattern	Sample program reading measuring items to programmable controller devices using monitor pattern P08 setting flag (RY (n+1)8)  Measured value is stored in programable controller device	Phase 1 current Phase 2 current Phase 3 current 1-2 voltage 2-3 voltage 3-1 voltage Active power Active energy(import)	61
Monitoring example by command (1H)	Sample program reading measuring items to programmable controller devices using monitor pattern P00 setting flag (RY(n+1)0) writing command (channel group) to remote register RWw.  Measured value is stored in programable controller device	Phase 1 current 1-2 voltage Active power Reactive power Power factor Frequency Active energy(import) Reactive energy(import lag)	65
Monitoring example by command (2H)	Sample program reset all alarms using monitor pattern P00 setting flag (RY(n+1)0)	Alarm all reset	70

**(1) Monitoring sample using pattern**

Normal communication (Monitoring by pattern)

- ① Confirming monitor pattern setting completion flag (X1010 to X106F) is OFF.
- ② Confirming monitor pattern setting flag (Y1010 to Y106F) is OFF.
- ③ Start monitor communication (M110) after confirming monitorable condition (M0 OFF), X107A is OFF, X101B is ON (remote ready), M100 is ON and M101 is ON.
- ④ Monitor pattern P08 setting flag (Y1018) turns to ON when Starting monitor communication (M110).
- ⑤ Monitor pattern P08 setting completion flag (X1018) turns to ON after monitor pattern P08 setting flag (Y1018) turns to ON and replay the data.
- ⑥ Measured data is transmitting to receiving data (D1000 to D1031) from remoter register RWr (W1000 to W101F) after monitor communication starting (M110) is ON  
 \* While monitor pattern P08 setting flag (Y1018) is ON, measured data in remote register RWr (W0000 to W001F) is update.
- ⑦ Monitor pattern setting completion flag (X1018) turns to OFF when time out (T13) turns to ON.

Device allocation

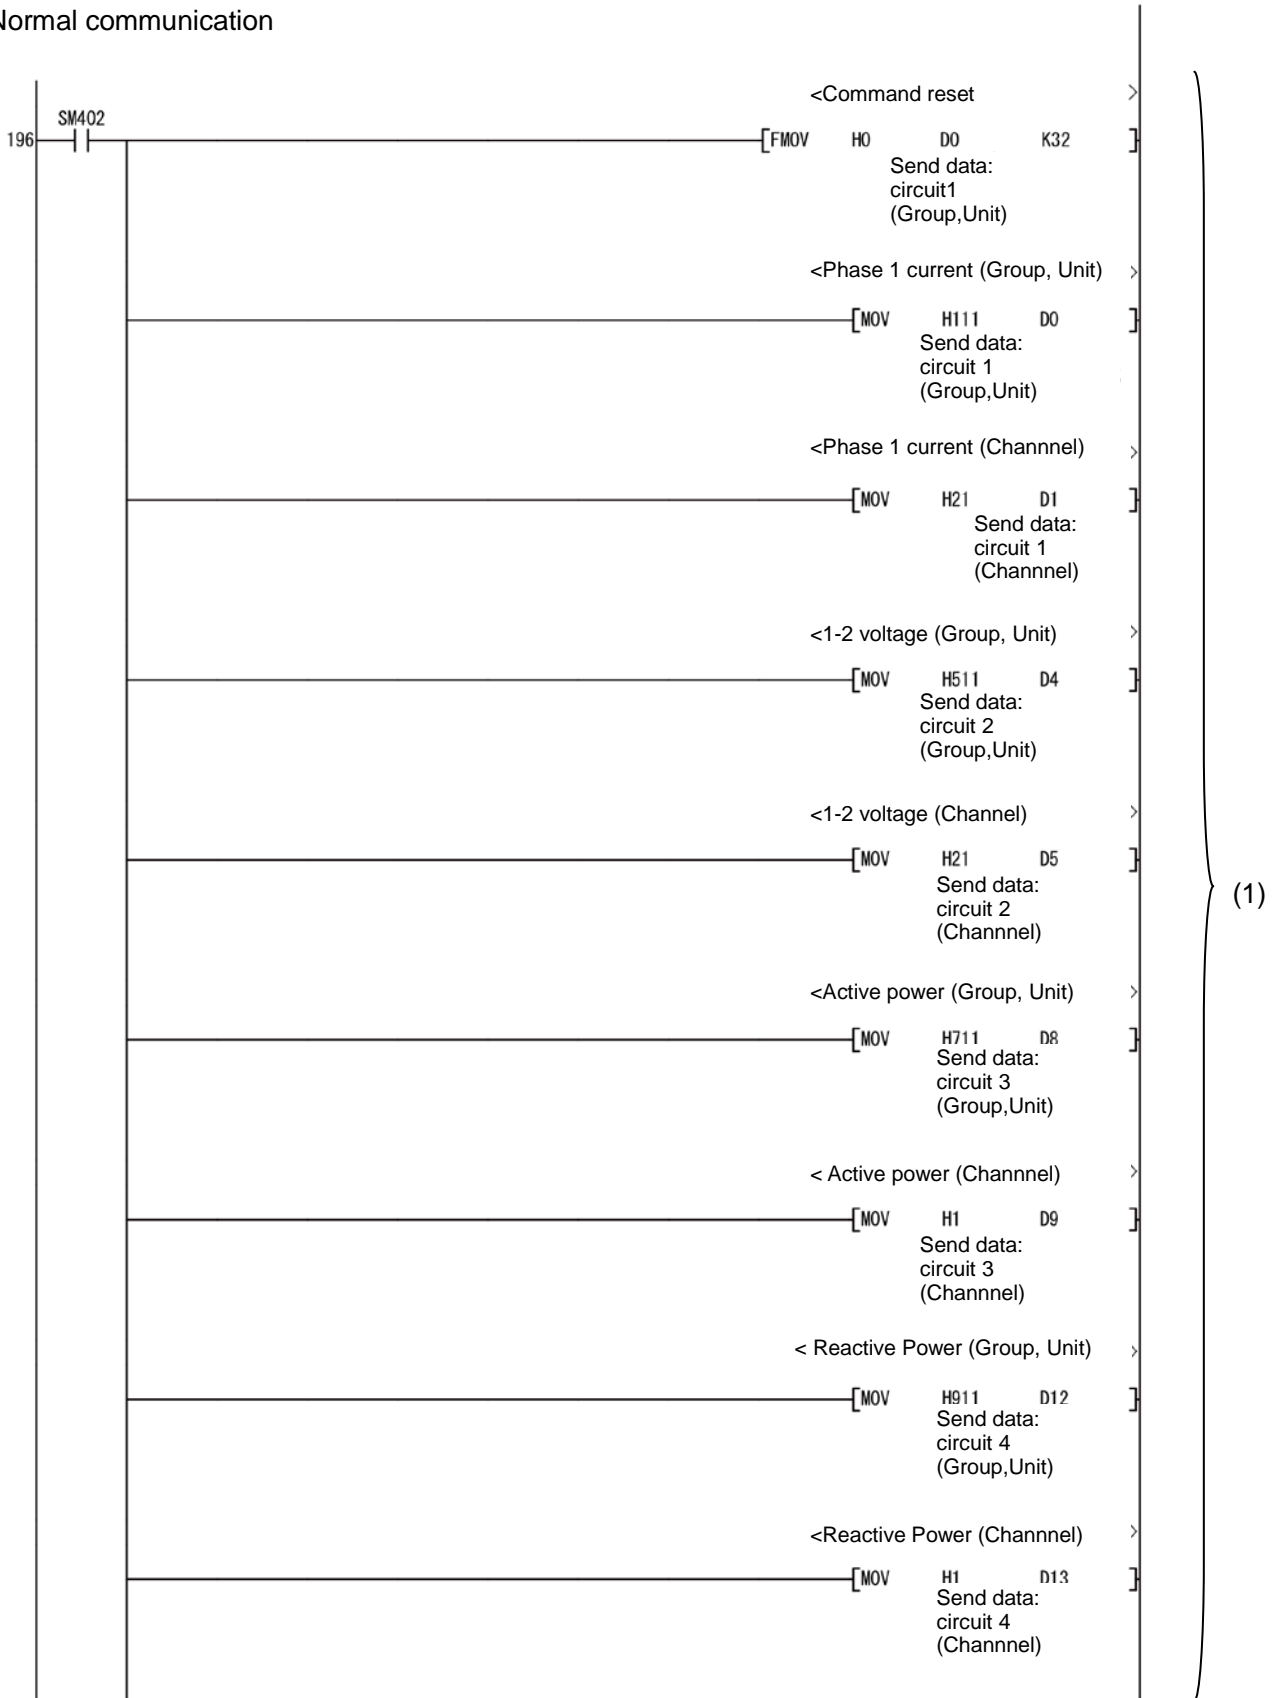

Device	Contents	Note
X1010	Monitor pattern P00 completion flag	Using monitor pattern P08 in sample program. Please change X1018 when using other monitor pattern. Setup Remote input (RX) refresh device. Please refer to Remote input RX.
X1011 to X1017	Reserved	
X1018	Monitor pattern P08 completion flag	
X1019	Monitor pattern P09 completion flag	
X101A	Monitor pattern P10 completion flag	
X101B	Monitor pattern P11 completion flag	
X101C	Monitor pattern P12 completion flag	
X101D to X1077	Reserved	
X107A	Error status flag	
X107B	Remote ready	
M100	Confirming the monitor pattern completion flag turns to OFF Confirming X1010 to X106F turns to OFF.	
Y1010	Monitor pattern P00 completion flag	Using monitor pattern P08 in sample program. Please change Y1018 when using other monitor pattern. Setup Remote input (RY) refresh device. Please refer to Remote output RY.
Y1011 to Y1017	Reserved	
Y1018	Monitor pattern P08 completion flag	
Y1019	Monitor pattern P09 completion flag	
Y101A	Monitor pattern P10 completion flag	
Y101B	Monitor pattern P11 completion flag	
Y101C	Monitor pattern P12 completion flag	
Y101D to Y1077	Reserved	
M101	Confirming the monitor pattern flag turns to OFF Confirming X1010 to X106F turns to OFF.	Devices in a CPU module.(User selectable). Use as interlock in monitor start.
M0	Data link error : station1	Devices in a CPU module.(User selectable). Please setup same device in (a) Initial program
T11	Monitor pattern receiving time	Devices in a CPU module.(User selectable).
M111	Start data receiving	Devices in a CPU module.(User selectable).
T12	Monitor pattern receiving time	Devices in a CPU module.(User selectable).
M112	Start data receiving	Devices in a CPU module.(User selectable).
T13	Time out	Devices in a CPU module.(User selectable).
W0000 to W0001F	Remote register RWr Storing reply data	Remote register changed according to setup of remote register refresh device and station No. of measuring unit.
D1000 to D1031	Receiving data	Devices in a CPU module.(User selectable).

Device	Contents	Note
Content of receive data depends on monitor pattern. Data details of monitor pattern P08 showed in below table.		
Device	Contents	Note
D1000	Phase 1 current	H2101
D1001		Multiplying factor
D1002, D1003		Data
D1004	Phase 1 current	H4101
D1005		Multiplying factor
D1006, D1007		Data
D1008	Phase 1 current	H6101
D1009		Multiplying factor
D1010, D1011		Data
D1012	1-2 voltage	H2105
D1013		Multiplying factor
D1014, D1015		Data
D1016	2-3 voltage	H4105
D1017		Multiplying factor
D1018, D1019		Data
D1020	3-1 voltage	H6105
D1021		Multiplying factor
D1022, D1023		Data
D1024	Electric power	H0107
D1025		Multiplying factor
D1026, D1027		Data
D1028	Electric Energy	H0180
D1029		Multiplying factor
D1030, D1031		Data

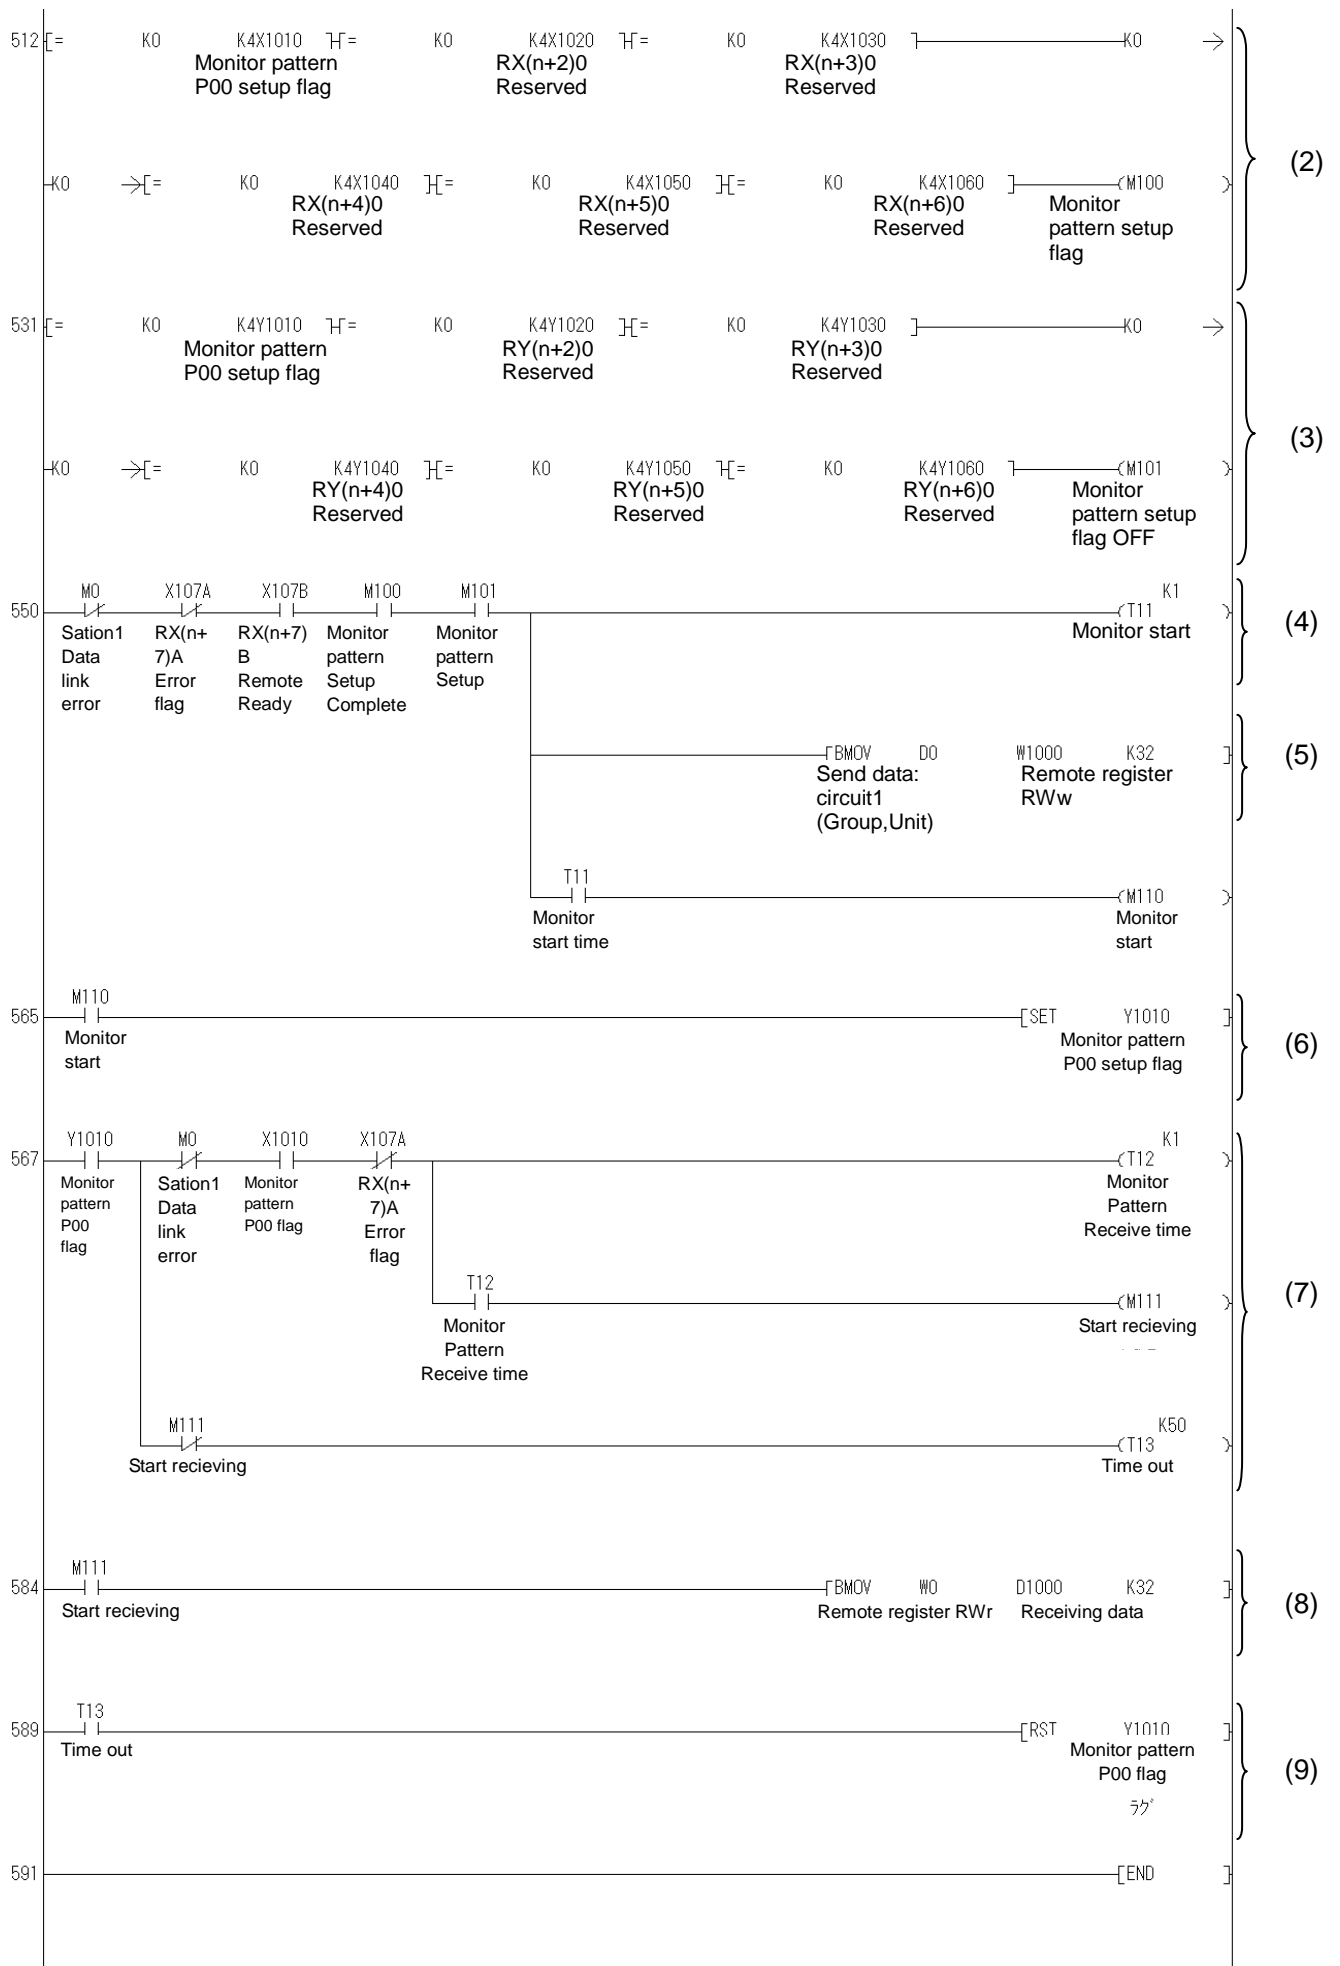

(2) Monitoring sample using command (1H)

\*Normal communication

(1)

- (1) Write command send to measuring unit in device.
- (2) Confirm the monitor pattern setup complete flag (X1010-X106F) is OFF.
- (3) Confirm the monitor pattern setup flag (Y1010-Y106F) is OFF.
- (4) Monitoring start after confirm X107A is OFF, X101B is ON, M100 is ON, M101 is ON.
- (5) Write send command at (1) in remote register RWw (W1000-W101F).
- (6) Monitor pattern P00 setup flag turn to ON in monitor start (M110).
- (7) After Monitor pattern P00 setup flag (Y1010) turns to ON and reply data according to monitor pattern, Monitor pattern P00 setup complete flag (X1010) turns ON.  
After confirming monitor pattern P00 setup complete flag (X1010), Error flag (X107A) is not ON, time out is conducted.
- (8) Transfer the measured data to receive data (D1000-D1031) when monitor start (M110)is ON.
- (9) After Time out (T13) is ON, Monitor pattern P00 setup flag (Y1010) turns to OFF.

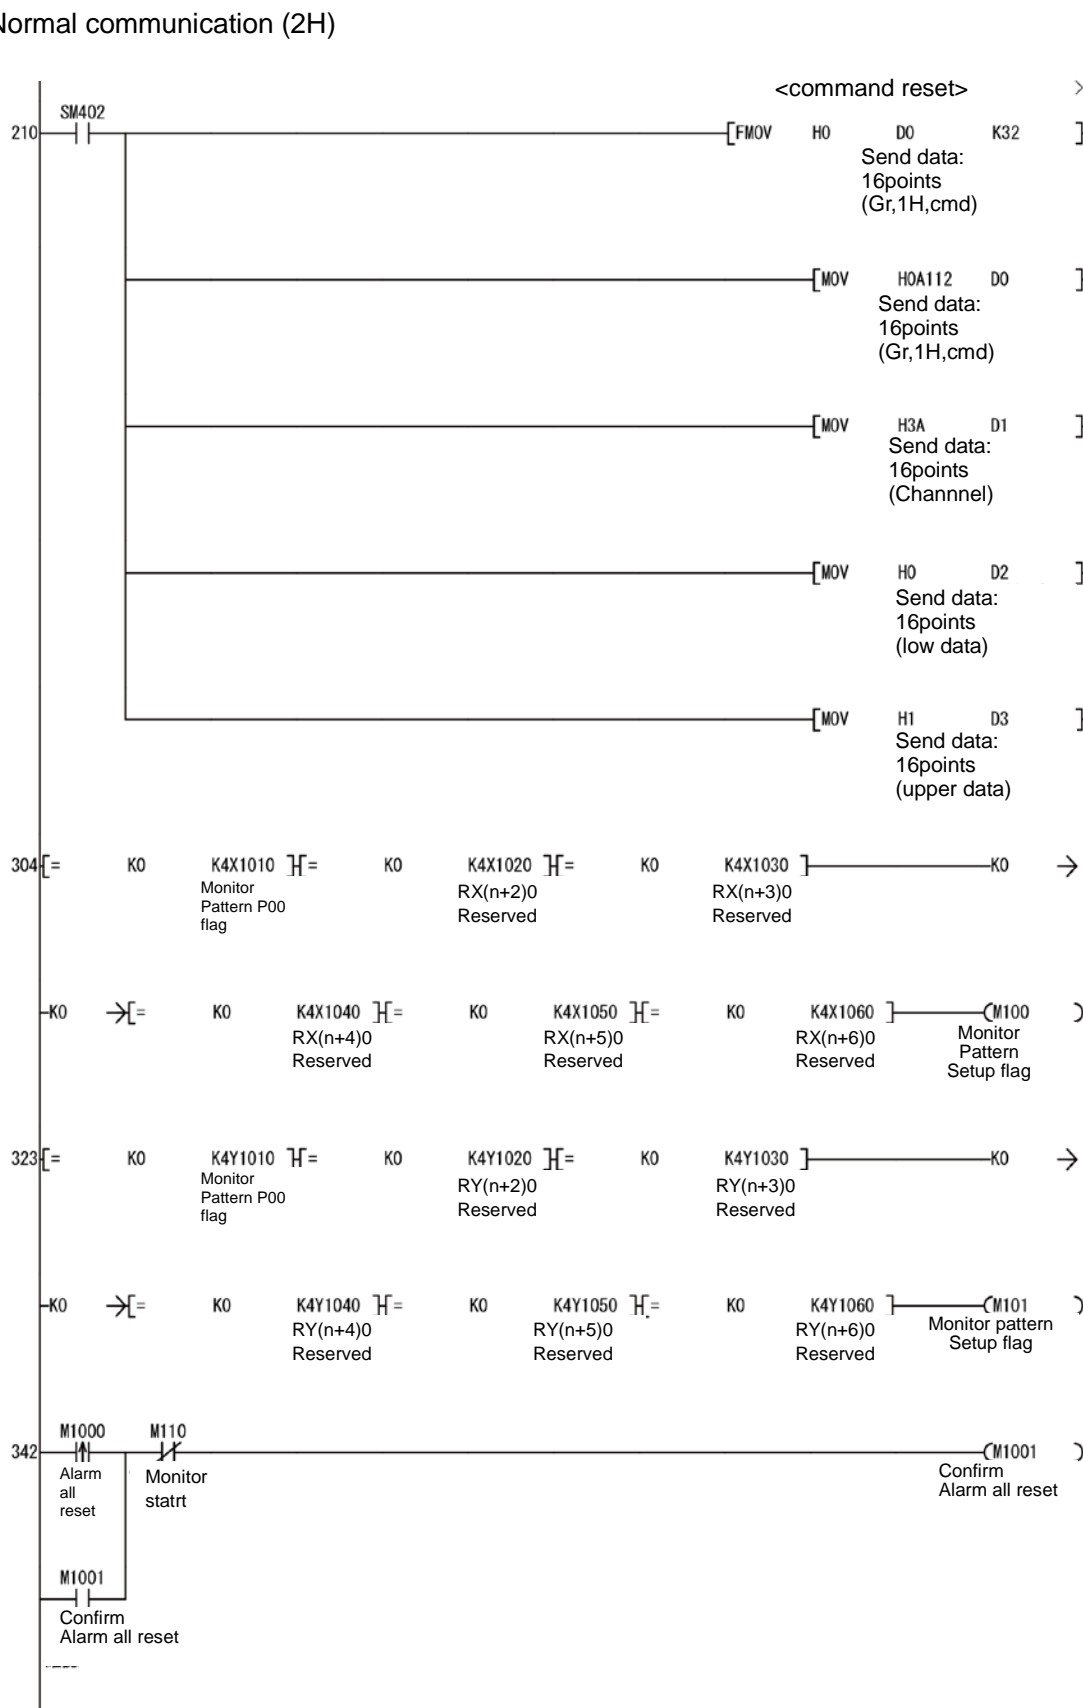

#### Device allocation

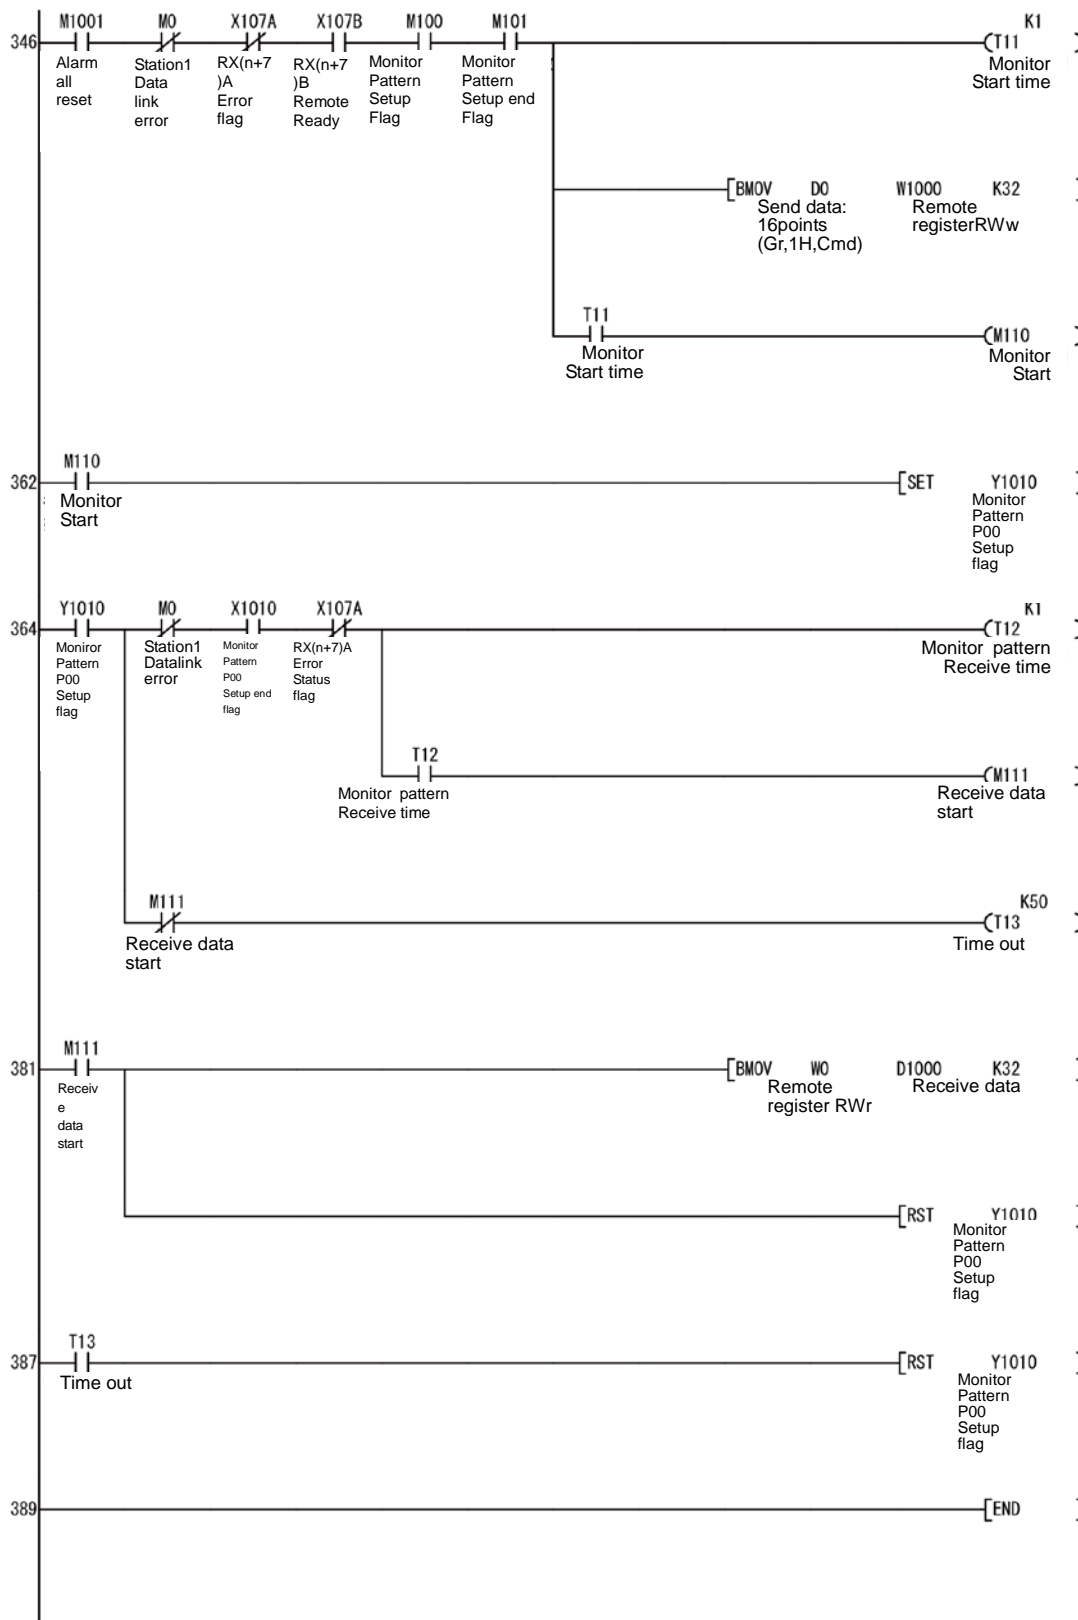

Device	Contents	Note
X1010	Monitor pattern P00 completion flag	Using monitor pattern P00 in sample program. Please change X1010 when using other monitor pattern. Setup Remote input (RX) refresh device. Please refer to Remote input RX.
X1011 to X1017	Reserved	
X1018	Monitor pattern P08 completion flag

D1030, D1031			Data	

(3) Monitoring sample using command (2H)

\*Normal communication (2H)

- (1) Write command send to measuring unit in device.
- (2) Confirm the monitor pattern setup complete flag (X1010-X106F) is OFF.
- (3) Confirm the monitor pattern setup flag (Y1010-Y106F) is OFF.
- (4) Confirm the alarm all reset M1001 is ON when M1000 is ON.  
M1001 turns to OFF when X101B is ON in (6)
- (5) Command is written to remote register RWw (W000 to W001F) after M1001 is ON, M0 is OFF, CX107A is OFF, X101B is ON.
- (6) M110 turns to ON after (5).
- (7) Y1010 turns to ON in M110.
- (8) After Monitor pattern P00 setup flag (Y1010) turns to ON and reply data according to monitor pattern, Monitor pattern P00 setup complete flag (X1010) turns ON.  
After confirming monitor pattern P00 setup complete flag (X1010), Error flag (X107A) is not ON, time out is conducted.
- (9) Transfer the measured data to receive data (D1000-D1031) when monitor start (M110) is ON.
- (10) After Time out (T13) is ON, Monitor pattern P00 setup flag (Y1010) turns to OFF.

#### Device allocation

Device	Contents	Note
X1010	Monitor pattern P00 completion flag	
X1011 to X1017	Reserved	
X1018	Monitor pattern P08 completion flag	
X1019	Monitor pattern P09 completion flag	
X101A	Monitor pattern P10 completion flag	
X101B	Monitor pattern P11 completion flag	
X101C	Monitor pattern P12 completion flag	
X101C to X106F	Reserved	
X107A	Error status flag	
X107B	Remote ready	
M100	Confirming the monitor pattern completion flag turns to OFF Confirming X1010 to X106F turns to OFF.	
Y1010	Monitor pattern P00 completion flag	
Y1011 to Y1017	Resereved	
Y1018	Monitor pattern P08 completion flag	
Y1019	Monitor pattern P09 completion flag	
Y101A	Monitor pattern P10 completion flag	
Y101B	Monitor pattern P11 completion flag	
Y101C	Monitor pattern P12 completion flag	
Y101C to Y106F	Reserved	
M101	Confirming the monitor pattern flag turns to OFF Confirming X1010 to X106F turns to OFF.	
M0	Data link error : station1	
T11	Monitor pattern receiving time	
M111	Start data receiving	
T12	Monitor pattern receiving time	
M112	Start data receiving	
T13	Time out	

Device	Contents	Note	
W1000 to W1001F	Remote register RWr Storing reply data		
W0000 to W001F	Remote register RWr Storing reply data		
D0 to D31	Send data Internal device		
	Write Group No., Channel No., command that monitored in receiving data		
	Device	Content	Note
	D0	Alarm all reset	HA112
	D1		H003A
	D2		H0000
D3	H0001		
D4 to D31	H0000		
D1000 to D1031	Receive data Internal device		
	Receive data is different by monitor pattern.		
	Device	Content	Note
	D1000	Alarm all reset	H3AA1
	D1001 to D1003		H0000
D1004 to D1031	H0000		

## 9.2 Sample program 2

### (1) Program Content

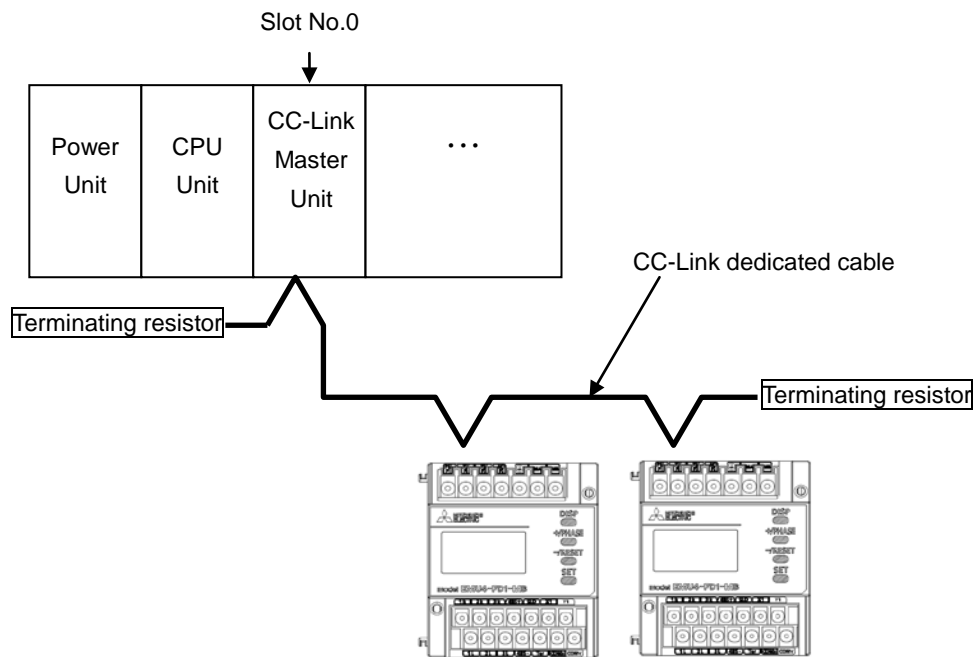

This program example is assumed the system configuration in below.

- CC-Link master unit: Mounting in Slot No.0.
- CC-Link master unit: First XY: 0000.
- Station No. of Measuring unit (EMU4-FD1-MB): 1
- Station No. of Measuring unit (EMU4-FD1-MB): 2

Note: The refresh set with the automatic refresh parameters and the refresh executed with the FROM/TO instructions cannot be performed simultaneously.

### (2) System Configuration

Q series programmable controller

\*Read data

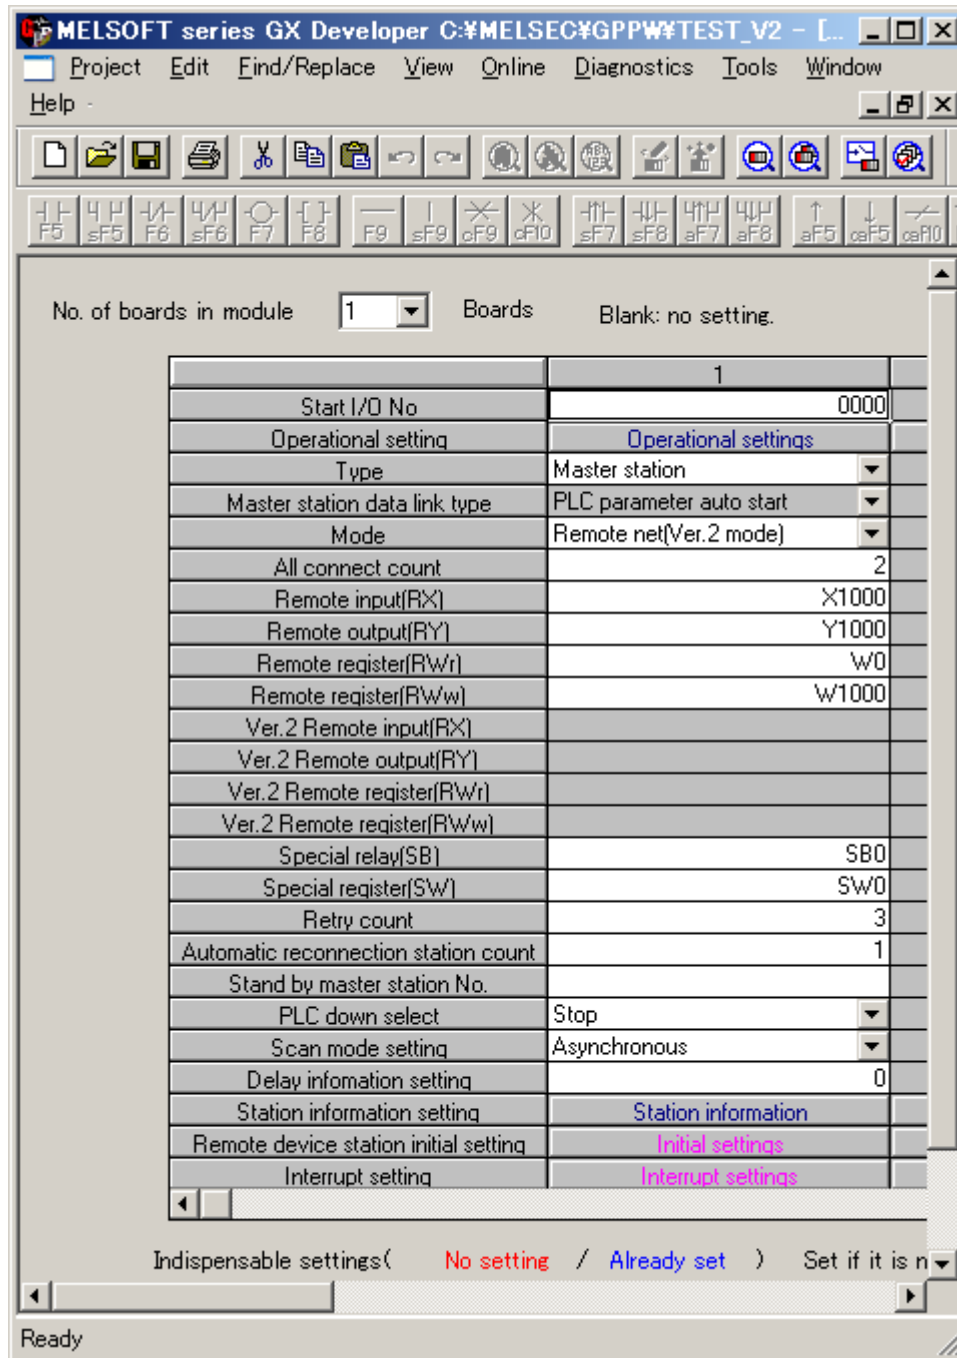

Station	Model	Data
Station1	EMU4-FD1-MB	Total reactive power, Total power factor, Reactive energy (import lag) Phase 1 current, Phase 2 current, Phase 3 current 1-2 voltage, 2-3 voltage, 3-1 voltage, Total active power,Active energy(import)
Station2	EMU4-FD1-MB	Total reactive power, Total power factor, Reactive energy (import lag) Phase 1 current, Phase 2 current, Phase 3 current 1-2 voltage, 2-3 voltage, 3-1 voltage, Total active power,Active energy(import)

### (3) Parameter Settings

Parameter settings are set as following with GX Developer.

#### 9.2.1 Network Parameter Settings and Auto Refresh Parameter Settings

The following is shown CC-Link network parameter settings and auto refresh parameter settings.

### 9.2.2 Operational Settings

Operational settings are as follows.

### 9.2.3 Station Information Settings

Station information settings are as follows.

Station No.	Station type	Expanded cyclic setting	Exclusive station count	Remote station points	Reserve/invalid station select	Intelligent buffer select(word)		
						Send	Receive	Automatic
1/1	Ver.2Remote device station	octuple	Exclusive station 1	128 points	No setting			
2/2	Ver.2Remote device station	octuple	Exclusive station 1	128 points	No setting			

#### (4) Device Allocation

Allocation of transmitted device

Items	Contents	Device No.	Note
Remote input (RX)	Station number 1: Remote input (RX00 to RX7F)	X1000 to X107F	Set X1000 to remote input(RX) refresh device.
	Station number 2: Remote input (RX00 to RX7F)	X1080 to X10FF	
Remote output (RY)	Station number 1: Remote output (RY00 to RY7F)	Y1000 to Y107F	Set Y1000 to remote output(RY) refresh device.
	Station number 2: Remote output (RY00 to RY7F)	Y1080 to Y10FF	
Remote register (RWr)	Station number 1: Remote register(RWr0 to RWr3)	W0000 to W001F	Set W0000 to remote register(RWr) refresh device.
	Station number 2: Remote register (RWr0 to RWr3)	W0020 to W003F	
Remote register (RWw)	Station number 1: Remote register (RWw0 to RWw3)	W1000 to W101F	Set W1000 to remote register(RWw) refresh device.
	Station number 2: Remote register (RWw0 to RWw3)	W1020 to W103F	
Link special relay (SB)	Link special relay of master station (SB0 to SB01FF)	SB0 to SB01FF	Set SB0 to link special relay(SB) refresh device.
Link special register (SW)	Link special register of master station (SW0 to SW01FF)	SW0 to SW01FF	Set SW0 to link special register(SW) refresh device.
Items of sending data	Sending data for monitoring by command(1H).	D0 to D31	Number of items are mentioned in section 9.1(2).
Error code	For station number 1:	D1000 to D1031	
	For station number 2:	D1050 to D1081	
Station error	For station number 1:	M0	0: Normal 1: Data link error occurred
	For station number 2:	M1	
Check of setting completion flag	For station number 1:	M100	To check the OFF.
	For station number 2:	M101	
Check of monitor pattern setting flag	For station number 1:	M150	To check the OFF.
	For station number 2:	M151	
Start of monitoring	For station number 1:	M200	
	For station number 2:	M201	
Start of received data	For station number 1:	M250	
	For station number 2:	M251	
Reception of error for monitoring by pattern	For station number 1:	M300	
	For station number 2:	M301	
Wait time for clear error	For station number 1:	T0	
	For station number 2:	T1	
Start time for monitor communication	For station number 1:	T50	
	For station number 2:	T51	
Reception time for monitoring by pattern	For station number 1:	T100	
	For station number 2:	T101	
Time out	For station number 1:	T150	
	For station number 2:	T151	
Index modification	For the select of station number	Z0	Uses Z0 or Z1. (To be Indexed the timer)
	For the flag of remote I/O	Z2	
	For the remote register	Z3	
	For the write device of received data	Z4	
	For the flag of monitoring by pattern	Z5	

Items	Contents		Device No.	Note	
Received data	Station number 1	Total reactive power	Multiplying factor, 00h Numerical value	R1 R2, R3	Active value = Numerical value x Multiplying factor
		Total power factor	Multiplying factor, 00h Numerical value	R5 R6, R7	
		Reactive energy (import lag)	Multiplying factor, 00h Numerical value	R9 R10, R11	
		Phase 1 current	Multiplying factor, 00h	R33	
			Numerical value	R34, R35	
		Phase 2 current	Multiplying factor, 00h	R37	
			Numerical value	R38, R39	
		Phase 3 current	Multiplying factor, 00h	R41	
			Numerical value	R42, R43	
		1-2 voltage	Multiplying factor, 00h	R45	
			Numerical value	R46, R47	
		2-3 voltage	Multiplying factor, 00h	R49	
			Numerical value	R50, R51	
		3-1 voltage	Multiplying factor, 00h	R53	
	Numerical value		R54, R55		
	Total active power	Multiplying factor, 00h	R57		
		Numerical value	R58, R59		
	Active energy (import)	Multiplying factor, 00h	R61		
		Numerical value	R62, R63		
	Station number 2	Total reactive power	Multiplying factor, 00h	R101	
			Numerical value	R102, R103	
		Total power factor	Multiplying factor, 00h	R105	
			Numerical value	R106, R107	
		Reactive energy (import lag)	Multiplying factor, 00h	R109	
			Numerical value	R110, R111	
		Phase 1 current	Multiplying factor, 00h	R133	
Numerical value			R134, R135		
Phase 2 current		Multiplying factor, 00h	R137		
		Numerical value	R138, R139		
Phase 3 current		Multiplying factor, 00h	R141		
		Numerical value	R142, R143		
1-2 voltage		Multiplying factor, 00h	R145		
		Numerical value	R146, R147		
2-3 voltage	Multiplying factor, 00h	R149			
	Numerical value	R150, R151			
3-1 voltage	Multiplying factor, 00h	R153			
	Numerical value	R154, R155			
Total active power	Multiplying factor, 00h	R157			
	Numerical value	R158, R159			
Active energy (import)	Multiplying factor, 00h	R161			
	Numerical value	R162, R163			
				Active value = Numerical value x Multiplying factor

## 10. Test Mode

Measuring Unit (EMU4-FD1-MB,) has the test mode which the fixed values are replied even if the voltage and current are not input. It can be used to check the communication to programmable controller.

### 10.1 How to Test

To do the test, it is necessary to operate the Measuring Unit.

About how to use the test mode, refer to the each instrument manual of Measuring Unit.
