- In the [Communication Configuration] dialog, [Display the dialog of [Communication Configuration] the next time as well] is cleared.

**Step 3** Configure the setting according to the communication path between the GOT and the personal computer, and click the [OK] button to display the [GOT Diagnostics] dialog.

⇒11.14.5 [GOT Diagnostics] dialog

**Step 4** Click the [Start Monitoring] button to obtain system status log data from the GOT and list the recorded errors in the error list.

**Step 5** Click an error in the error list to display its causes and corrective actions.

If an error with supplementary information is selected, click the [Related information] button to display a relevant page of GT Designer3 Help.

## ■2 Saving the contents of the error list to a file

The following shows the procedure for saving the contents of the error list displayed in the [GOT Diagnostics] dialog to a CSV or Unicode text file.

- Step 1** In the [GOT Diagnostics] dialog, obtain system status log data from the GOT.
- 11.14.2 ■1 Obtaining system status log data from the GOT and displaying error information
- Step 2** Set the items as shown below.
- [Refinement]: Type of errors to be displayed in the error list
  - [Series Display Selection]: This item appears when a system alarm (CPU error) of MITSUBISHI equipment is selected in the error list.
- Select the controller series to which the display contents of [Overview], [Cause], and [Corrective Action] for the system alarm (CPU error) correspond.
- Click the [Start Monitoring] button to automatically identify the series of the controller in which a selected error occurred.
- 11.14.5 [GOT Diagnostics] dialog
- Only the contents narrowed by the above items are output to a file.
- Step 3** Click the [Create File] button to display the [Save As] dialog.
- Step 4** Set [File name] and [Save as type], and click the [Save] button to save the contents of the error list.
- For the format of the saved file, refer to the following.
- 11.14.1 ■3 Format of a saved file

### 11.14.3 GOT internal device monitor

On GT Designer3, you can monitor the GOT internal devices and change the device values as necessary. You can import the sample free registration lists of the GOT internal devices related to specific functions.

#### 1 Specifications of the GOT internal device monitor

##### (1) Devices that can be monitored

You can monitor the GOT internal devices (GB, GD, and GS) and change their current values.

→ 12.1 GOT Internal Device

However, the current values of the following devices are not changeable.

- GB0 to GB63 (GB0 to GB38 and GB40 to GB63 for GT21 and GS21)
- Write devices of the GOT special registers (GS)

##### (2) Specifications of the free registration list

Use a free registration list to manage the GOT internal devices to be monitored.

A created free registration list is retained after GT Designer3 exits.

Up to 32 free registration lists can be created.

Up to 32 characters are available for a free registration list name.

The following characters cannot be used in a free registration list name.

\ / : ; \* ? " < > | .

Up to 6 free registration windows can be open simultaneously.

Up to 256 devices are registrable in one free registration list.

##### (3) Importing or exporting a free registration list

You can import or export a free registration list.

The CSV format and the Unicode text format are supported.

An exported free registration list is editable with spreadsheet software or others.

The following shows the layout of an exported free registration list.

1)	:DEV_MONT_VERSION		1		
2)	:LIST_TYPE		0		
3)	:LIST_NAME		Project_Screen_Script		
4)	:DEVICE_NUM		79		
5)	:NO	:DEVICE	:DEV_TYPE	:DISP_TYPE	:DEV_COMMENT
	0	GS14	BIN16	DEC	Script Common Information
	1	GS14.b0	BIT	BIN	Script Common Information: Error Occurrence Signal
	2	GS14.b7	BIT	BIN	Script Common Information: BCD Error Occurrence Signal

##### 1) Version

Version of the free registration list.

##### 2) List type

Type of a list.

Fixed to 0.

##### 3) List name

Name of the free registration list.

For the name specifications, refer to the following.

→ (2) Specifications of the free registration list

##### 4) Number of devices

Number of the registered devices.

Up to 256 devices are registrable in one free registration list.

##### 5) No.

Registered device number.

##### 6) Device

Registered device.

##### 7) Data type

Data type of a device

- BIT: [Bit]
- BIN8: [Byte [Signed]]
- BIN8\_Unsigned: [Byte [Unsigned]/Bit String [8-bit]]
- BIN16: [Word [Signed]]
- BIN16\_Unsigned: [Word [Unsigned]/Bit String [16-bit]]
- BIN32: [Double Word [Signed]]
- BIN32\_Unsigned: [Double Word [Unsigned]/Bit String [32-bit]]
- BIN64: [Quad Word [Signed]]
- BIN64\_Unsigned: [Quad Word [Unsigned]/Bit String[64-bit]]

#### 8) Display format

Display format of a device.

- BIN: [Binary]
- OCT: [Octal]
- DEC: [Decimal]
- HEX: [Hexadecimal]

#### 9) Comment

Comment set for a device.

Up to 255 characters can be set for one comment.

### (4) Sample free registration lists

You can import the sample free registration lists of the GOT internal devices related to the following functions.

Function	File name of a sample list
Project script, screen script	1_Project_ScreenScript.txt
Object script	2_ObjectScript.txt
GOT operational authority	3_GOT_OperationalAuthority.txt
Server function	4_ServerFunction.txt
Client function	5_ClientFunction.txt
Device data transfer	6_DeviceDataTransfer.txt
File transfer function	7_FileTransfer.txt
Mail send function	8_MailFunction.txt
Recipe	9_Recipe.txt
Global label	10_Label.txt
VNC server function	11_VNC_Server.txt

The sample free registration lists are stored in the following directory when GT Designer3 is installed.

[(Path to the installation location of GT Designer3)\GTD3\_2000\App\SampleDevMonitor]

The sample lists for the project script, screen script, object script and GOT operational authority are imported automatically at the initial startup of the GOT internal device monitor.

## ■2 How to use the GOT internal device monitor

### (1) Monitoring GOT internal devices

The following shows the procedure for monitoring GOT internal devices.

- Step 1** Configure the settings to enable the GOT internal device monitor.  
In the [GOT Setup] window ([GOT Internal Device Monitor]), select the following items.
- [Update the GOT internal device monitor setting]
  - [Use GOT internal device monitor in the GOT diagnostics function]
- To change the values of GOT internal devices by using the GOT internal device monitor, select [Allow GOT internal devices to be changed].
- ⇒5.3.7 Configuring the settings of the GOT internal device monitor ([GOT Internal Device Monitor])
- Step 2** Write package data to the GOT.  
For the communication method between the personal computer (GT Designer3) and the GOT, refer to the following.
- ⇒4. COMMUNICATING WITH GOT
- Step 3** In the [GOT Diagnostics] dialog, start the GOT internal device monitor.
- ⇒11.14.5 [GOT Diagnostics] dialog  
11.14.6 [GOT Internal Device Monitor] window
- The starting method varies according to the status of the GOT diagnostics.
- While the GOT diagnostics is running  
Click the [GOT Internal Device Monitor] button to display the [GOT Internal Device Monitor] window.
  - While the GOT diagnostics is not running  
Click the [GOT Internal Device Monitor] button to display the [GOT Internal Device Monitor] window, and perform one of the following operations.
    - Select [Online] → [Start] from the menu.
    - Click the [Start] button on the toolbar.
    - Click the [Start Monitoring] button in the [GOT Diagnostics] dialog.
- Step 4** Register the target GOT internal devices in a free registration list.  
Monitoring starts upon the registration of the devices.
- Step 5** To change the current value of a GOT internal device, enter a new value in [Current Value].  
The GOT internal device stores the new value upon the entering of the value.

### (2) Creating or editing a free registration list

Register a GOT internal device in a free registration list to monitor or change the current value of the device.

The following shows the procedure for creating or editing a free registration list.

- Step 1** Perform one of the following operations to display a free registration window.
- Select [Window] → [New Free Registration List] from the menu.
  - Double-click [New] under [Free Reg] in the [Project] window.
  - Double-click a target free registration list under [Free Reg] in the [Project] window.
- For information on how to import a free registration list and add it as a new list, refer to the following.
- ⇒(3) Importing a free registration list
- Step 2** Register, edit or delete a GOT internal device in the free registration window.
- ⇒11.14.6 [GOT Internal Device Monitor] window

To rename a free registration list, select a target free registration list, and click it again or press the [F2] key on the keyboard.

To delete a device in a free registration list, select a target device, and press the [Delete] key on the keyboard.

### (3) Importing a free registration list

Import a free registration list file in the CSV or Unicode text format.

The following shows the procedure for importing a free registration list.

- Step 1** Perform one of the following operations in the [Project] window according to the import method.
- To import a free registration list and add it as a new list, select [New].
  - To overwrite an existing free registration list with an imported list, select the target existing free registration list.
  - To import multiple free registration lists, select [Free Reg] at the top of the tree.
- Step 2** Perform one of the following operations to display the [Open] dialog.

- Select [File] → [Import Free Registration List] from the menu.
- In the [Project] window, click the [Im] button.
- Right-click the item selected in step 1, and select [Import] from the menu.

**Step 3** Select a free registration list file and click the [Open] button to import the file.

When importing multiple files, you can import CSV files and Unicode text files together.

For the precautions for using a CSV file or Unicode text file, refer to the following.

- 12.8 Precautions for Using CSV File
- 12.9 Precautions for Using Unicode Text File

#### (4) Exporting one free registration list

The following shows the procedure for exporting one free registration list to a CSV or Unicode text file.

**Step 1** In the [Project] window, select one free registration list to be exported.

**Step 2** Perform one of the following operations to display the [Save As] dialog.

- Select [File] → [Export Free Registration List] from the menu.
- In the [Project] window, click the [Ex] button.
- Right-click the free registration list to be exported, and select [Export] from the menu.

**Step 3** Set [File name] and [Save as type], and click the [Save] button to export the free registration list.

#### (5) Exporting all free registration lists

The following shows the procedure for exporting all free registration lists to CSV or Unicode text files.

**Step 1** In the [Project] window, select [Free Reg] at the top of the tree.

**Step 2** Perform one of the following operations to display a dialog where you can select a file format.

- Select [File] → [Export Free Registration List] from the menu.
- In the [Project] window, click the [Ex] button.
- Right-click [Free Reg] at the top of the tree, and select [Export] from the menu.

**Step 3** Select a file format and click the [OK] button to display the [Browse For Folder] dialog.

**Step 4** Select an export destination and click the [OK] button to export the free registration lists.

#### (6) Deleting a free registration list

The following shows the procedure for deleting a free registration list.

**Step 1** In the [Project] window, select a free registration list to be deleted.

**Step 2** Perform one of the following operations to display a confirmation dialog.

- Press the [Delete] key on the keyboard.
- Right-click the free registration list to be deleted, and select [Delete] from the menu.

**Step 3** Click the [Yes] button to delete the list.

## 11.14.4 Precautions

---

### ■1 Power saving function of the personal computer

Before performing the GOT diagnostics, disable the power saving function of the personal computer and Windows. For the details of the power saving function setting, refer to the manual of the personal computer or Windows Help.

### ■2 GOT diagnostics while firmware update is in progress

The GOT diagnostics cannot start while firmware update of the communication unit mounted on the GOT is in progress. To perform the GOT diagnostics, make sure that the firmware update is not in progress.

### ■3 Performing the GOT diagnostics while the FA transparent function is used

While the controller programming software communicates with a controller by using the FA transparent function, the GOT diagnostics cannot start.

To perform the GOT diagnostics, make sure that the FA transparent function is not in use.

### ■4 System alarms (CPU errors and network errors) displayed in the GOT diagnostics and the controller status

In the GOT diagnostics, system alarms (CPU errors and network errors) are displayed based on the error history recorded in the GOT (System status log). Therefore, the alarms does not indicate the controller status.

To check the controller status, use one of the following methods.

- Using a diagnostics function of the controller programming software
  - ⇒ Manual for the programming software used
- Checking system alarms in the GOT utility
  - ⇒ GOT2000 Series User's Manual (Utility)

### ■5 Resetting script error data

You cannot reset scrip error data in the following cases.

- The GOT displays a screen in which no script is set.
- The GOT displays the utility screen.

Reset scrip error data while the GOT displays a screen in which a script is set.

### ■6 Changing the values of GOT internal devices

With the GOT internal device monitor, the values of GOT internal devices are changeable from GT Designer3. In such a case, the GOT may not behave as its operator expects.

To disable the changing of the device values from GT Designer3, deselect [Allow GOT internal devices to be changed] in the [GOT Setup] window ([GOT Internal Device Monitor]).

### ■7 Precautions for exporting a free registration list

When a free registration list contains characters that cannot be represented in ASCII or Shift JIS code, export the list to a Unicode text file.

If you export the list to a CSV file, such characters are not output properly.

For the precautions for using Unicode text files, refer to the following.

⇒ 12.9 Precautions for Using Unicode Text File

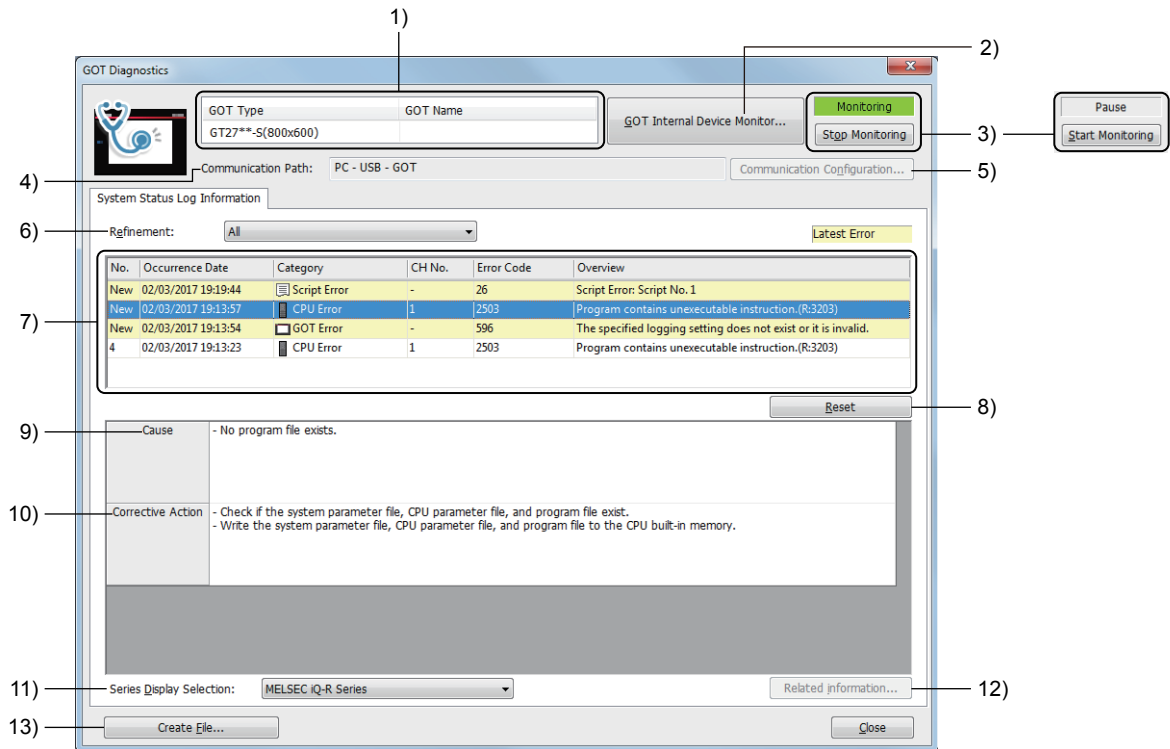

### ■8 Precautions for using the CC-Link IE TSN connection

When a controller is monitored using the CC-Link IE TSN connection, system alarms (CPU errors) are not displayed.

## 11.14.5 [GOT Diagnostics] dialog

In this dialog, system status log data is obtained from the GOT and error information is listed. To display the dialog, select [Diagnostics] → [GOT Diagnostics] from the menu.

### 1) **Connected GOT**

Type and name of the connected GOT

### 2) **[GOT Internal Device Monitor] button**

Displays the [GOT Internal Device Monitor] window.

⇒ 11.14.6 [GOT Internal Device Monitor] window

### 3) **[Start Monitoring] button, [Stop Monitoring] button**

Starts or stops the GOT diagnostics.

### 4) **[Communication Path]**

Communication path between the personal computer and the GOT

### 5) **[Communication Configuration] button**

Displays the [Communication Configuration] dialog.

Set the communication path between the personal computer and the GOT.

⇒ 4.8.8 [Communication Configuration] dialog

### 6) **[Refinement]**

Select the category of errors to be displayed in the error list.

The following shows selectable items.

- [All]
- [GOT Error]
- [CPU Error]
- [Network Error]
- [Script Error]

### 7) **Error list**

Lists errors based on the system status data recorded in the GOT.

Errors are displayed in reverse chronological order. If the number of errors exceeds the maximum number of displayed errors, earlier errors are not displayed.

The latest errors in each category are indicated with [New] in the [No.] column.

The maximum number of displayed errors depends on the error type.

- System alarm (GOT error): 30
- System alarm (CPU error or network error): 30
- Script error (Project script or screen script): 15
- Object script error: 15

For the system alarm (GOT error), script error, and object script error, correct an error and click the [Reset] button to delete the error from the error list.

For the precautions on the system alarm, refer to the following.

⇒9.1.3 ■4 (4) Display of system alarms occurring in multiple channels

#### 8) [Reset] button

Resets error data in the GOT, and updates the error list.

Corrected system alarms (GOT errors) and script errors are deleted from the error list.

Others remain in the list.

For the precautions on the script error or object script error, refer to the following.

⇒9.9.12 ■1 (11) Script error control and GOT status

9.10.7 ■1 (10) Object script error control and GOT status

#### 9) [Cause]

Causes of an error selected in the error list

#### 10) [Corrective Action]

Corrective actions to correct an error selected in the error list

#### 11) [Series Display Selection]

This item appears when a system alarm (CPU error) of MITSUBISHI equipment is selected in the error list.

Select the controller series to which the display contents of [Overview], [Cause], and [Corrective Action] for the system alarm (CPU error) correspond.

Upon updating the error list, selecting a relevant error automatically identifies the series of the controller in which the error occurred.

The following shows selectable items.

- [MELSEC iQ-R Series]
- [MELSEC iQ-F Series]
- [MELSEC-Q Series Basic Model]
- [MELSEC-Q Series High-performance Model]
- [MELSEC-Q Series Universal Model]
- [MELSEC-L Series]
- [MELSEC-L Series Head Module]
- [MELIPC]

#### 12) [Related information] button

Displays GT Designer3 Help, showing a relevant page for an error selected in the error list.

This item appears when an error with supplementary information is selected in the error list.

#### 13) [Create File] button

Saves the contents of the error list to a CSV or Unicode text file.

⇒11.14.1 ■3 Format of a saved file

## 11.14.6 [GOT Internal Device Monitor] window

In this window, monitor the GOT internal devices, and change the device values as necessary. To display the window, click the [GOT Internal Device Monitor] button in the [GOT Diagnostics] window.

### 1) Title bar

Displays the operation status of the GOT internal device monitor.

### 2) Menu bar

Displays the operation menus of the GOT internal device monitor.

→ ■1 Menus

### 3) Toolbar

Displays the operation buttons of the GOT internal device monitor.

→ ■2 Toolbar

### 4) [Project] window

Expand all button, collapse all button

- Expand all button, collapse all button  
Expands or collapses all items in the tree.
- [Im] button  
Import a free registration list file in the CSV or Unicode text format. For the procedure for importing a free registration list, refer to the following.  
→ 11.14.3 ■2 (3) Importing a free registration list
- [Ex] button  
Export a free registration list to a CSV or Unicode text file. For the procedure for exporting a free registration list, refer to the following.  
→ 11.14.3 ■2 (4) Exporting one free registration list  
11.14.3 ■2 (5) Exporting all free registration lists
- [Free Reg]  
Displays created free registration list names.
  - [New]  
Creates a free registration list.

### 5) Work window

An area in which free registration windows appear.

→ ■3 Free registration window

### 6) Editor tab

Displays the tabs corresponding to the windows opened in the work window.

To bring an open window to the foreground in the work window, select its tab.

• **Pull-down menu button**

Lists the open windows in the work window.  
To bring an open window to the foreground in the work window, select it from the pull-down menu.

**7) Status bar**

Displays the description of a selected menu.

**■ 1 Menus**

**(1) [File]**

Menu	Description
[Import Free Registration List]	Import a free registration list file in the CSV or Unicode text format. For the procedure for importing a free registration list, refer to the following. ⇒ 11.14.3 ■2 (3) Importing a free registration list
[Export Free Registration List]	Export a free registration list to a CSV or Unicode text file. For the procedure for exporting a free registration list, refer to the following. ⇒ 11.14.3 ■2 (4) Exporting one free registration list 11.14.3 ■2 (5) Exporting all free registration lists
[Exit]	Ends the device monitor.

**(2) [View]**

Menu	Description
[Toolbar]	Displays or hides the toolbar.
[Status Bar]	Displays or hides the status bar.

**(3) [Online]**

Menu	Description
[Start]	Starts monitoring the GOT internal devices.
[Stop]	Stops monitoring the GOT internal devices.

**(4) [Window]**

Menu	Description
[New Free Registration List]	Create a free registration list.
[Cascade]	Displays open windows in a stack in the work window.
[Arrange Sideways]	Tiles open windows side by side in the work window.
[Arrange Lengthways]	Tiles open windows horizontally in the work window.
[Close Inactive Windows]	Closes all open windows except the selected one in the work window.
[New Horizontal Tab Group]	Splits the work window into panes horizontally. Puts the free registration window corresponding to a selected tab in a pane immediately underneath the current pane. Tabs are movable between the editor tabs of panes.
[New Vertical Tab Group]	Splits the work window into panes vertically. Puts the free registration window corresponding to a selected tab in the immediately right pane. Tabs are movable between the editor tabs of panes.

**(5) [Help]**

Menu	Description
[GT Designer3 Help]	Displays GT Designer3 Help.

## ■2 Toolbar

- 1) **[Start]**  
Starts the device monitor.
- 2) **[Stop]**  
Stops the device monitor.
- 3) **[Cascade]**  
Displays open windows in a stack in the work window.
- 4) **[Arrange Sideways]**  
Tiles open windows side by side in the work window.
- 5) **[Arrange Lengthways]**  
Tiles open windows horizontally in the work window.
- 6) **[Close Inactive Windows]**  
Closes all open windows except the selected one in the work window.
- 7) **[New Horizontal Tab Group]**  
Splits the work window into panes horizontally.  
Puts the free registration window corresponding to a selected tab in a pane immediately underneath the current pane.  
Tabs are movable between the editor tabs of panes.
- 8) **[New Vertical Tab Group]**  
Splits the work window into panes vertically.  
Puts the free registration window corresponding to a selected tab in the immediately right pane.  
Tabs are movable between the editor tabs of panes.
- 9) **[GT Designer3 Help]**  
Displays GT Designer3 Help.

### ■ 3 Free registration window

	1)	2)	3)	4)	5)
	Device	Data Type	Current Value	Display Format	Comment
1	GS14	Word [Signed]	1	Decimal	Script Common Infor...
2	GS14.b0	Bit	1	Binary	Script Common Infor...
3	GS14.b7	Bit	0	Binary	Script Common Infor...
4	GS14.b8	Bit	0	Binary	Script Common Infor...
5	GS14.b12	Bit	0	Binary	Script Common Infor...
6	GS15	Word [Signed]	16	Decimal	Script Error Pointer
7	GS16	Word [Signed]	1	Decimal	Script No.
8	GS17	Word [Signed]	26	Decimal	Error Code

#### 1) [Device]

Set a GOT internal device to be monitored.

→ 6.1.2 How to set devices

#### 2) [Data Type]

Select the data type of a GOT internal device.

The following shows selectable items.

- [Bit]
- [Byte [Unsigned]/Bit String [8-bit]]
- [Word [Unsigned]/Bit String [16-bit]]
- [Double Word [Unsigned]/Bit String [32-bit]]
- [Quad Word [Unsigned]/Bit String [64-bit]]
- [Byte [Signed]]
- [Word [Signed]]
- [Double Word [Signed]]
- [Quad Word [Signed]]

#### 3) [Current Value]

Displays the current value of a GOT internal device.

The set value is changeable.

The setting range of [Current Value] depends on the device.

If a communication error occurs, [--] is displayed.

When any of the following is selected for [Data Type], displaying or changing the current value is not available.

- [Byte [Unsigned]/Bit String [8-bit]]
- [Quad Word [Unsigned]/Bit String [64-bit]]
- [Byte [Signed]]
- [Quad Word [Signed]]

#### 4) [Display Format]

Select the display format of a GOT internal device.

The following shows selectable items.

- [Binary]
- [Octal]
- [Decimal]
- [Hexadecimal]

#### 5) [Comment]

Set a comment for a GOT internal device.

Up to 255 characters can be set for one comment.

## 11.15 Offline Reproduction and Monitoring of Operation (GOT Offline Monitor)

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

The GOT offline monitor function is used to reproduce the circumstances of the troubled site by establishing connection with the GX Works3 offline monitor on a personal computer.

Using the file that records the circumstances when the trouble occurred and the project of that time, you can grasp the circumstances which enables a cause investigation.

- 11.15.1 Specifications of the GOT offline monitor
- 11.15.2 How to use the GOT offline monitor
- 11.15.3 Precautions for the GOT offline monitor
- 11.15.4 Screen layout of the GOT offline monitor
- 11.15.5 [Setting] dialog (GOT offline monitor)
- 11.15.6 [Resource File Viewer Setting]/[Resource File Viewer Operation] dialog
- 11.15.7 How to use a Resource File Viewer module
- 11.15.8 Screen layout of a Resource File Viewer module

## 11.15.1 Specifications of the GOT offline monitor

### ■ 1 Operating environment of the GOT offline monitor

The following shows the operating environment for the GOT offline monitor.

Item	Description
Model	Windows-compatible personal computer
OS (English, Simplified Chinese, Traditional Chinese, Korean, German, or Italian version)	<ul style="list-style-type: none"> <li>• Microsoft Windows Server 2016 Standard (64 bit)</li> <li>• Microsoft Windows Server 2012 R2 Standard (64 bit)</li> <li>• Microsoft Windows Server 2008 R2 Enterprise (64 bit)</li> <li>• Microsoft Windows Server 2008 R2 Standard (64 bit)</li> <li>• Microsoft Windows 11 Education (64 bit)</li> <li>• Microsoft Windows 11 Enterprise (64 bit)</li> <li>• Microsoft Windows 11 Pro (64 bit)</li> <li>• Microsoft Windows 11 Home (64 bit)</li> <li>• Microsoft Windows 10 Enterprise (32 bit, 64 bit)</li> <li>• Microsoft Windows 10 Pro (32 bit, 64 bit)</li> <li>• Microsoft Windows 10 Home (32 bit, 64 bit)</li> <li>• Microsoft Windows 10 IoT Enterprise 2016 LTSC (64 bit) (English OPK, or English OPK with a language pack for localization)</li> </ul>
CPU	Use the CPU which the above OSs run on.
Memory	Use the CPU which the above OSs run on.
Display	Use the CPU which the above OSs run on.
Hard disk space	Use the CPU which the above OSs run on.
Other software	<ul style="list-style-type: none"> <li>• GX Works3 Version 1.065T or later</li> <li>• When using Resource File Viewer: Microsoft .NET Framework 4.5.2 or later</li> </ul>
Other hardware	<ul style="list-style-type: none"> <li>• Use the hardware compatible with the above OS.</li> <li>• For installation: mouse, keyboard, DVD drive</li> <li>• For execution: Mouse and keyboard</li> <li>• For sound output (such as buzzer): Sound card, speaker</li> </ul>

### ■ 2 Monitoring-supported GOTs

The following shows the monitoring-supported GOTs with the GOT offline monitor.

Name	Resolution (dot)	Display color <sup>*1</sup>	Memory capacity <sup>*2</sup>
GT27**-X	1024 × 768	65536 colors	57 MB
GT27**-S	800 × 600	65536 colors	57 MB
GT27**-V	640 × 480	65536 colors	57 MB
GT2705-V	640 × 480	65536 colors	32 MB
GT25**-WX	1280 × 800	65536 colors	32 MB
GT25**-W	800 × 480	65536 colors	32 MB
GT25**-S	800 × 600	65536 colors	32 MB
GT25**-V	640 × 480	65536 colors	32 MB
GT2505-V	640 × 480	65536 colors	32 MB
GT23**-V	640 × 480	256 colors	9 MB
GT SoftGOT2000	640 × 480 to 1920 × 1200	65536 colors	57 MB
GS25**-WX	1280 × 800	65536 colors	32 MB

\*1 The following items are displayed in 16777216 colors.

- Parts display
- Parts movement
- Image file

\*2 Capacity of the GOT user area where package data is stored.

### ■ 3 Number of GX Works3 offline monitors that can be monitored

One GX Works3 offline monitor can be monitored.

#### ■4 Software version of GX Works3

Use GX Works3 version 1.065T or later.

#### ■5 Monitoring-supported controllers

When connected with the GX Works3 offline monitor, the GOT offline monitor can monitor the following virtual controllers.

Controller model	Firmware version
R04CPU R08CPU R16CPU R32CPU R120CPU R04ENCPU R08ENCPU R16ENCPU R32ENCPU R120ENCPU	Version 48 or later
R08SFCPU R16SFCPU R32SFCPU R120SFCPU	Version 21 or later

#### ■6 Monitoring-supported devices

##### (1) Read only devices

The devices that satisfy all of the following requirements can be read.

Writing is not available.

Requirement	Reference
Devices that can be monitored by GX Works3	⇒ GX Works3 Operating Manual
Devices that can be monitored by the GOT (Except the timer set value (TS) and counter set value (CS) of the Mitsubishi Electric PLC)	⇒ 12.3 Device Range and Settings of Mitsubishi Electric Equipment

##### (2) Readable/writable devices

The following shows the readable/writable devices.

- GOT internal devices
- SoftGOT2000 internal devices

#### ■7 Monitoring-supported functions

##### (1) Common functions

○: Supported, ×: Unsupported

Function	Supported/Unsupported	Function	Supported/Unsupported
System font display	○	Multi-channel connection	×
Option font display	○	Vertical display	○
Superimposition of objects	○	Touch panel and touch key	○
Base screen display	○	Numerical display/input	○
Overlap window display	○	Text display/input	○
Superimpose window display	○ <sup>*1</sup>	Historical data list display	×
Key window display	○	Clock display	○
Set overlay screen	○	Comment display	○
Screen switching	○ <sup>*2</sup>	Alarm display	×
Station No. switching	○	Alarm popup display	×
Buffer memory unit No. switching	○	Recipe display (record list)	○
Language switching	○ <sup>*3</sup>	Graphical meter	○
System information	○	Panelmeter	○
Security authentication	○ <sup>*4</sup>	Historical trend graph	×

Function	Supported/Unsupported	Function	Supported/Unsupported
Trigger action	○	Line graph	○
Time action	×	Bar graph	○
Hard copy function	○*5	Scatter graph	○
Comment	○	Statistics graph	○
Figure	○	Level display	○
Internal device	○*6	Touch switch	○
Cursor movement	○	Slider	○
Operation log	×	Video/RGB display object	×
Logging	×	Script parts	○*7
Recipe	○	Mobile screen display	×
Script	○	Hyperlink	×

\*1 The touch operation is not disabled even though [Disable the touch operation of a screen on the back] is selected in the detail setting for the overlap window.

⇒ 5.2.1 ■2 (8) Disabling the touch operation on the screens that are behind an overlap window

\*2 Use a Go To Screen switch or configure the screen switching setting for the GOT offline monitor.

⇒ 11.15.2 ■4 Switching the screen to be monitored

\*3 Configure the language switching setting for the GOT offline monitor.

⇒ 11.15.2 ■5 Switching the display language

\*4 Configure the security authentication setting for the GOT offline monitor.

⇒ 11.15.2 ■6 Switching the security level

\*5 Only available for file output.

\*6 The GOT internal devices (GB, GD, GS) and SoftGOT2000 internal devices (SGB, SGD) can be used.

Note that among the GOT internal devices, GS500 to GS507 supported only by GT SoftGOT2000 cannot be used.

\*7 The GOT internal devices (GB, GD, GS) and script parts temporary device areas (PTMP) can be used.

## (2) Utility function

○: Supported, ×: Unsupported

Category	Function	Supported/Unsupported	Function	Supported/Unsupported
[GOT basic set]	[Display]	○	[Time]	×
	[Language]	○	[Controller]	×
	[Specific Information]	×	[Ethernet Communication]	×
	[IP Address]	×	[Transparent Mode]	×
	[IP filter setting]	×	[GOT Internal Device Monitor]	×
	[Operation]	○	[Security]	○
	[Utility Call Key]	○	[Operator Authentication]	×
	[USB Host]	×		
[Ext. func. Set]	[SoftGOT-GOT Link Function]	×	[Wireless LAN Setting]	×
	[VNC Server Function]	×	[System launcher]	×
	[Sequence Program Monitor]	×	[iQSS utility]	×
	[Backup Restoration]	×	[ANDON Setting]	×
	[License Management]	×	[Ethernet printer]	×
	[Video/RGB]	×	[Network Drive]	×
	[Multimedia]	×		

Category	Function	Supported/Unsupported	Function	Supported/Unsupported
[Maintenance]	[Batch Self Check]	×	[Font check]	×
	[USB Device Management]	×	[Touch panel check]	×
	[Clean/Display Screen]	×	[I/O check]	×
	[Touch panel calibration]	×	[Ethernet Status Check]	×
	[System Alarm]	×	[GOT Information]	×
	[Drawing check]	×	[GOT Mobile information]	×
[Monitor]	[System launcher]	×	[Q Motion SFC monitor]	×
	[Device monitor]	×	[Log viewer]	×
	[Sequence Program Monitor (Ladder)]	×	[Network status display]	×
	[Sequence Program Monitor (iQ-R/iQ-L Ladder)]	×	[FX list editor]	×
	[Sequence Program Monitor (iQ-F Ladder)]	×	[CNC Machining Program Edit]	×
	[FX Ladder monitor]	×	[CNC data I/O]	×
	[Network monitor]	×	[Motion program editor]	×
	[Intelligent module monitor]	×	[Motion program I/O]	×
	[Servo amp Monitor]	×	[MELSEC-L Troubleshooting]	×
	[Q Motion monitor]	×	[iQSS utility]	×
	[R Motion monitor]	×	[Drive recorder]	×
	[CNC monitor]	×	[CC-Link IE diagnostics]	×
	[CNC monitor2]	×	[Servo amplifier graph]	×
	[Sequence Program Monitor (SFC)]	×	[Vision sensor monitor]	×
[R Motion SFC monitor]	×			
[Data mng.]	[Alarm information]	×	[Package Management]	○*1
	[Image File Management]	○	[Backup Restoration]	×
	[Recipe Information]	○	[SRAM control]	○*2
	[Logging information]	×	[Memory card format]	×
	[Operation log information]	×	[Memory check]	×
	[File manager]	×	[GOT Pkg. acquisition]	×
	[File print]	○*3		

\*1 [Delete all labels] and [Sort out labels] are supported.

\*2 [Initialize all] and [Initialize selected area] are supported.

\*3 Only [Preview] is supported.

### (3) Extended function

○: Supported, ×: Unsupported

Function	Supported/Unsupported	Function	Supported/Unsupported
Screen gesture	×	Device monitor	×
Object gesture	×	Network monitor	×
Kana-Kanji/Pinyin conversion	○	Log viewer	×
Wireless LAN	×	iQSS utility	×
SoftGOT-GOT link function	×	Intelligent module monitor	×
System launcher	×	Servo amplifier monitor	×
Sequence program monitor (Ladder)	×	Drive recorder	×
Sequence program monitor (SFC)	×	R motion monitor	×
FX ladder monitor	×	Q motion monitor	×
Backup/restore	×	CNC monitor	×
Gateway (Server, Client)	×	CNC data I/O	×

Function	Supported/Unsupported	Function	Supported/Unsupported
Gateway (Mail)	×	CNC machining program edit	×
Gateway (FTP server)	×	CNC monitor 2	×
File transfer function	×	Motion program editor	×
Barcode	×	Motion program I/O	×
RFID	×	R motion SFC monitor	×
Remote personal computer operation (Serial)	×	Q motion SFC monitor	×
Remote personal computer operation (Ethernet)	×	FX list editor	×
VNC server	×	Vision sensor monitor	×
Video display	×	CC-Link IE TSN/CC-Link IE Field Network diagnostics	×
RGB display	×	Recipe operation	○
Multimedia	×	Recipe display (record list)	○
Operation panel	×	Operation log screen image	×
External I/O	×	Operator authentication	○
Report	○	File manager	×
Printer	×	File print	○*1
Sound output	○	Document display	○
GOT network interaction	×	MELSEC-L troubleshooting	×
GOT Mobile Setting	×	Video/RGB display object	×
Device data transfer	○	GOT Platform Library	×
Servo amplifier graph	×	Network drive	○*2
MES interface	×	Base screen size expansion	○

\*1 Only [Preview] is supported.

\*2 In the simulation, files can be saved into virtual drives only.

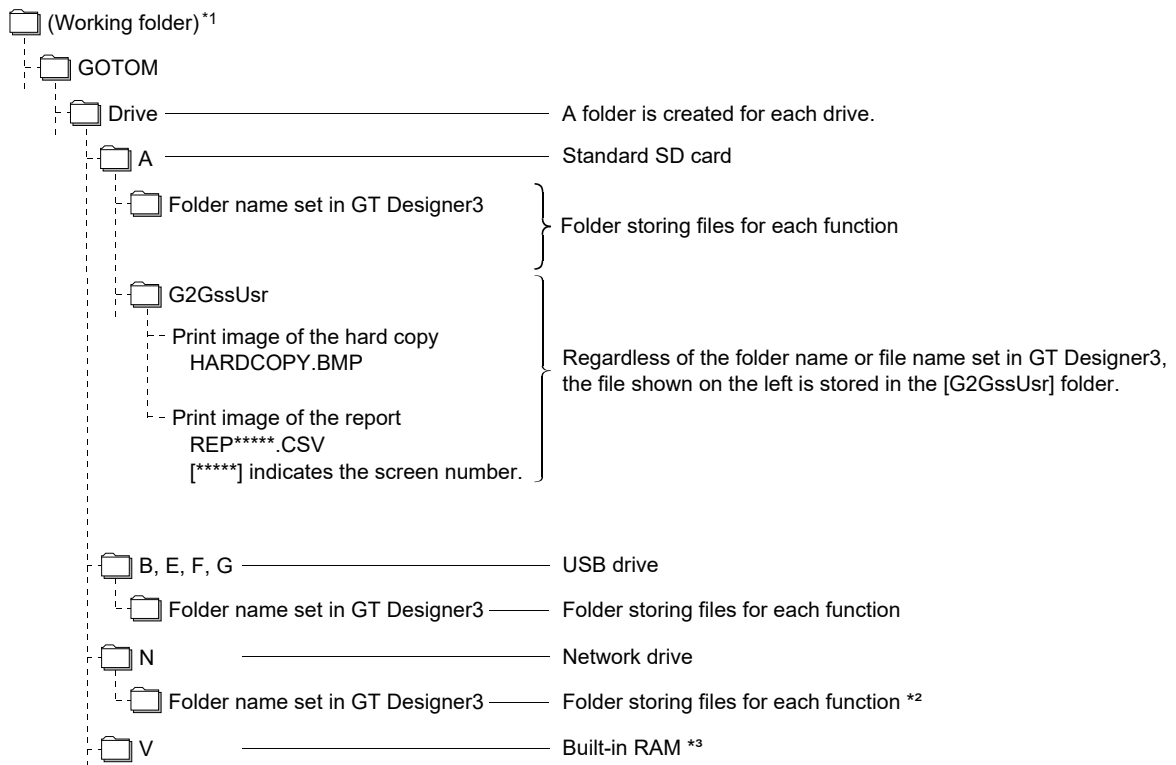

## ■ 8 Destination to save data

Folders in the hard disk of the personal computer are handled by the GOT offline monitor as the virtual drive.

### (1) For functions saving data into a data storage or file server

When a data storage or file server is specified to save the files for functions including object functions and extended functions, data is saved onto the hard drive of the personal computer.

The files for each function are saved into the folders as shown below.

The drive unavailable to the monitoring target GOT is not usable.

\*1 For the working folder, refer to the following.

⇒(3) Working folder

\*2 In the simulation, files can be saved into virtual drives only.

\*3 For details on drive V, refer to the following.

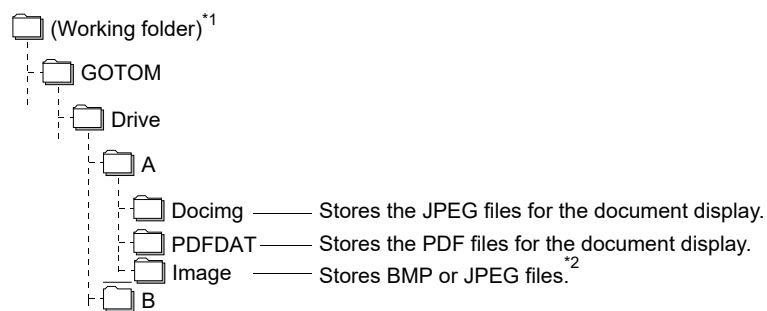

⇒11.15.3 ■10 Virtual drive V

## (2) For functions requiring the user to save data into a data storage

When registering BMP, JPEG, or PNG files used as parts, or data for document display, save them in the hard disk of the personal computer.

Store each data in the following (user-created) folders.

(The drive to be used depends on the specifications of the object or setting.)

\*1 For the working folder, refer to the following.

⇒(3) Working folder

\*2 In the simulation, files can be saved into virtual drives only.

## (3) Working folder

The following shows a working folder.

Users\<(user name)\AppData\Local\MITSUBISHI\GSS3

## 11.15.2 How to use the GOT offline monitor

---

### ■1 Starting the GOT offline monitor

To start the GOT offline monitor, establish connection between the GX Works3 offline monitor and the GOT offline monitor.

Start the GOT offline monitor in GT Designer3 or GX Works3.

#### (1) In GT Designer3

**Step 1** Start the GX Works3 offline monitor.

→ GX Works3 Operating Manual

**Step 2** Start GT Designer3 and open the project to be monitored in the GOT offline monitor.

→ 2.3.2 Opening a project

**Step 3** In GT Designer3, start the GOT offline monitor by either of the following methods.

- Select [Tools] → [GOT Offline Monitor] → [Activate] from the menu.
- Click the [GOT Offline Monitor: Activate] button on the toolbar.

**Step 4** Specify the recording file read from the GX Works3 offline monitor at the first startup.

When the [Recording File Setting] dialog is displayed, select the recording file to be monitored and click the [OK] button to start monitoring.

After the first startup, the recording file read at the last startup is read and monitoring starts.

For details on a recording file, refer to the following.

→ GX Works3 Operating Manual

#### (2) In GX Works3

**Step 1** Start the GX Works3 offline monitor.

→ GX Works3 Operating Manual

**Step 2** When the GOT offline monitor is started in GX Workd3 , the [Open Project] dialog is displayed.

→ GX Works3 Operating Manual

**Step 3** Select a GT Designer3 project to be monitored in the GOT offline monitor, and click the [Open] button to start monitoring.

### ■2 Ending the GOT offline monitor

When the GOT offline monitor is ended, the GX Works3 offline monitor is disconnected.

You can end the GOT offline monitor in GT Designer3, the GOT offline monitor, or GX Works3.

#### (1) In GT Designer3

End the GOT offline monitor by either of the following methods.

- Select [Tools] → [GOT Offline Monitor] → [Exit] from the menu.
- Click the [GOT Offline Monitor: Exit] button on the toolbar.

#### (2) In the GOT offline monitor

End the GOT offline monitor by either of the following methods.

- Select [Project] → [Exit] from the menu.
- Select [Online] → [Monitor Stop] from the menu.
- Click the [×] button.

#### (3) In GX Works3

You can end the GOT offline monitor in GX Works3 only when the GOT offline monitor is started in GX Works3.

For the details, refer to the following.

→ GX Works3 Operating Manual

#### (4) At disconnection of the GX Works3 offline monitor

When [Terminate GOT Offline Monitor when disconnected from GX Works3 Offline Monitor] is selected in the [Auxiliary Setup] tab in the [Setting] dialog, the GOT offline monitor automatically ends at disconnection of the GX Works3 offline monitor.

→ 11.15.5 ■3 [Auxiliary Setup] tab

### ■3 Changing the option settings of the GOT offline monitor

Change the option settings of the GOT offline monitor in the [Setting] dialog.

⇒11.15.5 [Setting] dialog (GOT offline monitor)

### ■4 Switching the screen to be monitored

Switch the currently monitored screen in the project by either of the following methods.

- Use the pull-down menu on the toolbar or arrow buttons.

⇒11.15.4 ■2 Toolbar

- Use a Go To Screen switch.

Switching by using a device is not available.

⇒8.2.7 [Go To Screen Switch] dialog

For details on the screen switching, refer to the following.

⇒5.2.1 Setting for switching screens to be displayed on the GOT ([Screen Switching/Window])

### ■5 Switching the display language

The GOT switches comments displayed on the object by changing the value (column number of the comment group) using the pull-down menu on the toolbar.

If messages are registered by language in each column of the comment group, the language of the comment displayed can be switched.

⇒11.15.4 ■2 Toolbar

For details on the language switching, refer to the following.

⇒5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])

### ■6 Switching the security level

Switch the security level of the project currently monitored using the pull-down menu on the toolbar.

⇒11.15.4 ■2 Toolbar

For details on the screen security, refer to the following.

⇒5.2.6 Configuring the security settings for the GOT screen ([Screen Security])

### ■7 Using Resource File Viewer

Displays the resource files read from the GOT.

For details on Resource File Viewer, refer to the following.

⇒11.15.7 How to use a Resource File Viewer module

### ■8 Capturing snap shots

Save the image of a monitor screen as a BMP format file or a JPEG format file.

**Step 1** Select [Project] → [Snap Shot] from the menu.

**Step 2** The [Save As] dialog appears.

Configure the following settings and click the [Save] button.

**1) [Save in]**

Select a location for saving a file.

**2) [File Name]**

Name the screen image file to be saved.

### 3) [Save as type]

Select the BMP format or the JPEG format.

## ■9 Printing a monitor screen

Output the image of a monitor screen to a printer.

- (1) Printing
- (2) Previewing the print image
- (3) Page setting
- (4) Configuring the printer setting

### (1) Printing

- Step 1** Select [Project] → [Print] from the menu.
- Step 2** The [Print] dialog of Windows is displayed.  
Click the [OK] button to start printing.

### (2) Previewing the print image

- Step 1** Select [Project] → [Print Preview] from the menu.
- Step 2** The print preview is displayed.

### Point

#### Precautions for using the print preview

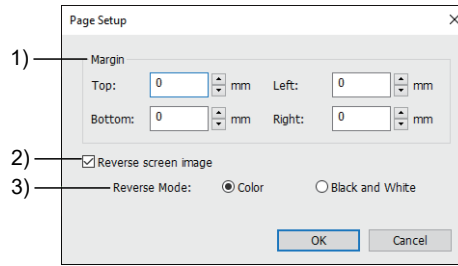

The print preview of a monitor screen may look smaller than the actual screen depending on the paper type or size, and the screen resolution.

Therefore, printed material may look different from the print preview in color.

Check the printed material.

### (3) Page setting

- Step 1** Select [Project] → [Page Setup] from the menu.
- Step 2** The [Page Setup] dialog is displayed.  
Configure the following settings and click the [OK] button.

#### 1) [Margin]

Set margins for the page to be printed.

#### 2) [Reverse screen image]

Select this item to reverse colors of the screen image at printing.

#### 3) [Reverse Mode]

Set a reverse method for the screen image.

The following shows selectable items.

- [Color]: Reverses whole colors of the screen image to be printed.
- [Black and White]: Reverses white to black of the screen image to be printed.

### (4) Configuring the printer setting

- Step 1** Select [Project] → [Print Setup] from the menu.
- Step 2** The Windows print dialog box is displayed.  
Configure the settings for the printer (selecting a printer, paper size, direction of printing).

#### Point

#### (1) Precautions for the printer used

Each GOT model that performs monitoring has its own print settings.

However, when you perform one of the following operations, the printer selected for [Set as default printer] in Windows is specified.

- Deleting the selected printer
- Selecting a printer whose name contains 31 characters or more

#### (2) Precautions for the print settings

Depending on the printer used, some print settings are not retained.

## ■ 10 Displaying the information of the currently monitored project

The project title, project ID, and the data size of the currently monitored project data are displayed.

**Step 1** Select [Project] → [Properties] from the menu.

**Step 2** The [Properties] dialog appears.

### 1) [Project Title]

Displays the title for the project.

### 2) [Project ID]

Displays the project ID.

### 3) [Data Size]

Displays the data size of the project data.

## Point

### When the properties dialog box is displayed before starting monitoring

When the [Properties] dialog is displayed before starting monitoring, the project title, the project ID, and the data size of the previous monitoring are displayed.

When the project data is not read, the project title, the project ID, and the data size are not displayed.

## ■ 11 Operating the numerical input or text input with a keyboard

Operate the numerical input or text input with the keyboard of a personal computer.

Perform one of the following operations to enable or disable the keyboard input.

- Select [Set] → [Keyboard] from the menu.
- Click the [Keyboard] button on the toolbar.
- Select [Set] → [Keyboard] from the right-click context menu.

The following shows how to operate the numerical input or text input with a keyboard.

Keyboard operation	GOT key code	Operation on the numerical input	Operation on the text input
[Back space]	0008h	Delete the character on the cursor.	
[Enter]*1	000Dh	Write the entry to a specified device, display the cursor on the target object, move the cursor to a different object, or close the key window.	
[Esc]	001Bh	Cancel the entry.	
[_] (Hyphen)	002Dh	Reverse the sign of the value.	-
[.] (Period)	002Eh	Enter a decimal point.	-
[0] to [9]	0030h to 0039h	Enter a numeric character.	Enter a character. (ASCII or Unicode 2.1-compatible)
[A] to [Z], [a] to [z]	0041h to 005Ah, 0061h to 007Ah	Enter a numeric character in hexadecimal ([A] to [F], [a] to [f]).	
Symbol keys	Character codes (ASCII)	-	
Enter text (such as hiragana or kanji characters).	Character codes (Unicode)	-	Enter text. (Unicode 2.1-compatible)
[→], [←], [↑], [↓]	0080h, 0081h, 0082h, 0083h	Move the cursor to a different object.	
[Home]	0084h	-	Convert the entry to kanji or Simplified Chinese characters.
[Page Up]	0085h	-	Select the previous candidate.
[Page Down]	0086h	-	Select the next candidate.
[End]	0087h	-	Confirm the entry, or select the next group of hiragana characters to be converted to kanji characters.

Keyboard operation	GOT key code	Operation on the numerical input	Operation on the text input
[Delete]	0088h	Delete all the entered characters.	
[Ctrl] + [←], [Ctrl] + [→]	0090h, 0091h	Move the cursor on the target object.	
[Ctrl] + [↑], [Ctrl] + [↓]	FFFAh, FFFBh	Increment or decrement the value.	-

\*1 The operation on the target object varies depending on the setting in the [Environmental Setting] window ([Key Windows]).  
For the details, refer to the following.

⇒5.2.4 ■4 [Key Window]

## ■12 Using the device monitor

You can monitor the virtual devices of a controller connected to the GOT offline monitor using the device monitor.

### (1) Specifications of the device monitor

#### (a) Starting the device monitor

You can start the device monitor only during monitoring when connection is established between the GOT offline monitor and the GX Works3 offline monitor.

#### (b) Monitoring-supported devices

With the device monitor function, the GOT internal devices, GT SoftGOT2000 internal devices, and virtual devices of the controllers can be monitored.

For the devices that can be monitored by the GOT offline monitor, refer to the following.

⇒11.15.1 ■6 Monitoring-supported devices

#### (c) Specifications of the free registration list

A created free registration list is retained after exiting the GOT offline monitor.

Up to 32 free registration lists can be created.

Up to 32 characters are available for a free registration list name.

The following characters cannot be used in a free registration list name.

\ / : ; \* ? " < > | .

Up to 6 free registration windows can be open simultaneously.

Up to 256 devices are registrable in one free registration list.

### (2) Starting the device monitor

Perform one of the following operations during monitoring to start the device monitor.

- Select [Tool] → [Start of Device Monitor] from the menu.
- Click the [Device Monitor] button on the toolbar.
- Select [Tool] → [Start of Device Monitor] from the right-click context menu.

### (3) Ending the device monitor

Perform one of the following operations to exit the device monitor.

- Select [Tool] → [End of Device Monitor] from the menu of the GOT offline monitor.
- Select [File] → [Exit] from the menu of the device monitor.
- Click the [Close] button on the title bar of the device monitor.
- On the GOT offline monitor, select [Tool] → [End of Device Monitor] from the right-click context menu.
- Ending the GOT offline monitor

### (4) Creating or editing a free registration list

Register a device in a free registration list to test the device for correct operation.

After changing the device value, you can check the project operations.

The following shows the procedure for creating or editing a free registration list.

**Step 1** Perform one of the following operations to display a free registration window.

- Select [Window] → [New Free Registration List] from the menu.
- Double-click [New] under [Free Reg] in the [Project] window.
- Double-click a target free registration list under [Free Reg] in the [Project] window.

For information on how to import a free registration list and add it as a new list, refer to the following.

⇒11.15.2 ■12 (7) Importing a free registration list

**Step 2** Register, edit or delete a device in the free registration window.

⇒(16) Free registration window

### (5) Changing the name of a free registration list

Select a free registration list, and click it again or press the [F2] key on the keyboard to edit its name.

## (6) Deleting a device

Select a device and press the [Delete] key on the keyboard to delete the device.

## (7) Importing a free registration list

Import a free registration list file in the CSV or Unicode text format.

The following shows the procedure for importing a free registration list.

- Step 1** Perform one of the following operations in the [Project] window according to the import method.
- To import a free registration list and add it as a new list, select [New].
  - To overwrite an existing free registration list with an imported list, select the target existing free registration list.
  - To import multiple free registration lists, select [Free Reg] at the top of the tree.

- Step 2** Perform one of the following operations to display the [Open] dialog.
- Select [File] → [Import Free Registration List] from the menu.
  - In the [Project] window, click the [Im] button.
  - Right-click the item selected in step 1, and select [Import] from the menu.

- Step 3** Select a free registration list file and click the [Open] button to import the file.
- When importing multiple files, you can import CSV files and Unicode text files together.  
For the precautions for using a CSV file or Unicode text file, refer to the following.

- ⇒ 12.8 Precautions for Using CSV File
- 12.9 Precautions for Using Unicode Text File

## (8) Exporting one free registration list at a time

The following shows the procedure for exporting one free registration list at a time to a CSV or Unicode text file.

- Step 1** In the [Project] window, select a free registration list to be exported.
- Step 2** Perform one of the following operations to display the [Save As] dialog.
- Select [File] → [Export Free Registration List] from the menu.
  - In the [Project] window, click the [Ex] button.
  - Right-click the free registration list to be exported, and select [Export] from the menu.
- Step 3** Set [File name] and [Save as type], and click the [Save] button to export the free registration list.

## (9) Exporting all free registration lists

The following shows the procedure for exporting all free registration lists to CSV or Unicode text files.

- Step 1** In the [Project] window, select [Free Reg] at the top of the tree.
- Step 2** Perform one of the following operations to display a dialog where you can select a file format.
- Select [File] → [Export Free Registration List] from the menu.
  - In the [Project] window, click the [Ex] button.
  - Right-click [Free Reg] at the top of the tree, and select [Export] from the menu.
- Step 3** Select a file format and click the [OK] button to display the [Browse For Folder] dialog.
- Step 4** Select an export destination and click the [OK] button to export the free registration lists.

## (10) Layout of an exported free registration list.

The exported free registration lists are editable with spreadsheet software or others.

The following shows the layout of an exported free registration list.

1)	:DEV_MONT_VERSION	2)			
2)	:LIST_TYPE	0			
3)	:LIST_NAME	Free Reg1			
4)	:DEVICE_NUM	6			
	:NO	:DEVICE	:DEV_TYPE	:DISP_TYPE	:DEV_COMMENT
	0	X0000	BIT	BIN	
	1	X0001	BIT	BIN	
5)	2	X0002	BIT	BIN	
	3	D1000	BIN16	DEC	
	4	D1001	BIN16	DEC	
	5	D1002	BIN16	DEC	
		6)	7)	8)	9)

- 1) Version  
Version of the free registration list
- 2) List type

Type of a list

- 0: Free registration list

### 3) List name

Name of the free registration list

For the name specifications, refer to the following.

⇒ 11.15.2 ■ 12 (1) (c) Specifications of the free registration list

### 4) Number of devices

Number of the registered devices

Up to 256 devices are registrable in one free registration list.

### 5) No.

Registered device number

### 6) Device

Registered device

### 7) Data type

Data type of a device

- BIT: [Bit]
- BIN8: [Byte [Signed]]
- BIN8\_Unsigned: [Byte [Unsigned]/Bit String [8-bit]]
- BIN16: [Word [Signed]]
- BIN16\_Unsigned: [Word [Unsigned]/Bit String [16-bit]]
- BIN32: [Double Word [Signed]]
- BIN32\_Unsigned: [Double Word [Unsigned]/Bit String [32-bit]]
- BIN64: [Quad Word [Signed]]
- BIN64\_Unsigned: [Quad Word [Unsigned]/Bit String [64-bit]]

### 8) Display format

Display format of a device

- BIN: [Binary]
- OCT: [Octal]
- DEC: [Decimal]
- HEX: [Hexadecimal]

### 9) Comment

Comment set for a device

Up to 255 characters can be entered per comment.

## (11)Deleting a free registration list

The following shows the procedure for deleting a free registration list.

- Step 1** In the [Project] window, select a free registration list to be deleted.
- Step 2** Perform one of the following operations to display a confirmation dialog.
- Press the [Delete] key on the keyboard.
  - Right-click the free registration list to be deleted, and select [Delete] from the menu.
- Step 3** Click the [Yes] button to delete the list.

## (12)Precautions for the device monitor

### (a) Monitoring performance of the GOT offline monitor

An increase in the number of monitored devices causes monitoring performance degradation in the GOT offline monitor.

### (b) Precautions for exporting a free registration list

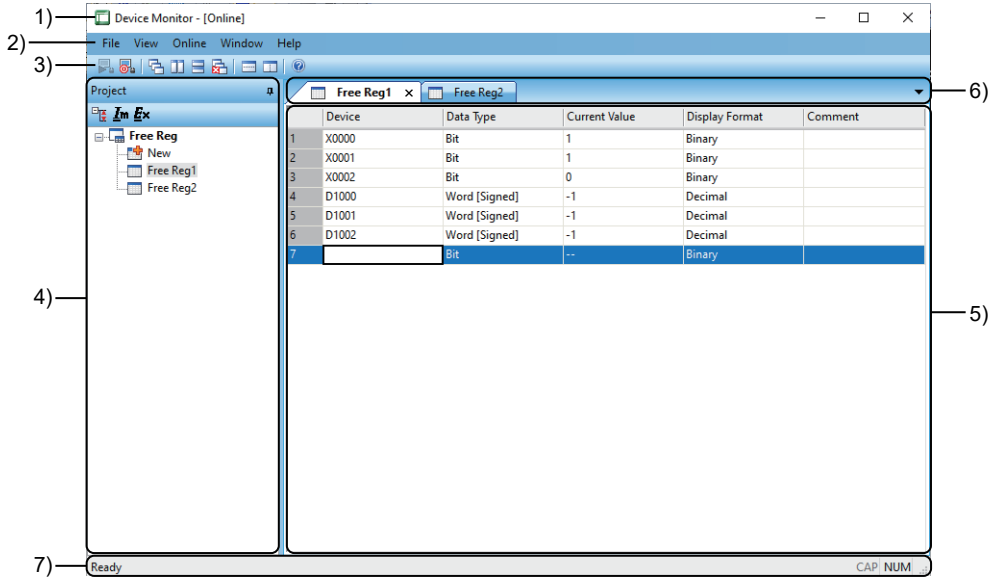

When a free registration list contains characters that cannot be represented in ASCII or Shift JIS code, export the list to a Unicode text file.

If you export the list to a CSV file, such characters are not output properly.

For the precautions for using a Unicode text file, refer to the following.

⇒ 12.9 Precautions for Using Unicode Text File

**(13)[Device Monitor] window**

**1) Title bar**

Displays the device monitor operation status.

**2) Menu bar**

Displays the operation menus of the device monitor.

→(14) Menus

**3) Toolbar**

Displays the operation buttons of the device monitor.

→(15) Toolbar

**4) [Project] window**

Expand all button, collapse all button

- Expand all button, collapse all button  
Expands or collapses all items in the tree.
- [Im] button  
Import a free registration list file in the CSV or Unicode text format.  
For the procedure for importing a free registration list, refer to the following.  
→ 11.15.2 ■12 (7) Importing a free registration list
- [Ex] button  
Export a free registration list to a CSV or Unicode text file.  
For the procedure for exporting a free registration list, refer to the following.  
→ 11.15.2 ■12 (8) Exporting one free registration list at a time  
11.15.2 ■12 (9) Exporting all free registration lists
- [Free Reg]  
Displays created free registration list names.
- [New]  
Creates a free registration list.

**5) Work window**

An area in which free registration windows appear

→(16) Free registration window

**6) Editor tab**

Displays the tabs corresponding to the windows opened in the work window.

To bring an open window to the foreground in the work window, select its tab.

Pull-down menu button

- Pull-down menu button  
Lists the open windows in the work window.  
To bring an open window to the foreground in the work window, select it from the pull-down menu.

**7) Status bar**

Displays the description of a selected menu.

**(14)Menus****(a) [File]**

Menu	Description	Shortcut key
[Import Free Registration List]	Import a free registration list file in the CSV or Unicode text format. For the procedure for importing a free registration list, refer to the following. ⇒ 11.15.2 ■12 (7) Importing a free registration list	Alt+I
[Export Free Registration List]	Export a free registration list to a CSV or Unicode text file. For the procedure for exporting a free registration list, refer to the following. ⇒ 11.15.2 ■12 (8) Exporting one free registration list at a time 11.15.2 ■12 (9) Exporting all free registration lists	Alt+E
[Exit]	Ends the device monitor.	-

**(b) [View]**

Menu	Description	Shortcut key

[Status Bar]	Displays or hides the status bar.	-

**(c) [Online]**

Menu	Description	Shortcut key
[Start]	Starts the device monitor.	F3
[Stop]	Stops the device monitor.	Alt+F3

**(d) [Window]**

Menu	Description	Shortcut key
[New Free Registration List]	Create a free registration list.	-
[Cascade]	Displays open windows in a stack in the work window.	-
[Arrange Sideways]	Tiles open windows side by side in the work window.	-
[Arrange Lengthways]	Tiles open windows horizontally in the work window.	-
[Close Inactive Windows]	Closes all open windows except the selected one in the work window.	-
[New Horizontal Tab Group]	Splits the work window into panes horizontally. Puts the free registration window corresponding to a selected tab in a pane immediately underneath the current pane. Tabs are movable between the editor tabs of panes.	-
[New Vertical Tab Group]	Splits the work window into panes vertically. Puts the free registration window corresponding to a selected tab in the immediately right pane. Tabs are movable between the editor tabs of panes.	-

**(e) [Help]**

Menu	Description	Shortcut key
[GT Designer3 Help]	Displays GT Designer3 Help.	F1

## (15)Toolbar

- 1) **[Start the communication] button**  
Starts the device monitor.
- 2) **[Stop the communication] button**  
Stops the device monitor.
- 3) **[Display all open windows in a stack (cascade)] button**  
Displays open windows in a stack in the work window.
- 4) **[Display all open windows in a horizontal direction] button**  
Tiles open windows side by side in the work window.
- 5) **[Display all open windows in a vertical direction] button**  
Tiles open windows horizontally in the work window.
- 6) **[Close all the inactive windows] button**  
Closes all open windows except the selected one in the work window.
- 7) **[Create a new horizontal tab group] button**  
Splits the work window into panes horizontally.  
Puts the free registration window corresponding to a selected tab in a pane immediately underneath the current pane.  
Tabs are movable between the editor tabs of panes.
- 8) **[Create a new vertical tab group] button**  
Splits the work window into panes vertically.  
Puts the free registration window corresponding to a selected tab in the immediately right pane.  
Tabs are movable between the editor tabs of panes.
- 9) **[Display GT Designer3 Help] button**  
Displays GT Designer3 Help.

## (16)Free registration window

	Device	Data Type	Current Value	Display Format	Comment
1	X0000	Bit	1	Binary	
2	X0001	Bit	1	Binary	
3	X0002	Bit	0	Binary	
4	D1000	Word [Signed]	-1	Decimal	
5	D1001	Word [Signed]	-1	Decimal	
6	D1002	Word [Signed]	-1	Decimal	
7		Bit	--	Binary	

### 1) [Device]

Set a device to be monitored.

→ 6.1.2 How to set devices

### 2) [Data Type]

Select the data type of a device.

The following shows selectable items.

- [Bit]
- [Byte [Unsigned]/Bit String [8-bit]]
- [Word [Unsigned]/Bit String [16-bit]]
- [Double Word [Unsigned]/Bit String [32-bit]]
- [Quad Word [Unsigned]/Bit String [64-bit]]
- [Byte [Signed]]
- [Word [Signed]]
- [Double Word [Signed]]
- [Quad Word [Signed]]

### 3) [Current Value]

Displays the current value of a device.

The set value is user-changeable.

If a communication error occurs, [--] is displayed.

The setting range of [Current Value] depends on the device.

### 4) [Display Format]

Select the display format of a device.

The following shows selectable items.

- [Binary]
- [Octal]
- [Decimal]
- [Hexadecimal]

### 5) [Comment]

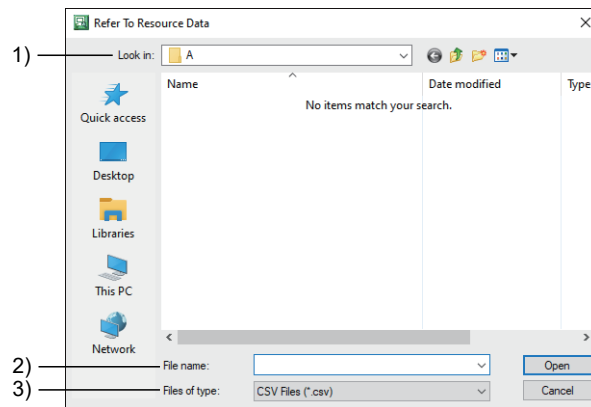

Set a comment for a device.

Up to 255 characters can be entered per comment.

## ■ 13 Referring to the resource data

Refer to the alarm log files, recipe files, data log files, operation log files, and image files (such as hard copies) saved in a personal computer.

- Step 1** Perform one of the following operations to display the [Refer To Resource Data] dialog.
- Select [Tool] → [Resource Data] from the menu.
  - Click the [Resource Data] button on the toolbar.
  - Select [Tool] → [Resource Data] from the right-click context menu.
- Step 2** Configure the following settings and click the [Open] button to display the resource data.

- 1) **[Look in]**  
Select the storage location of resource data.
- 2) **[File Name]**  
Select resource data to be referred to.
- 3) **[Files of type]**  
Select the file type of resource data.
- CSV Files (\*.csv): CSV format
  - Unicode Text Files (\*.txt): Unicode text format
  - Bitmap Files (\*.bmp): BMP format
  - JPEG Files (\*.jpg): JPEG format

## ■ 14 Displaying a script error

Displays the script error information.

For the script function, refer to the following.

→ 9.9 Project Script, Screen Script, and Script Part

- Step 1** Perform one of the following operations.
- Select [Tool] → [Script Error] from the menu.
  - Select [Tool] → [Script Error] from the right-click context menu.
- Step 2** The [Script Error Info.] dialog is displayed.

- 1) **[Script No.]**  
The script number of the script in which an error occurs is displayed.
- 2) **[Error No.]**  
The error code of the error is displayed.
- 3) **[Error message]**

Displays the error contents.

#### 4) **[Retry flag] button**

Retries the script.

If a screen in which no script runs is displayed on the simulator screen, the retry is not performed.

#### 5) **[Clear] button**

Clears the displayed error message by performing the following.

If a screen in which no script runs is displayed on the simulator screen, the error message is not cleared.

- GS14.b0, b7, b8, and b12 store 0.
- GS15 stores -1.
- GS16 to GS47 store 0.

For the details of the GOT internal devices, refer to the following.

⇒12.1.3 GOT special register (GS)

When the error has not been cleared, the error message is displayed again.

### ■15 Displaying an object script error

Displays the object script information.

For the object script function, refer to the following.

⇒9.10 Object Script

**Step 1** Perform one of the following operations.

- Select [Tool] → [Object Script Error] from the menu.
- Select [Tool] → [Object Script Error] from the right-click context menu.

**Step 2** The [Object Script Error Info.] dialog is displayed.

#### 1) **[Script User ID]**

The user ID of the script in which an error occurs is displayed.

#### 2) **[Error No.]**

The error code of the error is displayed.

#### 3) **[Error message]**

Displays the error contents.

#### 4) **[Retry Flag] button**

Retries the object script.

If a screen in which no script runs is displayed on the simulator screen, the retry is not performed.

#### 5) **[Clear] button**

Clears the displayed error message by performing the following.

If a screen in which no script runs is displayed on the simulator screen, the error message is not cleared.

- GS80.b0, b7, b8, and b12 store 0.
- GS81 stores -1.
- GS82 to GS113 store 0.

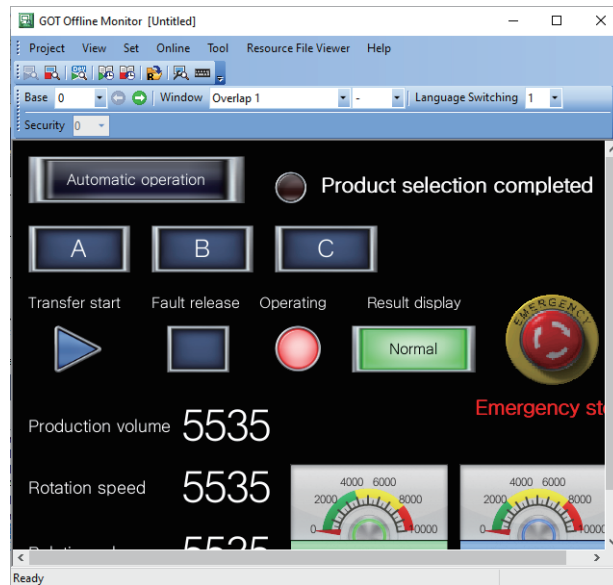

For the details of the GOT internal devices, refer to the following.

⇒12.1.3 GOT special register (GS)

When the error has not been cleared, the error message is displayed again.

## ■ 16 Displaying scroll bars

- Step 1** Perform one of the following operations.
- Select [View] → [Scroll Bar] from the menu.
  - Right-click the mouse and select [Scroll Bar] from the menu.
- Step 2** A scroll bar appears.

### Point

#### (1) Displaying the scroll bar

When resolutions of the GOT model to be monitored are lower than the window size, the scroll bar is not displayed.

#### (2) Scrolling the screen

When the GOT offline monitor is activated, the screen can be scrolled by a wheel of a mouse.

The vertical scroll is prioritized.

Scrolling with the [PageUp] key and the [PageDown] key is unavailable.

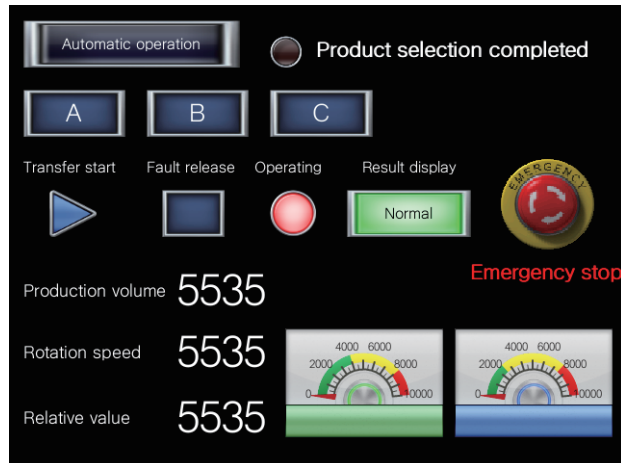

## ■17 Displaying a monitor screen in full screen mode

The monitor screen can be displayed on the personal computer in a full screen.

- (1) Executing a full screen display
- (2) Canceling a full screen display mode

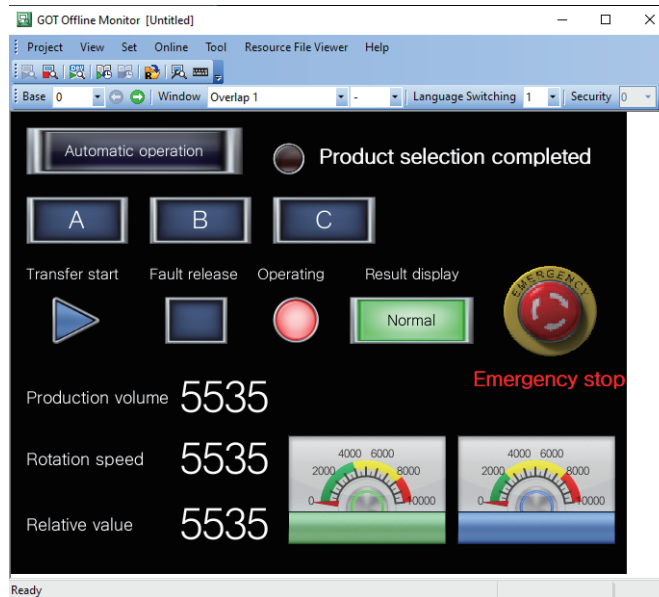

### (1) Executing a full screen display

- Step 1** Perform one of the following operations.
- Press the [Alt] key and the [F9] key.
  - Select the [View] → [Full Screen Mode] from the menu.
  - Right-click the mouse and select [Full Screen Mode] from the menu.
- Step 2** The confirmation dialog for switching the full screen display appears.  
Click the [OK] button, and then the GOT offline monitor is displayed in a full screen.

## (2) Canceling a full screen display mode

- Step 1** Perform one of the following operations.
- Press the [Alt] key and the [F9] key.
  - Right-click the mouse and select [Full Screen Mode] from the menu.
- Step 2** The confirmation dialog for switching the full screen display appears.  
Click the [OK] button, and a full screen display mode is canceled.

### Point

#### (1) Operations during the full screen display

During the full screen display, some menu operations are not usable.  
To use such operations, cancel the full screen display mode.

#### (2) Screen position during the full screen display

If a screen is switched to a full screen when resolutions of a personal computer are different from that of the project data, the GOT offline monitor is fixed to the upper left of the display of the personal computer.  
The screen cannot be moved.

### 11.15.3 Precautions for the GOT offline monitor

#### ■1 Display of the GOT offline monitor and the GOT

The display of the GOT offline monitor may differ from the display of the GOT.  
Check the actual display of the GOT.

#### ■2 Numerical display

If an invalid numerical value is stored when [Real] is selected for [Display Format] of [Numerical Display], the invalid numerical value is displayed on the GOT offline monitor. ([non] is displayed on the GOT.)

#### ■3 Clock display

The clock display during monitoring with the GOT offline monitor depends on the clock data of the personal computer.  
(The GOT reads the clock data of the PLC CPU to use it.)

The setting [Automatically adjust clock for daylight saving changes] in the personal computer is not applicable. Do not enable [Automatically adjust clock for daylight saving changes].

#### ■4 Hard copy function

The settings of [Invert], [Writing Notification Device], and [Writing Error Notification Device] of the hard copy function cannot be monitored.

The system information about the hard copy function cannot be monitored.

#### ■5 Printer output

##### (1) Printer output

The data cannot be output directly by the report function or hard copy function.

Data will be output to a file (TXT, CSV, or BMP format) on the hard disk of the personal computer. Output the file to a printer.

→11.15.1 ■8 (2) For functions requiring the user to save data into a data storage

##### (2) When creating a table with the report function

Create a table as shown in example 1.

If a table is created as shown in example 2, the table will appear incorrectly in the output CSV file.

Example 1) Table created with GT Designer3

	A	B
X	1	2
Y	3	4

CSV file table

	A	B
X	1	2
Y	3	4

Example 2) Table created with GT Designer3

	A	B
X	1	2
Y	3	4

CSV file table

A	B	
X	1	2
Y	3	4

##### (3) When outputting the characters specified with a text print object by using the report function

Store characters in the specified devices according to the setting of [Display in order of High -> Low].

If the characters are not stored in the specified byte order, the characters are displayed incorrectly in the output CSV file.

→8.32.5 [Text Print] dialog

##### (4) When using a project where the output trigger is set to turn on frequently

Make sure that your personal computer has enough free hard disk space, and delete the output files as necessary.

The output files will not be deleted automatically upon exit from the GOT offline monitor.

##### (5) When opening an output file on the personal computer

If you open an output TXT file by using a text editor such as WordPad or Notepad, character spacing may be misaligned on display.

If the character spacing is misaligned, adjust the character font or font size.

## (6) System alarm when the hard copy is executed

The system alarm is not displayed when the hard copy is executed.  
For the troubleshooting for the hard copy, refer to the following.

Symptom	Details of error and cause	Corrective action
No files are output when the hard copy command is executed from the monitor screen.	The file cannot be saved due to problems with the output destination disk.	<ul style="list-style-type: none"> <li>• Check that the folder specified as the virtual drive exists.</li> <li>• Check the access privilege for the folder specified as the virtual drive.</li> <li>• Check the disk space of the folder specified as the virtual drive.</li> </ul>
	The file cannot be saved since the file No. external control device value is not set within 1 to 9999.	Check that the file No. external control device value is set within 1 to 9999.

## ■6 Sound output

### (1) Personal computer conditions

The sound output function is executed with the sound function (sound card) or speaker of the personal computer.  
If the personal computer to be used cannot output sound, the sound output function is unavailable.

### (2) Unmuting the sound of the GOT offline monitor at its startup

If you mute the sound of the GOT offline monitor in Windows sound settings, the sound of the GOT offline monitor is automatically unmuted at its startup.  
However, if you mute all sounds on Windows, the GOT offline monitor remains mute.

## ■7 When the project data has multiple channels

Only channel 1 can be monitored.  
The other channels are ignored.

To monitor a device of other than channel 1, select [Search/Replace] → [Batch Edit] → [CHNo.] from the menu and set channel 1 for the debug target channel in GT Designer3.

Example) When channel 1 and 2 are used and channel 2 is to be monitored

- Step 1 Change channel 1 to channel 3 in a batch.
- Step 2 Change channel 2 to channel 1 in a batch.

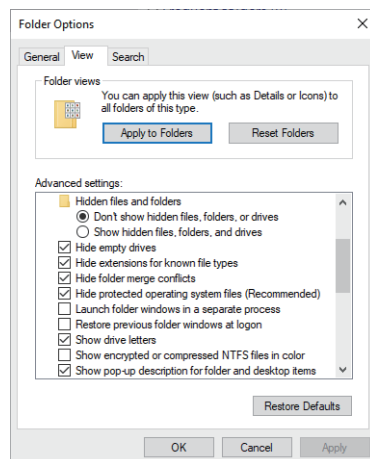

For the batch edit of the channels, refer to the following.

⇒ 11.8.4 Changing the set values in a batch (Batch Edit)

## ■8 Showing hidden folders

The following folder is a hidden folder.  
Users\user name\AppData\Local

To display the hidden folder, configure the setting in Windows.  
Example) Windows 10

## ■9 Recipe information

Clicking a special function switch to which [Recipe Information] is set displays the recipe operation window, regardless of the setting of [Enable recipe file operation on the monitor] in the [Recipe Common Setting] dialog.

To display the recipe information, click the [Recipe information] button in the simulation utility.

## ■10 Virtual drive V

To store image files in drive V and use them for parts displays, satisfy all the following conditions.

- Store the image files directly under drive V using the FTP server function that can run on Windows.
- Use IMG1.jpg, IMG2.jpg, IMG3.jpg, and IMG4.jpg only for the file name and extension.
- Limit the total file size to less than 6 MB.
- Do not store any file other than IMG1.jpg, IMG2.jpg, IMG3.jpg, and IMG4.jpg.

The files in drive V are deleted at the start or end of monitoring.

For details on parts displays, refer to the following.

⇒8.8 Placing a Parts Display

## ■11 Precautions when the GOT type is GT SoftGOT2000

### (1) Unavailable GOT internal devices

GOT internal devices (GS500 to GS507) are unavailable for the GOT offline monitor.

### (2) Unavailable functions

The following functions are unavailable for the GOT offline monitor.

- Application start-up
- Mail send function
- SoftGOT-GOT link function
- Edgecross interaction function
- Display of file information in the PLC
- Interaction with PX Developer

## ■12 Reconnection after exiting the GX Works3 offline monitor

When the GOT offline monitor and the GX Works3 offline monitor are connected, exiting the GX Works3 offline monitor disconnects the GOT offline monitor.

For reconnection, start the GX Works3 offline monitor, and then start the GOT offline monitor and Resource File Viewer.

## ■13 When another station is set in the built-in Ethernet port setting in GX Works3

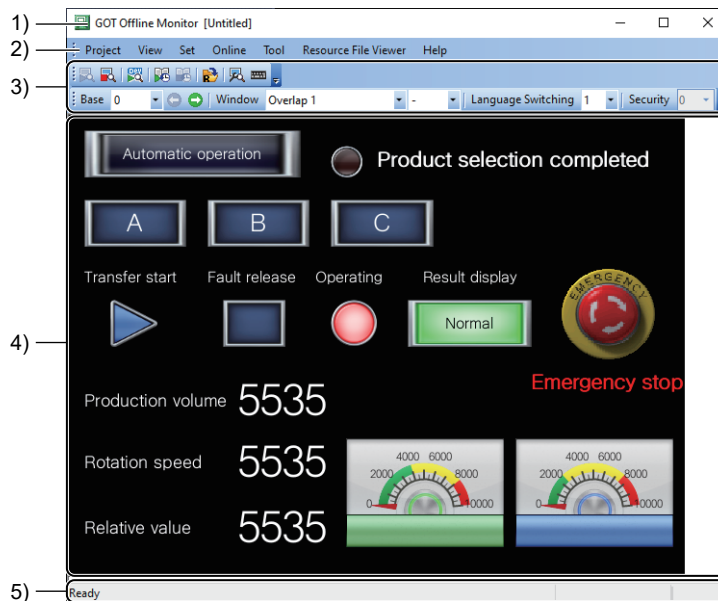

When another station is set in the built-in Ethernet port setting or station No. 0 is set for the module in GX Works3, the network information cannot be acquired automatically.

Apply the network information of GX Works3 to [Additional Allocation] in the [Setting] dialog ([Communication Setup] tab).

⇒11.15.5 ■1 [Communication Setup] tab

## 11.15.4 Screen layout of the GOT offline monitor

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

- 1) **Title bar**  
Displays the project name.
- 2) **Menu bar**  
Displays the operation menus of the GOT offline monitor.  
    → ■1 Menus
- 3) **Toolbar**  
Displays the operation buttons of the GOT offline monitor.  
    → ■2 Toolbar
- 4) **Monitor screen**  
Displays the monitor data.
- 5) **Status bar**  
Displays the status of the GOT offline monitor.

### ■1 Menus

#### (1) [Project]

Menu	Description	Shortcut key
[Snap Shot]	Saves a screen as a file. (BMP format and JPEG format) → 11.15.2 ■8 Capturing snap shots	Ctrl+H
[Print Setup]	Set a printer. → 11.15.2 ■9 Printing a monitor screen	-
[Page Setup]	Adjusts the page layout for printing. → 11.15.2 ■9 Printing a monitor screen	-
[Print Preview]	Displays a print preview. → 11.15.2 ■9 Printing a monitor screen	-
[Print]	Outputs the settings of the project into a file. → 11.15.2 ■9 Printing a monitor screen	Ctrl+P
[Properties]	Displays the project information.	-
[Exit]	Exits the GOT offline monitor.	Alt+F4

**(2) [View]**

Menu	Description	Shortcut key
[Scroll Bar]	Switches display or non-display of a scroll bar. ⇒ 11.15.2 ■16 Displaying scroll bars	-
[Full Screen Mode]	Sets and cancels the full screen mode. ⇒ 11.15.2 ■17 Displaying a monitor screen in full screen mode	Alt+F9

**(3) [Set]**

Menu	Description	Shortcut key
[Setting]	Displays the [Setting] dialog. ⇒ 11.15.5 [Setting] dialog (GOT offline monitor)	-
[Keyboard]	Enables or disables the keyboard input. ⇒ 11.15.2 ■11 Operating the numerical input or text input with a keyboard	-

**(4) [Online]**

Menu	Description	Shortcut key
[Monitor Start]	Starts the GOT offline monitor.	F3
[Monitor Stop]	Stops the GOT offline monitor.	Alt+F3

**(5) [Tool]**

Menu	Description	Shortcut key
[Start of Device Monitor] [End of Device Monitor]	Starts or ends the device monitor. ⇒ 11.15.2 ■12 Using the device monitor	-
[Resource Data]	Refers to the resource data. ⇒ 11.15.2 ■13 Referring to the resource data	Ctrl+R
[Script Error]	Displays the script error information. ⇒ 11.15.2 ■14 Displaying a script error	-
[Object Script Error]	Displays the object script information. ⇒ 11.15.2 ■15 Displaying an object script error	-

**(6) [Resource File Viewer]**

Menu	Description	Shortcut key
[Resource File Viewer Operation]	Displays the [Resource File Viewer Operation] dialog. ⇒ 11.15.6 [Resource File Viewer Setting]/[Resource File Viewer Operation] dialog	-
[Start All]	Starts all the Resource File Viewer modules enabled in the [Resource File Viewer Operation] dialog.	-
[Activate All]	Activates all the running Resource File Viewer modules.	-
[End All]	Ends all the running Resource File Viewer modules.	-
[Start Resource File Viewer 1] [End Resource File Viewer 1]	Starts or ends Resource File Viewer 1.	-
[Start Resource File Viewer 2] [End Resource File Viewer 2]	Starts or ends Resource File Viewer 2.	-
[Start Resource File Viewer 3] [End Resource File Viewer 3]	Starts or ends Resource File Viewer 3.	-
[Start Resource File Viewer 4] [End Resource File Viewer 4]	Starts or ends Resource File Viewer 4.	-
[Start Resource File Viewer 5] [End Resource File Viewer 5]	Starts or ends Resource File Viewer 5.	-
[Start Resource File Viewer 6] [End Resource File Viewer 6]	Starts or ends Resource File Viewer 6.	-
[Start Resource File Viewer 7] [End Resource File Viewer 7]	Starts or ends Resource File Viewer 7.	-

Menu	Description	Shortcut key
[Start Resource File Viewer 8] [End Resource File Viewer 8]	Starts or ends Resource File Viewer 8.	-

## (7) [Help]

Menu	Description	Shortcut key
[GT Designer3 Help]	Displays GT Designer3 Help.	F1

## ■ 2 Toolbar

### 1) [Start Monitoring] button

Starts the GOT offline monitor.

### 2) [Stop Monitoring] button

Stops the GOT offline monitor.

### 3) [Device Monitor] button

Starts or ends the device monitor.

### 4) [Start all Resource File Viewer] button

Starts all the Resource File Viewer modules enabled in the [Resource File Viewer Operation] dialog.

### 5) [End all Resource File Viewer] button

Ends all the running Resource File Viewer modules.

### 6) [Resource Data] button

Refers to the resource data.

### 7) [Setting] button

Displays the [Setting] dialog.

→ 11.15.5 [Setting] dialog (GOT offline monitor)

### 8) [Keyboard]

Enables or disables the keyboard input.

### 9) Base screen number

Switch the number of the base screen to be displayed on the monitor screen from the pull-down menu or using the arrow buttons.

### 10) Window screen types

Select how to display the window screen to be displayed on the monitor screen.

The following shows selectable items.

- [Overlap 1]
- [Overlap 2]
- [Overlap 3]
- [Overlap 4]
- [Overlap 5]
- [Superimpose 1]
- [Superimpose 2]
- [Dialog]

### 11) Window screen number

Switch the number of the window screen to be displayed on the monitor screen from the pull-down menu.

### 12) Language switching setting

Select the column number for a comment group to be displayed.

The selectable numbers range from [1] to [30].

### 13) Screen security

Switch the security level.

The selectable levels range from [0] to [15].

## 11.15.5 [Setting] dialog (GOT offline monitor)

Configure the option settings of the GOT offline monitor.

- ■1 [Communication Setup] tab
- 2 [Action setup] tab
- 3 [Auxiliary Setup] tab

### ■1 [Communication Setup] tab

#### 1) [File Path]

Set the path to the recording file read from the GX Works3 offline monitor.

- When the GX Works3 offline monitor is not running  
Click the [...] button to set the path to a recording file.
- When the GX Works3 offline monitor is running  
Click the [Auto Acquisition] button to acquire the path to the recording file read from the GX Works3 offline monitor.

#### 2) [Detail Setting >>] button, [Detail Setting <<] button

Displays or hides the network setting items.

#### 3) [Auto Allocation]

Select the network information of the controllers to be monitored.

#### 4) [Additional Allocation]

To monitor another station, set the network information of the target controller for monitoring.

#### 5) [Behavior of the devices of the stations that are not to be monitored]

Select whether to monitor the devices of the station numbers not selected in [Auto Allocation] or [Additional Allocation].

The following shows selectable items.

- [Not monitor]
- [Monitor]

#### 6) How to monitor the devices

Select how to display the devices when [Monitor] is selected for [Behavior of the devices that are not to be monitored].

The following shows selectable items.

- [Same as the devices to be monitored]
- [Display 0]

#### 7) [CPU No. switching GD device first No. (3 points)]

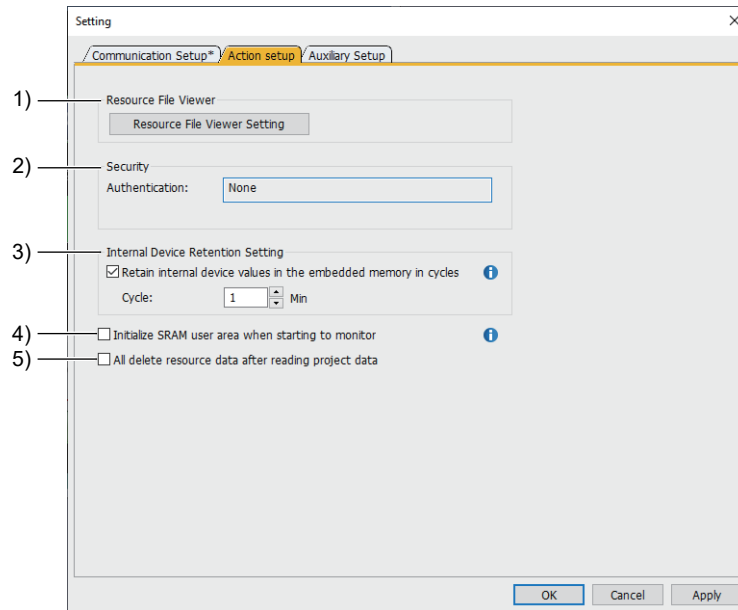

Set the start device number of the GOT data registers (GD) to specify a CPU number.

The setting range is [0] to [65520].

Specify the value of [CPU No. switching GD device first No. (3 points)] set in the [Controller Setting] window in GT Designer3.

If you set a different number, proper monitoring is not performed.

## ■2 [Action setup] tab

### 1) [Resource File Viewer]

Configure the settings of Resource File Viewer.

Click the [Resource File Viewer Setting] button to display the [Resource File Viewer Setting] dialog.

⇒ 11.15.6 [Resource File Viewer Setting]/[Resource File Viewer Operation] dialog

### 2) [Security]

Displays the authentication method set for the project data.

### 3) [Internal Device Retention Setting]

Item	Description
[Retain internal device values in the embedded memory in cycles]	Saves the values of GOT internal devices to the SRAM user area at the specified intervals. If this item is deselected, the values will be saved only when you exit the GOT offline monitor.
[Cycle]	Set a time interval to save the values of GOT internal devices to the SRAM user area. The setting range is [1] minute to [60] minutes.

### 4) [Initialize SRAM user area when starting to monitor]

Initializes the SRAM user area at a start of monitoring.

The following functions save data to the SRAM user area.

- User alarm observation
- System alarm observation
- Logging
- Recipe
- Internal device retention

### 5) [All delete resource data after reading project data]

Deletes all the user data in the following folders at a start of monitoring.

Folder A, B, E, F, G or lower hierarchies in the working folder

For the working folder, refer to the following.

⇒ 11.15.1 ■8 (3) Working folder

### ■3 [Auxiliary Setup] tab

1) **[Display a project title in the title bar]**

Displays the project name in the title bar.

2) **[Terminate GOT Offline Monitor when disconnected from GX Works3 Offline Monitor]**

Ends the GOT offline monitor at disconnection of the GX Works3 offline monitor.

If no PLC device is set in the common settings or object settings, this setting is disabled.

## 11.15.6 [Resource File Viewer Setting]/[Resource File Viewer Operation] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

### Point

This section explains startup of Resource File Viewer from the GOT offline monitor (linked startup).

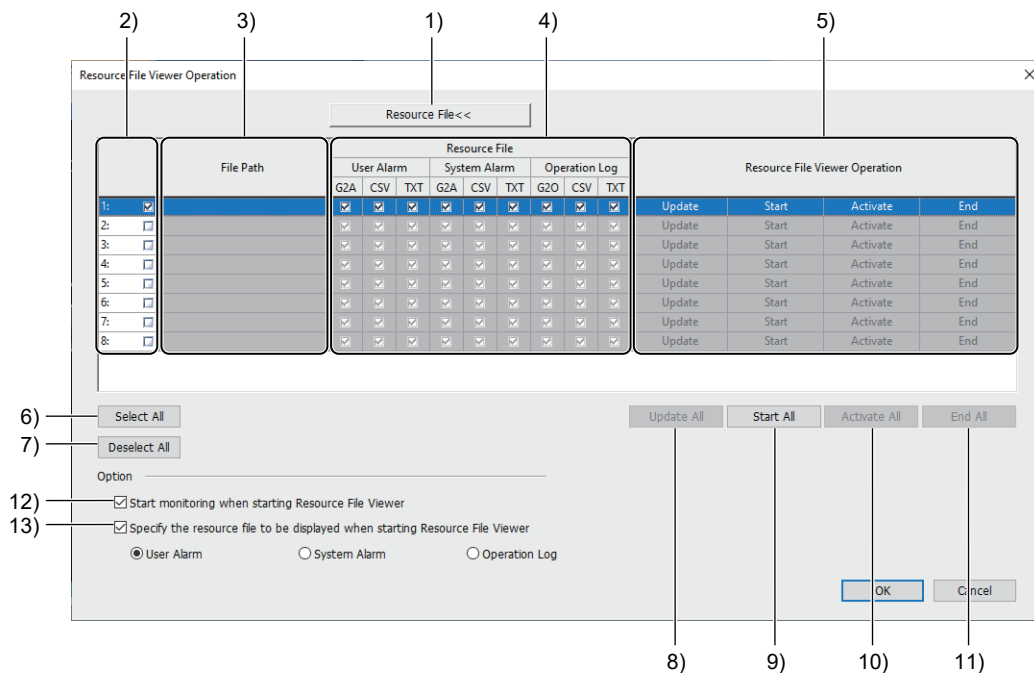

For startup of Resource File Viewer directly from the RCFView.exe (independent startup), refer to the following.

⇒ 11.16 Viewing an operation log file (Resource File Viewer)

Configure the settings for monitoring Resource File Viewer.

The dialog name depends on how to display the setting dialog.

Dialog name	Display method
[Resource File Viewer Setting] dialog	Before starting the GOT offline monitor, click [Tools] → [GOT Offline Monitor] → [Set] from the menu, and click [Resource File Viewer Setting] in the [Setting] dialog ([Action setup] tab).
[Resource File Viewer Operation] dialog	Select [Resource File Viewer] → [Resource File Viewer Operation] from the menu of the GOT offline monitor. Select [Set] → [Resource File Viewer Operation] from the menu of Resource File Viewer. After starting the GOT offline monitor, click [Resource File Viewer Setting] in the [Setting] dialog ([Action setup] tab) in the GOT offline monitor.

### 1) [Resource File>>] button, [Resource File<<] button

This item is displayed in the [Resource File Viewer Operation] dialog.

Displays or hides the [Resource File] field.

### 2) No.

Select the Resource File Viewer modules to be started when selecting [Resource File Viewer] → [Start All] from the menu.

### 3) [File Path]

Set the path to the resource files to be displayed in Resource File Viewer.

### 4) [Resource File]

Select the extensions of the resource files to be displayed in Resource File Viewer.

### 5) [Resource File Viewer Operation]

This item is displayed in the [Resource File Viewer Operation] dialog.

Select the operations for each Resource File Viewer module to be started.

Item	Description
[Update] button	Refreshes the display of the running Resource File Viewer module.
[Start] button	Starts Resource File Viewer.
[Activate] button	Activates Resource File Viewer.
[End] button	Ends Resource File Viewer.

6) **[Select All] button**

Selects all the resource file viewers.

7) **[Deselect All] button**

Deselects all the resource file viewers.

8) **[Update All] button**

This item is displayed in the [Resource File Viewer Operation] dialog.  
Refresh all the displays of the running Resource File Viewer modules.

9) **[Start All] button**

This item is displayed in the [Resource File Viewer Operation] dialog.  
Start all the Resource File Viewer modules targeted to start.

10) **[Activate All] button**

This item is displayed in the [Resource File Viewer Operation] dialog.  
Activates all the Resource File Viewer modules.

11) **[End All] button**

This item is displayed in the [Resource File Viewer Operation] dialog.  
Ends all the Resource File Viewer modules.

12) **[Start monitoring when starting Resource File Viewer]**

Starts monitoring at a start of a Resource File Viewer module.

13) **[Specify the resource file to be displayed when starting Resource File Viewer]**

Specify the type of the resource files to be displayed at a start of a Resource File Viewer module.  
The following shows selectable file types.

- [User Alarm]
- [System Alarm]
- [Operation Log]

## 11.15.7 How to use a Resource File Viewer module

### Point

This section explains startup of Resource File Viewer from the GOT offline monitor (linked startup).  
For startup of Resource File Viewer directly from the RCFView.exe (independent startup), refer to the following.

⇒ 11.16 Viewing an operation log file (Resource File Viewer)

Monitors the resource files read from the GOT.

The following shows the monitoring-supported resource file types.

- User alarm (G2A, CSV, TXT)
- System alarm (G2A, CSV, TXT)
- Operation log (G2O, CSV, TXT)

### ■ 1 Starting monitoring with a Resource File Viewer module

Establish connection between the GX Works3 offline monitor and the GOT offline monitor to start monitoring.  
Start a Resource File Viewer module from the GOT offline monitor.

**Step 1** Use one of the following methods to start a Resource File Viewer module.

- Select [Resource File Viewer] → [Start All] from the menu.
- Select [Resource File Viewer] → [Start Resource File Viewer n] from the menu (n = 1 to 8).
- Click the [Start all Resource File Viewer] button on the toolbar.

**Step 2** At the first startup, set the resource files to be read to a Resource File Viewer module.

When the [Resource File Viewer Operation] is displayed, set the resource files to be displayed in Resource File Viewer, and click the [Activate] button or [Activate All] button to start monitoring.

⇒ 11.15.6 [Resource File Viewer Setting]/[Resource File Viewer Operation] dialog

After the first startup, the resource files set in the [Resource File Viewer Operation] dialog are read and monitoring starts.

### ■ 2 Updating the resource files

#### (1) When the storage destination of the resource files has been changed

**Step 1** Display the [Resource File Viewer Operation] dialog and change the setting of the [File Path].

⇒ 11.15.6 [Resource File Viewer Setting]/[Resource File Viewer Operation] dialog

**Step 2** Click the [Update] button to update the resource files displayed in Resource File Viewer.

#### (2) When a resource file has been changed, added, or deleted

**Step 1** Perform either of the following operations.

- Click the [Update] button in the [Navigation] window of Resource File Viewer.
- Click the [Update] button in the [Resource File Viewer Operation] dialog

⇒ 11.15.6 [Resource File Viewer Setting]/[Resource File Viewer Operation] dialog

**Step 2** The resource files displayed in Resource File Viewer are updated.

### ■ 3 Exiting Resource File Viewer

Disconnect the GX Works3 offline monitor to stop monitoring.  
Exit the GOT offline monitor or Resource File Viewer.

#### (1) Exiting the GOT offline monitor

Exit Resource File Viewer by either of the following methods.

- Select [Resource File Viewer] → [End All] from the menu.
- Select [Resource File Viewer] → [End Resource File Viewer n] from the menu (n = 1 to 8).
- Click the [End all Resource File Viewer] button on the toolbar.
- Click the [End] button in the [Resource File Viewer Operation] dialog

⇒ 11.15.6 [Resource File Viewer Setting]/[Resource File Viewer Operation] dialog

• Exit the GOT offline monitor.

## (2) Exiting Resource File Viewer

Exit Resource File Viewer by either of the following methods.

- Select [Project] → [Exit Application] from the menu.
- Click the [×] button.

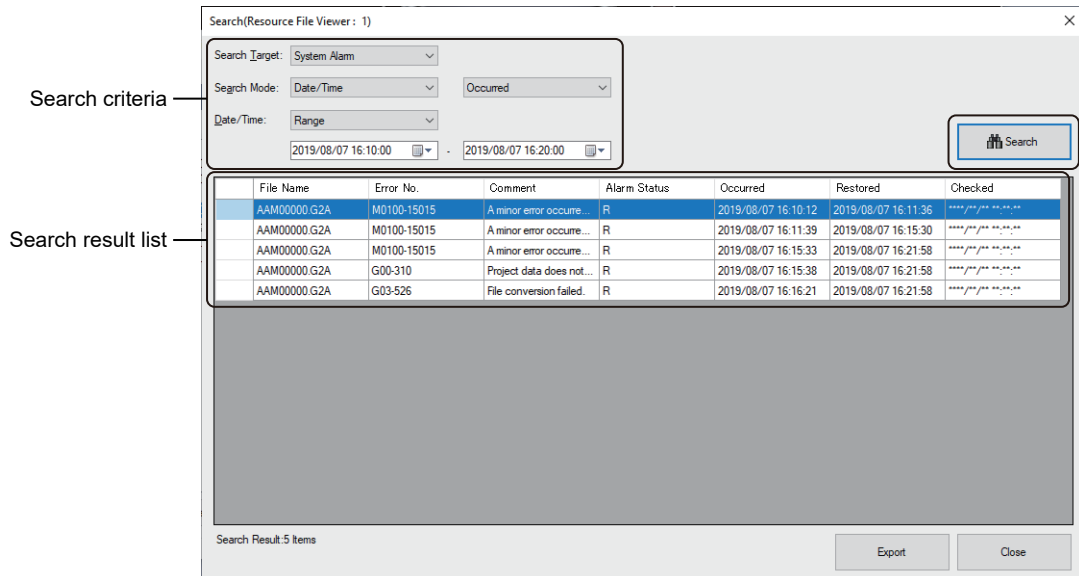

## ■4 Searching for the logs in the resource files

### (1) Searching for the logs by specifying a keyword or a date and time value

**Step 1** Perform either of the following operations to display the [Search] dialog.

- [Ctrl] key + [F] key
  - Select [Search] → [Search] from the menu.
- ⇒ 11.15.8 ■4 [Search] dialog

**Step 2** Set the search criteria and click the [Search] button to display the found logs in the search result list.

**Step 3** When monitoring is inactive, double-click any of the logs in the search result list to select the corresponding log in the resource file display area.

⇒ 11.15.8 Screen layout of a Resource File Viewer module

### (2) Exporting the search result list data

**Step 1** Search for the logs using the [Search] dialog.

⇒ (1) Searching for the logs by specifying a keyword or a date and time value

**Step 2** Click the [Export] button to display the [Save As] dialog.

**Step 3** Set [File name] and [Save as type] and click the [Save] button to export the search result list.

## ■5 Changing the items to be displayed in the resource file display area

**Step 1** Select [View] → [Display Items] from the menu to display the [Display Item Setting] dialog.

**Step 2** Select the items to be displayed in the resource file display area and specify their display order. For details on the operation buttons, refer to the following.

⇒ 11.15.8 ■5 [Display Item Setting] dialog (Resource File Viewer)

## ■6 Switching the display language of Resource File Viewer

The following shows how to switch the display language of Resource File Viewer.

**Step 1** Select [View] → [Switch Display Language] from the menu to display the [Display Language] dialog.

**Step 2** Select a language to be switched to in [Display Language] and click the [OK] button.

## ■7 Switching the display language of the resource files

When the resource files are binary format files, the display language can be switched.

How to switch the display language depends on the resource file type.

- User alarm

The data are displayed in the display language set in the toolbar of the GOT offline monitor before Resource File Viewer is started.

⇒ 11.15.2 ■5 Switching the display language

- System alarm, operation log

The data are displayed in the system language set in the GOT offline monitor before Resource File Viewer is started.

⇒ 5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])

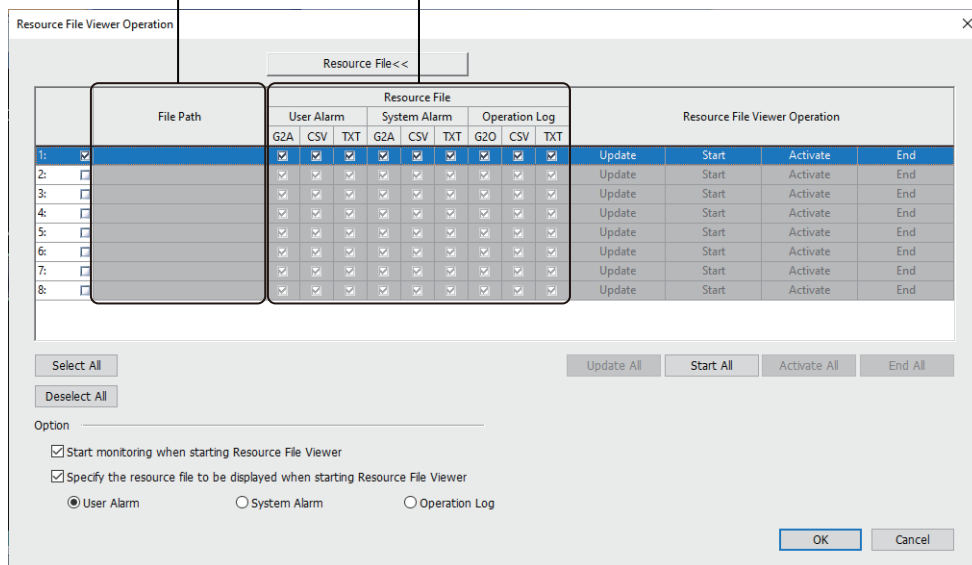

## ■8 Setting the resource files to be monitored in a Resource File Viewer module

Set the storage destinations and file types of the resource files to be read to each Resource File Viewer module.

**Step 1** Perform one of the following operations to display the [Resource File Viewer Setting] dialog or [Resource File Viewer Operation] dialog.

- Click the [Resource File Viewer Setting] button in the [Setting] dialog ([Action setup] tab) of the GOT offline monitor.
- Select [Resource File Viewer] → [Resource File Viewer Operation] from the menu of the GOT offline monitor.
- Select [Set] → [Resource File Viewer Operation] from the menu of Resource File Viewer.

⇒ 11.15.6 [Resource File Viewer Setting]/[Resource File Viewer Operation] dialog

**Step 2** Set the storage destinations and file types, and extensions of the resource files to be read, and click the [OK] button.

## ■ 9 Monitoring the logs by synchronizing the clock time with GX Works3 offline monitor

This is available while connection is established between the GOT offline monitor and the GX Works3 offline monitor.

### (1) Reading the clock time of the GX Works3 offline monitor

By reading the clock time of the GX Works3 offline monitor to a Resource File Viewer module, the logs collected at the same time as the events occurred in the GX Works3 offline monitor can be monitored.

**Step 1** Perform either of the following operations in Resource File Viewer.

- Select [Online] → [Start Monitoring] from the menu.
  - Click the [Adjust date and time of Resource File Viewer to those of GX Works3 Offline Monitor.] button.
- ⇒ 11.15.8 Screen layout of a Resource File Viewer module

**Step 2** The logs collected at the same time as the events occurred in GX Works3 offline monitor are selected in the resource file display area.

### (2) Writing the clock time of a Resource File Viewer module

By writing the clock time of a Resource File Viewer module to the GX Works3 offline monitor, the events occurred at the same time as the logs are collected can be monitored.

**Step 1** Select any of the logs in the resource file display area and perform either of the following operations.

- Click the [Adjust date and time of GX Works3 Offline Monitor to those of Resource File Viewer.] in Resource File Viewer.
  - Double-click the log selected in the resource file display area.  
(This is available when [Read/write GX Works3 Offline Monitor time on a selected date and time] in the [Action Setup] dialog is selected.)
- ⇒ 11.15.8 Screen layout of a Resource File Viewer module

**Step 2** The events occurred at the same clock time as Resource File Viewer are selected in the GX Works3 offline monitor.

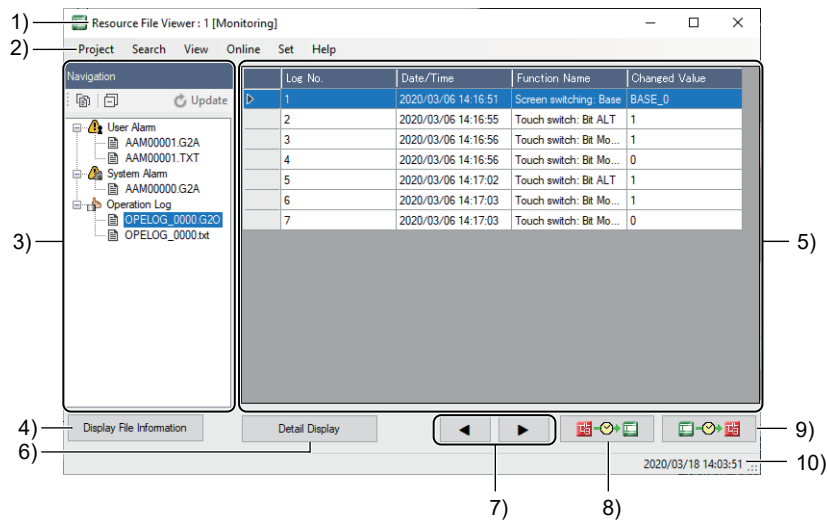

## 11.15.8 Screen layout of a Resource File Viewer module

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

### Point

This section explains startup of Resource File Viewer from the GOT offline monitor (linked startup). For the screen layout of Resource File Viewer when starting it directly from the RCFView.exe (independent startup), refer to the following.

→ 11.16.3 Screen layout of Resource File Viewer (at independent startup)

#### 1) Title bar

Displays the module number of Resource File Viewer and monitoring status.

#### 2) Menu bar

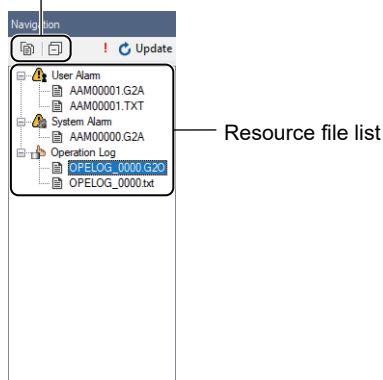

Displays the operation menus of Resource File Viewer.

→ ■ 1 Menus

#### 3) [Navigation] window

Lists the resource files.

[Unfold All] button, [Fold All] button

#### • [Unfold All] button, [Fold All] button

Expands or collapses all items in the tree.

#### • [!]

Appears when a resource file has been updated, added, deleted, or renamed.

#### • [Update] button

Updates the resource files.

#### • Resource file list

Displays the resource files with the extensions selected in [Resource File] in the [Resource File Viewer Setting] dialog or [Resource File Viewer Operation] dialog.

#### 4) [Display File Information] button

Displays the [Display File Information] dialog.

→ ■ 2 [Display File Information] dialog

#### 5) Resource file display area

Displays the details of the resource file selected in the [Navigation] window.

Set the display items in the [Display Item Setting] dialog.

→■5 [Display Item Setting] dialog (Resource File Viewer)

**6) [Detail Display] button**

Displays the [Detail Display] dialog.

→■3 [Detail Display] dialog

**7) Arrow buttons**

Switches between the resource files displayed in the resource file display area.

**8) [Adjust date and time of Resource File Viewer to those of GX Works3 Offline Monitor.] button**

Selects the logs collected at the same clock time as the GX Works3 offline monitor.

**9) [Adjust date and time of GX Works3 Offline Monitor to those of Resource File Viewer.] button**

Selects the events occurred at the same clock time as the resource file viewer.

**10) Status bar**

Displays the time read from the GX Works3 offline monitor.

**■1 Menus**

**(1) [Project]**

Menu	Description	Shortcut key
[Exit Application]	Exits Resource File Viewer.	Alt+F4

**(2) [Search]**

Menu	Description	Shortcut key
[Search]	Search for the resource files read to Resource File Viewer. →■4 [Search] dialog	Ctrl+F

**(3) [View]**

Menu	Description	Shortcut key
[Navigation]	Displays or hides the [Navigation] window.	-
[Display Items]	Select the items to be displayed in the resource file display area. →■5 [Display Item Setting] dialog (Resource File Viewer)	-
[Switch Display Language]	Switch the display language of Resource File Viewer. →11.15.7 ■6 Switching the display language of Resource File Viewer	-

**(4) [Online]**

Menu	Description	Shortcut key
[Start Monitoring]	Establish connection between the GX Works3 offline monitor and the GOT offline monitor to start monitoring.	F3
[Stop Monitoring]	Disconnects the GX Works3 offline monitor to stop monitoring.	Alt+F3

**(5) [Set]**

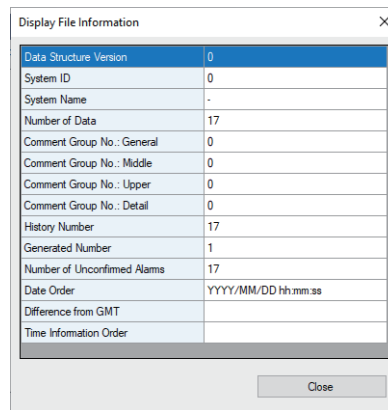

Menu	Description	Shortcut key
[Resource File Viewer Operation]	Configure the settings of Resource File Viewer. →11.15.6 [Resource File Viewer Setting]/[Resource File Viewer Operation] dialog	-
[Action Setup]	Configure the settings of the resource file display area. →■6 [Action Setup] dialog	-

**(6) [Help]**

Menu	Description	Shortcut key
[GT Designer3 Help]	Displays GT Designer3 Help.	F1

## ■2 [Display File Information] dialog

Displays the information of the resource file selected in the [Navigation] window.  
The displayed items depend on the resource file type.

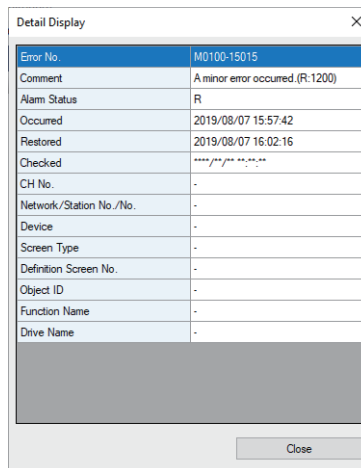

Example) User alarm, system alarm

Item	Description
Data Structure Version	The version of the data structure
System ID	Alarm ID (For system alarms, this item is fixed to 65535.)
System Name	The name of the alarm (For system alarms, this item is blank.)
Number of Data	The number of logs
Comment Group No.: General	The No. of the basic comment group (For system alarms, this item is fixed to 0.)
Comment Group No.: Middle	The No. of the middle level comment group (For system alarms, this item is fixed to 0.)
Comment Group No.: Upper	The No. of the upper level comment group (For system alarms, this item is fixed to 0.)
Comment Group No.: Detail	The No. of the detailed comment group (For system alarms, this item is fixed to 0.)
History Number	The number of alarms
Generated Number	The number of uncorrected alarms
Number of Unconfirmed Alarms	The number of unconfirmed alarms
Date Order	The order of the dates
Difference from GMT	The difference from the Greenwich Mean Time
Time Information Order	The order of output time

### ■3 [Detail Display] dialog

Displays the details of the logs selected in the resource file display screen.  
The displayed items depend on the resource file type.

#### (1) User alarm

Item	Description
Upper Comment No.	The No. of the upper level comment
Middle Comment No.	The No. of the middle level comment
Comment No.	The No. of the basic comment
Comment	The comment of the basic alarm
Alarm Status	The status of the alarm <ul style="list-style-type: none"> <li>• O: Occurring, not confirmed</li> <li>• OC: Occurring, confirmed</li> <li>• R: Restored, not confirmed</li> <li>• RC: Restored, confirmed</li> </ul>
Occurred	The date and time on which the alarm occurred
Restored	The date and time on which the alarm was corrected
Checked	The date and time on which the alarm was confirmed
Level	The level set for the alarm
Group	The group set for the alarm
Frequency of Occurrences	The number of alarms that occurred
Cumulative Down Time	Cumulative down time
Down Time	Down time

#### (2) System alarm

Item	Description
Error No.	The No. of the error
Comment	System alarm message
Alarm Status	The status of the alarm <ul style="list-style-type: none"> <li>• O: Occurring, not confirmed</li> <li>• OC: Occurring, confirmed</li> <li>• R: Restored, not confirmed</li> <li>• RC: Restored, confirmed</li> </ul>
Occurred	The date and time on which the alarm occurred
Restored	The date and time on which the alarm was corrected
Checked	The date and time on which the alarm was confirmed
CH No.	Channel No.
Network/Station No./No.	Network No., station No., and module No.
Device	The name of the device

Item	Description
Screen Type	The type of the screen <ul style="list-style-type: none"> <li>• BASE: Base screen</li> <li>• OVL1 to OVL5: Overlap windows 1 to 5</li> <li>• SPI1 to SPI2: Superimpose windows 1 to 2</li> <li>• DLG: Dialog window</li> <li>• PNL: Operation panel</li> <li>• KEY: Key window</li> <li>• RPT: Report screen</li> </ul>
Definition Screen No.	The No. of the definition screen <ul style="list-style-type: none"> <li>• B: Base screen</li> <li>• W: Window screen</li> <li>• R: Report screen</li> </ul>
Object ID	Object ID
Function Name	Function Name
Drive Name	The name of the drive

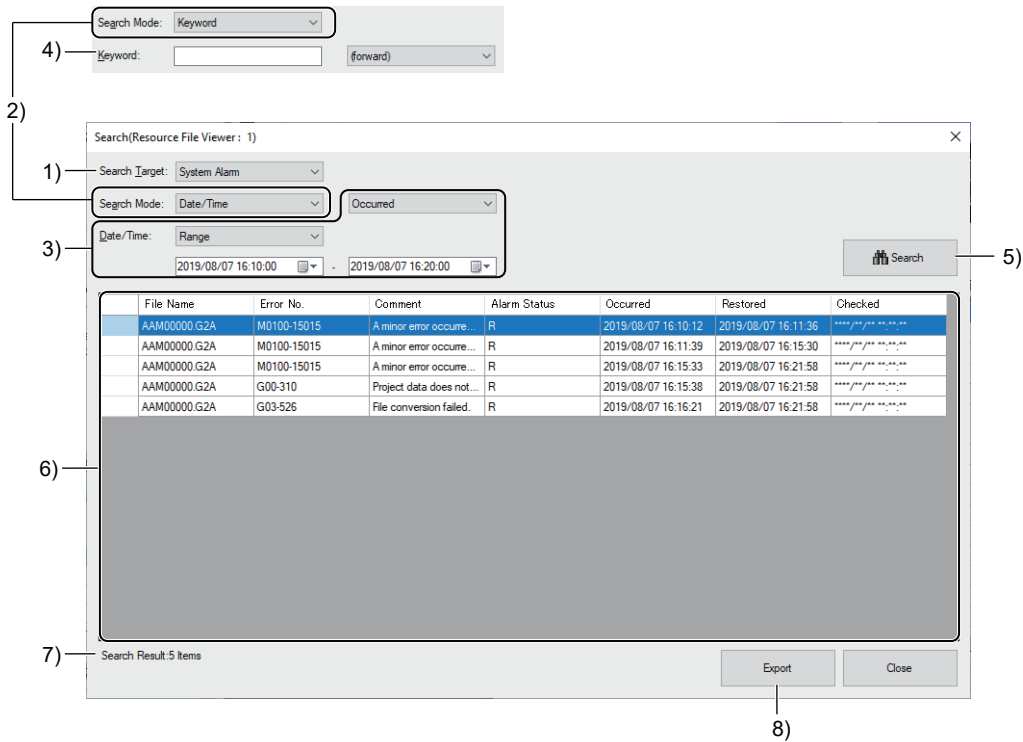

### (3) Operation log

The output items depend on the operations to be recorded.  
For the output items and information for each operation, refer to the following.

→ 5.2.11 ■ 1 (2) Output items of operation logs

### ■ 4 [Search] dialog

Searches for the resource files displayed in the [Navigation] window.

#### 1) [Search Target]

Select the file type of the resource data to be searched for.  
The following shows selectable items.

- [User Alarm]
- [System Alarm]
- [Operation Log]

#### 2) [Search Mode]

Select the method of searching.  
The following shows selectable items.

- [Date/Time]
- [Keyword]

#### 3) [Date/Time]

Set this field when [Search Mode] is set to [Date/Time].  
The settings depend on the resource file type.

Resource file type	Setting
User alarm and system alarm log files	Select the date and time targeted for a search. The following shows selectable items. <ul style="list-style-type: none"> <li>• [Occurred]</li> <li>• [Restored]</li> <li>• [Checked]</li> </ul> Based on the selection above, select the search period. The following shows selectable items. <ul style="list-style-type: none"> <li>• [Exact Match]</li> <li>• [On or Before]</li> <li>• [On or After]</li> <li>• [Range]</li> </ul>
Operation log file	Based on the recorded dates and time of the operation logs, select the search period. The following shows selectable items. <ul style="list-style-type: none"> <li>• [Exact Match]</li> <li>• [On or Before]</li> <li>• [On or After]</li> <li>• [Range]</li> </ul>

4) **[Keyword]**

Enter here when [Search Mode] is set to [Keyword].  
Specify the keyword for a search in the resource files.  
Up to 1024 characters can be entered.  
The characters are case-sensitive.  
After a search with [Keyword] left blank, the search result will be 0.

5) **[Search] button**

Start searching.  
Search results are displayed in the search result list.

6) **Search result list**

Lists the search results.  
When monitoring is interrupted, double-click any of the logs in the search result list to select the corresponding log in the resource file display area.

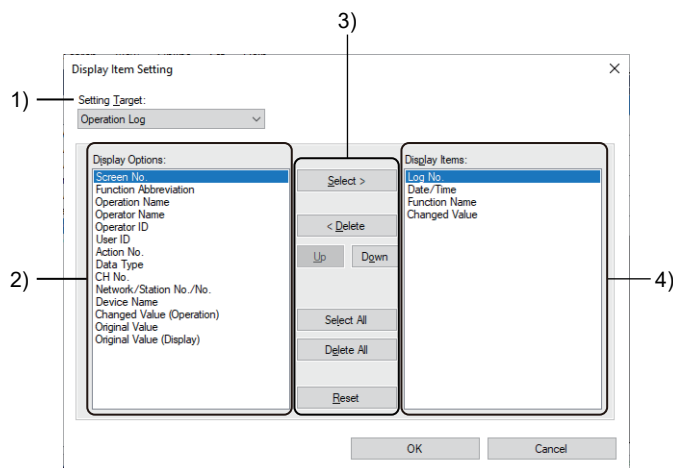

7) **[Search Result]**

The number of the resource files are displayed in the search result list.

8) **[Export]**

Saves the search result list as a CSV file or a Unicode text file.  
Set [File name] and [Save as type] in the displayed dialog and click the [Save] button to export the search result list.

■ 5 **[Display Item Setting] dialog (Resource File Viewer)**

1) **[Setting Target]**

Select the file type of the resource data set as the display items.  
The following shows selectable items.

- [User Alarm]
- [System Alarm]

- [Operation Log]

## 2) [Display Options]

Options of the items displayed in the search result list

Select an item and click the [Select] button to move the item to [Display Items].

## 3) Operation buttons

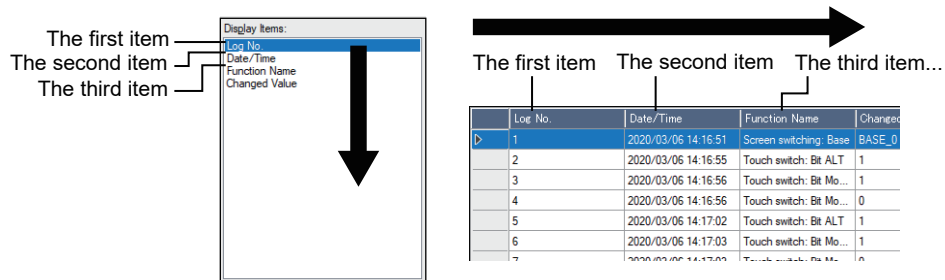

Item	Description
[Select] button	Moves the item selected in [Display Options] to [Display Items].
[Delete] button	Moves the item selected in [Display Items] to [Display Options].
[Up] button, [Down] button	Move the item selected in [Display Items] upward or downward.
[Select All] button	Moves all the items in [Display Options] to [Display Items].
[Delete All] button	Moves all the items in [Display Items] to [Display Options].
[Reset] button	Restores the items in [Display Items] to the default ones.

## 4) [Display Items]

Items to be displayed in the search result list

If any item is selected and the [Delete] button is clicked, the selected item is moved to [Display Options].

The items in the search result list are displayed in the order set for [Display Items].

If any item is selected and the [Up] button or the [Down] button is clicked, the position of the selected item is moved upward or downward.

## 6 [Action Setup] dialog

### 1) [Behavior when a selected row is double-clicked]

Select the behavior when a log selected in the resource file display area is double-clicked.

- [Display detailed contents of the resource file]

Displays the [Detail Display] dialog to show the details of the log.

- [Read/write GX Works3 Offline Monitor time on a selected date and time]

Write the clock time of the row selected in Resource File Viewer to the GX Works3 offline monitor to monitor the events occurred at the same clock time.

## 11.16 Viewing an operation log file (Resource File Viewer)

---

Start the Resource File Viewer exe directly, and the operation log file is viewable.

The operation log file read from the GOT is viewable on the personal computer without being converted in a CSV or Unicode text format.

- 11.16.1 Specifications of Resource File Viewer (at independent startup)
- 11.16.2 How to use Resource File Viewer (at independent startup)
- 11.16.3 Screen layout of Resource File Viewer (at independent startup)

### Point

This section explains direct startup of Resource File Viewer from the RCFView.exe (independent startup). For startup of Resource File Viewer from the GOT offline monitor (linked startup), refer to the following.

- 11.15.7 How to use a Resource File Viewer module
- 11.15.8 Screen layout of a Resource File Viewer module

### 11.16.1 Specifications of Resource File Viewer (at independent startup)

---

- ■1 Operating environment of Resource File Viewer (at independent startup)
- 2 Viewable operation log files
- 3 Number of Resource File Viewer modules that can be started

#### ■1 Operating environment of Resource File Viewer (at independent startup)

The operating environment of Resource File Viewer (at independent startup) is compliant with that of the GOT offline monitor.

For the operating environment of the GOT offline monitor, refer to the following.

- 11.15.1 ■1 Operating environment of the GOT offline monitor

#### ■2 Viewable operation log files

Files with the following extensions are viewable.

- G2O
- CSV
- TXT

#### ■3 Number of Resource File Viewer modules that can be started

Up to 16 Resource File Viewer modules can be started.

When a module is started, the smallest unused number from 1 to 16 is assigned to the module.

## 11.16.2 How to use Resource File Viewer (at independent startup)

- ➡■1 Obtaining a resource file
- 2 Starting Resource File Viewer
- 3 Updating the resource files

### ■1 Obtaining a resource file

Before starting Resource File Viewer, obtain a resource file.  
The following shows how to obtain a resource file.

Resource file source	Method to obtain	Reference
GOT	Obtaining a resource file using GT Designer3	➡4.8.2 [Communicate with GOT] dialog
	Obtaining a resource file output to a USB memory or SD card	
	Obtaining a resource file from the GOT using Data Transfer Tool	➡Help For Data Transfer Tool
	Obtaining a resource file output to the network drive	➡5.3.15 Configuring the network drive settings ([Network Drive])
	Obtaining a resource file using the FTP server function	➡10.16 Transferring a File between the GOT and Peripheral Device (FTP Server Function)
GT Simulator3	Obtaining a resource file from the working folder	➡3.1.5 Destination to save data
GT SoftGOT2000	Obtaining a resource file from a virtual drive	➡GT SoftGOT2000 Version1 Operating Manual

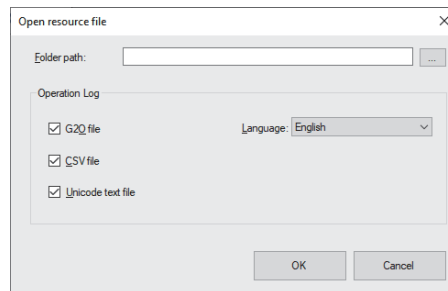

For details on operation logs, refer to the following.

- ➡5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

### ■2 Starting Resource File Viewer

The following shows how to start Resource File Viewer independently.

- Step 1** Double-click the Resource File Viewer exe in the directory: (Path to the installation location of GT Designer3)\GTD3\_2000\App\GSS3\RCFView\RCFView.exe.
- Step 2** In the [Open resource file] dialog, select a resource file to be read to Resource File Viewer.  
Click the [OK] button to start Resource File Viewer.

- ➡11.16.3 ■2 [Open resource file] dialog

### ■3 Updating the resource files

The following shows how to update the resource files or folder that stores the resource files.

#### (1) When the storage destination of the resource files has been changed

In the [Open resource file] dialog, set the path to the folder and click the [OK] button.

- ➡11.16.3 ■2 [Open resource file] dialog

#### (2) When a resource file has been changed, added, or deleted

Perform either of the following operations to update the resource files.

- Click the [Update] button in the [Navigation] window of the Resource File Viewer module.
- Click the [OK] button in the [Open resource file] dialog.

- ➡11.16.3 ■2 [Open resource file] dialog

### 11.16.3 Screen layout of Resource File Viewer (at independent startup)

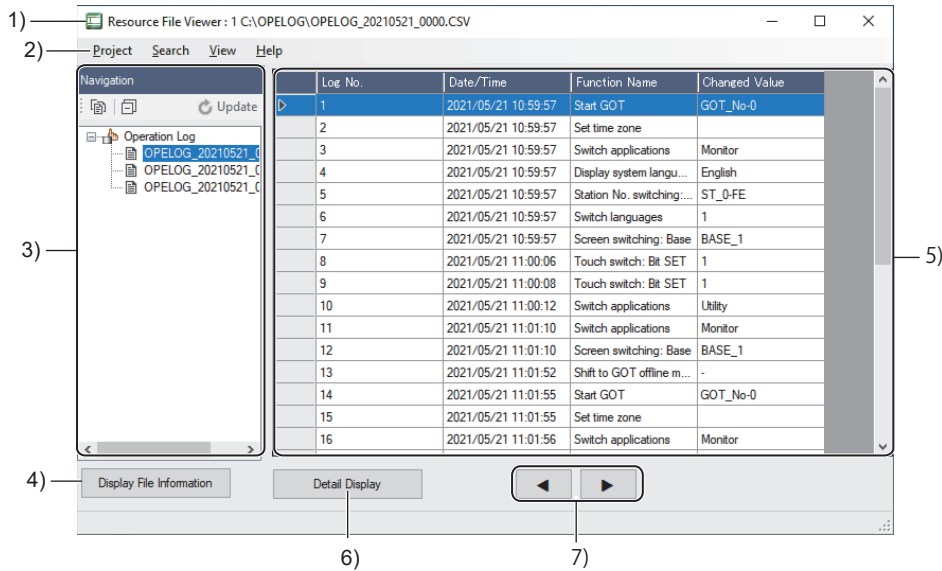

#### Point

This section explains startup of Resource File Viewer directly from the exe (independent startup).

For the screen layout at startup of Resource File Viewer from the GOT offline monitor (linked startup), refer to the following.

→ 11.15.8 Screen layout of a Resource File Viewer module

The following shows the screen layout of Resource File Viewer (at independent startup).

#### 1) Title bar

Displays the Resource File Viewer module number and path to the displayed resource file.

#### 2) Menu bar

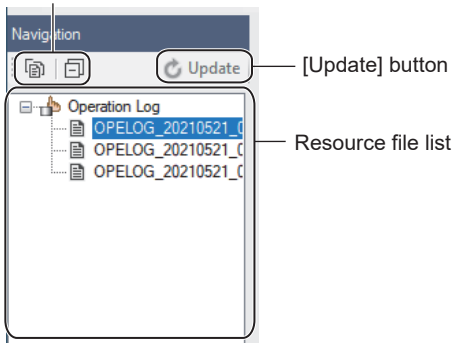

Displays the operation menus of the Resource File Viewer module.

→ ■ 1 Menus (at independent startup of a Resource File Viewer module)

#### 3) [Navigation] window

Lists the resource files.

[Unfold All] button, [Fold All] button

- [Unfold All] button, [Fold All] button

Expands or collapses all items in the tree.

- [!]

Appears when a resource file has been updated, added, deleted, or renamed.

- [Update] button

Updates the resource files.

- Resource file list

Displays the resource files with the extensions selected in the [Open resource file] dialog.

#### 4) [File Information] button

Displays the [Display File Information] dialog.

→ 11.15.8 ■ 2 [Display File Information] dialog

#### 5) Resource file display area

Displays the details of the resource file selected in the [Navigation] window.

Set the display items in the [Display Item Setting] dialog.

→ 11.15.8 ■ 5 [Display Item Setting] dialog (Resource File Viewer)

## 6) [Detail Display] button

Displays the [Detail Display] dialog.

⇒ 11.15.8 ■3 [Detail Display] dialog

## 7) Arrow buttons

Switches between the resource files displayed in the resource file display area.

# ■1 Menus (at independent startup of a Resource File Viewer module)

## (1) [Project]

Menu	Description	Shortcut key
[Exit Application]	Exits the Resource File Viewer module.	Alt+F4
[Open]	Select a resource file displayed in the resource file display area. ⇒ ■2 [Open resource file] dialog	-

## (2) [Search]

Menu	Description	Shortcut key
[Search]	Search for the resource files read to Resource File Viewer. Only operation logs are searched for. ⇒ 11.15.8 ■4 [Search] dialog	Ctrl+F

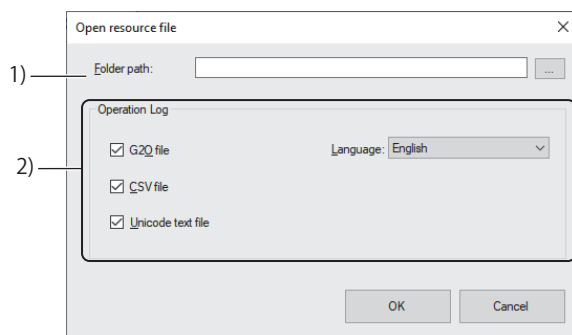

## (3) [View]

Menu	Description	Shortcut key
[Navigation]	Displays or hides the [Navigation] window.	-
[Display Items]	Select the items to be displayed in the resource file display area. Only operation logs are selectable. ⇒ 11.15.8 ■5 [Display Item Setting] dialog (Resource File Viewer)	-
[Switch Display Language]	Switch the display language of the Resource File Viewer module. ⇒ 11.15.7 ■6 Switching the display language of Resource File Viewer	-

## (4) [Help]

Menu	Description	Shortcut key
[GT Designer3 Help]	Displays GT Designer3 Help.	F1
[About Resource File Viewer]	Display the Resource File Viewer version. ⇒ ■3 [About Resource File Viewer] dialog (at independent startup of a Resource File Viewer module)	-

## ■2 [Open resource file] dialog

### 1) [Folder path]

Set the path to the resource file to be read to the Resource File Viewer module.

### 2) [Operation Log]

Select the types of operation logs displayed in the Resource File Viewer module.

- [G2O file]
- [CSV file]
- [Unicode text file]

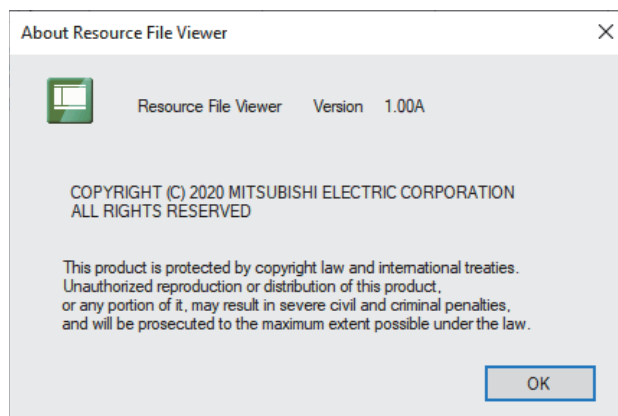

When selecting a G2O file, select the language displayed in the Resource File Viewer module.

The following system languages can be selected.

- [Japanese]
- [English]
- [Chinese (Simplified)]
- [Chinese (Traditional)]
- [Korean]

## ■3 [About Resource File Viewer] dialog (at independent startup of a Resource File Viewer module)

Select [Menu] → [Help] → [About Resource File Viewer] to display the [About Resource File Viewer] dialog.

- 12.1.1 GOT bit register (GB)
- 12.1.2 GOT data register (GD)
- 12.1.3 GOT special register (GS)

The following data types cannot be used for GOT internal devices.

GOT bit register (GB): 64-bit

GOT data register (GD): 8-bit

GOT special register (GS): 8-bit, 64-bit

### 12.1.1 GOT bit register (GB)

Device	Function	Supported models
GB0 to GB9	Use prohibited	GT27, GT25, GT23 GT21, GS25, GS21 SoftGOT2000
GB10 to GB25	External Output for Y0 to YF	GT27, GT25, GT23 GT21, GS25, GS21 SoftGOT2000
GB26 to GB29	Use prohibited	GT27, GT25, GT23 GT21, GS25, GS21 SoftGOT2000
GB30 to GB37	External Input for X0 to X7	GT27, GT25, GT23 GT21, GS25, GS21 SoftGOT2000
GB38	Without Power Supply	GT27, GT25, GT23 GT21, GS25, GS21 SoftGOT2000
GB39	Clock Data Storage During ON	GT27, GT25, GT23 GT21, GS25, GS21 SoftGOT2000
GB40	Always ON	GT27, GT25, GT23
GB41	Always OFF	GT27, GT25, GT23 GT21, GS25, GS21
GB42	ON When Screen Switching Occurs	SoftGOT2000
GB43 to GB49	Use prohibited	GT27, GT25, GT23 GT21, GS25, GS21 SoftGOT2000
GB50 to GB57	External Input for X8 To XF	GT27, GT25, GT23 GT21, GS25, GS21 SoftGOT2000

Device	Function	Supported models
GB58 to GB63	Use prohibited	
GB64 to GB2047	User area	
GB2048 to GB65535	User area	

### ■ 1 External Output for Y0 to YF (GB10 to GB25)

With the external I/O function, the signals are output to an external I/O device when the GB devices turn on. The following shows the signal names for each GB device.

GB device	Signal name	GB device	Signal name	GB device	Signal name	GB device	Signal name
GB10	Y0 output	GB14	Y4 output	GB18	Y8 output	GB22	YC output
GB11	Y1 output	GB15	Y5 output	GB19	Y9 output	GB23	YD output
GB12	Y2 output	GB16	Y6 output	GB20	YA output	GB24	YE output
GB13	Y3 output	GB17	Y7 output	GB21	YB output	GB25	YF output

### ■ 2 External Input for X0 to X7 And X8 To XF (GB30 to GB37, GB50 to GB57)

With the external I/O function, the GB devices turn on when signals are input with an external I/O device. The following shows the signal names for each GB device.

GB device	Signal name	GB device	Signal name	GB device	Signal name	GB device	Signal name
GB30	X0 input	GB34	X4 input	GB50	X8 input	GB54	XC input
GB31	X1 input	GB35	X5 input	GB51	X9 input	GB55	XD input
GB32	X2 input	GB36	X6 input	GB52	XA input	GB56	XE input
GB33	X3 input	GB37	X7 input	GB53	XB input	GB57	XF input

### ■ 3 Without Power Supply (GB38)

With the external I/O function, the GB devices turn on when the power for the external device is not supplied.

### ■ 4 Clock Data Storage during ON (GB39)

While this device is on, the clock data is stored to GD0 to GD6.  
While this device is off, the clock data is not stored.

### ■ 5 Always ON (GB40)

Always ON

### ■ 6 Always OFF (GB41)

Always OFF

### ■ 7 ON When Screen Switching Occurs (GB42)

Turns on when switching the following screens occurs.

- Base screen
- Overlap window 1, 2, 3, 4, 5
- Superimpose window 1, 2
- When an overlap window is closed by opening a test window or others

You need to turn off this device.

### Actions of the Always ON (GB40) and the Always OFF (GB41)

Actions of the Always ON (GB40) and the Always OFF (GB41) are the same as those of b4 and b5 in the Common Information 1 (GS0), respectively.

## 12.1.2 GOT data register (GD)

GD devices are listed as follows.

Device	Function	Supported models
GD0 to GD2047	User area	
GD2048 to GD65535	User area	

### 1 Storing clock data in GD devices (for GT21 and GS21)

While GB39 is on, the clock data is stored to GD0 to GD6.

For the details of the clock function, refer to the following.

→ 5.3.5 Setting the GOT time setting method ([Time Setting])

The following shows the data to be stored to each GD device.

GD device	Data to be stored
GD0	Second (0 to 59)
GD1	Minute (0 to 59)
GD2	Hour (0 to 23)
GD3	Date (1 to 31)
GD4	Month (1 to 12)
GD5	Year (2000 to 2037)
GD6	Day of the week (0 to 6)

While GB39 is on, GD0 to GD6 are not usable as the user area.

To use GD0 to GD6 as the user area, turn off GB39.

## ■2 Designation of a station number using GD (only for the temperature controller connection, inverter connection and servo amplifier connection)

If 100 to 115 is set for a station number. in the setting of device, a station number can be designated by the value of GD10 to GD25.

The monitor target station number can be changed by simply changing a device value.

For how to set the devices, refer to the following.

→6.1 Device Settings

### (1) When a GD device is used together with the Station No. Switching device (GT27, GT25, GT23, and GS25)

The station No. switching device has priority.

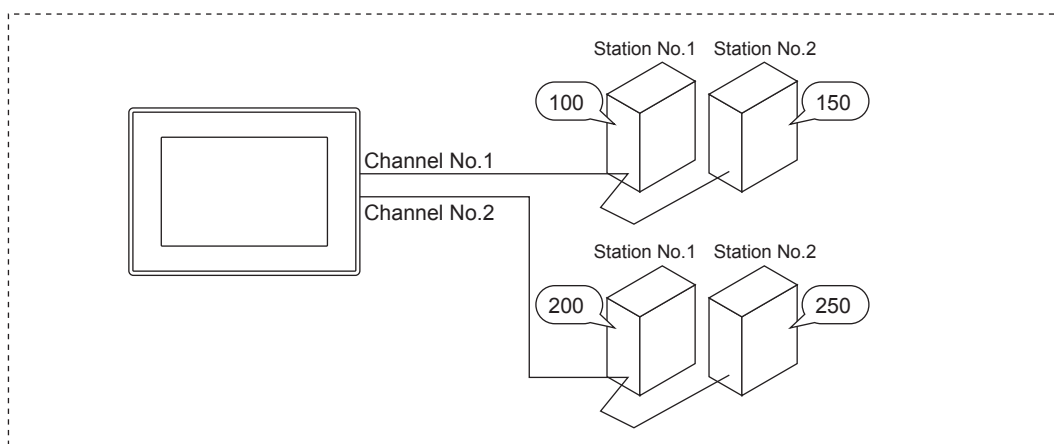

### (2) When objects that monitor different channel numbers. are arranged on the same screen

To monitor different station Nos. by individual objects, use GD10 to GD25.

If station No. switching devices are used, the monitor target station number of an unintended object may be changed. (Especially when multiple switching target channel Nos. are set)

Example) When monitor target channel Nos. of station No. switching device are 1 and 2

The monitor target station Nos are switched at the timing of changing the value of GD10 to GD25.

(When using the Station No. Switching device)

(When GD (GD10 to GD25) is used)

## 12.1.3 GOT special register (GS)

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

The GOT special register includes the following two types.

Types	Range	Description
Write device	GS0 to GS383, GS640 to GS1791	Writing values by the GOT notifies a user of the status of GOT. → ■1 Write device list
Read device	GS384 to GS639, GS1792 to GS2047	Writing values by a user controls the behavior of GOT. → ■4 Read device list

### Point

#### Functions affected by GOT special register

Some GOT special registers affect multiple functions on the GOT.

For the relation between each GOT special register and GOT functions, refer to the following.

→ Settings related to each function

#### ■ 1 Write device list

## ■2 Write device (GS0 to GS383)

### (1) Common Information1 (GS0)

- b0: Repeats turning on and off for every communication cycle (For channel No. 1) \*<sup>1</sup>
- b1: Turns on when the base or window screen is switched and remains on until a cycle of the on-screen setting processing is complete.  
(This applies to the station No. switching, security level change or language switching.)  
It is used to check (debug) the screen switch setting processing.
- b2: Turns on when the base or window screen is switched and remains on until a cycle of the trigger action processing for the project and screen display is complete.  
(This applies to the station No. switching, security level change or language switching.)  
It is used to activate the trigger action only once in switching the screen.
- b3: Turns on while the initial screen is displayed at power-on.  
It turns off when the base screen is switched over.
- b4: Always on
- b5: Always off
- b6 to b7: Use prohibited
- b8: Repeats turning on and off for every communication cycle (For channel No. 2) \*<sup>1</sup>
- b9: Repeats turning on and off for every communication cycle (For channel No. 3) \*<sup>1</sup>
- b10: Repeats turning on and off for every communication cycle (For channel No. 4) \*<sup>1</sup>
- b11 to b14: Use prohibited
- b15: Turns on in the screen gesture mode.

\*<sup>1</sup> One cycle is the elapsed time for the GOT to read the objects on the current screen display and the data set in the common settings.

#### Point

#### Actions of b4 and b5 in the Common Information 1 (GS0)

Actions of b4 and b5 in the Common Information 1 (GS0) are the Always ON (GB40) and the Always OFF (GB41) respectively.

### (2) Base Screen Information (GS1)

- b0: Repeats turning on and off for every communication cycle while the base screen is displayed. (For channel No. 1)
- b1: Turns on when the base screen is switched and remains on until a cycle of the on-screen setting processing is complete.  
(This applies to the station No. switching, security level change or language switching.)  
It is used to check (debug) the screen switch setting processing.

- b2: Turns on when the base screen is switched and remains on until a cycle of the on-screen setting processing is complete. (This applies to the station No. switching, security level change or language switching.)  
It is used to activate the trigger action only once in switching the screen.
- b3 to b7: Use prohibited
- b8: Repeats turning on and off for every communication cycle while the base screen is displayed. (For channel No. 2)
- b9: Repeats turning on and off for every communication cycle while the base screen is displayed. (For channel No. 3)
- b10: Repeats turning on and off for every communication cycle while the base screen is displayed. (For channel No. 4)
- b11 to b15: Use prohibited

### (3) GOT ID No. (GS3)

Notifies the GOT ID number.

The notified GOT ID numbers range from 0 to 32767.

Notifies 0 when no GOT ID number is used.

### (4) CC-Link G4 Station No.(CH1) (GS6)

For the CC-Link connection (via G4), the station number of the connected AJ65BT-G4-S3 or AJ65BT-R2N is stored when the GOT is powered on.

When the multi-channel function is used, the station number of channel No. 1 is stored.

The station numbers of channel No. 2 to 4 are stored to GS361 to GS363.

### (5) GOT Multidrop Slave Station No. (CH1) (GS6)

For the multidrop connection, the station number of the connected GOT is stored when the GOT is powered on.

When the multi-channel function is used, the station number of channel No. 1 is stored.

The station numbers of channel No. 2 to 4 are stored to GS361 to GS363.

### (6) 1 Second Binary Counter (GS7)

Starts counting every second immediately after the power is switched on.

When a value is written by a user, counting starts from the written value.

It is used to check how long the time has elapsed from specific timing (operation and others).

Data type: Unsigned binary

Counting range: 0 to 65535

When counting reaches the maximum value, a new counting starts from 0.

### (7) Scan Time of Monitor (GS8)

Stores the time (ms) of a complete processing cycle set on the display screen as binary data.

Data will be updated when all of the processing set on the display screen is complete.

An error of plus or minus 10 ms may be produced depending on the processing settings.

Also, it does not apply to the objects that have not been processed by the security function.

It is useful for load checking (debug) of the monitor processing.

### (8) Scan Counter of Monitor (GS10)

Counts up the number of cycles every time the processing cycle set on the display screen is complete.

It is used to check (debug) the number of scan of monitor.

Data type: Unsigned binary

Counting range: 0 to 65535

When counting reaches the maximum value, a new counting starts from 0.

### (9) Script Common Information (GS14)

The following script types are supported: project script, screen script, and script part.

Stores information of error occurrence.

- b0: Turns on in error occurrence
- b1 to b6: Use prohibited
- b7: Turns on in BCD error occurrence
- b8: Turns on in zero division error occurrence
- b9 to b11: Use prohibited
- b12: Turns on in communication error occurrence (including access to the device out of range)
- b13 to b15: Use prohibited

**(10)Script Error Pointer (GS15)**

The following script types are supported: project script and screen script.

Stores a number showing the start device number of the devices where the latest error record is stored.

Each error record is stored in two Script Error Data devices (GS16 to GS47).

The value at GS15 is changed as shown below each time an error occurs.

-1 → 16 → 18 → ... → 46 (The value is back to 16 and changes repeatedly.)

The following shows the relationship between the value of GS15 and the storage location of the latest error record.

- When GS15 stores 16, the latest error record is stored in GS16 and GS17.
- When GS15 stores 46, the latest error record is stored in GS46 and GS47.

**(11)Script Error Data (GS16 to GS47)**

The following script types are supported: project script and screen script.

Store the script numbers and error codes for the error-generated scripts.

Two word devices are used for one error.

If the number of errors is 17 or more, the error records are overwritten starting from the oldest one.

**(12)Script Execute Pointer (GS48)**

The following script types are supported: project script and screen script.

Stores the device number of the device where the latest script execution number is stored.

Each script execution number is stored in one Script Execute No. device (GS49 to GS79).

The value at GS48 changes as shown below each time the project script and the screen script are executed.

-1 → 49 → 50 → ... → 79 (The value is back to 49 and changes repeatedly.)

The following shows the relationship between the value of GS48 and the storage location of the latest script execution number.

- When GS48 stores 49, the latest script execution number is stored in GS49.
- When GS48 stores 79, the latest script execution number is stored in GS79.

**(13)Script Execute No. (GS49 to GS79)**

The following script types are supported: project script and screen script.

Store the script numbers of the executed scripts.

One word device is used for one script.

If the number of the executed scripts is 32 or more, the script execution records are overwritten starting from the oldest one.

**(14)Object Script Common Information (GS80)**

Stores information of error occurrence.

- b0: Turns on in error occurrence
- b1 to b6: Use prohibited
- b7: Turns on in BCD error occurrence
- b8: Turns on in zero division error occurrence
- b9 to b11: Use prohibited
- b12: Turns on in communication error occurrence (including access to the device out of range)
- b13 to b15: Use prohibited

**(15)Object Script Error Pointer (GS81)**

Stores a number showing the start device number of the devices where the latest error record is stored.

Each error record is stored in two Object Script Error Data devices (GS82 to GS113).

The value at GS81 changes as shown below each time an error occurs.

-1 → 82 → 84 → ... → 112 (The value is back to 16 and changes repeatedly.)

The following shows the relationship between the value of GS81 and the storage location of the error code of the latest error.

- When GS81 stores 82, the latest error record is stored in GS82 and GS83.
- When GS81 stores 112, the latest error record is stored in GS112 and GS113.

**(16)Object Script Error Data (GS82 to GS113)**

Store the script user ID numbers and error codes for the error-generated object scripts.

Two word devices are used for one error.

If the number of errors is 17 or more, the error records are overwritten starting from the oldest one.

### (17) Object Script Execute Pointer (GS114)

Stores the device number of the device where the latest script execution number is stored.

Each script execution number is stored in one Object Script Execute No. device (GS115 to GS145).

The value at GS114 changes as shown below each time an object script is executed.

-1 → 115 → 116 → ⋯ → 145 (The value is back to 115 and changes repeatedly.)

The following shows the relationship between the value of GS114 and the storage location of the latest script execution number.

- When GS114 stores 115, the latest script execution number is stored in GS115.
- When GS114 stores 145, the latest script execution number is stored in GS145.

### (18) Object Script Execute No. (GS115 to GS145)

Store the script numbers of the executed scripts.

One word device is used for one script.

If the number of the executed scripts is 32 or more, the script execution records are overwritten starting from the oldest one.

### (19) File operation function information (GS154)

The following script types are supported: project script and screen script.

Notifies the execution status of the file operation function.

- b0: Turns on during the executing for a file operation function.  
Turns off when the file operation function is completed.
- b1 to b14: Use prohibited
- b15: Turns on when an error occurs with a file operation function.  
The bit turns off when the next file operation function is completed normally.  
This bit does not turn off even if the Script Error Clear signal (GS384.b0) is turned on.

### (20) Latest Script Error Info Pointer (GS157)

The following script types are supported: project script, screen script, and script part.

Stores a number showing the devices where the latest error record is stored.

Data type: Signed binary

Initial value: -1

Calculate the start device number of the devices storing the latest error record by using the following expression.

- $GS392 + (GS157 \times 8)$

### (21) Latest Executed Script Pointer (GS158)

The following script types are supported: project script, screen script, and script part.

Stores a number showing the devices where the latest script execution record is stored.

Data type: Signed binary

Initial value: -1

Calculate the start device number of the devices storing the latest script execution record by using the following expression.

- $GS396 + (GS158 \times 8)$

### (22) Latest Object Script Error Info Pointer (GS159)

Stores a number showing the area where the latest object script error record is stored.

Data type: Signed binary

Initial value: -1

Calculate the start device number of the devices storing the latest error record by using the following expression.

- $GS432 + (GS159 \times 8)$

### (23) Latest Executed Object Script Pointer (GS160)

Stores a number showing the area where the latest object script execution record is stored.

Data type: Signed binary

Initial value: -1

Calculate the start device number of the devices storing the latest script execution record by using the following expression.

- $GS436 + (GS160 \times 8)$

**(24) Ethernet Port 2 GOT IP Address (GS194, GS195), Ethernet Port 1 GOT IP Address (GS198, GS199)**

Stores the GOT IP address that is specified for the GOT Ethernet interface in hexadecimal.

The following shows the IP address to be stored to each device.

GOT	GOT IP address	Destination device
GT27, GT25-S, GT25-V (excluding GT2505-V)	GOT IP address for the Ethernet standard port	GS198, GS199
	GOT IP address for the Ethernet extended port	GS194, GS195
GT25-W, GS25	GOT IP address for Ethernet standard port 1	GS198, GS199
	GOT IP address for Ethernet standard port 2	GS194, GS195
GT2505-V, GT25HS-V, GT23, GT21, GS21	GOT IP address for the Ethernet standard port	GS198, GS199

Example) When the GOT IP address for the Ethernet standard port of GT27 is 192.168.3.18 (decimal)

**(25) Gateway Common Information (GS200)**

Notifies the common information of the gateway function  
 GT21 and GS21 support b1 and b2.

- b0: Turns on while the mail send function is ready.
- b1: Turns on while the FTP server function is ready.
- b2: Turns on when an FTP client is logged in.
- b3: ON while the server function is ready.
- b4: ON while the client function is ready.
- b5 to b10: Use prohibited
- b11: Turns on when an error occurs in the mail send function.
- b12 to b13: Use prohibited
- b14: Turns on when an error occurs in the server function.
- b15: Turns on when an error occurs in the client function.

**(26) Mail Send Function Error Counter (GS201)**

Counts the number of the errors that have occurred in the mail send function.

**(27) Mail Send Function Error Code (GS202)**

Stores the codes of the errors that have occurred in the mail send function.  
 For the error codes to be stored, refer to the following.

→ 10.15.8 ■ 3 Error code and error message of the mail send function

**(28) Mail Send Function Error Occurrence Date And Time (GS203 to GS205)**

Stores the day and the time of the error occurrence with BCD code.

Example) When the error occurrence date is 15:30:20 May 15, 2013

**(29) Mail Send Function Send Source (GS206)**

Notifies the type of the function that has caused the error in the mail sending process.

- 0: No error
- 1: User alarm observation
- 2 or more: Use prohibited

**(30)Number of Connected FTP Clients (GS208)**

Notifies the number of the clients connected to the FTP server.  
 Clients are counted when the OPEN command (an FTP command) is executed.

**(31)Server Function Error Counter (GS210)**

Counts the number of the errors that have occurred in the server function.

**(32)Server Function Error Code (GS211)**

Stores the codes of the errors that have occurred in the server function.  
 The following shows the list of the error code to be stored.

Error code	Details of error and cause	Corrective action
490	A script was used for monitoring the gate device that executed the script.	<ul style="list-style-type: none"> <li>• Change the monitor destination GOT specified in the script to another GOT.</li> <li>• Monitor the PLC devices directly without using the script.</li> </ul>
491	A station that does not exist was accessed.	Check the network number, the PLC station number, and the Ethernet settings of the monitor destination.
492	A communication timeout error has occurred.	<ul style="list-style-type: none"> <li>• Specify a longer communication timeout period.</li> <li>    ⇒5.5.1 ■4 [Controller Setting]</li> <li>• Check the network. (Check if firewall exists, execute Ping, or take other actions.)</li> <li>• Check for cable disconnection, and check the module mounting status.</li> </ul>
493	A communication error has occurred.	<ul style="list-style-type: none"> <li>• Check the network. (Check if firewall exists, execute Ping, or take other actions.)</li> <li>• Check for cable disconnection, and check the module mounting status.</li> </ul>

**(33)Server Function Error Occurrence Date And Time (GS212 to GS214)**

Stores the day and the time of the error occurrence with BCD code.  
 Example) When the error occurrence date is 15:30:20 May 15, 2013

**(34)Server Function Error Client (GS215, GS216)**

Stores the IP address of the GOT (client) where the error occurred in hexadecimal.  
 Example) When the GOT IP address is 192.168.3.18 (decimal)

**(35)Client Function Error Counter (GS220)**

Counts the number of the errors that have occurred in the client function.

**(36)Client Function Error Code (GS221)**

Stores the codes of the errors that have occurred in the client function.  
 The following shows the list of the error code to be stored.

Error code	Details of error and cause	Corrective action
490	A script was used for monitoring the gate device that executed the script.	<ul style="list-style-type: none"> <li>• Change the monitor destination GOT specified in the script to another GOT.</li> <li>• Monitor the PLC devices directly without using the script.</li> </ul>
491	A station that does not exist was accessed.	Check the network number, the PLC station number, and the Ethernet settings of the monitor destination.
492	A communication timeout error has occurred.	<ul style="list-style-type: none"> <li>• Specify a longer communication timeout period.</li> <li>    ⇒5.5.1 ■4 [Controller Setting]</li> <li>• Check the network. (Check if firewall exists, execute Ping, or take other actions.)</li> <li>• Check for cable disconnection, and check the module mounting status.</li> </ul>
493	A communication error has occurred.	<ul style="list-style-type: none"> <li>• Check the network. (Check if firewall exists, execute Ping, or take other actions.)</li> <li>• Check for cable disconnection, and check the module mounting status.</li> </ul>

### (37) Client Function Error Occurrence Date And Time (GS222 to GS224)

Stores the day and the time of the error occurrence with BCD code.

Example) When the error occurrence date is 15:30:20 May 15, 2013

### (38) Client Function Error Counter (GS225, GS226)

Stores the IP address of the GOT (server) where the error occurred in hexadecimal.

Example) When the GOT IP address is 192.168.3.18 (decimal)

### (39) No. Of Faulty Stations (GS230)

Stores the number of stations where CPU error was detected.

The station where error occurs can be checked with GS231 to GS238.

⇒ (40) Ethernet Faulty Station Information (GS231 to GS238)

When the redundant setting is configured, these GS devices do not operate.

- b0 to b7: Stores the number of faulty stations.
- b8 to b15: Use prohibited

#### Point

#### Monitoring GS230 by numerical display

To monitor GS230 by numerical display and others, perform mask processing using data operation function as follows.

⇒ 6.5.5 ■ 4 Setting data operations

Example) Setting of numerical display (the [Operation/Script] tab)

Make setting for mask processing of the upper 8 bits (b15 to b8) of GS230 in the the numerical display.

### (40) Ethernet Faulty Station Information (GS231 to GS238)

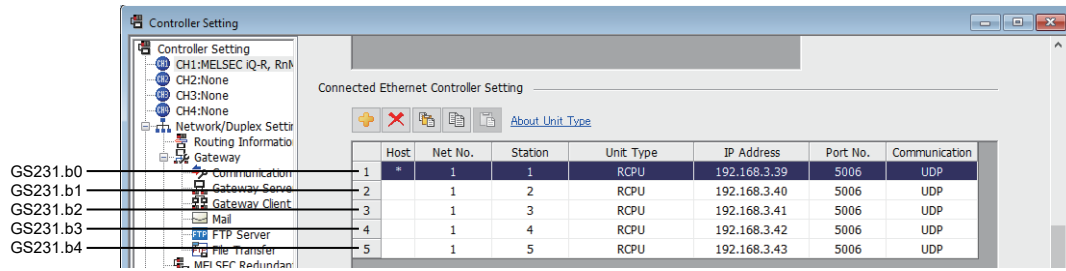

When the Ethernet connection is used, the bit corresponding to the station with a communication error turns on. When the multi-channel connection is used, the Ethernet-connected controller with the smallest channel number is monitored.

To monitor the faulty station information of multiple channels, use the following GOT special registers (GS).

⇒ (66) Faulty Station Information (CH1 to CH4) (GS281 to GS288, GS301 to GS308, GS321 to GS328, GS341 to GS348)

- 0: No error
- 1: Error

When the Ethernet module has restored from the error, the bit turns off.

Device	Ethernet setting No.															
	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
GS231	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
GS232	32	31	30	29	28	27	26	25	24	23	22	21	20	19	18	17
GS233	48	47	46	45	44	43	42	41	40	39	38	37	36	35	34	33
GS234	64	63	62	61	60	59	58	57	56	55	54	53	52	51	50	49
GS235	80	79	78	77	76	75	74	73	72	71	70	69	68	67	66	65
GS236	96	95	94	93	92	91	90	89	88	87	86	85	84	83	82	81
GS237	112	111	110	109	108	107	106	105	104	103	102	101	100	99	98	97

#### (41) External Authentication Status Notification (GS240)

- b0: Turns on when the authentication by an external authentication device succeeds.  
Turns off when the login screen or operator re-authentication screen is displayed regardless of the authentication method.
- b1: Turns on when the authentication by an external authentication device fails.  
Turns off when the login screen or operator re-authentication screen is displayed regardless of the authentication method.
- b2 to b12: Use prohibited
- b13: Turns on while the login screen or operator re-authentication screen is displayed.
- b14: Turns on while the login screen for the authentication by an external authentication device is displayed.
- b15: Turns on while the external authentication ID input key window is displayed.

#### Notifying the authentication mode by b13 and b14

The status of the Operator Authentication Reception signal and the External Authentication Reception signal notifies the user of the authentication mode currently being accepted.

Operator Authentication Reception signal (GS240.b13)	External Authentication Reception signal (GS240.b14)	Authentication mode
OFF	OFF	The operator authentication not accepted
ON	OFF	The password authentication accepted (operator name + password)
ON	ON	The external authentication accepted

This notifies the user of switching to the auxiliary authentication.

#### (42) Insufficient Security Level Notification (GS241)

The bit turns on when the screen cannot be displayed because of the insufficient security level.

- b0: Use prohibited
  - b1: Turns on when the overlap window 1 cannot be displayed.
  - b2: Turns on when the overlap window 2 cannot be displayed.
  - b3: Turns on when the superimpose window 1 cannot be displayed.
  - b4: Turns on when the superimpose window 2 cannot be displayed.
  - b5 to b7: Use prohibited
  - b8: Turns on when a called screen on the base screen cannot be displayed.
  - b9: Turns on when a called screen on the overlap window 1 cannot be displayed.
  - b10: Turns on when a called screen on the overlap window 2 cannot be displayed.
  - b11: Turns on when a called screen on the superimpose window 1 cannot be displayed.
  - b12: Turns on when a called screen on the superimpose window 2 cannot be displayed.
  - b13 to b15: Use prohibited
- b1 to b4 turn off when a screen is displayed.  
b1 to b4 turn off when 0 is stored in a screen switching device.  
b8 to b12 turn off when a called screen is displayed.

#### (43) Incorrect Login (GS242)

- b0: Turns on when an incorrect login is detected.  
Turns off upon the lapse of the set login block time or unlocking an operator account by logging in as the administrator.
- b1: Turns on when any operator account is locked.  
Turns off when no operator account is locked.
- b2 to b15: Use prohibited

#### (44) Object Direct Input Reception Notification (GS243)

- b1 to b14: Use prohibited
- b15: Turns on while an object is in the ready state for the data read by the barcode reader or RFID to be directly input.

#### (45) SoftGOT-GOT Link Status Control/Notification (GS244)

When the GOT network interaction function is enabled, only GS244.b2 operates.

- b0: Turns on while GT SoftGOT2000 communicates with the GOT.
- b1: Turns on when the GOT or GT b2: SoftGOT2000 obtains the authorization.
- b2: Notifies whether the GOT or GT SoftGOT2000 is in use.  
0: GOT  
1: GT SoftGOT2000 (Changes to 0 if GT SoftGOT2000 does not communicate with the GOT.)
- b3: Turns on when the GOT obtains the exclusive authorization. (Always off for GT SoftGOT2000)
- b4: Turns on when the dedicated screen for the utility or the extended function is displayed. (Always off for GT SoftGOT2000)
- b5 to b15: Use prohibited

#### (46) Drive Accessibility (GS251)

Notifies whether each drive is accessible.

- b0: Turns on when data can be read and written from and to drive A.
- b1: Turns on when data can be read and written from and to drive B
- b2: Turns on when data can be read and written from and to drive E.
- b3: Turns on when data can be read and written from and to drive F
- b4: Turns on when data can be read and written from and to drive G.
- b5: Turns on when data can be read from drive N.
- b6 and b7: Use prohibited
- b8: Turns on when data forbids writing to drive A.
- b9: Turns on when data forbids writing to drive B
- b10: Turns on when data forbids writing to drive E.
- b11: Turns on when data forbids writing to drive F.
- b12: Turns on when data forbids writing to drive G.
- b13 to b15: Use prohibited

For the available drives by GOT model, refer to the following.

⇒ 1.2.8 Drive configuration of the target GOT for data transfer

#### (47)Error Detection Common Information (GS252)

- b0 to b7: Use prohibited
- b8: Turns on when the video signal for CH1 is not input.  
The bit automatically turns off when the video signal for CH1 is input.
- b9: Turns on when the video signal for CH2 is not input.  
The bit automatically turns off when the video signal for CH2 is input.
- b10: Turns on when the video signal for CH3 is not input.  
The bit automatically turns off when the video signal for CH3 is input.
- b11: Turns on when the video signal for CH4 is not input.  
The bit automatically turns off when the video signal for CH4 is input.
- b12 to b13: Use prohibited
- b14: Turns on when the RGB signal for CH2 is not input.  
The bit automatically turns off when the RGB signal for CH2 is input.  
The bit turns off when b14 of the device specified for [Video/RGB Input Common] is turned off (to hide the RGB screen for CH2).  
For details, refer to the following.  
    ⇒10.7 Displaying Image from a Personal Computer on the GOT (RGB Display Function)
- b15: Turns on when the RGB signal for CH1 is not input.  
The bit automatically turns off when the RGB signal for CH1 is input.  
The bit turns off when b15 of the device specified for [Video/RGB Input Common] is turned off (to hide the RGB screen for CH1).  
For details, refer to the following.  
    ⇒10.7 Displaying Image from a Personal Computer on the GOT (RGB Display Function)

#### (48)Invalid Access from Ethernet Port 1, Invalid Access from Ethernet Port 2 (GS254)

Notifies an invalid write/read request from GT Designer3 while the writing or reading of package data is disabled with the Ethernet Port 1 Access Control or Ethernet Port 2 Access Control device (GS454).

The following shows the correspondence between the Ethernet interfaces and the bits.

GOT	Ethernet interface	Bit number
GT27, GT25-S, GT25-V (excluding GT2505-V)	Ethernet standard port	b0, b1, b8
	Ethernet extended port	b4, b5, b12
GT25-W, GS25	Ethernet standard port 1	b0, b1, b8
	Ethernet standard port 2	b4, b5, b12
GT2505-V, GT25HS-V, GT23, GT21, GS21	Ethernet standard port	b0, b1, b8

- b0: Available when the Prohibit System Package Write signal (GS454.b0) is on.  
Turns on when the GOT receives a write request of package data (containing system applications) from GT Designer3 through the corresponding Ethernet interface.  
When the Prohibit System Package Write signal (GS454.b0) turns off, this bit also turns off.
- b1: Available when the Prohibit Project Data Write signal (GS454.b1) is on.  
Turns on when the GOT receives a write request of package data (containing project data) from GT Designer3 through the corresponding Ethernet interface.  
When the Prohibit Project Data Write signal (GS454.b1) turns off, this bit also turns off.
- b2 to b3: Use prohibited
- b4: Available when the Prohibit System Package Write signal (GS454.b4) is on.  
Turns on when the GOT receives a write request of package data (containing system applications) from GT Designer3 through the corresponding Ethernet interface.  
When the Prohibit System Package Write signal (GS454.b4) turns off, this bit also turns off.
- b5: Available when the Prohibit Project Data Write signal (GS454.b5) is on.  
Turns on when the GOT receives a write request of package data (containing project data) from GT Designer3 through the corresponding Ethernet interface.  
When the Prohibit Project Data Write signal (GS454.b5) turns off, this bit also turns off.
- b6 to b7: Use prohibited
- b8: Available when the Prohibit Project Data Read signal (GS454.b8) is on.  
Turns on when the GOT receives a read request of package data from GT Designer3 through the corresponding Ethernet interface.  
When the Prohibit Project Data Read signal (GS454.b8) turns off, this bit also turns off.
- b9 to b11: Use prohibited

- b12: Available when the Prohibit Project Data Read signal (GS454.b12) is on.  
Turns on when the GOT receives a read request of package data from GT Designer3 through the corresponding Ethernet interface.  
When the Prohibit Project Data Read signal (GS454.b12) turns off, this bit also turns off.
- b13 to b15: Use prohibited  
→ 12.1.3 ■5 (34) Ethernet Port 1 Access Control, Ethernet Port 2 Access Control (GS454)

#### (49) Intensity Notification (GS255)

Stores the current intensity and the brightness adjustment mode of the GOT display section.

- b0 to b14: Store the current intensity.

Intensity	Notified value	Intensity	Notified value	Intensity	Notified value	Intensity	Notified value
1	1	9	109	17	117	25	125
2	102	10	3	18	118	26	126
3	103	11	111	19	5	27	127
4	104	12	112	20	120	28	7
5	2	13	113	21	121	29	129
6	106	14	4	22	122	30	130
7	107	15	115	23	6	31	131
8	108	16	116	24	124	32	8

For GT23

Intensity	Notified value	Intensity	Notified value	Intensity	Notified value	Intensity	Notified value
1	102	5	3	9	118	13	126
2	104	6	112	10	120	14	7
3	106	7	4	11	122	15	130
4	108	8	116	12	124	16	8

- b15: Sets the current brightness adjustment mode.  
The bit turns on when the brightness adjustment mode is set to the low intensity.  
The bit turns off when the brightness adjustment mode is set to normal.

The Intensity Notification is stored when the Intensity Control or the Intensity Control by the intensity adjustment function of the utility is performed.

For the details of the Intensity Control, refer to the following.

→ 12.1.3 ■5 (35) Intensity Control (GS455)

For the intensity adjustment function of the utility, refer to the following manual.

→ GOT2000 Series User's Manual (Utility)

#### (50) FA Transparent Status (GS256)

Notifies the status of the FA transparent function.

The relationship between the stored value and the FA transparent status is as indicated below.

0: Ordinary monitoring

1: In the transparent mode

2: In the pass-through mode

#### (51) Printer Status Information (GS258)

GT25-W, GT2505-V, GT23, GT21, GS25, and GS21 support b3 only.

- b0: This bit is available when a PictBridge-compatible printer is used.  
Turns on when the printer is connected to the printer unit of the GOT.  
Turns off when the connection is disconnected.
- b1: This bit is available when a PictBridge-compatible printer is used.  
Turns on when a warning occurs while the printer is connected.  
Turns off after the error restoration.
- b2: This bit is available when a PictBridge-compatible printer is used.  
Turns on when a fatal error occurs while the printer is connected.  
Turns off after the error restoration.
- b3: This bit is available when a PictBridge-compatible printer, serial printer, or Ethernet printer is used.  
Turns on when the printer is ready to print.

- Turns off while the printer is starting up (including warming up), or printing is in progress.
- When printing cannot be executed while this signal is on, confirm that a function that executes printing (such as the hard copy function) completes the processing.
- You can confirm that the processing is completed by the Hard Copy Output signal (System signal 2-1.b7).
- b4 to b15: Use prohibited

**(52)Ethernet Printer Error Info (GS259)**

The following printers are supported: Ethernet printers.  
 Notifies the error code of the latest error that has occurred in the printer.  
 For details on the error codes, refer to the following Technical Bulletin.

⇒List of Valid Devices Applicable for GOT2000 Series and GOT SIMPLE Series (for Overseas) (GOT-A-0160)

**(53)Integer←→Real Number Conversion Status (GS260)**

The following script types are supported: project script, screen script, and script part.  
 Stores the conversion completion notification and error occurrence status into each bit.  
 If the Conversion Start Indication (GS460.b15) is turned off (0), each bit becomes 0.

⇒12.1.3 ■5 (38) Conversion Start Indication (GS460)

- b0 to b13: Use prohibited
- b14: Turns on when error occurs during conversion processing by GOT.  
 (Stores an error code in GS261)  
 ⇒(54) Integer←→Real Number Conversion Error Code (GS261)
- b15: Turns on when conversion is completed by GOT.

**(54)Integer←→Real Number Conversion Error Code (GS261)**

The following script types are supported: project script, screen script, and script part.  
 Stores the error during conversion.  
 Stores 0 when the conversion is completed normally.  
 Error codes stored in GS261 are as follows.

Error code	Description	Remarks
1	The Conversion Start Indication is not initialized.	The conversion processing is not executed.
2	The setting of the Conversion Start Indication is incorrectly configured.	
3	The number of devices is out of range.	
4	The device is out of range.	
5	The conversion source and destination are the same.	
6	Not used	-
7	Conversion error (such as an overflow)	The conversion processing continues.

**(55)System Alarm GOT Error Channel No. (GS262)**

If a system alarm (GOT error) occurs, the corresponding channel No. is stored.  
 0 is stored when the system alarm is cleared.  
 With some system alarms, channel numbers are not stored.  
 For details, refer to the following manuals.  
 ⇒GOT2000 Series User's Manual (Utility)

**(56)System Alarm CPU Error Channel No. (GS263)**

If a system alarm (CPU error) occurs, the corresponding channel No. is stored.  
 0 is stored when the system alarm is cleared.

**(57)System Alarm Network Error Channel No.(GS264)**

If a system alarm (network error) occurs, the corresponding channel No. is stored.  
 0 is stored when the system alarm is cleared.

**(58)SNTP Time Synchronization Setting Status (GS265)**

Notifies the status of the SNTP time synchronization setting.  
 The following shows the values to be stored.  
 0: No SNTP time synchronization setting or failure  
 1: Synchronizing with SNTP

### **(59)SNTP Time Query Result (GS266 to GS272)**

Stores the SNTP Time Query Result.

The following shows the values to be stored.

- GS266: The four-digit year data is stored.
- GS267: The month data, 01 to 12, is stored.
- GS268: The day data, 01 to 31, is stored.
- GS269: The hour data, 00 to 23, is stored.
- GS270: The minute data, 00 to 59, is stored.
- GS271: The second data, 00 to 59, is stored.
- GS272: The day-of-the-week data, 0 to 6, is stored.  
(0: Sunday 1: Monday 2: Tuesday 3: Wednesday 4: Thursday 5: Friday 6: Saturday)

### **(60)Monitoring Interval Timeout Count (GS275)**

The cumulative number of times that monitoring interval timeout has occurred is stored.

If monitoring interval timeout occurs frequently, check the number of job settings and the trigger condition setting.

### **(61)Document Display Status (GS276)**

- b0: Turns on when a specified file is not displayable.  
Turns off when the file is displayed appropriately.  
For the cause of the display failure, refer to the following.  
    ⇒8.26.5 Precautions for a document display object
- b1: Turns on when a PDF file cannot be cached for display.  
Turns off when the cached PDF file is displayed.  
For the cause of the cache failure, refer to the following.  
    ⇒8.26.5 Precautions for a document display object
- b2: Turns on when a PDF document is displayed in high quality (144 dpi resolution).
- b3: Turns on when the display size of the document is changed by GS523.b3.  
Turns off when GS523.b3 is turned off.  
    ⇒12.1.3 ■5 (61) Document Display Common Control (GS523)
- b4 to b15: Use prohibited

### **(62)Notify Automatic Connection Status (GS277)**

Notifies the communication status between the controllers supporting the automatic connection and the GOT.  
GT21 and GS21 support b0 to b3.

- b0: Turns on when the automatic connection is enabled in the setting of the controller (CH1).
- b1: Turns on when the automatic connection process is completed between the controller (CH1) and the GOT.
- b2: Turns on when the automatic connection is enabled in the setting of the controller (CH2).
- b3: Turns on when the automatic connection process is completed between the controller (CH2) and the GOT.
- b4: Turns on when the automatic connection is enabled in the setting of the controller (CH3).
- b5: Turns on when the automatic connection process is completed between the controller (CH3) and the GOT.
- b6: Turns on when the automatic connection is enabled in the setting of the controller (CH4).
- b7: Turns on when the automatic connection process is completed between the controller (CH4) and the GOT.
- b8 to b15: Use prohibited

### **(63)Report Page Number (GS278)**

Specify this device for a numerical print object on a report screen to output page numbers at the position where the object is placed.

### **(64)Standard SD Card Information (GS279)**

- b0: Turns on when an SD card is inserted into the standard SD card interface.  
Check the Drive Accessibility device (GS251) to see if the SD card is accessible.  
    ⇒12.1.3 ■2 (46) Drive Accessibility (GS251)
- b1 to b15: Use prohibited

### **(65)Faulty Monitor Station signal (CH1 to CH14) (GS280, GS300, GS320, GS340)**

- b0 to b7: Stores the number of faulty monitor stations with the Ethernet connection. (Except the Ethernet connection with a microcomputer)
- b8 to b15: Use prohibited

## (66) Faulty Station Information (CH1 to CH4) (GS281 to GS288, GS301 to GS308, GS321 to GS328, GS341 to GS348)

If a communication error occurs in a station that is connected to the GOT by using an applicable connection type, the corresponding bit turns on. The applicable connection types are as follows: Ethernet connection, CC-Link IE Controller Network connection, CC-Link IE Field Network connection, temperature controller connection, inverter connection, and servo amplifier connection.

(For the multi-channel connection, the bit of the device corresponding to each channel No. (CH1 to CH4) turns on.)

0: No error

1: Error

When the faulty station is restored from the error, the bit turns off.

The following shows the communication drivers that support the device.

○: Supported, -: Not supported

\*1 Only the faulty station can be detected in the same network.

\*2 To detect a faulty station in the CC-Link IE TSN connection, use the following GOT special registers (GS).

➡ 12.1.3 ■3 (78) Faulty Station Information (CC-Link IE TSN) (GS1281 to GS1288)

When the GOT is connected to the AZBIL temperature controller (DMC50), the specified station number of the DMC50 differs from the station numbers of the other controllers.

The following shows station numbers for each device.

**(a) Correspondence between station numbers and device bits (when connecting to a controller other than the AZBIL temperature controller (DMC50))**

The station corresponding to each device bit differs according to whether the Ethernet connection is used or not.

- With the Ethernet connection: 1 to 128

Device				Ethernet setting No.

**Point**

**(1) Range of detectable faulty stations**

The GOT cannot detect errors with the station No. 128 or later, or the station number and the sub station 9-0 or later.

**(2) Detecting a faulty station whose station number is specified with the value of a GOT data register**

When an error occurs with the station number specified on GT Designer3, the operation differs according to the controller used.

**(a) When using other than the AZBIL temperature controller (DMC50)**

When an error occurs with the station number specified on GT Designer3, the own station number of the error temperature controller, inverter, or servo amplifier is detected.

(For example, when the station number specified on GT Designer3 is 110 and the own station number of the temperature controller or servo amplifier is 10, the bit for the station number 10 turns on.)

**(b) When using the AZBIL temperature controller (DMC50)**

When the station number is specified with the value of the GOT data register (GD), the GOT cannot detect errors.

For details of specifying station numbers, refer to the following.

⇒ GOT2000 Series Connection Manual for a controller used

### (3) Restrictions on the CC-Link IE Field Network connection

If a submaster station exists on the network, use a CC-Link IE Field Network communication unit (GT15-J71GF13-T2) with software version C or later.

You can find the software version on the rating plate of the unit. Check the 10th digit of the serial number.

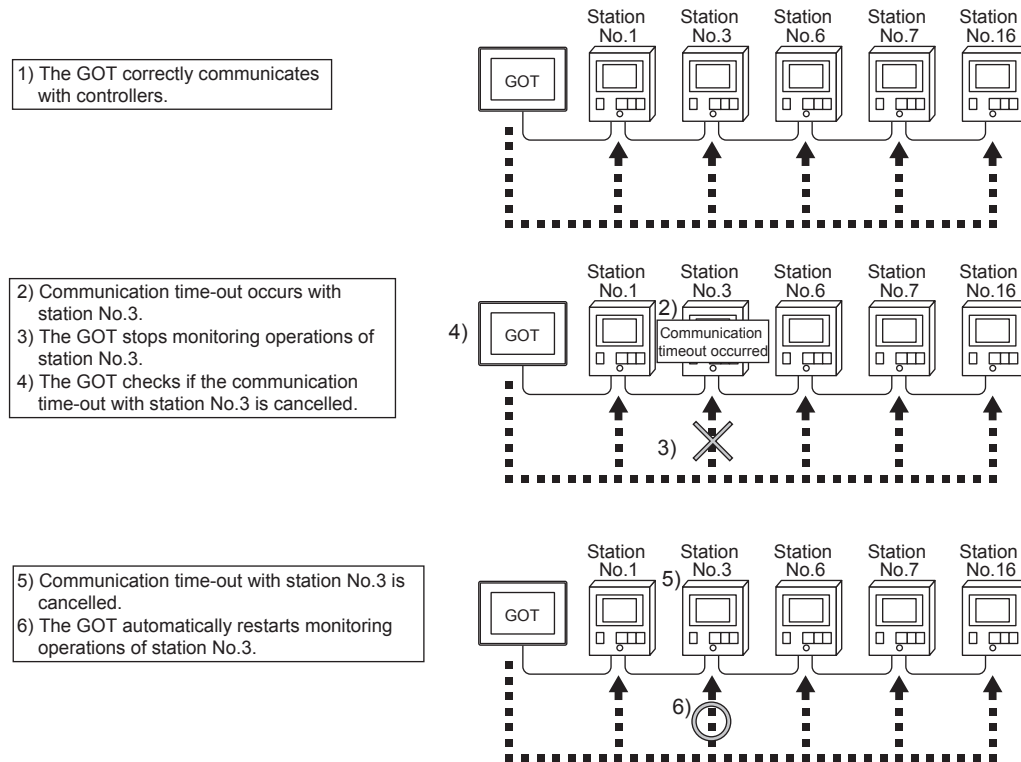

### (4) Dealing with a faulty station

#### (a) Automatically stopping monitoring a faulty station

The GOT automatically stops monitoring a connected station where a communication timeout error occurs so as not to retard the monitoring of the other connected stations. (No setting is required.)

The following shows an example of the GOT operation when a communication error occurs in station No. 3.

Example) When the GOT is connected to a temperature controller

#### (b) Disconnecting the specified station from the GOT with the GOT special register (GS)

You can disconnect the specified controller from the GOT by using the GOT special register (GS).

→ 12.1.3 ■5 (65) Monitor Station Disconnection (CH1 to CH4) (GS531 to GS538, GS541 to GS548, GS551 to GS558, GS561 to GS568)

Doing so helps avoid the occurrence of a communication timeout error even if the specified controller is removed for changing a module or other reasons. (No system alarm appears on the GOT.)

However, depending on the type of connection cables used, the GOT may not monitor the controllers that are connected to the removed one.

### (67) Channel Observation Notification Information (GS299, GS319, GS339, GS359)

Notifies the communication status of each channel.

- b0: Turns on if a connection error occurs.
- b1 to b15: Use prohibited

The following shows the communication drivers that support the device.

○: Supported, -: Not supported

Communication driver	Supported/Unsupported	Communication driver	Supported/Unsupported

**(68)GOT Network No./Station No. Notification (CH1 to CH4) (GS376 to GS383)**

When the GOT starts, the devices store a network number and a station number of the GOT connected with the Ethernet connection.  
 When the GOT is connected with other than the Ethernet connection, the devices store 0.

Device				Description
CH1	CH2	CH3	CH4	
GS376	GS378	GS380	GS382	Network number (1 to 239)
GS377	GS379	GS381	GS383	Station number (1 to 64)

**■ 3 Write device (GS640 to GS1791)**

**(1) Error Device Data Transfer ID (GS642)**

Stores the device data transfer ID with the executed device data if an error occurs during device data transfer.

**(2) Device Data Transfer Error Count (GS643)**

Stores the number of error times with the executed device data during the device data transfer. (Maximum 65535 times)  
 When errors occur 65535 times or more, the value remains 65535.  
 The device data transfer ID with the executed device data is stored in the error device data transfer ID.

**(3) Device Data Transfer Processing Time (GS644)**

Stores the device data transfer processing time for one time. (0 to 60000 (×10ms))  
 Stores 60000 (×10ms) when the device data transfer processing time is 600 seconds or more.

**(4) Device Data Transfer ID (GS645)**

Stores the device data transfer ID with the executed device data transfer.

**(5) Device Data Transfer Min. Processing Time (GS646)**

Stores the minimum processing time in all of the processing times stored in the Device Data Transfer Processing Time (GS644).  
 (0 to 60000 (×10ms))

**(6) Device Data Transfer ID (Min. Processing Time) (GS647)**

Stores the device data transfer ID with the executed device data transfer when GS646 stores the minimum processing time.

**(7) Device Data Transfer Max. Processing Time (GS648)**

Stores the maximum processing time in all of the processing times stored in the Device Data Transfer Processing Time (GS644).  
 (0 to 60000 (×10ms))

**(8) Device Data Transfer ID (Max. Processing Time) (GS649)**

Stores the device data transfer ID with the executed device data transfer when GS648 stores the maximum processing time.

**(9) Present Time (GS650 to GS635)**

Stores the current time with BCD code.  
 The day-of-the-week data, 0 to 6, is stored.  
 (0: Sunday 1: Monday 2: Tuesday 3: Wednesday 4: Thursday 5: Friday 6: Saturday)  
 Example) When the error occurrence date is 15:30:20 May 15, 2013 (Wednesday)

**(10)Touch Status External Notification (X-coordinate) (GS654)**

Stores the x-coordinate of touched position when the GOT screen is touched on.

**(11)Touch Status External Notification (Y-coordinate) (GS655)**

Stores the Y-coordinate of touched position when the GOT screen is touched on.

## (12) Touch Status External Notification (Touch Status) (GS656)

The following values are stored in the device depending on the touched screen types when the GOT screen is touched on.

- 0: Without touching
- 1: Touching on the base screen
- 2: Touching touchable objects on the base screen
- 11: Touching on the overlap window 1
- 12: Touching touchable objects on the overlap window 1
- 21: Touching on the overlap window 2
- 22: Touching touchable objects on the overlap window 2
- 31: Touching on the overlap window 3
- 32: Touching touchable objects on the overlap window 3
- 41: Touching on the overlap window 4
- 42: Touching touchable objects on the overlap window 4
- 51: Touching on the overlap window 5
- 52: Touching touchable objects on the overlap window 5
- 61: Touching on the video window
- 71: Touching on the key window
- 72: Touching touchable objects on the key window
- 81: Touching on the comment window
- 91: Touching on the popup display

## (13) Trigger Backup Processing Setting No. Notification (GS657)

The GOT notifies users of the trigger backup processing status.

Stores the channel number of the backup trigger setting if a trigger backup is being processed.

Stores 0 when the trigger backup is not processed.

## (14) Extended External Input Status Notification signal (GS658 to GS665)

When the 128-point input can be executed with the external I/O function, the bit for an input scan signal turns on.

When the 128-point input cannot be executed, the devices are always off.

To enable the 128-point input, turn on GS517.b0 (External I/O Function Notification/External I/O Control Function).

0: Signal off

1: Signal on

The following shows the devices for each bit.

Scan signal	Extended External Input Status Notification signal	External Input signal															
		X0	X1	X2	X3	X4	X5	X6	X7	X8	X9	XA	XB	XC	XD	XE	XF
XSCN0	GS658	b0	b1	b2	b3	b4	b5	b6	b7	b8	b9	b10	b11	b12	b13	b14	b15
XSCN1	GS659	b0	b1	b2	b3	b4	b5	b6	b7	b8	b9	b10	b11	b12	b13	b14	b15
XSCN2	GS660	b0	b1	b2	b3	b4	b5	b6	b7	b8	b9	b10	b11	b12	b13	b14	b15
XSCN3	GS661	b0	b1	b2	b3	b4	b5	b6	b7	b8	b9	b10	b11	b12	b13	b14	b15
XSCN4	GS662	b0	b1	b2	b3	b4	b5	b6	b7	b8	b9	b10	b11	b12	b13	b14	b15
XSCN5	GS663	b0	b1	b2	b3	b4	b5	b6	b7	b8	b9	b10	b11	b12	b13	b14	b15
XSCN6	GS664	b0	b1	b2	b3	b4	b5	b6	b7	b8	b9	b10	b11	b12	b13	b14	b15
XSCN7	GS665	b0	b1	b2	b3	b4	b5	b6	b7	b8	b9	b10	b11	b12	b13	b14	b15

### Controlling a signal with controllers

The above signals can be controlled with controllers when the trigger action and the script function are used.

## (15) Sound Status Information (GS668)

- b1 to b14: Use prohibited
- b15: Turns on with a jack disconnection when the sound output function is used.  
Turns off without a jack disconnection.

### (16)Sound File Number During Play (GS669)

Stores the sound file number during the play in the device.  
When no sound file exists during the play, 0 is stored in the device.

### (17)Number of Trigger Buffer Data (GS670)

Stores the number of the trigger buffer data.  
When many trigger buffer data is stored for a long time, the GOT becomes busy. As a result, some data may not be collected.  
Check the number of job settings for which the trigger buffering is enabled and the trigger condition setting.

### (18)Trigger Buffer Overflow Count (GS671)

Stores the cumulative number of times that a trigger buffer overflow has occurred.  
The trigger buffer overflow means that the 129th trigger data is discarded without being buffered when 128 trigger data is already buffered.  
If a trigger buffer overflow occurs frequently, check the number of job settings for which the trigger buffering is enabled and the trigger condition setting.

### (19)Trigger Buffer Overflow Flag per Job (GS672 to GS675)

Indicates the status of trigger buffer overflow for each job.  
When a trigger buffer overflow occurs for a job, the GOT internal device corresponding to the job turns on.  
The following shows the GOT internal devices corresponding to jobs from 1 to 64.

Device	Job	Correspondence of the jobs and the GOT internal devices															
		b0	b1	b2	b3	b4	b5	b6	b7	b8	b9	b10	b11	b12	b13	b14	b15
GS672	1 to 16	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
GS673	17 to 32	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32
GS674	33 to 48	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48
GS675	49 to 64	49	50	51	52	53	54	55	56	57	58	59	60	61	62	63	64

### (20)Notify Number of Hard Copy Output Screens signal (GS693)

Stores the number of screens whose the hard copy outputs are completed.  
When the start trigger condition is satisfied, 0 is stored.  
The target screens are counted one by one at completion of output regardless of the output file format or output settings of the target screen.

### (21)Object Position upon Cursor Display (GS694 and GS695)

Store the upper-left coordinates of the object (numerical input or text input) on which the cursor is displayed.

- GS694: X coordinate
- GS695: Y coordinate

The devices store 0 if the cursor is not displayed on any object.

### (22)Expanded Base Screen Position (GS696 and GS697)

Stores the upper-left coordinates of the area of the expanded base screen currently displayed on the GOT.

- GS696: X coordinate
- GS697: Y coordinate

The devices store 0 when the original size base screen is displayed on the GOT.

### (23)Touch Position Color Acquisition Complete signal (GS980)

- b0: Turns on when the Touch Position Color (GS981 to 983) stores a value.  
Turning on the bit cancels the touch position color acquisition ready status.  
Turning off the Touch Position Color Acquisition Ready signal (GS630.b0) turns off the bit.
- b1 to b15: Use prohibited

### (24)Touch Position Color (GS981 to GS983)

Notifies the color information at the touched position.  
The GOT acquires the color information with RGB. The following GOT special registers (GS) store the RGB values (0 to 255).

- R: GS981
- G: GS982
- B: GS983

Turning on the Touch Position Color Acquisition Ready signal (GS630.b0) stores -1 in R, G, and B each.  
After the signal (GS630.b0) turns on, the GOT acquires the color information at the first touch and release of the screen.

**(25)Authorization Guarantee Status Notification signal (GS984)**

Not available to GT SoftGOT2000 (Multiple channels).

This is disabled when the GOT network interaction function is used.

Stores the remaining authorization guarantee time (seconds) when the authorization guarantee time is set in GT SoftGOT2000 (Single channel) or the GOT.

**(26)Executing File Transfer ID Notification (GS987)**

Stores the file transfer setting ID of the file transfer setting in execution.

**(27)Communicating FTP Server ID Notification (GS988)**

Stores the FTP server setting ID of the currently connected destination FTP server setting.

**(28)File Transfer Error No. (GS989)**

Stores the error code of an error that occurred in the file transfer.

Turn on GS401.b0 to clear the stored error code.

The following shows the list of the error code to be stored.

Error code	Details of error and cause	Corrective action
1	The connection to the FTP server has failed.	<ul style="list-style-type: none"> <li>• Check the IP address of the FTP server.</li> <li>• Check if a cable is connected.</li> <li>• Check HUB connection status.</li> <li>• Check if the FTP server is working on the target device.</li> <li>• Check if the destination FTP server setting is configured properly.</li> </ul>
2	Authentication of the FTP server has failed.	Check if the user name and password are correct.
3	FTP server is busy.	Wait until the FTP server recovers from the busy status. *1
4	FTP communication timeout	<ul style="list-style-type: none"> <li>• Check if the communication line has not been physically interrupted.</li> <li>• Check the communication congestion.</li> </ul>
5	Access to the target file to be written has failed.	<ul style="list-style-type: none"> <li>• Check if the write destination drive is enabled.</li> <li>• Check if the write destination drive has enough available space.</li> <li>• Check if the file is not write-prohibited.</li> <li>• When using the GOT as the FTP server, check if the GOT is in the write enable mode.</li> </ul>
6	Access to the target file to be read has failed.	<ul style="list-style-type: none"> <li>• Check if the target file exists.</li> <li>• Check whether the file name specified by the file transfer setting is correct or not.</li> <li>• Check if the data storage has been installed on the GOT.</li> <li>• Check if the SD card cover has been closed.</li> <li>• Check that the SD card access switch is turned on.</li> <li>• Check that the write protection for the SD card is canceled.</li> </ul>
7	The file whose size exceeds the file size supported by the GOT was attempted to be transferred.	Check if the size of the transfer file is within 2GB.
10	<ul style="list-style-type: none"> <li>• For the FTP transfer The GOT folder name is invalid.</li> <li>• For the GOT internal transfer The transfer source folder name is invalid.</li> </ul>	Check that the GOT folder name or the transfer source folder name does not contain invalid characters, such as two-byte characters.
11	The transfer file name is invalid.	Check if the transfer file name does not include invalid characters such as two-byte characters.
12	The transfer source folder and destination folder have the same path.	Set different paths to the transfer source folder and the transfer destination folder.
13	Drive N is specified for both the transfer source folder and the transfer destination folder.	Specify drive N for only one of the transfer source folder and the transfer destination folder.
50	The drive specification on the PLC side is incorrect.	When a PLC is used as a FTP server, only drive 2 (Memory card (ROM)) is accessible. Check if the setting of [FTP Server Folder] specified in the [File Transfer Setting] dialog is correct.
100	The destination FTP server setting ID which does not exist has been specified.	<ul style="list-style-type: none"> <li>• Check if the destination FTP server setting ID specified by [File transfer setting] is correct.</li> <li>• Add the required destination FTP server setting.</li> </ul>
200	Access to the storage device has failed when the file name or folder name is specified indirectly.	Check if the device setting used for the indirect specification is correct.

Error code	Details of error and cause	Corrective action
507	The total number of characters of the folder path and transfer file name exceeds the limit.	Check that the total number of the characters does not exceed the limit as shown below.
600 *2	The file transfer has been skipped because the total number of characters of the folder path and transfer file name exceeds the limit. (Only when the file is specified with a wildcard character)	<ul style="list-style-type: none"> <li>• &lt;GOT folder path&gt;\&lt;Transfer file name&gt;: 78 characters or less (including backward slash marks)</li> <li>• &lt;FTP server folder path&gt;\&lt;Transfer file name&gt;: 250 characters or less (including backward slash marks)</li> <li>• &lt;Transfer source folder path&gt;\&lt;Transfer file name&gt;: 78 characters or less (including backward slash marks)</li> <li>• &lt;Transfer destination folder path&gt;\&lt;Transfer file name&gt;: 78 characters or less (including backward slash marks)</li> </ul>
601 *2	Since invalid characters had been used for the transfer file name, the transfer processing was skipped. (only when the file is specified with the wild card)	Check if the transfer file name does not include invalid characters such as two-byte characters.
602 *2	Since the write operation for the file had failed, the transfer processing was skipped. (only when the file is specified with the wild card)	<ul style="list-style-type: none"> <li>• Another function might have been using the transfer file. Transfer the file again.</li> <li>• Check if the write destination drive has enough available space.</li> </ul>
603 *2	Since the read operation for the file had failed, the transfer processing was skipped. (only when the file is specified with the wild card)	<ul style="list-style-type: none"> <li>• The file might have been deleted before being transferred. Check if all the files have been transferred to the destination folder.</li> <li>• Check if the data storage has been installed on the GOT.</li> <li>• Check if the SD card cover has been closed.</li> <li>• Check that the SD card access switch is turned on.</li> <li>• Check that the write protection for the SD card is canceled.</li> </ul>
606 *2	Since the file specified with the wild card had not existed, the file was not transferred. (only when the file is specified with the wild card)	Check if the specified file name is correct.
607 *2	The file whose size exceeds the file size supported by the GOT was attempted to be transferred. (only when the file is specified with the wild card)	Check if the size of the transfer file is within 2GB.
610 *2	Deleting the source file has failed.	Check if the source file is in the deletable status.

\*1 The status in which a request from the client cannot be accepted

\*2 Even if a warning is given, the file transfer process does not stop.

### (29)File Transfer Status (GS990)

Notifies the file transfer processing status.

- b0: Turns on when the GOT (FTP client) writes files to the FTP server, or the GOT transfers files within itself.
- b1: Turns on when the GOT (FTP client) reads files from the FTP server.
- b2: Notifies the connection mode of the GOT (FTP client) and the FTP server.  
ON: PASV mode  
OFF: PORT mode
- b3 to b13: Use prohibited
- b14: Turns on when the error with which the processing can be continued occurs during the file transfer.  
Turns off when the Clear File Transfer Error signal (GS401.b0) is turned on.
- b15: Turns on when the error with which the processing cannot be continued occurs during the file transfer.  
Files cannot be transferred while this signal is on.  
Turns off when the Clear File Transfer Error signal (GS401.b0) is turned on.

### (30)Number of Transfer Target Files (GS991)

Stores the total number of files to be transferred.

When the transfer file name is specified with the wild card, the total count includes the files which are not transferred due to an invalid number of characters for the folder name or other causes.

(However, the total count does not include only the files which have invalid names consisting of such as two-byte characters.)

Holds the device value until the processing for the next file transfer ID is started.

### (31)Number of Transferred Files (GS992)

Stores the total number of files which is completely transferred.

The total count includes the files which are not transferred due to the error or other causes.

Holds the device value until the processing for the next file transfer ID is started.

### (32)Recipe Status(GS1010)

Notifies the processing status of recipe data when the recipe data is manipulated using a special function switch ([Switch Action]: [Recipe Data Operation]).

⇒9.3.3 ■3 (4) Exporting a recipe file by using a special function switch (Recipe data operation)

- b0: Turns on when the recipe data is imported.
- b1: Turns on when the recipe data is exported.
- b2: Turns on when the recipe special control is executed.  
Turns off after the control is complete and the Execute Special Control signal (GS1800.b2) is turned off.
- b3 to b13: Use prohibited
- b14: Turns on after importing or exporting the recipe data is complete.  
Turns off when another recipe data manipulation is performed or the Clear Status Information signal (GS1800.b14) is turned on.

⇒12.1.3 ■6 (7) Recipe Control (GS1800)

- b15: Turns on when importing or exporting the recipe data fails.  
Turns off when another recipe data manipulation is performed or the Clear Status Information signal (GS1800.b14) is turned on.

⇒12.1.3 ■6 (7) Recipe Control (GS1800)

### (33)Recipe Special Control Result (GS1011)

Notifies the result of the recipe special control.  
Stores 0 if the control is complete.  
Stores a value other than 0 if an error occurs.  
For the error codes and corrective actions, refer to the following.

⇒9.3.3 ■8 (12) Error code list

This device is reset to 0 upon turn-on of the Execute Special Control signal (GS1800.b2).

### (34)Recipe Special Control No. (GS1012)

Notifies the search result (record No.) of the recipe special control.  
This device is reset to 0 upon turn-on of the Execute Special Control signal (GS1800.b2).

### (35)Recipe Display (Record List) Target Recipe No. (GS1013)

Notifies the recipe number for the records displayed on the recipe display (record list).  
This device stores 0 in the following cases.

- No recipe display (record list) is placed on the screen.
- A nonexistent recipe setting is specified to be displayed on the recipe display (record list).
- The recipe display (record list) is not displayed because the display condition is unsatisfied or the security level is insufficient.

For information on how to link the recipe function with the recipe display (record list) by using GOT special registers, refer to the following.

⇒9.3.3 ■9 Link with the recipe display (record list) by using GOT special registers

### (36)Recipe Display (Record List) Selected Record No. (GS1014)

Stores the record number selected on the recipe display (record list).  
This device stores 0 in the following cases.

- No recipe display (record list) is placed on the screen.
- A nonexistent recipe setting is specified to be displayed on the recipe display (record list).
- The recipe display (record list) is not displayed because the display condition is unsatisfied or the security level is insufficient.
- No cursor is displayed on the recipe display (record list).

For information on how to link the recipe function with the recipe display (record list) by using GOT special registers, refer to the following.

⇒9.3.3 ■9 Link with the recipe display (record list) by using GOT special registers

### (37)Recipe Display (Record List) Target Record No. (GS1015)

Stores the record number of the record manipulated on the recipe display (record list) while GS1809.b0 is on.  
This device stores 0 when the record number is not identified.

⇒12.1.3 ■6 (15) Recipe Display (Record List) Control (GS1809)

### (38)Recipe Display (Record List) Record Manipulation Result (GS1016)

Notifies the record manipulation result of the recipe display (record list) while GS1809.b0 is on.  
This device turns off when GS1809.b15 is turned on.

⇒12.1.3 ■6 (15) Recipe Display (Record List) Control (GS1809)

- b0: Turns on when the device values of a record and those of the PLC match at the record verification.
- b1: Turns on when the device values of a record and those of the PLC do not match at the record verification.
- b2: Turns on when no device value is set in the record at the record verification.
- b3 to b10: Use prohibited
- b11: Turns on when a record verification is unsuccessful.
- b12: Turns on when a record deletion is unsuccessful.
- b13: Turns on when a record writing is unsuccessful.
- b14: Turns on when a record reading is unsuccessful.
- b15: Turns on when a record renaming is unsuccessful.

### (39) Video File Maintenance Information (GS1022)

Notifies the amount of usage of the CF card or the number of video files in the card in the multimedia unit while the Start Video File Information Notification signal (GS522.b1) is on.

This function is usable only when [Enable] is selected and [Event Trigger Device] is set in [Before-After Event Recording Setting] on the [Recording Setting] tab of the [Multimedia] dialog.

This device turns off upon the turn-off of the Start Video File Information Notification signal (GS522.b1).

→ 12.1.3 ■5 (60) Special Control During Specific Function Execution (GS522)

- b0: Turns on when the amount of usage of the CF card reaches 60%.
- b1: Turns on when the amount of usage of the CF card reaches 80%.
- b2: Turns on when the number of video files in the CF card reaches 80.
- b3: Turns on when the number of video files in the CF card reaches 110.
- b4: Turns on when the number of video files in the CF card reaches 150.
- b5: Turns on when the number of video files in the CF card reaches 400.
- b6: Turns on when the number of video files in the CF card reaches 450.
- b7: Turns on when the number of video files in the CF card reaches 500.
- b8 to b15: Use prohibited

### (40) USB Drive Common Information (GS1024)

- b0: Turns on when the USB memory connected to drive E on the GOT is ready for removal after the USB Drive Common Control (GS1824.b0) turns on.
- b1: Turns on when the USB memory connected to drive F on the GOT is ready for removal after the USB Drive Common Control (GS1824.b1) turns on.
- b2: Turns on when the USB memory connected to drive B on the GOT is ready for removal after the USB Drive Common Control (GS1824.b2) turns on.
- b3: Turns on when the USB memory connected to drive G on the GOT is ready for removal after the USB Drive Common Control (GS1824.b3) turns on.
- b4: Turns on when the USB memory connected to drive E on the GOT is ready for removal after the USB Drive Common Control (GS1824.b4) turns on.
- b5: Turns on when the USB memory connected to drive F on the GOT is ready for removal after the USB Drive Common Control (GS1824.b5) turns on.
- b6: Turns on when the USB memory connected to drive B on the GOT is ready for removal after the USB Drive Common Control (GS1824.b6) turns on.
- b7: Turns on when the USB memory connected to drive G on the GOT is ready for removal after the USB Drive Common Control (GS1824.b7) turns on.
- b8: Turns on when the USB memory (drive E) connected to the USB interface on the GOT is ready for use.
- b9: Turns on when the USB memory (drive F) connected to the USB interface on the GOT is ready for use.
- b10: Turns on when the USB memory (drive B) connected to the USB interface on the GOT is ready for use.
- b11: Turns on when the USB memory (drive G) connected to the USB interface on the GOT is ready for use.
- b12: Turns on when the USB memory (drive E) connected to the USB interface on the GOT is ready for use.
- b13: Turns on when the USB memory (drive F) connected to the USB interface on the GOT is ready for use.
- b14: Turns on when the USB memory (drive B) connected to the USB interface on the GOT is ready for use.
- b15: Turns on when the USB memory (drive G) connected to the USB interface on the GOT is ready for use.

When GS1824.b0 to b7 are turned off, b0 to b7 of this device are also turned off.

For the available drives by GOT model, refer to the following.

→ 1.2.8 Drive configuration of the target GOT for data transfer

**(41)RGB Signal Input Status Notification (GS1025)**

Notifies the RGB signal input, supporting the resolution and the refresh rate of the RGB signal or not, and the RGB input unit status.

When the GT27-R2-Z is used, the device notifies the input status of the channel set for the input source of the RGB screen.

- b0: Turns on when the RGB signal is input.
- b1: Turns on when the GOT supports the input resolution and refresh rate.
- b2: Turns on when the RGB input unit operates normally.
- b3 to b15: Use prohibited

**(42)RGB Signal Resolution (Horizontal) (GS1026)**

When GS1025.b0 turns on, the device stores the horizontal resolution (dots) of the RGB signal.

When the RGB signal does not exist or the resolution of the signal is unclear, the device stores 0.

**(43)RGB Signal Resolution (Vertical) (GS1027)**

When GS1025.b0 turns on, the device stores the vertical resolution (dots) of the RGB signal.

When the RGB signal does not exist or the resolution of the signal is unclear, the device stores 0.

**(44)RGB Signal Refresh Rate (GS1028)**

When GS1025.b0 turns on, the device stores the refresh rate (Hz) of the RGB signal.

When the RGB signal does not exist or the refresh rate of the signal is unclear, the device stores 0.

**(45)Video/RGB Display Object Status (CH1 to CH2) (GS1030, GS1035)**

Notifies information on the video/RGB display object.

- b0: Turns on when a signal is input.
- b1: Turns on when the target GOT supports the resolution and refresh rate indicated by input signals.
- b2: Turns on when the RGB input unit operates normally.
- b3 to b15: Use prohibited

**(46)Video/RGB Display Object Horizontal Resolution (CH1 to CH2) (GS1031, GS1036)**

Stores the horizontal resolution (dots) indicated by an input signal for the video/RGB display object.

Stores 0 if no signal is input or the resolution cannot be identified.

**(47)Video/RGB Display Object Vertical Resolution (CH1 to CH2) (GS1032, GS1037)**

Stores the vertical resolution (dots) indicated by an input signal for the video/RGB display object.

Stores 0 if no signal is input or the resolution cannot be identified.

**(48)Video/RGB Display Object Refresh Rate (CH1 to CH2) (GS1033, GS1038)**

Stores the refresh rate (Hz) indicated by an input signal for the video/RGB display object.

Stores 0 if no signal is input or the refresh rate cannot be identified.

**(49)Wireless Processing Security Information (GS1040)**

Notifies operations executed via a wireless LAN.

- b0: Turns on when the GOT receives a write request of the package data (containing system applications) from GT Designer3 while the Prohibit System Package Write signal (GS1840.b0) is on.  
When the Prohibit System Package Write signal (GS1840.b0) turns off, this bit also turns off.
- b1: Turns on when the GOT receives a write request of the package data (containing project data) from GT Designer3 while the Prohibit Project Data Write signal (GS1840.b1) is on.  
When the Prohibit Project Data Write signal (GS1840.b1) turns off, this bit also turns off.
- b2 to b7: Use prohibited
- b8: Turns on when the GOT receives a read request of data from GT Designer3 while the Prohibit Project Data Read signal (GS1840.b8) is on.  
When the Prohibit Project Data Read signal (GS1840.b8) turns off, this bit also turns off.
- b9 to b15: Use prohibited

**(50)Ethernet Port 1 Subnet Mask Notification (GS1043, GS1044), Ethernet Port 2 Subnet Mask Notification (GS1045, GS1046)**

Stores the subnet mask that is specified for the GOT Ethernet port 1 or port 2 in hexadecimal.

Example) Subnet mask for Ethernet port 1: 255.255.255.0 (decimal)

When the subnet mask for Ethernet port 2 is invalid, 0.0.0.0 (decimal) is stored in GS1045 and GS1046.

**(51) Wireless LAN Port Subnet Mask Notification (GS1047 to GS1048)**

Stores the subnet mask that is specified for the wireless LAN interface in hexadecimal.

Example) Subnet mask: 255.255.255.0 (decimal)

When the wireless LAN function is disabled, 0.0.0.0 (decimal) is stored.

**(52) Default Gateway Notification (GS1049 to GS1050)**

Stores the default gateway set in the GOT in hexadecimal.

Example) Default gateway: 192.168.3.1 (decimal)

**(53) Wireless LAN Status Notification (GS1060)**

Notifies the information on the GOT wireless LAN function.

- b0: Turns on when the wireless LAN function is enabled.  
Turns off when the wireless LAN function is disabled.
- b1: Turns on when the GOT (operation mode: station) connects to the wireless LAN access point.
- b2: Notifies the GOT operation mode.  
0: Station  
1: Access point
- b3 to b15: Use prohibited

**(54) Reception Field Intensity Notification (GS1061)**

Stores a value (0 to 4) indicating the intensity of radio waves received by access points when the wireless LAN function is used.

Zero indicates a disconnection, and the other values indicate the intensity of radio waves. The larger the value, the higher the intensity.

**(55) Access Point MAC Address Notification (GS1067 to GS1069)**

Stores the MAC address of the access point to which the GOT is connected in hexadecimal.

Example) When the MAC address is 78-2B-CB-AA-3F-C6(16 bits)

**(56) Number of Connected Stations (GS1072)**

Stores the number of stations connected to the GOT (operation mode: access point) on a wireless LAN.

Stores 0 when the GOT operates as a station (operation mode: station) or the wireless LAN function is disabled.

### (57)Label Name Resolution Status (Common, CH1 to CH4) (GS1080, GS1081 to GS1084)

Notifies the status of the label name resolution.

GS1080 notifies the status relevant to all channels.

GS1081 to GS1084 each notify the status of the corresponding channel (CH1 to CH4).

- b0: Use prohibited
- b1: Notifies that the label name resolution is being executed.  
For GS1080, this bit turns on while the label name resolution is being executed on any of the channels.  
For GS1081 to GS1084, this bit turns on while the label name resolution is being executed on the corresponding channel.
- b2: Notifies that the label name resolution completes.  
For GS1080, this bit turns on when the label name resolution completes on all the channels.  
For GS1081 to GS1084, this bit turns on when the label name resolution completes on the corresponding channel.
- b3: Notifies that the label name resolution is canceled.  
For GS1080, this bit turns on when the label name resolution is canceled on any of the channels.  
For GS1081 to GS1084, this bit turns on when the label name resolution is canceled on the corresponding channel.
- b4 to b14: Use prohibited
- b15: Notifies that an error has occurred during the label name resolution.  
For GS1080, this bit turns on when a label name resolution error occurs on any of the channels.  
For GS1081 to GS1084, this bit turns on when a label name resolution error occurs on the corresponding channel.  
For how to use the bits, refer to the following.

→6.1.4 ■5 (3) Label name resolution performed by a user

### (58)HMS Communication Module Version (GS1110 to GS1111)

Stores the version of the HMS communication module used.

Example) When the communication module version is 01.02.01

### (59)HMS Communication Module Error Details (GS1112 to GS1113)

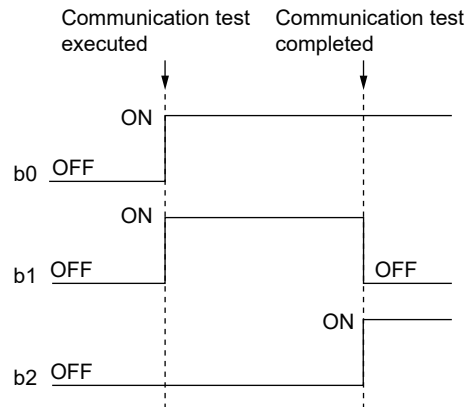

- GS1112.b0 to b7: Store an exception code of the network object.
- GS1112.b8 to b15: Store an exception code of the Anybus object.
- GS1113.b0 to b7: Store the Anybus status.
- GS1113.b8 to b15: Store the error code of an Anybus message.

### (60)CC-Link IE TSN Module Communication Test Status (GS1114)

Notifies the execution status of a communication test of the CC-Link IE TSN communication unit.

- b0: Turns on when a communication test is executed.
- b1: Is on while a communication test is being executed.
- b2: Turns on when a communication test is complete.
- b3 to b15: Use prohibited

Stores the IP address of the VNC client communicating with the VNC server in hexadecimal.

For details on the communication test of the CC-Link IE TSN communication unit, refer to the following.

→GOT2000 Series Connection Manual (Mitsubishi Electric Products) For GT Works3 Version1

### (61)CC-Link IE TSN Module Communication Test Error (GS1115)

Notifies that an error has occurred during a communication test of the CC-Link IE TSN communication unit.

- b0: Turns on if there is a problem with the port 1 side of the CC-Link IE TSN communication unit.
- b1: Turns on if there is a problem with the connection interface (port 1) or the Ethernet cable terminal connected to port 1.
- b2: Turns on if there is a problem with the Ethernet cable connected to port 1 of the CC-Link IE TSN communication unit.
- b3 to b7: Use prohibited
- b8: Turns on if there is a problem with the port 2 side of the CC-Link IE TSN communication unit.
- b9: Turns on if there is a problem with the connection interface (port 2) or the Ethernet cable terminal connected to port 2.
- b10: Turns on if there is a problem with the Ethernet cable connected to port 2 of the CC-Link IE TSN communication unit.
- b11 to b15: Use prohibited

For details on the communication test of the CC-Link IE TSN communication unit, refer to the following.

→GOT2000 Series Connection Manual (Mitsubishi Electric Products) For GT Works3 Version1

### (62)Front USB Drive Additional Installation Information (GS1130)

To use this device, install BootOS version BA or later on the GOT.

- b0: Notifies that additional installation of a data storage to the front USB drive of the GOT is disabled.  
This signal turns on when the Front USB Drive Additional Installation Control (GS1930.b0) turns on and the front USB drive of the GOT becomes unrecognized.  
The signal turns off when the Front USB Drive Additional Installation Control (GS1930.b0) turns off.

→12.1.3 ■6 (32) Front USB Drive Additional Installation Control (GS1930)

### (63)Special Function Switch Special Control (GS1220)

- b0: Turns on when an error occurs during the iQSS utility special control.  
This signal turns off at a start of the iQSS utility special control.

### (64)iQSS Utility Special Control Error Sensor Device No. (GS1221)

Stores the affected sensor device number when an error occurs during the iQSS utility special control.

Data type: Unsigned binary

When no error occurs, the reset value (65535) is stored.

### (65)VNC Server Operation Status Notification (GS1230)

- b0: Turns on while the VNC server communicates with the VNC client.
- b1: Turns on when the VNC client is allowed to display the VNC server screen and to remotely operate the VNC server.  
Turns off when the VNC client is allowed to only display the VNC server screen.
- b2: Turns on when the VNC client holds the authorization.  
Turns off when the VNC server holds the authorization.
- b3 to b14: Use prohibited
- b15: Turns on when the VNC client holds the authorization.  
Turns off when the VNC server holds the authorization.

### (66)Communicating VNC Client Information Notification (GS1231, GS1232)

Stores the IP address of the VNC client communicating with the VNC server in hexadecimal.

Example) When the IP address of the VNC client is 192.168.3.10 (Decimal)

### (67)VNC Server Authorization Guarantee Status Notification (GS1233)

Stores the remaining authorization guarantee time (second).

### (68)Insufficient Security Level Notification (GS1241)

Turns on when the screen cannot be displayed because of the insufficient security level.

- b0: Turns on when the overlap window 3 cannot be displayed.
- b1: Turns on when the overlap window 4 cannot be displayed.
- b2: Turns on when the overlap window 5 cannot be displayed.
- b3 to b7: Use prohibited
- b8: Turns on when a called screen on the overlap window 3 cannot be displayed.
- b9: Turns on when a called screen on the overlap window 4 cannot be displayed.
- b10: Turns on when a called screen on the overlap window 5 cannot be displayed.
- b11 to b15: Use prohibited

### (69)Report Output Status: Print Date/Time (Year) (GS1271)

Specify this device for a numerical print object on a report screen to output the date (year) on which the file print function prints a report.

This device is activated only when the report function outputs data to a file.

This device is activated on a report screen only.

### (70)Report Output Status: Print Date/Time (Month) (GS1272)

Specify this device for a numerical print object on a report screen to output the date (month) on which the file print function prints a report.

This device is activated only when the report function outputs data to a file.

This device is activated on a report screen only.

### (71)Report Output Status: Print Date/Time (Day) (GS1273)

Specify this device for a numerical print object on a report screen to output the date (day) on which the file print function prints a report.

This device is activated only when the report function outputs data to a file.

This device is activated on a report screen only.

### (72)Report Output Status: Print Date/Time (Hour) (GS1275)

Specify this device for a numerical print object on a report screen to output the time (hour) at which the file print function prints a report.

This device is activated only when the report function outputs data to a file.

This device is activated on a report screen only.

### (73)Report Output Status: Print Date/Time (Minute) (GS1276)

Specify this device for a numerical print object on a report screen to output the time (minute) at which the file print function prints a report.

This device is activated only when the report function outputs data to a file.

This device is activated on a report screen only.

### (74)Report Output Status: Print Date/Time (Second) (GS1277)

Specify this device for a numerical print object on a report screen to output the time (second) at which the file print function prints a report.

This device is activated only when the report function outputs data to a file.

This device is activated on a report screen only.

**(75)Report Output Status: Total Number of Pages (GS1278)**

Specify this device for a numerical print object on a report screen to output the total number of pages at the position where the object is placed.

This device is activated only when the report function outputs data to a file.

This device is activated on a report screen only.

**(76)Report Output Status: Operator Name (GS1279)**

Specify this device for a text print object on a report screen to output the name of the operator who prints a report using the file print function.

This device is activated only when the report function outputs data to a file.

This device is activated on a report screen only.

**(77)Faulty Monitor Station signal (CC-Link IE TSN) (GS1280)**

- b0 to b7: Stores the number of faulty monitor stations in the CC-Link IE TSN connection.
- b8 to b15: Use prohibited

**(78)Faulty Station Information (CC-Link IE TSN) (GS1281 to GS1288)**

Turn on the bit that corresponds to the faulty monitor station number in the CC-Link IE TSN network.

0: No error

1: Error

When the faulty station is restored from the error, the bit turns off.

The following shows station numbers for each device.

Device	Station number corresponding to each bit															
	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
GS1281	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
GS1282	31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16
GS1283	47	46	45	44	43	42	41	40	39	38	37	36	35	34	33	32
GS1284	63	62	61	60	59	58	57	56	55	54	53	52	51	50	49	48
GS1285	79	78	77	76	75	74	73	72	71	70	69	68	67	66	65	64
GS1286	95	94	93	92	91	90	89	88	87	86	85	84	83	82	81	80
GS1287	111	110	109	108	107	106	105	104	103	102	101	100	99	98	97	96
GS1288	-	-	-	-	-	-	-	120	119	118	117	116	115	114	113	112

**(79)CC-Link IE TSN Connection Status (GS1297)**

Notifies whether the GOT is connectable to the network in CC-Link IE TSN Connection.

After checking the connection with the master station at the startup, the GOT is connectable to the network.

- 0 or 1: Not connectable because the connection has not been confirmed.
- 2: Connectable

**(80)Number of Connected GOT Mobile Function Clients (GS1400)**

Stores the number of clients connected to the server (GOT).

**(81)GOT Mobile Function Connection Status (GS1401)**

Notifies the connection status between the server (GOT) and each client.

GT27, GT25, and GS25 support b0 to b5.

- b0: Use prohibited
- b1: Turns on when client 1 connects to the server (GOT).
- b2: Turns on when client 2 connects to the server (GOT).
- b3: Turns on when client 3 connects to the server (GOT).
- b4: Turns on when client 4 connects to the server (GOT).
- b5: Turns on when client 5 connects to the server (GOT).
- b6: Turns on when client 6 connects to the server (GOT).
- b7: Turns on when client 7 connects to the server (GOT).
- b8: Turns on when client 8 connects to the server (GOT).
- b9: Turns on when client 9 connects to the server (GOT).
- b10: Turns on when client 10 connects to the server (GOT).
- b11: Turns on when client 11 connects to the server (GOT).
- b12: Turns on when client 12 connects to the server (GOT).
- b13: Turns on when client 13 connects to the server (GOT).

- b14: Turns on when client 14 connects to the server (GOT).
- b15: Turns on when client 15 connects to the server (GOT).

### (82) Authorization Status Information (GS1460)

Notifies the information on the authorization of the GOT network interaction function.  
This device is activated in an applicable GOT in the control group.

- b0: Turns on when the equipment obtains the authorization.
- b1: Turns on when the equipment displays a screen in which the authorization control is enabled.
- b2 to b15: Use prohibited

### (83) Master GOT IP Address (GS1461 to GS1462)

Store the IP address of the master GOT in hexadecimal when GS1460.b0 turns on.  
Store 0 when GS1460.b0 is off.  
These devices are activated in an applicable GOT in the control group.  
Example) When the IP address of the master GOT is 192.168.3.18 (decimal)

### (84) Time Elapsed from Authorization Acquisition (GS1463)

Stores the time (second) elapsed since GS1460.b0 turned on.  
If the time exceeds 65536 seconds, the value update stops.  
Stores 0 when GS1460.b0 is off.  
This device is activated in an applicable GOT in the control group.

### (85) Authorization Guarantee Time (GS1464)

Stores the remaining authorization guarantee time (second) when GS1460.b0 is on.  
Stores 0 when GS1460.b0 is off.  
This device is activated in an applicable GOT in the control group.

### (86) Authorization Management Information (GS1465)

Notifies the information on the authorization of the GOT network interaction function.  
This device is activated in the master GOT in the control group.

- b0: Turns on when any equipment in the control group obtains the authorization.
- b1: Turns on when equipment except the master GOT in the control group is prohibited from obtaining the authorization (when GS1796.b0 is on).
- b2: Turns on when all pieces of equipment including the master GOT in the control group are prohibited from obtaining the authorization (when GS1796.b2 is on).
- b3 to b15: Use prohibited

### (87) Authorized Equipment IP Address (GS1466 to GS1467)

Store the IP address of the authorized equipment when GS1465.b0 turns on.  
Store 0 when GS1465.b0 is off.  
These devices are activated in the master GOT in the control group.  
Example) When the IP address of the authorized equipment is 192.168.3.19 (decimal)

### (88)Authorized Equipment Type (GS1468)

Stores the type of the authorized equipment when GS1465.b0 turns on.

Stored value	Type
0	GOT
1	GT SoftGOT2000
2	GOT Mobile function client

When GS1465.b0 is off, 0 is stored.

This device is activated in the master GOT in the control group.

### (89)Authorized Equipment ID Information (GS1469)

Stores the ID number of the authorized equipment when GS1465.b0 turns on.

The value to be stored varies depending on the type of the authorized equipment.

Type	Value to be stored
GOT	GOT ID number (1 to 32767)
GT SoftGOT2000	GT SoftGOT2000 module number (1 to 32767)
GOT Mobile function client	GOT Mobile function client number (1 to 15)

When GS1465.b0 is off, 0 is stored.

This device is activated in the master GOT in the control group.

### (90)Authorization Use Time (GS1470)

Stores the time (second) elapsed since GS1465.b0 turned on.

If the time exceeds 65536 seconds, the value update stops.

When GS1465.b0 is off, 0 is stored.

This device is activated in the master GOT in the control group.

### (91)GOT Ethernet Setting Change Status (GS1500)

Notifies the status of the GOT Ethernet setting change.

GT21 and GS21 support b0, b1, and b15.

- b0: Turns on while the Ethernet setting is being changed.

When the Execute GOT Ethernet Setting Change signal (GS1901.b0) turns off, this bit also turns off.

- b1: Turns on when the Ethernet setting change has completed.

- b2: Turns on when changes are made in the Ethernet setting by using the GOT Ethernet Setting Change devices (GS1900 to GS1908).

Restart the GOT to apply the new Ethernet setting.

- b3 to b14: Use prohibited

- b15: Turns on when an error occurs during the Ethernet setting change.

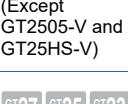

For the details of the GOT Ethernet Setting Change devices (GS1900 to GS1908), refer to the following.

⇒12.1.3 ■6 (27) GOT Ethernet Setting Change (GS1900 to GS1908)

## ■5 Read device (GS384 to GS639)

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

### (1) Script Common Control (GS384)

The following script types are supported: project script, screen script, and script part. Notifies the information common to project scripts and screen scripts.

- b0: When this bit is turned on, the script error records are cleared as shown below.
    - GS14.b0, b7, b8, and b12 store 0.
    - GS15 stores -1.
    - GS16 to GS47 store 0.
  - b1: When this bit is turned on, the script aborted due to an error is re-executed.
  - b2 to b15: Use prohibited
- For the precautions on the script error, refer to the following.

⇒9.9.12 ■1 (11) Script error control and GOT status

### (2) Script Monitoring Time (GS385)

The following script types are supported: project script, screen script, and script part. Specify the monitoring time of a project script, screen script, or script of a script parts object in seconds. If a script does not end after a lapse of the specified time, the script is aborted. The setting range is [1] (second) to [300] (seconds). If an invalid value is specified, 10 seconds are assumed.

### (3) Project/Screen Script Initial Operation (GS386)

Set whether to run a project script, screen script, or script of a script parts object upon screen switching or others applicable processes.

- When GS386 stores 0, the script runs.
- When GS386 stores a nonzero value, the script does not run.

This setting is applied to the project scripts, screen scripts, and script parts where the following trigger types are set.

- [Rise]:  
When the trigger device is on, the script runs upon screen switching or other applicable processes.
- [Fall]:  
When the trigger device is off, the script runs upon screen switching or other applicable processes.
- [Rise/Fall]:  
When the trigger device is on or off, the script runs upon screen switching or other applicable processes.

Example) When a screen script ([Trigger Type]: [Rise], [Trigger Device]: X1000) is set for base screen 2  
After base screen 1 is switched to base screen 2, if the trigger device (X1000) turns on, the screen script set for base screen 2 is executed.

The following processes trigger applicable scripts to run.

#### (a) Project script

- When the GOT is powered on or when the GOT returns from offline

#### (b) Screen script

- Screen switching

The script set for the destination screen runs upon screen switching.

If [Perform script initial operation (screen/object) only when switching screens] is deselected in the [Script] dialog, each of the following processes triggers the relevant script to run.

⇒9.9.5 ■4 [Option] tab

- Security switching
- Language switching
- System language switching
- Station No. switching

When the station No. switching devices are set by screen type, the scripts that are set for the screens of the target screen type are executed.

- Offset switching

Only the screen scripts are executed.

On a screen having a script setting, when offset switching occurs in any device of the screen, the script is executed.

- Buffer memory unit No. switching
- When object script "redraw\_screen()" is executed

#### (4) Object Script Common Control (GS387)

Notifies the information common to object scripts.

- b0: When this bit is turned on, the object script error records are cleared as shown below.

GS80.b0, b7, b8, and b12 store 0.

GS81 stores -1.

GS82 to GS113 store 0.

- b1: When this bit is turned on, the object script aborted due to an error is re-executed.

- b2 to b15: Use prohibited

For the precautions on the object script error, refer to the following.

→9.10.7 ■1 (10) Object script error control and GOT status

#### (5) Object Script Monitoring Time (GS388)

Specify the monitoring time of an object script in seconds.

If a script does not end after a lapse of the specified time, the script is aborted.

The setting range is [1] (second) to [300] (seconds).

If an invalid value is specified, 10 seconds are assumed.

#### (6) Object Script Initial Operation (GS389)

Set whether to run an object script upon screen switching or others applicable processes.

- When GS389 stores 0, the object script runs.
- When GS389 stores a nonzero value, the object script does not run.

This setting is applied to the object scripts where the following trigger types are set.

- [Rise]:

When the trigger device is on, the script runs upon screen switching or other applicable processes.

- [Fall]:

When the trigger device is off, the script runs upon screen switching or other applicable processes.

- [Rise/Fall]:

When the trigger device is on or off, the script runs upon screen switching or other applicable processes.

Example) When the object script ([Trigger Type]: [Rise], [Trigger Device]: X1000) is set for a switch on base screen 2

After base screen 1 is switched to base screen 2, if the trigger device (X1000) turns on, the object script of the switch on base screen 2 is executed.

The following processes trigger applicable scripts to run.

- Screen switching

The script set for the destination screen runs upon screen switching.

If [Perform script initial operation (screen/object) only when switching screens] is deselected in the [Script] dialog, each of the following processes triggers the relevant script to run.

⇒9.9.5 ■4 [Option] tab

- Security switching
- Language switching
- System language switching
- Station No. switching

When the station No. switching devices are set by screen type, the scripts that are set for the screens of the target screen type are executed.

### (7) File Operation Data Storage Order (GS390)

The following script types are supported: project script, screen script, and script part.  
Select the order in which data is stored when using the file\_read or file\_write function in a script.

[Low-->High]: Stores data from the lower-order bytes.

[High-->Low]: Stores data from the higher-order bytes.

Alternatively, you can configure the data storage order setting on GT Designer3.

This setting becomes invalid when GS390 stores 1 or 2.

The following shows examples of settings.

- When GS390 stores 0, data is stored in the order specified on GT Designer3.
- When GS390 stores 1, data is stored from the lower-order bytes.
- When GS390 stores 2, data is stored from the higher-order bytes.
- When GS390 stores 3 or more, data is stored in the order specified on GT Designer3.

### (8) Start GD Device for Script Error Info Notification (GS392)

The following script types are supported: project script, screen script, and script part.

Specify the start device number of the GD devices to store error records.

Data type: Unsigned binary

### (9) Number of Script Error Info Outputs (GS394)

The following script types are supported: project script, screen script, and script part.

Specify the maximum number of error records.

Data type: Unsigned binary

The setting range is 0 to 5000.

If the device stores 0, no error record will be stored.

If the device stores 5001 or more, up to 5000 records will be stored.

GS395.b1 specifies the operation to be performed when the number of errors has exceeded the maximum number of error records.

The following shows an example of how an error record is stored in eight word devices starting from GD1000.

Storage device	Item	Description
GD1000	Error code	Error code of an error. For the error details and corrective actions, refer to the following. ⇒9.9.14 ■3 (5) List of script execution error codes
GD1001	Script type	Number that shows a script type. The device stores any of the following values according to the script type. <ul style="list-style-type: none"> <li>• 1: Project script</li> <li>• 2: Screen script (set for a base screen)</li> <li>• 3: Screen script (set for a window screen)</li> <li>• 4: Script part</li> </ul>
GD1002	Screen number	Number of the screen for which the script is set. The device stores 0 for a project script.
GD1003	Script number or object ID number	The device stores a script number or object ID number according to the script type. <ul style="list-style-type: none"> <li>• For project scripts and screen scripts: script number</li> <li>• For script parts: object ID number</li> </ul>
GD1004	Execution order number	Script execution order number specified on GT Designer3 The device stores any of the following values according to the script type. <ul style="list-style-type: none"> <li>• For project scripts: 1 to 256</li> <li>• For screen scripts: 1 to 256 (per screen)</li> <li>• For script parts: 1 to 16 (per script parts object)</li> </ul>

Storage device	Item	Description
GD1005	Screen type	Type of the screen for which the script is set. The device stores any of the following values according to the screen type. <ul style="list-style-type: none"> <li>• 200: Base screen</li> <li>• 210: Superimpose window 1</li> <li>• 220: Superimpose window 2</li> <li>• 310: Overlap window 1</li> <li>• 320: Overlap window 2</li> <li>• 330: Overlap window 3</li> <li>• 340: Overlap window 4</li> <li>• 350: Overlap window 5</li> </ul> If the script is set for a called screen, the device stores a value by adding a number to the number showing the calling screen type. <ul style="list-style-type: none"> <li>• When a base screen is called, 1 is added.</li> <li>• When a window screen is called, 2 is added.</li> </ul> Example) When a window screen is called from overlap window 3 $330 + 2 = 332$ The device stores 0 for a project script.
GD1006	Number of the displayed base screen	Number of the base screen that is displayed when the script runs.
GD1007	Use prohibited	The device stores 0.

### (10)Script Error Info Output Common Control (GS395)

The following script types are supported: project script, screen script, and script part.

- b0: When this bit is turned on, storing error records starts.  
When this bit is turned off, storing error records ends.
- b1: Specifies the operation to be performed when the number of errors has exceeded the maximum number of error records specified with GS394.  
When this bit is turned on, storing error records stops.  
When this bit is turned off, storing error records continues by overwriting the oldest record.
- b2 to b7: Use prohibited
- b8: When this bit is turned on, the project script error records are not stored.
- b9: When this bit is turned on, the screen script error records are not stored.
- b10: When this bit is turned on, the script error records of script parts objects are not stored.
- b11: When this bit is turned on, the records of warnings that do not abort a script are not stored.
- b12 to b15: Use prohibited

### (11)Start GD Device for Script Event Notification (GS396)

The following script types are supported: project script, screen script, and script part.

Specify the start device number of the GD devices to store script execution records.

Data type: Unsigned binary

### (12)Number of Script Event Outputs (GS398)

The following script types are supported: project script, screen script, and script part.

Specify the maximum number of script execution records.

Data type: Unsigned binary

The setting range is 0 to 5000.

If the device stores 0, no script execution record will be stored.

If the device stores 5001 or more, up to 5000 records will be stored.

GS399.b1 specifies the operation to be performed when the number of the executed scripts has exceeded the maximum number of script execution records.

The following shows an example of how a script execution record is stored in eight word devices starting from GD1000.

Storage device	Item	Description
GD1000	Script type	Number that shows a script type. The device stores any of the following values according to the script type. <ul style="list-style-type: none"> <li>• 1: Project script</li> <li>• 2: Screen script (set for a base screen)</li> <li>• 3: Screen script (set for a window screen)</li> <li>• 4: Script part</li> </ul>
GD1001	Screen number	Number of the screen for which the script is set. The device stores 0 for a project script.

Storage device	Item	Description
GD1002	Script number or object ID number	The device stores a script number or object ID number according to the script type. <ul style="list-style-type: none"> <li>• For project scripts and screen scripts: script number</li> <li>• For script parts: object ID number</li> </ul>
GD1003	Execution order number	Script execution order number specified on GT Designer3 The device stores any of the following values according to the script type. <ul style="list-style-type: none"> <li>• For project scripts: 1 to 256</li> <li>• For screen scripts: 1 to 256 (per screen)</li> <li>• For script parts: 1 to 16 (per script parts object)</li> </ul>
GD1004	Screen type	Type of the screen for which the script is set. The device stores any of the following values according to the screen type. <ul style="list-style-type: none"> <li>• 200: Base screen</li> <li>• 210: Superimpose window 1</li> <li>• 220: Superimpose window 2</li> <li>• 310: Overlap window 1</li> <li>• 320: Overlap window 2</li> <li>• 330: Overlap window 3</li> <li>• 340: Overlap window 4</li> <li>• 350: Overlap window 5</li> </ul> If the script is set for a called screen, the device stores a value by adding a number to the number showing the calling screen type. <ul style="list-style-type: none"> <li>• When a base screen is called, 1 is added.</li> <li>• When a window screen is called, 2 is added.</li> </ul> Example) When a window screen is called from overlap window 3 $330 + 2 = 332$ The device stores 0 for a project script.
GD1005	Number of the displayed base screen	Number of the base screen that is displayed when the script runs.
GD1006	Use prohibited	The device stores 0.
GD1007	Use prohibited	The device stores 0.

### (13)Script Event Output Common Control (GS399)

The following script types are supported: project script, screen script, and script part.

- b0: When this bit is turned on, storing script execution records starts.  
When this bit is turned off, storing script execution records ends.
- b1: Specifies the operation to be performed when the number of executed scripts has exceeded the maximum number of script execution records specified with GS398.  
When this bit is turned on, storing script execution records stops.  
When this bit is turned off, storing script execution records continues by overwriting the oldest record.
- b2 to b7: Use prohibited
- b8: When this bit is turned on, the project script execution records are not stored.
- b9: When this bit is turned on, the screen script execution records are not stored.
- b10: When this bit is turned on, the script execution records of script parts objects are not stored.
- b11 to b15: Use prohibited

### (14)Gateway Common Control (GS400)

Controls the FTP server function.

GT21 and GS21 support b2 and b8.

- b0 to b1: Use prohibited
- b2: When this bit is turned on, all FTP clients connected to the FTP server are forcibly disconnected.
- b3 to b7: Use prohibited
- b8: When this bit is turned on, binary files (\*.G2□) become readable from all the FTP clients that are connected to the FTP server.
- b9 to b10: Use prohibited
- b11: When this bit is turned on, the error occurring in the mail send function is cleared. (GS200.b11 and GS201 to GS206 are cleared.)
- b12 to b13: Use prohibited
- b14: When this bit is turned on, the error occurring in the server function is cleared. (GS200.b14 and GS210 to GS216 are cleared.)
- b15: When this bit is turned on, the error occurring in the client function is cleared. (GS200.b15 and GS220 to GS226 are cleared.)

### **(15)File Transfer Control (GS401)**

- b0: When this bit is turned on, the error code stored in the following device is cleared or the following signals are turned off.  
File Transfer Error No. (GS989)  
Warning signal (GS990.b14)  
File Transfer Error signal (GS990.b15)
- b1 to b15: Use prohibited

### **(16)File Transfer Timeout Time (GS402)**

Set the timeout period for FTP communication in units of seconds.  
If a script does not end after the lapse of the timeout period, the script processing is aborted.  
The setting range is [1] (second) to [300] (seconds).  
If the set value falls outside the setting range, the timeout period defaults to 3 seconds.

### **(17)Maximum Number of Connected FTP Clients (GS404)**

Specify the number of FTP clients connectable to the FTP server.  
The setting range is 1 to 4.  
If an invalid value is specified, 1 is assumed.  
Changing the number of connectable FTP clients does not affect the already-connected FTP clients.

### **(18)GOT Information Output Common Control (GS405)**

For GT2505-V and GT25HS-V, b0 and b1 are available.

- b0: When this bit is turned on, the GOT serial number is output to the devices specified with GS406.  
If 10 word devices cannot be reserved, the output is not executed.
- b1: When this bit is turned on, the MAC address of the Ethernet standard port or Ethernet standard port 1 is output to the devices specified with GS408.  
If 3 word devices cannot be reserved, the output is not executed.
- b2: When this bit is turned on, the MAC address of the Ethernet extended port or Ethernet standard port 2 is output to the devices specified with GS410.  
If 3 word devices cannot be reserved, the output is not executed.
- b3: When this bit is turned on, the MAC address of the wireless LAN interface is output to the devices specified with GS412.  
If 3 word devices cannot be reserved, the output is not executed.  
The output may not be executed upon startup of the GOT, and therefore check that the Wireless LAN Status Notification signal (GS1060.b0) is on and then execute the output.
- b4 to b15: Use prohibited

### **(19)Serial No. Output Destination (GS406)**

Specify the start device number of the GOT data registers (GD) to store the GOT serial number.  
Ten GD devices, starting from the specified device, are used to store the GOT serial number.

### **(20)Ethernet Port 1 MAC Address Destination (GS408)**

Specify the start device number of the GOT data registers (GD) to store the MAC address of the Ethernet standard port or Ethernet standard port 1.  
Three GD devices, starting from the specified device, are used to store the MAC address.

### **(21)Ethernet Port 2 MAC Address Destination (GS410)**

Not available to GT2505-V and GT25HS-V.  
Specify the start device number of the GOT data registers (GD) to store the MAC address of the Ethernet extended port or Ethernet standard port 2.  
Three GD devices, starting from the specified device, are used to store the MAC address.

### **(22)Wireless LAN Interface MAC Address Destination (GS412)**

Not available to GT2505-V and GT25HS-V.  
Specify the start device number of the GOT data registers (GD) to store the MAC address of the wireless LAN interface.  
Three GD devices, starting from the specified device, are used to store the MAC address.

### **(23)Current Directory Designation when Logging in to the FTP Server Function (GS423)**

- Specify the current directory when logging in to the FTP server.
- b0 to b9: Use prohibited
  - b10: When this bit is turned on, drive V is specified as the current directory.
  - b11 to b15: Use prohibited

## (24)Start GD Device for Object Script Error Info Notification (GS432)

Specify the start device number of the GD devices to store error records.

Data type: Unsigned binary

## (25)Number of Object Script Error Info Outputs (GS434)

Specify the maximum number of error records.

Data type: Unsigned binary

The setting range is 0 to 5000.

If the device stores 0, no error record will be stored.

If the device stores 5001 or more, up to 5000 records will be stored.

GS435.b1 specifies the operation to be performed when the number of errors has exceeded the maximum number of error records.

The following shows an example of how an error record is stored in eight word devices starting from GD1000.

Storage device	Item	Description
GD1000	Error code	Error code of an error. For the error details and corrective actions, refer to the following. →9.10.9 ■3 (5) List of object script execution error codes
GD1001	Script type	Number that shows a script type. The device stores any of the following values according to the script type. • 10: Display object script or switch object script • 11: Input object script
GD1002	Screen number	Number of the screen where the object is placed.
GD1003	Object ID number	ID number of the object where a script error has occurred.
GD1004	Use prohibited	The device stores 0.
GD1005	Screen type	Type of the screen for which the script is set. The device stores any of the following values according to the screen type. • 200: Base screen • 210: Superimpose window 1 • 220: Superimpose window 2 • 310: Overlap window 1 • 320: Overlap window 2 • 330: Overlap window 3 • 340: Overlap window 4 • 350: Overlap window 5 • 400: User-created key window • 500: Dialog window substituted for a system message If the script is set for a called screen, the device stores a value by adding a number to the number showing the calling screen type. • When a base screen is called, 1 is added. • When a window screen is called, 2 is added. Example) When a window screen is called from overlap window 3 330 + 2 = 332
GD1006	Number of the displayed base screen	Number of the base screen that is displayed when the script runs.
GD1007	Use prohibited	The device stores 0.

## (26)Object Script Error Info Output Common Control (GS435)

- b0: When this bit is turned on, storing error records starts.

When this bit is turned off, storing error records ends.

- b1: Specifies the operation to be performed when the number of errors has exceeded the maximum number of error records specified with GS434.

When this bit is turned on, storing error records stops.

When this bit is turned off, storing error records continues by overwriting the oldest record.

- b2 to b10: Use prohibited
- b11: When this bit is turned on, the records of warnings that do not abort a script are not stored.
- b12 to b15: Use prohibited

## (27)Start GD Device for Object Script Event Notification (GS436)

Specify the start device number of the GD devices to store script execution records.

Data type: Unsigned binary

**(28)Number of Object Script Event Outputs (GS438)**

Specify the maximum number of script execution records.

Data type: Unsigned binary

The setting range is 0 to 5000.

If the device stores 0, no script execution record will be stored.

If the device stores 5001 or more, up to 5000 records will be stored.

GS439.b1 specifies the operation to be performed when the number of the executed scripts has exceeded the maximum number of script execution records.

The following shows an example of how a script execution record is stored in eight word devices starting from GD1000.

Storage device	Item	Description
GD1000	Script type	Number that shows a script type. The device stores any of the following values according to the script type. • 10: Display object script or switch object script • 11: Input object script
GD1001	Screen number	Number of the screen where the object is placed.
GD1002	Object ID number	ID number of the object where a script error has occurred.
GD1003	Use prohibited	The device stores 0.
GD1004	Screen type	Type of the screen for which the script is set. The device stores any of the following values according to the screen type. • 200: Base screen • 210: Superimpose window 1 • 220: Superimpose window 2 • 310: Overlap window 1 • 320: Overlap window 2 • 330: Overlap window 3 • 340: Overlap window 4 • 350: Overlap window 5 • 400: User-created key window • 500: Dialog window substituted for a system message If the script is set for a called screen, the device stores a value by adding a number to the number showing the calling screen type. • When a base screen is called, 1 is added. • When a window screen is called, 2 is added. Example) When a window screen is called from overlap window 3 330 + 2 = 332
GD1005	Number of the displayed base screen	Number of the base screen that is displayed when the script runs.
GD1006	Use prohibited	The device stores 0.
GD1007	Use prohibited	The device stores 0.

**(29)Object Script Event Output Common Control (GS439)**

- b0: When this bit is turned on, storing script execution records starts.

When this bit is turned off, storing script execution records ends.

- b1: Specifies the operation to be performed when the number of executed scripts has exceeded the maximum number of script execution records specified with GS438.

When this bit is turned on, storing script execution records stops.

When this bit is turned off, storing script execution records continues by overwriting the oldest record.

- b2 to b15: Use prohibited

**(30)Exclusive Authorization Control (GS447)**

Controls the authorization of the SoftGOT-GOT link function.

This is disabled when the GOT network interaction function is used.

- b0: When this bit is turned on, the GOT obtains the exclusive authorization.

- b1: When this bit is turned on, the authorization guarantee time for the SoftGOT-GOT link function is disabled and GS984 (Authorization Guarantee Status Notification signal) stores 0.

- b2 to b15: Use prohibited

**(31)RGB Display Common Control (GS449)**

- b0: When this bit is turned on, the RGB screen is displayed at the center of the GOT screen .

When this bit is turned off, the RGB screen is displayed at position set by the RGB display position (b13) of [Video/RGB Input Common] device.

⇒10.6.4 ■8 Setting items of [Video/RGB Input Common] device

- b1 to b15: Use prohibited

### (32) Monitor Common Control (GS450)

GT21 (except GT2107-W) and GS21 support b15 only.

GS21-W-N supports b4.

GT2107-W supports b4 and b15.

- b0: When this bit is turned on, a confirm message is displayed after numerical or text data (numerical input or text input) is input .
- b1: Controls the displaying methods of the message displayed when an numeric value exceeding the valid range is input.  
Turning on displays a message during the numerical input.  
Turning off displays a message after the numeric value is input.
- b2: When this bit is turned on, the system signal 1-1.b4 (Numeric Value Input Read Complete signal), system signal 2-1.b4 (Numeric Value Input signal), [Numeric Value Input Number], [Current Cursor Display User ID], and [Previous Cursor Display User ID] in the [Environmental Setting] window ([System Information]) are activated during the input as well.
- b3: When this bit is turned on, 0 is stored into [Current Cursor Display Object], [Previous Cursor Display Object], [Current Cursor Display User ID], and [Previous Cursor Display User ID] in the [Environmental Setting] window ([System information]) when a cursor is erased.
- b4: When this bit is turned on, the Kana-Kanji conversion or Pinyin conversion function is activated when text input is used.  
The conversion function selected for [Kana-Kanji/Pinyin Conversion] in the [Environmental Setting] window ([Kana-Kanji/Pinyin Conversion]) is activated.
- b5: When this bit is turned on, the key window is forcibly closed if the input condition (the trigger condition or security level for the object) is not satisfied during a value or text input.
- b6: When this bit is turned on, the key window for inputting binary values is displayed for the numerical input whose format is binary.
- b7: When this bit is turned on, the key window for inputting octal values is displayed for the numerical input whose format is octal.
- b8: When this bit is turned on, BNP, JPE, and PNG files in the data storage can be used as a part for parts display or parts movement.  
Turning off displays parts registered by GT Designer3.  
When [Show image files in the memory card at the time of specifying Parts No. 9001-9999] is selected in the [Parts Setting] dialog, a BMP, JPEG, or PNG file in the data storage is used as a part regardless of the on and off status of this signal.  
    ⇒8.8 Placing a Parts Display
- b9: When this bit is turned on, the GOT retains the state of the historical trend graph displayed before screen switching and displays the same graph state after switching back to the graph screen.  
    ⇒8.21 Placing a Historical Trend Graph
- b10: When this bit is turned on, the upper and lower limit symbols on the trend graph and the historical trend graph are hidden.
- b11: Use prohibited
- b12: Controlling the timing when the bit alternate or bit reset, or bit reset, or screen switching and station No. switching are set to the touch switch.  
    ⇒8.2 Placing a Touch Switch
- b13: When this bit is turned on, the data storage stores the history of the screen switching.
- b14: When this bit is turned on, the screen switching mode is switched from the previous mode to the history mode.
- b15: While this bit is on, touching an alarm once in the alarm display (user) displays the detail screen.  
While this bit is off, touching an alarm twice in the alarm display (user) displays the detail screen.

When GS450.b15 is on

When GS450.b15 is off

### (33)Auto Screen Save Time (GS451)

Stores the time before closing (OFF) the monitor screen in screen save function.

Stores the value by 1 to 60 (Min).

(To store value higher than 60, store it as 60)

The changed value is validated after canceling the screen save when a value is changed during the screen save.

#### Relationship between GS451 and GOT utility (screen save time)

If value other than 0 is stored in GS451, the screen save time set in GOT utility will be invalidated.

To validate the screen save time of utility, store 0 in GS451.

### (34)Ethernet Port 1 Access Control, Ethernet Port 2 Access Control (GS454)

Controls the operations through an Ethernet network.

The Ethernet interface corresponding to each bit varies by GOT model.

The following shows the correspondence between the Ethernet interfaces and the bits.

GOT	Ethernet interface	Bit number
GT27, GT25-S, GT25-V (excluding GT2505-V)	Ethernet standard port	b0, b1, b8
	Ethernet extended port	b4, b5, b12
GT25-W, GS25	Ethernet standard port 1	b0, b1, b8
	Ethernet standard port 2	b4, b5, b12
GT2505-V, GT25HS-V, GT23, GT21, GS21	Ethernet standard port	b0, b1, b8

- b0: Turn on this bit to disable the writing of package data (containing system applications) through the corresponding Ethernet interface.
- b1: Turn on this bit to disable the writing of package data (containing project data) through the corresponding Ethernet interface.
- b2 and b3: Use prohibited
- b4: Turn on this bit to disable the writing of package data (containing system applications) through the corresponding Ethernet interface.
- b5: Turn on this bit to disable the writing of package data (containing project data) through the corresponding Ethernet interface.
- b6 and b7: Use prohibited
- b8: Turn on this bit to disable the reading of data through the corresponding Ethernet interface.
- b9 to b11: Use prohibited
- b12: Turn on this bit to disable the reading of data through the corresponding Ethernet interface.
- b13 to b15: Use prohibited

### (35)Intensity Control (GS455)

Sets the intensity and the brightness adjustment mode of the GOT display section.

- b0 to b14: When the bits store a setting value, the intensity of the backlight changes to the one corresponding to the setting value.

The setting value ranges from 1 to 8, or 101 to 132.

Intensity	Setting value	Intensity	Setting value	Intensity	Setting value	Intensity	Setting value
1	1 or 101	9	109	17	117	25	125
2	102	10	3 or 110	18	118	26	126
3	103	11	111	19	5 or 119	27	127
4	104	12	112	20	120	28	7 or 128
5	2 or 105	13	113	21	121	29	129
6	106	14	4 or 114	22	122	30	130
7	107	15	115	23	6 or 123	31	131
8	108	16	116	24	124	32	8 or 132

For GT23

Intensity	Setting value	Intensity	Setting value	Intensity	Setting value	Intensity	Setting value
1	102	5	3 or 110	9	118	13	126
2	104	6	112	10	120	14	7 or 128
3	106	7	4 or 114	11	122	15	130
4	108	8	116	12	124	16	8 or 132

If 0 and 9 to 100, or 133 or more is set, the setting for the intensity adjustment function for the utility is applied.

- b15: When the bit turns on, the brightness adjustment mode is set to the low intensity.

To set the brightness adjustment mode to the low intensity, install the version E or later of BootOS on the GOT. The intensity of the GOT can be confirmed by the Intensity Notification (GS255).

→ 12.1.3 ■ 2 (49) Intensity Notification (GS255)

For the specifications of the GOT display section, refer to the following.

→ GOT2000 Series User's Manual (Hardware)

### Point

#### (1) Setting value changed by the Intensity Control (GS455)

The Intensity Control (GS455) changes the setting value of the intensity temporarily.

If the GOT is turned off after the setting value is changed by the Intensity Control (GS455), the value is returned to the value set in the utility.

#### (2) Stored setting value

For the projects converted from GOT1000 projects, you can use the stored setting value without changing the Intensity Control (GS455) setting.

Since the intensity is controlled in eight levels, the setting value ranges from 1 to 8.

### (36) Character Code Control (GS456)

The character code used for the text display or the text input is changeable.

This device is enabled only when the character code is determined by the system language or Unicode.

If you change the character code, the KANJI region for the kanji characters displayed on the text display or the text input is also changed.

The character code is changed to one corresponding to the stored value as shown below.

Stored value	Character code	KANJI region of displayed kanji characters	Supported models
0	ASCII code, Shift JIS code	Japanese	
	GB code*1	Chinese (Simplified)	
1	Shift JIS code	Japanese	
2	ASCII code	Japanese	
3	GB code	Chinese (Simplified)	
4	KS code	Japanese	
5	BIG5	Chinese (Traditional)	

\*1 This item is enabled when all of the following conditions are satisfied.

- Selecting [Kana-Kanji/Pinyin Conversion] in the [Extended] tab in the [Text Input] dialog
- Selecting [Pinyin Simplified Characters] for [Conversion Method] in [GOT Environmental Setting] → [Kana-Kanji/Pinyin

Conversion]

For the GOT models other than GT21 and GS21, a new character code is reflected to the GOT screen at any of the following timing.

- Switching screens (Switching to a key window or dialog window is excluded.)
- Switching security levels or operator accounts
- Switching languages
- Switching station numbers
- Switching buffer memory unit numbers
- Executing the function (redraw\_screen()) of the object script

For GT21 and GS21, a new character code is reflected to the GOT screen in real time.

#### (a) Applied KANJI region

If the GOT does not have a font corresponding to the KANJI region for a selected character code, the KANJI region for the standard font is applied.

The following is an example in using the GOT that has only Japanese as the standard font (standard).

If the character code is changed to GB code, the KANJI region of the displayed kanji characters is set to Japanese.

#### (b) How to reflect the new setting at the GOT startup

You can reflect the new setting at the GOT startup by using the object script.

Example) When changing the character code to GB code at the GOT startup

On the screen displayed at the GOT startup, place an object where the following object script is set.

Setting item for the script	Setting details
Trigger type	[Rise]
Trigger device	GS0.b4 (Common Information1: Always ON signal)
Script	[w:GS456] = 3; redraw_screen();

#### (37) Pass-through Transparent Stop Control (GS457)

When 1 is set at this area, pass-through transparent stop request is performed.

By using this area, the user can expedite recovery from the pass-through transparent recovery waiting status.

This area is effective only when 2 (pass-through mode in operation) is set for FA transparent status (GS256).

0: No stop request

1: No stop request

#### (38) Conversion Start Indication (GS460)

The following script types are supported: project script, screen script, and script part.

- b0: With Integer $\longleftrightarrow$ Real Number Conversion, converting unsigned 16-bit binary data to real numbers is specified.
- b1: With Integer $\longleftrightarrow$ Real Number Conversion, converting signed 16-bit binary data to real numbers is specified.
- b2 and b3: Use prohibited
- b4: With Integer $\longleftrightarrow$ Real Number Conversion, converting real numbers to unsigned 16-bit binary data is specified.
- b5: With Integer $\longleftrightarrow$ Real Number Conversion, converting real numbers to signed 16-bit binary data is specified.
- b6 to b14: Use prohibited
- b15: With Integer $\longleftrightarrow$ Real Number Conversion, the conversion start is indicated.

#### (39) Number of Conversion Devices (GS461)

The following script types are supported: project script, screen script, and script part.

With Integer $\longleftrightarrow$ Real Number Conversion, the number of conversion devices is specified.

1 to 4096 conversion devices can be specified.

#### (40) Conversion Source Head Device No. (GS462)

The following script types are supported: project script, screen script, and script part.

With Integer $\longleftrightarrow$ Real Number Conversion, the head device No. of GOT internal device (GD) that stores the value before conversion is specified.

#### (41) Conversion Destination Head Device No. (GS463)

The following script types are supported: project script, screen script, and script part.

With Integer $\longleftrightarrow$ Real Number Conversion, the value after conversion is stored and the head device No. of GOT internal device (GD) is specified.

#### (42)Storage Error Value (GS464)

The following script types are supported: project script, screen script, and script part.

With Integer $\leftrightarrow$ Real Number Conversion, if conversion error occurs, the device value to be stored in the conversion destination device is specified.

#### (43)Remote Personal Computer Operation (Ethernet) Common Control (GS465)

Set whether to display the operation buttons on the personal computer screen on the GOT, and specify the display magnification of the personal computer screen.

The setting is applied when the GOT displays the personal computer screen with the remote personal computer operation function (Ethernet).

For the details of the remote personal computer operation function (Ethernet), refer to the following.

##### $\Rightarrow$ 10.3 Operating a Personal Computer by Using the GOT (Remote Personal Computer Operation (Ethernet))

- b0: When this bit is turned on, the [CAD] button is hidden.
- b1: When this bit is turned on, the [C+E] button is hidden.
- b2: When this bit is turned on, the [KBD] button is hidden.
- b3: When this bit is turned on, the zoom in button and the zoom out button are hidden.
- b4: Use prohibited
- b5: Specifies the display magnification of the personal computer screen to be applied when b3 is turned on. When this bit is turned on, the display magnification specified on GT Designer3 is applied. When this bit is turned off, the display magnification is fixed to 100%.
- b6: When this bit is turned on, the click switching button is hidden.
- b7: When this bit is turned on, the scroll bars of the personal computer screen on the GOT are hidden.
- b8: When this bit is turned on, the personal computer screen on the GOT opens in the full screen mode.

For the display modes of the personal computer screen on the GOT, refer to the following.

##### $\Rightarrow$ 10.3.2 ■5 Display modes of the personal computer screen on the GOT

- b9: When this bit is on, the GOT (VNC server) can be connected to a vision sensor described in the following Technical Bulletin.

##### $\Rightarrow$ List of VNC Servers Supporting the Remote Personal Computer Operation (Ethernet) Function Validated to Operate with the GOT2000 Series (GOT-A-0110)

- b10: When the GOT connected with multiple personal computers displays a remote screen window, use this bit to set the action when the touch screen to open the specified personal computer screen without closing the remote screen window is touched.

When this bit is on, the personal computer screen on the GOT is switched.

When this bit is off, the personal computer screen on the GOT is not switched and an error message is displayed.

For switching the personal computer screen on the GOT, refer to the following.

##### $\Rightarrow$ 10.3.2 ■6 Switching the personal computer screen on the GOT

- b11 to b15: Use prohibited

#### (44)Unit of Drive Free Space (GS466)

Specify the unit of values to be stored in the Drive Empty Capacity Information devices of the system information.

##### $\Rightarrow$ 5.2.5 ■1 (14) Drive Empty Capacity Information

This setting applies to all the drives when the system information is updated.

The setting range is 0 to 2.

If you set a value outside the setting range, each target device stores a value in bytes.

Stored value	Unit	Remarks
0	byte	Each target device notifies up to 2 GB free space.
1	Kbyte	Each target device notifies up to 2 TB free space. (1 Kbyte = 1024 bytes) The fractional portion is rounded off. Example) For 1.1 Kbytes of free space, 1 is stored.
2	Mbyte	Each target device notifies up to 2 PB free space. (1 Mbyte = 1024 Kbytes) The fractional portion is rounded off. Example) For 1.2 Mbytes of free space, 1 is stored.

If you change the specified unit, the maximum size of free space to be notified is changed. Note that the capacity of the data storage usable in the GOT remains unchanged.

#### (45) Monitor Common Control 2 (GS467)

- b0: When this bit is turned on, the cursor moves to a different alarm on the alarm display (user) after the alarm under the cursor is deleted.  
The cursor display position after the deletion varies with the displayed contents on the alarm display (user).  
If an alarm is displayed below the deleted alarm, the cursor moves to this alarm after the deletion.  
If all the other alarms are displayed above the deleted alarm, the cursor moves to the alarm at the bottom after the deletion.  
If all the alarms are deleted, the cursor is hidden after the deletion.  
When this bit is off, the cursor is hidden.
- b1: When this bit is turned on, a key window for text input that supports Kana-Kanji conversion or Pinyin conversion appears when a text input object with Kana-Kanji/Pinyin conversion enabled is touched.  
The conversion function selected for [Kana-Kanji/Pinyin Conversion] in the [Environmental Setting] window ([Kana-Kanji/Pinyin Conversion]) is activated.
- b2 to b15: Use prohibited

#### (46) Kanji Region Control (GS468)

The KANJI region used for the text display or text input is changeable.

This setting is applied to all the text displays and text inputs where [Character Code] is set to [Unicode].

The KANJI region is changed according to the stored value as shown below.

Stored value	KANJI region
0	Not changed
1	Japanese
2	Simplified Chinese
3	Traditional Chinese

For the GOT models other than GT21 and GS21, a new KANJI region is reflected to the GOT screen at any of the following timing.

- Switching screens (Switching to a key window or dialog window is excluded.)
- Switching security levels or operator accounts
- Switching languages
- Switching station numbers
- Switching buffer memory unit numbers
- Executing the function (redraw\_screen()) of the object script

For GT21 and GS21, a new KANJI region is reflected to the GOT screen in real time.

If the GOT has no font corresponding to the new KANJI region, the KANJI region for an installed standard font is applied.

##### (a) How to reflect the new setting at the GOT startup

You can reflect the new setting at the GOT startup by using the object script.

Example) When changing the KANJI region to Simplified Chinese at the GOT startup

On the screen displayed at the GOT startup, place an object where the following object script is set.

Setting item for the script	Setting details
Trigger type	[Rise]
Trigger device	GS0.b4 (Common Information1: Always ON signal)
Script	[w:GS468] = 2; redraw_screen();

#### (47) GT SoftGOT2000 Common Control (GS500)

- b0: When this bit is turned on, the dialog for exiting the GT SoftGOT2000 is displayed.  
If exiting is canceled in the displayed dialog, the signal turns off.
- b1: When this bit is turned on, GT SoftGOT2000 is displayed in the full screen mode.  
When this bit is turned off, the full screen mode of GT SoftGOT2000 is canceled.
- b2: When this bit is turned on, the [File Information in PLC] dialog is displayed.  
Not available to GT SoftGOT2000 (Multiple channels).
- b3 to b15: Use prohibited

#### (48)Application Start signal (GS501, GS502)

b0 to b15: When this bit is turned on, the application assigned to each bit by GT SoftGOT2000 runs.

#### (49)GT SoftGOT2000 Full Screen Size (Width) (GS503)

With the full screen mode function of GT SoftGOT2000, set the width of GT SoftGOT2000 monitor screen (320 to 1920 dots).

When the set value is 320 or less, the value is processed as 320. When the set value is 1920 or more, the value is processed as 1920.

#### (50)GT SoftGOT2000 Full Screen Size (Height) (GS504)

With the full screen mode function of GT SoftGOT2000, set the height of GT SoftGOT2000 monitor screen (240 to 1200 dots).

When the set value is 240 or less, the value is processed as 240. When the set value is 1200 or more, the value is processed as 1200.

#### (51)Advanced Application Start signal (GS505, GS506 to GS507)

Using a value in GS505 and any bit from GS506 to GS507 starts an application on GT SoftGOT2000.

For setting the devices from GS505 to 507 as a trigger of the application, refer to the following manual.

⇒GT SoftGOT2000 Version1 Operating Manual

#### (a) GS505

Stores a value used for starting the application. (1 to 255)

#### (b) GS506 to 507

b0 to b15: When this bit is turned on, the application assigned to each bit according to a value stored in GS505.

#### (52)Device Data Transfer Information (GS510)

- b0: When this bit is turned on, the device stores 0 in the Error Device Data Transfer ID (GS642) and the Device Data Transfer Error Count (GS643).

- b1: When this bit is turned on, the device stores 0 in the Device Data Transfer Processing Time (GS644), the Device Data Transfer Min. Processing Time (GS646), and the Device Data Transfer Max. Processing Time (GS648).

- b2 to b15: Use prohibited

#### (53)Touch Status Communication Control (GS511)

- b0: When this bit is turned on, the touch status is output to the personal computer.

When this bit is turned off, the touch status is not output to the personal computer.

- b1 to b15: Use prohibited

### Point

#### For using the Touch Status Communication Control

To use the Touch Status Communication Control, the system application (extended function) for the remote personal computer operation (Serial) is required.

For details of the remote personal computer operation (Serial), refer to the following.

⇒10.4 Operating a Personal Computer by Using the GOT (Remote Personal Computer Operation (Serial))

#### (54)Time Change Information (GS512)

- b0: When this bit is turned on, the GOT clock data is changed to the data set for the Changed Time (GS513 to GS516).

- b1 to b15: Use prohibited

#### (55)Changed Time (GS513 to GS516)

Stores the current time with BCD code.

The valid date range varies with the GOT model.

- GT27, GT25, GT23, and GS25: Jan. 1, 2000 to Dec. 31, 2099

- GT21 and GS21: Jan. 1, 2000 to Dec. 31, 2037

The day-of-the-week data, 0 to 6, is stored.

(0: Sunday 1: Monday 2: Tuesday 3: Wednesday 4: Thursday 5: Friday 6: Saturday)

Example) When the error occurrence date is 15:30:20 May 15, 2013 (Wednesday)

### (56) External I/O Function Notification/External I/O Control Function (GS517)

- b0: When this bit is turned on, the 128-point input can be executed with the external I/O function. When this bit is turned off, the 16-point input can be executed.
- b1 to b15: Use prohibited

#### Point

#### 128-point input

Without the 128-point input (when the above device turns off), the GOT internal device turns on when the 16-point input is executed with the input terminal.

With the 128-point input (when the above device turns on), the 16-point input with the input terminal is used with the 8-point scan signal and the 128-point input (16 × 8) is performed.

For connection diagrams of each signal with the external I/O function, refer to the following manual.

→ GOT2000 Series Connection Manual (Microcomputers, MODBUS/Fieldbus Products, Peripherals)  
 For GT Works3 Version1

### (57) Sound Output Common Control (GS518)

- b0: Turn on this bit to stop the current playback.
- b1: Turn on this bit to stop the current playback and cancel all standby sound files.
- b2: Turn on this bit to mute the sound.
- b3 to b15: Use prohibited

### (58) Buffering And File Access Control (GS520)

- b0: When this bit is turned on, the whole data in the buffering area is stored in the destination drive at the timing of the rising edge.
- b1 to b15: Use prohibited

### (59) Trigger Backup Data Send Delay (GS521)

The backup/restore function can set the delay time for backup communication intervals.

Setting of the delay time can reduce the load of other processes (such as monitoring objects) with the backup process. The delay time set by the set value is listed as follows.

Set value	Delay time
0	None
1 to 100	Set value × 5 (ms)
101 or more	500 (ms)

#### Point

#### Setting of Trigger Backup Data Send Delay

Backup communication times are longer than a default when the Trigger Backup Data Send Delay is set. Set the suitable delay time to match the processing condition of backup function and others (such as monitoring objects).

### (60) Special Control During Specific Function Execution (GS522)

GT25, GT23, and GS25 support b0, b2 to b4, and b6.

GT2105-Q, GT2104-R, GT2104-P, GT2103-P, and GS21-W support b2 only.

GT2107-W and GS21-W-N support b2 and b3.

GT SoftGOT2000 supports b0, b2, and b3.

- b0: When this bit is turned on, during the backup/restore function execution, processing by the alarm functions, the logging function, and others and device monitoring stop, and only the backup and restore process is executed.
- b1: When this bit is turned on, the GOT notifies the amount of usage of the CF card and the number of video files in the card in the multimedia unit by using the Video File Maintenance Information (GS1022).

This function is usable only when [Enable] is selected and [Event Trigger Device] is set in [Before-After Event Recording

Setting] on the [Recording Setting] tab of the [Multimedia] dialog.

⇒ 12.1.3 ■3 (39) Video File Maintenance Information (GS1022)

- b2: When this bit is on, the character code is changed to Unicode and data is tab-delimited during a binary-to-CSV conversion or the creation of a CSV file.

Turn on this bit before executing the following operations.

- Converting a binary file (alarm log file, logging file, recipe file, or operation log file) to a CSV file
- Outputting a report screen to a virtual drive in CSV format.

(GT SoftGOT2000 only)

- Writing/reading data to/from a recipe file in CSV format
- Reading a CSV file from drive C or D of the GOT with a personal computer

(GT21 and GS21)

- Copying a CSV file from drive C or D to any other drive

(GT21 and GS21)

Make sure that this bit is on when you execute the following operations using the CSV file that has been converted from another format or created during the turn-on of the bit.

- Converting the CSV file to a binary file
- Performing an operation that uses the CSV file as a recipe file

- b3: When this bit is turned on, all buttons except the [List] and [Latest] buttons are disabled on the [Operation Log Information] screen of the utility.

- b4: When this bit is turned on, the printing operations are disabled on the [Print file list display] screen of the file print function in the utility.

- b5: Use prohibited

- b6: When this bit is turned on, the GOT data package acquisition is executed when the trigger backup of the backup/restoration function is complete.

When any backup trigger condition of any channel is satisfied, the GOT data package acquisition is executed.

- b7: Turn on this bit to close the displayed system window and switch the base screen, when switching the base screen with the system window open.

The system window is not closed if the base screen remains the same before and after switching.

For system windows, refer to the following.

⇒ 5.2.1 ■2 (5) Using an overlap window as the system window

- b8 to b15: Use prohibited

### (61) Document Display Common Control (GS523)

- b0: When this bit is turned on, PDF files are not cached, and the cached PDF files are not displayed and updated.

- b1: When this bit is turned on, the search history file is not created or updated.

- b2: When this bit is turned on, an A4 or smaller PDF document is displayed in high quality (144 dpi resolution).

When this bit is turned off, a PDF document is displayed in standard quality (72 dpi resolution).

- b3: When this bit is turned on while a PDF document is displayed, the document is fit to the object width.

When a document is displayed for the first time while this bit is on, the document is fit to the object width, regardless of the selection for [Initial Display Size].

- b4 to b15: Use prohibited

### (62) Report Common Control (GS524)

GT27, GT25, GT23, and GS25 do not support b15.

GT21 and GS21 support b15 only.

- b0: This bit is activated when [Output Timing] is set to [At the time of data collection] in the [Screen Property] dialog for a report screen.

While this bit is on, automatic page breaks are disabled and the footer is not output to a report when the number of output lines reaches the set value of [Page Lines] in the [Report Setting] dialog.

If [Insert a page break before an output] is selected in the [Report Setting] dialog, a page break will be inserted according to the previously output contents even after automatic page breaks are disabled.

To enable automatic page breaks again, restart the GOT.

- b1: This bit is activated when [Output Timing] is set to [At the time of data collection] in the [Screen Property] dialog for a report screen.

When this bit is turned on while GS524.b0 is on, a page break is inserted.

If a footer is set in the previously output report screen, the footer will be printed and then a page break will be inserted.

- b2: This bit is activated when [Output Timing] is set to [When trigger condition is satisfied] in the [Screen Property] dialog for a report screen.

When this bit is turned on, the data stored in a temporary file is output upon satisfaction of the output trigger condition.

If the number of collections of data stored in the file is less than or equal to the set value of [Number of repeats] in the [Screen Property] dialog for a report screen, the number of repeats will be assumed to be the number of collections of data decreased by one.

- b3 to b14: Use prohibited
- b15: This bit is activated when [Output Timing] is set to [When trigger condition is satisfied] in the [Screen Property] dialog for a report screen and a Brightek's serial printer is connected.

When the output trigger condition is satisfied while this bit is on, the Brightek's serial printer outputs a report with GB code.

If the bit is turned off after the report output, the output destination will still be the Brightek's serial printer.

To change the printer, restart the GOT.

### (63) Delay Hard Copy Execution (GS526)

Set delay time to output a hidden screen image using the hard copy function.

When the start trigger condition is satisfied, the hard copy processing is executed after the set delay time is passed.

Set the delay time as below according to the values to be stored.

Set value	Delay time
0	1 second
1 to 10	1 to 10 seconds
11 or more	10 seconds

### (64) Network No. For Monitor Station Disconnected (CH1 to CH4) (GS530, GS540, GS550, GS560)

Controls the disconnection and the connection of the monitor stations by the station.

- b0 to b7: the network No. for the station to be disconnected is specified. (0 to 239)

One network No. can be specified per channel.

- b8 to b15: Use prohibited

The devices are enabled only when the following communication drivers are used.

- [Serial(MELSEC)]
- [AJ71QC24, MELDAS C6\*]
- [AJ71C24/UC24]
- [Bus(A/QnA)]
- [Bus(Q)]
- [CC-Link(G4)]

Specify the station to be disconnected by using the following GOT special registers.

→ 12.1.3 ■5 (65) Monitor Station Disconnection (CH1 to CH4) (GS531 to GS538, GS541 to GS548, GS551 to GS558, GS561 to GS568)

### (65) Monitor Station Disconnection (CH1 to CH4) (GS531 to GS538, GS541 to GS548, GS551 to GS558, GS561 to GS568)

Each bit corresponds to a station number when one of the following communication drivers is used. Turning on a bit disconnects the corresponding station from the GOT.

The following shows the communication drivers supported by the GOT models.

○ : Available, - : Not available

Communication driver	GT27, GT25, GT23, GS25	GT21, GS21	Communication driver	GT27, GT25, GT23, GS25	GT21, GS21

\*1 Use the following GS devices to specify network numbers.

⇒12.1.3 ■5 (64) Network No. For Monitor Station Disconnected (CH1 to CH4) (GS530, GS540, GS550, GS560)

\*2 When the network connected through the PLC is the CC-Link IE TSN, 0 to 120 stations can be disconnected.

For the multi-channel connection, the target bit of the device corresponding to each channel No. (CH1 to CH4) turns on.

1: Disconnected

0: Connected

When the GOT is connected to the AZBIL temperature controller (DMC50), the specified station number of the DMC50 differs from the station numbers of the other models.

The following shows the station numbers for each device.

**(a) Correspondence between station numbers and device bits (when connecting to a controller other than the AZBIL temperature controller (DMC50))**

The station corresponding to each device differs according to whether the Ethernet connection is used or not.

- With the Ethernet connection: 1 to 128

Device				Ethernet setting No.															
CH 1	CH 2	CH 3	CH 4	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0

**Point**

**(1) Error station**

When an error station is disconnected from the GOT, the temperature controller and servo amplifier faulty station information corresponding to the disconnected station turns off.

⇒(66) Faulty Station Information (CH1 to CH4) (GS281 to GS288, GS301 to GS308, GS321 to GS328, GS341 to GS348)

**(2) Restrictions**

- The GOT cannot disconnect the station number 128 or later, or the station number and the sub station number 9-0 or later.
- The stations with the station numbers specified on GT Designer3 cannot be disconnected using the device of the temperature controller and servo amplifier monitor station disconnection. For details of specifying station numbers, refer to the following.

⇒GOT2000 Series Connection Manual for a controller used

**(66)Channel Shutdown Control (CH1 to CH4) (GS539, GS549, GS559, GS569)**

Communication of each channel is prohibited.

When this signal turns on, the Channel Observation Notification Information (GS299, GS319, GS339, GS359) for the channel whose communication is prohibited turns off.

⇒12.1.3 ■2 (67) Channel Observation Notification Information (GS299, GS319, GS339, GS359)

- b0: While the bit is on, communication of each channel is prohibited.

• b1 to b15: Use prohibited

**(67)MODBUS Communication Control Function (GS570 to GS576, GS590 to GS596, GS597 to GS603, GS604 to GS610, GS611 to GS617)**

When some controllers do not comply with the specifications, this function enables the GOT to reduce the communication delay in the MODBUSnetwork.

When the MODBUS/RTU master connection or the MODBUS/TCP master connection is used, each device enables a function code, or operates as shown below.

The MODBUS Communication Control Function contains two types: the MODBUS Communication Control Function (Common) and the MODBUS Communication Control Function (CH1 to CH4). For the MODBUS Communication Control Function (Common), the device values are applied to all relevant channels. For the MODBUS Communication Control Function (CH1 to CH4), the device values are applied to each applicable channel.

Use GS579 to determine which type of the MODBUS Communication Control Function is applied.

→(68) Channel Setting of MODBUS Communication Control Function (GS579)

When applicable devices store a value as shown below, the GOT operates with the values specified in the communication setting of the utility.

- For the MODBUS Communication Control Function (Common), GS571 to GS576 each store 0.
- For the MODBUS Communication Control Function (CH1), GS591 to GS596 each store 0.
- For the MODBUS Communication Control Function (CH2), GS598 to GS603 each store 0.
- For the MODBUS Communication Control Function (CH3), GS605 to GS610 each store 0.
- For the MODBUS Communication Control Function (CH4), GS612 to GS617 each store 0.

Device					Function
Common	CH1	CH2	CH3	CH4	
GS570.b0	GS590.b0	GS597.b0	GS604.b0	GS611.b0	When the bit turns on, the function code 0Fh (write multiple coils) is not available.
GS570.b1	GS590.b1	GS597.b1	GS604.b1	GS611.b1	When the bit turns on, the function code 10h (write multiple registers) is not available.
GS570.b2 to b15	GS590.b2 to b15	GS597.b2 to b15	GS604.b2 to b15	GS611.b2 to b15	Use prohibited
GS571	GS591	GS598	GS605	GS612	Set the maximum number of devices (1 to 2000) for a message with function code 01h (read coils). When 0 is set, the maximum number of devices is set as shown below. • MODBUS/TCP: 1000 • MODBUS/RTU: 2000 When a value other than the above is set, the maximum number of devices is 2000.
GS572	GS592	GS599	GS606	GS613	Set the maximum number of devices (1 to 2000) for a message with function code 02h (read input relays). When 0 is set, the maximum number of devices is set as shown below. • MODBUS/TCP: 1000 • MODBUS/RTU: 2000 When a value other than the above is set, the maximum number of devices is 2000.
GS573	GS593	GS600	GS607	GS614	Set the maximum number of devices (1 to 125) for a message with function code 03h (read holding registers). When a value other than 1 to 125 is set, the maximum number of devices is 125.
GS574	GS594	GS601	GS608	GS615	Set the maximum number of devices (1 to 125) for a message with the function code 04h (read input registers). When a value other than 1 to 125 is set, the maximum number of devices is 125.

Device					Function
Common	CH1	CH2	CH3	CH4	
GS575	GS595	GS602	GS609	GS616	Set the maximum number of devices for a message with the function code 0Fh (write multiple coils). The following shows the setting range of the maximum number of device points. • MODBUS/TCP: 1 to 800 • MODBUS/RTU: 1 to 1968 When 0 is set, the maximum number of devices is 800. When a value other than the above is set, the maximum value in the setting range is applied.
GS576	GS596	GS603	GS610	GS617	Set the maximum number of devices for a message with the function code 10h (write multiple registers). The following shows the setting range of the maximum number of devices. • MODBUS/TCP: 1 to 100 • MODBUS/RTU: 1 to 123 When 0 is set, the maximum number of devices is 100. When a value other than the above is set, the maximum value in the setting range is applied.

**Point**

**(1) Function codes supported by the GOT**

For details on the function codes supported by the GOT, refer to the following.

⇒ 12.4.56 ■ 7 Function code ([MODBUS Slave(GOT:Master)])

12.4.57 ■ 6 Function code ([MODBUS Master(GOT:Slave)])

**(2) Setting MODBUS Communication Control Function**

Set the MODBUS Communication Control Function at the GOT startup with the project script or others. Do not change the setting after the communication starts.

The communication error may occur.

Setting example of project script

**(68) Channel Setting of MODBUS Communication Control Function (GS579)**

The MODBUS Communication Control Function setting can be selected for each channel. GT21 and GS21 support b0 and b1.

⇒ (67) MODBUS Communication Control Function (GS570 to GS576, GS590 to GS596, GS597 to GS603, GS604 to GS610, GS611 to GS617)

- b0: The MODBUS Communication Control Function for CH1 can be selected.  
Turning on this bit applies the MODBUS Communication Control Function (CH1) (GS590 to GS596).  
Turning off this bit applies the MODBUS Communication Control Function (Common) (GS570 to GS576).
- b1: The MODBUS Communication Control Function for CH2 can be selected.  
Turning on this bit applies the MODBUS Communication Control Function (CH2) (GS597 to GS603).  
Turning off this bit applies the MODBUS Communication Control Function (Common) (GS570 to GS576).

- b2: The MODBUS Communication Control Function for CH3 can be selected.  
Turning on this bit applies the MODBUS Communication Control Function (CH3) (GS604 to GS610).  
Turning off this bit applies the MODBUS Communication Control Function (Common) (GS570 to GS576).
- b3: The MODBUS Communication Control Function for CH4 can be selected.  
Turning on this bit applies the MODBUS Communication Control Function (CH4) (GS611 to GS617).  
Turning off this bit applies the MODBUS Communication Control Function (Common) (GS570 to GS576).
- b4 to b15: Use prohibited

### **(69)Microcomputer Connection Extended Setting (CH1 to CH4) (GS580 to GS583)**

GT21 and GS21 support GS580.b0 and GS581.b0.

- b0: For the microcomputer connection (serial), when the bit turns on, if the data format of the message format is Format 12 or 13, communication packets are fully compatible with those of the SCHNEIDER EJM's memory link method.  
(ON: Fully compatible, OFF: Partly compatible)

For the details on the message format of the microcomputer connection (serial), refer to the following.

⇒GOT2000 Series Connection Manual (Microcomputers, MODBUS/Fieldbus Products, Peripherals) For GT Works3 Version1

- b1 to b7: Use prohibited
- b8: For the microcomputer connection (Ethernet), when the bit turns on, if the data format of the message format is Format 3 or 4, communication packets are fully compatible with those of the GOT-F900 series microcomputer connection.  
(ON: Fully compatible, OFF: Partly compatible)

For the details on the message format of the microcomputer connection (Ethernet), refer to the following.

⇒GOT2000 Series Connection Manual (Microcomputers, MODBUS/Fieldbus Products, Peripherals) For GT Works3 Version1

- b9 to b15: Use prohibited

### **(70)CC-Link IE TSN Control (GS620)**

- b0: When the bit is turned on, the firmware update of the CC-Link IE TSN communication unit is prohibited.
- b1 to b15: Use prohibited

### **(71)Operator Management Common Control (GS621)**

Controls the operator information management.

GT21 and GS21 support b0 and b2.

- b0: Turning on this bit inactivates the delete button on the operator management screen. This disables deletion of the existing operator information.  
If the GOT has operator information that does not exist in the operator management file to be imported, the GOT retains its operator information.  
When the operator name or operator ID to be imported is the same as that of the import destination, the operator information is not imported.
- b1: Turning on this bit inactivates the edit button on the operator management screen. This disables editing of the operator information when an inactivated operator is selected.  
If both b0 and b1 are on, the inactivated operator information is not updated when an operator management information file is imported.
- b2: Turning on this bit inactivates the import button on the operator management screen.
- b3 to b15: Use prohibited

### **(72)System Screen Operation Restriction (GS622)**

Restricts operation on the screens in the [Data] tab of the utility.

This device setting is applied when any of the relevant screens is displayed.

Turning on or off the signal while a relevant screen is displayed does not switch between restrictions.

- b0: Turning on this bit restricts access to the specified drives on the [Alarm info.], [Image file], [Recipe Information], [Logging info.], [Operation Log Information], and [SD card format] screens of the utility.  
Use GS623 or GS624 to specify the drives to which access is restricted.
- b1: Turning on this bit restricts the display of the [Package management] and [GOT data package acquisition] screens.  
When these screens are selected on the [Data] tab, an error dialog appears.
- b2: Turning on this bit restricts the display of the [SRAM management] screen.  
When this screen is selected on the [Data] tab, an error dialog appears.
- b3 to b15: Use prohibited

For details on the utility screens, refer to the following manual.

⇒GOT2000 Series User's Manual (Utility)

For the available drives by GOT model, refer to the following.

⇒1.2.7 Specifications of available devices

### (73)Specify Drive to Prohibit Write Operation (System Screen) (GS623)

Prohibits writing to the specified drives when GS622.b0 is on.

On an access-restricted screen, if you display the contents of a drive to which writing is prohibited, the buttons relevant to writing become inactive.

If you perform conversion, copying, or moving of data to the drive to which writing is prohibited, the attempt fails and an error dialog appears.

This device setting is applied when any of the relevant screens is displayed.

Turning on or off the signal while a relevant screen is displayed does not switch between restrictions.

- b0: Turning on this bit prohibits writing to all drives.
- b1: Turning on this bit prohibits writing to drive A.
- b2: Turning on this bit prohibits writing to drive B.
- b3: Turning on this bit prohibits writing to drive E.
- b4: Turning on this bit prohibits writing to drive F.
- b5: Turning on this bit prohibits writing to drive G.
- b6: Turning on this bit prohibits writing to drive N.
- b7 to b15: Use prohibited

### (74)Specify Drive to Hide (System Screen) (GS624)

Restricts access to specified drives when GS622.b0 is on.

If you perform conversion, copying, or moving of data to the drive to which access is restricted, the attempt fails and an error dialog appears.

This device setting is applied when any of the relevant screens is displayed.

Turning on or off the signal while a relevant screen is displayed does not switch between restrictions.

- b0: Turning on this bit restricts access to all drives.

Since no operation is available on a relevant screen, the screen itself is not displayed.

- b1: Turning on this bit restricts access to drive A.

When drive A is selected, the files are not displayed and the [Move], [Rename], [New folder], and [Del] buttons are inactivated.

Drive A is not displayed on the SD card format screen.

- b2: Turning on this bit restricts access to drive B.
- b3: Turning on this bit restricts access to drive E.
- b4: Turning on this bit restricts access to drive F.
- b5: Turning on this bit restricts access to drive G.
- b6: Turning on this bit restricts access to drive N.
- b7 to b15: Use prohibited

### (75)Touch Position Color Acquisition Ready signal (GS630)

- b0: Turning on the bit makes the GOT ready for acquiring the color information at the touched position on the GOT screen. In this status, even when an object or others is touched, the object or others does not function.

Turning off the bit without acquiring the color information cancels the status.

- b1 to b15: Use prohibited

### (76)Date Format Control (GS632)

Controls the date format used for the operation log information of the utility by turning b0 and b1 on or off.

This is available for the [Operation Log Data List] screen.

This is also available for the dialogs displayed from the [Operation Log Data List] screen.

The specified data format is applied to the [Operation Log Data List] screen when the screen is displayed.

GS632.b0	GS632.b1	Date format
OFF	OFF	Not controlled (Date format of the system language)
ON	OFF	Year, month, date
OFF	ON	Month, date, year
ON	ON	Date, month, year

**(77)Specify Notification While Monitoring Stopped (GS633)**

This device is available only when an overlap window is output to the display using the video output function. Specify the screen on the display when the GOT screen transitions to a utility screen or extended system application screen while the video output function is used.

- 0: Displays the monitoring stopped message in the center of the screen.

This message does not appear if the size of the overlap window to be output to the display is less than 190 dots × 56 dots.

- 1. Displays the screen specified using GS634.

The monitoring stopped message appears in the center of the screen when: 0 is specified for the screen number, the screen having the specified number does not exist, or the screen security level is insufficient.

- 2: Retains the screen on the display without notifying monitoring stopped.

When 3 or greater value is input, the value is handled as 0.

**(78)Specify Screen No. to be Displayed While Monitoring Stopped (GS634)**

Specify the screen number of the window to be displayed when GS633 is 1.

Only figures can be displayed on the window screen while monitoring is stopped.

**(79)Base Screen Size Expansion Common Control (GS635)**

- b0: Turning on this bit displays the specified area of the expanded base screen, when the screen is switched to an expanded base screen.

To specify the upper-left coordinates of the area to be in view, use GS636 and GS637.

- b1: Turning on this bit disables swiping to scroll the screen.
- b2 to b15: Use prohibited

**(80)Specify Expanded Base Screen Position (GS636 and GS637)**

Specify the upper-left coordinates of the area to be in view, when the screen is switched to an expanded base screen.

- GS636: X coordinate
- GS637: Y coordinate

If the specified area extends off the base screen, the area is adjusted to fit within the base screen.

Example) Displaying an expanded base screen (1600 × 960) on GT27-V (640 × 480)

When the specified area extends off the base screen in the X-axis direction

After the position adjustment

When the specified area extends off the base screen in both the X- and Y-axis directions

After the position adjustment

**(81)GOT Reset Control (GS639)**

GT21 and GS21 support b15 only.

- b0 to b13: Use prohibited
- b14: When the bit is turned on, all the GOT functions exit. (The GOT power can be turned off safely.)
- b15: When the bit is turned on, the software reset for the GOT is performed at the rising edge timing.

## ■ 6 Read device (GS1792 to GS2047)

### (1) VNC Server Function Control (GS1792)

This is disabled when the GOT network interaction function is used.

- b0: When the bit is turned on, the device disables communication from the VNC client.
- b1: When the bit is turned on, the device disables operations from the VNC client.
- b2 to b7: Use prohibited
- b8: When the bit is turned on, the authorization guarantee time for the VNC server function is disabled.
- b9 to b15: Use prohibited

### (2) Gesture Common Control (GS1794)

- b0: When the bit turns on, the object gesture function becomes disabled.  
The single touch operation of the object remains enabled.
- b1: When the bit turns on, the single touch operation of the object becomes disabled.  
The object gesture function remains enabled.
- b2 to b15: Use prohibited

### (3) Authorization Status Control (GS1795)

Controls the authorization of the GOT network interaction function.

This device is activated in an applicable GOT in the control group.

- b0: When this bit turns on, the automatic acquisition of the authorization becomes disabled.  
On unauthorized equipment, even if you switch a screen to another screen in which the authorization control is enabled, the equipment cannot automatically obtain the authorization.
- b1 to b15: Use prohibited

### (4) Authorization Management Control (GS1796)

Controls the authorization of the GOT network interaction function.

This device is activated in the master GOT in the control group.

- b0: When this bit turns on, equipment except the master GOT in the control group becomes prohibited from obtaining the authorization.  
The authorized equipment (other than the master GOT) loses the authorization.  
When the bit is used in combination with b1, the authorization can be released during the authorization guarantee time.
- b1: When this bit turns on, the authorization guarantee time becomes invalid.
- b2: When this bit turns on, all pieces of equipment including the master GOT in the control group become prohibited from obtaining the authorization.  
The authorized equipment loses the authorization.  
When the bit is used in combination with b1, the authorization can be released during the authorization guarantee time.
- b3 to b15: Use prohibited

### (5) Log Viewer Common Control (GS1797)

Specify the behavior of the log viewer.

- b0: When this bit is turned on, the access authentication and the remote password authentication set for the connected controller are performed automatically if the controller IP address is identical to the one connected in the last session.  
The automatic authentication is performed with the user name and password used in the last session.  
At the first startup of the log viewer, the automatic authentication is not performed because no user name and password are recorded.  
When you start the log viewer with the special function switch (log viewer), the switch setting overrides the setting of this bit.
- b1 to b15: Use prohibited

### (6) VNC Server GOT Processing Balance Control (GS1798)

Set the load balance between processing of the VNC server function and processing of the other functions in the GOT, whether or not the GOT is connected with the VNC client.

- b0: Turning on this bit prioritizes processing of the functions in the GOT.  
The number of the other processing delays caused by the VNC server function decreases.
- b1: Turning on this bit applies standard balance between processing of the VNC server function and processing of the other functions in the GOT.
- b2: Turning on this bit prioritizes processing of the VNC server function.  
The speed of remote screen refresh is higher than that when b0 or b1 is on.

- b3: Turning on this bit prioritizes processing of the VNC server function.  
The priority on the processing of the VNC function and the speed of remote screen refresh are higher than those when b2 is on.
- b4: Turning on this bit prioritizes processing of the VNC server function.  
The priority on the processing of the VNC function and the speed of remote screen refresh are higher than those when b3 is on.
- b5 to b15: Use prohibited

When multiple bits are turned on, the bit having the smallest number is prioritized.

When all the bits are off, the GOT operates according to the setting of [GOT processing balance when VNC server is in operation].

⇒ 10.5.4 [VNC Server] dialog

### (7) Recipe Control (GS1800)

- b0 to b1: Use prohibited
- b2: When this bit is turned on, the recipe special control is executed.
- b3 to b13: Use prohibited
- b14: When this bit is turned on, the Operation Completed signal (GS1010.b14) and the Operation Error signal (GS1010.b15) turn off.

⇒ 12.1.3 ■3 (32) Recipe Status(GS1010)

- b15: Use prohibited

### (8) Recipe Special Control Action (GS1801)

Specify the control action. The action varies with the stored value.

- 0: Resets the Recipe Special Control Result device (GS1011) and the Recipe Special Control No. device (GS1012) to 0.
- 1: Reads a record from the target recipe data into GOT data registers (GD).
- 2: Overwrites the values of a record in the target recipe data with the values of GOT data registers (GD).
- 4: Outputs recipe information to GOT data registers (GD).
- 5: Searches the target recipe data based on the values of GOT data registers (GD).

### (9) Recipe Special Control Target Type (GS1802)

Specify the target of the recipe special control.

- b0: When this signal is turned on, record information (record No., record attribute, and record name) is set as the control target.
- b1: When this signal is turned on, the update date and time of a record is set as the control target.
- b2: When this signal is turned on, the device values of a record are set as the control target.
- b3: When this signal is turned on, device comments are set as the control target.
- b4 to b15: Use prohibited

### (10) Recipe Special Control Start GD Device No. (GS1803)

Specify the start device number of the GOT internal devices (GD) to be used.

### (11) Recipe Special Control Recipe No. (GS1805)

Specify the recipe number of a target recipe setting.

### (12) Recipe Special Control Record No. (GS1806)

Specify the record number of a target record.

### (13) Recipe Special Control Row No. (GS1807)

Specify the start row of a record as necessary.

Subtract 1 from a target row number, and then set the result as the value of GS1807.

Example 1) To specify row No. 1, set GS1807 to 0.

Example 2) To specify row No. 65536, set GS1807 to 65535.

### (14) Recipe Special Control Points (GS1808)

Specify the number of target rows of a record as necessary.

Starting from the row specified with GS1807, the specified number of rows are targeted for the recipe special control.

### (15) Recipe Display (Record List) Control (GS1809)

- b0: Turning on this bit hides the confirmation or nonfiction dialog that appears during a record manipulation after this bit is turned on.

So, you can skip the confirmation step.

The manipulation result is notified by GS1015 and GS1016.

⇒ 12.1.3 ■3 (37) Recipe Display (Record List) Target Record No. (GS1015)

12.1.3 ■3 (38) Recipe Display (Record List) Record Manipulation Result (GS1016)

- b1 to b14: Use prohibited
- b15: When this bit is turned on, GS1016 turns off.  
This bit is invalid when the recipe display (record list) is not displayed.  
When the recipe display (record list) is displayed while this bit is on, GS1016 turns off.

**(16)Special Function Switch Special Control (GS1810)**

- b0: Turning on this bit enables the iQSS utility special control function.  
While this signal is on, press the special function switch for which [iQSS Utility] is selected for [Switch Action] to execute the iQSS utility special control.
- b1 to b15: Use prohibited

For details on the iQSS utility special control function, refer to the following.

⇒GOT2000 Series User's Manual (Monitor)

For the special function switch settings, refer to the following.

⇒8.2.9 ■1 (2) (v) Setting for [iQSS Utility]

**(17)iQSS Utility Special Control Start GD Device No. Specification (GS1811)**

Specify the start device of the GD devices used for the iQSS utility special control.

Setting range: 0 to 65529.

Data type: Unsigned binary

Parameters are stored in seven GD devices from the start device specified using this device.

The following shows the structure of the parameters to be stored.

Example) When GD1000 is set as the start device

Storage device (GD)	Parameter
GD1000	Sensor device No.: 0 to 65534
GD1001	When connected to an RCP, QCPU, or LCP Start XY address: 0x0000 to 0x0FE0  When connected to an FX5CPU Intelligent Module No.: 0x01 to 0x10
GD1002	For the bit slave module Device address: 0 to 254 The device stores 0 when any value from 255 to 65535 is set. For the word slave module Device address: 0 to 510 The device stores 0 when any value from 511 to 65535 is set.
GD1003	Device I/O type • 0: Bit input • 64: Bit output • 128: Bit input/output • 256: Word input • 320: Word output • 384: Word input/output
GD1004	Screen to be displayed • 00: Monitor screen • 01: Parameter information screen b0 and b1 are used as parameters.
GD1005	Error code of the ASLINK slave module: 100 to 65535 For details on the error codes, refer to the following manual. ⇒MELSEC iQ-R AnyWireASLINK Master Module User's Manual
GD1006	Error codes used for the iQSS utility special control function • 0: Normal startup • 1: Target network module not found • 2: Target CPU not found • 3: Information read error • 4: Target sensor device not found • 5: Profile not found • 6: Address/station number duplicated • 7: Incorrect profile

### (18) iQSS Utility Special Control Number of Parameters (GS1812)

Specify the number of sensor devices used for the iQSS utility special control.

Data type: Unsigned binary

Example) When setting 500 to GS1811 and 2 to GS1812

- GD500 to GD506: Parameters to start the first sensor device are stored.
- GD507 to GD513: Parameters to start the second sensor device are stored.

### (19) SD Card Access Switch Status Control (GS1820)

- b0: When the bit is turned on, the control for GS1820.b1 is enabled.  
When the bit is turned off, the control for GS1820.b1 is disabled.
- b1: When the bit is turned on, the access to the SD card is allowed.
- b2 to b15: Use prohibited

### (20) USB Drive Common Control (GS1824)

- b0: When the bit is turned on, the USB memory connected to drive E on the GOT can be removed.
- b1: When the bit is turned on, the USB memory connected to drive F on the GOT can be removed.
- b2: When the bit is turned on, the USB memory connected to drive B on the GOT can be removed.
- b3: When the bit is turned on, the USB memory connected to drive G on the GOT can be removed.
- b4: When the bit is turned on, the USB memory connected to drive E on the GOT can be removed.
- b5: When the bit is turned on, the USB memory connected to drive F on the GOT can be removed.
- b6: When the bit is turned on, the USB memory connected to drive B on the GOT can be removed.
- b7: When the bit is turned on, the USB memory connected to drive G on the GOT can be removed.
- b8 to b15: Use prohibited

For the available drives by GOT model, refer to the following.

⇒ 1.2.8 Drive configuration of the target GOT for data transfer

### (21) Wireless Access Control (GS1840)

Controls the operations through a wireless LAN.

- b0: When this bit is turned on, writing the package data (containing system applications) is disabled through a wireless LAN.
- b1: When this bit is turned on, writing the package data (containing project data) is disabled through a wireless LAN.
- b2 to b7: Use prohibited
- b8: When this bit is turned on, reading data is disabled through a wireless LAN.
- b9 to b15: Use prohibited

### (22) Label Name Resolution Control (GS1880)

- b0: Use prohibited
- b1: When this bit is turned on, the label name resolution is performed.
- b2: While this bit is on, executing the label name resolution resolves the label names that have been unresolved in the past resolution during the PLC initial processing.  
This operation does not resolve the unresolved label names resulting from the nonexistence of the relevant labels on the PLC side, and system alarm 328 occurs. Accordingly, you can find out which cause is responsible for the unresolved label names.

⇒ 6.1.4 ■6 (2) Precautions for the label name resolution

- b3 to b15: Use prohibited

For how to use the bits, refer to the following.

⇒ 6.1.4 ■5 (3) Label name resolution performed by a user

### (23) Prioritize Touch Switch Operation Control (GS1885)

Prioritizes touch switch operations or the processing being executed.

This device is available only when a communication driver of [SHARP JW] is used.

- b0: When this bit turns on, operations of the touch switches to monitor CH1 are prioritized.
- b1: When this bit turns on, operations of the touch switches to monitor CH2 are prioritized.
- b2: When this bit turns on, operations of the touch switches to monitor CH3 are prioritized.
- b3: When this bit turns on, operations of the touch switches to monitor CH4 are prioritized.
- b4 to b15: Use prohibited

## (24)GOT Mobile File Operation Security Level (GS1892)

Specify a security level with which file manipulations are allowed in the GOT Mobile function, ranging from 0 to 15. If an invalid value is specified, 0 is assumed.  
If 0 is specified, file manipulations are allowed without operator authentication and level authentication.

## (25)GOT Mobile Common Control (GS1896)

Specify the behavior of the GOT Mobile function.

- b0: When this bit is turned on, the URL parameter (initscreen) is enabled.

⇒■7 Usage

- b1: When this bit is turned on, file manipulations with the file manager are enabled.
- b2: When this bit is turned on, the addition of X-Frame-Option to the HTTP response header is disabled.
- b3 to b15: Use prohibited

## (26)Time to Force Mobile Momentary Switch OFF (GS1899)

Set the time from when communication is lost between the GOT and a client until when the GOT forcibly turns off the touch switch being touched on the client.

If a touch switch is released on a client after the client loses communication with the GOT, the GOT does not recognize the release.

After a specified time (default: 3 seconds) elapses, the GOT forcibly turns off the touch switch.

The following shows the setting range.

Device value	Time to force the touch switch off
0 to 2, 31 or more	3000 ms (3 seconds)
3 to 30	300 ms to 3000 ms (Settable in units of 100 ms)

## (27)GOT Ethernet Setting Change (GS1900 to GS1908)

Change the GOT Ethernet setting without using the utility.

### Point

#### Precautions for changing the Ethernet setting

Make sure to restart the GOT after you change the Ethernet setting by using the GOT Ethernet Setting Change devices (GS1900 to GS1908).

Even though the new Ethernet setting is displayed in the utility, the GOT does not operate with the new setting until you restart the GOT.

The following shows the procedure for changing the Ethernet setting.

- Step 1** Specify the category of an Ethernet setting item by using the GOT Ethernet Setting Change Category device (GS1900).  
⇒(28) GOT Ethernet Setting Change Category (GS1900)
- Step 2** Store a new value to the New GOT Ethernet Setting device (GS1903 to GS1908) that corresponds to the Ethernet setting item to be changed.  
⇒(31) New GOT Ethernet Setting (GS1903 to GS1908)
- Step 3** Turn on the relevant bit of the GOT Ethernet Setting Change Item device (GS1902) that corresponds to the New GOT Ethernet Setting device storing the new value.  
⇒(30) GOT Ethernet Setting Change Item (GS1902)
- Step 4** Turn on the Execute GOT Ethernet Setting Change signal (GS1901.b0) to execute the Ethernet setting change.  
⇒(29) Execute GOT Ethernet Setting Change (GS1901)
- Step 5** After the setting change has completed, the GOT Ethernet Setting Change Completed signal (GS1500.b1) and the GOT Ethernet Setting Changed signal (GS1500.b2) turn on.  
⇒12.1.3 ■3 (91) GOT Ethernet Setting Change Status (GS1500)  
Restart the GOT.

Example) When the GOT IP address for the Ethernet standard port of GT27 is changed to 200.50.1.254 (decimal)

- Step 1** Store 1 to GS1900.
- Step 2** Store new values to GS1903 and GS1904 as shown below.

- Step 3** Turn on GS1902.b0.
- Step 4** Turn on GS1901.b0 to execute the Ethernet setting change.
- Step 5** After the setting change has completed, GS1500.b1 and GS1500.b2 turn on.  
Restart the GOT.

For the details of the devices (GS1900 to GS1908) used for changing the GOT Ethernet setting, refer to the following.

- ➔(28) GOT Ethernet Setting Change Category (GS1900)
- (29) Execute GOT Ethernet Setting Change (GS1901)
- (30) GOT Ethernet Setting Change Item (GS1902)
- (31) New GOT Ethernet Setting (GS1903 to GS1908)

### (28)GOT Ethernet Setting Change Category (GS1900)

Specify the category of an Ethernet setting item to be changed.

The following shows the correspondence between the setting values and the categorized Ethernet setting items.

GOT	Setting value	Categorized Ethernet setting items
GT27 GT25-S GT25-V (excluding GT2505-V)	1	<ul style="list-style-type: none"> <li>• GOT IP address for the Ethernet standard port</li> <li>• Subnet mask for the Ethernet standard port</li> <li>• Default gateway</li> </ul>
	2	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Host station</li> <li>• GOT network number</li> <li>• GOT station number</li> </ul>
	3	<ul style="list-style-type: none"> <li>• GOT IP address for the wireless LAN interface</li> <li>• Subnet mask for the wireless LAN interface</li> </ul>
	4	<ul style="list-style-type: none"> <li>• GOT IP address for the Ethernet extended port</li> <li>• Subnet mask for the Ethernet extended port</li> <li>• Setting to disable the Ethernet extended port</li> </ul>
	5	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Setting number in the connected Ethernet controller setting</li> <li>• Network number for a controller</li> </ul>
	6	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Setting number in the connected Ethernet controller setting</li> <li>• Station number of a controller</li> </ul>
	7	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Setting number in the connected Ethernet controller setting</li> <li>• IP address of a controller</li> </ul>

GOT	Setting value	Categorized Ethernet setting items
GT25-W GS25	1	<ul style="list-style-type: none"> <li>• GOT IP address for Ethernet standard port 1</li> <li>• Subnet mask for Ethernet standard port 1</li> <li>• Default gateway</li> </ul>
	2	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Host station</li> <li>• GOT network number</li> <li>• GOT station number</li> </ul>
	3	<ul style="list-style-type: none"> <li>• GOT IP address for the wireless LAN interface</li> <li>• Subnet mask for the wireless LAN interface</li> </ul>
	4	<ul style="list-style-type: none"> <li>• GOT IP address for Ethernet standard port 2</li> <li>• Subnet mask for Ethernet standard port 2</li> <li>• Default gateway</li> </ul>
	5	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Setting number in the connected Ethernet controller setting</li> <li>• Network number for a controller</li> </ul>
	6	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Setting number in the connected Ethernet controller setting</li> <li>• Station number of a controller</li> </ul>
	7	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Setting number in the connected Ethernet controller setting</li> <li>• IP address of a controller</li> </ul>
GT2505-V GT25HSV GT23 GT21 GS21	1	<ul style="list-style-type: none"> <li>• GOT IP address for the Ethernet standard port</li> <li>• Subnet mask for the Ethernet standard port</li> <li>• Default gateway</li> </ul>
	2	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Host station</li> <li>• GOT network number</li> <li>• GOT station number</li> </ul>
	3	Invalid
	4	
	5	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Setting number in the connected Ethernet controller setting</li> <li>• Network number for a controller</li> </ul>
	6	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Setting number in the connected Ethernet controller setting</li> <li>• Station number of a controller</li> </ul>
	7	<ul style="list-style-type: none"> <li>• Channel number</li> <li>• Setting number in the connected Ethernet controller setting</li> <li>• IP address of a controller</li> </ul>

### (29)Execute GOT Ethernet Setting Change (GS1901)

- b0: Turning on the bit executes the Ethernet setting change. The item to be changed is specified by using the GOT Ethernet Setting Change Category device (GS1900) and the GOT Ethernet Setting Change Item device (GS1902).
- b1 to b15: Use prohibited

### (30)GOT Ethernet Setting Change Item (GS1902)

Set an Ethernet setting item to be changed. The category of the item is specified by using the GOT Ethernet Setting Change Category device (GS1900).

- b0 to b4: Turning on the bit sets the corresponding Ethernet setting item to be changed.

The following shows the correspondence between the bits and the Ethernet setting items.

When GS1900 stores 1, 2, 3 or 4

GOT	GS1902	Ethernet setting item to be changed			
		When GS1900 stores 1	When GS1900 stores 2	When GS1900 stores 3	When GS1900 stores 4
GT27 GT25-S GT25-V (excluding GT2505-V)	b0	GOT IP address for the Ethernet standard port	Channel number	GOT IP address for the wireless LAN interface	GOT IP address for the Ethernet extended port
	b1	Use prohibited	Host station	Use prohibited	Use prohibited
	b2	Subnet mask for the Ethernet standard port	GOT network number	Subnet mask for the wireless LAN interface	Subnet mask for the Ethernet extended port
	b3	Use prohibited	GOT station number	Use prohibited	Use prohibited
	b4	Default gateway	Use prohibited		Setting to disable the Ethernet extended port
GT25-W GS25	b0	GOT IP address for Ethernet standard port 1	Channel number	GOT IP address for the wireless LAN interface	GOT IP address for Ethernet standard port 2
	b1	Use prohibited	Host station	Use prohibited	Use prohibited
	b2	Subnet mask for Ethernet standard port 1	GOT network number	Subnet mask for the wireless LAN interface	Subnet mask for Ethernet standard port 2
	b3	Use prohibited	GOT station number	Use prohibited	Use prohibited
	b4	Default gateway	Use prohibited		Setting to disable Ethernet standard port 2
GT2505-V GT25HS-V GT23 GT21 GS21	b0	GOT IP address for the Ethernet standard port	Channel number	Use prohibited	Use prohibited
	b1	Use prohibited	Host station		
	b2	Subnet mask for the Ethernet standard port	GOT network number		
	b3	Use prohibited	GOT station number		
	b4	Default gateway	Use prohibited		

When GS1900 stores 5, 6, or 7

GOT	GS1902	Ethernet setting item to be changed		
		When GS1900 stores 5	When GS1900 stores 6	When GS1900 stores 7
All models	b0	Channel number	Channel number	Channel number
	b1	Setting number in the connected Ethernet controller setting	Setting number in the connected Ethernet controller setting	Setting number in the connected Ethernet controller setting
	b2	Network number for a controller	Station number of a controller	IP address of a controller

- b5 to b15: Use prohibited

### (31)New GOT Ethernet Setting (GS1903 to GS1908)

The device that corresponds to the Ethernet setting item to be changed stores a new value.

When the Execute GOT Ethernet Setting Change signal (GS1901.b0) is turned on, the Ethernet setting is updated with the new value.

The following shows the correspondence between the devices and the Ethernet setting items.

When GS1900 stores 1, 2, 3 or 4

GOT	New GOT Ethernet Setting device	Ethernet setting item			
		When GS1900 stores 1	When GS1900 stores 2	When GS1900 stores 3	When GS1900 stores 4
GT27 GT25-S GT25-V (excluding GT2505-V)	GS1903	GOT IP address for the Ethernet standard port	Channel number	GOT IP address for the wireless LAN interface	GOT IP address for the Ethernet extended port
	GS1904		Host station		
	GS1905	Subnet mask for the Ethernet standard port	GOT network number	Subnet mask for the wireless LAN interface	Subnet mask for the Ethernet extended port
	GS1906		GOT station number		
	GS1907	Default gateway	Use prohibited	Use prohibited	Setting to disable the Ethernet extended port
	GS1908				Use prohibited
GT25-W GS25	GS1903	GOT IP address for Ethernet standard port 1	Channel number	GOT IP address for the wireless LAN interface	GOT IP address for Ethernet standard port 2
	GS1904		Host station		
	GS1905	Subnet mask for Ethernet standard port 1	GOT network number	Subnet mask for the wireless LAN interface	Subnet mask for Ethernet standard port 2
	GS1906		GOT station number		
	GS1907	Default gateway	Use prohibited	Use prohibited	Setting to disable Ethernet standard port 2
	GS1908				Use prohibited
GT2505-V GT25HS-V GT23 GT21 GS21	GS1903	GOT IP address for the Ethernet standard port	Channel number	Use prohibited	Use prohibited
	GS1904		Host station		
	GS1905	Subnet mask for the Ethernet standard port	GOT network number		
	GS1906		GOT station number		
	GS1907	Default gateway	Use prohibited		
	GS1908				

When GS1900 stores 5, 6, or 7

GOT	New GOT Ethernet Setting device	Ethernet setting item		
		When GS1900 stores 5	When GS1900 stores 6	When GS1900 stores 7
All models	GS1903	Channel number	Channel number	Channel number
	GS1904	Setting number in the connected Ethernet controller setting	Setting number in the connected Ethernet controller setting	Setting number in the connected Ethernet controller setting
	GS1905	Network number for a controller	Station number of a controller	IP address of a controller
	GS1906	Use prohibited	Use prohibited	

The following shows how to set a new value.

#### (a) When the GOT Ethernet Setting Change Category device (GS1900) stores 1

Set new values in hexadecimal for the following items.

- GOT IP address for the Ethernet standard port or Ethernet standard port 1
- Subnet mask for the Ethernet standard port or Ethernet standard port 1
- Default gateway

The following shows the setting range of each item. (Decimal)

- GOT IP address: 0.0.0.0 to 223.255.255.255
- Subnet mask and default gateway: 0.0.0.0 to 255.255.255.255

If you do not use the subnet mask or default gateway, set the item to 0.0.0.0.

Example) When the GOT IP address for the Ethernet standard port of GT27 is changed to 192.168.3.18 (decimal)

**(b) When the GOT Ethernet Setting Change Category device (GS1900) stores 2**

- Channel number  
Set the channel number of a controller for which the host station, GOT network number, or GOT station number is changed.  
The setting range is 1 to 4.
- Host station, GOT network number, and GOT station number  
Set the host station, GOT network number, or GOT station number for the controller connected to the specified channel.  
The following shows the setting range of each item.  
Host station: 1 to 128  
GOT network number: The setting range depends on the controller used.  
GOT station number: The setting range depends on the controller used.  
For details, refer to the following.  
    ⇒ GOT2000 Series Connection Manual for a controller used  
To set the host station, specify a setting number existing in the connected Ethernet controller setting.

**(c) When the GOT Ethernet Setting Change Category device (GS1900) stores 3**

- Set the GOT IP address or subnet mask for the wireless LAN interface in hexadecimal.  
The following shows the setting range of each item. (Decimal)
- GOT IP address: 0.0.0.0 to 223.255.255.255
  - Subnet mask: 0.0.0.0 to 255.255.255.255
- If you do not use the subnet mask, set the item to 0.0.0.0.  
Example) When the GOT IP address for the wireless LAN interface of GT27 is changed to 192.168.4.20 (decimal)

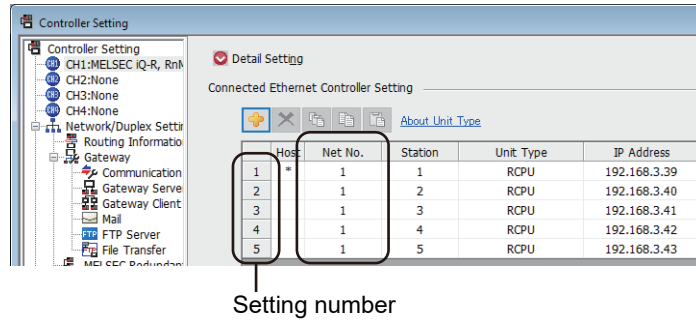

**(d) When the GOT Ethernet Setting Change Category device (GS1900) stores 4**

- Set the GOT IP address or subnet mask for the Ethernet extended port or Ethernet standard port 2 in hexadecimal with GS1903 to GS1906.  
The following shows the setting range of each item. (Decimal)
- GOT IP address: 0.0.0.0 to 223.255.255.255
  - Subnet mask: 0.0.0.0 to 255.255.255.255
- If you do not use the subnet mask, set the item to 0.0.0.0.  
Example) When the GOT IP address for the Ethernet extended port of GT27 is changed to 192.168.3.18 (decimal)

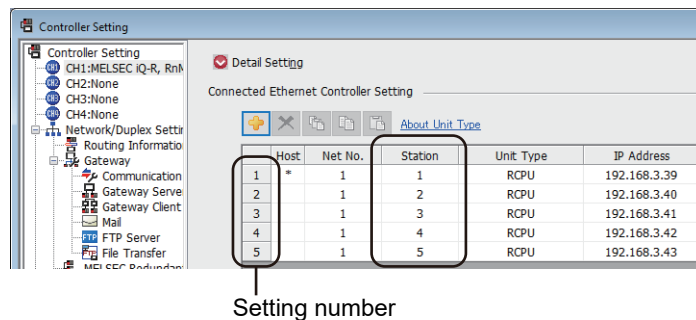

Set whether to disable the Ethernet extended port or Ethernet standard port 2 with GS1907.  
To disable the Ethernet extended port or Ethernet standard port 2, turn on GS1907.b0.

**(e) When the GOT Ethernet Setting Change Category device (GS1900) stores 5**

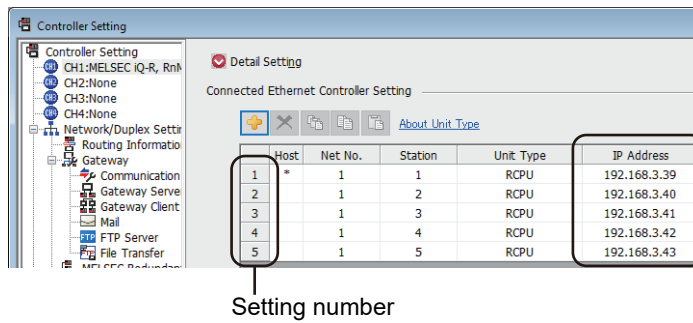

- Channel number and the setting number in the connected Ethernet controller setting  
Set the channel number and setting number of a controller for which the network number is changed.  
The following shows the setting range of each item.  
Channel number: 1 to 4  
Setting number in the connected Ethernet controller setting: 1 to 128
- Network number for a controller  
Set the network number for a controller.  
The setting range varies with the controller.  
For details, refer to the following.  
→ GOT2000 Series Connection Manual for a controller used

**(f) When the GOT Ethernet Setting Change Category device (GS1900) stores 6**

- Channel number and the setting number in the connected Ethernet controller setting  
Set the channel number and setting number of a controller whose station number is changed.  
The following shows the setting range of each item.  
Channel number: 1 to 4  
Setting number in the connected Ethernet controller setting: 1 to 128
- Station number of a controller  
Set the station number of a controller.  
The setting range varies with the controller.  
For details, refer to the following.  
→ GOT2000 Series Connection Manual for a controller used

**(g) When the GOT Ethernet Setting Change Category device (GS1900) stores 7**

- Channel number and the setting number in the connected Ethernet controller setting  
Set the channel number and setting number of a controller whose IP address is changed.  
The following shows the setting range of each item.  
Channel number: 1 to 4  
Setting number in the connected Ethernet controller setting: 1 to 128
- IP address of a controller  
Set the IP address of a controller in hexadecimal.  
The setting range is 0.0.0.0 to 223.255.255.255 (decimal).  
Example) When the IP address of a controller is changed to 192.168.3.45 (decimal)

**(32)Front USB Drive Additional Installation Control (GS1930)**

To use this device, install BootOS version BA or later on the GOT.

- b0: When this bit turns on, even when a data storage is installed to the front USB drive of the GOT, the drive is not recognized.  
Any drive that is recognized before this bit turns on can be used as is.

**(33)Full-screen Display Control signal (GS1998)**

When the Extended Control signal (b7) of the video and RGB input common device is on, the Full-screen Display Control signal specifies the video window or the RGB screen to be displayed in full-screen size.

For the setting other than the following values, the operation is the same as when 0 is stored.

- 0: Does not display the video window in full-screen size. (The size of the video window or the RGB screen corresponds to the setting of each video window or the RGB screen.)
- 1 to 4: Displays the specified number of video window in full-screen size.
- 5: Displays the RGB screen in full-screen size.

**(34)Video Window 1 to 4 and RGB Screen Extended Control signal (GS1999 to GS2006, GS2009 to GS2016, GS2019 to GS2026, GS2029 to GS2036, GS2039 to GS2045)**

While the Extended Control signal (b7) of the video and RGB input common device is on, configure the setting for video windows 1 to 4 or the RGB screen.

The default display position of the video window is the upper left corner of the GOT screen.

Device					Function
Video window 1	Video window 2	Video window 3	Video window 4	RGB window	
GS1999	GS2009	GS2019	GS2029	*1	Specify the channel No. of the video window.

Device					Function
Video window 1	Video window 2	Video window 3	Video window 4	RGB window	
GS2000	GS2010	GS2020	GS2030	GS2039	<p>Specify the display magnification of the video window or RGB screen.</p> <p>The display size, which is specified in the display size setting (width and height) for the video window or RGB screen, is used as the reference.</p> <ul style="list-style-type: none"> <li>• 7: 400%</li> <li>• 8: 200%</li> <li>• 0: 100%</li> <li>• 1: 87.5%</li> <li>• 2: 75%</li> <li>• 3: 62.5%</li> <li>• 4: 50%</li> <li>• 5: 37.5%</li> <li>• 6: 25%</li> <li>• Other than the above: 100%</li> </ul>
GS2001	GS2011	GS2021	GS2031	GS2040	<p>Specify the display size (width) of the video window or RGB screen in dots by using the size at 100% magnification as the reference.</p> <p>The actual display size (width) of the video window or RGB screen is enlarged or reduced according to the set display magnification.</p> <p>Specify the display magnification within a range of the lower resolution in the video image or the GOT.</p>
GS2002	GS2012	GS2022	GS2032	GS2041	<p>Specify the display size (height) of the video window or RGB screen in dots by using the size at 100% magnification as the reference.</p> <p>The actual display size (height) of the video window or RGB screen is enlarged or reduced according to the set display magnification.</p> <p>Specify the display magnification within a range of the lower resolution in the video image or the GOT.</p>
GS2003	GS2013	GS2023	GS2033	GS2042	<p>Using the upper left corner of the GOT screen as the origin point of coordinates, specify the display position (X coordinate) of the video window or RGB screen in dots.</p> <p>Specify the display magnification within a range of the lower resolution in the video image or the GOT.</p>
GS2004	GS2014	GS2024	GS2034	GS2043	<p>Using the upper left corner of the GOT screen as the origin point of coordinates, specify the display position (Y coordinate) of the video window or RGB screen in dots.</p> <p>Specify the display magnification within a range of the lower resolution in the video image or the GOT.</p>
GS2005	GS2015	GS2025	GS2035	GS2044	<p>Specify the origin point (X coordinate) of the clip area of the video image.</p> <p>Specify the display magnification within a range of the resolution of the video image.</p>
GS2006	GS2016	GS2026	GS2036	GS2045	<p>Specify the origin point (Y coordinate) of the clip area of the video image.</p> <p>Specify the display magnification within a range of the resolution of the video image.</p>

\*1 Specify a channel number with b14 and b15 of the device specified for [Video/RGB Input Common].

⇒ 10.6.4 ■ 8 Setting items of [Video/RGB Input Common] device

## 12.2 Correspondence between the setting of [Controller Type] and the controller used

---

Set [Manufacturer] and [Controller Type] in the [Controller Setting] window according to the controller to be used. The following shows the supported controllers and the corresponding settings of [Manufacturer] and [Controller Type] in the [Controller Setting] window.

- ➔■1 [MITSUBISHI ELECTRIC]
- 2 [IAI]
- 3 [Azbil]
- 4 [OMRON]
- 5 [KEYENCE]
- 6 [KOYO]
- 7 [JTEKT]
- 8 [SHARP]
- 9 [SHINKO]
- 10 [CHINO]
- 11 [TOSHIBA]
- 12 [SHIBAURA MACHINE]
- 13 [PANASONIC]
- 14 [HITACHI]
- 15 [Hirata HNC]
- 16 [FUJI]
- 17 [Muratec]
- 18 [YASKAWA]
- 19 [YOKOGAWA]
- 20 [RKC]
- 21 [AB]
- 22 [GE]
- 23 [LS IS]
- 24 [Mitsubishi Electric India]
- 25 [SICK]
- 26 [SIEMENS]
- 27 [CLPA]
- 28 [MODBUS]
- 29 [ODVA]
- 30 [OPC]
- 31 [PROFIBUS]
- 32 [Others]

## ■ 1 [MITSUBISHI ELECTRIC]

Set the channel of the controller to be connected with the GOT.

### (1) Setting

- Step 1 Select [Common] → [Controller Setting] from the menu.
- Step 2 The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3 Refer to the following to configure the settings.

### Point

#### Channel No. 2 to 4

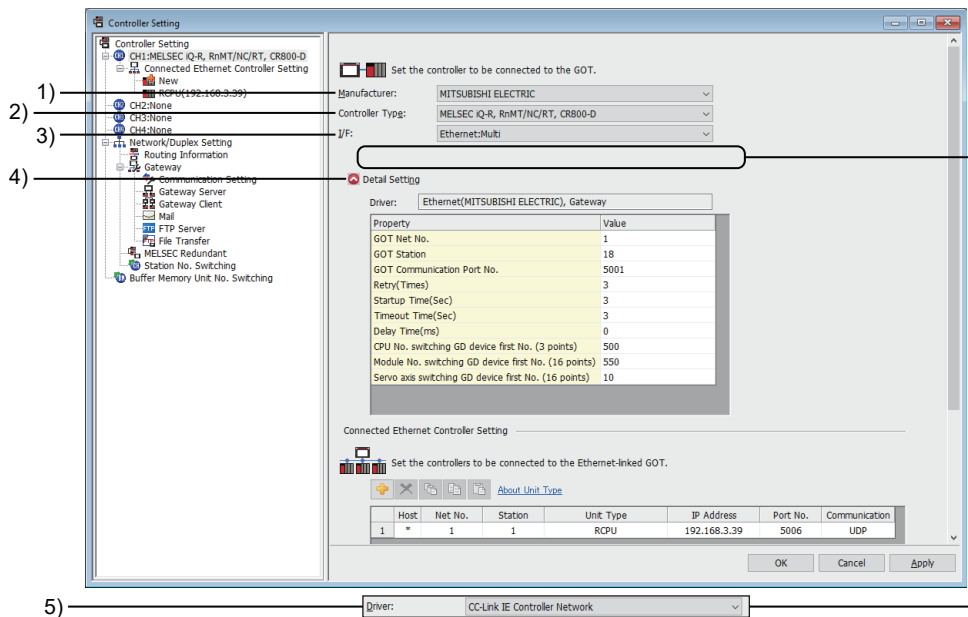

Set channel No. 2 to 4 when using the multi-channel function.

For the details of the multi-channel function, refer to the following.

→ GOT2000 Series Connection Manual (Mitsubishi Products) for GT Works3 Version1

### (2) Setting item

The following shows the setting items.

#### 1) [Manufacturer]

Select [MITSUBISHI ELECTRIC].

Select the manufacturer of the controller connected to the GOT.

## 2) [Controller Type]

The following table lists available controllers.

Controller type	Model name
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]	R00CPU, R01CPU, R02CPU, R04CPU, R08CPU, R16CPU, R32CPU, R120CPU

\*1 The controller is connectable to the GOT through a motion controller or a simple motion module.

\*2 The controller is connectable to the GOT through a Motion module.

### 3) [I/F]

Available interfaces differ depending on the GOT used.

Set [I/F] according to the interface used and the position of the communication unit mounted on the GOT.

### 4) [Detail Setting]

Configure the settings including the baud rate and the data length of the communication driver used.

### 5) [Driver]

This item appears when communication drivers are selectable according to the settings of [Controller Type] and [I/F].

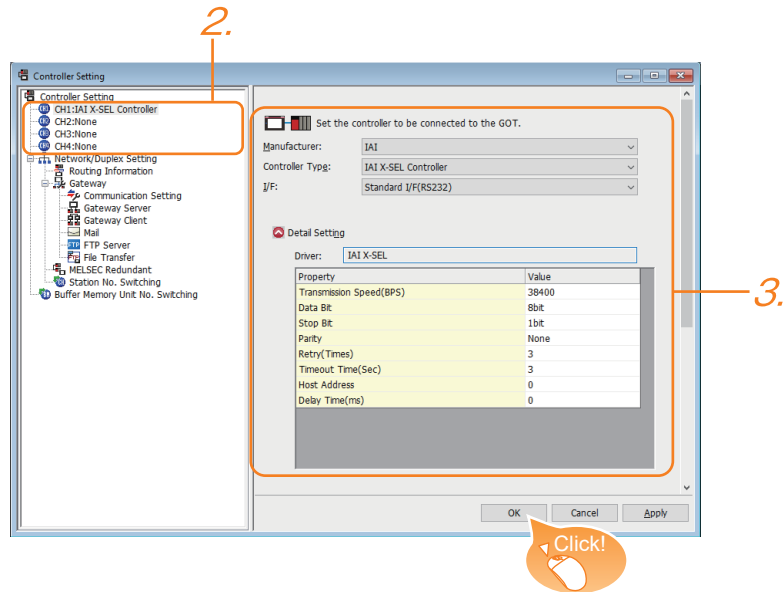

Select the communication driver to be written to the GOT.

Refer to the following to configure the setting.

→GOT2000 Series Connection Manual (Mitsubishi Products) for GT Works3 Version1

## ■2 [IAI]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [IAI]
  - [Controller Type]  
When connecting to X-SEL, SSEL, ASEL, or PSEL: [IAI X-SEL Controller]  
When connecting to PCON, ACON, SCON, or ERC2: [IAI ROBO CYLINDER]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

### Point

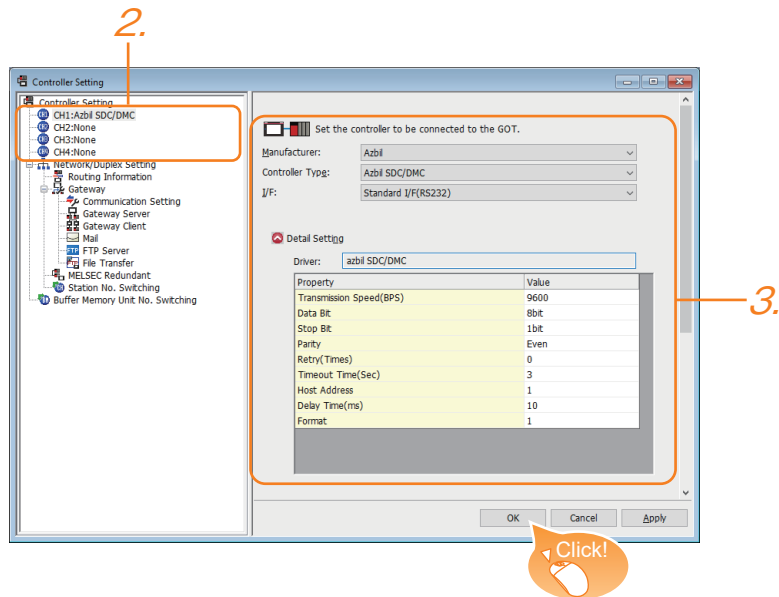

The controller setting can be checked in [I/F Communication Setting].

For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

### ■ 3 [Azbil]

Set the channel of the controller to be connected with the GOT.

**Step 1** Select [Common] → [Controller Setting] from the menu.

**Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.

**Step 3** Set the following items.

- [Manufacturer]: [Azbil]
- [Controller Type]  
When connecting to DMC50 or AHC2001: [Azbil DMC50]  
When connecting to the models other than DMC50: [Azbil SDC/DMC]
- [I/F]: The interface to be used
- [Detail Setting]: Configure the settings according to the use environment.

**Step 4** When you have completed the setting, click the [OK] button.

#### Point

The controller setting can be checked in [I/F Communication Setting].

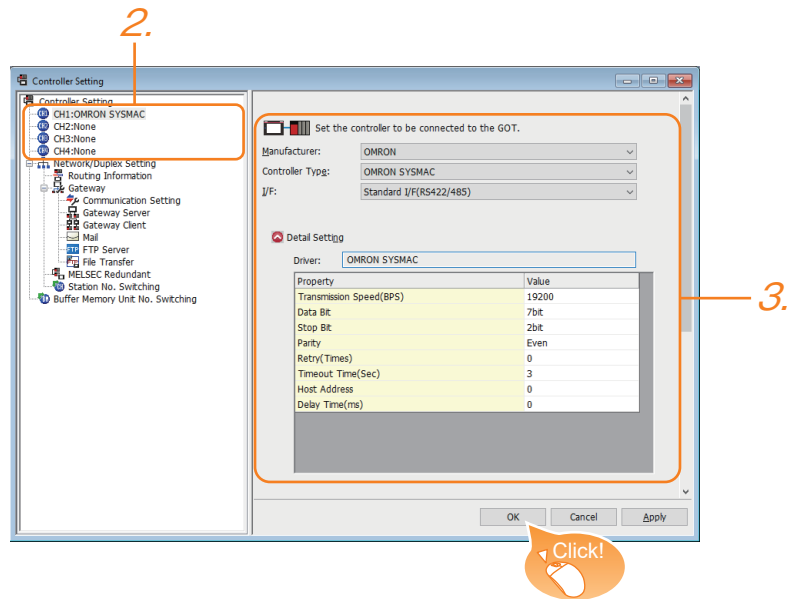

For details, refer to the following.

⇒ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## ■4 [OMRON]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [OMRON]
  - [Controller Type]: select either of the following according to the model to be connected.  
[OMRON SYSMAC]  
[OMRON NJ/NX]  
[OMRON THERMAC/INPANEL NEO]  
[OMRON Digital Temperature Controller]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

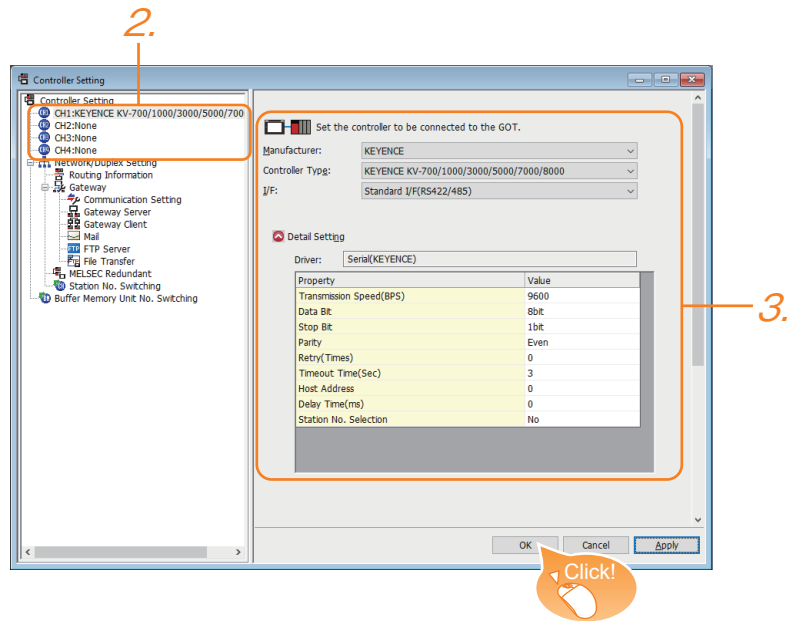

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## ■ 5 [KEYENCE]

Set the channel of the controller to be connected with the GOT.

**Step 1** Select [Common] → [Controller Setting] from the menu.

**Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.

**Step 3** Set the following items.

- [Manufacturer]: [KEYENCE]
- [Controller Type]: [KEYENCE KV-700/1000/3000/5000/7000/8000]
- [I/F]: The interface to be used
- [Detail Setting]: Configure the settings according to the use environment.

**Step 4** When you have completed the setting, click the [OK] button.

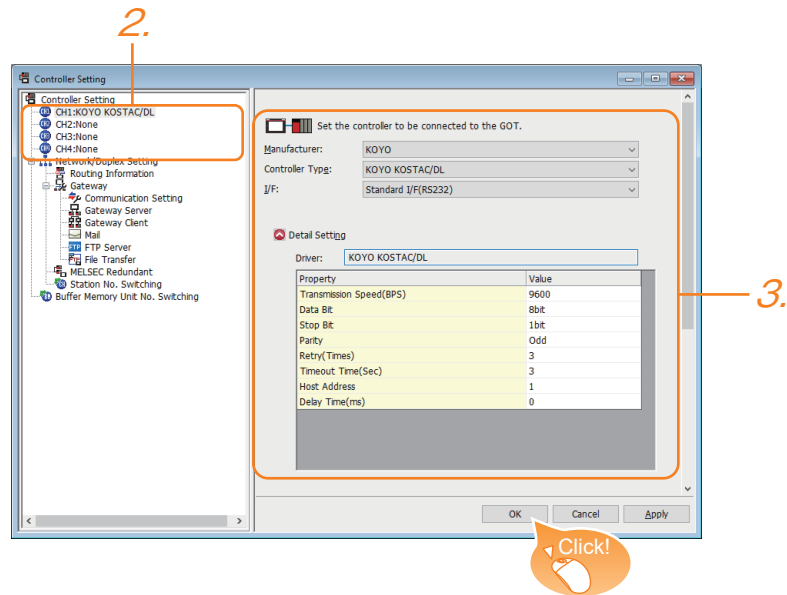

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## ■6 [KOYO]

Set the channel of the controller to be connected with the GOT.

- Step 1 Select [Common] → [Controller Setting] from the menu.
- Step 2 The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3 Set the following items.
  - [Manufacturer]: [KOYO]
  - [Controller Type]: [KOYO KOSTAC/DL]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4 When you have completed the setting, click the [OK] button.

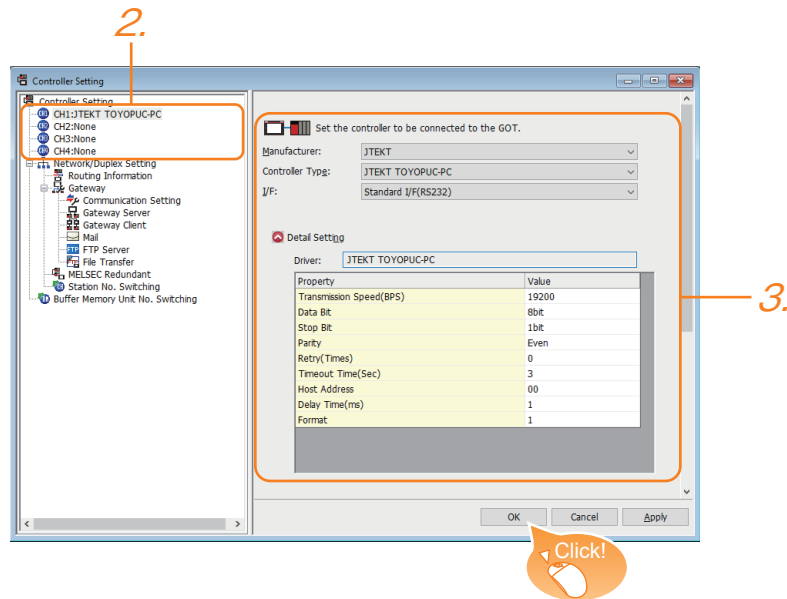

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

⇒ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## 7 [JTEKT]

Set the channel of the controller to be connected with the GOT.

**Step 1** Select [Common] → [Controller Setting] from the menu.

**Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.

**Step 3** Set the following items.

- [Manufacturer]: [JTEKT]
- [Controller Type]: [JTEKT TOYOPUC-PC]
- [I/F]: The interface to be used
- [Detail Setting]: Configure the settings according to the use environment.

**Step 4** When you have completed the setting, click the [OK] button.

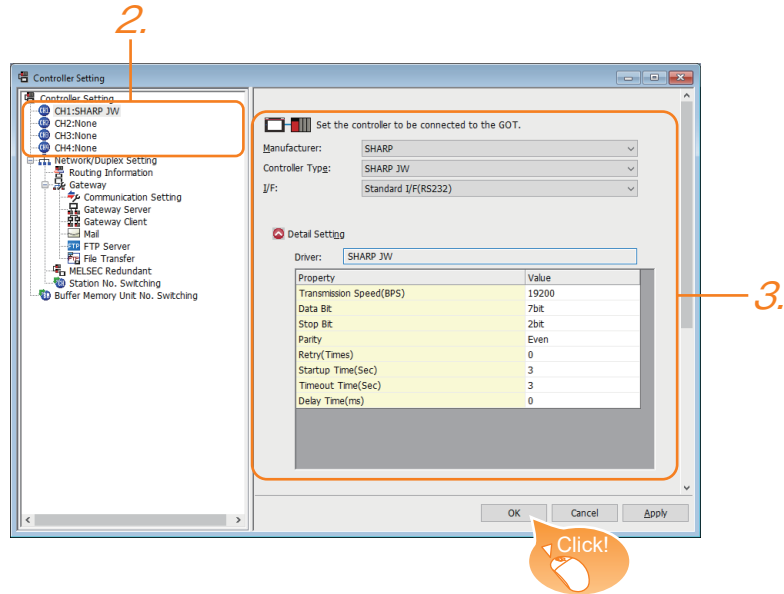

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## ■8 [SHARP]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [SHARP]
  - [Controller Type]: [SHARP JW]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

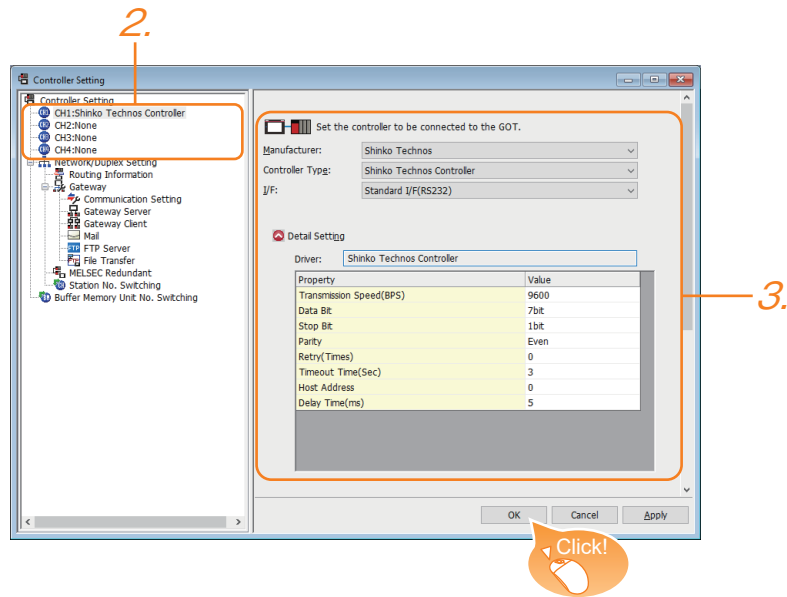

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

⇒ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## 9 [SHINKO]

Set the channel of the controller to be connected with the GOT.

- Step 1 Select [Common] → [Controller Setting] from the menu.
- Step 2 The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3 Set the following items.
  - [Manufacturer]: [SHINKO]
  - [Controller Type]: [Shinko Technos Controller]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4 When you have completed the setting, click the [OK] button.

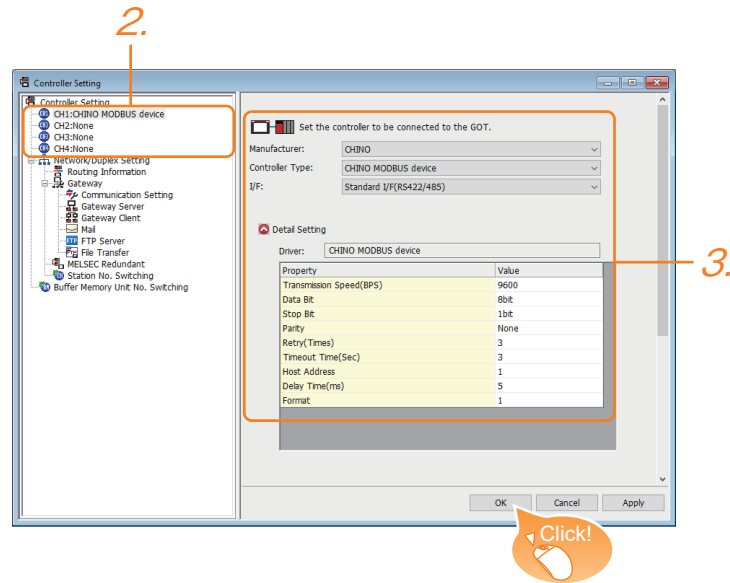

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## 10 [CHINO]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [CHINO]
  - [Controller Type]: [CHINO MODBUS device]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

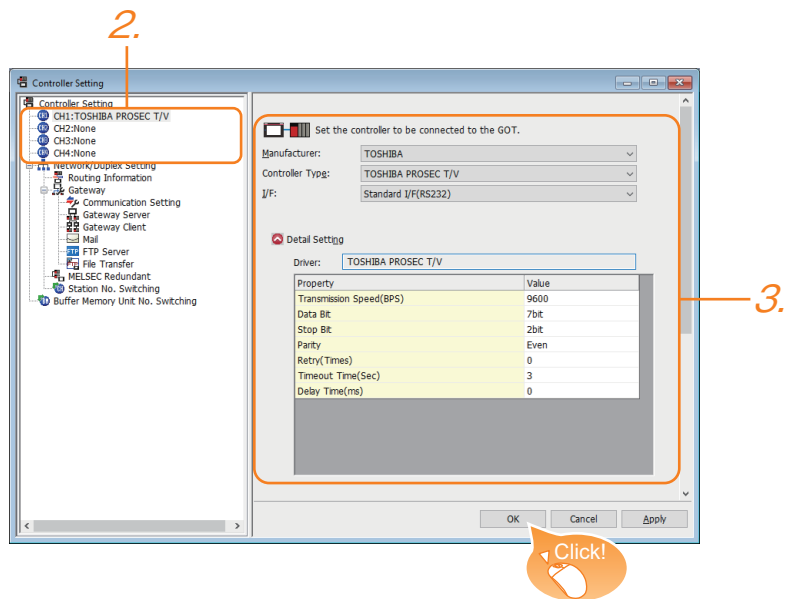

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

⇒ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## 11 [TOSHIBA]

Set the channel of the controller to be connected with the GOT.

**Step 1** Select [Common] → [Controller Setting] from the menu.

**Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.

**Step 3** Set the following items.

- [Manufacturer]: [TOSHIBA]
- [Controller Type]: select either of the following according to the model to be connected.  
[TOSHIBA PROSEC T/V]  
[TOSHIBA Unified Controller nv]
- [I/F]: The interface to be used
- [Detail Setting]: Configure the settings according to the use environment.

**Step 4** When you have completed the setting, click the [OK] button.

### Point

The controller setting can be checked in [I/F Communication Setting].

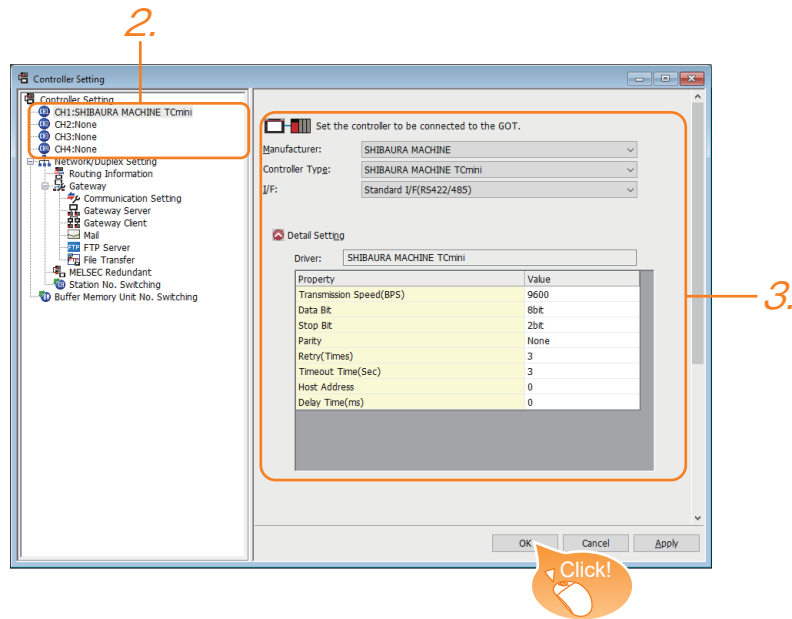

For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## ■ 12 [SHIBAURA MACHINE]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [SHIBAURA MACHINE]
  - [Controller Type]: [SHIBAURA MACHINE TCmini]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## ■ 13 [PANASONIC]

Set the channel of the controller to be connected with the GOT.

**Step 1** Select [Common] → [Controller Setting] from the menu.

**Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.

**Step 3** Set the following items.

- [Manufacturer]: [Panasonic]
- [Controller Type]: select either of the following according to the model to be connected.
  - [Panasonic MEWNET-FP]
  - [Panasonic FP7]
  - [Panasonic MINAS A4]
  - [Panasonic MINAS A5]
- [I/F]: The interface to be used
- [Detail Setting]: Configure the settings according to the use environment.

**Step 4** When you have completed the setting, click the [OK] button.

### Point

The controller setting can be checked in [I/F Communication Setting].

For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 1) for GT Works3 Version1

## ■ 14 [HITACHI]

Set the channel of the controller to be connected with the GOT.

**Step 1** Select [Common] → [Controller Setting] from the menu.

**Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.

**Step 3** Set the following items.

- [Manufacturer]: [HITACHI]
- [Controller Type]: select either of the following according to the model to be connected.  
[HITACHI IES EHV]  
[HITACHI IES HIDIC H]  
[HITACHI S10VE]  
[HITACHI S10mini/S10V]
- [I/F]: The interface to be used
- [Driver]: This item appears when [Controller Type] is set to [HITACHI HIDIC H].  
[HITACHI IES HIDIC H]  
[HITACHI IES HIDIC H(Protocol2)]
- [Detail Setting]: Configure the settings according to the use environment.

**Step 4** When you have completed the setting, click the [OK] button.

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■ 15 [Hirata HNC]

For the setting details, contact our company.

## ■ 16 [FUJI]

Set the channel of the controller to be connected with the GOT.

- Step 1 Select [Common] → [Controller Setting] from the menu.
- Step 2 The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3 Set the following items.
  - [Manufacturer]: [FUJI]
  - [Controller Type]: select either of the following according to the model to be connected.
    - [FUJI MICREX-F]
    - [FUJI Temperature Controller/Digital Controller]
    - [FUJI MICREX-SX SPH]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4 When you have completed the setting, click the [OK] button.

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

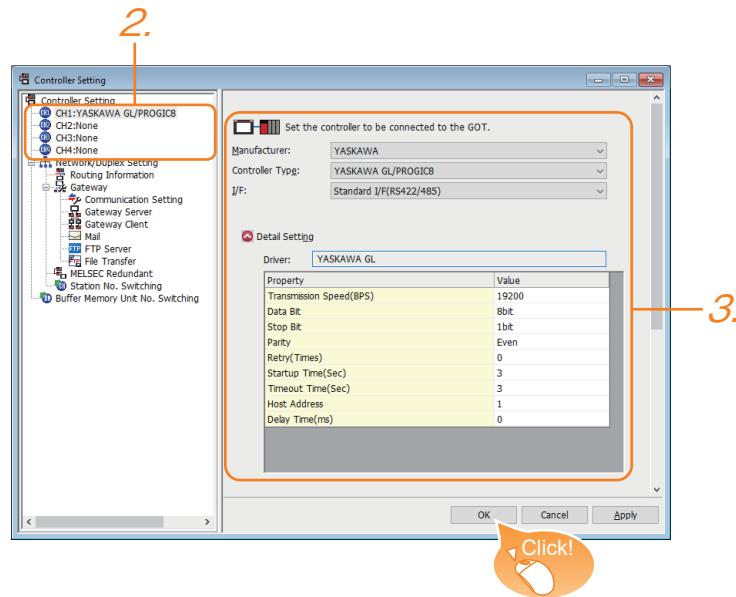

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■ 17 [Muratec]

For the setting details, contact our company.

## ■ 18 [YASKAWA]

Set the channel of the controller to be connected with the GOT.

**Step 1** Select [Common] → [Controller Setting] from the menu.

**Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.

**Step 3** Set the following items.

- [Manufacturer]: [YASKAWA]
- [Controller Type]: select either of the following according to the model to be connected.
  - [YASKAWA GL/PROGIC8]
  - [YASKAWA CP9200(H)]
  - [YASKAWA CP9300MS(MC compatible)]
  - [YASKAWA MP2000/MP900/CP9200SH]
  - [YASKAWA MP3000]
  - [YASKAWA Robot Controller]
- [I/F]: The interface to be used
- [Detail Setting]: Configure the settings according to the use environment.

**Step 4** When you have completed the setting, click the [OK] button.

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

⇒ GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■ 19 [YOKOGAWA]

Set the channel of the controller to be connected with the GOT.

- Step 1 Select [Common] → [Controller Setting] from the menu.
- Step 2 The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3 Set the following items.
  - [Manufacturer]: [YOKOGAWA]
  - [Controller Type]: select either of the following according to the model to be connected.  
[YOKOGAWA STARDOM/FA500/FA-M3]  
[YOKOGAWA GREEN/UT100/UT2000/UTAdvanced]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4 When you have completed the setting, click the [OK] button.

### Point

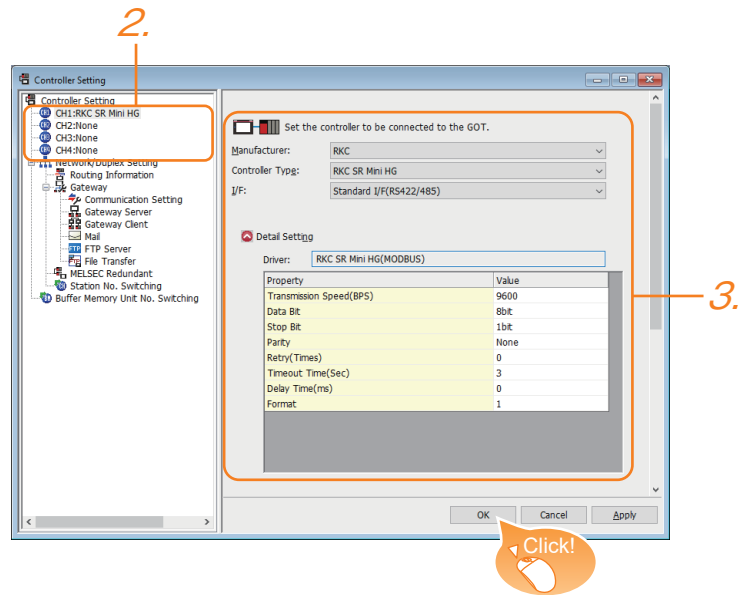

The controller setting can be checked in [I/F Communication Setting].

For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■20 [RKC]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [RKC]
  - [Controller Type]: [RKC SR Mini HG]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

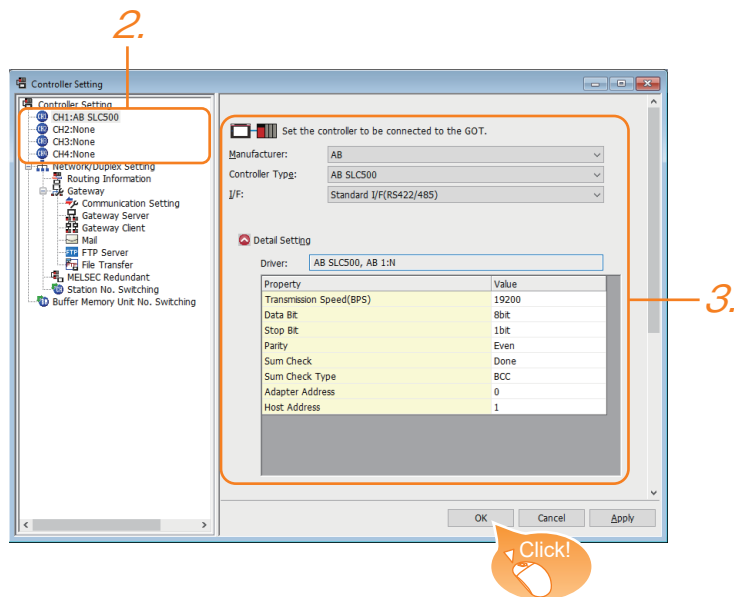

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

⇒ GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■21 [AB]

Set the channel of the controller to be connected with the GOT.

**Step 1** Select [Common] → [Controller Setting] from the menu.

**Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.

**Step 3** Set the following items.

- [Manufacturer]: [AB]
- [Controller Type]: select either of the following according to the model to be connected.
  - [AB SLC500]
  - [AB MicroLogix]
  - [AB MicroLogix (Extended)]
  - [AB Control/CompactLogix]
  - [AB Control/CompactLogix(Tag)]
- [I/F]: The interface to be used
- [Detail Setting]: Configure the settings according to the use environment.

**Step 4** When you have completed the setting, click the [OK] button.

### Point

The controller setting can be checked in [I/F Communication Setting].

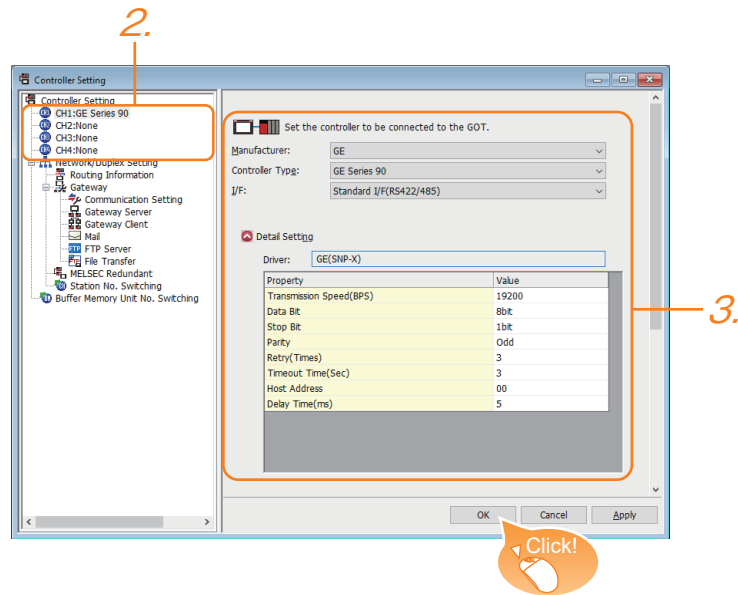

For details, refer to the following.

→GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■22 [GE]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [GE]
  - [Controller Type]: [GE Series 90]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

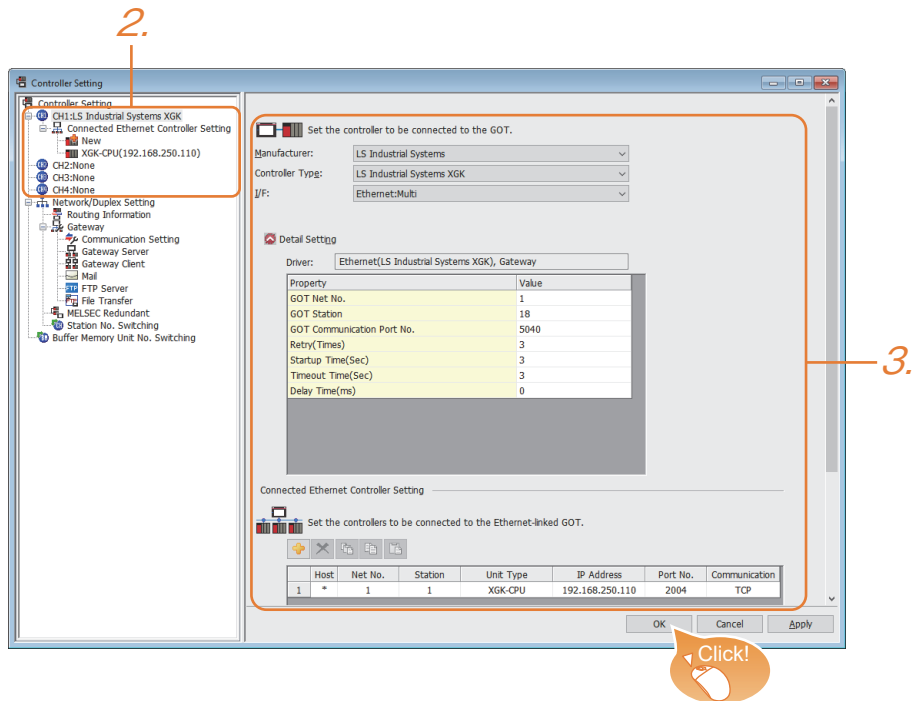

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

⇒ GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■ 23 [LS IS]

Set the channel of the controller to be connected with the GOT.

**Step 1** Select [Common] → [Controller Setting] from the menu.

**Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.

**Step 3** Set the following items.

- [Manufacturer]: [LS IS]
- [Controller Type]: select either of the following according to the model to be connected.  
[LS Industrial Systems XGK]  
[LS Industrial Systems MASTER-K]
- [I/F]: The interface to be used
- [Detail Setting]: Configure the settings according to the use environment.
- [Connected Ethernet Controller Setting]: Register the controller to be connected.

**Step 4** When you have completed the setting, click the [OK] button.

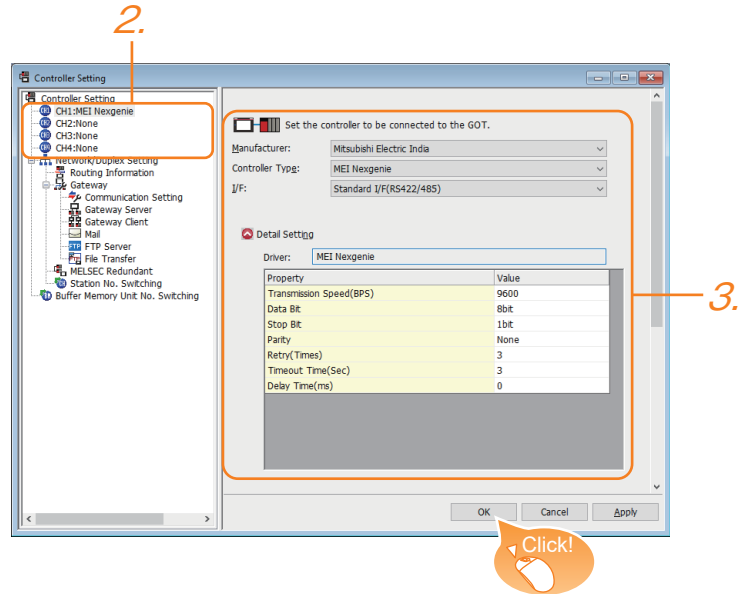

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■24 [Mitsubishi Electric India]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [Mitsubishi Electric India]
  - [Controller Type]: [MEI Nexgenie]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

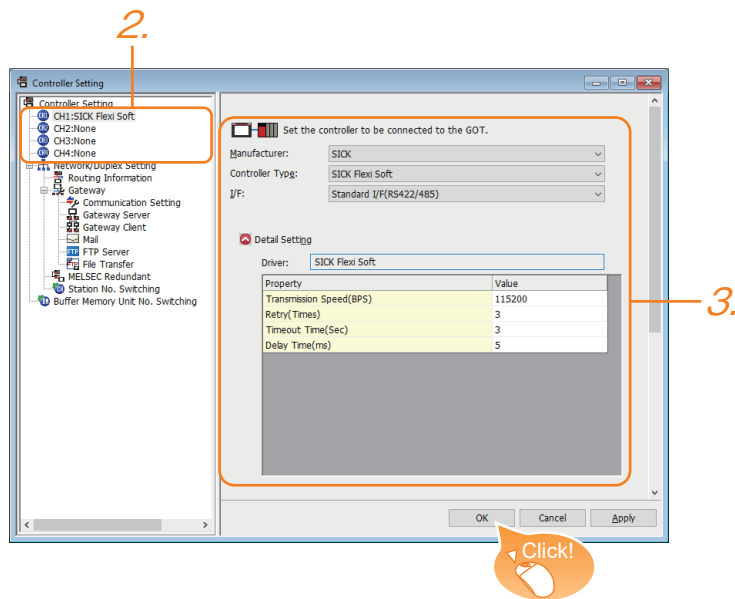

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

⇒ GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■ 25 [SICK]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [SICK]
  - [Controller Type]: [SICK Flexi Soft]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■26 [SIEMENS]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [SIEMENS]
  - [Controller Type]: select either of the following according to the model to be connected.  
[SIEMENS S7-200]  
[SIEMENS S7-200(CN/SMART)]  
[SIEMENS S7-300/400]  
[SIEMENS S7(Ethernet)]  
[SIEMENS OP(Ethernet)]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

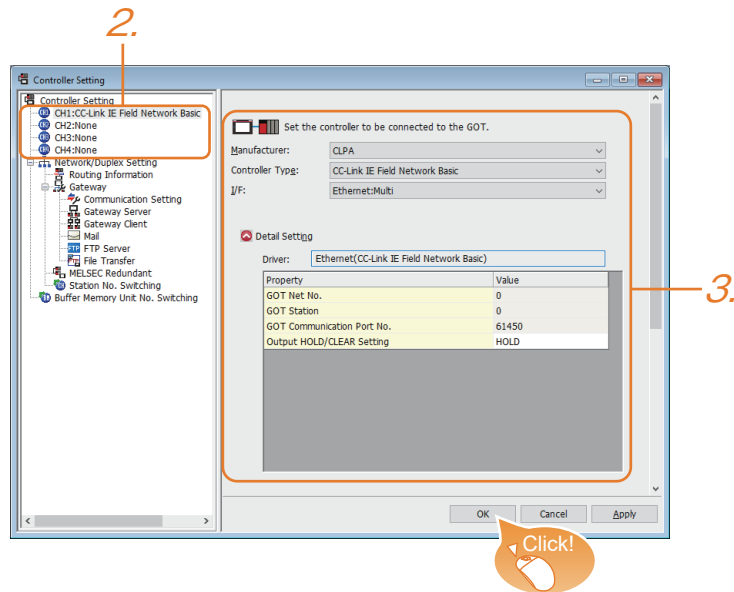

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→GOT2000 Series Connection Manual (Non-Mitsubishi Products 2) for GT Works3 Version1

## ■ 27 [CLPA]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [CLPA]
  - [Controller Type]: select either of the following according to the model to be connected.  
[CC-Link IE Field Network Basic]  
[SLMP]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

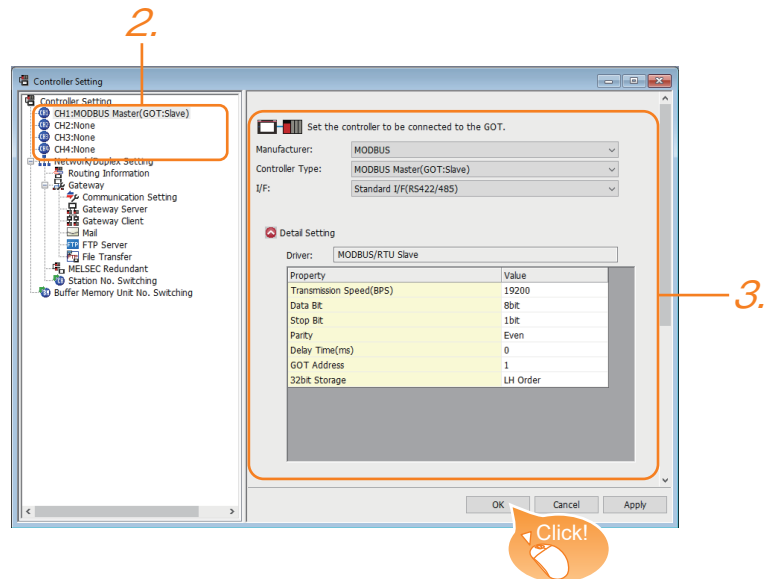

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→ GOT2000 Series Connection Manual (Microcomputers, MODBUS/Fieldbus Products, Peripherals) For GT Works3 Version1

## ■28 [MODBUS]

Set the channel of the controller to be connected with the GOT.

- Step 1 Select [Common] → [Controller Setting] from the menu.
- Step 2 The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3 Set the following items.
  - [Manufacturer]: [MODBUS]
  - [Controller Type]: select one of the following items according to the controller to be connected.  
[MODBUS Slave(GOT:Master)]  
[MODBUS Master(GOT:Slave)]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4 When you have completed the setting, click the [OK] button.

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

- GOT2000 Series Connection Manual (Microcomputers, MODBUS/Fieldbus Products, Peripherals) For GT Works3 Version1

## ■ 29 [ODVA]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [ODVA]
  - [Controller Type]: [DeviceNet]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

### Point

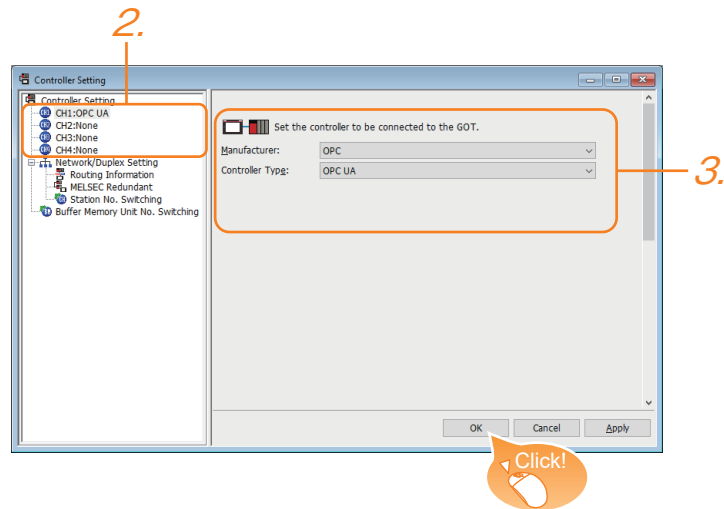

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

→ GOT2000 Series Connection Manual (Microcomputers, MODBUS/Fieldbus Products, Peripherals) For GT Works3 Version1

## ■ 30 [OPC]

Set the channel of the controller to be connected with the GOT.

- Step 1 Select [Common] → [Controller Setting] from the menu.
- Step 2 The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3 Set the following items.
  - [Manufacturer]: [OPC]
  - [Controller Type]: [OPC UA]
- Step 4 When you have completed the setting, click the [OK] button.

## ■ 31 [PROFIBUS]

Set the channel of the controller to be connected with the GOT.

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3** Set the following items.
- [Manufacturer]: [PROFIBUS]
  - [Controller Type]: [PROFIBUS DP]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4** When you have completed the setting, click the [OK] button.

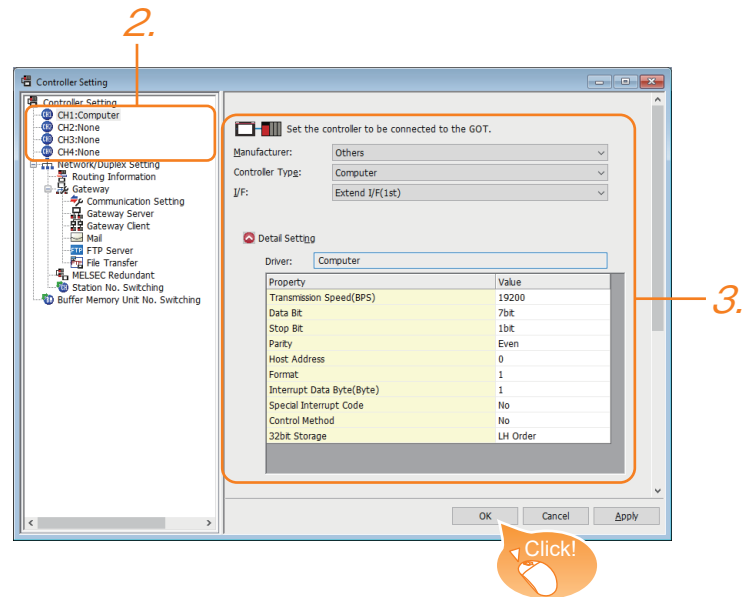

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

- GOT2000 Series Connection Manual (Microcomputers, MODBUS/Fieldbus Products, Peripherals) For GT Works3 Version1

## ■ 32 [Others]

Set the channel of the controller to be connected with the GOT.

- Step 1 Select [Common] → [Controller Setting] from the menu.
- Step 2 The [Controller Setting] window appears. select the channel No. to be used from the list menu.
- Step 3 Set the following items.
  - [Manufacturer]: [Other]
  - [Controller Type]: [Computer]
  - [I/F]: The interface to be used
  - [Detail Setting]: Configure the settings according to the use environment.
- Step 4 When you have completed the setting, click the [OK] button.

### Point

The controller setting can be checked in [I/F Communication Setting].  
For details, refer to the following.

- ⇒ GOT2000 Series Connection Manual (Microcomputers, MODBUS/Fieldbus Products, Peripherals) For GT Works3 Version1

## 12.3 Device Range and Settings of Mitsubishi Electric Equipment

---

This section describes the range of devices settable in GT Designer3 for each of Mitsubishi Electric products connected to the GOT.

The settable range varies with the selection for [Controller Type] in the [Controller Setting] window.

Configure the device setting according to the specifications of the controller to be used.

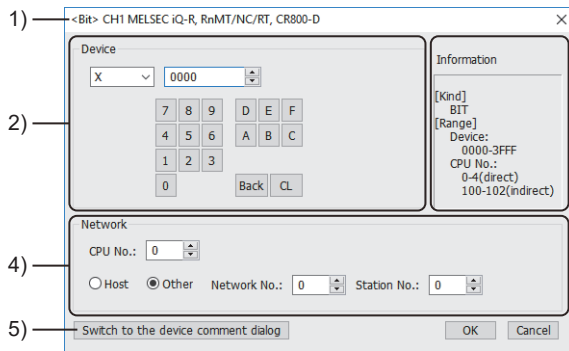

Device specifications differ depending on the controller model even among the controllers of the same series.

If a non-existent device or a device number out of the range is set for an object, other objects for which correct devices are set may not be monitored.

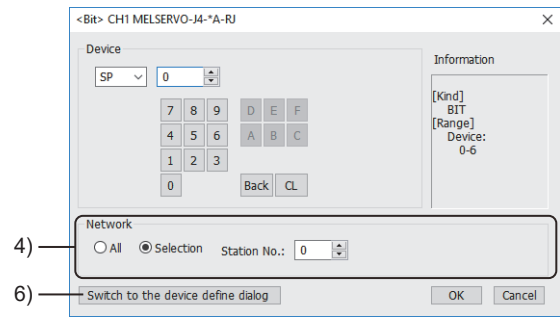

- 12.3.1 Device setting dialog (Mitsubishi Electric equipment)
- 12.3.2 [MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]
- 12.3.3 [MELSEC iQ-L]
- 12.3.4 [MELSEC iQ-F]
- 12.3.5 [MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700]
- 12.3.6 [MELSEC QnA, MELDAS C6\*]
- 12.3.7 [MELSEC-L]
- 12.3.8 [MELSEC-A]
- 12.3.9 [MELSEC-FX]
- 12.3.10 [MELSEC-WS]
- 12.3.11 [MELIPC]
- 12.3.12 [MELSERVO-J2M-P8A]
- 12.3.13 [MELSERVO-J2M-\*DU]
- 12.3.14 [MELSERVO-J2S-\*A]
- 12.3.15 [MELSERVO-J2S-\*CP]
- 12.3.16 [MELSERVO-J2S-\*CL]
- 12.3.17 [MELSERVO-J3-\*A]
- 12.3.18 [MELSERVO-J3-\*T]
- 12.3.19 [MELSERVO-J4-\*A, -JE-\*A]
- 12.3.20 [MELSERVO-J4-\*A-RJ]
- 12.3.21 [MELSERVO-JE-\*C]
- 12.3.22 [MELSERVO-J5(W)-\*G(-RJ), -JET-\*G]
- 12.3.23 [FREQROL 500/700/800, SENSORLESS SERVO]
- 12.3.24 [FREQROL 800]
- 12.3.25 [FREQROL 800/E700NE(Batch monitor)]
- 12.3.26 [Laser Displacement Sensor MH11]

## 12.3.1 Device setting dialog (Mitsubishi Electric equipment)

Set a device to be monitored.

[MELSEC iQ-R, RnMT/NC/RT, CR800-D]

[MELSERVO-J4-\*A-RJ]

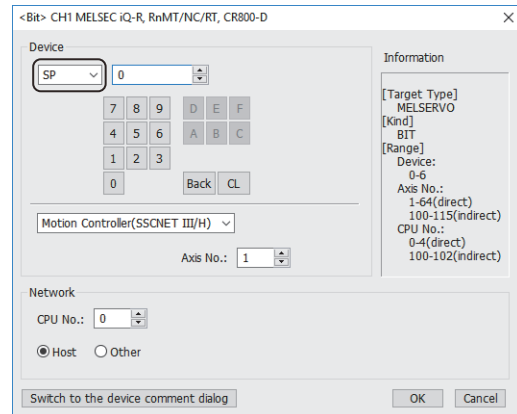

- 1) Title  
Data type and channel number of the device to be set
- 2) [Device]  
Set the device name and device number.  
If a bit number needs to be specified, the setting item is displayed.  
Example) Setting of X0000

The setting items vary with the selected device name.

When [X] is selected for the device name

When [SP] is selected for the device name

- 3) [Information]  
Displays the setting range of each setting item according to the selected device.
- 4) [Network]  
Set the station number of the controller to be monitored.  
The setting items depend on the controller setting.
  - ➡■1 Network setting for connection to the Mitsubishi Electric PLC
  - 2 Network setting for connection to the Mitsubishi Electric servo amplifier
  - 3 Network setting for connection to the Mitsubishi Electric inverter

5) [Switch to the device comment dialog] button

You can open the device comment setting dialog to check the device comments imported to GT Designer3.

→6.1.6 ■5 Device comment setting dialog

6) [Switch to the device define dialog] button

You can open the device definition setting dialog to check the definitions of the virtual servo amplifier or inverter devices.

→6.1.6 ■6 Device definition setting dialog

For the formats of devices, refer to the following.

→6.1.1 Formats of devices, labels, and tags

For the specifications of each device, refer to the following.

- 12.3.2 [MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]
- 12.3.3 [MELSEC iQ-L]
- 12.3.4 [MELSEC iQ-F]
- 12.3.5 [MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700]
- 12.3.6 [MELSEC QnA, MELDAS C6\*]
- 12.3.7 [MELSEC-L]
- 12.3.8 [MELSEC-A]
- 12.3.9 [MELSEC-FX]
- 12.3.10 [MELSEC-WS]
- 12.3.11 [MELIPC]
- 12.3.12 [MELSERVO-J2M-P8A]
- 12.3.13 [MELSERVO-J2M-\*DU]
- 12.3.14 [MELSERVO-J2S-\*A]
- 12.3.15 [MELSERVO-J2S-\*CP]
- 12.3.16 [MELSERVO-J2S-\*CL]
- 12.3.17 [MELSERVO-J3-\*A]
- 12.3.18 [MELSERVO-J3-\*T]
- 12.3.19 [MELSERVO-J4-\*A, -JE-\*A]
- 12.3.20 [MELSERVO-J4-\*A-RJ]
- 12.3.21 [MELSERVO-JE-\*C]
- 12.3.22 [MELSERVO-J5(W)-\*G(-RJ), -JET-\*G]
- 12.3.23 [FREQROL 500/700/800, SENSORLESS SERVO]
- 12.3.24 [FREQROL 800]
- 12.3.25 [FREQROL 800/E700NE(Batch monitor)]
- 12.3.26 [Laser Displacement Sensor MH11]

## 1 Network setting for connection to the Mitsubishi Electric PLC

Configure the following settings for connecting to a Mitsubishi Electric PLC.

Example) Device setting dialog for [MELSEC iQ-R, RnMT/NC/RT, CR800-D]

### 1) [CPU No.]

Set the CPU number of the controller.

⇒ (1) Setting the CPU No.

### 2) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

When monitoring link relay (B) and link register (W) assigned in link parameter and network parameter, select [Host].

If [Other] is selected, the cyclic transmission will be changed to the transient transmission irrespective of the network type, resulting in delay of the object display.

Set RX, RY, RWw, RWr, LB, or LW as [Host] when monitoring a cyclic device.

### 3) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

### 4) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

### 5) [Control System/Standby System]

This item can be set only when [Use the function of MELSEC Redundant] is selected in [MELSEC Redundant] of the [Controller Setting] window.

The following shows the items to be selected.

- [Control System]
- [Standby System]

Example) Display terminology of the control system

1-1/1-S W0.b0  
┆

[-S] is displayed for a device of the standby system.

⇒ 5.5.3 Configuring the setting of the MELSEC redundant function

## (1) Setting the CPU No.

The setting range depends on the system configuration of the monitoring target.

Item	Description
When monitoring a single CPU system	Set the CPU No. to [0].
When monitoring a multiple CPU system	Set the CPU No. to any of [1] to [4].
When GT SoftGOT2000 on the PC CPU module is connected using the bus connection	Do not specify 0 for [CPU No.]. When 0 is specified, the monitoring target is set to the PC CPU module that cannot be monitored.
When monitoring an inverter	Set the CPU No. to [0].

To specify a CPU number with the value of a GOT data register (GD), refer to the following.

→(2) Indirect specification of a CPU number

## (2) Indirect specification of a CPU number

To set a GOT data register (GD) to specify a CPU number, set [CPU No. switching GD device first No. (3 points)] in the [Controller Setting] window.

→5.5.1 ■4 [Controller Setting]

In GT SoftGOT2000, set [CPU No. switching GD device first No. (3 points)] in the [Communication Setup] dialog.

→GT SoftGOT2000 Version1 Operating Manual

The following shows the correspondence between CPU numbers and GOT data registers (GD).

Example) When 500 is set to [CPU No. switching GD device first No. (3 points)]

Three consecutive devices, starting from GD500, are set to specify CPU numbers.

CPU number	GOT data registers (GD)	Setting range
100	GD500	[1] to [4] (Setting an invalid value causes a communication timeout error.)
101	GD501	
102	GD502	

Upon the GOT startup, 0 is stored in the specified GD devices until values are set.

If you set the GD devices on the screen that appears upon the GOT startup, a communication timeout error occurs.

To avoid such situation, set the GD devices so that their values are retained at a power failure.

→5.2.12 Configuring the settings for retaining GOT internal device data at power failure ([Internal Device Retention])

When specifying GD devices for multiple channels, set different GD devices to [CPU No. switching GD device first No. (3 points)].

GD10 to GD25 are used to specify the monitoring targets, such as the station number of an inverter.

When setting GD devices for a different channel, set different GD devices to [CPU No. switching GD device first No. (3 points)].

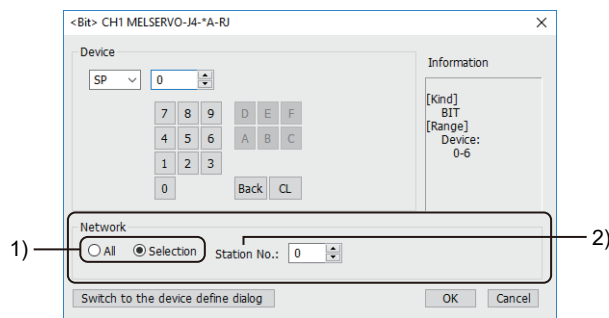

Do not change the value of the specified device while a touch switch with the bit momentary is being pressed.

Doing so may cause the touch switch to exhibit unintended behavior.

## 2 Network setting for connection to the Mitsubishi Electric servo amplifier

Example) Device setting dialog of [MELSERVO-J4-\*A-RJ]

### 1) Monitor target specification

Set the monitoring target of the set device.

Item	Description
[All]	Select this item when writing data to all servo amplifiers connected. During a monitoring, the servo amplifier of the station No. 0 is monitored. When inputting data by the numerical input, the data is written to all servo amplifiers connected during inputting and the servo amplifier of the station No. 0 is monitored during other than inputting (displaying). When [All] is selected for a device, network No. 0 and station No. FF are displayed in the device list window and the printed report.
[Selection]	Specify the station number of a servo amplifier to be monitored.

### 2) [Station No.]

This item appears when [Selection] is selected for the monitor target specification.

The setting range is [0] to [31] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

⇒(1) Indirect specification of a station number (for connection to a servo amplifier)

For the network settings of [MELSERVO-JE-\*C] and [MELSERVO-J5(W)-\*G(-RJ), -JET-\*G], refer to the following.

⇒(2) For the network settings for [MELSERVO-JE-\*C] and [MELSERVO-J5(W)-\*G(-RJ), -JET-\*G]

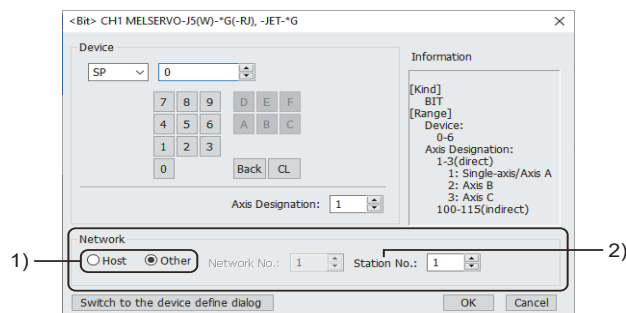

### (1) Indirect specification of a station number (for connection to a servo amplifier)

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the correspondence between station number setting values and GOT data registers (GD).

Station No.	GOT data registers (GD)	Setting range
100	GD10	[0] to [31] Setting a value outside the range causes a timeout error.
101	GD11	
:	:	
114	GD24	
115	GD25	

### (2) For the network settings for [MELSERVO-JE-\*C] and [MELSERVO-J5(W)-\*G(-RJ), -JET-\*G]

1) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

2) [Station No.]

This item appears when [Other] is selected for the station type. Specify a station number.

**■ 3 Network setting for connection to the Mitsubishi Electric inverter**

- (1) Network setting for [FREQROL 500/700/800, SENSORLESS SERVO]
- (3) Network setting for [FREQROL 800]
- (4) Network setting for [FREQROL 800/E700NE(Batch monitor)]

**(1) Network setting for [FREQROL 500/700/800, SENSORLESS SERVO]**

1) [Station No.]

Set the station number of the inverter to be monitored.

The setting range is [0] to [31] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

- (2) Indirect specification of a station number (for connecting an inverter)

**(2) Indirect specification of a station number (for connecting an inverter)**

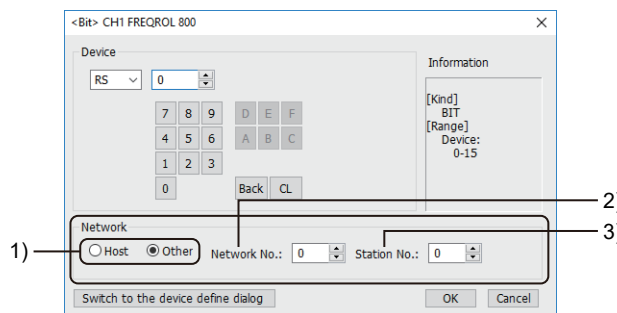

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the correspondence between station number setting values and GOT data registers (GD).

Station No.	GOT data registers (GD)	Setting range
100	GD10	[0] to [31] Setting a value outside the above range causes a device range error.
101	GD11	
:	:	
114	GD24	
115	GD25	

Do not change the value of the specified device while a touch switch with the bit momentary is being pressed. Doing so may cause the touch switch to exhibit unintended behavior.

**(3) Network setting for [FREQROL 800]**

1) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

## 2) [Network No.]

This item appears when [Other] is selected for the station type.

The setting depends on the connection type between the GOT and the inverter.

Connection type	Description
Serial communication connection	[Network No.] is not used.
Ethernet connection	Specify a network number. The setting range is [1] to [239].

## 3) [Station No.]

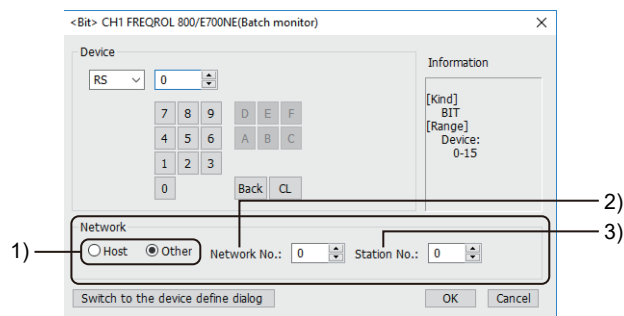

This item appears when [Other] is selected for the station type.

Set the station number of the inverter to be monitored.

The setting depends on the connection type between the GOT and the inverter.

Connection type	Description
Serial communication connection	The setting range is [0] to [31] (direct) or [100] to [115] (indirect). For indirect specification of a station number, refer to the following. → (2) Indirect specification of a station number (for connecting an inverter)
Ethernet connection	The setting range is [1] to [120].

### (4) Network setting for [FREQROL 800/E700NE(Batch monitor)]

#### 1) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 2) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

The setting range is [1] to [239].

#### 3) [Station No.]

This item appears when [Other] is selected for the station type.

Set the station number of the inverter to be monitored.

The setting range is [1] to [120].

## 12.3.2 [MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]

ECCDI*2	Encoder communication circuit diagnosis instruction	Decimal	⇒ 12.3.2 ■2 Setting virtual bit devices for servo amplifiers ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])	x	x
JnX	Link input (link direct)	Hexadecimal	J(Network No.n)-X(Device) Notation example: J1-X0000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 0000 to 3FFF	o	o
JnY	Link output (link direct)	Hexadecimal	J(Network No.n)-Y(Device) Notation example: J1-Y0000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 0000 to 3FFF	o	o
JnB	Link relay (link direct)	Hexadecimal	J(Network No.n)-B(Device) Notation example: J1-B0000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 0000 to 7FFF*6	o	o
JnSB	Link special relay (link direct)	Hexadecimal	J(Network No.n)-SB(Device) Notation example: J1-SB000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 000 to FFF	o	o
IOST*3	I/O terminal monitor	Decimal	0 to 127	x	x
CMD*3	Operation command	Decimal	0 to 63	x	x

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

⇒ 12.3.2 ■10 Virtual servo amplifier devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

\*3 Virtual inverter device

For the details, refer to the following.

⇒ 12.3.2 ■12 Virtual inverter devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

\*4 For the maximum number of devices when an extended SRAM cassette is installed, refer to the following.

⇒ MELSEC iQ-R CPU Module User's Manual (Application)

\*5 If a bit-specified word device is used in the random read processing, GT SoftGOT2000 (Single channel) or GT Simulator3 uses the value of the bit device in block No. 0 only.

The bit device status depends on the SFC program status (active or inactive). When the SFC program is inactive, the bit device is off (stores 0).

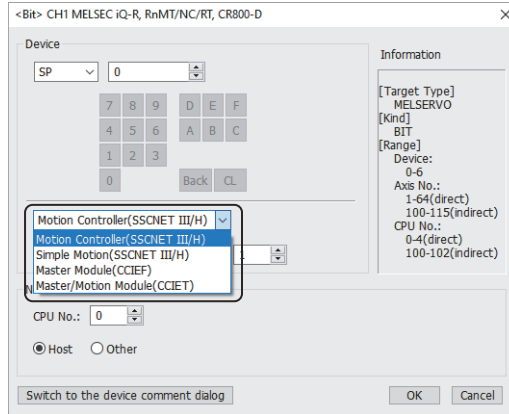

If a step relay (S) is used in the random read processing, specify the relevant step relay (block) (BLS) on GT SoftGOT2000 or GT Simulator3.

\*6 The device range for a PLC with the CC-Link IE TSN master/local module (1000BASE-SX model) (RJ71GN11-SX) installed is 00000 to 1FFFF.

## ■2 Setting virtual bit devices for servo amplifiers ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Motion Controller(SSCNET III/H)]	Select this item to connect the GOT through a Motion controller. The following item is displayed. • [Axis No.]: Set the axis number to be monitored.
[Simple Motion(SSCNET III/H)]	Select this item to connect the GOT through a Simple Motion module (RD77MS). The following items are displayed. • [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module. • [Axis No.]: Set the axis number to be monitored.
[Master Module(CCIEF)]	Select this item to connect the GOT through the master station on the CC-Link IE Field Network or a Simple Motion module (RD77GF).
[Master/Motion Module(CCIET)]	Select this item to connect the GOT through the master station on the CC-Link IE TSN and a Motion module (RD78G(H)). After the selection, set a device that enables axis designation to display the following item. • [Axis Designation]: Set the axis to be monitored.

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range		Notation example
SP	[Motion Controller(SSCNET III/H)]	A(Axis No.)-SP(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	A64-SP0
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-SP(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	UFF-A64-SP0
	[Master Module(CCIEF)]	SP(Device) • Device (decimal): 0 to 6	SP0
	[Master/Motion Module(CCIET)]	AA(Axis designation)-SP(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	AA3-SP0

Device name	Device notation and setting range		Notation example
OM	[Motion Controller(SSCNET III/H)]	A(Axis No.)-OM(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 4 to 5	A64-OM0
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-OM(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 4 to 5	UFF-A64-OM0
	[Master Module(CCIEF)]	OM(Device) • Device (decimal): 0 to 2, 4 to 5	OM0
	[Master/Motion Module(CCIET)]	AA(Axis designation)-OM(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 4 to 5	AA3-OM0
TMB	[Motion Controller(SSCNET III/H)]	A(Axis No.)-TMB(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 6	A64-TMB1
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-TMB(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 6	UFF-A64-TMB1
	[Master Module(CCIEF)]	TMB(Device) • Device (decimal): 1 to 6	TMB1
	[Master/Motion Module(CCIET)]	AA(Axis designation)-TMB(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 6	AA3-TMB1
OTI	[Motion Controller(SSCNET III/H)]	A(Axis No.)-OTI(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	A64-OTI0
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-OTI(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	UFF-A64-OTI0
	[Master Module(CCIEF)]	OTI(Device) • Device (decimal): 0 to 5	OTI0
	[Master/Motion Module(CCIET)]	AA(Axis designation)-OTI(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	AA3-OTI0
GFDI	[Motion Controller(SSCNET III/H)]	A(Axis No.)-GFDI(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	A64-GFDI1
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-GFDI(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	UFF-A64-GFDI1
	[Master/Motion Module(CCIET)]	AA(Axis designation)-GFDI(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	AA3-GFDI0
ECCDI	[Motion Controller(SSCNET III/H)]	A(Axis No.)-ECCDI(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	A64-ECCDI1
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-ECCDI(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	UFF-A64-ECCDI1
	[Master/Motion Module(CCIET)]	AA(Axis designation)-ECCDI(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	AA3-ECCDI0

For indirect specification of a module number, axis number, or axis designation, refer to the following.

- (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
- (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

**(1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])**

To set a GOT data register to specify a module number, set [Module No. switching GD device first No. (16 points)] in the [Controller Setting] window.

→5.5.1 ■4 [Controller Setting]

In GT SoftGOT2000, set [Module No. switching GD device first No. (16 points)] in the [Communication Setup] dialog.

→GT SoftGOT2000 Version1 Operating Manual

The following shows the correspondence between module numbers and GOT data registers (GD).

Example) When 550 is set to [Module No. switching GD device first No. (16 points)]

Sixteen consecutive devices, starting from GD550, are set to specify module numbers.

Module No.	GOT data registers (GD)	Setting range
100	GD550	[000] to [0FF] ([001] to [010] when [MELSEC iQ-F] is selected for [Controller Type] in the [Controller Setting] window) Setting a value outside the above range causes a device range error.
101	GD551	
:	:	
10E	GD564	
10F	GD565	

Upon the GOT startup, 0 is stored in the specified GD devices until values are set.

If you set the GD devices on the screen that appears upon the GOT startup, module No.0 is monitored unintentionally, or a device range error occurs.

To avoid such situation, set the GD devices so that their values are retained at a power failure.

→5.2.12 Configuring the settings for retaining GOT internal device data at power failure ([Internal Device Retention])

When setting GD devices for multiple channels, set different GD devices to [Module No. switching GD device first No. (16 points)].

GD10 to GD25 are used to specify the monitoring targets, such as the station number of an inverter.

When setting GD devices for a different channel, set different GD devices to [Module No. switching GD device first No. (16 points)].

Do not change the value of the specified device while a touch switch with the bit momentary is being pressed. Doing so may cause the touch switch to exhibit unintended behavior.

**(2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])**

To use GOT data registers (GD) to specify an axis number or axis designation, set [Servo axis switching GD device first No. (16 points)] in the [Controller Setting] window.

→5.5.1 ■4 [Controller Setting]

In GT SoftGOT2000, set [Servo axis switching GD device first No. (16 points)] in the [Communication Setup] dialog.

→GT SoftGOT2000 Version1 Operating Manual

The following shows the relationship between the axis number or axis designation and the GOT data register (GD).

Example) When 10 is set to [Servo axis switching GD device first No. (16 points)]

Sixteen consecutive devices, starting from GD10, are set to specify an axis number.

Axis No. or axis designation	GOT data registers (GD)	Setting range
100	GD10	• Axis number [1] to [64] • Axis designation [1]: Single-axis/Axis A [2]: Axis B [3]: Axis C Setting a value outside the above range causes a device range error.
101	GD11	
:	:	
114	GD24	
115	GD25	

Upon the GOT startup, 0 is stored in the specified GD devices until values are set.

If you set the GD devices on the screen that appears upon the GOT startup, a device range error occurs. To avoid such situation, set the GD devices so that their values are retained at a power failure.

→5.2.12 Configuring the settings for retaining GOT internal device data at power failure ([Internal Device Retention])

When specifying GD devices for multiple channels, set different GD devices to [CPU No. switching GD device first No. (3 points)].

GD10 to GD25 are used to specify the monitoring targets, such as the station number of an inverter.

When setting GD devices for a different channel, set different GD devices to [Servo axis switching GD device first No. (16 points)].

Do not change the value of the specified device while a touch switch with the bit momentary is being pressed. Doing so may cause the touch switch to exhibit unintended behavior.

### ■3 Availability of writing/reading data to/from bit devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	R/W	R/W	-/-
Y	R/W	-/-	R/W	R/W	-/-
B	R/W	-/-	R/W	R/W	-/-
M	R/W	-/-	R/W	R/W	-/-
L	R/W	-/-	R/W	R/W	-/-
S	R/-	-/-	R/-	R/-	-/-
F	R/W	-/-	R/W	R/W	-/-
TC	R/W	-/-	-/-	-/-	-/-
TT	R/W	-/-	-/-	-/-	-/-
CC	R/W	-/-	-/-	-/-	-/-
CT	R/W	-/-	-/-	-/-	-/-
SC	R/W	-/-	-/-	-/-	-/-
SS	R/W	-/-	-/-	-/-	-/-
SB	R/W	-/-	R/W	R/W	-/-

JnW	Link register (link direct)	Hexadecimal	J(Network No.n)-W(Device) Notation example: J1-W00000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 00000 to 1FFFF*8	o	o
JnSW	Link special register (link direct)	Hexadecimal	J(Network No.n)-SW(Device) Notation example: J1-SW000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 000 to FFF	o	o
U3E0G	CPU buffer memory access device	Decimal	U3E0-G(Device) Notation example: U3E0-G100 • Device (decimal): 0 to 268435455	o	o
U3E1G	CPU buffer memory access device	Decimal	U3E1-G(Device) Notation example: U3E1-G100 • Device (decimal): 0 to 268435455	o	o
U3E2G	CPU buffer memory access device	Decimal	U3E2-G(Device) Notation example: U3E2-G100 • Device (decimal): 0 to 268435455	o	o
U3E3G	CPU buffer memory access device	Decimal	U3E3-G(Device) Notation example: U3E3-G100 • Device (decimal): 0 to 268435455	o	o

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
RD	Refresh data register	Decimal	0 to 1048575	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

→ 12.3.2 ■ 10 Virtual servo amplifier devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

\*3 Not available to GT21 and GS21.

\*4 For the maximum number of devices when an extended SRAM cassette is installed, refer to the following.

→ MELSEC iQ-R CPU Module User's Manual (Application)

\*5 For monitoring the multiple CPU high speed transmission memory, the CPU buffer memory access device (HG) for RCPUCPU is monitored.

The CPU buffer memory access device (G) is not monitored.

\*6 The device name depends on the servo amplifier.

MR-J5-G(-RJ) or MR-J5W□-G: Motor extension parameter

Other than MR-J5-G(-RJ) or MR-J5W□-G: Linear servo motor/DD motor setting parameter

\*7 PVS is a virtual device corresponding to the servo parameter (PV) of MR-J5-G(-RJ), MR-J5W□-G, and MR-JET-G.

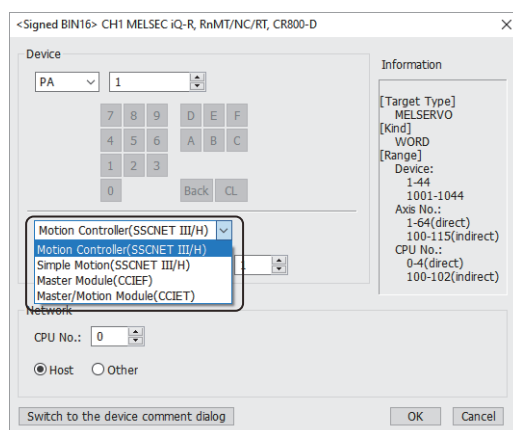

Use the virtual device (PVS) to read/write data from/to the servo parameter (PV).

\*8 The device range for a PLC with the CC-Link IE TSN master/local module (1000BASE-SX model) (RJ71GN11-SX) installed is 00000 to 83FFF.

## ■ 5 Setting virtual word devices for servo amplifiers ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Motion Controller(SSCNET III/H)]	Select this item to connect the GOT through a Motion controller. The following item is displayed. • [Axis No.]: Set the axis number to be monitored.
[Simple Motion(SSCNET III/H)]	Select this item to connect the GOT through a Simple Motion module (RD77MS). The following items are displayed. • [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module. • [Axis No.]: Set the axis number to be monitored.
[Master Module(CCIEF)]	Select this item to connect the GOT through the master station on the CC-Link IE Field Network or a Simple Motion module (RD77GF).
[Master/Motion Module(CCIET)]	Select this item to connect the GOT through the master station on the CC-Link IE TSN and a Motion module (RD78G(H)). After the selection, set a device that enables axis designation to display the following item. • [Axis Designation]: Set the axis to be monitored.

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range		Notation example
PA	[Motion Controller(SSCNET III/H)]	A(Axis No.)-PA(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 44, 1001 to 1044	A64-PA1
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-PA(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 44, 1001 to 1044	UFF-A64-PA1
	[Master Module(CCI EF)]	PA (Device) • Device (decimal): 1 to 44, 1001 to 1044	PA1

U3E2G	R/W	R/W	R/W	R/W
U3E3G	R/W	R/W	R/W	R/W
RD	R/W	R/W	R/W	R/W

\*1 Only reading is available for NPA1 and NPA2001 to NPA2032.

\*2 Only reading is available for OTS0 to OTS5.

## ■7 Monitoring-supported double-word devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.2 ■9 Availability of writing/reading data to/from double-word devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
LTN <sup>*4</sup>	Long timer current value	Decimal	0 to 2529407	×	×
LCN <sup>*4</sup>	Long counter current value	Decimal	0 to 4761215	×	×
LSN <sup>*4</sup>	Long retentive timer current value	Decimal	0 to 2529407	×	×
ZZ	Index register (32 bits)	Decimal	0 to 22	×	×
LZ	Index register (32 bits)	Decimal	0 to 11	×	×
ALD <sup>*2</sup>	Life diagnosis	Decimal	→ 12.3.2 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])	×	×

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>		
			Assignment to EG devices	Access using a client	
TMI <sup>*2</sup>	Input signal for test operation (for test operation)	Decimal	⇒ 12.3.2 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])	x	x
TMO <sup>*2</sup>	Forced output of signal pin (for test operation)	Decimal	⇒ 12.3.2 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])	x	x
TMD <sup>*2</sup>	Set data (for test operation)	Decimal	⇒ 12.3.2 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])	x	x
AL <sup>*3</sup>	Faults history	Decimal	0 to 899	x	x
LPr <sup>*3*5</sup>	Parameter (32-bit)	Decimal	0 to 1500	x	x
OP <sup>*3</sup>	Operation parameter	Decimal	0 to 5	x	x
PV <sup>*3</sup>	Current value monitor	Decimal	1 to 143	x	x

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

⇒ 12.3.2 ■10 Virtual servo amplifier devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

\*3 Virtual inverter device

For the details, refer to the following.

⇒ 12.3.2 ■12 Virtual inverter devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

\*4 For the maximum number of devices when an extended SRAM cassette is installed, refer to the following.

⇒ MELSEC iQ-R CPU Module User's Manual (Application)

\*5 If you specify LPr900 to LPr935, the following item is displayed in the device setting dialog.

• [Setting items (for calibration parameters)]: [Bias/gain value], [Analog input value]

Enclose the device number in parentheses when selecting [Analog input value].

Example 1) Notation when [Bias/gain value] is selected: LPr900

Example 2) Notation when [Analog input value] is selected: LPr(900)

When LPr900 or LPr901 (Calibration parameter) is specified, selecting [Bias/gain value] or [Analog input value] does not affect the monitoring target.

## ■ 8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Motion Controller(SSCNET III/H)]	Select this item to connect the GOT through a Motion controller. The following item is displayed. • [Axis No.]: Set the axis number to be monitored.
[Simple Motion(SSCNET III/H)]	Select this item to connect the GOT through a Simple Motion module (RD77MS). The following items are displayed. • [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module. • [Axis No.]: Set the axis number to be monitored.
[Master Module(CCIEF)]	Select this item to connect the GOT through the master station on the CC-Link IE Field Network or a Simple Motion module (RD77GF).
[Master/Motion Module(CCIET)]	Select this item to connect the GOT through the master station on the CC-Link IE TSN and a Motion module (RD78G(H)). After the selection, set a device that enables axis designation to display the following item. • [Axis Designation]: Set the axis to be monitored.

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example
ALD	[Motion Controller(SSCNET III/H)] A(Axis No.)-ALD(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	A64-ALD0
	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-ALD(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	UFF-A64-ALD0
	[Master Module(CCIEF)] ALD(Device) • Device (decimal): 0 to 1	ALD0
	[Master/Motion Module(CCIET)] AA(Axis designation)-ALD(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	AA3-ALD0

Device name	Device notation and setting range		Notation example
TMI	[Motion Controller(SSCNET III/H)]	A(Axis No.)-TMI(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2	A64-TMI0
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-TMI(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2	UFF-A64-TMI0
	[Master Module(CCIEF)]	TMI(Device) • Device (decimal): 0 to 2	TMI0
	[Master/Motion Module(CCIET)]	AA(Axis designation)-TMI(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2	AA3-TMI0
TMO	[Motion Controller(SSCNET III/H)]	A(Axis No.)-TMO(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0	A64-TMO0
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-TMO(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0	UFF-A64-TMO0
	[Master Module(CCIEF)]	TMO(Device) • Device (decimal): 0	TMO0
	[Master/Motion Module(CCIET)]	AA(Axis designation)-TMO(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0	AA3-TMO0
TMD	[Motion Controller(SSCNET III/H)]	A(Axis No.)-TMD(Device) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 3	A64-TMD0
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-TMD(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 3	UFF-A64-TMD0
	[Master Module(CCIEF)]	TMD(Device) • Device (decimal): 0 to 1, 3	TMD0
	[Master/Motion Module(CCIET)]	AA(Axis designation)-TMD(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 3	AA3-TMD0

For indirect specification of a module number, axis number, or axis designation, refer to the following.

⇒ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■9 Availability of writing/reading data to/from double-word devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
LTN	-/-	R/W	-/-	-/-
LCN	-/-	R/W	-/-	-/-
LSN	-/-	R/W	-/-	-/-
ZZ	-/-	R/W	-/-	-/-

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
LZ	-/-	R/W	-/-	-/-
ALD	-/-	R/-	-/-	-/-
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-
AL	-/-	R/-	-/-	-/-
LPr	-/-	R/W	-/-	-/-
OP	-/-	R/W	-/-	-/-
PV	-/-	R/-	-/-	-/-

## ■ 10 Virtual servo amplifier devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	→(1) Servo amplifier request ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OM	→(2) Operation mode selection ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
TMB	→(3) Instruction demand (for test operation) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OTI	→(4) One-touch tuning instruction ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
GFDI	→(5) Gear failure diagnosis instruction ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
ECCDI	→(6) Encoder communication circuit diagnosis instruction ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PA	→(7) Basic parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PB	→(8) Gain filter parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PC	→(9) Extension setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PD	→(10) I/O setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PO	→(11) Option unit parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PS	→(12) Special parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PU	→(13) Multi encoder parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PT	→(14) Positioning control parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PL	→(15) Motor extension parameter, linear servo motor/DD motor setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PN	→(16) Network setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PVS	→(17) Position extension parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
ST	→(18) Status display ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PE	→(19) Extension setting No.2 parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PF	→(20) Extension setting No.3 parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
NPA	→(21) Network basic parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
ALM	→(22) Alarm ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
	→(23) Specifications of ALM260 to ALM275, ALM280 to ALM295, and ALM300 to ALM315 ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
POS	→(24) Point table (position) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

Virtual device name	Reference
SPD	→ (25) Point table (speed) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
ACT	→ (26) Point table (acceleration time constant) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
DCT	→ (27) Point table (deceleration time constant) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
DWL	→ (28) Point table (dwell) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
AUX	→ (29) Point table (auxiliary function) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
MCD	→ (30) Point table (M code) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
MD	→ (31) Machine diagnosis data ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
GFDS	→ (32) Gear failure diagnosis data ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
ECCDS	→ (33) Encoder communication circuit diagnosis data ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OTS	→ (34) One-touch tuning data ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
DI	→ (35) External input signal in MR-J5-G(-RJ) and MR-J5W□-G ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (36) External input signal in MR-J5D□-G ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (37) External input signal in MR-J5(W)□B(-RJ) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (38) External input signal in MR-JET-G ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (39) External input signal in MR-JE-B and MR-JE-BF ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (40) External input signal in MR-J4-GF(-RJ) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (41) External input signal in MR-J4(W)□B-RJ ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
DO	→ (42) External output signal in MR-J5-G(-RJ) and MR-J5W□-G ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (43) External output signal in MR-J5D□-G ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (44) External output signal in MR-J5(W)□B(-RJ) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (45) External output signal in MR-JET-G ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (46) External output signal in MR-JE-B and MR-JE-BF ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (47) External output signal in MR-J4-GF(-RJ) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]) (48) External output signal in MR-J4(W)□B-RJ ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
ALD	→ (49) Life Diagnosis ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
TMI	→ (50) Input signal for test operation (for test operation) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
TMO	→ (51) Forced output of signal pin (for test operation) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
TMD	→ (52) Set data (for test operation) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## (1) Servo amplifier request ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

When using the encoder communication circuit diagnosis instruction, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

**(7) Basic parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])**

Use an appropriate device according to the write destination of the servo amplifier.

- PA1 to PA44: Writing data to the RAM of a servo amplifier
- PA1001 to PA1044: Writing data to the FlashROM or EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

## (9) Extension setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

Use an appropriate device according to the write destination of the servo amplifier.

- PC1 to PC90: Writing data to the RAM of a servo amplifier
- PC1001 to PC1090: Writing data to the FlashROM or EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

#### (10) I/O setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

Use an appropriate device according to the write destination of the servo amplifier.

- PD1 to PD72: Writing data to the RAM of a servo amplifier
- PD1001 to PD1072: Writing data to the FlashROM or EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

### (17) Position extension parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

Use an appropriate device according to the write destination of the servo amplifier.

- PVS1 to PVS32: Writing data to the RAM of a servo amplifier
- PVS1001 to PVS1032: Writing data to the FlashROM or EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

\*1 Set [Data Type] and [Format] as shown below for the objects for which this device is set.

- [Data Type]: [Unsigned BIN32]
- [Format]: [Hexadecimal]

### (23) Specifications of ALM260 to ALM275, ALM280 to ALM295, and ALM300 to ALM315 ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

The date and time of alarm occurrence are stored in BCD code in the upper eight bits and lower eight bits of each device.

The time zone setting of the controller is applied to the date and time to be acquired.

Example) When the date and time of the most recent alarm occurrence is 15:30:20 May 15, 2020

In either of the following cases, 0 is stored.

- When the date and time of alarm occurrence are those of 1999 or earlier
- When the controller is MR-J5(W)-B(-RJ)

#### (24)Point table (position) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

Use an appropriate device according to the write destination of the servo amplifier.

- POS1 to POS255: Writing data to the RAM of a servo amplifier
- POS1001 to POS1255: Writing data to the FlashROM or EEPROM of a servo amplifier

○: Available

MD11	Machine diagnosis data, rated speed at forward or reverse rotation torque	-	×	○	×	×	○	○	○	○
MD12	Machine diagnosis data friction based fault prediction prepare status	-	×	○	×	×	×	×	×	×
	Machine diagnosis data: friction failure prediction - threshold creation progress		×	×	×	×	○	○ <sup>*3</sup>	○	○

Virtual device name	Name	Symbol	MR-J4(W)-□B(-RJ)	MR-J4-GF(-RJ)	MR-JE-□B	MR-JE-□BF	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G	MR-J5-□B(-RJ)
MD13	Machine diagnosis data vibration based fault prediction prepare status	-	x	○	x	x	x	x	x	x
	Machine diagnosis data: vibration failure prediction - threshold creation progress	-	x	x	x	x	○	○*3	○	○
MD14	Machine diagnosis data motor total move distance	-	x	○	x	x	○	○*3	○	○
MD15	Machine diagnosis data, friction failure prediction, upper threshold at forward rotation torque, lower threshold at reverse rotation torque	-	x	○	x	x	○	○*3	○	○
MD16	Machine diagnosis data, friction failure prediction, lower threshold at forward rotation torque, upper threshold at reverse rotation torque	-	x	○	x	x	○	○*3	○	○
MD17	Machine diagnosis data vibration level threshold	-	x	○	x	x	x	x	x	x
	Machine diagnosis data: vibration failure prediction - threshold acquisition	-	x	x	x	x	○	○*3	○	○
MD18	Machine diagnosis data trouble prediction status	-	x	○	x	x	○	○*3	○	○
MD19	Machine diagnosis data: Belt tension estimation value	-	x	x	x	x	○	○*3	○	○
MD20	Machine diagnosis data: static friction used in failure prediction	-	x	x	x	x	○	○*3	○	○
MD21	Machine diagnosis data: Belt tension threshold estimation	-	x	x	x	x	○	○*3	○	○

\*1 While the servo amplifier is estimating the corresponding machine status in the machine diagnosis, do not write data to the parameters of the servo amplifier from another GOT.

Doing so may cause the servo amplifier to malfunction.

\*2 When MD2 indicates that the servo amplifier does not complete the machine diagnosis (is estimating or warning of the machine status), do not monitor MD3 to MD6 (friction states) and MD7 to MD10 (vibration/oscillation states).

To start monitoring those devices upon the estimation completion, set [Trigger] in the applicable object settings.

\*3 The commands assigned to MD12 to MD21 are not supported by MR-JET-G.

When the commands are used, the read values will be indefinite.

### (32) Gear failure diagnosis data ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

TMD0	Writes the speed (test mode)	-	○	○	○	○	×	×	×	×
	Motor speed		×	×	×	×	○	○	○	○
TMD1	Writes the acceleration/ deceleration time constant (test mode)	-	○	○	○	○	×	×	×	×
	Write acceleration/ deceleration time constant		×	×	×	×	○	○	○	○
TMD3	Writes the moving distance (test mode)	-	○	○	○	○	×	×	×	×
	Move distance		×	×	×	×	○	○	○	○

When using the set data (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

## ■ 11 Precautions for virtual servo amplifier devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

### (1) When handling real numbers for virtual servo amplifier devices

For the servo amplifier, if a real number is written to a virtual device, only the integer portion of the number is stored into the device.

Example) When 12.34 is entered with the numerical input on the GOT, the value is written as 1234 to the device of the servo amplifier.

If the data type of the virtual servo amplifier device is set to [Real], the value after the writing may differ from the one before the writing.

Additionally, the monitoring process may take a longer time.

Therefore, select one of the following items as the data type of the virtual device.

- Signed 16-bit binary data
- Unsigned 16-bit binary data
- Signed 32-bit binary data
- Unsigned 32-bit binary data

When you use the value of the virtual servo amplifier device, remember that only the integer portion of the value is stored in the device.

To display a real number on the numerical display or numerical input object, set [Format] to [Real] and select [Adjust Decimal Point Range] in the object setting.

## (2) Data type and format settings for using virtual servo amplifier devices

To specify virtual servo amplifier devices in the object setting or other settings, the data type and format must be set according to the notation of the values handled by the virtual devices.

For notation of the virtual device values, refer to the following.

→ Instruction manual for the servo amplifier used  
MR Configurator2 HELP

When real numbers are stored in virtual devices, set the data type as shown below instead of setting [Real].

The following shows a setting example for using virtual servo amplifier devices for an object.

Example) When using a numerical display

Notation of the virtual device values	Setting
Decimal number (positive values only)	<ul style="list-style-type: none"> <li>• [Data Type]: [Unsigned BIN16] ([Unsigned BIN32] for 65536 or more)</li> <li>• [Format]: [Unsigned Decimal]</li> </ul>
Decimal number (positive and negative values)	<ul style="list-style-type: none"> <li>• [Data Type]: [Signed BIN16] ([Signed BIN32] for -32769 or less, and 32768 or more)</li> <li>• [Format]: [Signed Decimal]</li> </ul>
Hexadecimal number	<ul style="list-style-type: none"> <li>• [Data Type]: [Unsigned BIN16] ([Unsigned BIN32] for 0x10000 or more)</li> <li>• [Format]: [Hexadecimal]</li> </ul>
Decimal point notation (positive values only)	<ul style="list-style-type: none"> <li>• [Data Type]: [Unsigned BIN16] ([Unsigned BIN32] as necessary)</li> <li>• [Format]: [Real]</li> <li>• [Digits (Integral)]: Set the number of digits in the integral portion.</li> <li>• [Digits (Fractional)]: Set the number of digits in the fractional portion.</li> <li>• [Adjust Decimal Point Range]: Selected</li> </ul>
Decimal point notation (positive and negative values)	<ul style="list-style-type: none"> <li>• [Data Type]: [Signed BIN16] ([Signed BIN32] as necessary)</li> <li>• [Format]: [Real]</li> <li>• [Digits (Integral)]: Set the number of digits in the integral portion.</li> <li>• [Digits (Fractional)]: Set the number of digits in the fractional portion.</li> <li>• [Adjust Decimal Point Range]: Selected</li> </ul>
When the notation varies by digit	<ul style="list-style-type: none"> <li>• [Data Type]: [Unsigned BIN16] ([Unsigned BIN32] for 0x10000 or more)</li> <li>• [Format]: [Hexadecimal]</li> <li>• On the [Operation/Script] tab, select [Data Operation] for [Operation Type], and set [Bit Mask] or [Bit Shift].</li> </ul>

## (3) Specifying consecutive virtual servo amplifier devices

The GOT does not support writing/reading data to/from consecutive virtual servo amplifier devices.

## ■ 12 Virtual inverter devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

The following shows the correspondence between the virtual devices used in the GOT and the inverter data.

Virtual device name	Reference
IOST	→(1) I/O terminal monitor ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
CMD	→(2) Operation command ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
	→(3) Operation when turning on/off one of the CMD3 to CMD12 devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
	→(4) Operation when turning on/off one of the CMD48 to CMD52 devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
AL	→(5) Alarm history ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
LPr	→(6) Parameter (32-bit) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OP	→(7) Operation parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PV	→(8) Current value monitor ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

The lists of virtual devices shown in this section explain the FR-A800 Plus series and FR-E800 series models using the following abbreviations.

Series	Abbreviation	Model
FR-A800 Plus series	CRN	FR-A8□0-CRN FR-A8□2-CRN FR-A8□0-E-CRN FR-A8□2-E-CRN
	R2R	FR-A8□0-R2R FR-A8□2-R2R FR-A8□0-E-R2R FR-A8□2-E-R2R

				FR-E7□0-NE
CMD50	NET X3 input	x	○*2*3*4	x
CMD51	NET X4 input	x	○*2*3*4	x
CMD52	NET X5 input	x	○*2*3*4	x

\*1 When the GOT is connected to the PU connector and the operation mode is set to the PU operation mode, the device cannot be used.

\*2 The monitor data can be changed by the settings of Pr.180 to Pr.189 (input terminal function selection).

For the relationship between the parameters and terminals, refer to the following.

⇒ Manual of the inverter used

\*3 The device is invalid for the initial state of the inverter in which a function that cannot be controlled by the GOT is set or no function is set.

Change the settings of Pr.180 to Pr.189 (input terminal function selection).

\*4 Use an inverter having SERIAL (serial No.) "□□211□□□□□□" or later.

SERIAL (serial No.) is provided on the rating plate of the inverter.

When using the operation command, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.
Operation when a CMD device is turned on	<p>⇒ (3) Operation when turning on/off one of the CMD3 to CMD12 devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])</p> <p>(4) Operation when turning on/off one of the CMD48 to CMD52 devices (MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])</p>

### (3) Operation when turning on/off one of the CMD3 to CMD12 devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

The CMD3 to CMD12 devices cannot be controlled simultaneously.

When you turn on/off one of the CMD3 to CMD12 devices, the rest of these devices are turned off.

Use OP4 to control multiple devices from CMD3 to CMD12 simultaneously.

The following shows the relationship between CMD3 to CMD12 and OP4.

Example) Turning on the CMD3 (RL terminal) and CMD12 (RES terminal) devices

For a hexadecimal value, write 0201.

For a decimal value, write 513.

### (4) Operation when turning on/off one of the CMD48 to CMD52 devices (MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

The CMD48 to CMD52 devices cannot be controlled simultaneously.

When you turn on/off one of the CMD48 to CMD52 devices, the rest of these devices are turned off.

Use OP5 to control multiple devices from CMD48 to CMD52 simultaneously.

The following shows the relationship between CMD48 to CMD52 and OP5.

Example) Turing on the CMD48 (NET X1 input) and CMD52 (NET X5 input) devices

For a hexadecimal value, write 0011.

For a decimal value, write 17.

**(5) Alarm history ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])**

**(6) Parameter (32-bit) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])**

The virtual device numbers (LPr) used in the GOT correspond to the inverter parameter numbers.

For the inverter parameters, refer to the following.

→ Manual of the inverter used

When using a parameter (32-bit), note the following.

Precautions	Description
When setting [8888] or [9999] to a 32-bit parameter (LPr) of an inverter	[8888] and [9999] are used for particular purposes. From the GOT, if you set these numbers to a 32-bit parameter that can accept a value with a fractional part, you are recommended to set the data type to [Real].

**(7) Operation parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])**

○: Available

	b3	CMD51: NET X4 input			
	b4	CMD52: NET X5 input			

\*1 When the GOT is connected to the PU connector and the operation mode is set to the PU operation mode, the device cannot be used.

\*2 The monitor data can be changed by the settings of Pr.180 to Pr.189 (input terminal function selection).  
For the relationship between the parameters and terminals, refer to the following.

→ Manual of the inverter used

\*3 The device is invalid for the initial state of the inverter in which a function that cannot be controlled by the GOT is set or no function is set.

Change the settings of Pr.180 to Pr.189 (input terminal function selection).

\*4 Use an inverter having SERIAL (serial No.) "□□211○○○○○" or later.

SERIAL (serial No.) is provided on the rating plate of the inverter.

**(8) Current value monitor ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])**

BL	SFC block	Decimal	0 to 319	×	×
BLS	Step relay (block)	Decimal	BL(SFC block No.)-S(Device) Notation example: BL1-S3 • SFC Block No. (decimal): 0 to 319 • Device (decimal): 0 to 511	×	×
SP*2	Servo amplifier request	Decimal	⇒12.3.3 ■2 Setting virtual bit devices for servo amplifiers ([MELSEC iQ-L])	×	×
OM*2	Operation mode selection	Decimal	⇒12.3.3 ■2 Setting virtual bit devices for servo amplifiers ([MELSEC iQ-L])	×	×
TMB*2	Instruction demand (for test operation)	Decimal	⇒12.3.3 ■2 Setting virtual bit devices for servo amplifiers ([MELSEC iQ-L])	×	×
OTI*2	One-touch tuning instruction	Decimal	⇒12.3.3 ■2 Setting virtual bit devices for servo amplifiers ([MELSEC iQ-L])	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

⇒12.3.3 ■10 Virtual servo amplifier devices ([MELSEC iQ-L])

\*3 If a bit-specified word device is used in the random read processing, GT SoftGOT2000 (Single channel) or GT Simulator3 uses the value of the bit device in block No. 0 only.

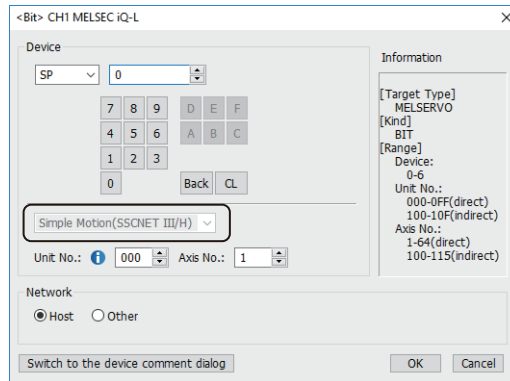

The bit device status depends on the SFC program status (active or inactive). When the SFC program is inactive, the bit device is off (stores 0).

If a step relay (S) is used in the random read processing, specify the relevant step relay (block) (BLS) on GT SoftGOT2000 or GT Simulator3.

## ■2 Setting virtual bit devices for servo amplifiers ([MELSEC iQ-L])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

When [MELSEC iQ-L] is selected, the connection type is fixed as shown in the following table.

Item	Description
[Simple Motion(SSCNET III/H)]	Connection through a Simple Motion module • [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module. • [Axis No.]: Set the axis number to be monitored.

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example
SP	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-SP(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	UFF-A64-SP0
OM	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-OM(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 4 to 5	UFF-A64-OM0
TMB	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-TMB(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 6	UFF-A64-TMB1
OTI	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-OTI(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	UFF-A64-OTI0

For indirect specification of a module or axis number, refer to the following.

→ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■3 Availability of writing/reading data to/from bit devices ([MELSEC iQ-L])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	R/W	R/W	-/-

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
Y	R/W	-/-	R/W	R/W	-/-
B	R/W	-/-	R/W	R/W	-/-
M	R/W	-/-	R/W	R/W	-/-
L	R/W	-/-	R/W	R/W	-/-
S	R/-	-/-	R/-	R/-	-/-
F	R/W	-/-	R/W	R/W	-/-
TC	R/W	-/-	-/-	-/-	-/-
TT	R/W	-/-	-/-	-/-	-/-
CC	R/W	-/-	-/-	-/-	-/-
CT	R/W	-/-	-/-	-/-	-/-
SC	R/W	-/-	-/-	-/-	-/-
SS	R/W	-/-	-/-	-/-	-/-
SB	R/W	-/-	R/W	R/W	-/-
SM	R/W	-/-	R/W	R/W	-/-
LTC	R/W	-/-	-/-	-/-	-/-
LTT	R/W	-/-	-/-	-/-	-/-
LCC	R/W	-/-	-/-	-/-	-/-
LCT	R/W	-/-	-/-	-/-	-/-
LSC	R/W	-/-	-/-	-/-	-/-
LSS	R/W	-/-	-/-	-/-	-/-
BL	R/W	-/-	-/-	-/-	-/-
BLS	R/W	-/-	-/-	-/-	-/-
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-
OTI	-/W	-/-	-/-	-/-	-/-

#### ■4 Monitoring-supported word devices ([MELSEC iQ-L])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.3 ■6 Availability of writing/reading data to/from word devices ([MELSEC iQ-L])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
TN	Timer current value	Decimal	0 to 781407	○	○
CN	Counter current value	Decimal	0 to 781407	○	○
SN	Retentive timer current value	Decimal	0 to 781407	○	○

RD	Refresh data register	Decimal	0 to 1048575	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

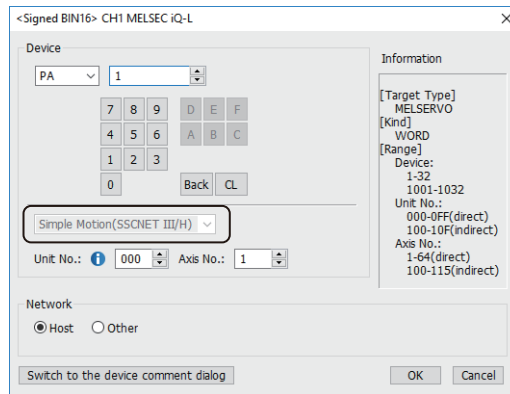

For the details, refer to the following.

⇒ 12.3.3 ■10 Virtual servo amplifier devices ([MELSEC iQ-L])

## 5 Setting virtual word devices for servo amplifiers ([MELSEC iQ-L])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

When [MELSEC iQ-L] is selected, the connection type is fixed as shown in the following table.

Item	Description
[Simple Motion(SSCNET III/H)]	Connection through a Simple Motion module <ul style="list-style-type: none"> <li>• [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module.</li> <li>• [Axis No.]: Set the axis number to be monitored.</li> </ul>

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example
PA	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PA(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 32, 1001 to 1032	UFF-A64-PA1
PB	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PB(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 64, 1001 to 1064	UFF-A64-PB1
PC	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PC(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 80, 1001 to 1080	UFF-A64-PC1
PD	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PD(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 48, 1001 to 1048	UFF-A64-PD1
PL	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PL(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 48, 1001 to 1048	UFF-A64-PL1
ST	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-ST(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 48	UFF-A64-ST0
PE	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PE(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 64, 1001 to 1064	UFF-A64-PE1
PF	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PF(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 64, 1001 to 1064	UFF-A64-PF1

Device name	Device notation and setting range		Notation example
ALM	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-ALM(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 11 to 59, 200 to 215, 220 to 235, 240 to 255	UFF-A64-ALM0
MD	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-MD(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 18	UFF-A64-MD0
OTS	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-OTS(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 3	UFF-A64-OTS0
DI	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-DI(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	UFF-A64-DI0
DO	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-DO(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 4	UFF-A64-DO0

For indirect specification of a module or axis number, refer to the following.

→ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■6 Availability of writing/reading data to/from word devices ([MELSEC iQ-L])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TN	R/W	R/W	-/-	-/-
CN	R/W	R/W	-/-	-/-
SN	R/W	R/W	-/-	-/-
D	R/W	R/W	R/W	R/W
SD	R/W	R/W	R/W	R/W
W	R/W	R/W	R/W	R/W
SW	R/W	R/W	-/-	R/W
R	R/W	R/W	R/W	R/W
ER	R/W	R/W	R/W	R/W
ZR	R/W	R/W	R/W	R/W
Z	R/W	R/W	-/-	-/-
G	R/W	R/W	R/W	R/W
PA	R/W	R/W	-/-	-/-
PB	R/W	R/W	-/-	-/-
PC	R/W	R/W	-/-	-/-
PD	R/W	R/W	-/-	-/-
PL	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
PE	R/W	R/W	-/-	-/-

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PF	R/W	R/W	-/-	-/-
ALM	R/-	R/-	-/-	-/-
MD	R/-	R/-	-/-	-/-
OTS	R/-	R/-	-/-	-/-
DI	R/-	R/W	-/-	-/-
DO	R/-	R/-	-/-	-/-
U3E0G	R/W	R/W	R/W	R/W
RD	R/W	R/W	R/W	R/W

## ■7 Monitoring-supported double-word devices ([MELSEC iQ-L])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.3 ■9 Availability of writing/reading data to/from double-word devices ([MELSEC iQ-L])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices *1		
			Assignment to EG devices	Access using a client	
LTN	Long timer current value	Decimal	0 to 219775	×	×
LCN	Long counter current value	Decimal	0 to 413695	×	×
LSN	Long retentive timer current value	Decimal	0 to 219775	×	×
ZZ	Index register (32 bits)	Decimal	0 to 22	×	×
LZ	Index register (32 bits)	Decimal	0 to 11	×	×
ALD*2	Life diagnosis	Decimal	⇒ 12.3.3 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-L])	×	×
TMI*2	Input signal for test operation (for test operation)	Decimal	⇒ 12.3.3 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-L])	×	×
TMO*2	Forced output of signal pin (for test operation)	Decimal	⇒ 12.3.3 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-L])	×	×
TMD*2	Set data (for test operation)	Decimal	⇒ 12.3.3 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-L])	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

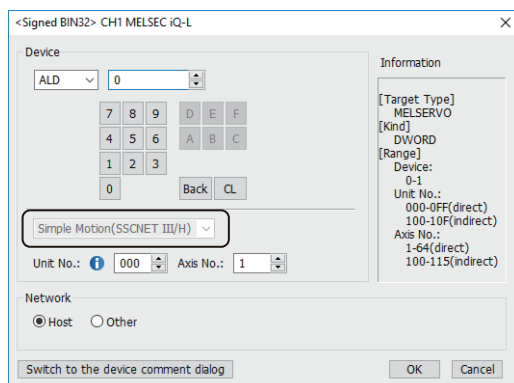

For the details, refer to the following.

⇒ 12.3.3 ■10 Virtual servo amplifier devices ([MELSEC iQ-L])

## ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-L])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

When [MELSEC iQ-L] is selected, the connection type is fixed as shown in the following table.

Item	Description
[Simple Motion(SSCNET III/H)]	Connection through a Simple Motion module • [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module. • [Axis No.]: Set the axis number to be monitored.

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example
ALD	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-ALD(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	UFF-A64-ALD0
TMI	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-TMI(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2	UFF-A64-TMI0
TMO	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-TMO(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0	UFF-A64-TMO0
TMD	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-TMD(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 64 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 3	UFF-A64-TMD0

For indirect specification of a module or axis number, refer to the following.

→ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■9 Availability of writing/reading data to/from double-word devices ([MELSEC iQ-L])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
LTN	-/-	R/W	-/-	-/-
LCN	-/-	R/W	-/-	-/-
LSN	-/-	R/W	-/-	-/-
ZZ	-/-	R/W	-/-	-/-
LZ	-/-	R/W	-/-	-/-
ALD	-/-	R/-	-/-	-/-

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-

## 10 Virtual servo amplifier devices ([MELSEC iQ-L])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	→ 12.3.2 ■10 (1) Servo amplifier request ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OM	→ 12.3.2 ■10 (2) Operation mode selection ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
TMB	→ 12.3.2 ■10 (3) Instruction demand (for test operation) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OTI	→ 12.3.2 ■10 (4) One-touch tuning instruction ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PA	→ 12.3.2 ■10 (7) Basic parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PB	→ 12.3.2 ■10 (8) Gain filter parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PC	→ 12.3.2 ■10 (9) Extension setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PD	→ 12.3.2 ■10 (10) I/O setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PL	→ 12.3.2 ■10 (15) Motor extension parameter, linear servo motor/DD motor setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
ST	→ 12.3.2 ■10 (18) Status display ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PE	→ 12.3.2 ■10 (19) Extension setting No.2 parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PF	→ 12.3.2 ■10 (20) Extension setting No.3 parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
ALM	→ 12.3.2 ■10 (22) Alarm ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
MD	→ 12.3.2 ■10 (31) Machine diagnosis data ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OTS	→ 12.3.2 ■10 (34) One-touch tuning data ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
DI	→ 12.3.2 ■10 (35) External input signal in MR-J5-G(-RJ) and MR-J5W□-G ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
DO	→ 12.3.2 ■10 (42) External output signal in MR-J5-G(-RJ) and MR-J5W□-G ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
ALD	→ 12.3.2 ■10 (49) Life Diagnosis ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
TMI	→ 12.3.2 ■10 (50) Input signal for test operation (for test operation) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
TMO	→ 12.3.2 ■10 (51) Forced output of signal pin (for test operation) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
TMD	→ 12.3.2 ■10 (52) Set data (for test operation) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## 11 Precautions for virtual servo amplifier devices ([MELSEC iQ-L])

For the precautions for virtual servo amplifier devices, refer to the following.

- 12.3.2 ■11 Precautions for virtual servo amplifier devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

→ 12.3.4 ■10 Virtual servo amplifier devices ([MELSEC iQ-F])

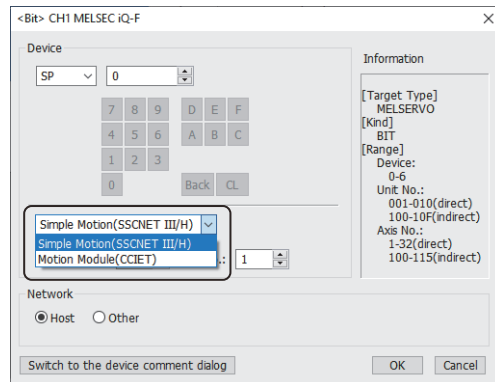

\*3 The target device of the host station can be monitored only.

Monitoring the target device of any other station causes a system error.

## ■2 Setting virtual bit devices for servo amplifiers ([MELSEC iQ-F])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Simple Motion(SSCNET III/H)]	<p>Connection through a Simple Motion module</p> <ul style="list-style-type: none"> <li>• [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module.</li> <li>• [Axis No.]: Set the axis number to be monitored.</li> </ul>
[Motion Module(CCIET)]	<p>Select this item to connect the GOT through a Motion module (FX5-nSSC-G). After the selection, set a device that enables axis designation to display the following item.</p> <ul style="list-style-type: none"> <li>• [Axis Designation]: Set the axis to be monitored.</li> </ul>

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example	
SP	[Simple Motion(SSCNET III/H)]	<p>U(Unit No.)-A(Axis No.)-SP(Device)</p> <ul style="list-style-type: none"> <li>• Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect)</li> <li>• Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 0 to 6</li> </ul>	U10-A32-SP0
	[Motion Module(CCIET)]	<p>AA(Axis designation)-SP(Device)</p> <ul style="list-style-type: none"> <li>• Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 0 to 6</li> </ul>	AA3-SP0
OM	[Simple Motion(SSCNET III/H)]	<p>U(Unit No.)-A(Axis No.)-OM(Device)</p> <ul style="list-style-type: none"> <li>• Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect)</li> <li>• Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 0 to 2, 4 to 5</li> </ul>	U10-A32-OM0
	[Motion Module(CCIET)]	<p>AA(Axis designation)-OM(Device)</p> <ul style="list-style-type: none"> <li>• Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 0 to 2, 4 to 5</li> </ul>	AA3-OM0
TMB	[Simple Motion(SSCNET III/H)]	<p>U(Unit No.)-A(Axis No.)-TMB(Device)</p> <ul style="list-style-type: none"> <li>• Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect)</li> <li>• Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 1 to 6</li> </ul>	U10-A32-TMB1
	[Motion Module(CCIET)]	<p>AA(Axis designation)-TMB(Device)</p> <ul style="list-style-type: none"> <li>• Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 1 to 6</li> </ul>	AA3-TMB1

Device name	Device notation and setting range		Notation example
OTI	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-OTI(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	U10-A32-OTI0
	[Motion Module(CCIET)]	AA(Axis designation)-OTI(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	AA3-OTI0
GFDI	[Motion Module(CCIET)]	AA(Axis designation)-GFDI(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	AA3-GFDI0
ECCDI	[Motion Module(CCIET)]	AA(Axis designation)-ECCDI(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	AA3-ECCDI0

For indirect specification of a module or axis number, refer to the following.

→ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

### ■3 Availability of writing/reading data to/from bit devices ([MELSEC iQ-F])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	R/W	R/W	-/-
Y	R/W	-/-	R/W	R/W	-/-
B	R/W	-/-	R/W	R/W	-/-
M	R/W	-/-	R/W	R/W	-/-
L	R/W	-/-	R/W	R/W	-/-
S	R/W	-/-	R/W	R/W	-/-
F	R/W	-/-	R/W	R/W	-/-
TC	R/W	-/-	-/-	-/-	-/-
TT	R/W	-/-	-/-	-/-	-/-
CC	R/W	-/-	-/-	-/-	-/-
CT	R/W	-/-	-/-	-/-	-/-
SC	R/W	-/-	-/-	-/-	-/-
SS	R/W	-/-	-/-	-/-	-/-
SB	R/W	-/-	R/W	R/W	-/-
SM	R/W	-/-	R/W	R/W	-/-
RX	R/W	-/-	R/W	R/W	-/-
RY	R/W	-/-	R/W	R/W	-/-
LCC	R/W	-/-	-/-	-/-	-/-
LCT	R/W	-/-	-/-	-/-	-/-
BL	R/W	-/-	-/-	-/-	-/-
BLS	R/W	-/-	-/-	-/-	-/-
SP	-/W	-/-	-/-	-/-	-/-

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-
OTI	-/W	-/-	-/-	-/-	-/-
GFDI	-/W	-/-	-/-	-/-	-/-
ECCDI	-/W	-/-	-/-	-/-	-/-

#### ■ 4 Monitoring-supported word devices ([MELSEC iQ-F])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.4 ■ 6 Availability of writing/reading data to/from word devices ([MELSEC iQ-F])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
TN	Timer current value	Decimal	0 to 1023	○	○
CN	Counter current value	Decimal	0 to 1023	○	○
SN	Retentive timer current value	Decimal	0 to 1023	○	○
D	Data register	Decimal	0 to 7999	○	○
SD	Special register	Decimal	0 to 11999	○	○
W	Link register	Hexadecimal	0000 to 7FFF	○	○
SW	Link special register	Hexadecimal	0000 to 7FFF	○	○
R <sup>4</sup>	File register	Decimal	0 to 32767	○	○
Z	Index register	Decimal	0 to 23	○	○ (Not usable as bit data)
G <sup>5</sup>	Buffer memory (Intelligent function module)	Decimal	U(Unit No.)-G(Device) Notation example: U10-G100 • Unit No. (hexadecimal): 01 to FF • Device (decimal): 0 to 262143 For the unit No., set the module number of the intelligent function module.	○	○
Ww <sup>*3</sup>	Remote register	Hexadecimal	0000 to 1FFF	○	○
Wr <sup>*3</sup>	Remote register	Hexadecimal	0000 to 1FFF	○	○
PA <sup>*2</sup>	Basic parameter	Decimal	⇒ 12.3.4 ■ 5 Setting virtual word devices for servo amplifiers ([MELSEC iQ-F])	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

➔ 12.3.4 ■ 10 Virtual servo amplifier devices ([MELSEC iQ-F])

\*3 The target device of the host station can be monitored only.

Monitoring the target device of any other station causes a system error.

\*4 Available for the file register of block No. switched with the RSET instruction.

\*5 Only the intelligent function module on the station connected to GOT can be specified.

Set the buffer memory within the address range of the buffer memory existing in the intelligent function module.

\*6 The device name depends on the servo amplifier.

MR-J5-G(-RJ) or MR-J5W□-G: Motor extension setting parameter

Other than MR-J5-G(-RJ) or MR-J5W□-G: Linear servo motor/DD motor setting parameter

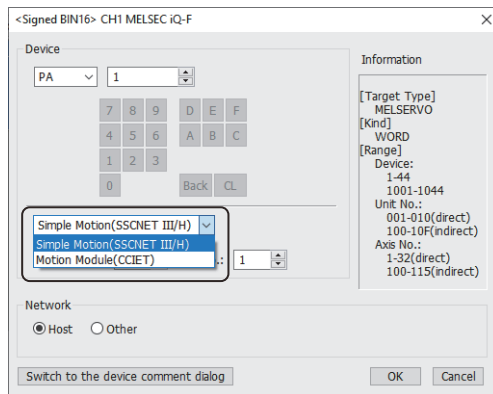

\*7 PVS is a virtual device corresponding to the servo parameter (PV) of MR-J5-G(-RJ), MR-J5W □ -G, and MR-JET-G.

Use the virtual device (PVS) to read/write data from/to the servo parameter (PV).

## ■ 5 Setting virtual word devices for servo amplifiers ([MELSEC iQ-F])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Simple Motion(SSCNET III/H)]	<p>Connection through a Simple Motion module</p> <ul style="list-style-type: none"> <li>• [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module.</li> <li>• [Axis No.]: Set the axis number to be monitored.</li> </ul>
[Motion Module(CCIET)]	<p>Select this item to connect the GOT through a Motion module (FX5-nSSC-G). After the selection, set a device that enables axis designation to display the following item.</p> <ul style="list-style-type: none"> <li>• [Axis Designation]: Set the axis to be monitored.</li> </ul>

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example	
PA	[Simple Motion(SSCNET III/H)]	<p>U(Unit No.)-A(Axis No.)-PA(Device)</p> <ul style="list-style-type: none"> <li>• Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect)</li> <li>• Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 1 to 44, 1001 to 1044</li> </ul>	U10-A32-PA1
	[Motion Module(CCIET)]	<p>AA(Axis designation)-PA(Device)</p> <ul style="list-style-type: none"> <li>• Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 1 to 44, 1001 to 1044</li> </ul>	AA3-PA1
PB	[Simple Motion(SSCNET III/H)]	<p>U(Unit No.)-A(Axis No.)-PB(Device)</p> <ul style="list-style-type: none"> <li>• Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect)</li> <li>• Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 1 to 92, 1001 to 1092</li> </ul>	U10-A32-PB1
	[Motion Module(CCIET)]	<p>AA(Axis designation)-PB(Device)</p> <ul style="list-style-type: none"> <li>• Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 1 to 92, 1001 to 1092</li> </ul>	AA3-PB1

Device name	Device notation and setting range		Notation example
PC	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-PC(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 90, 1001 to 1090	U10-A32-PC1
	[Motion Module(CCIET)]	AA(Axis designation)-PC(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 90, 1001 to 1090	AA3-PC1
PD	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-PD(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 72, 1001 to 1072	U10-A32-PD1
	[Motion Module(CCIET)]	AA(Axis designation)-PD(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 72, 1001 to 1072	AA3-PD1
PO	[Motion Module(CCIET)]	AA(Axis designation)-PO(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 2, 1001 to 1002	AA3-PO1
PS	[Motion Module(CCIET)]	AA(Axis designation)-PS(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 99, 1001 to 1099	AA3-PS1
PU	[Motion Module(CCIET)]	AA(Axis designation)-PU(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 44, 1001 to 1044	AA3-PU1
PT	[Motion Module(CCIET)]	AA(Axis designation)-PT(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 90, 1001 to 1090	AA3-PT1
PL	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-PL(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 72, 1001 to 1072	U10-A32-PL1
	[Motion Module(CCIET)]	AA(Axis designation)-PL(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 72, 1001 to 1072	AA3-PL1
PN	[Motion Module(CCIET)]	AA(Axis designation)-PN(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 32, 1001 to 1032	AA3-PN1
PVS	[Motion Module(CCIET)]	AA(Axis designation)-PVS(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 32, 1001 to 1032	AA3-PVS1
ST	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-ST(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 48	U10-A32-ST0
	[Motion Module(CCIET)]	AA(Axis designation)-ST(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 48	AA3-ST0
PE	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-PE(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 88, 1001 to 1088	U10-A32-PE1
	[Motion Module(CCIET)]	AA(Axis designation)-PE(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 88, 1001 to 1088	AA3-PE1

Device name	Device notation and setting range		Notation example
PF	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-PF(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 99, 1001 to 1099	U10-A32-PF1
	[Motion Module(CCIET)]	AA(Axis designation)-PF(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 99, 1001 to 1099	AA3-PF1
NPA	[Motion Module(CCIET)]	NPA(Device) • Device (decimal): 1 to 12, 2001 to 2032	NPA1
ALM	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-ALM(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 11 to 59, 200 to 215, 220 to 235, 240 to 255, 260 to 275, 280 to 295, 300 to 315	U10-A32-ALM0
	[Motion Module(CCIET)]	AA(Axis designation)-ALM(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 11 to 59, 200 to 215, 220 to 235, 240 to 255, 260 to 275, 280 to 295, 300 to 315	AA3-ALM0
POS	[Motion Module(CCIET)]	AA(Axis designation)-POS(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	AA3-POS1
SPD	[Motion Module(CCIET)]	AA(Axis designation)-SPD(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	AA3-SPD1
ACT	[Motion Module(CCIET)]	AA(Axis designation)-ACT(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	AA3-ACT1
DCT	[Motion Module(CCIET)]	AA(Axis designation)-DCT(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	AA3-DCT1
DWL	[Motion Module(CCIET)]	AA(Axis designation)-DWL(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	AA3-DWL1
AUX	[Motion Module(CCIET)]	AA(Axis designation)-AUX(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	AA3-AUX1
MCD	[Motion Module(CCIET)]	AA(Axis designation)-MCD(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	AA3-MCD1
MD	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-MD(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 21	U10-A32-MD0
	[Motion Module(CCIET)]	AA(Axis designation)-MD(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 21	AA3-MD0
GFDS	[Motion Module(CCIET)]	AA(Axis designation)-GFDS(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	AA3-GFDS0
ECCDS	[Motion Module(CCIET)]	AA(Axis designation)-ECCDS(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	AA3-ECCDS0

Device name	Device notation and setting range		Notation example
OTS	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-OTS(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5, 3000	U10-A32-OTS0
	[Motion Module(CCIET)]	AA(Axis designation)-OTS(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5, 3000	AA3-OTS0
DI	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-DI(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	U10-A32-DI0
	[Motion Module(CCIET)]	AA(Axis designation)-DI(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	AA3-DI0
DO	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-DO(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 4	U10-A32-DO0
	[Motion Module(CCIET)]	AA(Axis designation)-DO(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 4	AA3-DO0

For indirect specification of a module or axis number, refer to the following.

⇒ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■6 Availability of writing/reading data to/from word devices ([MELSEC iQ-F])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TN	R/W	R/W	-/-	-/-
CN	R/W	R/W	-/-	-/-
SN	R/W	R/W	-/-	-/-
D	R/W	R/W	R/W	R/W
SD	R/W	R/W	R/W	R/W
W	R/W	R/W	R/W	R/W

## ■ 7 Monitoring-supported double-word devices ([MELSEC iQ-F])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

➡ 12.3.4 ■ 9 Availability of writing/reading data to/from double-word devices ([MELSEC iQ-F])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
LCN	Long counter current value	Decimal	0 to 1023	×	×
LZ	Index register (32 bits)	Decimal	0 to 11	×	×
ALD*2	Life diagnosis	Decimal	➡ 12.3.4 ■ 8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-F])	×	×
TMI*2	Input signal for test operation (for test operation)	Decimal	➡ 12.3.4 ■ 8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-F])	×	×
TMO*2	Forced output of signal pin (for test operation)	Decimal	➡ 12.3.4 ■ 8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-F])	×	×
TMD*2	Set data (for test operation)	Decimal	➡ 12.3.4 ■ 8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-F])	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

➡ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

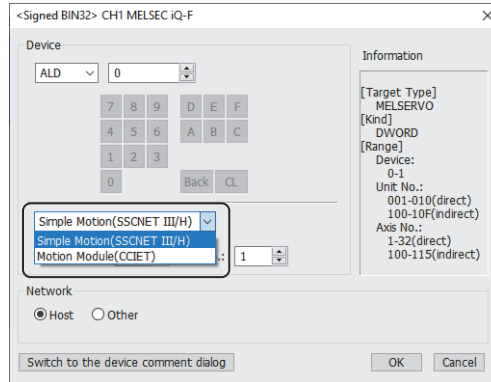

For the details, refer to the following.

→ 12.3.4 ■ 10 Virtual servo amplifier devices ([MELSEC iQ-F])

## ■ 8 Setting virtual double-word devices for servo amplifiers ([MELSEC iQ-F])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Simple Motion(SSCNET III/H)]	Connection through a Simple Motion module • [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module. • [Axis No.]: Set the axis number to be monitored.
[Motion Module(CCIET)]	Select this item to connect the GOT through a Motion module (FX5-nSSC-G). After the selection, set a device that enables axis designation to display the following item. • [Axis Designation]: Set the axis to be monitored.

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example
ALD	U(Unit No.)-A(Axis No.)-ALD(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	U10-A32-ALD0
	AA(Axis designation)-ALD(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	AA3-ALD0
TMI	U(Unit No.)-A(Axis No.)-TMI(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2	U10-A32-TMI0
	AA(Axis designation)-TMI(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2	AA3-TMI0
TMO	U(Unit No.)-A(Axis No.)-TMO(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0	U10-A32-TMO0
	AA(Axis designation)-TMO(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0	AA3-TMO0

Device name	Device notation and setting range		Notation example
TMD	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-TMD(Device) • Unit No. (hexadecimal): 01 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 3	U10-A32-TMD0
	[Motion Module(CCIET)]	AA(Axis designation)-TMD(Device) • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 3	AA3-TMD0

For indirect specification of a module or axis number, refer to the following.

➡ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■9 Availability of writing/reading data to/from double-word devices ([MELSEC iQ-F])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
LCN	-/-	R/W	-/-	-/-
LZ	-/-	R/W	-/-	-/-
ALD	-/-	R/-	-/-	-/-
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-

## ■10 Virtual servo amplifier devices ([MELSEC iQ-F])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	➡ 12.3.2 ■10 (1) Servo amplifier request ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OM	➡ 12.3.2 ■10 (2) Operation mode selection ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
TMB	➡ 12.3.2 ■10 (3) Instruction demand (for test operation) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OTI	➡ 12.3.2 ■10 (4) One-touch tuning instruction ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
GFDI	➡ 12.3.2 ■10 (5) Gear failure diagnosis instruction ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
ECCDI	➡ 12.3.2 ■10 (6) Encoder communication circuit diagnosis instruction ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PA	➡ 12.3.2 ■10 (7) Basic parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PB	➡ 12.3.2 ■10 (8) Gain filter parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PC	➡ 12.3.2 ■10 (9) Extension setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PD	➡ 12.3.2 ■10 (10) I/O setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PO	➡ 12.3.2 ■10 (11) Option unit parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PS	➡ 12.3.2 ■10 (12) Special parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

Virtual device name	Reference
PU	→ 12.3.2 ■10 (13) Multi encoder parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

- 10.13 Monitoring a Controller through a GOT (Server/Client Function)
- \*2 Virtual servo amplifier device  
For the details, refer to the following.
  - 12.3.5 ■ 10 Virtual servo amplifier devices ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])
- \*3 Virtual inverter device  
For the details, refer to the following.
  - 12.3.5 ■ 12 Virtual inverter devices ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])
- \*4 Do not use the local device set in a MELSEC-Q system.  
Doing so disables the correct monitoring.

## ■ 2 Setting virtual bit devices for servo amplifiers ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Motion Controller(SSCNET III/H)]	Select this item to connect the GOT through a Motion controller. The following item is displayed. • [Axis No.]: Set the axis number to be monitored.
[Simple Motion(SSCNET III/H)]	Select this item to connect the GOT through a Simple Motion module (QD77MS). The following item is displayed. • [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module. • [Axis No.]: Set the axis number to be monitored.
[Master Module(CCIEF)]	Select this item to connect the GOT through the master station on the CC-Link IE Field Network or a Simple Motion module (QD77GF).

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example
SP	[Motion Controller(SSCNET III/H)] A(Axis No.)-SP(Device) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	A32-SP0
	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-SP(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	UFF-A32-SP0
	[Master Module(CCIEF)] SP(Device) • Device (decimal): 0 to 6	SP0

Device name	Device notation and setting range		Notation example
OM	[Motion Controller(SSCNET III/H)]	A(Axis No.)-OM(Device) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 4 to 5	A32-OM0
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-OM(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 4 to 5	UFF-A32-OM0
	[Master Module(CCIEF)]	OM(Device) • Device (decimal): 0 to 2, 4 to 5	OM0

For indirect specification of a module or axis number, refer to the following.

→ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

### ■3 Availability of writing/reading data to/from bit devices ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

The GOT can only read data from the device when the QS001CPU is used.

To write data to the consecutive devices of a Q172DR(CR750-Q), use the Q172DR(CR750-Q) with firmware version R6b or later.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	R/W	R/W	-/-
Y	R/W	-/-	R/W	R/W	-/-
B	R/W	-/-	R/W	R/W	-/-
M	R/W	-/-	R/W	R/W	-/-

### ■4 Monitoring-supported word devices ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.5 ■6 Availability of writing/reading data to/from word devices ([MELSEC-Q/QS, Q17nD/M/NC/DR/

DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
TN*6	Timer current value	Decimal	0 to 32767	○	○
CN*6	Counter current value	Decimal	0 to 32767	○	○
SN*6	Retentive timer current value	Decimal	0 to 32767	○	○
D*3*5*6	Data register	Decimal	0 to 4910079	○	○
SD	Special register	Decimal	0 to 2255	○	○
W*3*5	Link register	Hexadecimal	000000 to 4AEBFF	○	○
SW	Link special register	Hexadecimal	0000 to 7FFF	○	○
R*3*4	File register	Decimal	0 to 32767	○	○
ER*3*9	Extension file register(Block)	Decimal	ER(R block)-(Device) Notation example: ER255-100 • R block (decimal): 0 to 255 • Device (decimal): 0 to 32767	○	○
ZR*3*5*7*9	Extension file register	Decimal	0 to 4849663	○	○
Z	Index register	Decimal	0 to 19	○	○ (Not usable as bit data)
G*9	Buffer memory (Intelligent function module)	Decimal	U(Unit No.)-G(Device) Notation example: UFF-G100 • Unit No. (hexadecimal): 00 to FF • Device (decimal): 0 to 65535 For the module No., set the first 2 digits of the 3-digit number that represents the start I/O number of the buffer memory for the intelligent function module.	○	○
Ww*8	Remote register	Hexadecimal	0000 to 1FFF	○	○
Wr*8	Remote register	Hexadecimal	0000 to 1FFF	○	○
LW	Link register	Hexadecimal	00000 to 1FFFF	○	○
#	Motion device	Decimal	0 to 12287	○	○
U3E0	Multiple CPU high speed transmission memory	Decimal	U3E0-G(Device) Notation example: U3E0-10000 • Device (decimal): 10000 to 24335	○	○
U3E1	Multiple CPU high speed transmission memory	Decimal	U3E1-G(Device) Notation example: U3E1-10000 • Device (decimal): 10000 to 24335	○	○
U3E2	Multiple CPU high speed transmission memory	Decimal	U3E2-(Device) Notation example: U3E2-10000 • Device (decimal): 10000 to 24335	○	○
U3E3	Multiple CPU high speed transmission memory	Decimal	U3E3-(Device) Notation example: U3E3-10000 • Device (decimal): 10000 to 24335	○	○

DO*2	External output signal	Decimal	⇒ 12.3.5 ■5 Setting virtual word devices for servo amplifiers ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

⇒ 12.3.5 ■10 Virtual servo amplifier devices ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])

\*3 Do not set a file register by GT Designer3 when executing multiple programs with the file of the file register set at [Use the same file name as the program.] by the PLC parameter of GX Developer. Otherwise, read or write at GOT will be erroneous.

\*4 Available for the file register of block No. switched with the RSET instruction.

\*5 Available for the file register of block number of file name switched with the QDRSET instruction.

\*6 Do not use the local device set in a MELSEC-Q system.

Doing so disables the correct monitoring.

\*7 ZR1042432 to ZR4184063 cannot be used for GT SoftGOT2000.

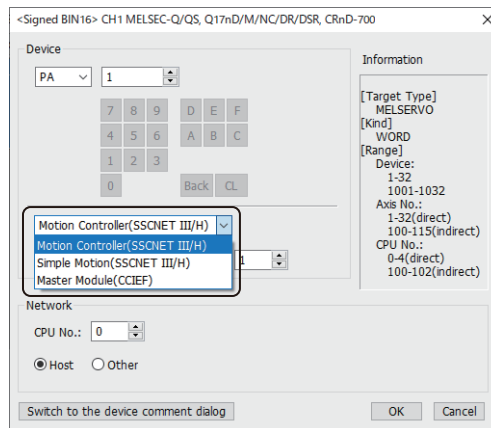

\*8 Not available to GT21.

\*9 Available to GT21 when a Universal model QCPU is connected only.

## ■5 Setting virtual word devices for servo amplifiers ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Motion Controller(SSCNET III/H)]	Select this item to connect the GOT through a Motion controller. The following item is displayed. • [Axis No.]: Set the axis number to be monitored.

Item	Description
[Simple Motion(SSCNET III/H)]	Select this item to connect the GOT through a Simple Motion module (QD77MS). The following item is displayed. <ul style="list-style-type: none"> <li>• [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module.</li> <li>• [Axis No.]: Set the axis number to be monitored.</li> </ul>
[Master Module(CCIEF)]	Select this item to connect the GOT through the master station on the CC-Link IE Field Network or a Simple Motion module (QD77GF).

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range		Notation example
PA	[Motion Controller(SSCNET III/H)]	A(Axis No.)-PA(Device) <ul style="list-style-type: none"> <li>• Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 1 to 44, 1001 to 1044</li> </ul>	A32-PA1

	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-DO(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 4	UFF-A32-DO0
	[Master Module(CCIEF)]	DO(Device) • Device (decimal): 0 to 4	DO0

For indirect specification of a module or axis number, refer to the following.

→12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■6 Availability of writing/reading data to/from word devices ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])

The following shows the availability of writing/reading data to/from word devices by device type.

The GOT can only read data from the device when the QS001CPU is used.

To write data to the consecutive devices of a Q172DR(CR750-Q), use the Q172DR(CR750-Q) with firmware version R6b or later.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TN	R/W	R/W	-/-	-/-

PV <sup>*3</sup>	Current value monitor	Decimal	1 to 143	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

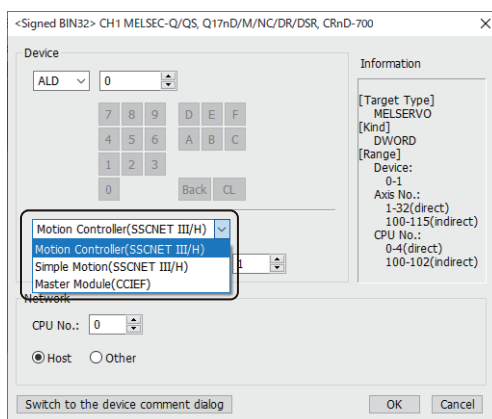

- 12.3.5 ■ 10 Virtual servo amplifier devices ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])
- \*3 Virtual inverter device  
For the details, refer to the following.
- 12.3.5 ■ 12 Virtual inverter devices ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])
- \*4 If you specify LPr900 to LPr935, the following item is displayed in the device setting dialog.
  - [Setting items (for calibration parameters)]: [Bias/gain value], [Analog input value]
 Enclose the device number in parentheses when selecting [Analog input value].  
 Example 1) Notation when [Bias/gain value] is selected: LPr900  
 Example 2) Notation when [Analog input value] is selected: LPr(900)  
 When LPr900 or LPr901 (Calibration parameter) is specified, selecting [Bias/gain value] or [Analog input value] does not affect the monitoring target.

## ■ 8 Setting virtual double-word devices for servo amplifiers ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Motion Controller(SSCNET III/H)]	Select this item to connect the GOT through a Motion controller. The following item is displayed. • [Axis No.]: Set the axis number to be monitored.
[Simple Motion(SSCNET III/H)]	Select this item to connect the GOT through a Simple Motion module (QD77MS). The following item is displayed. • [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module. • [Axis No.]: Set the axis number to be monitored.
[Master Module(CCIEF)]	Select this item to connect the GOT through the master station on the CC-Link IE Field Network or a Simple Motion module (QD77GF).

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example
ALD	[Motion Controller(SSCNET III/H)] A(Axis No.)-ALD(Device) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	A32-ALD0
	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-ALD(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	UFF-A32-ALD0
	[Master Module(CCIEF)] ALD(Device) • Device (decimal): 0 to 1	ALD0

Device name	Device notation and setting range		Notation example
TMI	[Motion Controller(SSCNET III/H)]	A(Axis No.)-TMI(Device) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2	A32-TMI0
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-TMI(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2	UFF-A32-TMI0
	[Master Module(CCIEF)]	TMI(Device) • Device (decimal): 0 to 2	TMI0
TMO	[Motion Controller(SSCNET III/H)]	A(Axis No.)-TMO(Device) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0	A32-TMO0
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-TMO(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0	UFF-A32-TMO0
	[Master Module(CCIEF)]	TMO(Device) • Device (decimal): 0	TMO0
TMD	[Motion Controller(SSCNET III/H)]	A(Axis No.)-TMD(Device) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 3	A32-TMD0
	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-TMD(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 3	UFF-A32-TMD0
	[Master Module(CCIEF)]	TMD(Device) • Device (decimal): 0 to 1, 3	TMD0

For indirect specification of a module or axis number, refer to the following.

⇒ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■9 Availability of writing/reading data to/from double-word devices ([MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700], [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700])

The following shows the availability of writing/reading data to/from double-word devices by device type.

The GOT can only read data from the device when the QS001CPU is used.

To write data to the consecutive devices of a Q172DR(CR750-Q), use the Q172DR(CR750-Q) with firmware version R6b or later.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

RY	Remote output	Hexadecimal	000 to 7FF	-	○	○

Device name <sup>*3*4</sup>		Device No. representation	Setting range		Specifications of EG devices <sup>*1</sup>	
			GT27, GT25, GT23, GT SoftGOT2000, and GS25	GT21 and GS21	Assignment to EG devices	Access using a client
LB	Link relay	Hexadecimal	0000 to 7FFF	-	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Do not use the local device set in a MELSEC-Q system.

Doing so disables the correct monitoring.

\*3 When monitoring MELDAS C6/C64, if a word device outside the range is set, the value will be indefinite.

If a bit device outside the range is set, the object may not be displayed or the set function may fail to operate.

Check the set device using the device list of GT Designer3.

\*4 Devices used by the MELDAS C6/C64 system cannot be used.

## ■ 2 Availability of writing/reading data to/from bit devices ([MELSEC QnA, MELDAS C6\*])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	R/W	R/W	-/-
Y	R/W	-/-	R/W	R/W	-/-
B	R/W	-/-	R/W	R/W	-/-
M	R/W	-/-	R/W	R/W	-/-
L	R/W	-/-	R/W	R/W	-/-
S	R/W	-/-	R/W	R/W	-/-
F	R/W	-/-	R/W	R/W	-/-
TC	R/W	-/-	-/-	-/-	-/-
TT	R/W	-/-	-/-	-/-	-/-
CC	R/W	-/-	-/-	-/-	-/-
CT	R/W	-/-	-/-	-/-	-/-
SC	R/W	-/-	-/-	-/-	-/-
SS	R/W	-/-	-/-	-/-	-/-
SB	R/W	-/-	R/W	R/W	-/-
SM	R/W	-/-	R/W	R/W	-/-
RX	R/W	-/-	R/W	R/W	-/-
RY	R/W	-/-	R/W	R/W	-/-
LB	R/W	-/-	R/W	R/W	-/-

### ■3 Monitoring-supported word devices ([MELSEC QnA, MELDAS C6\*])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.3.6 ■4 Availability of writing/reading data to/from word devices ([MELSEC QnA, MELDAS C6\*])

○: Available

×: Not available

Device name*9*10		Device No. representation	Setting range		Specifications of EG devices*1	
			GT27, GT25, GT23, GT SoftGOT2000, and GS25	GT21 and GS21	Assignment to EG devices	Access using a client
TN*6	Timer current value	Decimal	0 to 32767	0 to 32767	○	○
CN*6	Counter current value	Decimal	0 to 32767	0 to 32767	○	○
SN*6	Retentive timer current value	Decimal	0 to 32767	0 to 32767	○	○
D*6	Data register	Decimal	0 to 32767	0 to 32767	○	○
SD	Special register	Decimal	0 to 2047	0 to 2047	○	○
W	Link register	Hexadecimal	0000 to 7FFF	0000 to 7FFF	○	○
SW	Link special register	Hexadecimal	0000 to 07FF	0000 to 07FF	○	○
R*2*3*5	File register	Decimal	0 to 32767	0 to 32767	○	○
ER*2*7	Extension file register(Block)	Decimal	ER(R block)-(Device) Notation example: ER255-100 • R block (decimal): 0 to 255 • Device (decimal): 0 to 32767	-	○	○
ZR*2*4*5*7	Extension file register	Decimal	0 to 1042431	-	○	○
Z	Index register	Decimal	0 to 15	0 to 15	○	○ (Not usable as bit data)
G*7*8	Buffer memory (Intelligent function module)	Decimal	U(Unit No.)-G(Device) Notation example: UFF-G100 • Unit No. (hexadecimal): 00 to FF • Device (decimal): 0 to 65535	-	○	○
Ww*7	Remote register	Hexadecimal	0000 to 1FFF	-	○	○
Wr*7	Remote register	Hexadecimal	0000 to 1FFF	-	○	○
LW	Link register	Hexadecimal	00000 to 1FFFF	-	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Do not set a file register by GT Designer3 when executing multiple programs with the file of the file register set at [Use the same file name as the program.] by the PLC parameter of GX Developer.

(With exceptions of MELSEC-QnA)

Otherwise, read or write at GOT will be erroneous.

\*3 Available for the file register of block No. switched with the RSET instruction.

\*4 Available for the file register of block number of file name switched with the QDRSET instruction.

\*5 Set a value within the range of registers that exist in the PLC

\*6 Do not use the local device set in a MELSEC-Q system.

Doing so disables the correct monitoring.

\*7 This cannot be monitored when the GOT multi-drop is connected.

\*8 Only the intelligent function module on the station connected to GOT can be specified.

Set the buffer memory within the address range of the buffer memory existing in the intelligent function module.

\*9 When monitoring MELDAS C6/C64, if a word device outside the range is set, the value will be indefinite.  
 If a bit device outside the range is set, the object may not be displayed or the set function may fail to operate.  
 Check the set device using the device list of GT Designer3.

\*10 Devices used by the MELDAS C6/C64 system cannot be used.

#### ■ 4 Availability of writing/reading data to/from word devices ([MELSEC QnA, MELDAS C6\*])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TN	R/W	R/W	-/-	-/-
CN	R/W	R/W	-/-	-/-
SN	R/W	R/W	-/-	-/-
D	R/W	R/W	-/-	R/W
SD	R/W	R/W	-/-	R/W
W	R/W	R/W	-/-	R/W
SW	R/W	R/W	-/-	R/W
R	R/W	R/W	-/-	R/W
ER	R/W	R/W	-/-	R/W
ZR	R/W	R/W	-/-	R/W
Z	R/W	R/W	-/-	-/-
G	R/W	R/W	-/-	R/W
Ww	R/W	R/W	-/-	R/W
Wr	R/W	R/W	-/-	R/W
LW	R/W	R/W	-/-	R/W

IOST <sup>*3</sup>	I/O terminal monitor	Decimal	0 to 127	×	×
CMD <sup>*3</sup>	Operation command	Decimal	0 to 63	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

⇒ 12.3.7 ■10 Virtual servo amplifier devices ([MELSEC-L])

\*3 Virtual inverter device

For the details, refer to the following.

⇒ 12.3.7 ■12 Virtual inverter devices ([MELSEC-L])

\*4 Do not use the local device set in a MELSEC-L system.

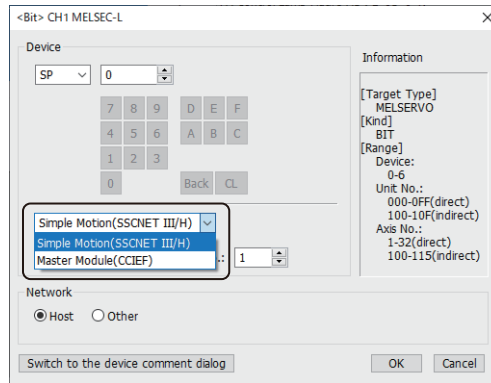

If used, the correct monitoring is disabled.

D32768 or later can be used for data register (D).

## ■2 Setting virtual bit devices for servo amplifiers ([MELSEC-L])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Simple Motion(SSCNET III/H)]	Select this item to connect the GOT through a Simple Motion module (LD77MS). The following item is displayed. <ul style="list-style-type: none"> <li>• [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module.</li> <li>• [Axis No.]: Set the axis number to be monitored.</li> </ul>
[Master Module(CCIEF)]	Select this item to connect the GOT through the master station on the CC-Link IE Field Network.

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example
SP	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-SP(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	UFF-A32-SP0
	[Master Module(CCIEF)] SP(Device) • Device (decimal): 0 to 6	SP0
OM	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-OM(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 4 to 5	UFF-A32-OM0
	[Master Module(CCIEF)] OM(Device) • Device (decimal): 0 to 2, 4 to 5	OM0
TMB	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-TMB(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 6	UFF-A32-TMB1
	[Master Module(CCIEF)] TMB(Device) • Device (decimal): 1 to 6	TMB1
OTI	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-OTI(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	UFF-A32-OTI0
	[Master Module(CCIEF)] OTI(Device) • Device (decimal): 0 to 5	OTI0

For indirect specification of a module or axis number, refer to the following.

⇒ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

### ■3 Availability of writing/reading data to/from bit devices ([MELSEC-L])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	R/W	R/W	-/-
Y	R/W	-/-	R/W	R/W	-/-
B	R/W	-/-	R/W	R/W	-/-
M	R/W	-/-	R/W	R/W	-/-
L	R/W	-/-	R/W	R/W	-/-
S	R/W	-/-	R/W	R/W	-/-
F	R/W	-/-	R/W	R/W	-/-

### ■4 Monitoring-supported word devices ([MELSEC-L])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.7 ■6 Availability of writing/reading data to/from word devices ([MELSEC-L])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
TN <sup>*6</sup>	Timer current value	Decimal	0 to 32767	○	○
CN <sup>*6</sup>	Counter current value	Decimal	0 to 32767	○	○
SN <sup>*6</sup>	Retentive timer current value	Decimal	0 to 32767	○	○
D <sup>*6</sup>	Data register	Decimal	0 to 421887	○	○
SD	Special register	Decimal	0 to 2047	○	○
W	Link register	Hexadecimal	00000 to 66FFF	○	○
SW	Link special register	Hexadecimal	0000 to 7FFF	○	○

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
R <sup>*3*4</sup>	File register	Decimal	0 to 32767	○	○
ZR <sup>*3*5</sup>	Extension file register	Decimal	0 to 393215	○	○
Z	Index register	Decimal	0 to 19	○	○ (Not usable as bit data)
G	Buffer memory (Intelligent function module)	Decimal	U(Unit No.)-G(Device) Notation example: UFF-G100 • Unit No.(hexadecimal): 00 to FF • Device (decimal): 0 to 65535 For the unit No., set the first 2 digits of the 3-digit number that represents the start I/O number of the buffer memory for the intelligent function module.	○	○
Ww <sup>*7</sup>	Remote register	Hexadecimal	0000 to 1FFF	○	○
Wr <sup>*7</sup>	Remote register	Hexadecimal	0000 to 1FFF	○	○
PA <sup>*2</sup>	Basic parameter	Decimal	→ 12.3.7 ■5 Setting virtual word devices for servo amplifiers ([MELSEC-L])	x	x
PB <sup>*2</sup>	Gain filter parameter	Decimal	→ 12.3.7 ■5 Setting virtual word devices for servo amplifiers ([MELSEC-L])	x	x
PC <sup>*2</sup>	Extension setting parameter	Decimal	→ 12.3.7 ■5 Setting virtual word devices for servo amplifiers ([MELSEC-L])	x	x
PD <sup>*2</sup>	I/O setting parameter	Decimal	→ 12.3.7 ■5 Setting virtual word devices for servo amplifiers ([MELSEC-L])	x	x
PT <sup>*2</sup>	Positioning control parameter	Decimal	→ 12.3.7 ■5 Setting virtual word devices for servo amplifiers ([MELSEC-L])	x	x

DO <sup>*2*7</sup>	External output signal	Decimal	→ 12.3.7 ■5 Setting virtual word devices for servo amplifiers ([MELSEC-L])	x	x

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

→ 12.3.7 ■10 Virtual servo amplifier devices ([MELSEC-L])

\*3 Do not set a file register by GT Designer3 when executing multiple programs with the file of the file register set at [Use the same file name as the program.] by the PLC parameter of GX Developer.

Otherwise, read or write at GOT will be erroneous.

\*4 Available for the file register of block No. switched with the RSET instruction.

\*5 Available for the file register of block number of file name switched with the QDRSET instruction.

\*6 Do not use the local device set in a MELSEC-L system.

If used, the correct monitoring is disabled.

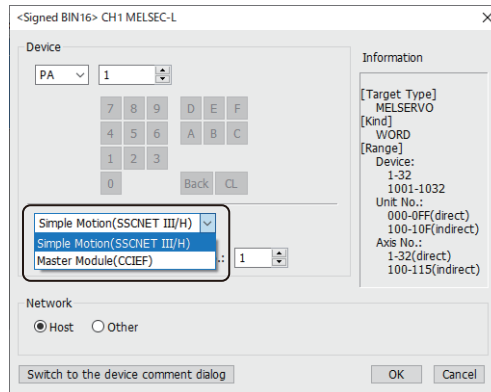

D32768 or later can be used for data register (D).

\*7 This cannot be monitored when the GOT multi-drop is connected.

## ■5 Setting virtual word devices for servo amplifiers ([MELSEC-L])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Simple Motion(SSCNET III/H)]	Select this item to connect the GOT through a Simple Motion module (LD77MS). The following item is displayed. <ul style="list-style-type: none"> <li>• [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module.</li> <li>• [Axis No.]: Set the axis number to be monitored.</li> </ul>
[Master Module(CCIEF)]	Select this item to connect the GOT through the master station on the CC-Link IE Field Network.

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example
PA	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PA(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 32, 1001 to 1032	UFF-A32-PA1
	[Master Module(CCIEF)] PA(Device) • Device (decimal): 1 to 32, 1001 to 1032	PA1
PB	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PB(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 64, 1001 to 1064	UFF-A32-PB1
	[Master Module(CCIEF)] PB(Device) • Device (decimal): 1 to 64, 1001 to 1064	PB1
PC	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PC(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 80, 1001 to 1080	UFF-A32-PC1
	[Master Module(CCIEF)] PC(Device) • Device (decimal): 1 to 80, 1001 to 1080	PC1
PD	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-PD(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 48, 1001 to 1048	UFF-A32-PD1
	[Master Module(CCIEF)] PD(Device) • Device (decimal): 1 to 48, 1001 to 1048	PD1
PT	[Master Module(CCIEF)] PT(Device) • Device (decimal): 1 to 80, 1001 to 1080	PT1

Device name	Device notation and setting range		Notation example
PL	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-PL(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 48, 1001 to 1048	UFF-A32-PL1
	[Master Module(CCIEF)]	PL(Device) • Device (decimal): 1 to 48, 1001 to 1048	PL1
PN	[Master Module(CCIEF)]	PN(Device) • Device (decimal): 1 to 32, 1001 to 1032	PN1
ST	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-ST(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 48	UFF-A32-ST0
	[Master Module(CCIEF)]	ST(Device) • Device (decimal): 0 to 48	ST0
PE	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-PE(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 64, 1001 to 1064	UFF-A32-PE1
	[Master Module(CCIEF)]	PE(Device) • Device (decimal): 1 to 64, 1001 to 1064	PE1
PF	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-PF(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 64, 1001 to 1064	UFF-A32-PF1
	[Master Module(CCIEF)]	PF(Device) • Device (decimal): 1 to 64, 1001 to 1064	PF1
ALM	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-ALM(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 11 to 59, 200 to 215, 220 to 235, 240 to 255	UFF-A32-ALM0
	[Master Module(CCIEF)]	ALM(Device) • Device (decimal): 0 to 1, 11 to 59, 200 to 215, 220 to 235, 240 to 255	ALM0
POS	[Master Module(CCIEF)]	POS(Device) • Device (decimal): 1 to 255, 1001 to 1255	POS1
SPD	[Master Module(CCIEF)]	SPD(Device) • Device (decimal): 1 to 255, 1001 to 1255	SPD1
ACT	[Master Module(CCIEF)]	ACT(Device) • Device (decimal): 1 to 255, 1001 to 1255	ACT1
DCT	[Master Module(CCIEF)]	DCT(Device) • Device (decimal): 1 to 255, 1001 to 1255	DCT1
DWL	[Master Module(CCIEF)]	DWL(Device) • Device (decimal): 1 to 255, 1001 to 1255	DWL1
AUX	[Master Module(CCIEF)]	AUX(Device) • Device (decimal): 1 to 255, 1001 to 1255	AUX1
MD	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-MD(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 18	UFF-A32-MD0
	[Master Module(CCIEF)]	MD(Device) • Device (decimal): 0 to 18	MD0
OTS	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-OTS(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 3	UFF-A32-OTS0
	[Master Module(CCIEF)]	OTS(Device) • Device (decimal): 0 to 3	OTS0

Device name	Device notation and setting range		Notation example
DI	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-DI(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	UFF-A32-DI0
	[Master Module(CCIEF)]	DI(Device) • Device (decimal): 0 to 6	DI0
DO	[Simple Motion(SSCNET III/H)]	U(Unit No.)-A(Axis No.)-DO(Device) • Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect) • Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 4	UFF-A32-DO0
	[Master Module(CCIEF)]	DO(Device) • Device (decimal): 0 to 4	DO0

For indirect specification of a module or axis number, refer to the following.

⇒ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■6 Availability of writing/reading data to/from word devices ([MELSEC-L])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TN	R/W	R/W	-/-	-/-
CN	R/W	R/W	-/-	-/-
SN	R/W	R/W	-/-	-/-
D	R/W	R/W	R/W	R/W
SD	R/W	R/W	R/W	R/W
W	R/W	R/W	R/W	R/W
SW	R/W	R/W	-/-	R/W
R	R/W	R/W	R/W	R/W
ZR	R/W	R/W	R/W	R/W
Z	R/W	R/W	-/-	-/-
G	R/W	R/W	R/W	R/W
Ww	R/W	R/W	R/W	R/W
Wr	R/W	R/W	R/W	R/W
PA	R/W	R/W	-/-	-/-
PB	R/W	R/W	-/-	-/-
PC	R/W	R/W	-/-	-/-
PD	R/W	R/W	-/-	-/-
PT	R/W	R/W	-/-	-/-
PL	R/W	R/W	-/-	-/-
PN	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
PE	R/W	R/W	-/-	-/-

SPD	R/W	R/W	-/-	-/-

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
ACT	R/W	R/W	-/-	-/-
DCT	R/W	R/W	-/-	-/-
DWL	R/W	R/W	-/-	-/-
AUX	R/W	R/W	-/-	-/-
MD	R/-	R/-	-/-	-/-
OTS	R/-	R/-	-/-	-/-
DI	R/-	R/W	-/-	-/-
DO	R/-	R/-	-/-	-/-

## ■7 Monitoring-supported double-word devices ([MELSEC-L])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.3.7 ■9 Availability of writing/reading data to/from double-word devices ([MELSEC-L])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
ALD*2	Life diagnosis	Decimal	⇒12.3.7 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC-L])	×
TMI*2	Input signal for test operation (for test operation)	Decimal	⇒12.3.7 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC-L])	×
TMO*2	Forced output of signal pin (for test operation)	Decimal	⇒12.3.7 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC-L])	×
TMD*2	Set data (for test operation)	Decimal	⇒12.3.7 ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC-L])	×
AL*3	Faults history	Decimal	0 to 899	×
LP*3	Parameter (32-bit)	Decimal	0 to 1500	×
OP*3	Operation parameter	Decimal	0 to 5	×
PV*3	Current value monitor	Decimal	1 to 143	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Virtual servo amplifier device

For the details, refer to the following.

⇒12.3.7 ■10 Virtual servo amplifier devices ([MELSEC-L])

\*3 Virtual inverter device

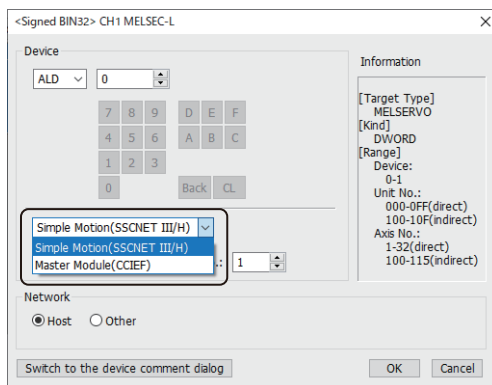

For the details, refer to the following.

⇒12.3.7 ■12 Virtual inverter devices ([MELSEC-L])

## ■8 Setting virtual double-word devices for servo amplifiers ([MELSEC-L])

For virtual servo amplifier devices, the notation differs according to the connection type between the GOT and the servo amplifier.

Select one of the following according to the control type in the device setting dialog.

Item	Description
[Simple Motion(SSCNET III/H)]	Select this item to connect the GOT through a Simple Motion module (LD77MS). The following item is displayed. <ul style="list-style-type: none"> <li>• [Unit No.]: Set the first 2 digits of the 3-digit number that represents the start I/O number of the Simple Motion module.</li> <li>• [Axis No.]: Set the axis number to be monitored.</li> </ul>
[Master Module(CCIEF)]	Select this item to connect the GOT through the master station on the CC-Link IE Field Network.

The following shows the notation and setting range of virtual devices.

Device name	Device notation and setting range	Notation example
ALD	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-ALD(Device) <ul style="list-style-type: none"> <li>• Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect)</li> <li>• Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 0 to 1</li> </ul>	UFF-A32-ALD0
	[Master Module(CCIEF)] ALD(Device) <ul style="list-style-type: none"> <li>• Device (decimal): 0 to 1</li> </ul>	ALD0
TMI	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-TMI(Device) <ul style="list-style-type: none"> <li>• Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect)</li> <li>• Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 0 to 2</li> </ul>	UFF-A32-TMI0
	[Master Module(CCIEF)] TMI(Device) <ul style="list-style-type: none"> <li>• Device (decimal): 0 to 2</li> </ul>	TMI0
TMO	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-TMO(Device) <ul style="list-style-type: none"> <li>• Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect)</li> <li>• Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 0</li> </ul>	UFF-A32-TMO0
	[Master Module(CCIEF)] TMO(Device) <ul style="list-style-type: none"> <li>• Device (decimal): 0</li> </ul>	TMO0
TMD	[Simple Motion(SSCNET III/H)] U(Unit No.)-A(Axis No.)-TMD(Device) <ul style="list-style-type: none"> <li>• Unit No. (hexadecimal): 00 to FF (direct), 100 to 10F (indirect)</li> <li>• Axis No. (decimal): 1 to 32 (direct), 100 to 115 (indirect)</li> <li>• Device (decimal): 0 to 1, 3</li> </ul>	UFF-A32-TMD0
	[Master Module(CCIEF)] TMD(Device) <ul style="list-style-type: none"> <li>• Device (decimal): 0 to 1, 3</li> </ul>	TMD0

For indirect specification of a module or axis number, refer to the following.

⇒ 12.3.2 ■2 (1) Indirect specification of a module number ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■9 Availability of writing/reading data to/from double-word devices ([MELSEC-L])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
ALD	-/-	R/-	-/-	-/-
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-
AL	-/-	R/-	-/-	-/-
LPr	-/-	R/W	-/-	-/-
OP	-/-	R/W	-/-	-/-
PV	-/-	R/-	-/-	-/-

## ■10 Virtual servo amplifier devices ([MELSEC-L])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	→ 12.3.2 ■10 (1) Servo amplifier request ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OM	→ 12.3.2 ■10 (2) Operation mode selection ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
TMB	→ 12.3.2 ■10 (3) Instruction demand (for test operation) ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
OTI	→ 12.3.2 ■10 (4) One-touch tuning instruction ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PA	→ 12.3.2 ■10 (7) Basic parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PB	→ 12.3.2 ■10 (8) Gain filter parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])
PC	→ 12.3.2 ■10 (9) Extension setting parameter ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## 12.3.8 [MELSEC-A]

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([MELSEC-A])
	→ ■2 Availability of writing/reading data to/from bit devices ([MELSEC-A])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([MELSEC-A])
	→ ■4 Availability of writing/reading data to/from word devices ([MELSEC-A])

### ■1 Monitoring-supported bit devices ([MELSEC-A])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.8 ■2 Availability of writing/reading data to/from bit devices ([MELSEC-A])

For monitoring-supported bit devices in the multi-drop connection, refer to the range for GT21 and GS21 in the following table.

○: Available

×: Not available

Device name		Device No. representation	Setting range		Specifications of EG devices <sup>*1</sup>	
			GT27, GT25, GT23, GT SoftGOT2000, and GS25	GT21 and GS21	Assignment to EG devices	Access using a client
X	Input relay	Hexadecimal	0000 to 1FFF	0000 to 1FFF	○	○
Y	Output relay	Hexadecimal	0000 to 1FFF	0000 to 1FFF	○	○
B	Link relay	Hexadecimal	0000 to 7FFF	0000 to 1FFF	○	○
M	Internal relay	Decimal	0 to 8999 9256 to 32767	0 to 8999	○	○
M <sup>*2</sup>	Special internal relay	Decimal	9000 to 9255	9000 to 9255	○	○
L	Latch relay	Decimal	0 to 32767	0 to 8191	○	○
F	Annunciator	Decimal	0 to 32767	0 to 2047	○	○
TC	Timer coil	Decimal	0 to 32767	0 to 2047	○	○ (Not usable as word data)
TT	Timer contact	Decimal	0 to 32767	0 to 2047	○	○ (Not usable as word data)
CC	Counter coil	Decimal	0 to 32767	0 to 1023	○	○ (Not usable as word data)
CT	Counter contact	Decimal	0 to 32767	0 to 1023	○	○ (Not usable as word data)
SB	Link special relay	Hexadecimal	0000 to 07FF	-	○	○
RX	Remote input	Hexadecimal	000 to 7FF	-	○	○
RY	Remote output	Hexadecimal	000 to 7FF	-	○	○
LB	Link relay	Hexadecimal	0000 to 1FFF	-	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 If the special internal relay (M) is converted to the word device, treat 9000 of the device No. as 0 and set in multiples of 16.

## ■2 Availability of writing/reading data to/from bit devices ([MELSEC-A])

The following shows whether writing/reading data to/from bit devices is available by device type. When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	R/W	R/W	-/-
Y	R/W	-/-	R/W	R/W	-/-
B	R/W	-/-	R/W	R/W	-/-
M	R/W	-/-	R/W	R/W	-/-
L	R/W	-/-	R/W	R/W	-/-
F	R/W	-/-	R/W	R/W	-/-
TC	R/W	-/-	-/-	-/-	-/-
TT	R/W	-/-	-/-	-/-	-/-
CC	R/W	-/-	-/-	-/-	-/-
CT	R/W	-/-	-/-	-/-	-/-
SB	R/W	-/-	R/W	R/W	-/-
RX	R/W	-/-	R/W	R/W	-/-
RY	R/W	-/-	R/W	R/W	-/-
LB	R/W	-/-	R/W	R/W	-/-

## ■3 Monitoring-supported word devices ([MELSEC-A])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.8 ■4 Availability of writing/reading data to/from word devices ([MELSEC-A])

For monitoring-supported word devices in the multi-drop connection, refer to the range for GT21 and GS21 in the following table.

○: Available

×: Not available

Device name		Device No. representation	Setting range		Specifications of EG devices*1	
			GT27, GT25, GT23, GT SoftGOT2000, and GS25	GT21 and GS21	Assignment to EG devices	Access using a client
TN	Timer current value	Decimal	0 to 32767	0 to 2047	○	○
CN	Counter current value	Decimal	0 to 32767	0 to 1023	○	○
D	Data register	Decimal	0 to 8999 9256 to 32767	0 to 8999	○	○
D	Special data register	Decimal	9000 to 9255	9000 to 9255	○	○
W	Link register	Hexadecimal	0000 to 7FFF	0000 to 1FFF	○	○
SW	Link special register	Hexadecimal	0000 to 07FF	-	○	○
R	File register	Decimal	0 to 32767	0 to 8191	○	○
ER	Extension file register(Block)	Decimal	ER(R block)-(Device) Notation example: ER255-100 • R block (decimal): 0 to 255 • Device (decimal): 0 to 8191	-	○	○
ZR	Extension file register	Decimal	0 to 1042431	-	○	○

Device name		Device No. representation	Setting range		Specifications of EG devices <sup>*1</sup>	
			GT27, GT25, GT23, GT SoftGOT2000, and GS25	GT21 and GS21	Assignment to EG devices	Access using a client
Z	Index register	Decimal	0 to 6	0 to 6	○	○ (Not usable as bit data)
V	Index register	Decimal	0 to 6	0 to 6	○	○ (Not usable as bit data)
BM <sup>*2</sup>	Buffer memory (Intelligent function module)	Decimal	GM(R block)-(Device) Notation example: BMFF-100 • BM start No. (hexadecimal): 00 to FF • Device (decimal): 0 to 32767 For the BM start No., set the first 2 digits of the 3-digit number that represents the start I/O number of the buffer memory for the intelligent function module.	-	○	○ (Not usable as bit data)
Ww	Remote register	Hexadecimal	000 to 7FF	-	○	○
Wr	Remote register	Hexadecimal	000 to 7FF	-	○	○
LW	Link register	Hexadecimal	0000 to 1FFF	-	○	○
A	Accumulator	Decimal	0 to 1	0 to 1	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Only the intelligent function module on the station connected to GOT can be specified.

Set the buffer memory within the address range of the buffer memory existing in the intelligent function module.

#### ■4 Availability of writing/reading data to/from word devices ([MELSEC-A])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TN	R/W	R/W	-/-	R/W
CN	R/W	R/W	-/-	R/W
D	R/W	R/W	-/-	R/W
W	R/W	R/W	-/-	R/W
SW	R/W	R/W	-/-	R/W
R	R/W	R/W	-/-	R/W
ER <sup>*1</sup>	R/W	R/W	-/-	R/W
ZR	R/W	R/W	-/-	R/W
Z <sup>*2</sup>	R/W	R/W	-/-	-/-
V <sup>*2</sup>	R/W	R/W	-/-	R/W
BM	R/W	R/W	-/-	-/-
Ww	R/W	R/W	-/-	R/W
Wr	R/W	R/W	-/-	R/W
LW	R/W	R/W	-/-	R/W
A <sup>*3</sup>	R/W	R/W	-/-	R/W

\*1 In the computer link connection, the bit specification writing of the word device to the ER29-0 (block 29 of the extension file register) or later of A3ACPU, A3UCPU, A4UCPU is not available.

When the bit specification writing of the word device is required, use the range of block No. 0 to 28.

\*2 In the computer link connection, writing to the index register (such as the touch switch function and numerical input function) is not available.

\*3 In the multi-drop connection (computer link connection between the CPU and the serial multi-drop connection unit), reading/writing data from/to an accumulator is not available.

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([MELSEC-FX])
	→ ■2 Availability of writing/reading data to/from bit devices ([MELSEC-FX])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([MELSEC-FX])
	→ ■4 Setting the buffer memory device ([MELSEC-FX])
	→ ■5 Availability of writing/reading data to/from word devices ([MELSEC-FX])
Protection with a keyword	→ ■6 Protection using a keyword ([MELSEC-FX])

### ■1 Monitoring-supported bit devices ([MELSEC-FX])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.9 ■2 Availability of writing/reading data to/from bit devices ([MELSEC-FX])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
X	Input relay	Octal	0000 to 0377	○	○
Y	Output relay	Octal	0000 to 0377	○	○
M	Auxiliary relay	Decimal	0 to 7679	○	○
M	Special aux relay	Decimal	8000 to 8511	○	○
S	State	Decimal	0 to 4095	○	○
T	Timer contact	Decimal	0 to 511	○	○ (Not usable as word data)
C	Counter contact	Decimal	0 to 255	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSEC-FX])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	R/W	R/W	-/-
Y	R/W	-/-	R/W	R/W	-/-
M	R/W	-/-	R/W	R/W	-/-
S	R/W	-/-	R/W	R/W	-/-
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSEC-FX])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.3.9 ■5 Availability of writing/reading data to/from word devices ([MELSEC-FX])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices *1		
			Assignment to EG devices	Access using a client	
T	Timer current value	Decimal	0 to 511	○	○
C*3	Counter current value	Decimal	0 to 255	○	○
D	Data register	Decimal	0 to 7999	○	○
D	Special data register	Decimal	8000 to 8511	○	○
R	Extension register	Decimal	0 to 32767	○	○
Z	Index register	Decimal	0 to 7	○	○ (Not usable as bit data)
V	Index register	Decimal	0 to 7	○	○ (Not usable as bit data)
BM*5	Buffer memory	Decimal	⇒12.3.9 ■4 Setting the buffer memory device ([MELSEC-FX])	○	○
TS*2*4*6	Timer set value	Decimal	0 to 511	○	○
CS*3*4*6	Counter set value	Decimal	0 to 255	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Only 16-bit (1-word) specification is possible.

\*3 For CS0 to CS199 and C0 to C199, only 16-bit (1-word) specification is allowed.

For CS200 to CS255 and C200 to C255, only 32-bit (2-word) specification is allowed.

\*4 The setting values of the timer and counter, which are not used for the program, cannot be monitored.

If monitoring is executed, a reading error occurs.

\*5 Usable only for special blocks or special units compatible with FX1N, FX1NC, FX2N, FX2NC, FX3G, FX3GC, FX3U, or FX3UC.

(Except FX0N-3A, FX2N-2AD, and FX2N-2DA)

\*6 GT SoftGOT2000 and GT Simulator3 cannot monitor the set values.

## ■4 Setting the buffer memory device ([MELSEC-FX])

### (1) Buffer memory format ([MELSEC-FX])

The following shows the format in the setting dialog of objects or others.

Example) Unit No.: 1, MASK: 6, Device: 100

Device name	Format
Buffer memory	BM(Unit No.)/(MASK)-(Device)

The buffer memory format includes the following elements.

Item	Description	
MASK	Setting range	0 to 6
	Device No. representation	Decimal
	Explanation	Set this item when only specific bit of the buffer memory is monitored or written. When this item is 0, /(MASK) is unnecessary. For the processing corresponding to each setting value, refer to the following. → 12.3.9 ■4 (2) MASK setting ([MELSEC-FX])
Unit No.	Setting range	0 to 7 (direct), 100 to 115 (indirect)
	Device No. representation	Decimal
	Explanation	Set the unit No. of the special block or special unit to be monitored or written. The unit No. (No.0 to No.7) is assigned to the unit or block in order of distance from the main unit. For the details of the unit No., refer to the following. → User's Manual (Hardware) of the MELSEC-FX used For indirect specification of a unit No., refer to the following. → 12.3.9 ■4 (3) Indirect specification of a unit No. ([MELSEC-FX])
Device	Setting range	0 to 32767
	Device No. representation	Decimal
	Explanation	Buffer memory

## (2) MASK setting ([MELSEC-FX])

The following shows the processing corresponding to each setting value for MASK.

MASK	Processing	
	Data type: 16-bit	Data type: 32-bit
0	The buffer memory value is monitored or written.	
1	<p>Only b0 to b3 of the buffer memory is monitored or written. Example) Monitoring BM0 = 4321H with MASK 1: Monitored value = 0001H</p>  <p>Example) Writing the input value (4321H) to BM0 = 0000H with MASK 1: BM0 = 0001H</p> 	<p>Only b0 to b3 and b16 to b19 of the buffer memory is monitored or written. Example) Monitoring BM0 = 87654321H with MASK 1: Monitored value = 00050001H</p>  <p>Example) Writing the input value (87654321H) to BM0 = 00000000H with MASK 1: BM0 = 00050001H</p> 
2	<p>Only b4 to b7 of the buffer memory is monitored or written. Example) Monitoring BM0 = 4321H with MASK 2: Monitored value = 0002H</p>  <p>Example) Writing the input value (4321H) to BM0 = 0000H with MASK 2: BM0 = 0010H</p> 	<p>Only b4 to b7 and b20 to b23 of the buffer memory is monitored or written. Example) Monitoring BM0 = 87654321H with MASK 2: Monitored value = 00060002H</p>  <p>Example) Writing the input value (87654321H) to BM0 = 00000000H with MASK 2: BM0 = 00500010H</p> 

MASK	Processing	
	Data type: 16-bit	Data type: 32-bit
3	<p>Only b8 to b11 of the buffer memory is monitored or written. Example) Monitoring BM0 = 4321H with MASK 3: Monitored value = 0003H</p> <p>Example) Writing the input value (4321H) to BM0 = 0000H with MASK 3: BM0 = 0100H</p>	<p>Only b8 to b11 and b28 to b31 of the buffer memory is monitored or written. Example) Monitoring BM0 = 87654321H with MASK 3: Monitored value = 00070003H</p> <p>Example) Writing the input value (87654321H) to BM0 = 00000000H with MASK 3: BM0 = 00050001H</p>
4	<p>Only b12 to b15 of the buffer memory is monitored or written. Example) Monitoring BM0 = 4321H with MASK 4: Monitored value = 0004H</p> <p>Example) Writing the input value (4321H) to BM0 = 0000H with MASK 4: BM0 = 1000H</p>	<p>Only b12 to b15 and b28 to b31 of the buffer memory is monitored or written. Example) Monitoring BM0 = 87654321H with MASK 4: Monitored value = 00080004H</p> <p>Example) Writing the input value (87654321H) to BM0 = 00000000H with MASK 4: BM0 = 50001000H</p>
5	<p>Only b0 to b7 of the buffer memory is monitored or written. Example) Monitoring BM0 = 4321H with MASK 5: Monitored value = 0021H</p> <p>Example) Writing the input value (4321H) to BM0 = 0000H with MASK 5: BM0 = 0021H</p>	<p>Only b0 to b7 and b16 to b13 of the buffer memory is monitored or written. Example) Monitoring BM0 = 87654321H with MASK 5: Monitored value = 00650021H</p> <p>Example) Writing the input value (87654321H) to BM0 = 00000000H with MASK 5: BM0 = 00650021H</p>

MASK	Processing	
	Data type: 16-bit	Data type: 32-bit
6	<p>Only b8 to b15 of the buffer memory is monitored or written. Example) Monitoring BM0 = 4321H with MASK 6: Monitored value = 0043H</p> <p>Example) Writing the input value (4321H) to BM0 = 0000H with MASK 6: BM0 = 2100H</p>	<p>Only b8 to b15 and b24 to b31 of the buffer memory is monitored or written. Example) Monitoring BM0 = 87654321H with MASK 6: Monitored value = 00870043H</p> <p>Example) Writing the input value (87654321H) to BM0=00000000H with MASK 6: BM0=65002100H</p>

### (3) Indirect specification of a unit No. ([MELSEC-FX])

When you specify any of 100 to 115 for the unit No., the value of the corresponding GOT internal register (GD10 to GD25) is used as the unit number of a special block or special unit.

In the multi-drop connection, indirect specification of a unit No. not available.

The following shows the correspondence between unit Nos. and GOT data registers.

Unit No.	GOT data registers (GD)	Setting range
100	GD10	[0] to [7] Setting a value outside the above range causes a device range error. If a non-existent unit No. is set, a communication timeout error occurs.
101	GD11	
:	:	
114	GD24	
115	GD25	

### (4) Precautions for using the buffer memory

- When the special block or special unit is turned off, the data in the buffer memory, except the data in some keep areas, are initialized.
- When the GOT monitors the buffer memory, the scan time of the PLC may momentarily increase.
- Specify 16-bit data for a 16-bit buffer memory, and specify 32-bit data for a 32-bit buffer memory.  
If 16-bit data is specified for a 32-bit buffer memory, monitoring/writing may not be performed properly.
- For the data size of each buffer memory, refer to the following.  
⇒ User's Manual of the special block or special unit
- When reading/writing data from/to the special block or special unit is performed by interrupting the sequence program, monitoring the buffer memory from the GOT or writing data from the GOT to the buffer memory may not be performed properly.

### ■5 Availability of writing/reading data to/from word devices ([MELSEC-FX])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data*1
T	R/W	R/W	-/-	R/W
C	R/W	R/W	-/-	R/W
D	R/W	R/W	-/-	R/W

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data <sup>*1</sup>
R	R/W	R/W	-/-	R/W
Z	R/W	R/W	-/-	R/W
V	R/W	-/-	-/-	R/W
BM	R/W	R/W	-/-	R/W
TS	R/W	-/-	-/-	-/-
CS	R/W	R/W	-/-	-/-

\*1 When executing the touch switch function that has been set during the bit specification of the word device, do not write any data to the word device through the sequence program.

## ■ 6 Protection using a keyword ([MELSEC-FX])

### (1) How to select a protection level by using a keyword

You can set a protection level for equipment that is allowed to access the FX PLC online, and three protection levels are selectable.

When performing monitoring or changing settings with any on-line equipment is required, specify a keyword with referring to the following.

Registered keyword	Description
When registering a keyword only	Select a protection level by specifying an applicable letter for the initial letter in a keyword. All operations prohibited: Specify a keyword beginning with A, D to F, or 0 to 9. Incorrect write/read prohibited: Specify a keyword beginning with B. Incorrect write prohibited: Specify a keyword beginning with C.
When registering a keyword and the second keyword	Select a protection level in [Registration condition].

### (2) Monitoring availability at each keyword protection level

The following shows the device monitoring availability at each keyword protection level.

Item	When registering a keyword only			When registering a keyword and the second keyword			Keyword not registered or protection canceled	
	All operations prohibited	Incorrect write/read prohibited	Write prohibited	All online operations prohibited	Read/write prohibited	Write prohibited		
Monitoring devices	○	○	○	×	○	○	○	
Changing devices	Value of T or C, and file registers (D1000 and the following)	x*1	x*1	x*1	×	○	○	○
	Other than the above	○	○	○	×	○	○	○

\*1 When the value of the T or C device is set indirectly, changing the device is available.

### (3) Difference between all online operations prohibition and all operations prohibition

When all online operations are prohibited, the programming tool and GOT cannot display devices and input data.

When all operations are prohibited, you cannot perform all operations with the programming tool, but the GOT can display devices and input data.

## 12.3.10 [MELSEC-WS]

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([MELSEC-WS])
	→ ■2 Availability of writing/reading data to/from bit devices ([MELSEC-WS])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([MELSEC-WS])
	→ ■4 Availability of writing/reading data to/from word devices ([MELSEC-WS])
Engineering software for MELSEC-WS and device representation of GT Designer3	→ ■5 Engineering software for MELSEC-WS and device representation of GT Designer3 ([MELSEC-WS])
Offset specifications	→ ■6 Offset specification ([MELSEC-WS])

### ■1 Monitoring-supported bit devices ([MELSEC-WS])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.10 ■2 Availability of writing/reading data to/from bit devices ([MELSEC-WS])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
I	Input	Decimal	I(Module No.)(Input position) Notation example: I12.8 • Module No. (decimal): 1 to 12 • Input position (decimal): 1 to 8	×	×
Q	Output	Decimal	Q(Module No.)(Output position) Notation example: Q12.8 • Module No. (decimal): 1 to 12 • Output position (decimal): 1 to 8	×	×
LI	Logic input	Decimal	LI(Byte No.)(Bit position) Notation example: LI3.7 • Byte No. (decimal): 0 to 3 • Bit position (decimal): 0 to 7	×	×
LQ	Logic result	Decimal	LQ(Byte No.)(Bit position) Notation example: LQ3.7 • Byte No. (decimal): 0 to 3 • Bit position (decimal): 0 to 7	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSEC-WS])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
I	R/-	-/-	-/-	-/-	-/-
Q	R/-	-/-	-/-	-/-	-/-
LI	R/-	-/-	-/-	-/-	-/-
LQ	R/-	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSEC-WS])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.3.10 ■4 Availability of writing/reading data to/from word devices ([MELSEC-WS])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
EI	EFI input (byte)	Decimal	EI(EFI No.)(Device No.)(Byte No.) Notation example: EI231 • EFI No. (decimal): 1 to 2 • Device No. (decimal): 1 to 3 • Byte No. (decimal): 0 to 3	○	○
EQ	EFI output (byte)	Decimal	EQ(EFI No.)(Device No.)(Byte No.) Notation example: EQ21 • EFI No. (decimal): 1 to 2 • Byte No. (decimal): 0 to 2	○	○
D	Data (byte)	Decimal	0 to 99	○	○
LD	Logic input (byte)	Decimal	0 to 3	○	○
W	Data (word)	Decimal	0 to 49	○	○
LW	Logic input (word)	Decimal	0 to 1	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■4 Availability of writing/reading data to/from word devices ([MELSEC-WS])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
EI	R/-	-/-	-/-	R/-
EQ	R/-	-/-	-/-	R/-
D	R/-	-/-	-/-	R/-
LD	R/-	-/-	-/-	R/-
W	R/-	R/-	-/-	R/-
LW	R/-	R/-	-/-	R/-

### ■5 Engineering software for MELSEC-WS and device representation of GT Designer3 ([MELSEC-WS])

The engineering software for MELSEC-WS and the device representation of GT Designer3 are different.

Set the device by referring to the following table.

Device name	GT Designer3	Engineering software for MELSEC-WS
I*1	I□□.● □□ (1-12(Dec)): Module number ● (1-8): Input position	▲▲▲▲[□□],I● ▲▲▲▲: I/O model name (such as XTIO and XTDI) □□ (1-12(Dec)): Module number ● (1-8): Input position
Q*1	Q□□.● □□ (1-12(Dec)): Module number ●(1-8): Output position	▲▲▲▲ [□□].Q ▲▲▲▲: I/O model name (such as XTIO and XTDI) □□ (1-12(Dec)): Module number ●(1-8): Output position
LI*1	LI□.● □ (0-3): Byte number ● (0-7): Bit position	▲▲▲▲[0].□.● ▲▲▲▲: CPU type (CPU0, CPU1) □ (0-3): Byte number ● (0-7): Bit position

Device name	GT Designer3	Engineering software for MELSEC-WS
LQ*1	LQ□● □ (0-3): Byte number ● (0-7): Bit position	▲▲□● ▲▲: Result □ (0-3): Byte number ● (0-7): Bit position
EI*1	EI□● ○ (1-2): EFI number □ (1-3): Device number ● (0-3): Byte number	▲▲▲▲[0].EFI○□,Byte● ▲▲▲▲: CPU type (CPU0, CPU1) ○ (1-2): EFI number □ (1-3): Device number ● (0-3): Byte number
EQ*1	EQ○● ○ (1-2): EFI number ● (0-2): Byte number	▲▲▲▲[0].EFI○:1,Byte● ▲▲▲▲: CPU type (CPU0, CPU1) ○ (1-2): EFI number ● (0-2): Byte number
D	D● ●(0-99(Dec)): Byte number	RS232 data (Safety controller to RS232)
LD	LD● ● (0-3): Byte number	RS232 data (RS232 to safety controller)
W	W● ● (0-49(Dec)): Word number Word virtualization of D device W0 = (D1(Higher-order bits), D0(Lower-order bits))	GOT independent device (Not available)
LW	LW● ● (0-1): Word number Word virtualization of LD device LW0 = (LD1(Higher-order bits), LD0(Lower-order bits))	GOT independent device (Not available)

\*1 When the mapping position is changed by the MELSEC-WS engineering software, a mismatch occurs between virtual devices on GOT and MELSEC-WS mapping devices.  
When mapping is changed, use D devices or LD devices.

## ■6 Offset specification ([MELSEC-WS])

When devices are set with using the offset function, the device values are as follows.

### (1) Input (I)

Offset	+0	+1	+2	+3	+4	+5	+6	+7	+8 to +15	
+0	I1.1	I1.2	I1.3	I1.4	I1.5	I1.6	I1.7	I1.8	Fixed to 0 (OFF)	
+16	I2.1	I2.2	I2.3	I2.4	I2.5	I2.6	I2.7	I2.8		
+32	I3.1	I3.2	I3.3	I3.4	I3.5	I3.6	I3.7	I3.8		
+48	I4.1	I4.2	I4.3	I4.4	I4.5	I4.6	I4.7	I4.8		
+64	I5.1	I5.2	I5.3	I5.4	I5.5	I5.6	I5.7	I5.8		
+80	I6.1	I6.2	I6.3	I6.4	I6.5	I6.6	I6.7	I6.8		
+96	I7.1	I7.2	I7.3	I7.4	I7.5	I7.6	I7.7	I7.8		
+112	I8.1	I8.2	I8.3	I8.4	I8.5	I8.6	I8.7	I8.8		
+128	I9.1	I9.2	I9.3	I9.4	I9.5	I9.6	I9.7	I9.8		
+144	I10.1	I10.2	I10.3	I10.4	I10.5	I10.6	I10.7	I10.8		
+160	I11.1	I11.2	I11.3	I11.4	I11.5	I11.6	I11.7	I11.8		
+176	I12.1	I12.2	I12.3	I12.4	I12.5	I12.6	I12.7	I12.8		
+192	Device range error									

## (2) Output (Q)

Offset	+0	+1	+2	+3	+4	+5	+6	+7	+8 to +15
+0	Q1.1	Q1.2	Q1.3	Q1.4	Q1.5	Q1.6	Q1.7	Q1.8	Fixed to 0 (OFF)
+16	Q2.1	Q2.2	Q2.3	Q2.4	Q2.5	Q2.6	Q2.7	Q2.8	
+32	Q3.1	Q3.2	Q3.3	Q3.4	Q3.5	Q3.6	Q3.7	Q3.8	
+48	Q4.1	Q4.2	Q4.3	Q4.4	Q4.5	Q4.6	Q4.7	Q4.8	
+64	Q5.1	Q5.2	Q5.3	Q5.4	Q5.5	Q5.6	Q5.7	Q5.8	
+80	Q6.1	Q6.2	Q6.3	Q6.4	Q6.5	Q6.6	Q6.7	Q6.8	
+96	Q7.1	Q7.2	Q7.3	Q7.4	Q7.5	Q7.6	Q7.7	Q7.8	
+112	Q8.1	Q8.2	Q8.3	Q8.4	Q8.5	Q8.6	Q8.7	Q8.8	
+128	Q9.1	Q9.2	Q9.3	Q9.4	Q9.5	Q9.6	Q9.7	Q9.8	
+144	Q10.1	Q10.2	Q10.3	Q10.4	Q10.5	Q10.6	Q10.7	Q10.8	
+160	Q11.1	Q11.2	Q11.3	Q11.4	Q11.5	Q11.6	Q11.7	Q11.8	
+176	Q12.1	Q12.2	Q12.3	Q12.4	Q12.5	Q12.6	Q12.7	Q12.8	
+192	Device range error								

## (3) Logic input (LI)

Offset	+0	+1	+2	+3	+4	+5	+6	+7	
+0	LI0.0	LI0.1	LI0.2	LI0.3	LI0.4	LI0.5	LI0.6	LI0.7	
+8	LI1.0	LI1.1	LI1.2	LI1.3	LI1.4	LI1.5	LI1.6	LI1.7	
+16	LI2.0	LI2.1	LI2.2	LI2.3	LI2.4	LI2.5	LI2.6	LI2.7	
+24	LI3.0	LI3.1	LI3.2	LI3.3	LI3.4	LI3.5	LI3.6	LI3.7	
+32	Device range error								

## (4) Logic result (LQ)

Offset	+0	+1	+2	+3	+4	+5	+6	+7	
+0	LQ0.0	LQ0.1	LQ0.2	LQ0.3	LQ0.4	LQ0.5	LQ0.6	LQ0.7	
+8	LQ1.0	LQ1.1	LQ1.2	LQ1.3	LQ1.4	LQ1.5	LQ1.6	LQ1.7	
+16	LQ2.0	LQ2.1	LQ2.2	LQ2.3	LQ2.4	LQ2.5	LQ2.6	LQ2.7	
+24	LQ3.0	LQ3.1	LQ3.2	LQ3.3	LQ3.4	LQ3.5	LQ3.6	LQ3.7	
+32	Device range error								

## (5) EFI input (EI)

Offset	+0	+1	+2	+3	+4 to +15
+0	EI110	EI111	EI112	EI113	Fixed to 0
+16	EI120	EI121	EI122	EI123	
+32	EI130	EI131	EI132	EI133	
+48 : +240	Fixed to 0				
+256	EI210	EI211	EI212	EI213	Fixed to 0
+272	EI220	EI221	EI222	EI223	
+288	EI230	EI231	EI232	EI233	Device range error
+302	Device range error				

## (6) EFI output (EQ)

Offset	+0	+1	+2	+3 to +15
+0	EQ10	EQ11	EQ12	Fixed to 0
+16 : +240	Fixed to 0			
+256	EQ20	EQ21	EQ22	Device range error
+272	Device range error			

## 12.3.11 [MELIPC]

Not available to GT2105-Q.

This section shows the device range of MELIPC (MI5122-VW).

Item	Reference
Specifications of bit devices	⇒ ■1 Monitoring-supported bit devices ([MELIPC])
Specifications of word devices	⇒ ■2 Monitoring-supported word devices ([MELIPC])

The settable device range is the same when [MELIPC] is selected and when [MELSEC iQ-R, RnMT/NC/RT, CR800-D] is selected.

For the device range when the GOT is connected to the MELSEC iQ-R series, refer to the following.

⇒ 12.3.2 [MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D]

### ■1 Monitoring-supported bit devices ([MELIPC])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.2 ■3 Availability of writing/reading data to/from bit devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
B	Link relay	Hexadecimal 00000 to 9FFFF	○	○
M	Internal relay	Decimal 0 to 61439	○	○
SM	Special relay	Decimal 0 to 4095	○	○
JnX	Link input (link direct)	Hexadecimal J(Network No.n)-X(Device) Notation example: J1-X0000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 0000 to 3FFF	○	○
JnY	Link output (link direct)	Hexadecimal J(Network No.n)-Y(Device) Notation example: J1-Y0000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 0000 to 3FFF	○	○
JnSB	Link special relay (link direct)	Hexadecimal J(Network No.n)-SB(Device) Notation example: J1-SB000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 000 to 1FF	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■2 Monitoring-supported word devices ([MELIPC])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.3.2 ■6 Availability of writing/reading data to/from word devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
D	Data register	Decimal	0 to 4184063	○	○
SD	Special register	Decimal	0 to 4095	○	○
W	Link register	Hexadecimal	00000 to FFFFF	○	○
ZR	Extension file register	Decimal	0 to 524287	○	○
JnW	Link register (link direct)	Hexadecimal	J(Network No.n)-W(Device) Notation example: J1-W00000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 0000 to 3FFF*2	○	○
JnSW	Link special register (link direct)	Hexadecimal	J(Network No.n)-SW(Device) Notation example: J1-SW000 • Network No.n (decimal): 1 to 239 • Device (hexadecimal): 000 to 1FF	○	○
U3E0G	CPU buffer memory access device	Decimal	U3E0-G(Device) Notation example: U3E0-G100 • Device (decimal): 0 to 199999	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 The device range for a PLC with the CC-Link IE TSN master/local module (1000BASE-SX model) (RJ71GN11-SX) installed is 00000 to 83FFF.

## 12.3.12 [MELSERVO-J2M-P8A]

Item	Reference
Specifications of bit devices	➡ ■1 Monitoring-supported bit devices ([MELSERVO-J2M-P8A])

➡ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J2M-P8A])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSERVO-J2M-P8A])

The following table shows monitoring-supported virtual word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

➡ 12.3.12 ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J2M-P8A])

For details on virtual servo amplifier devices, refer to the following.

⇒12.3.12 ■7 Virtual servo amplifier devices ([MELSERVO-J2M-P8A])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
PRM	Parameter	Decimal	0 to 29 1000 to 1029	○	×
ST	Status display	Decimal	0 to 2	○	×
AL	Alarm (current alarm)	Decimal	0 11 to 13	○	×
AL	Alarm (alarm history)	Decimal	200 to 205 210 to 215 230 to 235	○	×
DI	External input signal	Decimal	0 to 2	×	×
DO	External output signal	Decimal	0 to 1	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

■4 Availability of writing/reading data to/from word devices ([MELSERVO-J2M-P8A])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PRM	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
AL	R/-	R/-	-/-	-/-
DI	R/-	R/-	-/-	-/-
DO	R/-	R/-	-/-	-/-

■5 Monitoring-supported double-word devices ([MELSERVO-J2M-P8A])

The following table shows monitoring-supported virtual double-word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.3.12 ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J2M-P8A])

For details on virtual servo amplifier devices, refer to the following.

⇒12.3.12 ■7 Virtual servo amplifier devices ([MELSERVO-J2M-P8A])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
TMO	Forced output of signal pin (for test operation)	Decimal	0	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J2M-P8A])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
TMO	-/-	-/W	-/-	-/-

## ■7 Virtual servo amplifier devices ([MELSERVO-J2M-P8A])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	⇒(1) Servo amplifier request ([MELSERVO-J2M-P8A])
OM	⇒(2) Operation mode selection ([MELSERVO-J2M-P8A])
PRM	⇒(3) Parameter ([MELSERVO-J2M-P8A])
ST	⇒(4) Status display ([MELSERVO-J2M-P8A])
AL	⇒(5) Alarm ([MELSERVO-J2M-P8A])
DI	⇒(6) External input signal ([MELSERVO-J2M-P8A])
DO	⇒(7) External output signal ([MELSERVO-J2M-P8A])
TMO	⇒(8) Forced output of signal pin (for test operation) ([MELSERVO-J2M-P8A])

### (1) Servo amplifier request ([MELSERVO-J2M-P8A])

Virtual device name	Name	Symbol
SP1	Current alarm clear	-
SP2	Alarm history clear	-

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (2) Operation mode selection ([MELSERVO-J2M-P8A])

Virtual device name	Name	Symbol
OM0	Normal mode (not test operation mode)	-
OM4	Output signal (DO) forced output	-

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (3) Parameter ([MELSERVO-J2M-P8A])

Use an appropriate device according to the write destination of the servo amplifier.

- PRM0 to PRM29: Writing data to the RAM of a servo amplifier
- PRM1000 to PRM1029: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PRM0, PRM1000	Serial communication function selection, alarm history clear	*BPS
PRM1, PRM1001	Regenerative brake option selection	*REG
PRM2, PRM1002	Function selection 1	*OP1
PRM3, PRM1003	Analog monitor 1 output	MD1

Virtual device name	Name	Symbol
PRM4, PRM1004	Analog monitor 2 output	MD2
PRM5, PRM1005	Analog monitor 3 output	MD3
PRM6, PRM1006	Analog monitor 1 offset	MO1
PRM7, PRM1007	Analog monitor 2 offset	MO2
PRM8, PRM1008	Analog monitor 3 offset	MO3
PRM9, PRM1009	Function selection 2	*OP2
PRM10, PRM1010	Interface unit serial communication number selection	*ISN
PRM11, PRM1011	1slot serial communication station number selection	*DSN1
PRM12, PRM1012	2slot serial communication station number selection	*DSN2
PRM13, PRM1013	3slot serial communication station number selection	*DSN3
PRM14, PRM1014	4slot serial communication station number selection	*DSN4
PRM15, PRM1015	5slot serial communication station number selection	*DSN5
PRM16, PRM1016	6slot serial communication station number selection	*DSN6
PRM17, PRM1017	7slot serial communication station number selection	*DSN7
PRM18, PRM1018	8slot serial communication station number selection	*DSN8
PRM19, PRM1019	Parameter write inhibit	*BLK
PRM20, PRM1020	Serial communication time-out selection	SIC
PRM21 to PRM29, PRM1021 to PRM1029	For manufacturer setting	-

#### (4) Status display ([MELSERVO-J2M-P8A])

Virtual device name	Name	Symbol
ST0	Regenerative load ratio	-
ST1	Bus voltage	-
ST2	Peak bus voltage	-

#### (5) Alarm ([MELSERVO-J2M-P8A])

Virtual device name	Name	Symbol
AL0	Current alarm number	-
AL11	Servo status when alarm occurs, regenerative load ratio	-
AL12	Servo status when alarm occurs, bus voltage	-
AL13	Servo status when alarm occurs, peak bus voltage	-
AL200	Alarm number from alarm history most recent alarm	-
AL201	Alarm number from alarm history first alarm in past	-
AL202	Alarm number from alarm history second alarm in past	-
AL203	Alarm number from alarm history third alarm in past	-
AL204	Alarm number from alarm history fourth alarm in past	-
AL205	Alarm number from alarm history fifth alarm in past	-
AL210	Alarm occurrence time in alarm history most recent alarm	-
AL211	Alarm occurrence time in alarm history first alarm in past	-
AL212	Alarm occurrence time in alarm history second alarm in past	-
AL213	Alarm occurrence time in alarm history third alarm in past	-
AL214	Alarm occurrence time in alarm history fourth alarm in past	-
AL215	Alarm occurrence time in alarm history fifth alarm in past	-
AL230	Detailed alarm from alarm history most recent alarm	-
AL231	Detailed alarm from alarm history first alarm in past	-
AL232	Detailed alarm from alarm history second alarm in past	-
AL233	Detailed alarm from alarm history third alarm in past	-

Virtual device name	Name	Symbol
AL234	Detailed alarm from alarm history fourth alarm in past	-
AL235	Detailed alarm from alarm history fifth alarm in past	-

### (6) External input signal ([MELSERVO-J2M-P8A])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	External input pin status CN1A/CN1B	-	For the mapping of the bits corresponding to the data to be read, refer to the following. →MR-J2M-A Instruction Manual
DI1	External input pin status CN5	-	
DI2	External input pin status CN4A/CN4B	-	

### (7) External output signal ([MELSERVO-J2M-P8A])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	External output pin status CN1A/CN1B	-	For the mapping of the bits corresponding to the data to be read, refer to the following. →MR-J2M-A Instruction Manual
DO1	External output pin status CN4A/CN4B	-	

### (8) Forced output of signal pin (for test operation) ([MELSERVO-J2M-P8A])

Virtual device name	Name	Symbol
TMO0	Forced output of signal pin	-

When using the forced output of signal pin (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

## ■ 8 Precautions for virtual servo amplifier devices ([MELSERVO-J2M-P8A])

### (1) Monitoring servo amplifier

Carefully read the manual of servo amplifier to be connected and fully understand the operating procedures before monitoring.

Before operation, check the parameter settings and adjust them as required. Improper settings may cause some machines to perform unexpected operation.

The parameter settings must not be changed excessively. Operation will be insatiable.

### (2) Data length of a virtual device

Set the data length of a virtual device as shown below.

Virtual device	Data length
PRM, ST, AL, PA, PB, PC, PD, POS, SPD, ACT, DCT, DWL, AUX	16 bits or 32 bits Depending on the servo amplifier data
DI, DO, TMI, TMO, TMD	32 bits

If the above data length is not set, data will be specified incorrectly for the servo amplifier or cannot be properly monitored by the GOT.

Item	Operation	
Monitoring	Handling 16-bit data as 32-bit data	The upper 16 bits are displayed as 0.
	Handling 32-bit data as 16-bit data	The lower 16 bits only are displayed.
Writing	The GOT writes within the range of data length set. Note that the servo amplifier responds correctly while the written data is invalid in the servo amplifier side when the written data is out of the range of values which can be set by the servo amplifier.	

### (3) Memory to which parameter values are written

Parameter values are written to the RAM or EEPROM of a servo amplifier.

Write destination	Precautions
RAM	Remember that the written parameter values are cleared when the servo amplifier is turned off.
EEPROM	The written parameter values are not cleared when the servo amplifier is turned off. However, there is a limit on the number of times data can be written to EEPROM. If you update the data frequently (more than once an hour), write parameter values to RAM. For the details, refer to the manual of the servo amplifier used.

### (4) Data type and format settings for using virtual servo amplifier devices (direct connection between the GOT and servo amplifier)

To specify virtual servo amplifier devices in the object setting or other settings, the data type and format must be set according to the notation of the values handled by the virtual devices.

For notation of the virtual device values, refer to the following.

→ Instruction manual for the servo amplifier used  
MR Configurator2 HELP

The following shows a setting example for using virtual servo amplifier devices for an object.

Example) When using a numerical display

Notation of the virtual device values	Setting
Decimal number (positive values only)	<ul style="list-style-type: none"> <li>• [Data Type]: [Unsigned BIN16] ([Unsigned BIN32] for 65536 or more)</li> <li>• [Format]: [Unsigned Decimal]</li> </ul>
Decimal number (positive and negative values)	<ul style="list-style-type: none"> <li>• [Data Type]: [Signed BIN16] ([Signed BIN32] for -32769 or less, and 32768 or more)</li> <li>• [Format]: [Signed Decimal]</li> </ul>
Hexadecimal number	<ul style="list-style-type: none"> <li>• [Data Type]: [Unsigned BIN16] ([Unsigned BIN32] for 0x10000 or more)</li> <li>• [Format]: [Hexadecimal]</li> </ul>
Decimal point notation (positive values only)	<ul style="list-style-type: none"> <li>• [Data Type]: [Real]</li> <li>• [Format]: [Real]</li> </ul>
Decimal point notation (positive and negative values)	<ul style="list-style-type: none"> <li>• [Digits (Integral)]: Set the number of digits in the integral portion.</li> <li>• [Digits (Fractional)]: Set the number of digits in the fractional portion.</li> </ul>
When the notation varies by digit	<ul style="list-style-type: none"> <li>• [Data Type]: [Unsigned BIN16] ([Unsigned BIN32] for 0x10000 or more)</li> <li>• [Format]: [Hexadecimal]</li> <li>• On the [Operation/Script] tab, select [Data Operation] for [Operation Type], and set [Bit Mask] or [Bit Shift].</li> </ul>

### (5) Specifying consecutive virtual servo amplifier devices

The GOT does not support writing/reading data to/from consecutive virtual servo amplifier devices.

## 12.3.13 [MELSERVO-J2M-\*DU]

Item	Reference
Specifications of bit devices	➡ ■1 Monitoring-supported bit devices ([MELSERVO-J2M-*DU])

TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-

## ■7 Virtual servo amplifier devices ([MELSERVO-J2M-\*DU])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	⇒(1) Servo amplifier request ([MELSERVO-J2M-*DU])
OM	⇒(2) Operation mode selection ([MELSERVO-J2M-*DU])
TMB	⇒(3) Instruction demand (for test operation) ([MELSERVO-J2M-*DU])
PRM	⇒(4) Parameter ([MELSERVO-J2M-*DU])
ST	⇒(5) Status display ([MELSERVO-J2M-*DU])
AL	⇒(6) Alarm ([MELSERVO-J2M-*DU])
TMI	⇒(7) Input signal for test operation (for test operation) ([MELSERVO-J2M-*DU])
TMO	⇒(8) Forced output of signal pin (for test operation) ([MELSERVO-J2M-*DU])
TMD	⇒(9) Set data (for test operation) ([MELSERVO-J2M-*DU])

### (1) Servo amplifier request ([MELSERVO-J2M-\*DU])

Virtual device name	Name	Symbol
SP0	Status display data clear	-
SP1	Current alarm clear	-
SP2	Alarm history clear	-
SP3	External input signal prohibited	-
SP4	External output signal prohibited	-
SP5	External input signal resumed	-
SP6	External output signal resumed	-

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (2) Operation mode selection ([MELSERVO-J2M-\*DU])

Virtual device name	Name	Symbol
OM0	Normal mode (not test operation mode)	-
OM1	JOG operation	-
OM2	Positioning operation	-
OM3	Motorless operation	-
OM4	Output signal (DO) forced output	-

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (3) Instruction demand (for test operation) ([MELSERVO-J2M-\*DU])

Virtual device name	Name	Symbol
TMB0	Clearing acceleration/deceleration time constant	-
TMB1	Temporary stop command	-

When using the instruction demand (for test operation), note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (4) Parameter ([MELSERVO-J2M-\*DU])

Use an appropriate device according to the write destination of the servo amplifier.

- PRM0 to PRM84: Writing data to the RAM of a servo amplifier
- PRM1000 to PRM1084: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PRM0, PRM1000	For manufacturer setting	-
PRM1, PRM1001	Function selection 1	*OP1
PRM2, PRM1002	Auto tuning	ATU
PRM3, PRM1003	Electronic gear numerator (Command pulse multiplying factor numerator)	CMX
PRM4, PRM1004	Electronic gear denominator (Command pulse multiplying factor denominator)	CDV
PRM5, PRM1005	In-position range	INP
PRM6, PRM1006	Position control gain 1	PG1
PRM7, PRM1007	Position command acceleration/deceleration time constant (position smoothing)	PST
PRM8 to PRM15, PRM1008 to PRM1015	For manufacturer setting	-
PRM16, PRM1016	Alarm history clear	*BPS
PRM17 to PRM18, PRM1017 to PRM1018	For manufacturer setting	-
PRM19, PRM1019	DRU parameter block	*BLK
PRM20, PRM1020	Function selection 2	*OP2
PRM21, PRM1021	Function selection 3 (Command pulse selection)	*OP3
PRM22, PRM1022	Function selection 4	*OP4
PRM23, PRM1023	Feed forward gain	FFC
PRM24, PRM1024	Zero speed	ZSP
PRM25 to PRM26, PRM1025 to PRM1026	For manufacturer setting	-
PRM27, PRM1027	Encoder output pulses	*ENR
PRM28, PRM1028	Internal torque limit 1	TL1
PRM29 to PRM32, PRM1029 to PRM1032	For manufacturer setting	-
PRM33, PRM1033	Electromagnetic brake sequence output	MBR
PRM34, PRM1034	Ratio of load inertia moment to servo motor inertia moment	GD2
PRM35, PRM1035	Position control gain 2	PG2
PRM36, PRM1036	Speed control gain 1	VG1
PRM37, PRM1037	Speed control gain 2	VG2
PRM38, PRM1038	Speed integral compensation	VIC
PRM39, PRM1039	Speed differential compensation	VDC
PRM40 to PRM41, PRM1040 to PRM1041	For manufacturer setting	-
PRM42, PRM1042	Input signal selection 1	*DI1

Virtual device name	Name	Symbol
PRM43 to PRM50, PRM1043 to PRM1050	For manufacturer setting	-
PRM51, PRM1051	Function selection 6	*OP6
PRM52 to PRM53, PRM1052 to PRM1053	For manufacturer setting	-
PRM54, PRM1054	Function selection 9	*OP9
PRM55, PRM1055	Function selection A	*OPA
PRM56 to PRM57, PRM1056 to PRM1057	For manufacturer setting	-
PRM58, PRM1058	Machine resonance suppression filter 1	NH1
PRM59, PRM1059	Machine resonance suppression filter 2	NH2
PRM60, PRM1060	Low-pass filter, adaptive vibration suppression control	LPF
PRM61, PRM1061	Ratio of load inertia moment to servo motor inertia moment 2	GD2B
PRM62, PRM1062	Position control gain 2 changing ratio	PG2B
PRM63, PRM1063	Speed control gain 2 changing ratio	VG2B
PRM64, PRM1064	Speed integral compensation changing ratio	VICB
PRM65, PRM1065	Gain changing selection	*CDP
PRM66, PRM1066	Gain switching condition	CDS
PRM67, PRM1067	Gain switching time constant	CDT
PRM68, PRM1068	For manufacturer setting	-
PRM69, PRM1069	Command pulse multiplying factor numerator 2	CMX2
PRM70, PRM1070	Command pulse multiplying factor numerator 3	CMX3
PRM71, PRM1071	Command pulse multiplying factor numerator 4	CMX4
PRM72 to PRM75, PRM1072 to PRM1075	For manufacturer setting	-
PRM76, PRM1076	Internal torque limit 2	TL2
PRM77 to PRM84, PRM1077 to PRM1084	For manufacturer setting	-

#### (5) Status display ([MELSERVO-J2M-\*DU])

Virtual device name	Name	Symbol
ST0	Cumulative feedback pulses	-
ST1	Servo motor speed	-
ST2	Droop pulses	-
ST3	Cumulative command pulses	-
ST4	Command pulse frequency	-
ST5	Effective load ratio	-
ST6	Peak load ratio	-
ST7	Instantaneous torque	-
ST8	Within one-revolution position	-
ST9	ABS counter	-
ST10	Load inertia moment ratio	-

#### (6) Alarm ([MELSERVO-J2M-\*DU])

Virtual device name	Name	Symbol
AL0	Current alarm number	-
AL11	Servo status when alarm occurs, cumulative feedback pulses	-
AL12	Servo status when alarm occurs, servo motor speed	-
AL13	Servo status when alarm occurs, droop pulses	-
AL14	Servo status when alarm occurs, cumulative command pulses	-

Virtual device name	Name	Symbol
AL15	Servo status when alarm occurs, command pulse frequency	-
AL16	Servo status when alarm occurs, effective load ratio	-
AL17	Servo status when alarm occurs, peak load ratio	-
AL18	Servo status when alarm occurs, instantaneous torque	-
AL19	Servo status when alarm occurs, within one-revolution position	-
AL20	Servo status when alarm occurs, ABS counter	-
AL21	Servo status when alarm occurs, load inertia moment ratio	-
AL200	Alarm number from alarm history most recent alarm	-
AL201	Alarm number from alarm history first alarm in past	-
AL202	Alarm number from alarm history second alarm in past	-
AL203	Alarm number from alarm history third alarm in past	-
AL204	Alarm number from alarm history fourth alarm in past	-
AL205	Alarm number from alarm history fifth alarm in past	-
AL210	Alarm occurrence time in alarm history most recent alarm	-
AL211	Alarm occurrence time in alarm history first alarm in past	-
AL212	Alarm occurrence time in alarm history second alarm in past	-
AL213	Alarm occurrence time in alarm history third alarm in past	-
AL214	Alarm occurrence time in alarm history fourth alarm in past	-
AL215	Alarm occurrence time in alarm history fifth alarm in past	-
AL230	Detailed alarm from alarm history most recent alarm	-
AL231	Detailed alarm from alarm history first alarm in past	-
AL232	Detailed alarm from alarm history second alarm in past	-
AL233	Detailed alarm from alarm history third alarm in past	-
AL234	Detailed alarm from alarm history fourth alarm in past	-
AL235	Detailed alarm from alarm history fifth alarm in past	-

### (7) Input signal for test operation (for test operation) ([MELSERVO-J2M-\*DU])

Virtual device name	Name	Symbol
TMI0	Input signal for test operation	-

When using the input signal for test operation (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (8) Forced output of signal pin (for test operation) ([MELSERVO-J2M-\*DU])

Virtual device name	Name	Symbol
TMO0	Forced output of signal pin	-

When using the forced output of signal pin (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (9) Set data (for test operation) ([MELSERVO-J2M-\*DU])

Virtual device name	Name	Symbol
TMD0	Writes the speed (test mode)	-
TMD1	Writes the acceleration/deceleration time constant (test mode)	-
TMD2	Writes the moving distance in pulses (test mode)	-

When using the set data (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2M-\*DU])

For the precautions for virtual servo amplifier devices, refer to the following.

→ 12.3.12 ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2M-P8A])

## 12.3.14 [MELSERVO-J2S-\*A]

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([MELSERVO-J2S-*A])
	→ ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J2S-*A])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([MELSERVO-J2S-*A])
	→ ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J2S-*A])
Specifications of double-word devices	→ ■5 Monitoring-supported double-word devices ([MELSERVO-J2S-*A])
	→ ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J2S-*A])
Specifications of virtual servo amplifier devices	→ ■7 Virtual servo amplifier devices ([MELSERVO-J2S-*A])
	→ ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2S-*A])

### ■1 Monitoring-supported bit devices ([MELSERVO-J2S-\*A])

The following table shows monitoring-supported virtual bit devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.14 ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J2S-\*A])

For details on virtual servo amplifier devices, refer to the following.

→ 12.3.14 ■7 Virtual servo amplifier devices ([MELSERVO-J2S-\*A])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
SP	Servo amplifier request	Decimal	0 to 6	×	×
OM	Operation mode selection	Decimal	0 to 4	×	×
TMB	Instruction demand (for test operation)	Decimal	0 to 1	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J2S-\*A])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSERVO-J2S-\*A])

The following table shows monitoring-supported virtual word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.14 ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J2S-\*A])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.14 ■7 Virtual servo amplifier devices ([MELSERVO-J2S-\*A])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
PRM	Parameter	Decimal	0 to 84 1000 to 1084	○	×
ST	Status display	Decimal	0 to 14	○	×
AL	Alarm (current alarm)	Decimal	0 to 1 11 to 25	○	×
AL	Alarm (alarm history)	Decimal	200 to 205 210 to 215 230 to 235	○	×
DI	External input signal	Decimal	0	×	×
DO	External output signal	Decimal	0	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

■4 Availability of writing/reading data to/from word devices ([MELSERVO-J2S-\*A])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PRM	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
AL	R/-	R/-	-/-	-/-
DI	R/-	R/-	-/-	-/-
DO	R/-	R/-	-/-	-/-

■5 Monitoring-supported double-word devices ([MELSERVO-J2S-\*A])

The following table shows monitoring-supported virtual double-word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.14 ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J2S-\*A])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.14 ■7 Virtual servo amplifier devices ([MELSERVO-J2S-\*A])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
TMI	Input signal for test operation (for test operation)	Decimal	0	×	×
TMO	Forced output of signal pin (for test operation)	Decimal	0	×	×
TMD	Set data (for test operation)	Decimal	0 to 2	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J2S-\*A])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-

## ■7 Virtual servo amplifier devices ([MELSERVO-J2S-\*A])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	⇒ (1) Servo amplifier request ([MELSERVO-J2S-*A])
OM	⇒ (2) Operation mode selection ([MELSERVO-J2S-*A])
TMB	⇒ (3) Instruction demand (for test operation) ([MELSERVO-J2S-*A])
PRM	⇒ (4) Parameter ([MELSERVO-J2S-*A])
ST	⇒ (5) Status display ([MELSERVO-J2S-*A])
AL	⇒ (6) Alarm ([MELSERVO-J2S-*A])
DI	⇒ (7) External input signal ([MELSERVO-J2S-*A])
DO	⇒ (8) External output signal ([MELSERVO-J2S-*A])
TMI	⇒ (9) Input signal for test operation (for test operation) ([MELSERVO-J2S-*A])
TMO	⇒ (10) Forced output of signal pin (for test operation) ([MELSERVO-J2S-*A])
TMD	⇒ (11) Set data (for test operation) ([MELSERVO-J2S-*A])

### (1) Servo amplifier request ([MELSERVO-J2S-\*A])

Virtual device name	Name	Symbol
SP0	Status display data clear	-
SP1	Current alarm clear	-
SP2	Alarm history clear	-
SP3	External input signal prohibited	-
SP4	External output signal prohibited	-
SP5	External input signal resumed	-
SP6	External output signal resumed	-

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (2) Operation mode selection ([MELSERVO-J2S-\*A])

Virtual device name	Name	Symbol
OM0	Normal mode (not test operation mode)	-
OM1	JOG operation	-
OM2	Positioning operation	-
OM3	Motorless operation	-
OM4	Output signal (DO) forced output	-

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (3) Instruction demand (for test operation) ([MELSERVO-J2S-\*A])

Virtual device name	Name	Symbol
TMB0	Clearing acceleration/deceleration time constant	-
TMB1	Temporary stop command	-

When using the instruction demand (for test operation), note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (4) Parameter ([MELSERVO-J2S-\*A])

Use an appropriate device according to the write destination of the servo amplifier.

- PRM0 to PRM84: Writing data to the RAM of a servo amplifier
- PRM1000 to PRM1084: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PRM0, PRM1000	Control mode, regenerative brake option selection	*STY
PRM1, PRM1001	Function selection 1	*OP1
PRM2, PRM1002	Auto tuning	ATU
PRM3, PRM1003	Electronic gear numerator (Command pulse multiplying factor numerator)	CMX
PRM4, PRM1004	Electronic gear denominator (Command pulse multiplying factor denominator)	CDV
PRM5, PRM1005	In-position range	INP
PRM6, PRM1006	Position control gain 1	PG1
PRM7, PRM1007	Position command acceleration/deceleration time constant	PST
PRM8, PRM1008	Internal speed command1/limit1	SC1
PRM9, PRM1009	Internal speed command2/limit2	SC2
PRM10, PRM1010	Internal speed command3/limit3	SC3
PRM11, PRM1011	Acceleration time constant	STA
PRM12, PRM1012	Deceleration time constant	STB
PRM13, PRM1013	S-pattern acceleration/deceleration time constant	STC
PRM14, PRM1014	Torque command time constant	TQC
PRM15, PRM1015	Station number setting	*SNO
PRM16, PRM1016	Serial communication function selection, alarm history clear	*BPS
PRM17, PRM1017	Analog monitor output	MOD
PRM18, PRM1018	Status display selection	*DMD
PRM19, PRM1019	Parameter block	*BLK
PRM20, PRM1020	Function selection 2	*OP2
PRM21, PRM1021	Function selection 3 (Command pulse selection)	*OP3
PRM22, PRM1022	Function selection 4	*OP4

Virtual device name	Name	Symbol
PRM23, PRM1023	Feed forward gain	FFC
PRM24, PRM1024	Zero speed	ZSP
PRM25, PRM1025	Analog speed command maximum speed/limit maximum speed	VCM
PRM26, PRM1026	Analog torque command maximum output	TLC
PRM27, PRM1027	Encoder output pulses	*ENR
PRM28, PRM1028	Internal torque limit 1	TL1
PRM29, PRM1029	Analog speed command offset/limit offset	VCO
PRM30, PRM1030	Analog torque command offset/limit offset	TLO
PRM31, PRM1031	Analog monitor 1 offset	MO1
PRM32, PRM1032	Analog monitor 2 offset	MO2
PRM33, PRM1033	Electromagnetic brake sequence output	MBR
PRM34, PRM1034	Ratio of load inertia moment to servo motor inertia moment	GD2
PRM35, PRM1035	Position control gain 2	PG2
PRM36, PRM1036	Speed control gain 1	VG1
PRM37, PRM1037	Speed control gain 2	VG2
PRM38, PRM1038	Speed integral compensation	VIC
PRM39, PRM1039	Speed differential compensation	VDC
PRM40, PRM1040	For manufacturer setting	-
PRM41, PRM1041	Input signal automatic ON selection	*DIA
PRM42, PRM1042	Input signal selection 1	*DI1
PRM43, PRM1043	Input signal selection 2 (CN1B-5)	*DI2
PRM44, PRM1044	Input signal selection 3 (CN1B-14)	*DI3
PRM45, PRM1045	Input signal selection 4 (CN1A-8)	*DI4
PRM46, PRM1046	Input signal selection 5 (CN1B-7)	*DI5
PRM47, PRM1047	Input signal selection 6 (CN1B-8)	*DI6
PRM48, PRM1048	Input signal selection 7 (CN1B-9)	*DI7
PRM49, PRM1049	Output signal selection 1	*DO1
PRM50, PRM1050	For manufacturer setting	-
PRM51, PRM1051	Function selection 6	*OP6
PRM52, PRM1052	For manufacturer setting	-
PRM53, PRM1053	Function selection 8	*OP8
PRM54, PRM1054	Function selection 9	*OP9
PRM55, PRM1055	Function selection A	*OPA
PRM56, PRM1056	Serial communication time-out selection	SIC
PRM57, PRM1057	For manufacturer setting	-
PRM58, PRM1058	Machine resonance suppression filter 1	NH1
PRM59, PRM1059	Machine resonance suppression filter 2	NH2
PRM60, PRM1060	Low-pass filter, adaptive vibration suppression control	LPF
PRM61, PRM1061	Ratio of load inertia moment to servo motor inertia moment 2	GD2B
PRM62, PRM1062	Position control gain 2 changing ratio	PG2B
PRM63, PRM1063	Speed control gain 2 changing ratio	VG2B
PRM64, PRM1064	Speed integral compensation changing ratio	VICB
PRM65, PRM1065	Gain changing selection	*CDP
PRM66, PRM1066	Gain switching condition	CDS
PRM67, PRM1067	Gain switching time constant	CDT
PRM68, PRM1068	For manufacturer setting	-
PRM69, PRM1069	Command pulse multiplying factor numerator 2	CMX2

Virtual device name	Name	Symbol
PRM70, PRM1070	Command pulse multiplying factor numerator 3	CMX3
PRM71, PRM1071	Command pulse multiplying factor numerator 4	CMX4
PRM72, PRM1072	Internal speed command4/limit4	SC4
PRM73, PRM1073	Internal speed command5/limit5	SC5
PRM74, PRM1074	Internal speed command6/limit6	SC6
PRM75, PRM1075	Internal speed command7/limit7	SC7
PRM76, PRM1076	Internal torque limit 2	TL2
PRM77 to PRM84, PRM1077 to PRM1084	For manufacturer setting	-

#### (5) Status display ([MELSERVO-J2S-\*A])

Virtual device name	Name	Symbol
ST0	Cumulative feedback pulses	-
ST1	Servo motor speed	-
ST2	Droop pulses	-
ST3	Cumulative command pulses	-
ST4	Command pulse frequency	-
ST5	Analog speed command voltage/limit voltage	-
ST6	Analog torque command voltage/limit voltage	-
ST7	Regenerative load ratio	-
ST8	Effective load ratio	-
ST9	Peak load ratio	-
ST10	Instantaneous torque	-
ST11	Within one-revolution position	-
ST12	ABS counter	-
ST13	Load inertia moment ratio	-
ST14	Bus voltage	-

#### (6) Alarm ([MELSERVO-J2S-\*A])

Virtual device name	Name	Symbol
AL0	Current alarm number	-
AL1	Detailed data of current alarms	-
AL11	Servo status when alarm occurs, cumulative feedback pulses	-
AL12	Servo status when alarm occurs, servo motor speed	-
AL13	Servo status when alarm occurs, droop pulses	-
AL14	Servo status when alarm occurs, cumulative command pulses	-
AL15	Servo status when alarm occurs, command pulse frequency	-
AL16	Servo status when alarm occurs, analog speed command voltage/limit voltage	-
AL17	Servo status when alarm occurs, analog torque command voltage/limit voltage	-
AL18	Servo status when alarm occurs, regenerative load ratio	-
AL19	Servo status when alarm occurs, effective load ratio	-
AL20	Servo status when alarm occurs, peak load ratio	-
AL21	Servo status when alarm occurs, Instantaneous torque	-
AL22	Servo status when alarm occurs, within one-revolution position	-
AL23	Servo status when alarm occurs, ABS counter	-
AL24	Servo status when alarm occurs, load inertia moment ratio	-
AL25	Servo status when alarm occurs, Bus voltage	-
AL200	Alarm number from alarm history most recent alarm	-

Virtual device name	Name	Symbol
AL201	Alarm number from alarm history first alarm in past	-
AL202	Alarm number from alarm history second alarm in past	-
AL203	Alarm number from alarm history third alarm in past	-
AL204	Alarm number from alarm history fourth alarm in past	-
AL205	Alarm number from alarm history fifth alarm in past	-
AL210	Alarm occurrence time in alarm history most recent alarm	-
AL211	Alarm occurrence time in alarm history first alarm in past	-
AL212	Alarm occurrence time in alarm history second alarm in past	-
AL213	Alarm occurrence time in alarm history third alarm in past	-
AL214	Alarm occurrence time in alarm history fourth alarm in past	-
AL215	Alarm occurrence time in alarm history fifth alarm in past	-
AL230	Detailed alarm from alarm history most recent alarm	-
AL231	Detailed alarm from alarm history first alarm in past	-
AL232	Detailed alarm from alarm history second alarm in past	-
AL233	Detailed alarm from alarm history third alarm in past	-
AL234	Detailed alarm from alarm history fourth alarm in past	-
AL235	Detailed alarm from alarm history fifth alarm in past	-

### (7) External input signal ([MELSERVO-J2S-\*A])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	External input pin statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. →MR-J2S-_A Instruction Manual

### (8) External output signal ([MELSERVO-J2S-\*A])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	External output pin statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. →MR-J2S-_A Instruction Manual

### (9) Input signal for test operation (for test operation) ([MELSERVO-J2S-\*A])

Virtual device name	Name	Symbol
TMI0	Input signal for test operation	-

When using the input signal for test operation (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (10) Forced output of signal pin (for test operation) ([MELSERVO-J2S-\*A])

Virtual device name	Name	Symbol
TMO0	Forced output of signal pin	-

When using the forced output of signal pin (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (11) Set data (for test operation) ([MELSERVO-J2S-\*A])

Virtual device name	Name	Symbol
TMD0	Writes the speed (test mode)	-
TMD1	Writes the acceleration/deceleration time constant (test mode)	-
TMD2	Writes the moving distance in pulses (test mode)	-

When using the set data (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2S-\*A])

For the precautions for virtual servo amplifier devices, refer to the following.

→ 12.3.12 ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2M-P8A])

## 12.3.15 [MELSERVO-J2S-\*CP]

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([MELSERVO-J2S-*CP])
	→ ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J2S-*CP])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([MELSERVO-J2S-*CP])
	→ ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J2S-*CP])
Specifications of double-word devices	→ ■5 Monitoring-supported double-word devices ([MELSERVO-J2S-*CP])
	→ ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J2S-*CP])
Specifications of virtual servo amplifier devices	→ ■7 Virtual servo amplifier devices ([MELSERVO-J2S-*CP])
	→ ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2S-*CP])

### ■1 Monitoring-supported bit devices ([MELSERVO-J2S-\*CP])

The following table shows monitoring-supported virtual bit devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.15 ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J2S-\*CP])

For details on virtual servo amplifier devices, refer to the following.

→ 12.3.15 ■7 Virtual servo amplifier devices ([MELSERVO-J2S-\*CP])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
SP	Servo amplifier request	Decimal	0 to 6	×	×
OM	Operation mode selection	Decimal	0 to 4	×	×
TMB	Instruction demand (for test operation)	Decimal	0 to 1	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J2S-\*CP])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSERVO-J2S-\*CP])

The following table shows monitoring-supported virtual word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.15 ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J2S-\*CP])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.15 ■ 7 Virtual servo amplifier devices ([MELSERVO-J2S-\*CP])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
PRM	Parameter	Decimal	0 to 90 1000 to 1090	○	×
ST	Status display	Decimal	0 to 16	○	×
AL	Alarm (current alarm)	Decimal	0 to 1 11 to 27	○	×
AL	Alarm (alarm history)	Decimal	200 to 205 210 to 215 230 to 235	○	×

■ 4 Availability of writing/reading data to/from word devices ([MELSERVO-J2S-\*CP])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PRM	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
AL	R/-	R/-	-/-	-/-
POS	R/W	R/W	-/-	-/-
SPD	R/W	R/W	-/-	-/-
ACT	R/W	R/W	-/-	-/-
DCT	R/W	R/W	-/-	-/-
DWL	R/W	R/W	-/-	-/-
AUX	R/W	R/W	-/-	-/-
DI*1	R/-	R/W	-/-	-/-
DO	R/-	R/-	-/-	-/-

\*1 Only reading is available for DI0 to DI1.

## ■5 Monitoring-supported double-word devices ([MELSERVO-J2S-\*CP])

The following table shows monitoring-supported virtual double-word devices for servo amplifiers. To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.15 ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J2S-\*CP])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.15 ■7 Virtual servo amplifier devices ([MELSERVO-J2S-\*CP])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
TMI	Input signal for test operation (for test operation)	Decimal	0	×	×
TMO	Forced output of signal pin (for test operation)	Decimal	0	×	×

DO	⇒ (14) External output signal ([MELSERVO-J2S-*CP])
TMI	⇒ (15) Input signal for test operation (for test operation) ([MELSERVO-J2S-*CP])

Virtual device name	Reference
TMO	→(16) Forced output of signal pin (for test operation) ([MELSERVO-J2S-*CP])
TMD	→(17) Set data (for test operation) ([MELSERVO-J2S-*CP])

### (1) Servo amplifier request ([MELSERVO-J2S-\*CP])

Virtual device name	Name	Symbol
SP0	Status display data clear	-
SP1	Current alarm clear	-
SP2	Alarm history clear	-
SP3	External input signal prohibited	-
SP4	External output signal prohibited	-
SP5	External input signal resumed	-
SP6	External output signal resumed	-

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (2) Operation mode selection ([MELSERVO-J2S-\*CP])

Virtual device name	Name	Symbol
OM0	Normal mode (not test operation mode)	-
OM1	JOG operation	-
OM2	Positioning operation	-
OM3	Motorless operation	-
OM4	Output signal (DO) forced output	-

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (3) Instruction demand (for test operation) ([MELSERVO-J2S-\*CP])

Virtual device name	Name	Symbol
TMB0	Clearing acceleration/deceleration time constant	-
TMB1	Temporary stop command	-

When using the instruction demand (for test operation), note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (4) Parameter ([MELSERVO-J2S-\*CP])

Use an appropriate device according to the write destination of the servo amplifier.

- PRM0 to PRM90: Writing data to the RAM of a servo amplifier
- PRM1000 to PRM1090: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PRM0, PRM1000	Command system/regenerative brake option selection	*STY
PRM1, PRM1001	Feeding function selection	*FTY
PRM2, PRM1002	Function selection 1	*OP1
PRM3, PRM1003	Auto tuning	ATU
PRM4, PRM1004	Electronic gear numerator	*CMX
PRM5, PRM1005	Electronic gear denominator	*CDV

Virtual device name	Name	Symbol
PRM6, PRM1006	In-position range	INP
PRM7, PRM1007	Position control gain 1	PG1
PRM8, PRM1008	Home position return type	*ZTY
PRM9, PRM1009	Home position return speed	ZRF
PRM10, PRM1010	Creep speed	CRF
PRM11, PRM1011	Home position shift distance	ZST
PRM12, PRM1012	Rough match output range	CRP
PRM13, PRM1013	Jog speed	JOG
PRM14, PRM1014	S-pattern acceleration/deceleration time constant	*STC
PRM15, PRM1015	Station number setting	*SNO
PRM16, PRM1016	Serial communication function selection, alarm history clear	*BPS
PRM17, PRM1017	Analog monitor output	MOD
PRM18, PRM1018	Status display selection	*DMD
PRM19, PRM1019	Parameter block	*BLK
PRM20, PRM1020	Function selection 2	*OP2
PRM21, PRM1021	For manufacturer setting	-
PRM22, PRM1022	Function selection 4	*OP4
PRM23, PRM1023	Serial communication time-out selection	SIC
PRM24, PRM1024	Feed forward gain	FFC
PRM25, PRM1025	Override offset	VCO
PRM26, PRM1026	Torque limit offset	TLO
PRM27, PRM1027	Encoder output pulses	*ENR
PRM28, PRM1028	Internal torque limit 1	TL1
PRM29, PRM1029	Internal torque limit 2	TL2
PRM30, PRM1030	Backlash compensation	*BKC
PRM31, PRM1031	Analog monitor 1 offset	MO1
PRM32, PRM1032	Analog monitor 2 offset	MO2
PRM33, PRM1033	Electromagnetic brake sequence output	MBR
PRM34, PRM1034	Ratio of load inertia moment to servo motor inertia moment	GD2
PRM35, PRM1035	Position control gain 2	PG2
PRM36, PRM1036	Speed control gain 1	VG1
PRM37, PRM1037	Speed control gain 2	VG2
PRM38, PRM1038	Speed integral compensation	VIC
PRM39, PRM1039	Speed differential compensation	VDC
PRM40 to PRM41, PRM1040 to PRM1041	For manufacturer setting	-
PRM42, PRM1042	Home position return position data	*ZPS
PRM43, PRM1043	Moving distance after proximity dog	DCT
PRM44, PRM1044	Stopper type home position return stopper time	ZTM
PRM45, PRM1045	Stopper type home position return torque limit value	ZTT
PRM46, PRM1046	Software limit +	*LMP
PRM47, PRM1047		
PRM48, PRM1048		
PRM49, PRM1049	Software limit -	*LMN
PRM50, PRM1050	Position range output address +	*LPP
PRM51, PRM1051		
PRM52, PRM1052	Position range output address -	*LNP
PRM53, PRM1053		

Virtual device name	Name	Symbol
PRM54, PRM1054	For manufacturer setting	-
PRM55, PRM1055	Function selection 6	*OP6
PRM56, PRM1056	For manufacturer setting	-
PRM57, PRM1057	Function selection 8	*OP8
PRM58, PRM1058	Function selection 9	*OP9
PRM59, PRM1059	Function selection A	*OPA
PRM60, PRM1060	For manufacturer setting	-
PRM61, PRM1061	Machine resonance suppression filter 1	NH1
PRM62, PRM1062	Machine resonance suppression filter 2	NH2
PRM63, PRM1063	Low-pass filter, adaptive vibration suppression control	LPF
PRM64, PRM1064	Ratio of load inertia moment to servo motor inertia moment 2	GD2B
PRM65, PRM1065	Position control gain 2 changing ratio	PG2B
PRM66, PRM1066	Speed control gain 2 changing ratio	VG2B
PRM67, PRM1067	Speed integral compensation changing ratio	VICB
PRM68, PRM1068	Gain changing selection	*CDP
PRM69, PRM1069	Gain switching condition	CDS
PRM70, PRM1070	Gain switching time constant	CDT
PRM71 to PRM90, PRM1071 to PRM1090	For manufacturer setting	-

#### (5) Status display ([MELSERVO-J2S-\*CP])

Virtual device name	Name	Symbol
ST0	Current position	-
ST1	Command position	-
ST2	Command remaining distance	-
ST3	Point table No.	-
ST4	Cumulative feedback pulses	-
ST5	Servo motor speed	-
ST6	Droop pulses	-
ST7	Override	-
ST8	Torque limit voltage	-
ST9	Regenerative load ratio	-
ST10	Effective load ratio	-
ST11	Peak load ratio	-
ST12	Instantaneous torque	-
ST13	Within one-revolution position	-
ST14	ABS counter	-
ST15	Load inertia moment ratio	-
ST16	Bus voltage	-

#### (6) Alarm ([MELSERVO-J2S-\*CP])

Virtual device name	Name	Symbol
AL0	Current alarm number	-
AL1	Detailed data of current alarms	-
AL11	Servo status when alarm occurs, current position	-
AL12	Servo status when alarm occurs, command position	-
AL13	Servo status when alarm occurs, command remaining distance	-
AL14	Servo status when alarm occurs, point table No.	-
AL15	Servo status when alarm occurs, cumulative feedback pulses	-

Virtual device name	Name	Symbol
AL16	Servo status when alarm occurs, servo motor speed	-
AL17	Servo status when alarm occurs, droop pulses	-
AL18	Servo status when alarm occurs, override	-
AL19	Servo status when alarm occurs, torque limit voltage	-
AL20	Servo status when alarm occurs, regenerative load ratio	-
AL21	Servo status when alarm occurs, effective load ratio	-
AL22	Servo status when alarm occurs, peak load ratio	-
AL23	Servo status when alarm occurs, instantaneous torque	-
AL24	Servo status when alarm occurs, within one-revolution position	-
AL25	Servo status when alarm occurs, ABS counter	-
AL26	Servo status when alarm occurs, load inertia moment ratio	-
AL27	Servo status when alarm occurs, Bus voltage	-
AL200	Alarm number from alarm history most recent alarm	-
AL201	Alarm number from alarm history first alarm in past	-
AL202	Alarm number from alarm history second alarm in past	-
AL203	Alarm number from alarm history third alarm in past	-
AL204	Alarm number from alarm history fourth alarm in past	-
AL205	Alarm number from alarm history fifth alarm in past	-
AL210	Alarm occurrence time in alarm history most recent alarm	-
AL211	Alarm occurrence time in alarm history first alarm in past	-
AL212	Alarm occurrence time in alarm history second alarm in past	-
AL213	Alarm occurrence time in alarm history third alarm in past	-
AL214	Alarm occurrence time in alarm history fourth alarm in past	-
AL215	Alarm occurrence time in alarm history fifth alarm in past	-
AL230	Detailed alarm from alarm history most recent alarm	-
AL231	Detailed alarm from alarm history first alarm in past	-
AL232	Detailed alarm from alarm history second alarm in past	-
AL233	Detailed alarm from alarm history third alarm in past	-
AL234	Detailed alarm from alarm history fourth alarm in past	-
AL235	Detailed alarm from alarm history fifth alarm in past	-

### (7) Point table (position) ([MELSERVO-J2S-\*CP])

Use an appropriate device according to the write destination of the servo amplifier.

- POS1 to POS31: Writing data to the RAM of a servo amplifier
- POS1001 to POS1031: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
POS1 to POS31, POS1001 to POS1031	Point table/position data No. 1 to No. 31	-

### (8) Point table (speed) ([MELSERVO-J2S-\*CP])

Use an appropriate device according to the write destination of the servo amplifier.

- SPD1 to SPD31: Writing data to the RAM of a servo amplifier
- SPD1001 to SPD1031: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
SPD1 to SPD31, SPD1001 to SPD1031	Point table/speed data No. 1 to No. 31	-

### (9) Point table (acceleration time constant) ([MELSERVO-J2S-\*CP])

Use an appropriate device according to the write destination of the servo amplifier.

- ACT1 to ACT31: Writing data to the RAM of a servo amplifier
- ACT1001 to ACT1031: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
ACT1 to ACT31, ACT1001 to ACT1031	Point table/acceleration time constant No. 1 to No. 31	-

### (10) Point table (deceleration time constant) ([MELSERVO-J2S-\*CP])

Use an appropriate device according to the write destination of the servo amplifier.

- DCT1 to DCT31: Writing data to the RAM of a servo amplifier
- DCT1001 to DCT1031: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
DCT1 to DCT31, DCT1001 to DCT1031	Point table/deceleration time constant No. 1 to No. 31	-

### (11) Point table (dwell) ([MELSERVO-J2S-\*CP])

Use an appropriate device according to the write destination of the servo amplifier.

- DWL1 to DWL31: Writing data to the RAM of a servo amplifier
- DWL1001 to DWL1031: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
DWL1 to DWL31, DWL1001 to DWL1031	Point table/dwell No. 1 to No. 31	-

### (12) Point table (auxiliary function) ([MELSERVO-J2S-\*CP])

Use an appropriate device according to the write destination of the servo amplifier.

- AUX1 to AUX31: Writing data to the RAM of a servo amplifier
- AUX1001 to AUX1031: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
AUX1 to AUX31, AUX1001 to AUX1031	Point table/auxiliary function No. 1 to No. 31	-

### (13) External input signal ([MELSERVO-J2S-\*CP])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	Input device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. ⇒MR-J2S-_CP Instruction Manual
DI1	External input pin statuses	-	
DI2	Statuses of input devices switched on through communication	-	

### (14) External output signal ([MELSERVO-J2S-\*CP])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	Output device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. ⇒MR-J2S-_CP Instruction Manual
DO1	External output pin statuses	-	

### (15) Input signal for test operation (for test operation) ([MELSERVO-J2S-\*CP])

Virtual device name	Name	Symbol
TMIO	Input signal for test operation	-

When using the input signal for test operation (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (16) Forced output of signal pin (for test operation) ([MELSERVO-J2S-\*CP])

Virtual device name	Name	Symbol
TMD0	Forced output of signal pin	-

When using the forced output of signal pin (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (17) Set data (for test operation) ([MELSERVO-J2S-\*CP])

Virtual device name	Name	Symbol
TMD0	Writes the speed (test mode)	-
TMD1	Writes the acceleration/deceleration time constant (test mode)	-
TMD2	Writes the moving distance in pulses (test mode)	-

When using the set data (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

## ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2S-\*CP])

For the precautions for virtual servo amplifier devices, refer to the following.

→ 12.3.12 ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2M-P8A])

## 12.3.16 [MELSERVO-J2S-\*CL]

Item	Reference
Specifications of bit devices	➡ ■1 Monitoring-supported bit devices ([MELSERVO-J2S-*CL])
	➡ ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J2S-*CL])
Specifications of word devices	➡ ■3 Monitoring-supported word devices ([MELSERVO-J2S-*CL])
	➡ ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J2S-*CL])
Specifications of double-word devices	➡ ■5 Monitoring-supported double-word devices ([MELSERVO-J2S-*CL])
	➡ ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J2S-*CL])
Specifications of virtual servo amplifier devices	➡ ■7 Virtual servo amplifier devices ([MELSERVO-J2S-*CL])
	➡ ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2S-*CL])

### ■1 Monitoring-supported bit devices ([MELSERVO-J2S-\*CL])

The following table shows monitoring-supported virtual bit devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

➡ 12.3.16 ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J2S-\*CL])

For details on virtual servo amplifier devices, refer to the following.

➡ 12.3.16 ■7 Virtual servo amplifier devices ([MELSERVO-J2S-\*CL])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
SP	Servo amplifier request	Decimal	0 to 6	×	×
OM	Operation mode selection	Decimal	0 to 4	×	×
TMB	Instruction demand (for test operation)	Decimal	0 to 1	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

➡ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J2S-\*CL])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSERVO-J2S-\*CL])

The following table shows monitoring-supported virtual word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

➡ 12.3.16 ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J2S-\*CL])

For details on virtual servo amplifier devices, refer to the following.

⇒12.3.16 ■7 Virtual servo amplifier devices ([MELSERVO-J2S-\*CL])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
PRM	Parameter	Decimal	0 to 90 1000 to 1090	○	×
ST	Status display	Decimal	0 to 17	○	×
AL	Alarm (current alarm)	Decimal	0 to 1 11 to 28	○	×
AL	Alarm (alarm history)	Decimal	200 to 205 210 to 215 230 to 235	○	×
DI	External input signal	Decimal	0 to 2	×	×
DO	External output signal	Decimal	0 to 1	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J2S-\*CL])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PRM	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
AL	R/-	R/-	-/-	-/-
DI*1	R/-	R/W	-/-	-/-
DO	R/-	R/-	-/-	-/-

\*1 Only reading is available for DI0 to DI1.

#### ■5 Monitoring-supported double-word devices ([MELSERVO-J2S-\*CL])

The following table shows monitoring-supported virtual double-word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.3.16 ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J2S-\*CL])

For details on virtual servo amplifier devices, refer to the following.

⇒12.3.16 ■7 Virtual servo amplifier devices ([MELSERVO-J2S-\*CL])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
LD	Current position latch data	Decimal	1	×	×
RR*2	Value of the general-purpose register (Rx)	Decimal	1 to 4 1001 to 1004	×	×
RD	Value of the general-purpose register (Dx)	Decimal	1 to 4	×	×
TMI	Input signal for test operation (for test operation)	Decimal	0	×	×
TMO	Forced output of signal pin (for test operation)	Decimal	0	×	×
TMD	Set data (for test operation)	Decimal	0 to 2	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Use the integer number when writing parameters to Rx.

## ■ 6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J2S-\*CL])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
LD	-/-	R/-	-/-	-/-
RR	-/-	R/W	-/-	-/-
RD	-/-	R/W	-/-	-/-
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-

## ■ 7 Virtual servo amplifier devices ([MELSERVO-J2S-\*CL])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	⇒ (1) Servo amplifier request ([MELSERVO-J2S-*CL])
OM	⇒ (2) Operation mode selection ([MELSERVO-J2S-*CL])
TMB	⇒ (3) Instruction demand (for test operation) ([MELSERVO-J2S-*CL])
PRM	⇒ (4) Parameter ([MELSERVO-J2S-*CL])
ST	⇒ (5) Status display ([MELSERVO-J2S-*CL])
AL	⇒ (6) Alarm ([MELSERVO-J2S-*CL])
DI	⇒ (7) External input signal ([MELSERVO-J2S-*CL])
DO	⇒ (8) External output signal ([MELSERVO-J2S-*CL])
LD	⇒ (9) Current position latch data ([MELSERVO-J2S-*CL])
RR	⇒ (10) Value of the general-purpose register (Rx) ([MELSERVO-J2S-*CL])
RD	⇒ (11) Value of the general-purpose register (Dx) ([MELSERVO-J2S-*CL])
TMI	⇒ (12) Input signal for test operation (for test operation) ([MELSERVO-J2S-*CL])
TMO	⇒ (13) Forced output of signal pin (for test operation) ([MELSERVO-J2S-*CL])
TMD	⇒ (14) Set data (for test operation) ([MELSERVO-J2S-*CL])

**(1) Servo amplifier request ([MELSERVO-J2S-\*CL])**

Virtual device name	Name	Symbol
SP0	Status display data clear	-
SP1	Current alarm clear	-
SP2	Alarm history clear	-
SP3	External input signal prohibited	-
SP4	External output signal prohibited	-
SP5	External input signal resumed	-
SP6	External output signal resumed	-

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

**(2) Operation mode selection ([MELSERVO-J2S-\*CL])**

Virtual device name	Name	Symbol
OM0	Normal mode (not test operation mode)	-
OM1	JOG operation	-
OM2	Positioning operation	-
OM3	Motorless operation	-
OM4	Output signal (DO) forced output	-

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

**(3) Instruction demand (for test operation) ([MELSERVO-J2S-\*CL])**

Virtual device name	Name	Symbol
TMB0	Clearing acceleration/deceleration time constant	-
TMB1	Temporary stop command	-

When using the instruction demand (for test operation), note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

**(4) Parameter ([MELSERVO-J2S-\*CL])**

Use an appropriate device according to the write destination of the servo amplifier.

- PRM0 to PRM90: Writing data to the RAM of a servo amplifier
- PRM1000 to PRM1090: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PRM0, PRM1000	Command system/regenerative brake option selection	*STY
PRM1, PRM1001	Feeding function selection	*FTY
PRM2, PRM1002	Function selection 1	*OP1
PRM3, PRM1003	Auto tuning	ATU
PRM4, PRM1004	Electronic gear numerator	*CMX
PRM5, PRM1005	Electronic gear denominator	*CDV
PRM6, PRM1006	In-position range	INP
PRM7, PRM1007	Position control gain 1	PG1
PRM8, PRM1008	Home position return type	*ZTY
PRM9, PRM1009	Home position return speed	ZRF

Virtual device name	Name	Symbol
PRM10, PRM1010	Creep speed	CRF
PRM11, PRM1011	Home position shift distance	ZST
PRM12, PRM1012	For manufacturer setting	-
PRM13, PRM1013	Jog speed	JOG
PRM14, PRM1014	S-pattern acceleration/deceleration time constant	*STC
PRM15, PRM1015	Station number setting	*SNO
PRM16, PRM1016	Serial communication function selection, alarm history clear	*BPS
PRM17, PRM1017	Analog monitor output	MOD
PRM18, PRM1018	Status display selection	*DMD
PRM19, PRM1019	Parameter block	*BLK
PRM20, PRM1020	Function selection 2	*OP2
PRM21, PRM1021	For manufacturer setting	-
PRM22, PRM1022	Function selection 4	*OP4
PRM23, PRM1023	Serial communication time-out selection	SIC
PRM24, PRM1024	Feed forward gain	FFC

#### (5) Status display ([MELSERVO-J2S-\*CL])

Virtual device name	Name	Symbol
ST0	Current position	-
ST1	Command position	-
ST2	Command remaining distance	-
ST3	Program Number	-
ST4	Step Number	-
ST5	Cumulative feedback pulses	-
ST6	Servo motor speed	-
ST7	Droop pulses	-
ST8	Override	-
ST9	Torque limit voltage	-
ST10	Regenerative load ratio	-
ST11	Effective load ratio	-
ST12	Peak load ratio	-
ST13	Instantaneous torque	-
ST14	Within one-revolution position	-
ST15	ABS counter	-
ST16	Load inertia moment ratio	-
ST17	Bus voltage	-

#### (6) Alarm ([MELSERVO-J2S-\*CL])

Virtual device name	Name	Symbol
AL0	Current alarm number	-
AL1	Detailed data of current alarms	-
AL11	Servo status when alarm occurs, current position	-

Virtual device name	Name	Symbol
AL12	Servo status when alarm occurs, command position	-
AL13	Servo status when alarm occurs, command remaining distance	-
AL14	Servo status when alarm occurs, program number	-
AL15	Servo status when alarm occurs, step number	-
AL16	Servo status when alarm occurs, cumulative feedback pulses	-
AL17	Servo status when alarm occurs, servo motor speed	-
AL18	Servo status when alarm occurs, droop pulses	-
AL19	Servo status when alarm occurs, override	-
AL20	Servo status when alarm occurs, torque limit voltage	-
AL21	Servo status when alarm occurs, regenerative load ratio	-
AL22	Servo status when alarm occurs, effective load ratio	-
AL23	Servo status when alarm occurs, peak load ratio	-
AL24	Servo status when alarm occurs, instantaneous torque	-
AL25	Servo status when alarm occurs, within one-revolution position	-
AL26	Servo status when alarm occurs, ABS counter	-
AL27	Servo status when alarm occurs, load inertia moment ratio	-
AL28	Servo status when alarm occurs, Bus voltage	-
AL200	Alarm number from alarm history most recent alarm	-
AL201	Alarm number from alarm history first alarm in past	-
AL202	Alarm number from alarm history second alarm in past	-
AL203	Alarm number from alarm history third alarm in past	-
AL204	Alarm number from alarm history fourth alarm in past	-
AL205	Alarm number from alarm history fifth alarm in past	-
AL210	Alarm occurrence time in alarm history most recent alarm	-
AL211	Alarm occurrence time in alarm history first alarm in past	-
AL212	Alarm occurrence time in alarm history second alarm in past	-
AL213	Alarm occurrence time in alarm history third alarm in past	-
AL214	Alarm occurrence time in alarm history fourth alarm in past	-
AL215	Alarm occurrence time in alarm history fifth alarm in past	-
AL230	Detailed alarm from alarm history most recent alarm	-
AL231	Detailed alarm from alarm history first alarm in past	-
AL232	Detailed alarm from alarm history second alarm in past	-
AL233	Detailed alarm from alarm history third alarm in past	-
AL234	Detailed alarm from alarm history fourth alarm in past	-
AL235	Detailed alarm from alarm history fifth alarm in past	-

### (7) External input signal ([MELSERVO-J2S-\*CL])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	Input device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. ⇒MR-J2S-_CL Instruction Manual
DI1	External input pin statuses	-	
DI2	Statuses of input devices switched on through communication	-	For the mapping of the bits corresponding to the data to be read or written, refer to the following. ⇒MR-J2S-_CL Instruction Manual

## (8) External output signal ([MELSERVO-J2S-\*CL])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	Output device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. →MR-J2S-_CL Instruction Manual
DO1	External output pin statuses	-	

## (9) Current position latch data ([MELSERVO-J2S-\*CL])

Virtual device name	Name	Symbol
LD1	Current position latch data	-

## (10) Value of the general-purpose register (Rx) ([MELSERVO-J2S-\*CL])

Use an appropriate device according to the write destination of the servo amplifier.

- RR1 to RR4: Writing data to the RAM of a servo amplifier
- RR1001 to RR1004: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
RR1, RR1001	Value of the general-purpose register (R1)	-
RR2, RR1002	Value of the general-purpose register (R2)	-
RR3, RR1003	Value of the general-purpose register (R3)	-
RR4, RR1004	Value of the general-purpose register (R4)	-

## (11) Value of the general-purpose register (Dx) ([MELSERVO-J2S-\*CL])

Virtual device name	Name	Symbol
RD1	Value of the general-purpose register (D1)	-
RD2	Value of the general-purpose register (D2)	-
RD3	Value of the general-purpose register (D3)	-
RD4	Value of the general-purpose register (D4)	-

## (12) Input signal for test operation (for test operation) ([MELSERVO-J2S-\*CL])

Virtual device name	Name	Symbol
TMI0	Input signal for test operation	-

When using the input signal for test operation (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

## (13) Forced output of signal pin (for test operation) ([MELSERVO-J2S-\*CL])

Virtual device name	Name	Symbol
TMO0	Forced output of signal pin	-

When using the forced output of signal pin (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

#### (14)Set data (for test operation) ([MELSERVO-J2S-\*CL])

Virtual device name	Name	Symbol
TMD0	Writes the speed (test mode)	-
TMD1	Writes the acceleration/deceleration time constant (test mode)	-
TMD2	Writes the moving distance in pulses (test mode)	-

When using the set data (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

#### ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2S-\*CL])

For the precautions for virtual servo amplifier devices, refer to the following.

→ 12.3.12 ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2M-P8A])

## 12.3.17 [MELSERVO-J3-\*A]

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([MELSERVO-J3-*A])
	→ ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J3-*A])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([MELSERVO-J3-*A])
	→ ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J3-*A])
Specifications of double-word devices	→ ■5 Monitoring-supported double-word devices ([MELSERVO-J3-*A])
	→ ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J3-*A])
Specifications of virtual servo amplifier devices	→ ■7 Virtual servo amplifier devices ([MELSERVO-J3-*A])
	→ ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J3-*A])

### ■1 Monitoring-supported bit devices ([MELSERVO-J3-\*A])

The following table shows monitoring-supported virtual bit devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.17 ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J3-\*A])

For details on virtual servo amplifier devices, refer to the following.

→ 12.3.17 ■7 Virtual servo amplifier devices ([MELSERVO-J3-\*A])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
SP	Servo amplifier request	Decimal	0 to 6	×	×
OM	Operation mode selection	Decimal	0 to 4	×	×
TMB	Instruction demand (for test operation)	Decimal	1 to 6	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J3-\*A])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSERVO-J3-\*A])

The following table shows monitoring-supported virtual word devices for servo amplifiers.  
To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.17 ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J3-\*A])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.17 ■7 Virtual servo amplifier devices ([MELSERVO-J3-\*A])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
PA	Basic parameter	Decimal	1 to 19 1001 to 1019	○	×
PB	Gain filter parameter	Decimal	1 to 45 1001 to 1045	○	×
PC	Extension setting parameter	Decimal	1 to 50 1001 to 1050	○	×
PD	I/O setting parameter	Decimal	1 to 30 1001 to 1030	○	×
ST	Status display	Decimal	0 to 14	○	×
AL	Alarm (current alarm)	Decimal	0 to 1 11 to 25	○	×
AL	Alarm (alarm history)	Decimal	200 to 205 210 to 215 230 to 235	○	×
DI	External input signal	Decimal	0 to 2	×	×
DO	External output signal	Decimal	0 to 1	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J3-\*A])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PA	R/W	R/W	-/-	-/-
PB	R/W	R/W	-/-	-/-
PC	R/W	R/W	-/-	-/-
PD	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
AL	R/-	R/-	-/-	-/-
DI*1	R/-	R/W	-/-	-/-
DO	R/-	R/-	-/-	-/-

\*1 Only reading is available for DI0 to DI1.

### ■5 Monitoring-supported double-word devices ([MELSERVO-J3-\*A])

The following table shows monitoring-supported virtual double-word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.17 ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J3-\*A])

For details on virtual servo amplifier devices, refer to the following.

⇒12.3.17 ■7 Virtual servo amplifier devices ([MELSERVO-J3-\*A])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices *1	
				Assignment to EG devices	Access using a client
TMI	Input signal for test operation (for test operation)	Decimal	0	×	×
TMO	Forced output of signal pin (for test operation)	Decimal	0	×	×
TMD	Set data (for test operation)	Decimal	0 to1, 3	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J3-\*A])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-W: Write only

-/: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
TMI	-/	-W	-/	-/
TMO	-/	-W	-/	-/
TMD	-/	-W	-/	-/

■7 Virtual servo amplifier devices ([MELSERVO-J3-\*A])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	⇒(1) Servo amplifier request ([MELSERVO-J3-*A])
OM	⇒(2) Operation mode selection ([MELSERVO-J3-*A])
TMB	⇒(3) Instruction demand (for test operation) ([MELSERVO-J3-*A])
PA	⇒(4) Basic parameter ([MELSERVO-J3-*A])
PB	⇒(5) Gain filter parameter ([MELSERVO-J3-*A])
PC	⇒(6) Extension setting parameter ([MELSERVO-J3-*A])
PD	⇒(7) I/O setting parameter ([MELSERVO-J3-*A])
ST	⇒(8) Status display ([MELSERVO-J3-*A])
AL	⇒(9) Alarm ([MELSERVO-J3-*A])
DI	⇒(10) External input signal ([MELSERVO-J3-*A])
DO	⇒(11) External output signal ([MELSERVO-J3-*A])
TMI	⇒(12) Input signal for test operation (for test operation) ([MELSERVO-J3-*A])
TMO	⇒(13) Forced output of signal pin (for test operation) ([MELSERVO-J3-*A])
TMD	⇒(14) Set data (for test operation) ([MELSERVO-J3-*A])

### (1) Servo amplifier request ([MELSERVO-J3-\*A])

Virtual device name	Name	Symbol
SP0	Status display data clear	-
SP1	Current alarm clear	-
SP2	Alarm history clear	-
SP3	External input signal prohibited	-
SP4	External output signal prohibited	-
SP5	External input signal resumed	-
SP6	External output signal resumed	-

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (2) Operation mode selection ([MELSERVO-J3-\*A])

Virtual device name	Name	Symbol
OM0	Normal mode (not test operation mode)	-
OM1	JOG operation	-
OM2	Positioning operation	-
OM3	Motorless operation	-
OM4	Output signal (DO) forced output	-

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (3) Instruction demand (for test operation) ([MELSERVO-J3-\*A])

Virtual device name	Name	Symbol
TMB1	Temporary stop command	-
TMB2	Test operation (positioning operation) start command	-
TMB3	Forward rotation direction	-
TMB4	Reverse rotation direction	-
TMB5	Restart for remaining distance	-
TMB6	Remaining distance clear	-

When using the instruction demand (for test operation), note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (4) Basic parameter ([MELSERVO-J3-\*A])

Use an appropriate device according to the write destination of the servo amplifier.

- PA1 to PA50: Writing data to the RAM of a servo amplifier
- PA1001 to PA1050: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PA1, PA1001	Control mode	*STY
PA2, PA1002	Regenerative brake option	*REG
PA3, PA1003	Absolute position detection system	*ABS
PA4, PA1004	Function selection A-1	*AOP1
PA5, PA1005	Number of command input pulses per revolution	*FBP
PA6, PA1006	Electronic gear numerator (command pulse multiplication numerator)	CMX

Virtual device name	Name	Symbol
PA7, PA1007	Electronic gear denominator (command pulse multiplication denominator)	CDV
PA8, PA1008	Auto tuning mode	ATU
PA9, PA1009	Auto tuning response	RSP
PA10, PA1010	In-position range	INP
PA11, PA1011	Forward rotation torque limit	TLP
PA12, PA1012	Reverse rotation torque limit	TLN
PA13, PA1013	Command pulse input form	*PLSS
PA14, PA1014	Rotation direction selection	*POL
PA15, PA1015	Encoder output pulses	*ENR
PA16 to PA18, PA1016 to PA1018	For manufacturer setting	-
PA19, PA1019	Parameter block	*BLK

### (5) Gain filter parameter ([MELSERVO-J3-\*A])

Use an appropriate device according to the write destination of the servo amplifier.

- PB1 to PB50: Writing data to the RAM of a servo amplifier
- PB1001 to PB1050: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PB1, PB1001	Adaptive tuning mode (Adaptive filter II)	FILT
PB2, PB1002	Vibration suppression control tuning mode (advanced vibration suppression control)	VRFT
PB3, PB1003	Position command acceleration/deceleration time constant (position smoothing)	PST
PB4, PB1004	Feed forward gain	FFC
PB5, PB1005	For manufacturer setting	-
PB6, PB1006	Ratio of load inertia moment to servo motor inertia moment	GD2
PB7, PB1007	Model control gain	PG1
PB8, PB1008	Position control gain	PG2
PB9, PB1009	Speed control gain	VG2
PB10, PB1010	Speed integral compensation	VIC
PB11, PB1011	Speed differential compensation	VDC
PB12, PB1012	For manufacturer setting	-
PB13, PB1013	Machine resonance suppression filter 1	NH1
PB14, PB1014	Notch shape selection 1	NHQ1
PB15, PB1015	Machine resonance suppression filter 2	NH2
PB16, PB1016	Notch shape selection 2	NHQ2
PB17, PB1017	For manufacturer setting	-
PB18, PB1018	Low-pass filter setting	LPF
PB19, PB1019	Vibration suppression control vibration frequency setting	VRF1
PB20, PB1020	Vibration suppression control resonance frequency setting	VRF2
PB21 to PB22, PB1021 to PB1022	For manufacturer setting	-
PB23, PB1023	Low-pass filter setting	VFBF
PB24, PB1024	Slight vibration suppression control	*MVS
PB25, PB1025	Function selection B-1	*BOP1
PB26, PB1026	Gain changing selection	*CDP
PB27, PB1027	Gain switching condition	CDL
PB28, PB1028	Gain switching time constant	CDT
PB29, PB1029	Ratio of load inertia moment to servo motor after gain switching	GD2B

Virtual device name	Name	Symbol
PB30, PB1030	Position loop gain after gain switching	PG2B
PB31, PB1031	Speed loop gain after gain switching	VG2B
PB32, PB1032	Speed integral compensation after gain switching	VICB
PB33, PB1033	Suppression control and vibration frequency setting after gain switching	VRF1B
PB34, PB1034	Suppression control and vibration resonance setting after gain switching	VRF2B
PB35 to PB45, PB1035 to PB1045	For manufacturer setting	-

## (6) Extension setting parameter ([MELSERVO-J3-\*A])

Use an appropriate device according to the write destination of the servo amplifier.

- PC1 to PC50: Writing data to the RAM of a servo amplifier
- PC1001 to PC1050: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PC1, PC1001	Acceleration time constant	STA
PC2, PC1002	Deceleration time constant	STB
PC3, PC1003	S-pattern acceleration/deceleration time constant	STC
PC4, PC1004	Torque command time constant	TQC
PC5, PC1005	Internal speed command1/limit1	SC1
PC6, PC1006	Internal speed command2/limit2	SC2
PC7, PC1007	Internal speed command3/limit3	SC3
PC8, PC1008	Internal speed command4/limit4	SC4
PC9, PC1009	Internal speed command5/limit5	SC5
PC10, PC1010	Internal speed command6/limit6	SC6
PC11, PC1011	Internal speed command7/limit7	SC7
PC12, PC1012	Analog speed command maximum speed/limit maximum speed	VCM
PC13, PC1013	Analog torque command maximum output	TLC
PC14, PC1014	Analog monitor 1 output	MOD1
PC15, PC1015	Analog monitor 2 output	MOD2
PC16, PC1016	Electromagnetic brake sequence output	MBR
PC17, PC1017	Zero speed	ZSP
PC18, PC1018	Alarm history clear	*BPS
PC19, PC1019	Encoder output pulse selection	*ENRS
PC20, PC1020	Station number setting	*SNO
PC21, PC1021	Communication function selection	*SOP
PC22, PC1022	Function selection C-1	*COP1
PC23, PC1023	Function selection C-2	*COP2
PC24, PC1024	Function selection C-3	*COP3
PC25, PC1025	For manufacturer setting	-
PC26, PC1026	Function selection C-5	*COP5
PC27 to PC29, PC1027 to PC1029	For manufacturer setting	-
PC30, PC1030	Acceleration time constant 2	STA2
PC31, PC1031	Deceleration time constant 2	STB2
PC32, PC1032	Command input pulse multiplication numerator 2	CMX2
PC33, PC1033	Command input pulse multiplication numerator 3	CMX3
PC34, PC1034	Command input pulse multiplication numerator 4	CMX4
PC35, PC1035	Internal torque limit 2	TL2

Virtual device name	Name	Symbol
PC36, PC1036	Status display selection	*DMD
PC37, PC1037	Analog speed command offset/limit offset	VCO
PC38, PC1038	Analog torque command offset/limit offset	TPO
PC39, PC1039	Analog monitor 1 offset	MO1
PC40, PC1040	Analog monitor 2 offset	MO2
PC41 to PC50, PC1041 to PC1050	For manufacturer setting	-

### (7) I/O setting parameter ([MELSERVO-J3-\*A])

Use an appropriate device according to the write destination of the servo amplifier.

- PD1 to PD50: Writing data to the RAM of a servo amplifier
- PD1001 to PD1050: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PD1, PD1001	Input signal automatic ON selection 1	*DIA1
PD2, PD1002	For manufacturer setting	-
PD3, PD1003	Input device selection 1 (CN1-15)	*DI1
PD4, PD1004	Input device selection 2 (CN1-16)	*DI2
PD5, PD1005	Input device selection 3 (CN1-17)	*DI3
PD6, PD1006	Input device selection 4 (CN1-18)	*DI4
PD7, PD1007	Input device selection 5 (CN1-19)	*DI5
PD8, PD1008	Input device selection 6 (CN1-41)	*DI6
PD9, PD1009	For manufacturer setting	-
PD10, PD1010	Input device selection 8 (CN1-43)	*DI8
PD11, PD1011	Input device selection 9 (CN1-44)	*DI9
PD12, PD1012	Input device selection 10 (CN1-45)	*DI10
PD13, PD1013	Output device selection 1 (CN1-22)	*DO1
PD14, PD1014	Output device selection 2 (CN1-23)	*DO2
PD15, PD1015	Output device selection 3 (CN1-24)	*DO3
PD16, PD1016	Output device selection 4 (CN1-25)	*DO4
PD17, PD1017	For manufacturer setting	-
PD18, PD1018	Output device selection 6 (CN1-49)	*DO6
PD19, PD1019	Input filter setting	*DIF
PD20, PD1020	Function selection D-1	*DOP1
PD21, PD1021	For manufacturer setting	-
PD22, PD1022	Function selection D-3	*DOP3
PD23, PD1023	For manufacturer setting	-
PD24, PD1024	Function selection D-5	*DOP5
PD25 to PD30, PD1025 to PD1030	For manufacturer setting	-

### (8) Status display ([MELSERVO-J3-\*A])

Virtual device name	Name	Symbol
ST0	Cumulative feedback pulses	-
ST1	Servo motor speed	-
ST2	Droop pulses	-
ST3	Cumulative command pulses	-
ST4	Command pulse frequency	-
ST5	Analog speed command voltage/limit voltage	-

Virtual device name	Name	Symbol
ST6	Analog torque command voltage/limit voltage	-
ST7	Regenerative load ratio	-
ST8	Effective load ratio	-
ST9	Peak load ratio	-
ST10	Instantaneous torque	-
ST11	Within one-revolution position	-
ST12	ABS counter	-
ST13	Load inertia moment ratio	-
ST14	Bus voltage	-

### (9) Alarm ([MELSERVO-J3-\*A])

Virtual device name	Name	Symbol
AL0	Current alarm number	-
AL1	Detailed data of current alarms	-
AL11	Servo status when alarm occurs, cumulative feedback pulses	-
AL12	Servo status when alarm occurs, servo motor speed	-
AL13	Servo status when alarm occurs, droop pulses	-
AL14	Servo status when alarm occurs, cumulative command pulses	-
AL15	Servo status when alarm occurs, command pulse frequency	-
AL16	Servo status when alarm occurs, analog speed command voltage/limit voltage	-
AL17	Servo status when alarm occurs, analog torque command voltage/limit voltage	-
AL18	Servo status when alarm occurs, regenerative load ratio	-
AL19	Servo status when alarm occurs, effective load ratio	-
AL20	Servo status when alarm occurs, peak load ratio	-
AL21	Servo status when alarm occurs, Instantaneous torque	-
AL22	Servo status when alarm occurs, within one-revolution position	-
AL23	Servo status when alarm occurs, ABS counter	-
AL24	Servo status when alarm occurs, load inertia moment ratio	-
AL25	Servo status when alarm occurs, bus voltage	-
AL200	Alarm number from Alarm History most recent alarm	-
AL201	Alarm number from Alarm History first alarm in past	-
AL202	Alarm number from Alarm History second alarm in past	-
AL203	Alarm number from Alarm History third alarm in past	-
AL204	Alarm number from Alarm History fourth alarm in past	-
AL205	Alarm number from Alarm History fifth alarm in past	-
AL210	Alarm occurrence time in alarm history most recent alarm	-
AL211	Alarm occurrence time in alarm history first alarm in past	-
AL212	Alarm occurrence time in alarm history second alarm in past	-
AL213	Alarm occurrence time in alarm history third alarm in past	-
AL214	Alarm occurrence time in alarm history fourth alarm in past	-
AL215	Alarm occurrence time in alarm history fifth alarm in past	-
AL230	Detailed alarm from Alarm History most recent alarm	-
AL231	Detailed alarm from Alarm History first alarm in past	-
AL232	Detailed alarm from Alarm History second alarm in past	-
AL233	Detailed alarm from Alarm History third alarm in past	-
AL234	Detailed alarm from Alarm History fourth alarm in past	-
AL235	Detailed alarm from Alarm History fifth alarm in past	-

### (10) External input signal ([MELSERVO-J3-\*A])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	Input device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. ⇒MR-J3-_A Instruction Manual
DI1	External input pin statuses	-	
DI2	Statuses of input devices switched on through communication	-	

### (11) External output signal ([MELSERVO-J3-\*A])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	Output device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. ⇒MR-J3-_A Instruction Manual
DO1	External output pin statuses	-	

### (12) Input signal for test operation (for test operation) ([MELSERVO-J3-\*A])

Virtual device name	Name	Symbol
TMI0	Input signal for test operation	-

When using the input signal for test operation (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (13) Forced output of signal pin (for test operation) ([MELSERVO-J3-\*A])

Virtual device name	Name	Symbol
TMO0	Forced output of signal pin	-

When using the forced output of signal pin (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (14) Set data (for test operation) ([MELSERVO-J3-\*A])

Virtual device name	Name	Symbol
TMD0	Writes the speed (test mode)	-
TMD1	Writes the acceleration/deceleration time constant (test mode)	-
TMD2	For manufacturer setting	-
TMD3	Writes the moving distance (test mode)	-

When using the set data (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

## ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J3-\*A])

For the precautions for virtual servo amplifier devices, refer to the following.

⇒12.3.12 ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2M-P8A])

## 12.3.18 [MELSERVO-J3-\*T]

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([MELSERVO-J3-*T])
	→ ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J3-*T])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([MELSERVO-J3-*T])
	→ ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J3-*T])
Specifications of double-word devices	→ ■5 Monitoring-supported double-word devices ([MELSERVO-J3-*T])
	→ ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J3-*T])
Specifications of virtual servo amplifier devices	→ ■7 Virtual servo amplifier devices ([MELSERVO-J3-*T])
	→ ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J3-*T])

### ■1 Monitoring-supported bit devices ([MELSERVO-J3-\*T])

The following table shows monitoring-supported virtual bit devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.18 ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J3-\*T])

For details on virtual servo amplifier devices, refer to the following.

→ 12.3.18 ■7 Virtual servo amplifier devices ([MELSERVO-J3-\*T])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
SP	Servo amplifier request	Decimal	0 to 6	×	×
OM	Operation mode selection	Decimal	0 to 5	×	×
TMB	Instruction demand (for test operation)	Decimal	1 to 6	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J3-\*T])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSERVO-J3-\*T])

The following table shows monitoring-supported virtual word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.18 ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J3-\*T])

For details on virtual servo amplifier devices, refer to the following.

⇒12.3.18 ■7 Virtual servo amplifier devices ([MELSERVO-J3-\*T])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices *1	
				Assignment to EG devices	Access using a client
PA	Basic parameter	Decimal	1 to 19 1001 to 1019	○	×
PB	Gain filter parameter	Decimal	1 to 45 1001 to 1045	○	×
PC	Extension setting parameter	Decimal	1 to 50 1001 to 1050	○	×
PD	I/O setting parameter	Decimal	1 to 30 1001 to 1030	○	×
PO	Option unit parameter (PO)*1	Decimal	1 to 35 1001 to 1035	○	×
ST	Status display	Decimal	0 to 17	○	×
AL	Alarm (current alarm)	Decimal	0 to 1 11 to 28	○	×
AL	Alarm (alarm history)	Decimal	200 to 205 210 to 215 230 to 235	○	×
POS	Point table (position)	Decimal	1 to 255 1001 to 1255	○	×
SPD	Point table (speed)	Decimal	1 to 255 1001 to 1255	○	×
ACT	Point table (acceleration time constant)	Decimal	1 to 255 1001 to 1255	○	×
DCT	Point table (deceleration time constant)	Decimal	1 to 255 1001 to 1255	○	×
DWL	Point table (dwell)	Decimal	1 to 255 1001 to 1255	○	×
AUX	Point table (auxiliary function)	Decimal	1 to 255 1001 to 1255	○	×
MCD*2	Point table (M code)	Decimal	1 to 255 1001 to 1255	○	×
DI	External input signal	Decimal	0 to 7	×	×
DO	External output signal	Decimal	0 to 4	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 MCD cannot be used as a real number.

■4 Availability of writing/reading data to/from word devices ([MELSERVO-J3-\*T])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PA	R/W	R/W	-/-	-/-
PB	R/W	R/W	-/-	-/-
PC	R/W	R/W	-/-	-/-
PD	R/W	R/W	-/-	-/-
PO	R/W	R/W	-/-	-/-

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
ST	R/-	R/-	-/-	-/-
AL	R/-	R/-	-/-	-/-
POS	R/W	R/W	-/-	-/-
SPD	R/W	R/W	-/-	-/-
ACT	R/W	R/W	-/-	-/-
DCT	R/W	R/W	-/-	-/-
DWL	R/W	R/W	-/-	-/-
AUX	R/W	R/W	-/-	-/-
MCD	R/W	R/W	-/-	-/-
DI*1	R/-	R/W	-/-	-/-
DO	R/-	R/-	-/-	-/-

\*1 For DI0 to DI4, the GOT can only read data from devices.

## ■5 Monitoring-supported double-word devices ([MELSERVO-J3-\*T])

The following table shows monitoring-supported virtual double-word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.18 ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J3-\*T])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.18 ■7 Virtual servo amplifier devices ([MELSERVO-J3-\*T])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
TMI	Input signal for test operation (for test operation)	Decimal	0 to 2	×	×
TMO	Forced output of signal pin (for test operation)	Decimal	0 to 1	×	×
TMD	Set data (for test operation)	Decimal	0 to 1, 3	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J3-\*T])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-

## ■7 Virtual servo amplifier devices ([MELSERVO-J3-\*T])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	→ (1) Servo amplifier request ([MELSERVO-J3-*T])
OM	→ (2) Operation mode selection ([MELSERVO-J3-*T])
TMB	→ (3) Instruction demand (for test operation) ([MELSERVO-J3-*T])
PA	→ (4) Basic parameter ([MELSERVO-J3-*T])
PB	→ (5) Gain filter parameter ([MELSERVO-J3-*T])
PC	→ (6) Extension setting parameter ([MELSERVO-J3-*T])
PD	→ (7) I/O setting parameter ([MELSERVO-J3-*T])
PO	→ (8) Option unit parameter ([MELSERVO-J3-*T])
ST	→ (9) Status display ([MELSERVO-J3-*T])
AL	→ (10) Alarm ([MELSERVO-J3-*T])
POS	→ (11) Point table (position) ([MELSERVO-J3-*T])
SPD	→ (12) Point table (speed) ([MELSERVO-J3-*T])
ACT	→ (13) Point table (acceleration time constant) ([MELSERVO-J3-*T])
DCT	→ (14) Point table (deceleration time constant) ([MELSERVO-J3-*T])
DWL	→ (15) Point table (dwell) ([MELSERVO-J3-*T])
AUX	→ (16) Point table (auxiliary function) ([MELSERVO-J3-*T])
MCD	→ (17) Point table (M code) ([MELSERVO-J3-*T])
DI	→ (18) External input signal ([MELSERVO-J3-*T])
DO	→ (19) External output signal ([MELSERVO-J3-*T])
TMI	→ (20) Input signal for test operation (for test operation) ([MELSERVO-J3-*T])
TMO	→ (21) Forced output of signal pin (for test operation) ([MELSERVO-J3-*T])
TMD	→ (22) Set data (for test operation) ([MELSERVO-J3-*T])

### (1) Servo amplifier request ([MELSERVO-J3-\*T])

Virtual device name	Name	Symbol
SP0	Status display data clear	-
SP1	Current alarm clear	-
SP2	Alarm history clear	-
SP3	External input signal prohibited	-
SP4	External output signal prohibited	-
SP5	External input signal resumed	-
SP6	External output signal resumed	-

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (2) Operation mode selection ([MELSERVO-J3-\*T])

Virtual device name	Name	Symbol
OM0	Normal mode (not test operation mode)	-
OM1	JOG operation	-
OM2	Positioning operation	-
OM3	Motorless operation	-
OM4	Output signal (DO) forced output	-
OM5	Single-step feed	-

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (3) Instruction demand (for test operation) ([MELSERVO-J3-\*T])

Virtual device name	Name	Symbol
TMB1	Temporary stop command	-
TMB2	Test operation (positioning operation) start command	-
TMB3	Forward rotation direction	-
TMB4	Reverse rotation direction	-
TMB5	Restart for remaining distance	-
TMB6	Remaining distance clear	-

When using the instruction demand (for test operation), note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (4) Basic parameter ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- PA1 to PA19: Writing data to the RAM of a servo amplifier
- PA1001 to PA1019: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PA1, PA1001	Control mode	*STY
PA2, PA1002	Regenerative brake option	*REG
PA3, PA1003	Absolute position detection system	*ABS
PA4, PA1004	Function selection A-1	*AOP1
PA5, PA1005	Feeding function selection	*FTY
PA6, PA1006	Electronic gear numerator	*CMX
PA7, PA1007	Electronic gear denominator	*CDV
PA8, PA1008	Auto tuning mode	ATU
PA9, PA1009	Auto tuning response	RSP
PA10, PA1010	In-position range	INP
PA11, PA1011	Forward rotation torque limit	TLP
PA12, PA1012	Reverse rotation torque limit	TLN
PA13, PA1013	For manufacturer setting	-
PA14, PA1014	Rotation direction selection	*POL
PA15, PA1015	Encoder output pulses	*ENR
PA16 to PA18, PA1016 to PA1018	For manufacturer setting	-
PA19, PA1019	Parameter block	*BLK

### (5) Gain filter parameter ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- PB1 to PB45: Writing data to the RAM of a servo amplifier
- PB1001 to PB1045: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PB1, PB1001	Adaptive tuning mode (Adaptive filter II)	FILT
PB2, PB1002	Vibration suppression control tuning mode (advanced vibration suppression control)	VRFT
PB3, PB1003	For manufacturer setting	-
PB4, PB1004	Feed forward gain	FFC
PB5, PB1005	For manufacturer setting	-
PB6, PB1006	Ratio of load inertia moment to servo motor inertia moment	GD2
PB7, PB1007	Model control gain	PG1
PB8, PB1008	Position control gain	PG2
PB9, PB1009	Speed control gain	VG2
PB10, PB1010	Speed integral compensation	VIC
PB11, PB1011	Speed differential compensation	VDC
PB12, PB1012	For manufacturer setting	-
PB13, PB1013	Machine resonance suppression filter 1	NH1
PB14, PB1014	Notch shape selection 1	NHQ1
PB15, PB1015	Machine resonance suppression filter 2	NH2
PB16, PB1016	Notch shape selection 2	NHQ2
PB17, PB1017	For manufacturer setting	-
PB18, PB1018	Low-pass filter setting	LPF
PB19, PB1019	Vibration suppression control vibration frequency setting	VRF1
PB20, PB1020	Vibration suppression control resonance frequency setting	VRF2
PB21 to PB22, PB1021 to PB1022	For manufacturer setting	-
PB23, PB1023	Low-pass filter setting	VFBF
PB24, PB1024	Slight vibration suppression control	*MVS
PB25, PB1025	For manufacturer setting	-
PB26, PB1026	Gain changing selection	*CDP
PB27, PB1027	Gain switching condition	CDL
PB28, PB1028	Gain switching time constant	CDT
PB29, PB1029	Ratio of load inertia moment to servo motor after gain switching	GD2B
PB30, PB1030	Position loop gain after gain switching	PG2B
PB31, PB1031	Speed loop gain after gain switching	VG2B
PB32, PB1032	Speed integral compensation after gain switching	VICB
PB33, PB1033	Suppression control and vibration frequency setting after gain switching	VRF1B
PB34, PB1034	Suppression control and vibration resonance setting after gain switching	VRF2B
PB35 to PB45, PB1035 to PB1045	For manufacturer setting	-

### (6) Extension setting parameter ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- PC1 to PC50: Writing data to the RAM of a servo amplifier

- PC1001 to PC1050: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PC1, PC1001	For manufacturer setting	-
PC2, PC1002	Home position return type	*ZTY
PC3, PC1003	Direction of home position return	*ZDIR
PC4, PC1004	Home position return speed	ZRF
PC5, PC1005	Creep speed	CRF
PC6, PC1006	Home position shift distance	ZST
PC7, PC1007	Home position return position data	*ZPS
PC8, PC1008	Moving distance after proximity dog	DCT
PC9, PC1009	Stopper type home position return stopper time	ZTM
PC10, PC1010	Stopper type home position return torque limit value	ZTT
PC11, PC1011	Rough match output range	CRP
PC12, PC1012	Jog speed	JOG
PC13, PC1013	S-pattern acceleration/deceleration time constant	*STC
PC14, PC1014	Backlash compensation	*BKC
PC15, PC1015	For manufacturer setting	-
PC16, PC1016	Electromagnetic brake sequence output	MBR
PC17, PC1017	Zero speed	ZSP
PC18, PC1018	Alarm history clear	*BPS
PC19, PC1019	Encoder output pulse selection	*ENRS
PC20, PC1020	Station number setting	*SNO
PC21, PC1021	RS-422 communication function selection	*SOP
PC22, PC1022	Function selection C-1	*COP1
PC23, PC1023	For manufacturer setting	-
PC24, PC1024	Function selection C-3	*COP3
PC25, PC1025	For manufacturer setting	-
PC26, PC1026	Function selection C-5	*COP5
PC27, PC1027	For manufacturer setting	-
PC28, PC1028	Function selection C-7	*COP7
PC29 to PC30, PC1029 to PC1030	For manufacturer setting	-
PC31, PC1031	Software limit + Low	LMPL
PC32, PC1032	Software limit + High	LMPH
PC33, PC1033	Software limit - Low	LMNL
PC34, PC1034	Software limit - High	LMNH
PC35, PC1035	Internal torque limit 2	TL2
PC36, PC1036	Status display selection	*DMD
PC37, PC1037	Position range output address + Low	*LPPL
PC38, PC1038	Position range output address + High	*LPPH
PC39, PC1039	Position range output address - Low	*LNPL
PC40, PC1040	Position range output address - High	*LNPH
PC41 to PC50, PC1041 to PC1050	For manufacturer setting	-

#### (7) I/O setting parameter ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- PD1 to PD30: Writing data to the RAM of a servo amplifier

- PD1001 to PD1030: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PD1, PD1001	Input signal automatic ON selection 1	*DIA1
PD2, PD1002	For manufacturer setting	-
PD3, PD1003	Input signal automatic ON selection 3	*DIA3
PD4, PD1004	Input signal automatic ON selection 4	*DIA4
PD5, PD1005	For manufacturer setting	-
PD6, PD1006	Input device selection 2 (CN6-2)	*DI2
PD7, PD1007	Input device selection 3 (CN6-3)	*DI3
PD8, PD1008	Input device selection 4 (CN6-4)	*DI4
PD9, PD1009	Output signal device selection 1 (CN6-14)	*DO1
PD10, PD1010	Output signal device selection 2 (CN6-15)	*DO2
PD11, PD1011	Output signal device selection 3 (CN6-16)	*DD3
PD12 to PD15, PD1012 to PD1015	For manufacturer setting	-
PD16, PD1016	Input polarity selection	*DIAB
PD17 to PD18, PD1017 to PD1018	For manufacturer setting	-
PD19, PD1019	Input filter setting	*DIF
PD20, PD1020	Function selection D-1	*DOP1
PD21, PD1021	For manufacturer setting	-
PD22, PD1022	Function selection D-3	*DOP3
PD23, PD1023	For manufacturer setting	-
PD24, PD1024	Function selection D-5	*DOP5
PD25 to PD30, PD1025 to PD1030	For manufacturer setting	-

### (8) Option unit parameter ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- PO1 to PO35: Writing data to the RAM of a servo amplifier
- PO1001 to PO1035: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
PO1, PO1001	For manufacturer setting	-
PO2, PO1002	MR-J3-D01 Input signal device selection 1 (CN10-21, 26)	*ODI1
PO3, PO1003	MR-J3-D01 Input signal device selection 2 (CN10-27, 28)	*ODI2
PO4, PO1004	MR-J3-D01 Input signal device selection 3 (CN10-29, 30)	*ODI3
PO5, PO1005	MR-J3-D01 Input signal device selection 4 (CN10-31, 32)	*ODI4
PO6, PO1006	MR-J3-D01 Input signal device selection 5 (CN10-33, 34)	*ODI5
PO7, PO1007	MR-J3-D01 Input signal device selection 6 (CN10-35, 36)	*ODI6
PO8, PO1008	MR-J3-D01 Output signal device selection 1 (CN10-46, 47)	*ODO1
PO9, PO1009	MR-J3-D01 Output signal device selection 2 (CN10-48, 49)	*ODO2
PO10, PO1010	Function selection 0-1	*OOP1
PO11, PO1011	For manufacturer setting	-
PO12, PO1012	Function selection 0-3	*OOP3
PO13, PO1013	MR-J3-D01 Analog monitor 1 output	MOD1
PO14, PO1014	MR-J3-D01 Analog monitor 2 output	MOD2
PO15, PO1015	MR-J3-D01 Analog monitor 1 offset	MO1
PO16, PO1016	MR-J3-D01 Analog monitor 2 offset	MO2

Virtual device name	Name	Symbol
PO17 to 20, PO1017 to PO1020	For manufacturer setting	-
PO21, PO1021	MR-J3-D01 Override offset	VCO
PO22, PO1022	MR-J3-D01 Analog torque limitation offset	TLO
PO23 to PO35, PO1023 to PO1035	For manufacturer setting	-

### (9) Status display ([MELSERVO-J3-\*T])

Virtual device name	Name	Symbol
ST0	Current position	-
ST1	Command position	-
ST2	Command remaining distance	-
ST3	Point table No.	-
ST4	Cumulative feedback pulses	-
ST5	Servo motor speed	-
ST6	Droop pulses	-
ST7	Override voltage	-
ST8	Override	-
ST9	Analog torque command voltage/limit voltage	-
ST10	Regenerative load ratio	-
ST11	Effective load ratio	-
ST12	Peak load ratio	-
ST13	Instantaneous torque	-
ST14	Within one-revolution position	-
ST15	ABS counter	-
ST16	Load inertia moment ratio	-
ST17	Bus voltage	-

### (10) Alarm ([MELSERVO-J3-\*T])

Virtual device name	Name	Symbol
AL0	Current alarm number	-
AL1	Detailed data of current alarms	-
AL11	Servo status when alarm occurs, current position	-
AL12	Servo status when alarm occurs, command position	-
AL13	Servo status when alarm occurs, command remaining distance	-
AL14	Servo status when alarm occurs, point table No.	-
AL15	Servo status when alarm occurs, cumulative feedback pulses	-
AL16	Servo status when alarm occurs, servo motor speed	-
AL17	Servo status when alarm occurs, droop pulses	-
AL18	Servo status when alarm occurs, override voltage	-
AL19	Servo status when alarm occurs, override	-
AL20	Servo status when alarm occurs, analog torque limit voltage	-
AL21	Servo status when alarm occurs, regenerative load ratio	-
AL22	Servo status when alarm occurs, effective load ratio	-
AL23	Servo status when alarm occurs, peak load ratio	-
AL24	Servo status when alarm occurs, Instantaneous torque	-
AL25	Servo status when alarm occurs, within one-revolution position	-
AL26	Servo status when alarm occurs, ABS counter	-
AL27	Servo status when alarm occurs, load inertia moment ratio	-

Virtual device name	Name	Symbol
AL28	Servo status when alarm occurs, Bus voltage	-
AL200	Alarm number from alarm history most recent alarm	-
AL201	Alarm number from alarm history first alarm in past	-
AL202	Alarm number from alarm history second alarm in past	-
AL203	Alarm number from alarm history third alarm in past	-
AL204	Alarm number from alarm history fourth alarm in past	-
AL205	Alarm number from alarm history fifth alarm in past	-
AL210	Alarm occurrence time in alarm history most recent alarm	-
AL211	Alarm occurrence time in alarm history first alarm in past	-
AL212	Alarm occurrence time in alarm history second alarm in past	-
AL213	Alarm occurrence time in alarm history third alarm in past	-
AL214	Alarm occurrence time in alarm history fourth alarm in past	-
AL215	Alarm occurrence time in alarm history fifth alarm in past	-
AL230	Detailed alarm from alarm history most recent alarm	-
AL231	Detailed alarm from alarm history first alarm in past	-
AL232	Detailed alarm from alarm history second alarm in past	-
AL233	Detailed alarm from alarm history third alarm in past	-
AL234	Detailed alarm from alarm history fourth alarm in past	-
AL235	Detailed alarm from alarm history fifth alarm in past	-

#### (11)Point table (position) ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- POS1 to POS255: Writing data to the RAM of a servo amplifier
- POS1001 to POS1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
POS1 to POS255, POS1001 to POS1255	Point table/position data No. 1 to No. 255	-

#### (12)Point table (speed) ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- SPD1 to SPD255: Writing data to the RAM of a servo amplifier
- SPD1001 to SPD1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
SPD1 to SPD255, SPD1001 to SPD1255	Point table/speed data No. 1 to No. 255	-

#### (13)Point table (acceleration time constant) ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- ACT1 to ACT255: Writing data to the RAM of a servo amplifier
- ACT1001 to ACT1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
ACT1 to ACT255, ACT1001 to ACT1255	Point table/acceleration time constant No. 1 to No. 255	-

#### (14)Point table (deceleration time constant) ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- DCT1 to DCT255: Writing data to the RAM of a servo amplifier
- DCT1001 to DCT1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
DCT1 to DCT255, DCT1001 to DCT1255	Point table/deceleration time constant No. 1 to No. 255	-

### (15)Point table (dwell) ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- DWL1 to DWL255: Writing data to the RAM of a servo amplifier
- DWL1001 to DWL1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
DWL1 to DWL255, DWL1001 to DWL1255	Point table/dwell No. 1 to No. 255	-

### (16)Point table (auxiliary function) ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- AUX1 to AUX255: Writing data to the RAM of a servo amplifier
- AUX1001 to AUX1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
AUX1 to AUX255, AUX1001 to AUX1255	Point table/auxiliary function No. 1 to No. 255	-

### (17)Point table (M code) ([MELSERVO-J3-\*T])

Use an appropriate device according to the write destination of the servo amplifier.

- MCD1 to MCD255: Writing data to the RAM of a servo amplifier
- MCD1001 to MCD1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
MCD1 to MCD255, MCD1001 to MCD1255	Point table/M code No.1 to No.255	-

### (18)External input signal ([MELSERVO-J3-\*T])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	Input device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. ⇒MR-J3-_T Instruction Manual
DI1	Input device statuses	-	
DI3	External input pin statuses	-	
DI5	Statuses of input devices switched on through communication	-	For the mapping of the bits corresponding to the data to be read or written, refer to the following. ⇒MR-J3-_T Instruction Manual
DI6	Statuses of input devices switched on through communication	-	

### (19)External output signal ([MELSERVO-J3-\*T])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	Output device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. ⇒MR-J3-_T Instruction Manual
DO1	Output device statuses	-	
DO3	External output pin statuses	-	

### (20)Input signal for test operation (for test operation) ([MELSERVO-J3-\*T])

Virtual device name	Name	Symbol
TMI0	Input signal for test operation 1	-
TMI1	Input signal for test operation 2	-
TMI2	Input signal for test operation 3	-

When using the input signal for test operation (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (21) Forced output of signal pin (for test operation) ([MELSERVO-J3-\*T])

Virtual device name	Name	Symbol
TMO0	Forced output from signal pin (CN6)	-
TMO1	Forced output from signal pin (CN10)	-

When using the forced output of signal pin (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (22) Set data (for test operation) ([MELSERVO-J3-\*T])

Virtual device name	Name	Symbol
TMD0	Writes the speed (test mode)	-
TMD1	Writes the acceleration/deceleration time constant (test mode)	-
TMD3	Writes the moving distance (test mode)	-

When using the set data (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

## ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J3-\*T])

For the precautions for virtual servo amplifier devices, refer to the following.

⇒ 12.3.12 ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2M-P8A])

## 12.3.19 [MELSERVO-J4-\*A, -JE-\*A]

Item	Reference
Specifications of bit devices	➡ ■1 Monitoring-supported bit devices ([MELSERVO-J4-*A, -JE-*A])
	➡ ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J4-*A, -JE-*A])
Specifications of word devices	➡ ■3 Monitoring-supported word devices ([MELSERVO-J4-*A, -JE-*A])
	➡ ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J4-*A, -JE-*A])
Specifications of double-word devices	➡ ■5 Monitoring-supported double-word devices ([MELSERVO-J4-*A, -JE-*A])
	➡ ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J4-*A, -JE-*A])
Specifications of virtual servo amplifier devices	➡ ■7 Virtual servo amplifier devices ([MELSERVO-J4-*A, -JE-*A])
	➡ ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J4-*A, -JE-*A])

### ■1 Monitoring-supported bit devices ([MELSERVO-J4-\*A, -JE-\*A])

The following table shows monitoring-supported virtual bit devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

➡ 12.3.19 ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J4-\*A, -JE-\*A])

For details on virtual servo amplifier devices, refer to the following.

➡ 12.3.19 ■7 Virtual servo amplifier devices ([MELSERVO-J4-\*A, -JE-\*A])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
SP	Servo amplifier request	Decimal	0 to 6	×	×
OM	Operation mode selection	Decimal	0 to 4	×	×
TMB	Instruction demand (for test operation)	Decimal	1 to 6	×	×
OTI	One-touch tuning instruction	Decimal	0 to 5	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

➡ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J4-\*A, -JE-\*A])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-
OTI	-/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSERVO-J4-\*A, -JE-\*A])

The following table shows monitoring-supported virtual word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.3.19 ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J4-\*A, -JE-\*A])  
 For details on virtual servo amplifier devices, refer to the following.

⇒12.3.19 ■7 Virtual servo amplifier devices ([MELSERVO-J4-\*A, -JE-\*A])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices *1	
				Assignment to EG devices	Access using a client
PA	Basic parameter	Decimal	1 to 32 1001 to 1032	○	×
PB	Gain filter parameter	Decimal	1 to 64 1001 to 1064	○	×
PC	Extension setting parameter	Decimal	1 to 80 1001 to 1080	○	×
PD	I/O setting parameter	Decimal	1 to 48 1001 to 1048	○	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J4-\*A, -JE-\*A])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PA	R/W	R/W	-/-	-/-
PB	R/W	R/W	-/-	-/-
PC	R/W	R/W	-/-	-/-
PD	R/W	R/W	-/-	-/-
PL	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
AL	R/-	R/-	-/-	-/-

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PE	R/W	R/W	-/-	-/-
PF	R/W	R/W	-/-	-/-
ALM	R/-	R/-	-/-	-/-
MD	R/-	R/-	-/-	-/-
OTS	R/-	R/-	-/-	-/-
DI*1	R/-	R/W	-/-	-/-
DO	R/-	R/-	-/-	-/-

\*1 Only reading is available for DI0 and DI1.

## ■5 Monitoring-supported double-word devices ([MELSERVO-J4-\*A, -JE-\*A])

The following table shows monitoring-supported virtual double-word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.19 ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J4-\*A, -JE-\*A])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.19 ■7 Virtual servo amplifier devices ([MELSERVO-J4-\*A, -JE-\*A])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
ALD	Life diagnosis	Decimal	0 to 1	×	×
TMI	Input signal for test operation (for test operation)	Decimal	0	×	×
TMO	Forced output of signal pin (for test operation)	Decimal	0	×	×
TMD	Set data (for test operation)	Decimal	0 to 1, 3	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J4-\*A, -JE-\*A])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
ALD	-/-	R/-	-/-	-/-
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-

## ■7 Virtual servo amplifier devices ([MELSERVO-J4-\*A, -JE-\*A])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	⇒ (1) Servo amplifier request ([MELSERVO-J4-*A, -JE-*A])
OM	⇒ (2) Operation mode selection ([MELSERVO-J4-*A, -JE-*A])
TMB	⇒ (3) Instruction demand (for test operation) ([MELSERVO-J4-*A, -JE-*A])
OTI	⇒ (4) One-touch tuning instruction ([MELSERVO-J4-*A, -JE-*A])

Virtual device name	Reference
PA	→ (5) Basic parameter ([MELSERVO-J4-*A, -JE-*A])
PB	→ (6) Gain filter parameter ([MELSERVO-J4-*A, -JE-*A])
PC	→ (7) Extension setting parameter ([MELSERVO-J4-*A, -JE-*A])
PD	→ (8) I/O setting parameter ([MELSERVO-J4-*A, -JE-*A])
PL	→ (9) Linear servo motor/DD motor setting parameter ([MELSERVO-J4-*A, -JE-*A])
ST	→ (10) Status display ([MELSERVO-J4-*A, -JE-*A])
AL	→ (11) Alarm (MELSERVO-J3-*A compatible) ([MELSERVO-J4-*A, -JE-*A])
PE	→ (12) Extension setting No.2 parameter ([MELSERVO-J4-*A, -JE-*A])
PF	→ (13) Extension setting No.3 parameter ([MELSERVO-J4-*A, -JE-*A])
ALM	→ (14) Alarm (MELSERVO-J4-*A extended) ([MELSERVO-J4-*A, -JE-*A])
MD	→ (15) Machine diagnosis data ([MELSERVO-J4-*A, -JE-*A])
OTS	→ (16) One-touch tuning data ([MELSERVO-J4-*A, -JE-*A])
DI	→ (17) External input signal in MR-J4-□A ([MELSERVO-J4-*A, -JE-*A])
	→ (18) External input signal in MR-JE-□A ([MELSERVO-J4-*A, -JE-*A])
DO	→ (19) External output signal in MR-J4-□A ([MELSERVO-J4-*A, -JE-*A])
	→ (20) External output signal in MR-JE-□A ([MELSERVO-J4-*A, -JE-*A])
ALD	→ (21) Life diagnosis ([MELSERVO-J4-*A, -JE-*A])
TMI	→ (22) Input signal for test operation (for test operation) ([MELSERVO-J4-*A, -JE-*A])
TMO	→ (23) Forced output of signal pin (for test operation) ([MELSERVO-J4-*A, -JE-*A])
TMD	→ (24) Set data (for test operation) ([MELSERVO-J4-*A, -JE-*A])

### (1) Servo amplifier request ([MELSERVO-J4-\*A, -JE-\*A])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J4-□A	MR-JE-□A
SP0	Status display data clear	-	○	○
SP1	Current alarm clear	-	○	○
SP2	Alarm history clear	-	○	○
SP3	External input signal prohibited	-	○	○
SP4	External output signal prohibited	-	○	○
SP5	External input signal resumed	-	○	○
SP6	External output signal resumed	-	○	○

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (2) Operation mode selection ([MELSERVO-J4-\*A, -JE-\*A])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J4-□A	MR-JE-□A
OM0	Normal mode (not test operation mode)	-	○	○
OM1	JOG operation	-	○	○
OM2	Positioning operation	-	○	○
OM4	Output signal (DO) forced output	-	○	○

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (3) Instruction demand (for test operation) ([MELSERVO-J4-\*A, -JE-\*A])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J4-□A	MR-JE-□A
TMB1	Temporary stop command	-	○	○
TMB2	Test operation (positioning operation) start command	-	○	○
TMB3	Forward rotation direction	-	○	○
TMB4	Reverse rotation direction	-	○	○
TMB5	Restart for remaining distance	-	○	○
TMB6	Remaining distance clear	-	○	○

When using the instruction demand (for test operation), note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (4) One-touch tuning instruction ([MELSERVO-J4-\*A, -JE-\*A])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J4-□A	MR-JE-□A
OTI0	One-touch tuning start command (Basic mode)	-	○	○
OTI1	One-touch tuning start command (High mode)	-	○	○
OTI2	One-touch tuning start command (Low mode)	-	○	○
OTI3	One-touch tuning stop command	-	○	○
OTI4	Return to initial value	-	○	○
OTI5	Return to value before adjustment	-	○	○

## (5) Basic parameter ([MELSERVO-J4-\*A, -JE-\*A])

Use an appropriate device according to the write destination of the servo amplifier.

- PA1 to PA32: Writing data to the RAM of a servo amplifier
- PA1001 to PA1032: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

#### (6) Gain filter parameter ([MELSERVO-J4-\*A, -JE-\*A])

Use an appropriate device according to the write destination of the servo amplifier.

- PB1 to PB64: Writing data to the RAM of a servo amplifier
- PB1001 to PB1064: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

## (7) Extension setting parameter ([MELSERVO-J4-\*A, -JE-\*A])

Use an appropriate device according to the write destination of the servo amplifier.

- PC1 to PC80: Writing data to the RAM of a servo amplifier
- PC1001 to PC1080: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

### (8) I/O setting parameter ([MELSERVO-J4-\*A, -JE-\*A])

Use an appropriate device according to the write destination of the servo amplifier.

- PD1 to PD48: Writing data to the RAM of a servo amplifier
- PD1001 to PD1048: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

MD5	Machine diagnosis data coulomb friction torque in negative direction	-	○	○
MD6	Machine diagnosis data friction torque at rated speed in negative direction	-	○	○
MD7	Machine diagnosis data oscillation frequency (motor is stopped)	-	○	○
MD8	Machine diagnosis data vibration level (motor is stopped)	-	○	○
MD9	Machine diagnosis data oscillation frequency (motor is operating)	-	○	○
MD10	Machine diagnosis data vibration level (motor is operating)	-	○	○
MD11	Machine diagnosis data, rated speed at forward or reverse rotation torque	-	○	○

### (16) One-touch tuning data ([MELSERVO-J4-\*A, -JE-\*A])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J4-□A	MR-JE-□A
OTS0	One-touch tuning status confirmation	-	○	○
OTS1	Error code list	-	○	○
OTS2	Settling time	-	○	○
OTS3	Overshoot amount	-	○	○

### (17) External input signal in MR-J4-□A ([MELSERVO-J4-\*A, -JE-\*A])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	Input device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. → MR-J4-_A_(-RJ)/MR-J4-03A6(-RJ) SERVO AMPLIFIER INSTRUCTION MANUAL
DI1	External input pin statuses	-	
DI2	Statuses of input devices switched on through communication	-	

### (18) External input signal in MR-JE-□A ([MELSERVO-J4-\*A, -JE-\*A])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	Input device statuses	-	System information
DI1	External input pin statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. ⇒MR-JE_ A SERVO AMPLIFIER INSTRUCTION MANUAL
DI2	Statuses of input devices switched on through communication	-	System information

### (19) External output signal in MR-J4-□A ([MELSERVO-J4-\*A, -JE-\*A])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	Output device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following.
DO1	External output pin statuses	-	⇒MR-J4_ A (-RJ)/MR-J4-03A6(-RJ) SERVO AMPLIFIER INSTRUCTION MANUAL

### (20) External output signal in MR-JE-□A ([MELSERVO-J4-\*A, -JE-\*A])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	Output device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. ⇒MR-JE_ A SERVO AMPLIFIER INSTRUCTION MANUAL
DO1	External output pin statuses	-	System information

### (21) Life diagnosis ([MELSERVO-J4-\*A, -JE-\*A])

- : Available
- ×: Not available

Virtual device name	Name	Symbol	MR-J4-□A	MR-JE-□A
ALD0	Cumulative power-on time	-	○	○
ALD1	Number of inrush current switching times	-	○	○

### (22) Input signal for test operation (for test operation) ([MELSERVO-J4-\*A, -JE-\*A])

- : Available
- ×: Not available

Virtual device name	Name	Symbol	MR-J4-□A	MR-JE-□A
TMI0	Input signal for test operation	-	○	○

When using the input signal for test operation (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (23) Forced output of signal pin (for test operation) ([MELSERVO-J4-\*A, -JE-\*A])

- : Available
- ×: Not available

Virtual device name	Name	Symbol	MR-J4-□A	MR-JE-□A
TMO0	Forced output of signal pin	-	○	○

When using the forced output of signal pin (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

## (24)Set data (for test operation) ([MELSERVO-J4-\*A, -JE-\*A])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J4-□A	MR-JE-□A
TMD0	Writes the speed (test mode)	-	○	○
TMD1	Writes the acceleration/deceleration time constant (test mode)	-	○	○
TMD3	Writes the moving distance (test mode)	-	○	○

When using the set data (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J4-\*A, -JE-\*A])

For the precautions for virtual servo amplifier devices, refer to the following.

→ 12.3.12 ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2M-P8A])

## 12.3.20 [MELSERVO-J4-\*A-RJ]

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([MELSERVO-J4-*A-RJ])
	→ ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J4-*A-RJ])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([MELSERVO-J4-*A-RJ])
	→ ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J4-*A-RJ])
Specifications of double-word devices	→ ■5 Monitoring-supported double-word devices ([MELSERVO-J4-*A-RJ])
	→ ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J4-*A-RJ])
Specifications of virtual servo amplifier devices	→ ■7 Virtual servo amplifier devices ([MELSERVO-J4-*A-RJ])
	→ ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J4-*A-RJ])

### ■1 Monitoring-supported bit devices ([MELSERVO-J4-\*A-RJ])

The following table shows monitoring-supported virtual bit devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.20 ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J4-\*A-RJ])

For details on virtual servo amplifier devices, refer to the following.

→ 12.3.20 ■7 Virtual servo amplifier devices ([MELSERVO-J4-\*A-RJ])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
SP	Servo amplifier request	Decimal	0 to 6	×	×
OM	Operation mode selection	Decimal	0 to 2, 4 to 5	×	×
TMB	Instruction demand (for test operation)	Decimal	1 to 6	×	×
OTI	One-touch tuning instruction	Decimal	0 to 5	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J4-\*A-RJ])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-
OTI	-/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSERVO-J4-\*A-RJ])

The following table shows monitoring-supported virtual word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.20 ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J4-\*A-RJ])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.20 ■7 Virtual servo amplifier devices ([MELSERVO-J4-\*A-RJ])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
PA	Basic parameter	Decimal	1 to 32 1001 to 1032	○	×
PB	Gain filter parameter	Decimal	1 to 64 1001 to 1064	○	×
PC	Extension setting parameter	Decimal	1 to 80 1001 to 1080	○	×
PD	I/O setting parameter	Decimal	1 to 48 1001 to 1048	○	×
PO	Option setting parameter	Decimal	1 to 32 1001 to 1032	○	×
PL	Linear servo motor/DD motor setting parameter	Decimal	1 to 48 1001 to 1048	○	×
PT	Positioning control parameter	Decimal	1 to 48 1001 to 1048	○	×
ST	Status display	Decimal	0 to 48	○	×
AL	Alarm (current alarm, J3A compatible)	Decimal	0 to 1 11 to 25	○	×
AL	Alarm (alarm history, J3A compatible)	Decimal	200 to 205 210 to 215 230 to 235	○	×
PE	Extension setting No.2 parameter	Decimal	1 to 64 1001 to 1064	○	×
PF	Extension setting No.3 parameter	Decimal	1 to 48 1001 to 1048	○	×
ALM	Alarm (current alarm, J4A extend)	Decimal	0 to 1 11 to 59	○	×
ALM	Alarm (alarm history, J4A extend)	Decimal	200 to 215 220 to 235 240 to 255	○	×
POS	Point table (position)	Decimal	1 to 255 1001 to 1255	○	×
SPD	Point table (speed)	Decimal	1 to 255 1001 to 1255	○	×
ACT	Point table (acceleration time constant)	Decimal	1 to 255 1001 to 1255	○	×
DCT	Point table (deceleration time constant)	Decimal	1 to 255 1001 to 1255	○	×
DWL	Point table (dwell)	Decimal	1 to 255 1001 to 1255	○	×
AUX	Point table (auxiliary function)	Decimal	1 to 255 1001 to 1255	○	×
MCD*2	Point table (M code)	Decimal	1 to 255 1001 to 1255	○	×
MD	Machine diagnosis data	Decimal	0 to 11	×	×
OTS	One-touch tuning data	Decimal	0 to 3	×	×
DI	External input signal	Decimal	0 to 6	×	×
DO	External output signal	Decimal	0 to 4	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 MCD cannot be used as a real number.

#### ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J4-\*A-RJ])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PA	R/W	R/W	-/-	-/-
PB	R/W	R/W	-/-	-/-
PC	R/W	R/W	-/-	-/-
PD	R/W	R/W	-/-	-/-
PO	R/W	R/W	-/-	-/-
PL	R/W	R/W	-/-	-/-
PT	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
AL	R/-	R/-	-/-	-/-
PE	R/W	R/W	-/-	-/-
PF	R/W	R/W	-/-	-/-
ALM	R/-	R/-	-/-	-/-
POS	R/W	R/W	-/-	-/-
SPD	R/W	R/W	-/-	-/-
ACT	R/W	R/W	-/-	-/-
DCT	R/W	R/W	-/-	-/-
DWL	R/W	R/W	-/-	-/-
AUX	R/W	R/W	-/-	-/-
MCD	R/W	R/W	-/-	-/-
MD	R/-	R/-	-/-	-/-
OTS	R/-	R/-	-/-	-/-
DI*1	R/-	R/W	-/-	-/-
DO	R/-	R/-	-/-	-/-

\*1 Only reading is available for DI0 to DI3.

#### ■5 Monitoring-supported double-word devices ([MELSERVO-J4-\*A-RJ])

The following table shows monitoring-supported virtual double-word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.20 ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J4-\*A-RJ])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.20 ■7 Virtual servo amplifier devices ([MELSERVO-J4-\*A-RJ])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
LD	Current position latch data	Decimal 0 to 1	×	×
RR*2	Value of the general-purpose register (Rx)	Decimal 1 to 4 1001 to 1004	×	×
RD	Value of the general-purpose register (Dx)	Decimal 1 to 4	×	×
ALD	Life diagnosis	Decimal 0 to 1	×	×

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
TMI	Input signal for test operation (for test operation)	Decimal	0 to 2	×	×
TMO	Forced output of signal pin (for test operation)	Decimal	0	×	×
TMD	Set data (for test operation)	Decimal	0 to1, 3	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Use the integer number when writing parameters to Rx.

## ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J4-\*A-RJ])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
LD	-/-	R/-	-/-	-/-
RR	-/-	R/W	-/-	-/-
RD	-/-	R/W	-/-	-/-
ALD	-/-	R/-	-/-	-/-
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-

## ■7 Virtual servo amplifier devices ([MELSERVO-J4-\*A-RJ])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	⇒(1) Servo amplifier request ([MELSERVO-J4-*A-RJ])
OM	⇒(2) Operation mode selection ([MELSERVO-J4-*A-RJ])
TMB	⇒(3) Instruction demand (for test operation) ([MELSERVO-J4-*A-RJ])
OTI	⇒(4) One-touch tuning instruction ([MELSERVO-J4-*A-RJ])
PA	⇒(5) Basic parameter ([MELSERVO-J4-*A-RJ])
PB	⇒(6) Gain filter parameter ([MELSERVO-J4-*A-RJ])
PC	⇒(7) Extension setting parameter ([MELSERVO-J4-*A-RJ])
PD	⇒(8) I/O setting parameter ([MELSERVO-J4-*A-RJ])
PO	⇒(9) Option setting parameter ([MELSERVO-J4-*A-RJ])
PL	⇒(10) Linear servo motor/DD motor setting parameter ([MELSERVO-J4-*A-RJ])
PT	⇒(11) Positioning control parameter ([MELSERVO-J4-*A-RJ])
ST	⇒(12) Status display ([MELSERVO-J4-*A-RJ])
AL	⇒(13) Alarm (MELSERVO-J3-*A compatible) ([MELSERVO-J4-*A-RJ])
PE	⇒(14) Extension setting No.2 parameter ([MELSERVO-J4-*A-RJ])
PF	⇒(15) Extension setting No.3 parameter ([MELSERVO-J4-*A-RJ])
ALM	⇒(16) Alarm (MELSERVO-J4-*A extended) ([MELSERVO-J4-*A-RJ])
POS	⇒(17) Point table (position) ([MELSERVO-J4-*A-RJ])

Virtual device name	Reference
SPD	→ (18) Point table (speed) ([MELSERVO-J4-*A-RJ])
ACT	→ (19) Point table (acceleration time constant) ([MELSERVO-J4-*A-RJ])
DCT	→ (20) Point table (deceleration time constant) ([MELSERVO-J4-*A-RJ])
DWL	→ (21) Point table (dwell) ([MELSERVO-J4-*A-RJ])
AUX	→ (22) Point table (auxiliary function) ([MELSERVO-J4-*A-RJ])
MCD	→ (23) Point table (M code) ([MELSERVO-J4-*A-RJ])
MD	→ (24) Machine diagnosis data ([MELSERVO-J4-*A-RJ])
OTS	→ (25) One-touch tuning data ([MELSERVO-J4-*A-RJ])
DI	→ (26) External input signal ([MELSERVO-J4-*A-RJ])
DO	→ (27) External output signal ([MELSERVO-J4-*A-RJ])
LD	→ (28) Current position latch data ([MELSERVO-J4-*A-RJ])
RR	→ (29) Value of the general-purpose register (Rx) ([MELSERVO-J4-*A-RJ])
RD	→ (30) Value of the general-purpose register (Dx) ([MELSERVO-J4-*A-RJ])
ALD	→ (31) Life diagnosis ([MELSERVO-J4-*A-RJ])
TMI	→ (32) Input signal for test operation (for test operation) ([MELSERVO-J4-*A-RJ])
TMO	→ (33) Forced output of signal pin (for test operation) ([MELSERVO-J4-*A-RJ])
TMD	→ (34) Set data (for test operation) ([MELSERVO-J4-*A-RJ])

### (1) Servo amplifier request ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
SP0	Status display data clear	-
SP1	Current alarm clear	-
SP2	Alarm history clear	-
SP3	External input signal prohibited	-
SP4	External output signal prohibited	-
SP5	External input signal resumed	-
SP6	External output signal resumed	-

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (2) Operation mode selection ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
OM0	Normal mode (not test operation mode)	-
OM1	JOG operation	-
OM2	Positioning operation	-
OM4	Output signal (DO) forced output	-
OM5	Single-step feed operation	-

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (3) Instruction demand (for test operation) ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
TMB1	Temporary stop command	-
TMB2	Test operation (positioning operation) start command	-
TMB3	Forward rotation direction	-
TMB4	Reverse rotation direction	-
TMB5	Restart for remaining distance	-
TMB6	Remaining distance clear	-

When using the instruction demand (for test operation), note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (4) One-touch tuning instruction ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
OTI0	One-touch tuning start command (Basic mode)	-
OTI1	One-touch tuning start command (High mode)	-
OTI2	One-touch tuning start command (Low mode)	-
OTI3	One-touch tuning stop command	-
OTI4	Return to initial value	-
OTI5	Return to value before adjustment	-

### (5) Basic parameter ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- PA1 to PA32: Writing data to the RAM of a servo amplifier
- PA1001 to PA1032: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PA1, PA1001	Operation mode	*STY
PA2, PA1002	Regenerative brake option	*REG
PA3, PA1003	Absolute position detection system	*ABS
PA4, PA1004	Function selection A-1	*AOP1
PA5, PA1005	Number of command input pulses per revolution	*FBP
PA6, PA1006	Electronic gear numerator (command pulse multiplication numerator)/number of gear teeth on machine side	*CMX
PA7, PA1007	Electronic gear denominator (command pulse multiplication denominator)/number of gear teeth on servo motor side	*CDV
PA8, PA1008	Auto tuning mode	ATU
PA9, PA1009	Auto tuning response	RSP
PA10, PA1010	In-position range	INP
PA11, PA1011	Forward rotation torque limit/positive direction thrust limit	TLP
PA12, PA1012	Reverse rotation torque limit/negative direction thrust limit	TLN
PA13, PA1013	Command pulse input form	*PLSS
PA14, PA1014	Rotation direction selection/travel direction selection	*POL
PA15, PA1015	Encoder output pulses	*ENR
PA16, PA1016	Encoder output pulses 2	*ENR2
PA17, PA1017	Servo motor series setting	*MSR
PA18, PA1018	Servo motor type setting	*MTY
PA19, PA1019	Parameter block	*BLK
PA20, PA1020	Tough drive setting	*TDS

Virtual device name	Name	Symbol
PA21, PA1021	Function selection A-3	*AOP3
PA22, PA1022	Position control composition selection	*PCS
PA23, PA1023	Drive recorder arbitrary alarm trigger setting	DRAT
PA24, PA1024	Function selection A-4	AOP4
PA25, PA1025	One-touch tuning - Overshoot permissible level	OTHOV
PA26, PA1026	Function selection A-5	*AOP5
PA27 to PA32, PA1027 to PA1032	For manufacturer setting	-

## (6) Gain filter parameter ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- PB1 to PB64: Writing data to the RAM of a servo amplifier
- PB1001 to PB1064: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PB1, PB1001	Adaptive tuning mode (Adaptive filter II)	FILT
PB2, PB1002	Vibration suppression control tuning mode (advanced vibration suppression control II)	VRFT
PB3, PB1003	Position command acceleration/deceleration time constant (position smoothing)	PST
PB4, PB1004	Feed forward gain	FFC
PB5, PB1005	For manufacturer setting	-
PB6, PB1006	Load to motor inertia ratio/load to motor mass ratio	GD2
PB7, PB1007	Model control gain	PG1
PB8, PB1008	Position control gain	PG2
PB9, PB1009	Speed control gain	VG2
PB10, PB1010	Speed integral compensation	VIC
PB11, PB1011	Speed differential compensation	VDC
PB12, PB1012	Overshoot amount compensation	OVA
PB13, PB1013	Machine resonance suppression filter 1	NH1
PB14, PB1014	Notch shape selection 1	NHQ1
PB15, PB1015	Machine resonance suppression filter 2	NH2
PB16, PB1016	Notch shape selection 2	NHQ2
PB17, PB1017	Shaft resonance suppression filter	NHF
PB18, PB1018	Low-pass filter setting	LPF
PB19, PB1019	Vibration suppression control 1 - Vibration frequency	VRF11
PB20, PB1020	Vibration suppression control 1 - Resonance frequency	VRF12
PB21, PB1021	Vibration suppression control 1 - Vibration frequency damping	VRF13
PB22, PB1022	Vibration suppression control 1 - Resonance frequency damping	VRF14
PB23, PB1023	Low-pass filter setting	VFBF
PB24, PB1024	Slight vibration suppression control	*MVS
PB25, PB1025	Function selection B-1	*BOP1
PB26, PB1026	Gain switching function	*CDP
PB27, PB1027	Gain switching condition	CDL
PB28, PB1028	Gain switching time constant	CDT
PB29, PB1029	Load to motor inertia ratio/load to motor mass ratio after gain switching	GD2B
PB30, PB1030	Position loop gain after gain switching	PG2B
PB31, PB1031	Speed loop gain after gain switching	VG2B
PB32, PB1032	Speed integral compensation after gain switching	VICB
PB33, PB1033	Vibration suppression control 1 - Vibration frequency after gain switching	VRF1B

Virtual device name	Name	Symbol
PB34, PB1034	Vibration suppression control 1 - Resonance frequency after gain switching	VRF2B
PB35, PB1035	Vibration suppression control 1 - Vibration frequency damping after gain switching	VRF3B
PB36, PB1036	Vibration suppression control 1 - Resonance frequency damping after gain switching	VRF4B
PB37 to PB44, PB1037 to PB1044	For manufacturer setting	-
PB45, PB1045	Command notch filter	CNHF
PB46, PB1046	Machine resonance suppression filter 3	NH3
PB47, PB1047	Notch shape selection 3	NHQ3
PB48, PB1048	Machine resonance suppression filter 4	NH4
PB49, PB1049	Notch shape selection 4	NHQ4
PB50, PB1050	Machine resonance suppression filter 5	NH5
PB51, PB1051	Notch shape selection 5	NHQ5
PB52, PB1052	Vibration suppression control 2 - Vibration frequency	VRF21
PB53, PB1053	Vibration suppression control 2 - Resonance frequency	VRF22
PB54, PB1054	Vibration suppression control 2 - Vibration frequency damping	VRF23
PB55, PB1055	Vibration suppression control 2 - Resonance frequency damping	VRF24
PB56, PB1056	Vibration suppression control 2 - Vibration frequency after gain switching	VRF21B
PB57, PB1057	Vibration suppression control 2 - Resonance frequency after gain switching	VRF22B
PB58, PB1058	Vibration suppression control 2 - Vibration frequency damping after gain switching	VRF23B
PB59, PB1059	Vibration suppression control 2 - Resonance frequency damping after gain switching	VRF24B
PB60, PB1060	Model loop gain after gain switching	PG1B
PB61 to PB64, PB1061 to PB1064	For manufacturer setting	-

### (7) Extension setting parameter ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- PC1 to PC80: Writing data to the RAM of a servo amplifier
- PC1001 to PC1080: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PC1, PC1001	JOG operation acceleration time constant/acceleration time constant 1	STA

## (8) I/O setting parameter ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- PD1 to PD48: Writing data to the RAM of a servo amplifier
- PD1001 to PD1048: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PD1, PD1001	Input signal automatic on selection 1	*DIA1
PD2, PD1002	For manufacturer setting	-

PO16, PO1016	MR-D01 analog monitor 2 offset	OMO2
PO17 to PO20, PO1017 to PO1020	For manufacturer setting	-
PO21, PO1021	MR-D01 override offset	OVCO
PO22, PO1022	MR-D01 analog torque limit offset	OTLO
PO23 to PO26, PO1023 to PO1026	For manufacturer setting	-
PO27, PO1027	MR-D01 input device selection 7	*ODI7
PO28, PO1028	MR-D01 input device selection 8	*ODI8
PO29 to PO32, PO1029 to PO1032	For manufacturer setting	-

### (10) Linear servo motor/DD motor setting parameter ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- PL1 to PL48: Writing data to the RAM of a servo amplifier
- PL1001 to PL1048: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PL1, PL1001	Linear servo motor/DD motor function selection 1	*LIT1
PL2, PL1002	Linear encoder resolution - Numerator	*LIM
PL3, PL1003	Linear encoder resolution - Denominator	*LID
PL4, PL1004	Linear servo motor/DD motor function selection 2	*LIT2
PL5, PL1005	Position deviation error detection level	LB1
PL6, PL1006	Speed deviation error detection level	LB2
PL7, PL1007	Torque/thrust deviation error detection level	LB3

Virtual device name	Name	Symbol
PL8, PL1008	Linear servo motor/DD motor function selection 3	*LIT3
PL9, PL1009	Magnetic pole detection voltage level	LPWM
PL10 to PL16, PL1010 to PL1016	For manufacturer setting	-
PL17, PL1017	Magnetic pole detection - Minute position detection method - Function selection	LTSTS
PL18, PL1018	Magnetic pole detection - Minute position detection method - Identification signal amplitude	IDLV
PL19 to PL48, PL1019 to PL1048	For manufacturer setting	-

### (11) Positioning control parameter ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- PT1 to PT48: Writing data to the RAM of a servo amplifier
- PT1001 to PT1048: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PT1, PT1001	Command mode selection	*CTY
PT2, PT1002	Function selection T-1	*TOP1
PT3, PT1003	Feeding function selection	*FTY
PT4, PT1004	Home position return type	*ZTY
PT5, PT1005	Home position return speed	ZRF
PT6, PT1006	Creep speed	CRF
PT7, PT1007	Home position shift distance	ZST
PT8, PT1008	Home position return position data	*ZPS
PT9, PT1009	Moving distance after proximity dog	DCT
PT10, PT1010	Stopper type home position return stopper time	ZTM
PT11, PT1011	Stopper type home position return torque limit value	ZTT
PT12, PT1012	Rough match output range	CRP
PT13, PT1013	JOG operation	JOG

#### (14) Extension setting No.2 parameter ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- PE1 to PE64: Writing data to the RAM of a servo amplifier
- PE1001 to PE1064: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PE1, PE1001	Fully closed loop function selection 1	*FCT1
PE2, PE1002	For manufacturer setting	-
PE3, PE1003	Fully closed loop function selection 2	*FCT2
PE4, PE1004	Fully closed loop control - Feedback pulse electronic gear 1 - Numerator	*FBN
PE5, PE1005	Fully closed loop control - Feedback pulse electronic gear 1 - Denominator	*FBD
PE6, PE1006	Fully closed loop control - Speed deviation error detection level	BC1
PE7, PE1007	Fully closed loop control - Position deviation error detection level	BC2
PE8, PE1008	Fully closed loop dual feedback filter	DUF
PE9, PE1009	For manufacturer setting	-
PE10, PE1010	Fully closed loop function selection 3	FCT3
PE11 to PE33, PE1011 to PE1033	For manufacturer setting	-
PE34, PE1034	Fully closed loop control - Feedback pulse electronic gear 2 - Numerator	*FBN2
PE35, PE1035	Fully closed loop control - Feedback pulse electronic gear 2 - Denominator	*FBD2
PE36 to PE40, PE1036 to PE1040	For manufacturer setting	-
PE41, PE1041	Function selection E-3	EOP3
PE42 to PE43, PE1042 to PE1043	For manufacturer setting	-
PE44, PE1044	Lost motion compensation positive-side compensation value selection	LMCP
PE45, PE1045	Lost motion compensation negative-side compensation value selection	LMCN
PE46, PE1046	Lost motion filter setting	LMFLT
PE47, PE1047	Torque offset	TOF
PE48, PE1048	Lost motion compensation function selection	*LMOP
PE49, PE1049	Lost motion compensation timing	LMCD
PE50, PE1050	Lost motion compensation non-sensitive band	LMCT
PE51 to PE64, PE1051 to PE1064	For manufacturer setting	-

#### (15) Extension setting No.3 parameter ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- PF1 to PF48: Writing data to the RAM of a servo amplifier
- PF1001 to PF1048: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Virtual device name	Name	Symbol
PF1 to PF8, PF1001 to PF1008	For manufacturer setting	-
PF9, PF1009	Function selection F-5	*FOP5
PF10 to PF14, PF1010 to PF1014	For manufacturer setting	-
PF15, PF1015	Electronic dynamic brake operating time	DBT
PF16 to PF17, PF1016 to PF1017	For manufacturer setting	-
PF18, PF1018	STO diagnosis error detection time	*STOD

Virtual device name	Name	Symbol
PF19 to PF20, PF1019 to PF1020	For manufacturer setting	-
PF21, PF1021	Drive recorder switching time setting	DRT
PF22, PF1022	For manufacturer setting	-
PF23, PF1023	Vibration tough drive - Oscillation detection level	OSCL1
PF24, PF1024	Vibration tough drive function selection	OSCL2
PF25, PF1025	SEMI-F47 function - Instantaneous power failure detection time	CVAT
PF26 to PF30, PF1026 to PF1030	For manufacturer setting	-
PF31, PF1031	Machine diagnosis function - Friction judgment speed	FRIC
PF32 to PF33, PF1032 to PF1033	For manufacturer setting	-
PF34, PF1034	RS-422 communication function selection 3	*SOP3
PF35 to PF44, PF1035 to PF1044	For manufacturer setting	-
PF45, PF1045	Function selection F-12	*FOP12
PF46, PF1046	Modbus-RTU comm. - Communication time-out time	MIC
PF47 to PF48, PF1047 to PF1048	For manufacturer setting	-

#### (16) Alarm (MELSERVO-J4-\*A extended) ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
ALM0	Current alarm number	-
ALM1	Detailed data of current alarms	-
ALM11	Servo status(alarm) Cumulative feedback pulses	-
ALM12	Servo status(alarm) Servo motor speed	-
ALM13	Servo status(alarm) Droop pulses	-
ALM14	Servo status(alarm) cumulative command pulses	-
ALM15	Servo status(alarm) command pulse frequency	-
ALM16	Servo status(alarm) analog speed command voltage/limit voltage	-
ALM17	Servo status(alarm) analog torque command voltage/limit voltage	-
ALM18	Servo status(alarm) regenerative load ratio	-
ALM19	Servo status(alarm) effective load ratio	-
ALM20	Servo status(alarm) peak load ratio	-
ALM21	Servo status(alarm) Instantaneous torque	-
ALM22	Servo status(alarm) Within one-revolution position(1 pulse unit)	-
ALM23	Servo status(alarm) ABS counter	-
ALM24	Servo status(alarm) load inertia moment ratio	-
ALM25	Servo status(alarm) Bus voltage	-
ALM26	Servo status(alarm) Load-side cumulative feedback pulses	-
ALM27	Servo status(alarm) Load-side droop pulses	-
ALM28	Servo status(alarm) Load-side encoder information 1	-
ALM29	Servo status(alarm) Load-side encoder information 2	-
ALM30 to ALM32	For manufacturer setting	-
ALM33	Servo status(alarm) Temperature of servo motor thermistor	-
ALM34	Servo status(alarm) Servo motor-side cumulative feedback pulses (before gear)	-
ALM35	Servo status(alarm) Electrical angle	-
ALM36 to ALM40	For manufacturer setting	-
ALM41	Servo status(alarm) Servo motor-side/load-side position deviation	-
ALM42	Servo status(alarm) Servo motor-side/load-side speed deviation	-

Virtual device name	Name	Symbol
ALM43	Servo status(alarm) Internal temperature of encoder	-
ALM44	Servo status(alarm) Setting time	-
ALM45	Servo status(alarm) Oscillation detection frequency	-
ALM46	Servo status(alarm) Number of tough drives	-
ALM47 to ALM50	For manufacturer setting	-
ALM51	Servo status(alarm) Unit power consumption	-
ALM52	Servo status(alarm) Unit total power consumption	-
ALM53	Servo status(alarm) Current position	-
ALM54	Servo status(alarm) Command position	-
ALM55	Servo status(alarm) Command remaining distance	-
ALM56	Servo status(alarm) Point table No./Program No./Station position No.	-
ALM57	Servo status(alarm) Step No.	-
ALM58	Servo status(alarm) Analog override voltage	-
ALM59	Servo status(alarm) Override level	-
ALM200	Alarm number from Alarm History most recent alarm	-
ALM201	Alarm number from Alarm History 1st alarm in past	-
ALM202	Alarm number from Alarm History 2nd alarm in past	-
ALM203	Alarm number from Alarm History 3rd alarm in past	-
ALM204	Alarm number from Alarm History 4th alarm in past	-
ALM205	Alarm number from Alarm History 5th alarm in past	-
ALM206	Alarm number from Alarm History 6th alarm in past	-
ALM207	Alarm number from Alarm History 7th alarm in past	-
ALM208	Alarm number from Alarm History 8th alarm in past	-
ALM209	Alarm number from Alarm History 9th alarm in past	-
ALM210	Alarm number from Alarm History 10th alarm in past	-
ALM211	Alarm number from Alarm History 11th alarm in past	-
ALM212	Alarm number from Alarm History 12th alarm in past	-
ALM213	Alarm number from Alarm History 13th alarm in past	-
ALM214	Alarm number from Alarm History 14th alarm in past	-
ALM215	Alarm number from Alarm History 15th alarm in past	-
ALM220	Alarm occurrence time in alarm history most recent alarm	-
ALM221	Alarm occurrence time in alarm history 1st alarm in past	-
ALM222	Alarm occurrence time in alarm history 2nd alarm in past	-
ALM223	Alarm occurrence time in alarm history 3rd alarm in past	-
ALM224	Alarm occurrence time in alarm history 4th alarm in past	-
ALM225	Alarm occurrence time in alarm history 5th alarm in past	-
ALM226	Alarm occurrence time in alarm history 6th alarm in past	-
ALM227	Alarm occurrence time in alarm history 7th alarm in past	-
ALM228	Alarm occurrence time in alarm history 8th alarm in past	-
ALM229	Alarm occurrence time in alarm history 9th alarm in past	-
ALM230	Alarm occurrence time in alarm history 10th alarm in past	-
ALM231	Alarm occurrence time in alarm history 11th alarm in past	-
ALM232	Alarm occurrence time in alarm history 12th alarm in past	-
ALM233	Alarm occurrence time in alarm history 13th alarm in past	-
ALM234	Alarm occurrence time in alarm history 14th alarm in past	-
ALM235	Alarm occurrence time in alarm history 15th alarm in past	-
ALM240	Detailed alarm from Alarm History most recent alarm	-

Virtual device name	Name	Symbol
ALM241	Detailed alarm from Alarm History 1st alarm in past	-
ALM242	Detailed alarm from Alarm History 2nd alarm in past	-
ALM243	Detailed alarm from Alarm History 3rd alarm in past	-
ALM244	Detailed alarm from Alarm History 4th alarm in past	-
ALM245	Detailed alarm from Alarm History 5th alarm in past	-
ALM246	Detailed alarm from Alarm History 6th alarm in past	-
ALM247	Detailed alarm from Alarm History 7th alarm in past	-
ALM248	Detailed alarm from Alarm History 8th alarm in past	-
ALM249	Detailed alarm from Alarm History 9th alarm in past	-
ALM250	Detailed alarm from Alarm History 10th alarm in past	-
ALM251	Detailed alarm from Alarm History 11th alarm in past	-
ALM252	Detailed alarm from Alarm History 12th alarm in past	-
ALM253	Detailed alarm from Alarm History 13th alarm in past	-
ALM254	Detailed alarm from Alarm History 14th alarm in past	-
ALM255	Detailed alarm from Alarm History 15th alarm in past	-

### (17)Point table (position) ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- POS1 to POS255: Writing data to the RAM of a servo amplifier
- POS1001 to POS1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
POS1 to POS255, POS1001 to POS1255	Point table/position data No. 1 to No. 255	-

### (18)Point table (speed) ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- SPD1 to SPD255: Writing data to the RAM of a servo amplifier
- SPD1001 to SPD1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
SPD1 to SPD255, SPD1001 to SPD1255	Point table/speed data No. 1 to No. 255	-

### (19)Point table (acceleration time constant) ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- ACT1 to ACT255: Writing data to the RAM of a servo amplifier
- ACT1001 to ACT1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
ACT1 to ACT255, ACT1001 to ACT1255	Point table/acceleration time constant No. 1 to No. 255	-

### (20)Point table (deceleration time constant) ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- DCT1 to DCT255: Writing data to the RAM of a servo amplifier
- DCT1001 to DCT1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
DCT1 to DCT255, DCT1001 to DCT1255	Point table/deceleration time constant No. 1 to No. 255	-

### (21)Point table (dwell) ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- DWL1 to DWL255: Writing data to the RAM of a servo amplifier

- DWL1001 to DWL1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
DWL1 to DWL255, DWL1001 to DWL1255	Point table/dwell No. 1 to No. 255	-

### (22)Point table (auxiliary function) ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- AUX1 to AUX255: Writing data to the RAM of a servo amplifier
- AUX1001 to AUX1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
AUX1 to AUX255, AUX1001 to AUX1255	Point table/auxiliary function No. 1 to No. 255	-

### (23)Point table (M code) ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- MCD1 to MCD255: Writing data to the RAM of a servo amplifier
- MCD1001 to MCD1255: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
MCD1 to MCD255, MCD1001 to MCD1255	Point table/M code No.1 to No.255	-

### (24)Machine diagnosis data ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
MD0	Machine diagnosis data, station number	-
MD1	Machine diagnosis data shift judgment (test mode)	-
MD2	Machine diagnosis data status	-
MD3	Machine diagnosis data coulomb friction torque in positive direction	-
MD4	Machine diagnosis data friction torque at rated speed in positive direction	-
MD5	Machine diagnosis data coulomb friction torque in negative direction	-
MD6	Machine diagnosis data friction torque at rated speed in negative direction	-
MD7	Machine diagnosis data oscillation frequency (motor is stopped)	-
MD8	Machine diagnosis data vibration level (motor is stopped)	-
MD9	Machine diagnosis data oscillation frequency (motor is operating)	-
MD10	Machine diagnosis data vibration level (motor is operating)	-
MD11	Machine diagnosis data, rated speed at forward or reverse rotation torque	-

### (25)One-touch tuning data ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
OTS0	One-touch tuning status confirmation	-
OTS1	Error code list	-
OTS2	Settling time	-
OTS3	Overshoot amount	-

### (26)External input signal ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	Input device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following.
DI3	External input pin statuses	-	⇒MR-J4-_A_(-RJ)/MR-J4-03A6(-RJ) SERVO AMPLIFIER INSTRUCTION MANUAL
DI4	Statuses of input devices switched on through communication	-	For the mapping of the bits corresponding to the data to be read or written, refer to the following. ⇒MR-J4-_A_(-RJ)/MR-J4-03A6(-RJ) SERVO AMPLIFIER INSTRUCTION MANUAL

## (27) External output signal ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	Output device statuses	-	For the mapping of the bits corresponding to the data to be read, refer to the following. ➡MR-J4-_A_(-RJ)/MR-J4-03sA6(-RJ) SERVO AMPLIFIER INSTRUCTION MANUAL
DO4	External output pin statuses	-	

## (28) Current position latch data ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
LD0	Position data unit	-
LD1	Current position latch data	-

## (29) Value of the general-purpose register (Rx) ([MELSERVO-J4-\*A-RJ])

Use an appropriate device according to the write destination of the servo amplifier.

- RR1 to RR4: Writing data to the RAM of a servo amplifier
- RR1001 to RR1004: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
RR1, RR1001	Value of the general-purpose register (R1)	-
RR2, RR1002	Value of the general-purpose register (R2)	-
RR3, RR1003	Value of the general-purpose register (R3)	-
RR4, RR1004	Value of the general-purpose register (R4)	-

## (30) Value of the general-purpose register (Dx) ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
RD1	Value of the general-purpose register (D1)	-
RD2	Value of the general-purpose register (D2)	-
RD3	Value of the general-purpose register (D3)	-
RD4	Value of the general-purpose register (D4)	-

## (31) Life diagnosis ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
ALD0	Cumulative power-on time	-
ALD1	Number of inrush current switching times	-

## (32) Input signal for test operation (for test operation) ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
TM10	Input signal for test operation 1	-
TM11	Input signal for test operation 2	-
TM12	Input signal for test operation 3	-

When using the input signal for test operation (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

## (33) Forced output of signal pin (for test operation) ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
TMO0	Forced output of signal pin	-

When using the forced output of signal pin (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (34)Set data (for test operation) ([MELSERVO-J4-\*A-RJ])

Virtual device name	Name	Symbol
TMD0	Writes the speed (test mode)	-
TMD1	Writes the acceleration/deceleration time constant (test mode)	-
TMD3	Writes the moving distance (test mode)	-

When using the set data (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J4-\*A-RJ])

For the precautions for virtual servo amplifier devices, refer to the following.

→12.3.12 ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J2M-P8A])

## 12.3.21 [MELSERVO-JE-\*C]

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([MELSERVO-JE-*C])
	→ ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-JE-*C])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([MELSERVO-JE-*C])
	→ ■4 Availability of writing/reading data to/from word devices ([MELSERVO-JE-*C])
Specifications of double-word devices	→ ■5 Monitoring-supported double-word devices ([MELSERVO-JE-*C])
	→ ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-JE-*C])
Specifications of virtual servo amplifier devices	→ ■7 Virtual servo amplifier devices ([MELSERVO-JE-*C])
	→ ■8 Precautions for virtual servo amplifier devices ([MELSERVO-JE-*C])

### ■1 Monitoring-supported bit devices ([MELSERVO-JE-\*C])

The following table shows monitoring-supported virtual bit devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.21 ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-JE-\*C])

For details on virtual servo amplifier devices, refer to the following.

→ 12.3.21 ■7 Virtual servo amplifier devices ([MELSERVO-JE-\*C])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
SP	Servo amplifier request	Decimal	0 to 6	×	×
OM	Operation mode selection	Decimal	0 to 2 4 to 5	×	×
TMB	Instruction demand (for test operation)	Decimal	1 to 6	×	×
OTI	One-touch tuning instruction	Decimal	0 to 5	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-JE-\*C])

The following shows the availability of writing/reading data to/from bit devices by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-
OTI	-/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([MELSERVO-JE-\*C])

The following table shows monitoring-supported virtual word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.3.21 ■4 Availability of writing/reading data to/from word devices ([MELSERVO-JE-\*C])  
 For details on virtual servo amplifier devices, refer to the following.

⇒12.3.21 ■7 Virtual servo amplifier devices ([MELSERVO-JE-\*C])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices *1	
				Assignment to EG devices	Access using a client
PA	Basic setting parameter	Decimal	1 to 32 1001 to 1032	○	×
PB	Gain filter parameter	Decimal	1 to 64 1001 to 1064	○	×
PC	Extension setting parameter	Decimal	1 to 80 1001 to 1080	○	×
PD	I/O setting parameter	Decimal	1 to 48 1001 to 1048	○	×
PT	Positioning control parameters	Decimal	1 to 80 1001 to 1080	○	×
PN	Network setting parameters	Decimal	1 to 48 1001 to 1048	×	×

OTS	One-touch tuning data	Decimal	0 to 3	×	×
DI	External input	Decimal	0 to 6	×	×
DO	External output	Decimal	0 to 4	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■4 Availability of writing/reading data to/from word devices ([MELSERVO-JE-\*C])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PA	R/W	R/W	-/-	-/-
PB	R/W	R/W	-/-	-/-
PC	R/W	R/W	-/-	-/-
PD	R/W	R/W	-/-	-/-
PT	R/W	R/W	-/-	-/-
PN	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
PE	R/W	R/W	-/-	-/-
PF	R/W	R/W	-/-	-/-

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
ALM	R/-	R/-	-/-	-/-
MD	R/-	R/-	-/-	-/-
OTS	R/-	R/-	-/-	-/-
DI*1	R/-	R/W	-/-	-/-
DO	R/-	R/-	-/-	-/-

\*1 Only reading is available for DI0 to DI3.

## ■5 Monitoring-supported double-word devices ([MELSERVO-JE-\*C])

The following table shows monitoring-supported virtual double-word devices for servo amplifiers. To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.21 ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-JE-\*C])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.21 ■7 Virtual servo amplifier devices ([MELSERVO-JE-\*C])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
LD	Current position latch data	Decimal 0 to 1	×	×
RR	General-purpose register (Rx)	Decimal 1 to 4 1001 to 1004	×	×
RD	General-purpose register (Dx)	Decimal 1 to 4	×	×
ALD	Life diagnosis	Decimal 0 to 1	×	×
TMI	Input signal for test operation (for test operation)	Decimal 0 to 2	×	×
TMO	Forced output of signal pin (for test operation)	Decimal 0	×	×
TMD	Set data (for test operation)	Decimal 0 to 1, 3	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-JE-\*C])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
LD	-/-	R/-	-/-	-/-
RR	-/-	R/W	-/-	-/-
RD	-/-	R/W	-/-	-/-
ALD	-/-	R/-	-/-	-/-
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-

## 7 Virtual servo amplifier devices ([MELSERVO-JE-\*C])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	→ (1) Servo amplifier request ([MELSERVO-JE-*C])
OM	→ (2) Operation mode selection ([MELSERVO-JE-*C])
TMB	→ (3) Instruction demand (for test operation) ([MELSERVO-JE-*C])
OTI	→ (4) One-touch tuning instruction ([MELSERVO-JE-*C])
PA	→ (5) Basic parameter ([MELSERVO-JE-*C])
PB	→ (6) Gain filter parameter ([MELSERVO-JE-*C])
PC	→ (7) Extension setting parameter ([MELSERVO-JE-*C])
PD	→ (8) I/O setting parameter ([MELSERVO-JE-*C])
PT	→ (9) Positioning control parameter ([MELSERVO-JE-*C])
PN	→ (10) Network setting parameter ([MELSERVO-JE-*C])
ST	→ (11) Status display ([MELSERVO-JE-*C])
PE	→ (12) Extension setting No.2 parameter ([MELSERVO-JE-*C])
PF	→ (13) Extension setting No.3 parameter ([MELSERVO-JE-*C])
ALM	→ (14) Alarm (MELSERVO-J4-*A extended) ([MELSERVO-JE-*C])
MD	→ (15) Machine diagnosis data ([MELSERVO-JE-*C])
OTS	→ (16) One-touch tuning data ([MELSERVO-JE-*C])
DI	→ (17) External input signal ([MELSERVO-JE-*C])
DO	→ (18) External output signal ([MELSERVO-JE-*C])
LD	→ (19) Current position latch data ([MELSERVO-JE-*C])
RR	→ (20) Value of the general-purpose register (Rx) ([MELSERVO-JE-*C])
RD	→ (21) Value of the general-purpose register (Dx) ([MELSERVO-JE-*C])
ALD	→ (22) Life diagnosis ([MELSERVO-JE-*C])
TMI	→ (23) Input signal for test operation (for test operation) ([MELSERVO-JE-*C])
TMO	→ (24) Forced output of signal pin (for test operation) ([MELSERVO-JE-*C])
TMD	→ (25) Set data (for test operation) ([MELSERVO-JE-*C])

### (1) Servo amplifier request ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
SP0	Status display data clear	-
SP1	Current alarm clear	-
SP2	Alarm history clear	-
SP3	External input signal prohibited	-
SP4	External output signal prohibited	-
SP5	External input signal resumed	-
SP6	External output signal resumed	-

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (2) Operation mode selection ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
OM0	Normal mode (not test operation mode)	-
OM1	JOG operation	-
OM2	Positioning operation	-
OM4	Output signal (DO) forced output	-
OM5	Single-step feed operation	-

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (3) Instruction demand (for test operation) ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
TMB1	Temporary stop command	-
TMB2	Test operation (positioning operation) start command	-
TMB3	Forward rotation direction	-
TMB4	Reverse rotation direction	-
TMB5	Restart for remaining distance	-
TMB6	Remaining distance clear	-

When using the instruction demand (for test operation), note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

## (4) One-touch tuning instruction ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
OTI0	One-touch tuning start command (Basic mode)	-
OTI1	One-touch tuning start command (High mode)	-
OTI2	One-touch tuning start command (Low mode)	-
OTI3	One-touch tuning stop command	-
OTI4	Return to initial value	-
OTI5	Return to value before adjustment	-

## (5) Basic parameter ([MELSERVO-JE-\*C])

Use an appropriate device according to the write destination of the servo amplifier.

- PA1 to PA32: Writing data to the RAM of a servo amplifier
- PA1001 to PA1032: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Device name	Name	Symbol
PA1, PA1001	Operation mode	*STY
PA2, PA1002	Regenerative option	*REG
PA3, PA1003	Absolute position detection system	*ABS
PA4, PA1004	Function selection A-1	*AOP1
PA5, PA1005	Number of command input pulses per revolution	*FBP
PA6, PA1006	Electronic gear numerator	CMX
PA7, PA1007	Electronic gear denominator	CDV
PA8, PA1008	Auto tuning mode	ATU
PA9, PA1009	Auto tuning response	RSP
PA10, PA1010	In-position range	INP

Device name	Name	Symbol
PA11, PA1011	Forward rotation torque limit	TLP
PA12, PA1012	Reverse rotation torque limit	TLN
PA13, PA1013	Command pulse input form	*PLSS
PA14, PA1014	Rotation direction selection	*POL
PA15, PA1015	Encoder output pulses	*ENR
PA16, PA1016	Encoder output pulses 2	*ENR2
PA17 to PA18, PA1017 to PA1018	For manufacturer setting	-
PA19, PA1019	Parameter block	*BLK
PA20, PA1020	Tough drive setting	*TDS
PA21, PA1021	Function selection A-3	*AOP3
PA22, PA1022	For manufacturer setting	-
PA23, PA1023	Drive recorder arbitrary alarm trigger setting	DRAT
PA24, PA1024	Function selection A-4	*AOP4
PA25, PA1025	One-touch tuning - Overshoot permissible level	OTHOV
PA26, PA1026	Function selection A-5	*AOP5
PA27, PA1027	For manufacturer setting	-
PA28, PA1028	Function selection A-6	*AOP6
PA29 to PA32, PA1029 to PA1032	For manufacturer setting	-

#### (6) Gain filter parameter ([MELSERVO-JE-\*C])

Use an appropriate device according to the write destination of the servo amplifier.

- PB1 to PB64: Writing data to the RAM of a servo amplifier
- PB1001 to PB1064: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Device name	Name	Symbol
PB1, PB1001	Adaptive tuning mode (Adaptive filter II)	FILT
PB2, PB1002	Vibration suppression control tuning mode (advanced vibration suppression control II)	VRFT
PB3, PB1003	Position command acceleration/deceleration time constant (position smoothing)	PST
PB4, PB1004	Feed forward gain	FFC
PB5, PB1005	For manufacturer setting	-
PB6, PB1006	Load inertia moment ratio	GD2
PB7, PB1007	Model control gain	PG1
PB8, PB1008	Position control gain	PG2
PB9, PB1009	Speed control gain	VG2
PB10, PB1010	Speed integral compensation	VIC
PB11, PB1011	Speed differential compensation	VDC
PB12, PB1012	Overshoot amount compensation	OVA
PB13, PB1013	Machine resonance suppression filter 1	NH1
PB14, PB1014	Notch shape selection 1	NHQ1
PB15, PB1015	Machine resonance suppression filter 2	NH2
PB16, PB1016	Notch shape selection 2	NHQ2
PB17, PB1017	Shaft resonance suppression filter	NHF
PB18, PB1018	Low-pass filter setting	LPF
PB19, PB1019	Vibration suppression control 1 - Vibration frequency	VRF11
PB20, PB1020	Vibration suppression control 1 - Resonance frequency	VRF12
PB21, PB1021	Vibration suppression control 1 - Vibration frequency damping	VRF13

Device name	Name	Symbol
PB22, PB1022	Vibration suppression control 1 - Resonance frequency damping	VRF14
PB23, PB1023	Low-pass filter setting	VFBF
PB24, PB1024	Slight vibration suppression control	*MVS
PB25, PB1025	Function selection B-1	*BOP1
PB26, PB1026	Gain switching function	*CDP
PB27, PB1027	Gain switching condition	CDL
PB28, PB1028	Gain switching time constant	CDT
PB29, PB1029	Load to motor inertia ratio after gain switching	GD2B
PB30, PB1030	Position loop gain after gain switching	PG2B
PB31, PB1031	Speed loop gain after gain switching	VG2B
PB32, PB1032	Speed integral compensation after gain switching	VICB
PB33, PB1033	Vibration suppression control 1 - Vibration frequency after gain switching	VRF1B
PB34, PB1034	Vibration suppression control 1 - Resonance frequency after gain switching	VRF2B
PB35, PB1035	Vibration suppression control 1 - Vibration frequency damping after gain switching	VRF3B
PB36, PB1036	Vibration suppression control 1 - Resonance frequency damping after gain switching	VRF4B
PB37 to PB44, PB1037 to PB1044	For manufacturer setting	-
PB45, PB1045	Command notch filter	CNHF
PB46, PB1046	Machine resonance suppression filter 3	NH3
PB47, PB1047	Notch shape selection 3	NHQ3
PB48, PB1048	Machine resonance suppression filter 4	NH4
PB49, PB1049	Notch shape selection 4	NHQ4
PB50, PB1050	Machine resonance suppression filter 5	NH5
PB51, PB1051	Notch shape selection 5	NHQ5
PB52, PB1052	Vibration suppression control 2 - Vibration frequency	VRF21
PB53, PB1053	Vibration suppression control 2 - Resonance frequency	VRF22
PB54, PB1054	Vibration suppression control 2 - Vibration frequency damping	VRF23
PB55, PB1055	Vibration suppression control 2 - Resonance frequency damping	VRF24
PB56, PB1056	Vibration suppression control 2 - Vibration frequency after gain switching	VRF21B
PB57, PB1057	Vibration suppression control 2 - Resonance frequency after gain switching	VRF22B
PB58, PB1058	Vibration suppression control 2 - Vibration frequency damping after gain switching	VRF23B
PB59, PB1059	Vibration suppression control 2 - Resonance frequency damping after gain switching	VRF24B
PB60, PB1060	Model loop gain after gain switching	PG1B
PB61 to PB64, PB1061 to PB1064	For manufacturer setting	-

### (7) Extension setting parameter ([MELSERVO-JE-\*C])

Use an appropriate device according to the write destination of the servo amplifier.

- PC1 to PC80: Writing data to the RAM of a servo amplifier
- PC1001 to PC1080: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Device name	Name	Symbol
PC1, PC1001	Acceleration time constant	STA
PC2, PC1002	Deceleration time constant	STB
PC3, PC1003	S-pattern acceleration/deceleration time constant	STC
PC4, PC1004	Torque command time constant	TQC
PC5, PC1005	Internal speed command 1	SC1
PC6, PC1006	Internal speed command 2	SC2

Device name	Name	Symbol
PC7, PC1007	Internal speed command 3	SC3
PC8, PC1008	Internal speed command 4	SC4
PC9, PC1009	Internal speed command 5	SC5
PC10, PC1010	Internal speed command 6	SC6
PC11, PC1011	Internal speed command 7	SC7
PC12, PC1012	Analog speed command maximum speed	VCM
PC13, PC1013	Analog torque command maximum output	TLC
PC14 to PC15, PC1014 to PC1015	For manufacturer setting	-
PC16, PC1016	Electromagnetic brake sequence output	MBR
PC17, PC1017	Zero speed	ZSP
PC18, PC1018	Alarm history clear	*BPS
PC19, PC1019	Encoder output pulse selection	*ENRS
PC20 to PC21, PC1020 to PC1021	For manufacturer setting	-
PC22, PC1022	Function selection C-1	*COP1
PC23, PC1023	Function selection C-2	*COP2
PC24, PC1024	Function selection C-3	*COP3
PC25, PC1025	Function selection C-4	*COP3
PC26, PC1026	Function selection C-5	*COP5
PC27, PC1027	Function selection C-6	*COP6
PC28, PC1028	For manufacturer setting	-
PC29, PC1029	Function selection C-8	*COP7
PC30, PC1030	Acceleration time constant 2	STA2
PC31, PC1031	Deceleration time constant 2	STB2
PC32, PC1032	Command input pulse multiplication numerator 2	CMX2
PC33, PC1033	Command input pulse multiplication numerator 3	CMX3
PC34, PC1034	Command input pulse multiplication numerator 4	CMX4
PC35, PC1035	Internal torque limit 2	TL2
PC36, PC1036	For manufacturer setting	-
PC37, PC1037	Analog speed command offset	VCO
PC38, PC1038	Analog torque command offset	TPO
PC39 to PC42, PC1039 to PC1042	For manufacturer setting	-
PC43, PC1043	Error excessive alarm detection level	ERZ
PC44 to PC50, PC1044 to PC1050	For manufacturer setting	-
PC51, PC1051	Forced stop deceleration time constant	RSBR
PC52 to PC53, PC1052 to PC1053	For manufacturer setting	-
PC54, PC1054	Vertical axis freefall prevention compensation amount	RSUP1
PC55 to PC59, PC1055 to PC1059	For manufacturer setting	-
PC60, PC1060	Function selection C-D	*COPD
PC61 to PC72, PC1061 to PC1072	For manufacturer setting	-
PC73, PC1073	Error excessive warning level	ERW
PC74, PC1074	For manufacturer setting	-
PC75, PC1075	Following error output level	FEWL
PC76, PC1076	Following error output level	FEWH
PC77, PC1077	Following error output filtering time	FEWF

Device name	Name	Symbol
PC78 to PC80, PC1078 to PC1080	For manufacturer setting	-

### (8) I/O setting parameter ([MELSERVO-JE-\*C])

Use an appropriate device according to the write destination of the servo amplifier.

- PD1 to PD48: Writing data to the RAM of a servo amplifier
- PD1001 to PD1048: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Device name	Name	Symbol
PD1, PD1001	Input signal automatic on selection 1	*DIA1
PD2 to PD4, PD1002 to PD1004	For manufacturer setting	-
PD5, PD1005	Input device selection 1L	*DI1L
PD6, PD1006	Input device selection 1M	*DI1M
PD7, PD1007	Input device selection 1H	*DI1H
PD8, PD1008	Input device selection 2L	*DI2L
PD9, PD1009	Input device selection 2M	*DI2M
PD10, PD1010	Input device selection 2H	*DI2H
PD11, PD1011	Input device selection 3L	*DI3L
PD12, PD1012	Input device selection 3M	*DI3M
PD13, PD1013	Input device selection 3H	*DI3H
PD14, PD1014	Input device selection 4L	*DI4L
PD15, PD1015	Input device selection 4M	*DI4M
PD16, PD1016	Input device selection 4H	*DI4H
PD17, PD1017	Input device selection 5L	*DI5L
PD18, PD1018	Input device selection 5M	*DI5M
PD19, PD1019	Input device selection 5H	*DI5H
PD20 to 22, PD1020 to PD1022	For manufacturer setting	-
PD23, PD1023	Input device selection 7L	*DI7L
PD24, PD1024	Input device selection 7M	*DI7M
PD25, PD1025	Input device selection 7H	*DI7H
PD26, PD1026	Input device selection 8L	*DI8L
PD27, PD1027	Input device selection 8M	*DI8M
PD28, PD1028	Input device selection 8H	*DI8H
PD29, PD1029	Output device selection 1	*DO1
PD30, PD1030	Output device selection 2	*DO2
PD31, PD1031	Output device selection 3	*DO3
PD32, PD1032	Output device selection 4	*DO4
PD33, PD1033	For manufacturer setting	-
PD34, PD1034	Input filter setting	*DIF
PD35, PD1035	Function selection D-1	*DOP1
PD36, PD1036	For manufacturer setting	-
PD37, PD1037	Function selection D-3	*DOP3
PD38, PD1038	Function selection D-4	*DOP4
PD39, PD1039	Function selection D-5	*DOP5
PD40 to PD48, PD1040 to PD1048	For manufacturer setting	-

### (9) Positioning control parameter ([MELSERVO-JE-\*C])

Use an appropriate device according to the write destination of the servo amplifier.

- PT1 to PT80: Writing data to the RAM of a servo amplifier
- PT1001 to PT1080: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Device name	Name	Symbol
PT1, PT1001	Command mode selection	*CTY
PT2, PT1002	For manufacturer setting	-
PT3, PT1003	Feeding function selection	*FTY
PT4, PT1004	For manufacturer setting	-
PT5, PT1005	Home position return speed	ZRF
PT6, PT1006	Creep speed	CRF
PT7, PT1007	Home position shift distance	ZST
PT8, PT1008	For manufacturer setting	-
PT9, PT1009	Moving distance after proximity dog	DCT
PT10, PT1010	Stopper type home position return stopper time	ZTM
PT11, PT1011	Stopper type home position return torque limit value	ZTT
PT12 to PT14, PT1012 to PT1014	For manufacturer setting	-
PT15, PT1015	Software limit +	LMPL
PT16, PT1016	Software limit +	LMPH
PT17, PT1017	Software limit -	LMNL
PT18, PT1018	Software limit -	LMNH
PT19 to 25, PT1019 to PT1025	For manufacturer setting	-
PT26, PT1026	Function selection T-2	*TOP2
PT27 to 28, PT1027 to PT1028	For manufacturer setting	-
PT29, PT1029	Function selection T-3	*TOP3
PT30 to PT40, PT1030 to PT1040	For manufacturer setting	-
PT41, PT1041	Home position return inhibit selection	ORP
PT42 to PT44, PT1042 to PT1044	For manufacturer setting	-
PT45, PT1045	Home position return method	HMM
PT46 to PT48, PT1046 to PT1048	For manufacturer setting	-
PT49, PT1049	Torque slope	TQS
PT50, PT1050	Profile speed command	PVC
PT51, PT1051	Maximum profile speed	MPVC
PT52, PT1052	Speed limit	VLMT
PT53 to 56, PT1053 to PT1056	For manufacturer setting	-
PT57, PT1057	Home position shift distance (extension parameter)	ZSTH
PT58, PT1058	For manufacturer setting	*ZPSH
PT59, PT1059	Travel distance after proximity dog (extension parameter)	DCTH
PT60, PT1060	Function selection T-8	*TOP8
PT61, PT1061	Home position return acceleration time constant	HMA
PT62, PT1062	Home position return deceleration time constant	HMB
PT63, PT1063	Zero speed 2 level	ZSP2L
PT64, PT1064	Zero speed 2 filter time	ZSP2F

Device name	Name	Symbol
PT65, PT1065	In-position 2 output range	INP2R
PT66, PT1066	In-position 2 output filter time	INP2F
PT67, PT1067	Speed reached 2 output range	SA2R
PT68, PT1068	Speed reached 2 output filter time	SA2F
PT69 to 80, PT1069 to PT1080	For manufacturer setting	-

#### (10) Network setting parameter ([MELSERVO-JE-\*C])

Use an appropriate device according to the write destination of the servo amplifier.

- PN1 to PN48: Writing data to the RAM of a servo amplifier
- PN1001 to PN1048: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Device name	Name	Symbol
PN1, PN1001	For manufacturer setting	-
PN2, PN1002	Communication error detection time	CERT
PN3 to PN5, PN1003 to PN1005	For manufacturer setting	-
PN6, PN1006	Function selection N-1	NOP1
PN7, PN1007	For manufacturer setting	-
PN8, PN1008	Function selection N-2	NOP2
PN9, PN1009	For manufacturer setting	-
PN10, PN1010	Ethernet communication time-out selection	EIC
PN11, PN1011	IP address setting 1	*IPAD1
PN12, PN1012	IP address setting 2	*IPAD2
PN13, PN1013	IP address setting 3	*IPAD3
PN14, PN1014	IP address setting 4	*IPAD4
PN15, PN1015	Subnet mask setting 1	*SNMK1
PN16, PN1016	Subnet mask setting 2	*SNMK2
PN17, PN1017	Subnet mask setting 3	*SNMK3
PN18, PN1018	Subnet mask setting 4	*SNMK4
PN19, PN1019	Default gateway setting 1	*DGW1
PN20, PN1020	Default gateway setting 2	*DGW2
PN21, PN1021	Default gateway setting 3	*DGW3
PN22, PN1022	Default gateway setting 4	*DGW4
PN23, PN1023	KeepAlive time	*KAA
PN24, PN1024	IP address filter 1	*IPAF1
PN25, PN1025	IP address filter 2	*IPAF2
PN26, PN1026	IP address filter 3	*IPAF3
PN27, PN1027	IP address filter 4	*IPAF4
PN28, PN1028	IP address filter 2 range specification	*IPFR2
PN29, PN1029	IP address filter 3 range specification	*IPFR3
PN30, PN1030	IP address filter 4 range specification	*IPFR4
PN31, PN1031	Operation specification IP address 1	*IPOA1
PN32, PN1032	Operation specification IP address 2	*IPOA2
PN33, PN1033	Operation specification IP address 3	*IPOA3
PN34, PN1034	Operation specification IP address 4	*IPOA4
PN35, PN1035	Operation specification IP address 3 range spec.	*IPOR3
PN36, PN1036	Operation specification IP address 4 range spec.	*IPOR4

Device name	Name	Symbol
PN37 to PN48, PN1037 to PN1048	For manufacturer setting	-

### (11) Status display ([MELSERVO-JE-\*C])

Device name	Name	Symbol
ST0	Cumulative feedback pulses	-
ST1	Servo motor speed	-
ST2	Droop pulses	-
ST3	Cumulative command pulses	-
ST4	Command pulse frequency	-
ST5	Analog speed command voltage	-
ST6	Analog torque command voltage	-
ST7	Regenerative load ratio	-
ST8	Effective load ratio	-
ST9	Peak load ratio	-
ST10	Instantaneous torque	-
ST11	Within one-revolution position	-
ST12	ABS counter	-
ST13	Load inertia moment ratio	-
ST14	Bus voltage	-
ST15 to ST31	For manufacturer setting	-
ST32	Encoder inside temperature	-
ST33	Settling time	-
ST34	Oscillation detection frequency	-
ST35	Number of tough drive operations	-
ST36 to ST39	For manufacturer setting	-
ST40	Unit power consumption	-
ST41	Unit total power consumption	-
ST42	Current position	-
ST43	Command position	-
ST44	Command remaining distance	-
ST45 to ST48	For manufacturer setting	-

### (12) Extension setting No.2 parameter ([MELSERVO-JE-\*C])

Use an appropriate device according to the write destination of the servo amplifier.

- PE1 to PE64: Writing data to the RAM of a servo amplifier
- PE1001 to PE1064: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Device name	Name	Symbol
PE1 to PE40, PE1001 to PE1040	For manufacturer setting	-
PE41, PE1041	Function selection E-3	EOP3
PE42 to PE43, PE1042 to PE1043	For manufacturer setting	-
PE44, PE1044	Lost motion compensation positive-side compensation value selection	LMCP
PE45, PE1045	Lost motion compensation negative-side compensation value selection	LMCN
PE46, PE1046	Lost motion filter setting	LMFLT
PE47, PE1047	Torque offset	TOF
PE48, PE1048	Lost motion compensation function selection	*LMOP

Device name	Name	Symbol
PE49, PE1049	Lost motion compensation timing	LMCD
PE50, PE1050	Lost motion compensation non-sensitive band	LMCT
PE51 to PE64, PE1051 to PE1064	For manufacturer setting	-

### (13) Extension setting No.3 parameter ([MELSERVO-JE-\*C])

Use an appropriate device according to the write destination of the servo amplifier.

- PF1 to PF48: Writing data to the RAM of a servo amplifier
- PF1001 to PF1048: Writing data to the EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

Device name	Name	Symbol
PF1 to PF8, PF1001 to PF1008	For manufacturer setting	-
PF9, PF1009	Function selection F-5	*FOP5
PF10 to PF14, PF1010 to PF1014	For manufacturer setting	-
PF15, PF1015	Electronic dynamic brake operating time	DBT
PF16 to PF20, PF1016 to PF1020	For manufacturer setting	-
PF21, PF1021	Drive recorder switching time setting	DRT
PF22, PF1022	For manufacturer setting	-
PF23, PF1023	Vibration tough drive - Oscillation detection level	OSCL1
PF24, PF1024	Vibration tough drive function selection	OSCL2
PF25, PF1025	Instantaneous power failure tough drive - Detection time	CVAT
PF26 to PF30, PF1026 to PF1030	For manufacturer setting	-
PF31, PF1031	Machine diagnosis function - Friction judgment speed	FRIC
PF32 to PF48, PF1032 to PF1048	For manufacturer setting	-

### (14) Alarm (MELSERVO-J4-\*A extended) ([MELSERVO-JE-\*C])

Device name	Name	Symbol
ALM0	Current alarm number	-
ALM1	Detailed data of current alarms	-
ALM11	Servo status(alarm) Cumulative feedback pulses	-
ALM12	Servo status(alarm) Servo motor speed	-
ALM13	Servo status(alarm) Droop pulses	-
ALM14	Servo status(alarm) Cumulative command pulses	-
ALM15	Servo status(alarm) Command pulse frequency	-
ALM16	Servo status(alarm) Analog speed command voltage	-
ALM17	Servo status(alarm) Analog torque command voltage	-
ALM18	Servo status(alarm) Regenerative load ratio	-
ALM19	Servo status(alarm) Effective load ratio	-
ALM20	Servo status(alarm) Peak load ratio	-
ALM21	Servo status(alarm) Instantaneous torque	-
ALM22	Servo status(alarm) Within one-revolution position	-
ALM23	Servo status(alarm) ABS counter	-
ALM24	Servo status(alarm) Load inertia moment ratio	-
ALM25	Servo status(alarm) Bus voltage	-
ALM26 to ALM42	For manufacturer setting	-
ALM43	Servo status(alarm) Internal temperature of encoder	-

Device name	Name	Symbol
ALM44	Servo status(alarm) Settling time	-
ALM45	Servo status(alarm) Oscillation detection frequency	-
ALM46	Servo status(alarm) Number of tough drives	-
ALM47 to ALM50	For manufacturer setting	-
ALM51	Servo status(alarm) Unit power consumption	-
ALM52	Servo status(alarm) Unit total power consumption	-
ALM53	Servo status(alarm) Current position	-
ALM54	Servo status(alarm) Command position	-
ALM55	Servo status(alarm) Command remaining distance	-
ALM56 to ALM59	For manufacturer setting	-
ALM200	Alarm number from Alarm History most recent alarm	-
ALM201	Alarm number from Alarm History 1st alarm in past	-
ALM202	Alarm number from Alarm History 2nd alarm in past	-
ALM203	Alarm number from Alarm History 3rd alarm in past	-
ALM204	Alarm number from Alarm History 4th alarm in past	-
ALM205	Alarm number from Alarm History 5th alarm in past	-
ALM206	Alarm number from Alarm History 6th alarm in past	-
ALM207	Alarm number from Alarm History 7th alarm in past	-
ALM208	Alarm number from Alarm History 8th alarm in past	-
ALM209	Alarm number from Alarm History 9th alarm in past	-
ALM210	Alarm number from Alarm History 10th alarm in past	-
ALM211	Alarm number from Alarm History 11th alarm in past	-
ALM212	Alarm number from Alarm History 12th alarm in past	-
ALM213	Alarm number from Alarm History 13th alarm in past	-
ALM214	Alarm number from Alarm History 14th alarm in past	-

### (15)Machine diagnosis data ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
MD0	Machine diagnosis data parameter number	-
MD1	Machine diagnosis data shift judgment (test mode)	-
MD2*1	Machine diagnosis data status	-
MD3*2	Machine diagnosis data coulomb friction torque in positive direction	-
MD4*2	Machine diagnosis data friction torque at rated speed in positive direction	-
MD5*2	Machine diagnosis data coulomb friction torque in negative direction	-
MD6*2	Machine diagnosis data friction torque at rated speed in negative direction	-
MD7*2	Machine diagnosis data oscillation frequency (motor is stopped)	-
MD8*2	Machine diagnosis data vibration level (motor is stopped)	-
MD9*2	Machine diagnosis data oscillation frequency (motor is operating)	-
MD10*2	Machine diagnosis data vibration level (motor is operating)	-
MD11	Machine diagnosis data, rated speed at forward or reverse rotation torque	-

\*1 While the servo amplifier is estimating the corresponding machine status in the machine diagnosis, do not write data to the parameters of the servo amplifier from another GOT.

Doing so may cause the servo amplifier to malfunction.

\*2 When MD2 indicates that the servo amplifier does not complete the machine diagnosis (is estimating or warning of the machine status), do not monitor MD3 to MD6 (friction states) and MD7 to MD10 (vibration/oscillation states).

To start monitoring those devices upon the estimation completion, set [Trigger] in the applicable object settings.

### (16)One-touch tuning data ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
OTS0	One-touch tuning status confirmation	-
OTS1	Error code list	-
OTS2	Settling time	-
OTS3	Overshoot amount	-

### (17)External input signal ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	Input device statuses	-	System information
DI1	Input device statuses	-	
DI2	Input device statuses	-	
DI3	External input pin statuses	-	The statuses of the listed input devices are assigned to the bits in order from bit 0 and read. For details on the input devices, refer to the following. ➡MR-JE-_C SERVO AMPLIFIER INSTRUCTION MANUAL

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI4	Statuses of input devices switched on through communication	-	System information
DI5	Statuses of input devices switched on through communication	-	
DI6	Statuses of input devices switched on through communication	-	

### (18) External output signal ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	Output device statuses	-	System information
DO1	Output device statuses	-	
DO2	Output device statuses	-	
DO4	External output pin statuses	-	The statuses of the listed output devices are assigned to the bits in order from bit 0 and read. For details on the output devices, refer to the following. →MR-JE-_C SERVO AMPLIFIER INSTRUCTION MANUAL

### (19) Current position latch data ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
LD0	Position data unit	-
LD1	Current position latch data	-

### (20) Value of the general-purpose register (Rx) ([MELSERVO-JE-\*C])

Use an appropriate device according to the write destination of the servo amplifier.

- RR1 to RR4: Writing data to the RAM of a servo amplifier
- RR1001 to RR1004: Writing data to the EEPROM of a servo amplifier

Virtual device name	Name	Symbol
RR1, RR1001	Value of the general-purpose register (R1)	-
RR2, RR1002	Value of the general-purpose register (R2)	-
RR3, RR1003	Value of the general-purpose register (R3)	-
RR4, RR1004	Value of the general-purpose register (R4)	-

### (21) Value of the general-purpose register (Dx) ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
RD1	Value of the general-purpose register (D1)	-
RD2	Value of the general-purpose register (D2)	-
RD3	Value of the general-purpose register (D3)	-
RD4	Value of the general-purpose register (D4)	-

### (22) Life diagnosis ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
ALD0	Cumulative power-on time	-
ALD1	Number of inrush current switching times	-

### (23) Input signal for test operation (for test operation) ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
TMI0	Input signal for test operation 1	-
TMI1	Input signal for test operation 2	-
TMI2	Input signal for test operation 3	-

When using the input signal for test operation (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (24) Forced output of signal pin (for test operation) ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
TMO0	Forced output of signal pin	-

When using the forced output of signal pin (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

### (25) Set data (for test operation) ([MELSERVO-JE-\*C])

Virtual device name	Name	Symbol
TMD0	Writes the speed (test mode)	-
TMD1	Writes the acceleration/deceleration time constant (test mode)	-
TMD3	Writes the moving distance (test mode)	-

When using the set data (for test operation), note the following.

Precautions	Description
Writing a value to a virtual device using an object	Numerical input cannot be used. Use a word switch for writing.

## ■ 8 Precautions for virtual servo amplifier devices ([MELSERVO-JE-\*C])

For the precautions for virtual servo amplifier devices, refer to the following.

- ⇒ 12.3.2 ■ 11 Precautions for virtual servo amplifier devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## 12.3.22 [MELSERVO-J5(W)-\*G(-RJ), -JET-\*G]

Not available to GT2105-Q.

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([MELSERVO-J5(W)-*G(-RJ), -JET-*G])
	→ ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J5(W)-*G(-RJ), -JET-*G])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([MELSERVO-J5(W)-*G(-RJ), -JET-*G])
	→ ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J5(W)-*G(-RJ), -JET-*G])

### ■1 Monitoring-supported bit devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

The following table shows monitoring-supported virtual bit devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.22 ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

For details on virtual servo amplifier devices, refer to the following.

→ 12.3.22 ■7 Virtual servo amplifier devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices *1	
			Assignment to EG devices	Access using a client
SP	Servo amplifier request	Decimal AA(Axis designation)-SP(Device) Notation example: AA3-SP0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	×	×
OM	Operation mode selection	Decimal AA(Axis designation)-OM(Device) Notation example: AA3-OM0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 4 to 5	×	×
TMB	Instruction demand (for test operation)	Decimal AA(Axis designation)-TMB(Device) Notation example: AA3-TMB1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 6	×	×
OTI	One-touch tuning instruction	Decimal AA(Axis designation)-OTI(Device) Notation example: AA3-OTI0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	×	×
GFDI	Gear failure diagnosis instruction	Decimal AA(Axis designation)-GFDI(Device) Notation example: AA3-GFDI0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	×	×
ECCDI	Encoder communication circuit diagnosis instruction	Decimal AA(Axis designation)-ECCDI(Device) Notation example: AA3-ECCDI0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

For indirect specification of an axis designation, refer to the following.

⇒ 12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■2 Availability of writing/reading data to/from bit devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

The following shows the availability of writing/reading data to/from bit devices by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SP	-/W	-/-	-/-	-/-	-/-
OM	-/W	-/-	-/-	-/-	-/-
TMB	-/W	-/-	-/-	-/-	-/-
OTI	-/W	-/-	-/-	-/-	-/-
GFDI	-/W	-/-	-/-	-/-	-/-
ECCDI	-/W	-/-	-/-	-/-	-/-

## ■3 Monitoring-supported word devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

The following table shows monitoring-supported virtual word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.22 ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

For details on virtual servo amplifier devices, refer to the following.

⇒ 12.3.22 ■7 Virtual servo amplifier devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
PA	Basic setting parameter	Decimal	AA(Axis designation)-PA(Device) Notation example: AA3-PA1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 44, 1001 to 1044	×	×
PB	Gain filter parameter	Decimal	AA(Axis designation)-PB(Device) Notation example: AA3-PB1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 92, 1001 to 1092	×	×
PC	Extension setting parameter	Decimal	AA(Axis designation)-PC(Device) Notation example: AA3-PC1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 90, 1001 to 1090	×	×
PD	I/O setting parameter	Decimal	AA(Axis designation)-PD(Device) Notation example: AA3-PD1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 72, 1001 to 1072	×	×
PT	Positioning control parameters	Decimal	AA(Axis designation)-PT(Device) Notation example: AA3-PT1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 90, 1001 to 1090	×	×

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
PN	Network setting parameters	Decimal	AA(Axis designation)-PN(Device) Notation example: AA3-PN1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 32, 1001 to 1032	×	×
ST	Status display	Decimal	AA(Axis designation)-ST(Device) Notation example: AA3-ST0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 48	×	×
PE	Extension setting No.2 parameter	Decimal	AA(Axis designation)-PE(Device) Notation example: AA3-PE1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 88, 1001 to 1088	×	×
PF	Extension setting No.3 parameter	Decimal	AA(Axis designation)-PF(Device) Notation example: AA3-PF1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 99, 1001 to 1099	×	×
ALM	Alarm (Current alarm)	Decimal	AA(Axis designation)-ALM(Device) Notation example: AA3-ALM0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2, 11 to 59	×	×
ALM	Alarm (Alarm history)	Decimal	AA(Axis designation)-ALM(Device) Notation example: AA3-ALM200 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 200 to 215, 220 to 235, 240 to 255, 260 to 275, 280 to 295, 300 to 315	×	×
POS	Point table (position)	Decimal	AA(Axis designation)-POS(Device) Notation example: AA3-POS1 • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	×	×
SPD	Point table (speed)	Decimal	AA(Axis designation)-SPD(Device) Notation example: AA3-SPD1 • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	×	×
ACT	Point table (acceleration time constant)	Decimal	AA(Axis designation)-ACT(Device) Notation example: AA3-ACT1 • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	×	×
DCT	Point table (deceleration time constant)	Decimal	AA(Axis designation)-DCT(Device) Notation example: AA3-DCT1 • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	×	×
DWL	Point table (dwell)	Decimal	AA(Axis designation)-DWL(Device) Notation example: AA3-DWL1 • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	×	×
AUX	Point table (auxiliary function)	Decimal	AA(Axis designation)-AUX(Device) Notation example: AA3-AUX1 • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	×	×

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
MCD	Point table (M code)	Decimal	AA(Axis designation)-MCD(Device) Notation example: AA3-MCD1 • Axis designation (decimal): 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 255, 1001 to 1255	×	×
MD	Machine diagnosis data	Decimal	AA(Axis designation)-MD(Device) Notation example: AA3-MD0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 21	×	×
OTS	One-touch tuning data	Decimal	AA(Axis designation)-OTS(Device) Notation example: AA3-OTS0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5, 3000	×	×
DI	External input signal	Decimal	AA(Axis designation)-DI(Device) Notation example: AA3-DI0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 6	×	×
DO	External output signal	Decimal	AA(Axis designation)-DO(Device) Notation example: AA3-DO0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 4	×	×
PO	Option unit parameter	Decimal	AA(Axis designation)-PO(Device) Notation example: AA3-PO1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 2, 1001 to 1002	×	×
PS	Special parameter	Decimal	AA(Axis designation)-PS(Device) Notation example: AA3-PS1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 99, 1001 to 1099	×	×
PL	Linear servo motor/DD motor setting parameters	Decimal	AA(Axis designation)-PL(Device) Notation example: AA3-PL1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 72, 1001 to 1072	×	×
PU	Multi encoder parameter	Decimal	AA(Axis designation)-PU(Device) Notation example: AA3-PU1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 44, 1001 to 1044	×	×
PVS	Position extension parameter	Decimal	AA(Axis designation)-PVS(Device) Notation example: AA3-PVS1 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 1 to 32, 1001 to 1032	×	×
NPA	Network basic parameter	Decimal	1 to 12 2001 to 2032	×	×
GFDS	Gear failure diagnosis data	Decimal	AA(Axis designation)-GFDS(Device) Notation example: AA3-GFDS0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	×	×
ECCDS	Encoder communication circuit diagnosis data	Decimal	AA(Axis designation)-ECCDS(Device) Notation example: AA3-ECCDS0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 5	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

For indirect specification of an axis designation, refer to the following.

⇒12.3.2 ■2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

#### ■4 Availability of writing/reading data to/from word devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PA	R/W	R/W	-/-	-/-
PB	R/W	R/W	-/-	-/-
PC	R/W	R/W	-/-	-/-
PD	R/W	R/W	-/-	-/-
PT	R/W	R/W	-/-	-/-
PN	R/W	R/W	-/-	-/-
ST	R/-	R/-	-/-	-/-
PE	R/W	R/W	-/-	-/-
PF	R/W	R/W	-/-	-/-
ALM	R/-	R/-	-/-	-/-
POS	R/W	R/W	-/-	-/-
SPD	R/W	R/W	-/-	-/-
ACT	R/W	R/W	-/-	-/-
DCT	R/W	R/W	-/-	-/-
DWL	R/W	R/W	-/-	-/-
AUX	R/W	R/W	-/-	-/-
MCD	R/W	R/W	-/-	-/-
MD	R/-	R/-	-/-	-/-
OTS*1	R/W	R/W	-/-	-/-
DI*2	R/-	R/W	-/-	-/-
DO	R/-	R/-	-/-	-/-
PO	R/W	R/W	-/-	-/-
PS	R/W	R/W	-/-	-/-
PL	R/W	R/W	-/-	-/-
PU	R/W	R/W	-/-	-/-
PVS	R/W	R/W	-/-	-/-
NPA*3	R/W	R/W	-/-	-/-
GFDS	R/-	R/-	-/-	-/-
ECCDS	R/-	R/-	-/-	-/-

\*1 Only reading is available for OTS0 to OTS5.

\*2 Only reading is available for DI0 to DI3.

\*3 Only reading is available for NPA1, NPA8, and NPA2001 to NPA2032.

#### ■5 Monitoring-supported double-word devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

The following table shows monitoring-supported virtual double-word devices for servo amplifiers.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.3.22 ■6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J5(W)-\*G(-RJ), -

JET-\*G])

For details on virtual servo amplifier devices, refer to the following.

→ 12.3.22 ■ 7 Virtual servo amplifier devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
ALD	Life diagnosis	Decimal	AA(Axis designation)-ALD(Device) Notation example: AA3-ALD0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1	×	×
TMI	Input signal for test operation (for test operation)	Decimal	AA(Axis designation)-TMI(Device) Notation example: AA3-TMI0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 2	×	×
TMO	Forced output of signal pin (for test operation)	Decimal	AA(Axis designation)-TMO(Device) Notation example: AA3-TMO0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0	×	×
TMD	Set data (for test operation)	Decimal	AA(Axis designation)-TMD(Device) Notation example: AA3-TMD0 • Axis designation: 1 to 3 (direct), 100 to 115 (indirect) • Device (decimal): 0 to 1, 3	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

For indirect specification of an axis designation, refer to the following.

→ 12.3.2 ■ 2 (2) Indirect specification of an axis number or axis designation ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## ■ 6 Availability of writing/reading data to/from double-word devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
ALD	-/-	R/-	-/-	-/-
TMI	-/-	-/W	-/-	-/-
TMO	-/-	-/W	-/-	-/-
TMD	-/-	-/W	-/-	-/-

## ■ 7 Virtual servo amplifier devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

The following shows the correspondence between the virtual devices used in the GOT and the servo amplifier data.

Virtual device name	Reference
SP	→ (1) Servo amplifier request ([MELSERVO-J5(W)-*G(-RJ), -JET-*G])
OM	→ (2) Operation mode selection ([MELSERVO-J5(W)-*G(-RJ), -JET-*G])

### (1) Servo amplifier request ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
SP0	Status display data clear	-	○	○	○
SP1	Current alarm clear	-	○	○	○
SP2	Alarm history clear	-	○	○	○
SP3	External input signal prohibited	-	○	○	○
SP4	External output signal prohibited	-	○	○	○
SP5	External input signal resumed	-	○	○	○
SP6	External output signal resumed	-	○	○	○

When using the servo amplifier request, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (2) Operation mode selection ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
OM0	Cancel test operation mode	-	○	○	○
OM1	JOG operation	-	○	○	○
OM2	Positioning operation	-	○	○	○
OM4	Output signal (DO) forced output	-	○	○	○
OM5	Single-step feed operation	-	○	○	○

When using the operation mode selection, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

### (3) Instruction demand (for test operation) ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
TMB1	Pause	-	○	○	○
TMB2	Test operation (positioning operation) start command	-	○	○	○
TMB3	Forward rotation direction	-	○	○	○
TMB4	Reverse rotation direction	-	○	○	○
TMB5	Restart for remaining distance	-	○	○	○
TMB6	Remaining distance clear	-	○	○	○

When using the instruction demand (for test operation), note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

**(4) One-touch tuning instruction ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])**

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
OTI0	One-touch tuning start command (Basic mode)	-	○	○	○
OTI1	One-touch tuning start command (High mode)	-	○	○	○
OTI2	One-touch tuning start command (Low mode)	-	○	○	○
OTI3	One-touch tuning stop command	-	○	○	○
OTI4	Return to initial value	-	○	○	○
OTI5	Return to value before adjustment	-	○	○	○

When using the one-touch tuning instruction, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

**(5) Gear failure diagnosis instruction ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])**

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
GFDI0	Backlash estimation start command	-	○	×	○
GFDI1	Backlash estimation stop command	-	○	×	○

When using the gear failure diagnosis instruction, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

**(6) Encoder communication circuit diagnosis instruction ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])**

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
ECCDI0	CN2 encoder communication circuit diagnosis start command	-	○	○	○
ECCDI1	CN2L encoder communication circuit diagnosis start command	-	○	○	○

When using the encoder communication circuit diagnosis instruction, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.

**(7) Basic setting parameter ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])**

Use an appropriate device according to the write destination of the servo amplifier.

- PA1 to PA44: Writing data to the RAM of a servo amplifier
- PA1001 to PA1044: Writing data to the FlashROM or EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

### (9) Extension setting parameter ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- PC1 to PC90: Writing data to the RAM of a servo amplifier
- PC1001 to PC1090: Writing data to the FlashROM or EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

## (11) Positioning control parameters ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- PT1 to PT90: Writing data to the RAM of a servo amplifier
- PT1001 to PT1090: Writing data to the FlashROM or EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

\*1 Set [Data Type] and [Format] as shown below for the objects for which this device is set.

- [Data Type]: [Unsigned BIN32]
- [Format]: [Hexadecimal]

### (17) Specifications of ALM260 to ALM275, ALM280 to ALM295, and ALM300 to ALM315 ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

The date and time of alarm occurrence are stored in BCD code in the upper eight bits and lower eight bits of each device. The time zone setting of the controller is applied to the date and time to be acquired.

Example) When the date and time of the most recent alarm occurrence is 15:30:20 May 15, 2020

When the date and time of alarm occurrence are those of 1999 or earlier, 0 is displayed.

### (18) Point table (position) ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- POS1 to POS255: Writing data to the RAM of a servo amplifier

- POS1001 to POS1255: Writing data to the FlashROM or EEPROM of a servo amplifier

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
POS1 to POS255, POS1001 to POS1255	Point table/position data No. 1 to No. 255	-	○	○	○

### (19)Point table (speed) ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- SPD1 to SPD255: Writing data to the RAM of a servo amplifier
- SPD1001 to SPD1255: Writing data to the FlashROM or EEPROM of a servo amplifier

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
SPD1 to SPD255, SPD1001 to SPD1255	Point table/speed data No. 1 to No. 255	-	○	○	○

### (20)Point table (acceleration time constant) ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- ACT1 to ACT255: Writing data to the RAM of a servo amplifier
- ACT1001 to ACT1255: Writing data to the FlashROM or EEPROM of a servo amplifier

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
ACT1 to ACT255, ACT1001 to ACT1255	Point table/acceleration time constant No. 1 to No. 255	-	○	○	○

### (21)Point table (deceleration time constant) ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- DCT1 to DCT255: Writing data to the RAM of a servo amplifier
- DCT1001 to DCT1255: Writing data to the FlashROM or EEPROM of a servo amplifier

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
DCT1 to DCT255, DCT1001 to DCT1255	Point table/deceleration time constant No. 1 to No. 255	-	○	○	○

### (22)Point table (dwell) ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- DWL1 to DWL255: Writing data to the RAM of a servo amplifier
- DWL1001 to DWL1255: Writing data to the FlashROM or EEPROM of a servo amplifier

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
DWL1 to DWL255, DWL1001 to DWL1255	Point table/dwell No. 1 to No. 255	-	○	○	○

### (23)Point table (auxiliary function) ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- AUX1 to AUX255: Writing data to the RAM of a servo amplifier

- AUX1001 to AUX1255: Writing data to the FlashROM or EEPROM of a servo amplifier

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
AUX1 to AUX255, AUX1001 to AUX1255	Point table/auxiliary function No. 1 to No. 255	-	○	○	○

#### (24)Point table (M code) ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- MCD1 to MCD255: Writing data to the RAM of a servo amplifier
- MCD1001 to MCD1255: Writing data to the FlashROM or EEPROM of a servo amplifier

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
MCD1 to MCD255, MCD1001 to MCD1255	Point table/M code No. 1 to No. 255	-	○	○	○

#### (25)Machine diagnosis data ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
MD0	Machine diagnosis data: Station number	-	○	○	○
MD1	Machine diagnosis data shift judgment(test mode)	-	○	○	○
MD2*1	Machine diagnosis data status	-	○	○	○
MD3*2	Machine diagnosis data coulomb friction torque in positive direction	-	○	○	○
MD4*2	Machine diagnosis data friction torque at rated speed in positive direction	-	○	○	○
MD5*2	Machine diagnosis data coulomb friction torque in negative direction	-	○	○	○
MD6*2	Machine diagnosis data friction torque at rated speed in negative direction	-	○	○	○
MD7*2	Machine diagnosis data oscillation frequency(motor is stopped)	-	○	○	○
MD8*2	Machine diagnosis data vibration level(motor is stopped)	-	○	○	○
MD9*2	Machine diagnosis data oscillation frequency(motor is operating)	-	○	○	○
MD10*2	Machine diagnosis data vibration level(motor is operating)	-	○	○	○
MD11	Machine diagnosis data, rated speed at forward or reverse rotation torque	-	○	○	○
MD12	Machine diagnosis data: friction failure prediction - threshold creation progress	-	○	○*3	○
MD13	Machine diagnosis data: vibration failure prediction - threshold creation progress	-	○	○*3	○
MD14	Machine diagnosis data motor total move distance	-	○	○*3	○
MD15	Machine diagnosis data, friction failure prediction, upper threshold at forward rotation torque, lower threshold at reverse rotation torque	-	○	○*3	○
MD16	Machine diagnosis data, friction failure prediction, lower threshold at forward rotation torque, upper threshold at reverse rotation torque	-	○	○*3	○

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
MD17	Machine diagnosis data: vibration failure prediction - threshold acquisition	-	○	○*3	○
MD18	Machine diagnosis data trouble prediction status	-	○	○*3	○
MD19	Machine diagnosis data: Belt tension estimation value	-	○	○*3	○
MD20	Machine diagnosis data: static friction used in failure prediction	-	○	○*3	○
MD21	Machine diagnosis data: Belt tension threshold estimation	-	○	○*3	○

\*1 While the servo amplifier is estimating the corresponding machine status in the machine diagnosis, do not write data to the parameters of the servo amplifier from another GOT.

Doing so may cause the servo amplifier to malfunction.

\*2 When MD2 indicates that the servo amplifier does not complete the machine diagnosis (is estimating or warning of the machine status), do not monitor MD3 to MD6 (friction states) and MD7 to MD10 (vibration/oscillation states).

To start monitoring those devices upon the estimation completion, set [Trigger] in the applicable object settings.

\*3 The commands assigned to MD12 to MD21 are not supported by MR-JET-G.

When the commands are used, the read values will be indefinite.

## (26)One-touch tuning data ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
OTS0	One-touch tuning status confirmation	-	○	○	○
OTS1	Error code list	-	○	○	○
OTS2	Setting time	-	○	○	○
OTS3	Overshoot amount	-	○	○	○
OTS4	One-touch tuning command mode	-	○	○	○
OTS5	Load inertia moment ratio	-	○	○	○
OTS3000*1	Read/write permissible move distance	-	○	○	○

\*1 Writing is not available when a negative value is set for the device value.

## (27)External input signal in MR-J5-G(-RJ) and MR-J5W□-G ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	Input device statuses	-	The input device statuses corresponding to the setting values 0000 to 001F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DI1	Input device statuses	-	The input device statuses corresponding to the setting values 0020 to 003F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DI2	Input device statuses	-	The input device statuses corresponding to the setting values 0040 to 005F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DI3	External input pin statuses	-	The statuses of the listed input devices are assigned to the bits in order from bit 0 and read. For details on the input devices, refer to the following. →MR-J5 User's Manual (Hardware)
DI4	Statuses of input devices switched on through communication	-	The statuses of the input devices switched on through communication (input device statuses corresponding to the setting values 0000 to 001F of the following) are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DI5	Statuses of input devices switched on through communication	-	The statuses of input devices switched on through communication (input device statuses corresponding to the setting values 0020 to 003F of the following) are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI6	Statuses of input devices switched on through communication	-	The input device statuses switched on through communications (input device statuses corresponding to the setting values 0040 to 005F of the following) are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)

### (28) External input signal in MR-J5D□-G ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DI0	Input device statuses	-	The input device statuses corresponding to the setting values 0000 to 001F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DI1	Input device statuses	-	The input device statuses corresponding to the setting values 0020 to 003F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DI2	Input device statuses	-	The input device statuses corresponding to the setting values 0040 to 005F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DI3	External input pin statuses	-	The statuses of the listed input devices are assigned to the bits in order from bit 0 and read. For details on the input devices, refer to the following. →MR-J5 User's Manual (Hardware)
DI4	Statuses of input devices switched on through communication	-	The statuses of the input devices switched on through communication (input device statuses corresponding to the setting values 0000 to 001F of the following) are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DI5	Statuses of input devices switched on through communication	-	The statuses of input devices switched on through communication (input device statuses corresponding to the setting values 0020 to 003F of the following) are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DI6	Statuses of input devices switched on through communication	-	The input device statuses switched on through communications (input device statuses corresponding to the setting values 0040 to 005F of the following) are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)

### (29) External input signal in MR-JET-G ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Virtual device name	Name	Symbol
DI0	Input device statuses	-
DI1	Input device statuses	-
DI2	Input device statuses	-
DI3	External input pin statuses	-
DI4	Statuses of input devices switched on through communication	-
DI5	Statuses of input devices switched on through communication	-
DI6	Statuses of input devices switched on through communication	-

### (30) External output signal in MR-J5-G(-RJ) and MR-J5W□-G ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	Output device statuses	-	The output device statuses corresponding to the setting values 8000 to 801F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DO1	Output device statuses	-	The output device statuses corresponding to the setting values 8020 to 803F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DO2	Output device statuses	-	The output device statuses corresponding to the setting values 8040 to 805F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DO4	External output pin statuses	-	The statuses of the listed output devices are assigned to the bits in order from bit 0 and read. For details on the output devices, refer to the following. →MR-J5 User's Manual (Hardware)

### (31) External output signal in MR-J5D□-G ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Virtual device name	Name	Symbol	Data to be read from the servo amplifier
DO0	Output device statuses	-	The output device statuses corresponding to the setting values 8000 to 801F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DO1	Output device statuses	-	The output device statuses corresponding to the setting values 8020 to 803F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DO2	Output device statuses	-	The output device statuses corresponding to the setting values 8040 to 805F of the following are read. Pr. PF91_Drive recorder Digital channel setting 1 (DRDC1)
DO4	External output pin statuses	-	The statuses of the listed output devices are assigned to the bits in order from bit 0 and read. For details on the output devices, refer to the following. →MR-J5 User's Manual (Hardware)

### (32) External output signal in MR-JET-G ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Virtual device name	Name	Symbol
DO0	Output device statuses	-
DO1	Output device statuses	-
DO2	Output device statuses	-
DO4	External output pin statuses	-

### (33) Option unit parameter ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- PO1 to PO2: Writing data to the RAM of a servo amplifier
- PO1001 to PO1002: Writing data to the FlashROM or EEPROM of a servo amplifier

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
PO1 to PO2, PO1001 to P1002	For manufacturer setting	-	×	×	×

### (34) Special parameter ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- PS1 to PS99: Writing data to the RAM of a servo amplifier
- PS1001 to PS1099: Writing data to the FlashROM or EEPROM of a servo amplifier

○: Available

×: Not available

Virtual device name	Name	Symbol	MR-J5-G(-RJ), MR-J5W□-G	MR-JET-G	MR-J5D□-G
PS1 to PS99, PS1001 to PS1099	For manufacturer setting	-	×	×	×

### (35) Linear servo motor/DD motor setting parameters ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

Use an appropriate device according to the write destination of the servo amplifier.

- PL1 to PL72: Writing data to the RAM of a servo amplifier
- PL1001 to PL1072: Writing data to the FlashROM or EEPROM of a servo amplifier

For the parameters prefixed by an asterisk (\*), setting becomes effective when the power is turned off once and back on after setting the parameter data.

## ■8 Precautions for virtual servo amplifier devices ([MELSERVO-J5(W)-\*G(-RJ), -JET-\*G])

For the precautions for virtual servo amplifier devices, refer to the following.

- 12.3.2 ■11 Precautions for virtual servo amplifier devices ([MELSEC iQ-R, RnMT/NC/RT, CR800-D], [MELSEC iQ-R, RnMT/RT, CR800-D])

## 12.3.23 [FREQROL 500/700/800, SENSORLESS SERVO]

Item	Reference
Specifications of bit devices	⇒ ■1 Monitoring-supported bit devices ([FREQROL 500/700/800, SENSORLESS SERVO])
	⇒ ■2 Availability of writing/reading data to/from bit devices ([FREQROL 500/700/800, SENSORLESS SERVO])
Specifications of word devices	⇒ ■3 Monitoring-supported word devices ([FREQROL 500/700/800, SENSORLESS SERVO])
	⇒ ■4 Availability of writing/reading data to/from word devices ([FREQROL 500/700/800, SENSORLESS SERVO])
Specifications of virtual inverter devices	⇒ ■5 Virtual inverter devices ([FREQROL 500/700/800, SENSORLESS SERVO])

### ■1 Monitoring-supported bit devices ([FREQROL 500/700/800, SENSORLESS SERVO])

The following table shows monitoring-supported virtual bit devices for inverters.

To check whether writing/reading data to/from each device is available, refer to the following.

- ⇒ 12.3.23 ■2 Availability of writing/reading data to/from bit devices ([FREQROL 500/700/800, SENSORLESS SERVO])

For details on virtual inverter devices, refer to the following.

- ⇒ 12.3.23 ■5 Virtual inverter devices ([FREQROL 500/700/800, SENSORLESS SERVO])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
RS	Inverter status monitor	Decimal	0 to 15	×	×
WS	Operation command	Decimal	0 to 15	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

- ⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([FREQROL 500/700/800, SENSORLESS SERVO])

The following shows the availability of writing/reading data to/from bit devices by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
RS	R/-	-/-	-/-	-/-	-/-
WS	-/W	-/-	-/-	-/-	-/-

### ■3 Monitoring-supported word devices ([FREQROL 500/700/800, SENSORLESS SERVO])

The following table shows monitoring-supported virtual word devices for inverters.

To check whether writing/reading data to/from each device is available, refer to the following.

- ⇒ 12.3.23 ■4 Availability of writing/reading data to/from word devices ([FREQROL 500/700/800, SENSORLESS SERVO])

For details on virtual inverter devices, refer to the following.

⇒12.3.23 ■5 Virtual inverter devices ([FREQROL 500/700/800, SENSORLESS SERVO])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices *1		
			Assignment to EG devices	Access using a client	
A	Alarm definition	Decimal	0 to 7	○	×
Pr	Parameter	Decimal	0 to 1500	○	×
PG	Program operation	Decimal	0 to 89	○	×
SP	Special parameter	Decimal	108 to 127	○	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

■4 Availability of writing/reading data to/from word devices ([FREQROL 500/700/800, SENSORLESS SERVO])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
A	R/-	-/-	-/-	-/-
Pr	R/W	-/-	-/-	-/-
PG	R/W	-/-	-/-	-/-
SP*1	R/W	-/-	-/-	-/-

\*1 Only reading is available for SP111 to SP114.

Only writing is available for SP124 and SP125.

■5 Virtual inverter devices ([FREQROL 500/700/800, SENSORLESS SERVO])

The following shows the correspondence between the virtual devices used in the GOT and the inverter data.

For details on the inverter parameters, refer to the following.

⇒Manual of the inverter used

Virtual device name	Reference
RS	⇒(1) Inverter status monitor ([FREQROL 500/700/800, SENSORLESS SERVO])
WS	⇒(2) Operation command ([FREQROL 500/700/800, SENSORLESS SERVO])
	⇒(3) Activating WS devices ([FREQROL 500/700/800, SENSORLESS SERVO])
A	⇒(4) Alarm definition ([FREQROL 500/700/800, SENSORLESS SERVO])
Pr	⇒(5) Parameter ([FREQROL 500/700/800, SENSORLESS SERVO])
PG	⇒(6) Programmed operation ([FREQROL 500/700/800, SENSORLESS SERVO])
SP	⇒(7) Special parameter ([FREQROL 500/700/800, SENSORLESS SERVO])
	⇒(8) Specifications of SP122 and SP121([FREQROL 500/700/800, SENSORLESS SERVO])

(1) Inverter status monitor ([FREQROL 500/700/800, SENSORLESS SERVO])

The settable devices vary by inverter model.

For the settable devices of each inverter, refer to the following.

⇒ Manual of the inverter used

Parameter settings may have been changed in the inverter.  
To use the devices, check the parameters and set the parameters as required.

Example) When using the FR-A700 series

Virtual device name	Name
RS0	Inverter running (RUN)
RS1	Forward rotation (STF)
RS2	Reverse rotation (STR)
RS3	Up to frequency (SU)
RS4	Overload (OL)
RS5	Instantaneous power failure (IPF)
RS6	Frequency detection (FU)
RS7	Fault occurrence (ABC1)
RS8	ABC2
RS15	Fault occurrence

## (2) Operation command ([FREQROL 500/700/800, SENSORLESS SERVO])

The settable devices vary by inverter model.  
For the settable devices of each inverter, refer to the following.

⇒ Manual of the inverter used

Parameter settings may have been changed in the inverter.  
To use the devices, check the parameters and set the parameters as required.

Example) When using the FR-A700 series

Virtual device name	Name
WS0	Current input selection (AU)
WS1	Forward rotation (STF)
WS2	Reverse rotation (STR)
WS3 <sup>*1</sup>	Low speed operation (RL)
WS4 <sup>*1</sup>	Middle speed operation (RM)
WS5 <sup>*1</sup>	High speed operation (RH)
WS6 <sup>*1</sup>	Second function selection (RT)
WS7 <sup>*1</sup>	Output stop (MRS)
WS8 <sup>*2</sup>	JOG operation (JOG)
WS9 <sup>*2</sup>	Selection of automatic restart after instantaneous power failure (CS)
WS10 <sup>*2</sup>	Start self-holding selection (STOP)
WS11 <sup>*2</sup>	Reset (RES)

\*1 When the GOT is connected to the PU connector and the operation mode is set to the PU operation mode, the multispeed operation (WS3 to WS7, SP121, SP122) cannot be used.

For using the multi-speed operation, follow either of the operations below.

- Connect the GOT to the RS-485 terminal and set the operation mode to the NET operation mode (Computer link operation mode), and then operate the inverter.
- Change the motor speed with the set frequency (SP109, SP110), and then operate the inverter with the forward or reverse rotation (WS1, WS2, SP121, SP122).

\*2 The initial status is invalid.

The virtual device becomes operable by writing a value in the corresponding parameter shown below to change the signal.

- WS8: Pr.185
- WS9: Pr.186
- WS10: Pr.188
- WS11: Pr.189

For the relationship between the parameter values and signals, refer to the following.

→ Manual of the inverter used

When using the operation command, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.
When activating WS devices	→ 12.3.23 ■5 (3) Activating WS devices ([FREQROL 500/700/800, SENSORLESS SERVO])

### (3) Activating WS devices ([FREQROL 500/700/800, SENSORLESS SERVO])

More than one WS device cannot turn on at once.

Turning on one WS device turns off the other WS devices.

Use SP122 or SP121 to turn on multiple WS devices simultaneously.

→ 12.3.23 ■5 (8) Specifications of SP122 and SP121 ([FREQROL 500/700/800, SENSORLESS SERVO])

The following shows the specifications of WS devices.

WS device	Specifications
WS0 to WS7	<p>GOT's virtual devices corresponding to the inverter's operation commands (instruction code: HFA, bit length: 8 bits)</p> <div style="text-align: center;"> <p>Operation command: <span style="border: 1px solid black; padding: 2px;">0 0 0 0 0 0 0 0</span></p> <p>Bit positions: b7, b6, b5, b4, b3, b2, b1, b0</p> <p>Device connections: WS0, WS1, WS2, WS3, WS4, WS5, WS6, WS7</p> </div> <p>The function of each bit differs depending on the inverter.            Example) A800 series inverter</p> <ul style="list-style-type: none"> <li>• WS0: AU (Terminal 4 input selection)</li> <li>• WS1: Forward rotation command</li> <li>• WS2: Reverse rotation command</li> <li>• WS3: RL (Low-speed operation command)</li> <li>• WS4: RM (Middle-speed operation command)</li> <li>• WS5: RH (High-speed operation command)</li> <li>• WS6: RT (Second function selection)</li> <li>• WS7: MRS (Output stop)</li> </ul> <p>When you turn on one of the WS0 to WS7 devices, the rest of these devices are turned off.            Example) When you turn on WS1            WS0 and WS2 to WS7 are turned off.</p>
WS8 to WS15	<p>WS8 to WS11 are GOT's virtual devices corresponding to the inverter's operation commands (extended) (instruction code: HF9, bit length: 16 bits).</p> <div style="text-align: center;"> <p>Operation command (extended): <span style="border: 1px solid black; padding: 2px;">0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0</span></p> <p>Bit positions: b15, b14, b13, b12, b11, b10, b9, b8, b7, b6, b5, b4, b3, b2, b1, b0</p> <p>Device connections: WS8, WS9, WS10, WS11</p> <p>Other labels: Fixed to 0, Not used</p> </div> <p>The function of each bit differs depending on the inverter.            Example) A800 series inverter</p> <ul style="list-style-type: none"> <li>• WS8: JOG (Jog operation selection)</li> <li>• WS9: CS (Selection of automatic restart after instantaneous power failure, flying start)</li> <li>• WS10: STOP (Start self-holding selection)</li> <li>• WS11: RES (Inverter reset)</li> </ul> <p>Turning on a device out of WS8 to WS11 turns off WS0 to WS15 except the one that is turned on.            Example) When you turn on WS9            WS0 to WS8 and WS10 to WS15 are turned off.</p>

#### (4) Alarm definition ([FREQROL 500/700/800, SENSORLESS SERVO])

The settable devices vary by inverter model.

For the settable devices of each inverter, refer to the following.

→ Manual of the inverter used

Virtual device name	Name
A0	Second fault in past
A1	Latest fault
A2	Fourth fault in past
A3	Third fault in past
A4	Sixth fault in past
A5	Fifth fault in past
A6	Eighth fault in past
A7	Seventh fault in past

#### (5) Parameter ([FREQROL 500/700/800, SENSORLESS SERVO])

The virtual device numbers (Pr) used in the GOT correspond to the inverter parameter numbers.

For the inverter parameters, refer to the following.

→ Manual of the inverter used

When using a parameter, note the following.

Precautions	Description
When creating a screen using a parameter (Pr)	Specify a PG device (Programmed operation) or Pr device (Parameter). Do not specify PG devices (PG0 to PG89) and Pr devices (Pr900 to Pr905) together on one screen.
When setting 8888 or 9999 to a parameter (Pr) of an inverter	Values 8888 and 9999 are used for particular purposes. To set these values to inverter parameters, write the following values to the GOT virtual device. <ul style="list-style-type: none"> <li>• To set 8888: 65520</li> <li>• To set 9999: 65535</li> </ul>
When specifying Pr900 to Pr933 (Calibration parameter) or Pr934 and Pr935 (PID display)	If you specify Pr900 to Pr933 (Calibration parameter), or Pr934 and Pr935 (PID display), whether the value below must be written to SP108 (Second parameter changing) depends on the specified device number and inverter model. <ul style="list-style-type: none"> <li>• H00: Offset/gain</li> <li>• H01: Analog</li> <li>• H02: Analog value at terminal</li> </ul>
Parameters that cannot be monitored	The GOT cannot monitor the parameter (Pr.37) of FR-E500, FR-S500(E), FR-F500J, FR-D700, FR-F700PJ, and FR-E700 series.

#### (6) Programmed operation ([FREQROL 500/700/800, SENSORLESS SERVO])

The virtual devices below correspond to the parameters (Pr.201 to Pr.230) of the FR-A500 series.

Virtual device name	Name
PG0 to PG9	Program set 1 (running frequency)
PG10 to PG19*1	Program set 1 (time)
PG20 to PG29	Program set 1 (rotation direction)
PG30 to PG39	Program set 2 (running frequency)
PG40 to PG49*1	Program set 2 (time)
PG50 to PG59	Program set 2 (rotation direction)
PG60 to PG69	Program set 3 (running frequency)
PG70 to PG79*1	Program set 3 (time)
PG80 to PG89	Program set 3 (rotation direction)

\*1 To set the start time (PG10 to PG19, PG40 to PG49, PG70 to PG79), set hour or minute in the upper 8 bits, and minute or second in the lower 8 bits.

Example) To set 12 minutes 35 seconds

- Value written to the upper 8 bits: H0C (hexadecimal value of 12)
- Value written to the lower 8 bits: H23 (hexadecimal value of 35)

Write H0C23 (decimal value: 3107) to the device.  
When using the programmed operation, note the following.

Precautions	Description
When creating a screen using the programmed operation (PG)	Specify a PG device (Programmed operation) or Pr device (Parameter). Do not specify PG devices (PG0 to PG89) and Pr devices (Pr900 to Pr905) together on one screen.

### (7) Special parameter ([FREQROL 500/700/800, SENSORLESS SERVO])

If the GOT reads or writes data from or to a virtual device (SP), the inverter's instruction code corresponding to the SP device is used for communication.

For instruction details, and values to be read and written, refer to the following.

⇒ Manual of the inverter used

Virtual device name	Name	Instruction code	
		Read	Writing
SP108	Second parameter changing	6CH	ECH
SP109*1	Set frequency (RAM)	6DH	EDH
SP110*1	Set frequency (RAM, EEPROM)	6EH	EEH
SP111*1	Output frequency	6FH	-
SP112	Output current	70H	-
SP113	Output voltage	71H	-
SP114	Special monitor	72H	-
SP115	Special monitor selection No.	73H	F3H
SP116	Faults history batch clear	-	F4H
	Latest fault, Second fault in past	74H	-
SP117	Third fault in past, Fourth fault in past	75H	-
SP118	Fifth fault in past, Sixth fault in past	76H	-
SP119	Seventh fault in past, Eighth fault in past	77H	-
SP121*2*3	Inverter status monitor (extended)	79H	F9H
	Operation command (extended)		
SP122*2*3	Inverter status monitor	7AH	-
	Operation command	-	FAH
SP123*4	Operation mode	7BH	FBH
SP124	All parameter clear	-	FCH
SP125	Inverter reset	-	FDH
SP127	Link parameter extended setting	7FH	FFH

\*1 GOT cannot monitor SP109 to SP111 if the conditions below are satisfied at the same time.

(Only FR-E500/S500(E)/F500J/D700/F700PJ/E700 series)

- Pr37 ≠ 0
- SP127 = 1

\*2 When the GOT is connected to the PU connector and the operation mode is set to the PU operation mode, the multispeed operation (WS3 to WS7, SP121, SP122) cannot be used.

For using the multi-speed operation, follow either of the operations below.

- Connect the GOT to the RS-485 terminal and set the operation mode to the NET operation mode (Computer link operation mode), and then operate the inverter.
- Change the motor speed with the set frequency (SP109, SP110), and then operate the inverter with the forward or reverse rotation (WS1, WS2, SP121, SP122).

\*3 For the specifications of SP122 and SP121, refer to the following.

⇒ 12.3.23 ■ 5 (8) Specifications of SP122 and SP121 ([FREQROL 500/700/800, SENSORLESS SERVO])

\*4 If the GOT is connected to the PU port of the FR-A500/E500/F500 (excluding the FR-F500J), the connected inverter is in the external operation mode at power-on.

To change parameters from the GOT, change the value of SP123 to 2 (PU operation mode) in advance.

## (8) Specifications of SP122 and SP121([FREQROL 500/700/800, SENSORLESS SERVO])

SP122 and SP121 are the GOT's virtual devices corresponding to the inverter's ordinary and extended operation commands.

The following shows the specifications of SP122 and SP121.

SP device	Specifications
SP122	<p>GOT's virtual device corresponding to the inverter's operation command (instruction code: HFA, bit length: 8 bits)            The function of each bit differs depending on the inverter.            Example) A800 series inverter</p> <ul style="list-style-type: none"> <li>• SP122.b0: AU (Terminal 4 input selection)</li> <li>• SP122.b1: Forward rotation command</li> <li>• SP122.b2: Reverse rotation command</li> <li>• SP122.b3: RL (Low-speed operation command)</li> <li>• SP122.b4: RM (Middle-speed operation command)</li> <li>• SP122.b5: RH (High-speed operation command)</li> <li>• SP122.b6: RT (Second function selection)</li> <li>• SP122.b7: MRS (Output stop)</li> </ul> <p>To send more than one command simultaneously, convert the binary value of the bits to be turned on to a decimal value, and write the decimal value to SP122.            Example) Sending forward rotation command and RL (Low-speed operation command) simultaneously            Binary: 00001010            Decimal: 10            Write 10 to SP122.</p>
SP121	<p>GOT's virtual device corresponding to the inverter's operation commands (instruction code: HF9, bit length: 16 bits)            The function of each bit differs depending on the inverter.            Example) A800 series inverter</p> <ul style="list-style-type: none"> <li>• SP121.b0: AU (Terminal 4 input selection)</li> <li>• SP121.b1: Forward rotation command</li> <li>• SP121.b2: Reverse rotation command</li> <li>• SP121.b3: RL (Low-speed operation command)</li> <li>• SP121.b4: RM (Middle-speed operation command)</li> <li>• SP121.b5: RH (High-speed operation command)</li> <li>• SP121.b6: RT (Second function selection)</li> <li>• SP121.b7: MRS (Output stop)</li> <li>• SP121.b8: JOG (Jog operation selection)</li> <li>• SP121.b9: CS (Selection of automatic restart after instantaneous power failure, flying start)</li> <li>• SP121.b10: STOP (Start self-holding selection)</li> <li>• SP121.b11: RES (Inverter reset)</li> <li>• SP121.b12 to SP121.b15: Not used</li> </ul> <p>To send more than one command simultaneously, convert the binary value of the device (with applicable bits on) to a decimal value, and write the decimal value to SP121.            Example) Sending forward rotation command, RL (Low-speed operation command), and JOG (Jog operation selection) simultaneously            Binary: 0000000100001010            Decimal: 266            Write 266 to SP121.</p>

## 12.3.24 [FREQROL 800]

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([FREQROL 800])
	→ ■2 Availability of writing/reading data to/from bit devices ([FREQROL 800])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([FREQROL 800])
	→ ■4 Availability of writing/reading data to/from word devices ([FREQROL 800])
Specifications of virtual inverter devices	→ ■5 Virtual inverter devices ([FREQROL 800])

When [Automatic Negotiation] is set to [Yes] in the GOT communication settings, the inverter parameters are reconfigured within the user-specified negotiation time.

If the automatic connection fails, set the longer negotiation time with GT Designer3 or the utility.

### ■1 Monitoring-supported bit devices ([FREQROL 800])

The following table shows monitoring-supported virtual bit devices for inverters.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.24 ■2 Availability of writing/reading data to/from bit devices ([FREQROL 800])

For details on virtual inverter devices, refer to the following.

→ 12.3.24 ■5 Virtual inverter devices ([FREQROL 800])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
RS	Inverter status monitor	Decimal	0 to 15	×	×
WS	Operation command	Decimal	0 to 15	×	×
X	Input	Hexadecimal	00 to 7F	○	○
Y	Output	Hexadecimal	00 to 7F	○	○
M	Internal relay	Decimal	0 to 127	○	○
TC	Timer coil	Decimal	0 to 15	○	○ (Not usable as word data)
TT	Timer contact	Decimal	0 to 15	○	○ (Not usable as word data)
CC	Counter coil	Decimal	0 to 15	○	○ (Not usable as word data)
CT	Counter contact	Decimal	0 to 15	○	○ (Not usable as word data)
SC	Retentive timer coil	Decimal	0 to 15	○	○ (Not usable as word data)
SS	Retentive timer contact	Decimal	0 to 15	○	○ (Not usable as word data)
SM*2	Special relay	Decimal	0 to 2047	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Functions are assigned to the SM devices by using the PLC function.

Do not write data from the GOT.

## ■2 Availability of writing/reading data to/from bit devices ([FREQROL 800])

The following shows the availability of writing/reading data to/from bit devices by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
RS	R/-	-/-	-/-	-/-	-/-
WS	-/W	-/-	-/-	-/-	-/-
X	R/W	-/-	R/W	R/W	-/-
Y	R/W	-/-	R/W	R/W	-/-
M	R/W	-/-	R/W	R/W	-/-
TC	R/W	-/-	-/-	-/-	-/-
TT	R/W	-/-	-/-	-/-	-/-
CC	R/W	-/-	-/-	-/-	-/-
CT	R/W	-/-	-/-	-/-	-/-
SC	R/W	-/-	-/-	-/-	-/-
SS	R/W	-/-	-/-	-/-	-/-
SM	R/W	-/-	R/W	R/W	-/-

## ■3 Monitoring-supported word devices ([FREQROL 800])

The following table shows monitoring-supported virtual word devices for inverters.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.24 ■4 Availability of writing/reading data to/from word devices ([FREQROL 800])

For details on virtual inverter devices, refer to the following.

⇒ 12.3.24 ■5 Virtual inverter devices ([FREQROL 800])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
A	Alarm definition	Decimal	0 to 7	○	○
Pr	Parameter	Decimal	0 to 1500	○	○
SP	Special parameter	Decimal	108 to 127	○	○
TN	Timer current value	Decimal	0 to 15	○	○
CN	Counter current value	Decimal	0 to 15	○	○
SN	Retentive timer current value	Decimal	0 to 15	○	○
D	Data register	Decimal	0 to 255	○	○
SD	Special register	Decimal	0 to 2047	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■4 Availability of writing/reading data to/from word devices ([FREQROL 800])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
A	R/-	-/-	-/-	-/-
Pr	R/W	-/-	-/-	-/-
SP*1	R/W	-/-	-/-	-/-
TN	R/W	R/W	-/-	-/-
CN	R/W	R/W	-/-	-/-
SN	R/W	R/W	-/-	-/-
D	R/W	R/W	-/-	R/W
SD	R/W	R/W	-/-	R/W

\*1 Only reading is available for SP111 to SP114 and SP117 to SP119.

Only writing is available for SP124 and SP125.

#### ■5 Virtual inverter devices ([FREQROL 800])

The following shows the correspondence between the virtual devices used in the GOT and the inverter data.

For details on the inverter parameters, refer to the following.

⇒ Manual of the inverter used

Virtual device name	Reference
RS	⇒ (1) Inverter status monitor ([FREQROL 800])
WS	⇒ (2) Operation command ([FREQROL 800])
	⇒ (3) Activating WS devices ([FREQROL 800])
A	⇒ (4) Alarm definition ([FREQROL 800])
Pr	⇒ (5) Parameter ([FREQROL 800])
SP	⇒ (6) Special parameter ([FREQROL 800])
	⇒ (7) Specifications of SP122 and SP121 ([FREQROL 800])

##### (1) Inverter status monitor ([FREQROL 800])

Parameter settings may have been changed in the inverter.

To use the devices, check the parameters and set the parameters as required.

⇒ Manual of the inverter used

Virtual device name	Name
RS0	RUN (Inverter running)
RS1	During forward rotation
RS2	During reverse rotation
RS3	SU (Up to frequency)
RS4	OL (Overload warning)
RS5	IPF (Instantaneous power failure/undervoltage)
RS6	FU (Output frequency detection)
RS7	ABC1 (Fault)
RS8	ABC2
RS9	Safety monitor output
RS15	Fault occurrence

## (2) Operation command ([FREQROL 800])

Parameter settings may have been changed in the inverter.

To use the devices, check the parameters and set the parameters as required.

⇒ Manual of the inverter used

Virtual device name	Name
WS0 <sup>*1*2</sup>	AU (Terminal 4 input selection)
WS1	Forward rotation command
WS2	Reverse rotation command
WS3 <sup>*1*2</sup>	RL (Low-speed operation command)
WS4 <sup>*1*2</sup>	RM (Middle-speed operation command)
WS5 <sup>*1*2</sup>	RH (High-speed operation command)
WS6 <sup>*1*2</sup>	RT (Second function selection)
WS7 <sup>*1*2</sup>	MRS (Output stop)
WS8 <sup>*1*2*3</sup>	JOG (Jog operation selection)
WS9 <sup>*1*2*3</sup>	CS (Selection of automatic restart after instantaneous power failure, flying start)
WS10 <sup>*1*2*3</sup>	STOP (Start self-holding selection)
WS11 <sup>*1*2*3</sup>	RES (Inverter reset)

\*1 When the GOT is connected to the PU connector and the operation mode is set to the PU operation mode, the device cannot be used.

\*2 The monitor data can be changed by the settings of Pr.180 to Pr.189 (input terminal function selection).  
For the relationship between the parameters and terminals, refer to the following.

⇒ Manual of the inverter used

\*3 The device is invalid for the initial state of the inverter in which a function that cannot be controlled by the GOT is set or no function is set.

Change the relevant setting in Pr.180 to Pr.189 (input terminal function selection).

When using the operation command, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.
When activating WS devices	⇒ 12.3.24 ■5 (3) Activating WS devices ([FREQROL 800])

## (3) Activating WS devices ([FREQROL 800])

More than one WS device cannot turn on at once.

Turning on one WS device turns off the other WS devices.

Use SP122 or SP121 to turn on multiple WS devices simultaneously.

→12.3.24 ■5 (7) Specifications of SP122 and SP121 ([FREQROL 800])

The following shows the specifications of WS devices.

WS device	Specifications
WS0 to WS7	<p>GOT's virtual devices corresponding to the inverter's operation commands (instruction code: HFA, bit length: 8 bits)</p> <div style="text-align: center;"> </div> <p>The function of each bit differs depending on the inverter.                      Example) A800 series inverter</p> <ul style="list-style-type: none"> <li>• WS0: AU (Terminal 4 input selection)</li> <li>• WS1: Forward rotation command</li> <li>• WS2: Reverse rotation command</li> <li>• WS3: RL (Low-speed operation command)</li> <li>• WS4: RM (Middle-speed operation command)</li> <li>• WS5: RH (High-speed operation command)</li> <li>• WS6: RT (Second function selection)</li> <li>• WS7: MRS (Output stop)</li> </ul> <p>When you turn on one of the WS0 to WS7 devices, the rest of these devices are turned off.                      Example) When you turn on WS1                      WS0 and WS2 to WS7 are turned off.</p>
WS8 to WS15	<p>WS8 to WS11 are GOT's virtual devices corresponding to the inverter's operation commands (extended) (instruction code: HF9, bit length: 16 bits).</p> <div style="text-align: center;"> </div> <p>The function of each bit differs depending on the inverter.                      Example) A800 series inverter</p> <ul style="list-style-type: none"> <li>• WS8: JOG (Jog operation selection)</li> <li>• WS9: CS (Selection of automatic restart after instantaneous power failure, flying start)</li> <li>• WS10: STOP (Start self-holding selection)</li> <li>• WS11: RES (Inverter reset)</li> </ul> <p>Turning on a device out of WS8 to WS11 turns off WS0 to WS15 except the one that is turned on.                      Example) When you turn on WS9                      WS0 to WS8 and WS10 to WS15 are turned off.</p>

**(4) Alarm definition ([FREQROL 800])**

Virtual device name	Name
A0	Second fault in past
A1	Latest fault
A2	Fourth fault in past
A3	Third fault in past
A4	Sixth fault in past
A5	Fifth fault in past
A6	Eighth fault in past
A7	Seventh fault in past

## (5) Parameter ([FREQROL 800])

The virtual device numbers (Pr) used in the GOT correspond to the inverter parameter numbers.

For the inverter parameters, refer to the following.

⇒ Manual of the inverter used

When using a parameter, note the following.

Precautions	Description
When setting 8888 or 9999 to a parameter (Pr) of an inverter	<p>Values 8888 and 9999 are used for particular purposes.</p> <p>To set these values to inverter parameters, write the following values to the GOT virtual device.</p> <ul style="list-style-type: none"> <li>• To set 8888: 65520</li> <li>• To set 9999: 65535</li> </ul>
When specifying Pr900 to Pr933 (Calibration parameter) or Pr934 and Pr935 (PID display)	<p>If you specify Pr900 to Pr933 (Calibration parameter), or Pr934 and Pr935 (PID display), whether the value below must be written to SP108 (Second parameter changing) depends on the specified device number and inverter model.</p> <ul style="list-style-type: none"> <li>• H00: Offset/gain</li> <li>• H01: Analog</li> <li>• H02: Analog value at terminal</li> </ul>

## (6) Special parameter ([FREQROL 800])

If the GOT reads or writes data from or to a virtual device (SP), the inverter's instruction code corresponding to the SP device is used for communication.

For instruction details, and values to be read and written, refer to the following.

⇒ Manual of the inverter used

Virtual device name	Name	Instruction code	
		Read	Writing
SP108	Second parameter changing	6CH	ECH
SP109	Set frequency (RAM)	6DH	EDH
SP110	Set frequency (RAM, EEPROM)	6EH	EEH
SP111	Output frequency/speed	6FH	-
SP112	Output current	70H	-
SP113	Output voltage	71H	-
SP114	Special monitor	72H	-
SP115	Special monitor selection No.	73H	F3H
SP116	Faults history batch clear	-	F4H
	Latest fault, Second fault in past	74H	-
SP117	Third fault in past, Fourth fault in past	75H	-
SP118	Fifth fault in past, Sixth fault in past	76H	-
SP119	Seventh fault in past, Eighth fault in past	77H	-
SP121 <sup>*1*2</sup>	Inverter status monitor (extended)	79H	F9H
	Operation command (extended)	-	-
SP122 <sup>*1*2</sup>	Inverter status monitor	7AH	-
	Operation command	-	FAH
SP123	Operation mode	7BH	FBH
SP124	All parameter clear	-	FCH
SP125	Inverter reset	-	FDH
SP127	Link parameter extended setting	7FH	FFH

\*1 When the GOT is connected to the PU connector and the operation mode is set to the PU operation mode, the multispeed operation (WS3 to WS7, SP121, SP122) cannot be used.

For using the multi-speed operation, follow either of the operations below.

- Connect the GOT to the RS-485 terminal and set the operation mode to the NET operation mode (Computer link operation mode), and then operate the inverter.
- Change the motor speed with the set frequency (SP109, SP110), and then operate the inverter with the forward or reverse rotation (WS1, WS2, SP121, SP122).

\*2 For the specifications of SP122 and SP121, refer to the following.

⇒ 12.3.24 ■5 (7) Specifications of SP122 and SP121 ([FREQROL 800])

## (7) Specifications of SP122 and SP121 ([FREQROL 800])

SP122 and SP121 are the GOT's virtual devices corresponding to the inverter's ordinary and extended operation commands.

The following shows the specifications of SP122 and SP121.

SP device	Specifications
SP122	<p>GOT's virtual device corresponding to the inverter's operation command (instruction code: HFA, bit length: 8 bits) The function of each bit differs depending on the inverter. Example) A800 series inverter</p> <ul style="list-style-type: none"> <li>• SP122.b0: AU (Terminal 4 input selection)</li> <li>• SP122.b1: Forward rotation command</li> <li>• SP122.b2: Reverse rotation command</li> <li>• SP122.b3: RL (Low-speed operation command)</li> <li>• SP122.b4: RM (Middle-speed operation command)</li> <li>• SP122.b5: RH (High-speed operation command)</li> <li>• SP122.b6: RT (Second function selection)</li> <li>• SP122.b7: MRS (Output stop)</li> </ul> <p>To send more than one command simultaneously, convert the binary value of the bits to be turned on to a decimal value, and write the decimal value to SP122. Example) Sending forward rotation command and RL (Low-speed operation command) simultaneously Binary: 00001010 Decimal: 10 Write 10 to SP122.</p>
SP121	<p>GOT's virtual device corresponding to the inverter's operation commands (instruction code: HF9, bit length: 16 bits) The function of each bit differs depending on the inverter. Example) A800 series inverter</p> <ul style="list-style-type: none"> <li>• SP121.b0: AU (Terminal 4 input selection)</li> <li>• SP121.b1: Forward rotation command</li> <li>• SP121.b2: Reverse rotation command</li> <li>• SP121.b3: RL (Low-speed operation command)</li> <li>• SP121.b4: RM (Middle-speed operation command)</li> <li>• SP121.b5: RH (High-speed operation command)</li> <li>• SP121.b6: RT (Second function selection)</li> <li>• SP121.b7: MRS (Output stop)</li> <li>• SP121.b8: JOG (Jog operation selection)</li> <li>• SP121.b9: CS (Selection of automatic restart after instantaneous power failure, flying start)</li> <li>• SP121.b10: STOP (Start self-holding selection)</li> <li>• SP121.b11: RES (Inverter reset)</li> <li>• SP121.b12 to SP121.b15: Not used</li> </ul> <p>To send more than one command simultaneously, convert the binary value of the device (with applicable bits on) to a decimal value, and write the decimal value to SP121. Example) Sending forward rotation command, RL (Low-speed operation command), and JOG (Jog operation selection) simultaneously Binary: 0000000100001010 Decimal: 266 Write 266 to SP121.</p>

#### ■4 Availability of writing/reading data to/from word devices ([FREQROL 800/E700NE(Batch monitor)])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
A	R/-	-/-	-/-	-/-
Pr	R/W	-/-	-/-	-/-
SP <sup>*1</sup>	R/W	-/-	-/-	-/-
TN	R/W	R/W	-/-	-/-
CN	R/W	R/W	-/-	-/-
SN	R/W	R/W	-/-	-/-
D	R/W	R/W	-/-	R/W
SD	R/W	R/W	-/-	R/W

\*1 Only reading is available for SP111 to SP114 and SP117 to SP119.

Only writing is available for SP124 and SP125.

#### ■5 Monitoring-supported double-word devices ([FREQROL 800/E700NE(Batch monitor)])

The following table shows monitoring-supported virtual double-word devices for inverters.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.3.25 ■6 Availability of writing/reading data to/from double-word devices ([FREQROL 800/E700NE(Batch monitor)])

For details on virtual inverter devices, refer to the following.

⇒ 12.3.25 ■7 Virtual inverter devices ([FREQROL 800/E700NE(Batch monitor)])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>		
			Assignment to EG devices	Access using a client	
AL	Faults history	Decimal	0 to 899	×	×
LPr <sup>*2</sup>	Parameter (32-bit)	Decimal	0 to 1500	×	×
OP	Operation parameters	Decimal	0 to 5	×	×
PV	Current value monitor	Decimal	1 to 143	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 If you specify LPr900 to LPr935, the following item is displayed in the device setting dialog.

• [Setting items (for calibration parameters)]: [Bias/gain value], [Analog input value]

Enclose the device number in parentheses when selecting [Analog input value].

Example 1) Notation when [Bias/gain value] is selected: LPr900

Example 2) Notation when [Analog input value] is selected: LPr(900)

When LPr900 or LPr901 (Calibration parameter) is specified, selecting [Bias/gain value] or [Analog input value] does not affect the monitoring target.

## ■6 Availability of writing/reading data to/from double-word devices ([FREQROL 800/E700NE(Batch monitor)])

The following shows the availability of writing/reading data to/from double-word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
AL	-/-	R/-	-/-	-/-
LPr	-/-	R/W	-/-	-/-
OP*1	-/-	R/W	-/-	-/-
PV	-/-	R/-	-/-	-/-

\*1 Only reading is available for OP3.

Only writing is available for OP4 and OP5.

## ■7 Virtual inverter devices ([FREQROL 800/E700NE(Batch monitor)])

The following shows the correspondence between the virtual devices used in the GOT and the inverter data.

For details on the inverter parameters, refer to the following.

⇒ Manual of the inverter used

Virtual device name	Reference
RS*1	⇒ (1) Inverter status monitor ([FREQROL 800/E700NE(Batch monitor)])
WS*1	⇒ (2) Operation command ([FREQROL 800/E700NE(Batch monitor)])
	⇒ (3) Operation when turning on/off the WS devices ([FREQROL 800/E700NE(Batch monitor)])
IOST	⇒ (4) I/O terminal monitor ([FREQROL 800/E700NE(Batch monitor)])
CMD	⇒ (5) Operation command ([FREQROL 800/E700NE(Batch monitor)])
	⇒ (6) Operation when turning on/off one of the CMD3 to CMD12 devices ([FREQROL 800/E700NE(Batch monitor)])
	⇒ (7) Operation when turning on/off one of the CMD48 to CMD52 devices ([FREQROL 800/E700NE(Batch monitor)])
A*1	⇒ (8) Alarm definition ([FREQROL 800/E700NE(Batch monitor)])
Pr*1	⇒ (9) Parameter, parameter (32-bit) ([FREQROL 800/E700NE(Batch monitor)])
SP*1	⇒ (10) Special parameter ([FREQROL 800/E700NE(Batch monitor)])
	⇒ (11) Specifications of SP122 and SP121 ([FREQROL 800/E700NE(Batch monitor)])
AL	⇒ (12) Alarm history ([FREQROL 800/E700NE(Batch monitor)])
LPr	⇒ (9) Parameter, parameter (32-bit) ([FREQROL 800/E700NE(Batch monitor)])
OP	⇒ (13) Operation parameter ([FREQROL 800/E700NE(Batch monitor)])
PV	⇒ (14) Current value monitor ([FREQROL 800/E700NE(Batch monitor)])

\*1 The virtual device is also usable for the controller whose type is [FREQROL 500/700/800, SENSORLESS SERVO] or [FREQROL 800].

Use the device to maintain compatibility when you change the controller type in a project from any of the above ones to [FREQROL 800(Batch monitor)].

When you create a project, use a different device.  
The lists of virtual devices shown in this section explain the FR-A800 Plus series and FR-E800 series models using the following abbreviations.

Series	Abbreviation	Model
FR-A800 Plus series	CRN	FR-A8□0-CRN FR-A8□2-CRN FR-A8□0-E-CRN FR-A8□2-E-CRN
	R2R	FR-A8□0-R2R FR-A8□2-R2R FR-A8□0-E-R2R FR-A8□2-E-R2R
	AWH	FR-A8□0-AWH FR-A8□0-E-AWH
	LC	FR-A8□0-LC FR-A8□0-E-LC
FR-E800 series	E800	FR-E8□0
	E	FR-E8□0-E

### (1) Inverter status monitor ([FREQROL 800/E700NE(Batch monitor)])

Parameter settings may have been changed in the inverter.  
To use the devices, check the parameters and set the parameters as required.

→ Manual of the inverter used

- : Available
- ×: Not available

Virtual device name	Name	FR-A800 series FR-A800 Plus series FR-F800 series	FR-E800 series	FR-E700 series
				FR-E7□0-NE
RS0	RUN (Inverter running)	○*1	○*1	○*1
RS1	During forward rotation	○	○	○
RS2	During reverse rotation	○	○	○
RS3	SU (Up to frequency)	○*1	○	○

WS11*1	RES (Inverter reset)	○*2*3	○*2*3	○*2

\*1 When the GOT is connected to the PU connector and the operation mode is set to the PU operation mode, the device cannot be used.

\*2 The monitor data can be changed by the settings of Pr.180 to Pr.189 (input terminal function selection).  
For the relationship between the parameters and terminals, refer to the following.

⇒ Manual of the inverter used

\*3 The device is invalid for the initial state of the inverter in which a function that cannot be controlled by the GOT is set or no function is set.

Change the relevant setting in Pr.180 to Pr.189 (input terminal function selection).

When using the operation command, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.
When activating WS devices	⇒ (3) Operation when turning on/off the WS devices ([FREQROL 800/E700NE(Batch monitor)])

### (3) Operation when turning on/off the WS devices ([FREQROL 800/E700NE(Batch monitor)])

When you turn on/off one of the WS0 to WS15 devices, the rest of these devices are turned off.

Example) When you turn on WS9

WS0 to WS8 and WS10 to WS15 are turned off.

The following shows the relationship between the inverter's operation commands and WS devices.

The function of each bit differs depending on the inverter.

Example) A800 series inverter

- WS0: AU (Terminal 4 input selection)
- WS1: Forward rotation command
- WS2: Reverse rotation command
- WS3: RL (Low-speed operation command)
- WS4: RM (Middle-speed operation command)

- WS5: RH (High-speed operation command)
- WS6: RT (Second function selection)
- WS7: MRS (Output stop)
- WS8: JOG (Jog operation selection)
- WS9: CS (Selection of automatic restart after instantaneous power failure, flying start)
- WS10: STOP (Start self-holding selection)
- WS11: RES (Inverter reset)

Use SP122 or SP121 to control multiple WS devices simultaneously.

⇒(11) Specifications of SP122 and SP121 ([FREQROL 800/E700NE(Batch monitor)])

#### (4) I/O terminal monitor ([FREQROL 800/E700NE(Batch monitor)])

CMD52	NET X5 input	×	○ *2*3*4	×

\*1 When the GOT is connected to the PU connector and the operation mode is set to the PU operation mode, the device cannot be used.

\*2 The monitor data can be changed by the settings of Pr.180 to Pr.189 (input terminal function selection).  
For the relationship between the parameters and terminals, refer to the following.

⇒ Manual of the inverter used

\*3 The device is invalid for the initial state of the inverter in which a function that cannot be controlled by the GOT is set or no function is set.

Change the relevant setting in Pr.180 to Pr.189 (input terminal function selection).

\*4 Use an inverter having SERIAL (serial No.) "□□211○○○○○" or later.

SERIAL (serial No.) is provided on the rating plate of the inverter.

When using the operation command, note the following.

Precautions	Description
When setting a device for a bit switch	Do not select [Alternate] for [Switch Action] of the bit switch.
Operation when a CMD device is turned on	<p>⇒ (6) Operation when turning on/off one of the CMD3 to CMD12 devices ([FREQROL 800/E700NE(Batch monitor)])</p> <p>(7) Operation when turning on/off one of the CMD48 to CMD52 devices ([FREQROL 800/E700NE(Batch monitor)])</p>

### (6) Operation when turning on/off one of the CMD3 to CMD12 devices ([FREQROL 800/E700NE(Batch monitor)])

The CMD3 to CMD12 devices cannot be controlled simultaneously.

When you turn on/off one of the CMD3 to CMD12 devices, the rest of these devices are turned off.

Use OP4 to control multiple devices from CMD3 to CMD12 simultaneously.

The following shows the relationship between CMD3 to CMD12 and OP4.

Example) Turning on the CMD3 (RL terminal) and CMD12 (RES terminal) devices

For a hexadecimal value, write 0201.

For a decimal value, write 513.

**(7) Operation when turning on/off one of the CMD48 to CMD52 devices ([FREQROL 800/E700NE(Batch monitor)])**

The CMD48 to CMD52 devices cannot be controlled simultaneously.

When you turn on/off one of the CMD48 to CMD52 devices, the rest of these devices are turned off.

Use OP5 to control multiple devices from CMD48 to CMD52 simultaneously.

The following shows the relationship between CMD48 to CMD52 and OP5.

Example) Turning on the CMD48 (NET X1 input) and CMD52 (NET X5 input) devices

For a hexadecimal value, write 0011.

For a decimal value, write 17.

**(8) Alarm definition ([FREQROL 800/E700NE(Batch monitor)])**

○: Available

×: Not available

Virtual device name	Name	FR-A800 series FR-A800 Plus series FR-F800 series	FR-E800 series	FR-E700 series
				FR-E7□0-NE
A0	Second alarm in past	○	○	○
A1	Latest fault	○	○	○
A2	Fourth fault in past	○	○	○
A3	Third fault in past	○	○	○
A4	Sixth fault in past	○	○	○
A5	Fifth fault in past	○	○	○
A6	Eighth fault in past	○	○	○
A7	Seventh fault in past	○	○	○

**(9) Parameter, parameter (32-bit) ([FREQROL 800/E700NE(Batch monitor)])**

The virtual device numbers (Pr and LPr) used in the GOT correspond to the inverter parameter numbers.

For the inverter parameters, refer to the following.

→ Manual of the inverter used

When using a parameter, note the following.

Precautions	Description
When setting 8888 or 9999 to a parameter (Pr) of an inverter	Values 8888 and 9999 are used for particular purposes. To set these values to inverter parameters using the virtual devices, write the following values from the GOT. • To set 8888: 65520 • To set 9999: 65535
When setting 8888 or 9999 to a 32-bit parameter (LPr) of an inverter	Values 8888 and 9999 are used for particular purposes. To set these values to inverter parameters, write the following values to the GOT virtual device. • To set 8888: 8888 • To set 9999: 9999 You are recommended to set the data type to [Real] for a parameter that can accept a value with a fractional part.
When specifying a calibration parameter or PID display	If you specify Pr900 to Pr933 (Calibration parameter), or Pr934 and Pr935 (PID display), whether the value below must be written to SP108 (Second parameter changing) depends on the specified device number and inverter model. • H00: Offset/gain • H01: Analog • H02: Analog value at terminal

## (10)Special parameter ([FREQROL 800/E700NE(Batch monitor)])

\*1 When the GOT is connected to the PU connector and the operation mode is set to the PU operation mode, SP121.b1, SP121.b2, SP122.b1, and SP122.b2 can be used.

For the specifications of SP122 and SP121, refer to the following.

→(11) Specifications of SP122 and SP121 ([FREQROL 800/E700NE(Batch monitor)])

## (11)Specifications of SP122 and SP121 ([FREQROL 800/E700NE(Batch monitor)])

SP122 and SP121 are the GOT's virtual devices corresponding to the inverter's operation commands.

The following shows the specifications of SP122 and SP121.

SP device	Specifications
SP122	<p>The function of each bit differs depending on the inverter. Example) A800 series inverter</p> <ul style="list-style-type: none"> <li>• SP122.b0: AU (Terminal 4 input selection)</li> <li>• SP122.b1: Forward rotation command</li> <li>• SP122.b2: Reverse rotation command</li> <li>• SP122.b3: RL (Low-speed operation command)</li> <li>• SP122.b4: RM (Middle-speed operation command)</li> <li>• SP122.b5: RH (High-speed operation command)</li> <li>• SP122.b6: RT (Second function selection)</li> <li>• SP122.b7: MRS (Output stop)</li> <li>• SP122.b8 to b15: Fixed to 0</li> </ul> <p>SP122 (virtual device) is used to maintain compatibility when you change the controller type from [FREQROL 500/700/800, SENSORLESS SERVO] or [FREQROL 800] to [FREQROL 800/E700NE(Batch monitor)]. When [FREQROL 800/E700NE(Batch monitor)] is set, writing a value to SP122 clears each bit of SP122.b8 to SP122.b15.</p> <p>To send more than one command simultaneously, convert the binary value of the bits to be turned on to a decimal value, and write the decimal value to SP122. Example) Sending forward rotation command and RL (Low-speed operation command) simultaneously Binary: 0000000000001010 Decimal: 10 Write 10 to SP122.</p>

SP device	Specifications
SP121	<p>The function of each bit differs depending on the inverter. Example) A800 series inverter</p> <ul style="list-style-type: none"> <li>• SP121.b0: AU (Terminal 4 input selection)</li> <li>• SP121.b1: Forward rotation command</li> <li>• SP121.b2: Reverse rotation command</li> <li>• SP121.b3: RL (Low-speed operation command)</li> <li>• SP121.b4: RM (Middle-speed operation command)</li> <li>• SP121.b5: RH (High-speed operation command)</li> <li>• SP121.b6: RT (Second function selection)</li> <li>• SP121.b7: MRS (Output stop)</li> <li>• SP121.b8: JOG (Jog operation selection)</li> <li>• SP121.b9: CS (Selection of automatic restart after instantaneous power failure, flying start)</li> <li>• SP121.b10: STOP (Start self-holding selection)</li> <li>• SP121.b11: RES (Inverter reset)</li> </ul> <p>To send more than one command simultaneously, convert the binary value of the device (with applicable bits on) to a decimal value, and write the decimal value to SP121. Example) Sending forward rotation command, RL (Low-speed operation command), and JOG (Jog operation selection) simultaneously Binary: 000000100001010 Decimal: 266 Write 266 to SP121.</p>

\*1 When the GOT is connected to the PU connector and the operation mode is set to the PU operation mode, the device cannot be used.

\*2 The monitor data can be changed by the settings of Pr.180 to Pr.189 (input terminal function selection).  
For the relationship between the parameters and terminals, refer to the following.

⇒Manual of the inverter used

\*3 The device is invalid for the initial state of the inverter in which a function that cannot be controlled by the GOT is set or no function is set.

Change the relevant setting in Pr.180 to Pr.189 (input terminal function selection).

\*4 Use an inverter having SERIAL (serial No.) "□□211○○○○○" or later.

SERIAL (serial No.) is provided on the rating plate of the inverter.

## 12.3.26 [Laser Displacement Sensor MH11]

GT27 GT25 GT23 **GT21** SoftGOT2000 GS25 GS21

Only available to GT2104-PMBDS2.

Item	Reference
Specifications of bit devices	→ ■1 Monitoring-supported bit devices ([Laser Displacement Sensor MH11])
	→ ■2 Availability of writing/reading data to/from bit devices ([Laser Displacement Sensor MH11])
Specifications of word devices	→ ■3 Monitoring-supported word devices ([Laser Displacement Sensor MH11])
	→ ■4 Availability of writing/reading data to/from word devices ([Laser Displacement Sensor MH11])

### ■1 Monitoring-supported bit devices ([Laser Displacement Sensor MH11])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.26 ■2 Availability of writing/reading data to/from bit devices ([Laser Displacement Sensor MH11])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
R	Internal relay	Decimal + hexadecimal R(Word address)(Bit address) Notation example: R100F • Word address (DEC): 000 to 999 • Bit address (HEX): 0 to F	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■2 Availability of writing/reading data to/from bit devices ([Laser Displacement Sensor MH11])

The following shows the availability of writing/reading data to/from bit devices by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
R	R/W	-/	-/	-/	-/

### ■3 Monitoring-supported word devices ([Laser Displacement Sensor MH11])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.3.26 ■4 Availability of writing/reading data to/from word devices ([Laser Displacement Sensor MH11])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>		
			Assignment to EG devices	Access using a client	
DT	Data register	Decimal	0 to 99999	○	○
WR	Internal relay	Decimal	000 to 999	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■4 Availability of writing/reading data to/from word devices ([Laser Displacement Sensor MH11])

The following shows the availability of writing/reading data to/from word devices by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
DT	R/W	R/W	-/-	R/W
WR	R/W	R/W	-/-	-/-

## 12.4 Device Range and Settings of Each Controller

This section describes the range of devices settable in GT Designer3 for each of non-Mitsubishi Electric products connected to the GOT.

The settable range varies with the selection for [Controller Type] in the [Controller Setting] window.

Configure the device setting according to the specifications of the controller to be used.

Device specifications differ depending on the controller model even among the controllers of the same series.

If a non-existent device or a device number out of the range is set for an object, other objects for which correct devices are set may not be monitored.

- 12.4.1 IAI equipment ([IAI X-SEL Controller])
- 12.4.2 IAI equipment ([IAI ROBO CYLINDER])
- 12.4.3 AZBIL equipment ([Azbil SDC/DMC])
- 12.4.4 AZBIL equipment ([Azbil DMC50])
- 12.4.5 OMRON equipment ([OMRON SYSMAC])
- 12.4.6 OMRON equipment ([OMRON NJ/NX])
- 12.4.7 OMRON equipment ([OMRON THERMAC/INPANEL NEO])
- 12.4.8 OMRON equipment ([OMRON Digital Temperature Controller])
- 12.4.9 KEYENCE equipment ([KEYENCE KV-700/1000/3000/5000/7000/8000])
- 12.4.10 KOYO EI equipment ([KOYO KOSTAC/DL])
- 12.4.11 JTEKT equipment ([JTEKT TOYOPUC-PC])
- 12.4.12 SHARP equipment ([SHARP JW])
- 12.4.13 SHINKO equipment ([Shinko Technos Controller])
- 12.4.14 CHINO equipment ([CHINO MODBUS device])
- 12.4.15 TOSHIBA equipment ([TOSHIBA PROSEC T/V])
- 12.4.16 TOSHIBA equipment ([TOSHIBA Unified Controller nv])
- 12.4.17 SHIBAURA MACHINE equipment ([SHIBAURA MACHINE TCmini])
- 12.4.18 PANASONIC equipment ([Panasonic MINAS A4])
- 12.4.19 PANASONIC equipment ([Panasonic MINAS A5])
- 12.4.20 PANASONIC IDS equipment ([Panasonic MEWNET-FP])
- 12.4.21 PANASONIC IDS equipment ([Panasonic FP7])
- 12.4.22 HITACHI IES equipment ([HITACHI IES EHV])
- 12.4.23 HITACHI IES equipment ([HITACHI IES HIDIC H])
- 12.4.24 HITACHI equipment ([HITACHI S10VE])
- 12.4.25 HITACHI equipment ([HITACHI S10mini/S10V])
- 12.4.26 HIRATA equipment ([Hirata HNC])
- 12.4.27 FUJI equipment ([FUJI Temperature Controller/Digital Controller])
- 12.4.28 FUJI equipment ([FUJI MICREX-F])
- 12.4.29 FUJI equipment ([FUJI MICREX-SX SPH])
- 12.4.30 MURATEC equipment ([Muratec MPC/MCR])
- 12.4.31 YASKAWA equipment ([YASKAWA GL/PROGIC8])
- 12.4.32 YASKAWA equipment ([YASKAWA CP9200(H)])
- 12.4.33 YASKAWA equipment ([YASKAWA CP9300MS(MC compatible)])
- 12.4.34 YASKAWA equipment ([YASKAWA MP2000/MP900/CP9200SH])
- 12.4.35 YASKAWA equipment ([YASKAWA MP3000])
- 12.4.36 YASKAWA equipment ([YASKAWA Robot Controller])
- 12.4.37 YOKOGAWA equipment ([YOKOGAWA STARDOM/FA500/FA-M3])
- 12.4.38 YOKOGAWA equipment ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])
- 12.4.39 RKC equipment ([RKC SR Mini HG])
- 12.4.40 ALLEN-BRADLEY equipment ([AB SLC500])
- 12.4.41 ALLEN-BRADLEY equipment ([AB MicroLogix])

## 1 Device setting dialog ([IAI X-SEL Controller])

Set a device to be monitored.

### 1) Title

Data type and channel number of the device to be set

### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of IP000

### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### 4) [Switch to the device define dialog] button

You can open the device definition setting dialog to check the definition of the device.

→ 6.1.6 ■ 6 Device definition setting dialog

## 2 Monitoring-supported bit devices ([IAI X-SEL Controller])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.1 ■ 3 Availability of writing/reading data to/from bit devices ([IAI X-SEL Controller])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
IP	Input Port	Decimal	000 to 299	○	×
OP	Output Port	Decimal	300 to 599	○	×
FG	Flag	Decimal	FG(Program No.):(Flag No.) Notation example: FG000:899	○	×
			Global area		
			Local area		
			<ul style="list-style-type: none"> <li>• Program No. (decimal): 001 to 128</li> <li>• Flag No. (decimal): 900 to 999</li> </ul>		
PCLR	Point Data Clear	Hexadecimal	0001 to 4E20	○	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from bit devices ([IAI X-SEL Controller])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
IP	R/-	-/-	R/-	-/-	-/-
OP	R/W	-/-	R/W	-/-	-/-
FG	R/W	-/-	R/W	-/-	-/-
PCLR*1	-/W	-/-	-/W	-/-	-/-

\*1 When a word device is specified, only 1 can be set for the rightmost digit of the device number.

### ■4 Monitoring-supported word devices ([IAI X-SEL Controller])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.1 ■15 Availability of writing/reading data to/from word devices ([IAI X-SEL Controller])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1		
				Assignment to EG devices	Access using a client	
PDT	Point Data Total Count	Decimal	0	×	×	
STR	String	Decimal	STR(Program No.):(Variable No.) Notation example: STR000:998	○	×	
			Global area			<ul style="list-style-type: none"> <li>• Program No. (decimal): 000</li> <li>• Variable No. (decimal): 300 to 998 (even numbers only)</li> </ul>
			Local area			<ul style="list-style-type: none"> <li>• Program No. (decimal): 001 to 128</li> <li>• Variable No. (decimal): 001 to 299 (odd numbers only)</li> </ul>
AXST	Axis Status	Hexadecimal	⇒ 12.4.1 ■5 Axis Status device details ([IAI X-SEL Controller])	○	×	
SAXS0	Scara Axis Status 0 (Base coordinate system)	Hexadecimal	⇒ 12.4.1 ■6 Scara Axis Status device details ([IAI X-SEL Controller])	○	×	
SAXS1	Scara Axis Status 1 (Selected work coordinate system)	Hexadecimal	⇒ 12.4.1 ■6 Scara Axis Status device details ([IAI X-SEL Controller])	○	×	
SAXS2	Scara Axis Status 2 (Reserved for system use)	Hexadecimal	⇒ 12.4.1 ■6 Scara Axis Status device details ([IAI X-SEL Controller])	○	×	
SAXS3	Scara Axis Status 3 (Each axis system)	Hexadecimal	⇒ 12.4.1 ■6 Scara Axis Status device details ([IAI X-SEL Controller])	○	×	
VR0	Version 0 (Main CPU application)	Hexadecimal	⇒ 12.4.1 ■7 Version device details ([IAI X-SEL Controller])	○	×	
VR1	Version 1 (Main CPU core)	Hexadecimal	⇒ 12.4.1 ■7 Version device details ([IAI X-SEL Controller])	○	×	
VR2	Version 2 (Driver CPU)	Hexadecimal	⇒ 12.4.1 ■7 Version device details ([IAI X-SEL Controller])	○	×	
VR3	Version 3 (Mount SIO)	Hexadecimal	⇒ 12.4.1 ■7 Version device details ([IAI X-SEL Controller])	○	×	

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
PGST	Program Status	Decimal	⇒ 12.4.1 ■8 Program Status device details ([IAI X-SEL Controller])	○	×
SYST	System Status	Decimal	⇒ 12.4.1 ■9 System Status device details ([IAI X-SEL Controller])	○	×
PRG*2	Program Control	Decimal	000 to 128	○	×
AR	Alarm Reset	Decimal	0	×	×
SR*3	Software Reset	Decimal	0	×	×
DSR	Drive-Source Recovery	Decimal	0	×	×
OPR	Operation-Pause Reset	Decimal	0	×	×
SV*4	Servo	Decimal	⇒ 12.4.1 ■10 Servo device details ([IAI X-SEL Controller])	○	×
FRW*4	Write to Flash ROM	Decimal	⇒ 12.4.1 ■11 Write to Flash ROM device details ([IAI X-SEL Controller])	○	×
RO*4	Return to Origin	Decimal	⇒ 12.4.1 ■12 Return to Origin device details ([IAI X-SEL Controller])	○	×
PNM*4	Point Number Movement	Decimal	⇒ 12.4.1 ■13 Point Number Movement device details ([IAI X-SEL Controller])	○	×
OSC*4	Operation Stop/Cancel	Decimal	⇒ 12.4.1 ■14 Operation Stop/Cancel device details ([IAI X-SEL Controller])	○	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 For the program control device, the command to be sent differs depending on the write data.

Write data other than the followings are processed as an internal error of the GOT.

- Write data 0: Program Exit Command (0x254)
- Write data 1: Program Execution Command (0x253)
- Write data 2: Program Pause Command (0x255)
- Write data 3: Program 1 Step Execution Command (0x256)
- Write data 4: Program Restart Command (0x257)

\*3 When software reset is performed, a no response error is displayed after a non-communicating period of ten and several seconds, and then the communication is resumed.

\*4 For the device whose obtained data No.0 is a command trigger, a request is sent to the controller when the Write or Read is input to the command trigger.

It is not sent when the Clear is input.

## ■5 Axis Status device details ([IAI X-SEL Controller])

### (1) Axis Status device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Axis Status	AXST(Obtained data) Notation example: AXST00

The axis status device format includes the following elements.

Item	Description	
Obtained data	Setting range	00 to 2F
	Device No. representation	Hexadecimal
	Explanation	For the device definitions, refer to the following. ⇒ 12.4.1 ■5 (2) Axis Status device definition ([IAI X-SEL Controller])

## (2) Axis Status device definition ([IAI X-SEL Controller])

Obtained data	Device definition
00	<p>- Single-axis: Axis Status</p> <p>b0 Servo axis in use            • 0: Not in use            • 1: In use (moving or others)            "Servo axis in use" indicates that a given task has the right to use the applicable axis. Therefore, this bit will turn on in the following conditions.            • When an operation command involving axis movement is in progress (including when an axis is moving)            • Servo is starting up from an OFF state            • Servo is shutting down from an ON state (excluding emergency stop)            • Operation axis is paused</p> <p>b1 to b2 Return to Origin            • 0: Not yet performed            • 1: Returning to origin            • 2: Completed</p> <p>b3 Servo            • 0: OFF            • 1: ON</p> <p>b4 Operation command successful completion            • 0: Not yet complete            • 1: Completed successfully            This can be used only to check the completion of the operation command.</p> <p>b5 Push error detection            • 0: Not detected            • 1: Detected</p> <p>b6 to b7 Reserved for system use</p>
01	<p>- Single-axis: Axis sensor input status</p> <p>b0 Creep sensor            • 0: OFF            • 1: ON</p> <p>b1 Overrun sensor            • 0: OFF            • 1: ON</p> <p>b2 Origin sensor            • 0: OFF            • 1: ON</p> <p>b3 Reserved for system use</p>
02	Single-axis: Axis error code
03	<p>- Single-axis: Encoder status</p> <p>b0 Overspeed (OS)</p> <p>b1 Full absolute status (FS)</p> <p>b2 Count error (CE)</p> <p>b3 Counter overflow (OF)</p> <p>b4 Reserved for system use</p> <p>b5 Multi-rotation error (ME)</p> <p>b6 Battery error (BE)</p> <p>b7 Battery alarm (BA)</p>
04	Single-axis: Current position (lower 16 bits) unit (0.001 mm) Indicates the lower 16 bits of the current position in hexadecimal.
05	Single-axis Current position (upper 16 bits) unit (0.001 mm) Indicates the upper 16 bits of the current position in hexadecimal.
06 to 0B	Double axes data For the device definitions, refer to the definitions of the single-axis status (00 to 05).
:	:
2A to 2F	Eight axes status For the device definitions, refer to the definitions of the single-axis status (00 to 05).

## ■6 Scara Axis Status device details ([IAI X-SEL Controller])

### (1) Scara Axis Status device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Scara Axis Status 0 (Base coordinate system)	SAXS0(Obtained data) Notation example: SAXS004
Scara Axis Status 1 (Selected work coordinate system)	SAXS1(Obtained data) Notation example: SAXS104
Scara Axis Status 2 (Reserved for system use)	SAXS2(Obtained data) Notation example: SAXS204
Scara Axis Status 3 (Each axis system)	SAXS3(Obtained data) Notation example: SAXS304

The SCARA axis status device formats include the following elements.

Item	Description	
Obtained data	Setting range	00 to FF
	Device No. representation	Hexadecimal
	Explanation	For the device definitions, refer to the following. → 12.4.1 ■6 (2) Scara Axis Status device definition ([IAI X-SEL Controller])

### (2) Scara Axis Status device definition ([IAI X-SEL Controller])

Obtained data	Device definition	
00	Work coordinate system selection number	
01	Tool coordinate system selection number	
02	-	Common axis status
	b0 to b1	Scara axis current arm system <ul style="list-style-type: none"> <li>• 0: Base coordinate system</li> <li>• 1: Selected work coordinate system</li> <li>• 2: Reserved for system use</li> <li>• 3: Each axis system</li> </ul>
	b2 to b3	Scara axis current position coordinate system type <ul style="list-style-type: none"> <li>• 0: Right arm system</li> <li>• 1: Left arm system</li> <li>• 2: Indeterminable</li> <li>• 3: Reserved for system use</li> </ul>
	b4 to b7	Reserved for system use
03	Axis pattern	

Obtained data	Device definition	
04	-	Single-axis: Axis Status
	b0	Servo axis in use <ul style="list-style-type: none"> <li>• 0: Not in use</li> <li>• 1: In use (moving or others)</li> </ul> "Servo axis in use" indicates that a given task has the right to use the applicable axis. Therefore, this bit will turn on in the following conditions. <ul style="list-style-type: none"> <li>• When an operation command involving axis movement is in progress (including when an axis is moving)</li> <li>• Servo is starting up from an OFF state</li> <li>• Servo is shutting down from an ON state (excluding emergency stop)</li> <li>• Operation axis is paused</li> </ul>
	b1 to b2	Return to Origin <ul style="list-style-type: none"> <li>• 0: Not yet performed</li> <li>• 1: Returning to origin</li> <li>• 2: Completed</li> </ul>
	b3	Servo <ul style="list-style-type: none"> <li>• 0: OFF</li> <li>• 1: ON</li> </ul>
	b4	Operation command successful completion <ul style="list-style-type: none"> <li>• 0: Not yet complete</li> <li>• 1: Completed successfully</li> </ul> This can be used only to check the completion of the operation command. For positioning that includes any of the X, Y and R axes, make sure to check completion for all of the X, Y and R axes.
	b5	Push error detection <ul style="list-style-type: none"> <li>• 0: Not detected</li> <li>• 1: Detected</li> </ul>
	b6 to b7	Reserved for system use
05	-	Single-axis: Axis sensor input status
	b0	Creep sensor <ul style="list-style-type: none"> <li>• 0: OFF</li> <li>• 1: ON</li> </ul>
	b1	Overrun sensor <ul style="list-style-type: none"> <li>• 0: OFF</li> <li>• 1: ON</li> </ul>
	b2	Origin sensor <ul style="list-style-type: none"> <li>• 0: OFF</li> <li>• 1: ON</li> </ul>
	b3	Reserved for system use
06		Single-axis: Axis error code
07	-	Single-axis: Encoder status
	b0	Overspeed (OS)
	b1	Full absolute status (FS)
	b2	Count error (CE)
	b3	Counter overflow (OF)
	b4	Reserved for system use
	b5	Multi-rotation error (ME)
	b6	Battery error (BE)
	b7	Battery alarm (BA)
08		Single-axis: Current position (lower 16 bits) unit (0.001 mm or 0.001 deg) Indicates the lower 16 bits of the current position in hexadecimal.
09		Single-axis: Current position (upper 16 bits) unit (0.001 mm or 0.001 deg) Indicates the upper 16 bits of the current position in hexadecimal.
0A to 0F		Double axes data For the device definitions, refer to the definitions of the single-axis status (04 to 09).
:		:
2E to 33		Eight axes data For the device definitions, refer to the definitions of the single-axis status (04 to 09).
34 to FF		Reserved for system use

## ■7 Version device details ([IAI X-SEL Controller])

### (1) Version device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Version 0 (Main CPU application)	VR0(Device No.):(Obtained data) Notation example: VR0F:0
Version 1 (Main CPU core)	VR1(Device No.):(Obtained data) Notation example: VR1F:0
Version 2 (Driver CPU)	VR2(Device No.):(Obtained data) Notation example: VR2F:0
Version 3 (Mount SIO)	VR3(Device No.):(Obtained data) Notation example: VR3F:0

The version device formats include the following elements.

Item	Description	
Device No.	Setting range	0 to F
	Device No. representation	Hexadecimal
Obtained data	Setting range	0 to F
	Device No. representation	Hexadecimal
	Explanation	For the device definitions, refer to the following. → 12.4.1 ■7 (2) Version device definition ([IAI X-SEL Controller])

### (2) Version device definition ([IAI X-SEL Controller])

Obtained data	Device definition
0	Model code
1	Unit code
2	Version number
3	Time (year)
4	Time (month)
5	Time (day)
6	Time (hour)
7	Time (min)
8	Time (sec)
9 to F	Reserved for system use

## ■8 Program Status device details ([IAI X-SEL Controller])

### (1) Program Status device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Program Status	PGST (Obtained data) Notation example: PGST000

The program status format includes the following elements.

Item	Description	
Obtained data	Setting range	000 to 511
	Device No. representation	Decimal
	Explanation	For the device definitions, refer to the following. → 12.4.1 ■8 (2) Program Status device definition ([IAI X-SEL Controller])

## (2) Program Status device definition ([IAI X-SEL Controller])

Obtained data	Device definition	
000	-	Program number 1: Status
	b0	Startup • 0: Not started • 1: Started
	b1 to b3	Reserved for system use
001	Program number 1: Execution program step number	
002	Program number 1: Program-dependent error code	
003	Program number 1: Error occurrence step number	
004 to 007	Data of program number 2 For the device definitions, refer to the definitions of Program number 1 (000 to 003).	
:	:	
508 to 511	Data of program number 128 For the device definitions, refer to the definitions of Program number 1 (000 to 003).	

## ■9 System Status device details ([IAI X-SEL Controller])

### (1) System Status device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
System Status	SYST(Obtained data) Notation example: SYST0

The system status device format includes the following elements.

Item	Description	
Obtained data	Setting range	0 to 6
	Device No. representation	Decimal
	Explanation	For the device definitions, refer to the following. ⇒ 12.4.1 ■9 (2) System Status device definition ([IAI X-SEL Controller])

### (2) System Status device definition ([IAI X-SEL Controller])

Obtained data	Device definition
0	System mode • 0: Indeterminable • 1: AUTO mode • 2: MANUAL mode • 3: Slave update mode • 4: Core update mode
1	Critical level system error number
2	Latest system error number

Obtained data	Device definition	
3	-	System status byte 1
	b0	Operation mode switch status • 0: AUTO • 1: MANUAL
	b1	TP enable switch status • 0: ON • 1: OFF X-SEL (P/Q series) (Multi axes/Scara)/ SSEL / ASEL / PSEL: This bit is disabled (fixed to 0).
	b2	Safety gate status • 0: CLOSE • 1: OPEN X-SEL (P/Q series) (Multi axes/Scara) / SSEL / ASEL / PSEL: This bit indicates the status of the enable switch or deadman switch.
	b3	Emergency stop switch status • 0: No emergency stop • 1: Emergency stop
	b4	Power error status • 0: Normal • 1: Error
	b5	Battery voltage low warning status • 0: Not low • 1: Low
	b6	Battery voltage error status • 0: No error • 1: Error
	b7	Reserved for system use
4	-	System status byte 2
	b0	Application data flash ROM write status • 0: Not writing/erasing • 1: Writing/erasing When the core program is in operation (Application update mode), only Bit 0 is enabled. Data for System mode, Critical level system error number, Latest system error number, System status byte 1, System status byte 3 and System status byte 4 is disabled.
	b1	Slave parameter writing status • 0: Not writing • 1: Writing
	b2	Servo interlock status • 0: No interlock • 1: Interlock
	b3	I/O interlock status • 0: No interlock • 1: Interlock
	b4	Restart wait status • 0: Not waiting • 1: Waiting
	b5	Program run status • 0: Not run • 1: Running
	b6 to b7	Reserved for system use

Obtained data	Device definition	
5	-	System status byte 3
	b0	Drive-source cutoff status • 0: Not cut off • 1: Cut off
	b1	System operation status • 0: Not operating in AUTO mode • 1: Operating in AUTO mode
	b2	System ready status • 0: Not ready • 1: Ready
	b3	Reserved for system use
	b4	Operation mode • 0: Program mode • 1: Position mode
	b5 to b7	Reserved for system use
6	System status byte 4 Reserved for system use	

## ■ 10 Servo device details ([IAI X-SEL Controller])

### (1) Servo device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Servo	SV(Obtained data) Notation example: SV0

The servo device format includes the following elements.

Item	Description	
Obtained data	Setting range	0 to 2
	Device No. representation	Decimal
	Explanation	For the device definitions, refer to the following. → 12.4.1 ■ 10 (2) Servo device definition ([IAI X-SEL Controller])

### (2) Servo device definition ([IAI X-SEL Controller])

Obtained data	Device definition	
0	Servo: Command trigger • 1: Write • 4: Clear	
1	Servo: Axis pattern  	
2	-	Servo: Operation type
	b0	Servo ON/OFF • 0: OFF • 1: ON
	b1 to b3	Reserved for system use Fixed to 0

## ■11 Write to Flash ROM device details ([IAI X-SEL Controller])

### (1) Write to Flash ROM device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Write to Flash ROM	FRW(Obtained data) Notation example: FRW0

The write to flash ROM device format includes the following elements.

Item	Description	
Obtained data	Setting range	0 to 1
	Device No. representation	Decimal
	Explanation	For the device definitions, refer to the following. ⇒ 12.4.1 ■11 (2) Write to Flash ROM device definition ([IAI X-SEL Controller])

### (2) Write to Flash ROM device definition ([IAI X-SEL Controller])

Obtained data	Device definition
0	Write to Flash ROM: Command trigger • 1: Write
1	Reserved for system use

## ■12 Return to Origin device details ([IAI X-SEL Controller])

### (1) Return to Origin device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Return to Origin	RO(Obtained data) Notation example: RO0

The return to origin device format includes the following elements.

Item	Description	
Obtained data	Setting range	0 to 3
	Device No. representation	Decimal
	Explanation	For the device definitions, refer to the following. ⇒ 12.4.1 ■12 (2) Return to Origin device definition ([IAI X-SEL Controller])

### (2) Return to Origin device definition ([IAI X-SEL Controller])

Obtained data	Device definition									
0	Return to Origin: Command trigger • 1: Write • 4: Clear									
1	Return to Origin: Axis pattern For the XSEL-JX/KX/KTX/PX/QX series controller, specify a linear drive axis only.  Bit <table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>-</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td> </tr> </table> <div style="display: inline-block; vertical-align: middle; margin-left: 10px;"> <p>1st axis</p> <p>8th axis</p> <p>Reserved for system use</p> </div>	-	7	6	5	4	3	2	1	0
-	7	6	5	4	3	2	1	0		
2	Return to Origin: End search speed unit (mm/sec) When it is zero, the parameter value is enabled.									
3	Return to Origin: Creep speed unit (mm/sec) When it is zero, the parameter value is enabled.									

## ■ 13 Point Number Movement device details ([IAI X-SEL Controller])

### (1) Point Number Movement device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Point Number Movement	PNM(Obtained data) Notation example: PNM0

The point number movement device format includes the following elements.

Item	Description	
Obtained data	Setting range	0 to 5
	Device No. representation	Decimal
	Explanation	For the device definitions, refer to the following. ⇒ 12.4.1 ■ 13 (2) Point Number Movement device definition ([IAI X-SEL Controller])

### (2) Point Number Movement device definition ([IAI X-SEL Controller])

Obtained data	Device definition
0	Point Number Movement: Command trigger • 1: Write • 4: Clear
1	Point Number Movement: Axis pattern 
2	Point Number Movement: Acceleration unit (0.01 G) When the setting value of the acceleration is zero, the relevant setting value of the position data is effective. When the setting value of the acceleration and the relevant setting value are both zero, the parameter value is effective.
3	Point Number Movement: Deceleration unit (0.01 G) When the setting value of the deceleration is zero, the relevant setting value of the position data is effective. When the setting value of the deceleration and the relevant setting value are both zero, the parameter value is effective.
4	Point Number Movement: Speed unit (mm/sec) When the setting value of the speed is zero, the relevant setting value of the position data is effective. When the setting value of the speed and the relevant setting value are both zero, the parameter value is effective. The safety limit value is applied depending on the mode.
5	Point Number Movement: Point number

## ■ 14 Operation Stop/Cancel device details ([IAI X-SEL Controller])

### (1) Operation Stop/Cancel device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Operation Stop/Cancel	OSC(Obtained data) Notation example: OSC0

The operation stop/cancel device format includes the following elements.

Item	Description	
Obtained data	Setting range	0 to 2
	Device No. representation	Decimal
	Explanation	For the device definitions, refer to the following. ⇒ 12.4.1 ■ 14 (2) Operation Stop/Cancel device definition ([IAI X-SEL Controller])

## (2) Operation Stop/Cancel device definition ([IAI X-SEL Controller])

Obtained data	Device definition	
0	Operation Stop/Cancel: Command trigger <ul style="list-style-type: none"> <li>• 1: Write</li> <li>• 4: Clear</li> </ul>	
1	Operation Stop/Cancel: Stop axis pattern Including during-interlock-pending servo command cancelation 	
2	-	Operation Stop/Cancel: Additional command
	b0	During-interlock-pending output (out port) (during all operation pause) cancellation instruction <ul style="list-style-type: none"> <li>• 0: Non-cancellation</li> <li>• 1: Temporary cancellation</li> </ul>
	b1 to b7	Reserved for system use Fixed to 0

### ■ 15 Availability of writing/reading data to/from word devices ([IAI X-SEL Controller])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PDT	R/-	-/-	-/-	-/-
STR	R/W	-/-	-/-	-/-
AXST	R/-	-/-	-/-	-/-
SAXS0	R/-	-/-	-/-	-/-
SAXS1	R/-	-/-	-/-	-/-
SAXS2	R/-	-/-	-/-	-/-
SAXS3	R/-	-/-	-/-	-/-
VR0	R/-	-/-	-/-	-/-
VR1	R/-	-/-	-/-	-/-
VR2	R/-	-/-	-/-	-/-
VR3	R/-	-/-	-/-	-/-
PGST	R/-	-/-	-/-	-/-
SYST	R/-	-/-	-/-	-/-
PRG	-/W	-/-	-/-	-/-
AR	-/W	-/-	-/-	-/-
SR	-/W	-/-	-/-	-/-
DSR	-/W	-/-	-/-	-/-
OPR	-/W	-/-	-/-	-/-
SV	R/W	-/-	-/-	-/-
FRW	-/W	-/-	-/-	-/-
RO	R/W	-/-	-/-	-/-
PNM	R/W	-/-	-/-	-/-
OSC	R/W	-/-	-/-	-/-

### ■ 16 Monitoring-supported double-word devices ([IAI X-SEL Controller])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

➡ 12.4.1 ■22 Availability of writing/reading data to/from double-word devices ([IAI X-SEL Controller])

For the formats of devices, refer to the following.

➡ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1			
			Assignment to EG devices	Access using a client		
CD0	Coordinate Affiliate Data 0 (Work coordinate system definition data)	Hexadecimal	➡ 12.4.1 ■17 Coordinate Affiliate Data device details ([IAI X-SEL Controller])	×	×	
CD1	Coordinate Affiliate Data 1 (Tool coordinate system definition data)	Hexadecimal	➡ 12.4.1 ■17 Coordinate Affiliate Data device details ([IAI X-SEL Controller])	×	×	
INT	Integer	Decimal	INT(Program No.);(Variable No.) Notation example: INT128:0200	×	×	
			Global area			<ul style="list-style-type: none"> <li>• Program No. (decimal): 000</li> <li>• Variable No. (decimal): 0200 to 0299, 1200 to 1299</li> </ul>
			Local area			<ul style="list-style-type: none"> <li>• Program No. (decimal): 001 to 128</li> <li>• Variable No. (decimal): 0001 to 0099, 1001 to 1099</li> </ul>
RL	Real	Decimal	RL(Program No.);(Variable No.) Notation example: RL000:1399	×	×	
			Global area			<ul style="list-style-type: none"> <li>• Program No. (decimal): 000</li> <li>• Variable No. (decimal): 0300 to 0399, 1300 to 1399</li> </ul>
			Local area			<ul style="list-style-type: none"> <li>• Program No. (decimal): 001 to 128</li> <li>• Variable No. (decimal): 0100 to 0199, 1100 to 1199</li> </ul>
ER0	Error Detail 0 (System error)	Hexadecimal	➡ 12.4.1 ■18 Error Detail device details ([IAI X-SEL Controller])	×	×	
ER1	Error Detail 1 (Axis-specific error)	Hexadecimal	➡ 12.4.1 ■18 Error Detail device details ([IAI X-SEL Controller])	×	×	
ER2	Error Detail 2 (Program-specific error)	Hexadecimal	➡ 12.4.1 ■18 Error Detail device details ([IAI X-SEL Controller])	×	×	
ER3	Error Detail 3 (Error in error list record)	Hexadecimal	➡ 12.4.1 ■18 Error Detail device details ([IAI X-SEL Controller])	×	×

ER7	Error Detail 7 (Reserved for system use)	Hexadecimal	➡ 12.4.1 ■18 Error Detail device details ([IAI X-SEL Controller])	×	×	
PD	Point Data	Hexadecimal	➡ 12.4.1 ■19 Point Data device details ([IAI X-SEL Controller])	×	×	
SD	Simple Interference Check Zone Data	Hexadecimal	➡ 12.4.1 ■20 Simple Interference Check Zone Data device details ([IAI X-SEL Controller])	×	×	
JIM	Jogging/Inching Movement	Decimal	➡ 12.4.1 ■21 Jogging/Inching Movement device details ([IAI X-SEL Controller])	×	×	

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

➡ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 For the device whose obtained data No.0 is a command trigger, a request is sent to the controller when the Write or Read is input to the command trigger.

It is not sent when the Clear is input.

## ■17 Coordinate Affiliate Data device details ([IAI X-SEL Controller])

### (1) Coordinate Affiliate Data device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Coordinate Affiliate Data 0 (Work coordinate system definition data)	CD0(Definition data No.):(Obtained data) Notation example: CD0FF:0
Coordinate Affiliate Data 1 (Tool coordinate system definition data)	CD1(Definition data No.):(Obtained data) Notation example: CD1FF:0

The Coordinate Affiliate Data device formats include the following elements.

Item	Description	
Definition data number	Setting range	00 to FF
	Device No. representation	Hexadecimal
Obtained data	Setting range	0 to F
	Device No. representation	Hexadecimal
	Explanation	For the device definitions, refer to the following. → 12.4.1 ■17 (2) Coordinate Affiliate Data device definition ([IAI X-SEL Controller])

### (2) Coordinate Affiliate Data device definition ([IAI X-SEL Controller])

Obtained data	Device definition
0	X axis coordinate offset
1	Y axis coordinate offset
2	Z axis coordinate offset
3	R axis coordinate offset
4 to F	Reserved for system use

## ■18 Error Detail device details ([IAI X-SEL Controller])

### (1) Error Detail device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Error Detail 0 (System error)	ER0(Type2):(Reserved for system use):(Obtained data) Notation example: ER0FF:000:00
Error Detail 1 (Axis-specific error)	ER1(Type2):(Reserved for system use):(Obtained data) Notation example: ER1FF:000:00
Error Detail 2 (Program-specific error)	ER2(Type2):(Reserved for system use):(Obtained data) Notation example: ER2FF:000:00
Error Detail 3 (Error in error list record)	ER3(Type2):(Reserved for system use):(Obtained data) Notation example: ER3FF:000:00
Error Detail 4 (Reserved for system use)	ER4(Type2):(Reserved for system use):(Obtained data) Notation example: ER4FF:000:00
Error Detail 5 (Reserved for system use)	ER5(Type2):(Reserved for system use):(Obtained data) Notation example: ER5FF:000:00
Error Detail 6 (Reserved for system use)	ER6(Type2):(Reserved for system use):(Obtained data) Notation example: ER6FF:000:00
Error Detail 7 (Reserved for system use)	ER7(Type2):(Reserved for system use):(Obtained data) Notation example: ER7FF:000:00

The Error Detail device formats include the following elements.

Item	Description	
Type 2	Setting range	00 to FF
	Device No. representation	Hexadecimal
	Explanation	System error
		• 0: Critical level error
		• 1: Latest error
Axis-specific error: Axis number		
Program-specific error: Program number		
Error in error list record: Record number (1 or later)		
Reserved for system use	Setting range	000
	Device No. representation	Hexadecimal
Obtained data	Setting range	00 to FF
	Device No. representation	Hexadecimal
	Explanation	For the device definitions, refer to the following. →12.4.1 ■18 (2) Error Detail device definition ([IAI X-SEL Controller])

### (2) Error Detail device definition ([IAI X-SEL Controller])

Obtained data	Device definition
00	Error No.
01	Detail information 1
	Other than system-down level error: Program number (Error source is indicated if the step number is not 0.) System-down level error: System down type
02	Detail information 2
	Other than system-down level error: Step number (Error source) System-down level error: System down error code
03	Detail information 3
	Other than system-down level error: Axis number System-down level error: System down information 1

Obtained data	Device definition
04	Detail information 4 Other than system-down level error: Point number (Negative value at interpolation point) System-down level error: System down information 2
05	Detail information 5
06	Detail information 6
07	Detail information 7
08	Detail information 8
09	Message bytes
0A	Message 1
0B	Message 2
:	:
49	Message 64
50 to FF	Reserved for system use

## ■ 19 Point Data device details ([IAI X-SEL Controller])

### (1) Point Data device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Point Data	PD(Obtained data) Notation example: PD00

The Point Data device format includes the following elements.

Item	Description
Obtained data	Setting range 00 to 9E
	Device No. representation Hexadecimal
	Explanation For the device definitions, refer to the following. → 12.4.1 ■ 19 (2) Point Data device definition ([IAI X-SEL Controller])

### (2) Point Data device definition ([IAI X-SEL Controller])

Obtained data	Device definition
00	Point Data: Command trigger • 1: Write • 2: Read • 4: Clear
01	Point Data: Starting point number
02	Point Data: Number of point data
03	Point Data 1: Point number
04	Point Data 1: Axis pattern 
05	Point Data 1: Acceleration unit (0.01 G)
06	Point Data 1: Deceleration unit (0.01 G)
07	Point Data 1: Speed unit (mm/sec)
08	Point Data 1: 1st axis position data unit (0.001 mm)
09	Point Data 1: 2nd axis position data unit (0.001 mm)
0A	Point Data 1: 3rd axis position data unit (0.001 mm)
0B	Point Data 1: 4th axis position data unit (0.001 mm)
0C	Point Data 1: 5th axis position data unit (0.001 mm)

Obtained data	Device definition
0D	Point Data 1: 6th axis position data unit (0.001 mm)
0E	Point Data 1: 7th axis position data unit (0.001 mm)
0F	Point Data 1: 8th axis position data unit (0.001 mm)
10 to 1C	Data of Point Data 2 For the device definition, refer to the definition of Point Data 1 (03 to 0F).
:	:
92 to 9E	Data of Point Data 12 For the device definition, refer to the definition of Point Data 1 (03 to 0F).

## ■20 Simple Interference Check Zone Data device details ([IAI X-SEL Controller])

### (1) Simple Interference Check Zone Data device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Simple Interference Check Zone Data	SD(Definition data No.):(Obtained data) Notation example: SDFF:0

The Simple Interference Check Zone Data device format includes the following elements.

Item	Description	
Definition data number	Setting range	01 to FF
	Device No. representation	Hexadecimal
Obtained data	Setting range	0 to F
	Device No. representation	Hexadecimal
	Explanation	For the device definitions, refer to the following. ⇒ 12.4.1 ■20 (2) Simple Interference Check Zone Data device definition ([IAI X-SEL Controller])

### (2) Simple Interference Check Zone Data device definition ([IAI X-SEL Controller])

Obtained data	Device definition
0	Effective axis pattern
1	Simple interference check zone definition coordinate 1 X axis unit (0.001 mm (R axis: 0.001 deg))
2	Simple interference check zone definition coordinate 1 Y axis unit (0.001 mm (R axis: 0.002 deg))
3	Simple interference check zone definition coordinate 1 Z axis unit (0.001 mm (R axis: 0.003 deg))
4	Simple interference check zone definition coordinate 1 R axis unit (0.001 mm (R axis: 0.004 deg))
5	Simple interference check zone definition coordinate 2 X axis unit (0.001 mm (R axis: 0.001 deg))
6	Simple interference check zone definition coordinate 2 Y axis unit (0.001 mm (R axis: 0.002 deg))
7	Simple interference check zone definition coordinate 2 Z axis unit (0.001 mm (R axis: 0.003 deg))
8	Simple interference check zone definition coordinate 2 R axis unit (0.001 mm (R axis: 0.004 deg))
9	Physical output port number or global flag number for output upon entry
A	Entry error type specification • 0: No error handling • 1: Message-level error • 2: Operation-cancellation level error
B to F	Reserved for system use

## ■21 Jogging/Inching Movement device details ([IAI X-SEL Controller])

### (1) Jogging/Inching Movement device format ([IAI X-SEL Controller])

The following shows the format in the setting dialog of an object or others.

Device name	Format
Jogging/Inching Movement	JIM(Obtained data) Notation example: JIM0

The Jogging/Inching Movement device format includes the following elements.

Item	Description	
Obtained data	Setting range	0 to 6
	Device No. representation	Decimal
	Explanation	For the device definitions, refer to the following. → 12.4.1 ■21 (2) Jogging/Inching Movement device definition ([IAI X-SEL Controller])

### (2) Jogging/Inching Movement device definition ([IAI X-SEL Controller])

Obtained data	Device definition	
0	Jogging/Inching Movement: Command trigger <ul style="list-style-type: none"> <li>• 1: Write</li> <li>• 4: Clear</li> </ul>	
1	Jogging/Inching Movement: Axis pattern For SCARA controllers, only one SCARA axis can be specified. (Multiple axes cannot be specified.) For SCARA controllers, jog/inch commands are available only when all SCARA servo axes are in non-operating state. For X-SEL-PX/QX/RX/SX controllers, simultaneous specification of SCARA and linear drive axes is prohibited. 	
2	Jogging/Inching Movement: Acceleration unit (0.01 G (% for each axis)) When it is zero, the parameter value is enabled.	
3	Jogging/Inching Movement: Deceleration unit (0.01 G (% for each axis)) When it is zero, the parameter value is enabled.	
4	Jogging/Inching Movement: Speed unit (mm/sec (% for each axis)) When it is zero, the parameter value is enabled. (The safety limit value is applied depending on the mode.)	
5	Jogging/Inching Movement: Inch distance unit (0.001 mm (0.001 deg for each axis)) An absolute value is specified. When it is zero, no distance is specified (= Jog).	
6	-	Jogging/Inching Movement: Operation type
	b0	Jog/inch direction <ul style="list-style-type: none"> <li>• 0: Coordinate - Direction</li> <li>• 1: Coordinate + Direction</li> </ul>
	b1 to b2	Jog/inch movement coordinate system (dedicated to SCARA) <ul style="list-style-type: none"> <li>• 0: Base coordinate system</li> <li>• 1: Selected work coordinate system</li> <li>• 2: Selected work coordinate system</li> <li>• 3: Each axis system</li> </ul>
	b3	Reserved for system use Fixed to 0

## ■ 22 Availability of writing/reading data to/from double-word devices ([IAI X-SEL Controller])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
CD0	-/-	R/-	-/-	-/-
CD1	-/-	R/-	-/-	-/-
INT	-/-	R/W	-/-	-/-
RL	-/-	R/W	-/-	-/-
ER0	-/-	R/-	-/-	-/-
ER1	-/-	R/-	-/-	-/-
ER2	-/-	R/-	-/-	-/-
ER3	-/-	R/-	-/-	-/-
ER4	-/-	R/-	-/-	-/-
ER5	-/-	R/-	-/-	-/-
ER6	-/-	R/-	-/-	-/-
ER7	-/-	R/-	-/-	-/-
PD	-/-	R/W	-/-	-/-
SD	-/-	R/-	-/-	-/-
JIM	-/-	R/W	-/-	-/-

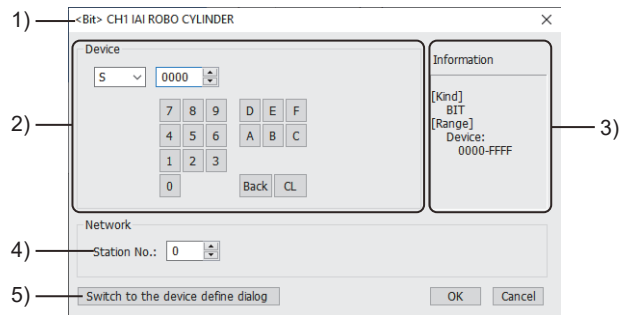

## 12.4.2 IAI equipment ([IAI ROBO CYLINDER])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([IAI ROBO CYLINDER])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([IAI ROBO CYLINDER])
	→ ■3 Status device definition ([IAI ROBO CYLINDER])
	→ ■4 Availability of writing/reading data to/from bit devices ([IAI ROBO CYLINDER])
Specifications of word devices	→ ■5 Monitoring-supported word devices ([IAI ROBO CYLINDER])
	→ ■6 Registers device definition ([IAI ROBO CYLINDER])
	→ ■7 Availability of writing/reading data to/from word devices ([IAI ROBO CYLINDER])

### ■1 Device setting dialog ([IAI ROBO CYLINDER])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of S0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

Specify a station number.

The setting range is [0] to [15] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

→ (1) Indirect specification of a station number ([IAI ROBO CYLINDER])

#### 5) [Switch to the device define dialog]

You can open the device definition setting dialog to check the definition of the device.

→ 6.1.6 ■6 Device definition setting dialog

### (1) Indirect specification of a station number ([IAI ROBO CYLINDER])

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the correspondence between station number setting values and GOT data registers (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	[0] to [15] Setting a value outside the above range causes a timeout error.
101	GD11	
:	:	
114	GD24	
115	GD25	

### ■2 Monitoring-supported bit devices ([IAI ROBO CYLINDER])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.2 ■4 Availability of writing/reading data to/from bit devices ([IAI ROBO CYLINDER])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
S	Status	Hexadecimal	0000 to FFFF For the device definitions, refer to the following. → 12.4.2 ■3 Status device definition ([IAI ROBO CYLINDER])	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Status device definition ([IAI ROBO CYLINDER])

Not available to the RCON series.

Status	Device definition	Symbol
0000 to 00FF	- (Reserved for system use)	-
0100	EMG status	EMGS
0101	Safety speed enabled status	SFTY
0102	Controller ready status	PWR
0103	Servo ON status	SV
0104	Missed work in push-motion operation	PSFL
0105	Major failure status	ALMH
0106	Minor failure status	ALML
0107	Absolute error status	ABER
0108	Brake forced-release status	BKRL
0109	Use prohibited	-
010A	Pause status	STP
010B	Home return status	HEND
010C	Position complete status	PEND
010D	Load cell calibration complete	CEND
010E	Load cell calibration status	CLBS
010F to 0111	Use prohibited	-
0112	Load output judgment status	LOAD
0113	Torque level status	TRQS

Status	Device definition	Symbol
0114	Teaching mode status	MODS
0115	Position-data load command status	TEAC
0116	Jog + status	JOG+
0117	Jog - status	JOG-
0118	Position complete 7	PE7
0119	Position complete 6	PE6
011A	Position complete 5	PE5
011B	Position complete 4	PE4
011C	Position complete 3	PE3
011D	Position complete 2	PE2
011E	Position complete 1	PE1
011F	Position complete 0	PE0
0120	Emergency stop status	EMGP
0121	Motor voltage low status	MPUV
0122	Operation mode status	RMDS
0123	Use prohibited	-
0124	Home returning status	GHMS
0125	Push-motion operation in progress	PUSH
0126	Excitation detection status	PSNS
0127	PIO/Modbus switching status	PMSS
0128 to 0129	Use prohibited	-
012A	Moving signal	MOVE
012B to 0135	Use prohibited	-
0136	Position complete number status bit 512	PM512
0137	Completed position number status bit 256	PM256
0138	Position complete number status bit 128	PM128
0139	Position complete number status bit 64	PM64
013A	Position complete number status bit 32/Executed program number status bit 32	PM32
013B	Position complete number status bit 16/Executed program number status bit 16	PM16
013C	Position complete number status bit 8/Executed program number status bit 8	PM8
013D	Position complete number status bit 4/Executed program number status bit 4	PM4
013E	Position complete number status bit 2/Executed program number status bit 2	PM2
013F	Position complete number status bit 1/Executed program number status bit 1	PM1
0140	Use prohibited	-
0141	Limit sensor output monitor 2	LS2
0142	Limit sensor output monitor 1	LS1
0143	Limit sensor output monitor 0	LS0
0144 to 0146	Use prohibited	-
0147	Position zone output monitor	ZP
0148 to 014D	Use prohibited	-
014E	Zone output monitor 2	Z2
014F	Zone output monitor 1	Z1
0150 to 015F	PIO connector pin number 20A(IN15) to PIO connector pin number 5A(IN0)	-

#### ■ 4 Availability of writing/reading data to/from bit devices ([IAI ROBO CYLINDER])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
S	R/W	-/-	-/-	-/-	-/-

## ■5 Monitoring-supported word devices ([IAI ROBO CYLINDER])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.2 ■7 Availability of writing/reading data to/from word devices ([IAI ROBO CYLINDER])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
R	Register	Hexadecimal	0000 to FFFF For the device definitions, refer to the following. ⇒ 12.4.2 ■6 Registers device definition ([IAI ROBO CYLINDER])	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■6 Registers device definition ([IAI ROBO CYLINDER])

### (1) When using PCON, ACON, SCON, or ERC2

Register	Definition	Symbol	
0000 to 04FF	- (Reserved for system use)	-	
0500	Alarm detail code	ALA0	
0501	Alarm address	ALA0	
0502	Always 0	-

9020	Overload level monitor (upper 16 bits)	OLLV
9021	Overload level monitor (lower 16 bits)	OLLV
9030 to 92FF	- (Reserved for system use)	-
9300	Total moving count(Higher 16bit)	TTIM
9301	Total moving count(Lower 16bit)	TTIM
9302	Total drive distance(Higher 16bit)	ODOM

Register	Definition	Symbol
9303	Total drive distance(Lower 16bit)	ODOM
9304	Max. Drive Supply Voltage	FMAX
9305	Max. Control Voltage	VMAX
9306	Max. Motor Current(Higher 16bit)	CMAX
9307	Max. Motor Current(Lower 16bit)	CMAX
9308	Total conducting time(Higher 16bit)	TTIM
9309	Total conducting time(Lower 16bit)	TTIM
930A	Emergency Stop Input Count(Higher 16bit)	EMGC
930B	Emergency Stop Input Count(Lower 16bit)	EMGC
930C	Average PCB Temperature	TEMP
930D	Max. PCB Temperature	TEMP
930E	Max. PCB Temperature Detected Time(Higher 16bit)	TTPM
930F	Max. PCB Temperature Detected Time(Lower 16bit)	TTPM
9311	Max. Motor Overload Ratio	OLMX
9312	Max. Motor Overload Ratio Detected Time(Higher 16bit)	TOLM
9313	Max. Motor Overload Ratio Detected Time(Lower 16bit)	TOLM
9014 to 93FF	- (Reserved for system use)	-
9400	Serial code 1(Higher 16bit)	CTS1
9401	Serial code 1(Lower 16bit)	CTS1
9402	Serial code 2(Higher 16bit)	CTS2
9403	Serial code 2(Lower 16bit)	CTS2
9404	Serial code 3(Higher 16bit)	CTS3
9405	Serial code 3(Lower 16bit)	CTS3
9406	Serial code 4(Higher 16bit)	CTS4
9407	Serial code 4(Lower 16bit)	CTS4
9800	Position Number Indication Register	POSR
9801 to 98FF	- (Reserved for system use)	-
9900	Target position coordinate specification register (upper 16 bits)	PCMD
9901	Target position coordinate specification register (lower 16 bits)	PCMD
9902	Positioning band specification register (upper 16 bits)	INP
9903	Positioning band specification register (lower 16 bits)	INP
9904	Speed specification register (upper 16 bits)	VCMD
9905	Speed specification register (lower 16 bits)	VCMD
9906	Acceleration speed specification register	ACMD
9907	Push-current limiting value	PPOW
9908	Control flag specification register	CTLF
9909 to 99FF	- (Reserved for system use)	-
9A00	Target Position Indication Register(Higher 16bit)	PCMD
9A01	Target Position Indication Register(Lower 16bit)	PCMD
9A02	Position Number Indication Register (except for target position)	PPOS
9A03 to FFFF	- (Reserved for system use)	-

## ■ 7 Availability of writing/reading data to/from word devices ([IAI ROBO CYLINDER])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
R	R/W	R/W	-/-	R/W

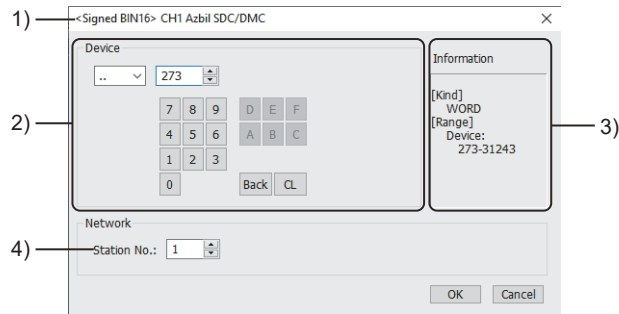

### 12.4.3 AZBIL equipment ([Azbil SDC/DMC])

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([Azbil SDC/DMC])
Specifications of word devices	→ ■2 Monitoring-supported word devices ([Azbil SDC/DMC])
	→ ■3 Availability of writing/reading data to/from word devices ([Azbil SDC/DMC])

#### ■1 Device setting dialog ([Azbil SDC/DMC])

Set a device to be monitored.

1) Title

Data type and channel number of the device to be set

2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of ..273

3) [Information]

Displays the setting range of each setting item according to the selected device.

4) [Station No.]

Specify a station number.

The setting range is [0] to [127] (direct) or [200] to [215] (indirect).

For indirect specification of a station number, refer to the following.

→ (1) Indirect specification of a station number ([Azbil SDC/DMC])

#### (1) Indirect specification of a station number ([Azbil SDC/DMC])

When you specify any of 200 to 215 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the correspondence between station number setting values and GOT data registers (GD).

Station No.	GOT data register (GD)	Setting range
200	GD10	[0] to [127] Setting a value outside the above range causes a device range error.
201	GD11	
:	:	
214	GD24	
215	GD25	

## ■2 Monitoring-supported word devices ([Azbil SDC/DMC])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.3 ■3 Availability of writing/reading data to/from word devices ([Azbil SDC/DMC])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
..	Data	Decimal	273 to 31243	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from word devices ([Azbil SDC/DMC])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
..	R/W	-/-	-/-	R/W

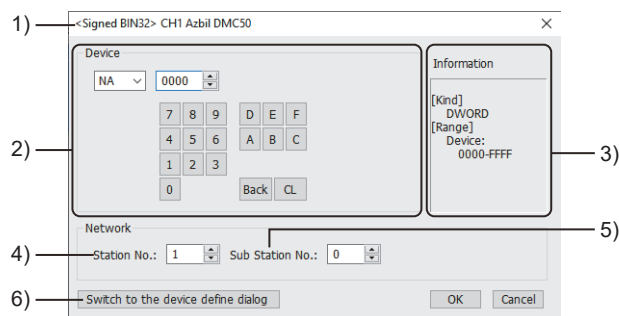

## 12.4.4 AZBIL equipment ([Azbil DMC50])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([Azbil DMC50])
Specifications of double-word devices	→ ■2 Monitoring-supported double-word devices ([Azbil DMC50])
	→ ■3 Network Addresses device definition ([Azbil DMC50])
	→ ■4 Parameter Addresses device definition ([Azbil DMC50])
	→ ■5 Availability of writing/reading data to/from double-word devices ([Azbil DMC50])
Precautions	→ ■6 Precautions ([Azbil DMC50])

### ■1 Device setting dialog ([Azbil DMC50])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of NA0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

Specify the station number of a COM module or control equipment.

The setting range is [1] to [15] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

→ (1) Indirect specification of a station number ([Azbil DMC50])

#### 5) [Sub Station No.]

Specify the sub station number of the control equipment that is connected to the COM module specified with [Station].

The setting range is [0] to [15].

If [Sub Station No.] is set to 0, the GOT monitors the COM module or the control equipment specified with [Station].

For AHC2001, [Sub Station No.] is ignored.

#### 6) [Switch to the device define dialog]

You can open the device definition setting dialog to check the definition of the device.

**(1) Indirect specification of a station number ([Azbil DMC50])**

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The upper 8 bits of the value in the GOT data register are regarded as the station number, and the lower 8 bits are regarded as the sub station number.

When a GD device is used as the station number, the setting of [Sub Station No.] becomes invalid.

The following shows the relationship between the specified station number and the GOT data register (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	0x0000 to 0xFFFF
101	GD11	
:	:	
114	GD24	
115	GD25	

Example) When [Station] is set to 100

The value of GD10 determines the control equipment to be monitored.

GD10 = 0 × 010A

(Upper 8 bits) 0 × 01 → Station No.: 1

(Lower 8 bits) 0 × 0A → Sub station No.: 10

**■2 Monitoring-supported double-word devices ([Azbil DMC50])**

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.4 ■5 Availability of writing/reading data to/from double-word devices ([Azbil DMC50])

For the formats of devices, refer to the following.

→6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
NA	Network Addresses	Hexadecimal	0000 to FFFF For the device definitions, refer to the following. →12.4.4 ■3 Network Addresses device definition ([Azbil DMC50])	×	×

## ■5 Availability of writing/reading data to/from double-word devices ([Azbil DMC50])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
NA	-/-	R/W	-/-	-/-
PA	-/-	R/-	-/-	-/-

## ■6 Precautions ([Azbil DMC50])

### (1) Station No. and sub station No. of AZBIL DMC50

The station number and the sub station number set for the AZBIL DMC50 are equivalent to the network number and the station number set for the MITSUBISHI ELECTRIC PLC, respectively.

To set the control equipment to be monitored, set both the station number and the sub station number.

### (2) Restrictions for the faulty station information, the control equipment, and servo amplifier monitor station disconnection

When the DMC50 is used, the GOT only monitors some stations.

For the details of the station numbers of the DMC50 to be monitored, refer to the following.

→ 12.1.3 ■4 Read device list

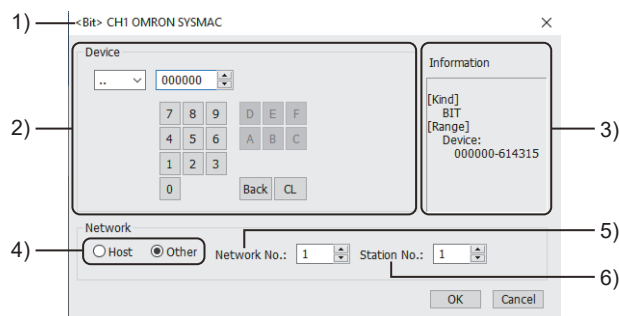

## 12.4.5 OMRON equipment ([OMRON SYSMAC])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([OMRON SYSMAC])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([OMRON SYSMAC])
	→ ■3 Availability of writing/reading data to/from bit devices ([OMRON SYSMAC])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([OMRON SYSMAC])
	→ ■5 Availability of writing/reading data to/from word devices ([OMRON SYSMAC])

### ■1 Device setting dialog ([OMRON SYSMAC])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of ..000000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

#### 6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

## ■2 Monitoring-supported bit devices ([OMRON SYSMAC])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.5 ■3 Availability of writing/reading data to/from bit devices ([OMRON SYSMAC])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
..	I/O relay, Internal auxiliary relay	Decimal ..(Channel No.)(Bit No.) Notation example: ..614300 The two rightmost digits represent a bit number. • Channel No. (decimal): 0000 to 6143 • Bit No.: 00 to 15	○	○
LR	Data link relay	Decimal LR(Channel No.)(Bit No.) Notation example: LR19900 The two rightmost digits represent a bit number. • Channel No. (decimal): 000 to 199 • Bit No.: 00 to 15	○	○
HR	Holding relay	Decimal HR(Channel No.)(Bit No.) Notation example: HR51100 The two rightmost digits represent a bit number. • Channel No. (decimal): 000 to 511 • Bit No.: 00 to 15	○	○
WR	Internal auxiliary relay, Work relay	Decimal WR(Channel No.)(Bit No.) Notation example: WR51100 The two rightmost digits represent a bit number. • Channel No. (decimal): 000 to 511 • Bit No.: 00 to 15	○	○
TIM	Timer contact	Decimal 0 to 4095	○	○
CNT	Counter contact	Decimal 0 to 4095	○	○
AR	Auxiliary memory relay	Decimal AR(Channel No.)(Bit No.) Notation example: AR1153500 The two rightmost digits represent a bit number. • Channel No. (decimal): 00000 to 11535 • Bit No.: 00 to 15	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from bit devices ([OMRON SYSMAC])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
..	R/W	-/-	R/W	R/W	-/-
LR	R/W	-/-	R/W	R/W	-/-
HR	R/W	-/-	R/W	R/W	-/-
WR	R/W	-/-	R/W	R/W	-/-

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
TIM	R/-	-/-	R/-	R/-	-/-
CNT	R/-	-/-	R/-	R/-	-/-
AR	R/W	-/-	R/W	R/W	-/-

#### ■4 Monitoring-supported word devices ([OMRON SYSMAC])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.5 ■5 Availability of writing/reading data to/from word devices ([OMRON SYSMAC])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>		
			Assignment to EG devices	Access using a client	
TIM	Timer (current value) <sup>*3*4</sup>	Decimal	0 to 4095	○	○
CNT	Counter (current value) <sup>*3*4</sup>	Decimal	0 to 4095	○	○
DM	Data memory	Decimal	0 to 32767	○	○
EM <sup>*2</sup>	Extension data memory, EM current bank	Decimal	0 to 32767	○	○
E <sup>*2</sup>	Extension data memory	Hexadecimal + decimal	E(Bank No.)-(Device) Notation example: E18-100 • Bank No. (hexadecimal): 0 to 18 • Device (decimal): 0 to 32767	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Writing or reading data extending across banks is not possible.

\*3 A valid value ranges from 0 to 9999.

(This applies to the 16 bit/32 bit device data.)

\*4 This is handled as a BCD value in the PLC. When serial connection is used between the PLC and the GOT, this is handled as an unsigned 16-bit binary data in the GOT.

For the object for monitoring on the GOT, select [Unsigned BIN16] for [Data Type].

#### ■5 Availability of writing/reading data to/from word devices ([OMRON SYSMAC])

The following shows whether writing/reading data to/from word devices is available by device type.

When executing the touch switch function that has been set during the bit specification of the word device, do not write any data to the word device through the sequence program.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TIM	R/W	R/W	-/-	R/W
CNT	R/W	R/W	-/-	R/W
DM	R/W	R/W	-/-	R/W
EM	R/W	R/W	-/-	R/W
E	R/W	R/W	-/-	R/W

## 12.4.6 OMRON equipment ([OMRON NJ/NX])

Not available to GT2105-Q.

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([OMRON NJ/NX])
Device specifications	→ ■2 Monitoring-supported devices ([OMRON NJ/NX])

### ■1 Device setting dialog ([OMRON NJ/NX])

Set a device to be monitored.

In the device setting dialog, only GOT internal devices are settable.

For setting the OMRON NJ/NX tags, refer to the following.

→6.1.7 How to set OMRON NJ/NX tags

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported devices ([OMRON NJ/NX])

To monitor the OMRON NJ or NX series, use OMRON NJ/NX tags.

For the usable OMRON NJ/NX tags, refer to the following.

→6.1.7 ■1 Usable OMRON NJ/NX tags

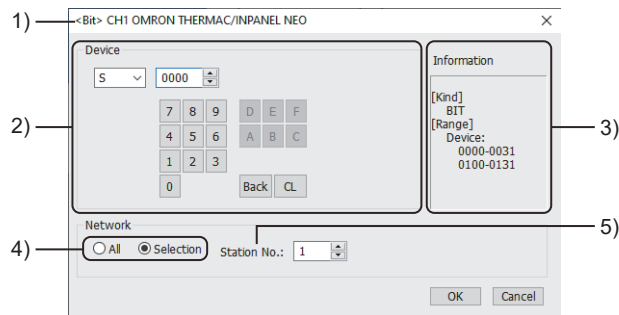

## 12.4.7 OMRON equipment ([OMRON THERMAC/INPANEL NEO])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	➔ ■1 Device setting dialog ([OMRON THERMAC/INPANEL NEO])
Specifications of bit devices	➔ ■2 Monitoring-supported bit devices ([OMRON THERMAC/INPANEL NEO])
	➔ ■3 Availability of writing/reading data to/from bit devices ([OMRON THERMAC/INPANEL NEO])
Specifications of word devices	➔ ■4 Monitoring-supported word devices ([OMRON THERMAC/INPANEL NEO])
	➔ ■5 Availability of writing/reading data to/from word devices ([OMRON THERMAC/INPANEL NEO])
Specifications of double-word devices	➔ ■6 Monitoring-supported double-word devices ([OMRON THERMAC/INPANEL NEO])
	➔ ■7 Availability of writing/reading data to/from double-word devices ([OMRON THERMAC/INPANEL NEO])

### ■1 Device setting dialog ([OMRON THERMAC/INPANEL NEO])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of S0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Monitor target specification

Set the monitoring target of the set device.

Item	Description
[All]	Select this when writing data to all temperature controllers. During monitoring, the temperature controller of station No. 1 is monitored. When writing the data in numerical input, data is written to all connected temperature controllers during input, and the temperature controller of station No. 1 is monitored during other than input (displaying).
[Selection]	Select this item when monitoring the indicating controller that has the specified station number.

#### 5) [Station No.]

This item appears when [Selection] is selected for the monitor target specification.

The setting range is [0] to [99] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

⇒(1) Indirect specification of a station number ([OMRON THERMAC/INPANEL NEO])

### (1) Indirect specification of a station number ([OMRON THERMAC/INPANEL NEO])

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the relationship between the specified station number and the GOT data register (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	[0] to [99] Setting a value outside the above range causes a device range error.
101	GD11	
:	:	
114	GD24	
115	GD25	

## ■2 Monitoring-supported bit devices ([OMRON THERMAC/INPANEL NEO])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.7 ■3 Availability of writing/reading data to/from bit devices ([OMRON THERMAC/INPANEL NEO])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
S	Status	Decimal S(Channel No.)(Bit No.) Notation example: S0100 • Channel No. (decimal): 00 to 01 • Bit No. (decimal): 00 to 31	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from bit devices ([OMRON THERMAC/INPANEL NEO])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
S	R/-	-/-	-/-	-/-	-/-

## ■4 Monitoring-supported word devices ([OMRON THERMAC/INPANEL NEO])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.7 ■5 Availability of writing/reading data to/from word devices ([OMRON THERMAC/INPANEL NEO])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
A <sup>*2</sup>	Hexadecimal	0000 to 0011	○	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Numerical input cannot be used.

Use a word switch for writing.

## ■5 Availability of writing/reading data to/from word devices ([OMRON THERMAC/INPANEL NEO])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
A	-/W	-/-	-/-	-/-

## ■6 Monitoring-supported double-word devices ([OMRON THERMAC/INPANEL NEO])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.7 ■7 Availability of writing/reading data to/from double-word devices ([OMRON THERMAC/INPANEL NEO])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
C0	Variable area 0	C0(Channel No.)(Address) Notation example: C00100 • Channel No. (decimal): 00 to 01 • Address (hexadecimal): 00 to 13	×	×
C1	Variable area 1	C1(Channel No.)(Address) Notation example: C10100 • Channel No. (decimal): 00 to 01 • Address (hexadecimal): 00 to 31	×	×
C3	Variable area 3	C3(Channel No.)(Address) Notation example: C30100 • Channel No. (decimal): 00 to 01 • Address (hexadecimal): 00 to 83	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■ 7 Availability of writing/reading data to/from double-word devices ([OMRON THERMAC/ INPANEL NEO])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
C0	-/-	R/-	-/-	-/-
C1	-/-	R/W	-/-	-/-
C3	-/-	R/W	-/-	-/-

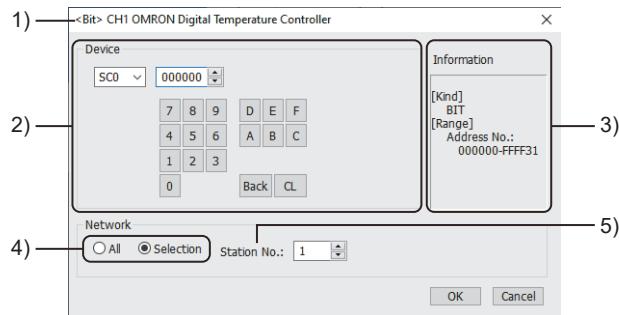

## 12.4.8 OMRON equipment ([OMRON Digital Temperature Controller])

	→ ■7 Availability of writing/reading data to/from double-word devices ([OMRON Digital Temperature Controller])

### ■1 Device setting dialog ([OMRON Digital Temperature Controller])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of SC0000000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Monitor target specification

Set the monitoring target of the set device.

Item	Description
[All]	Select this when writing data to all temperature controllers. During monitoring, the temperature controller of station No. 1 is monitored. When writing the data in numerical input, data is written to all connected temperature controllers during input, and the temperature controller of station No. 1 is monitored during other than input (displaying).
[Selection]	Select this item when monitoring the indicating controller that has the specified station number.

5) [Station No.]

This item appears when [Selection] is selected for the monitor target specification.

The setting range is [0] to [99] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

→(1) Indirect specification of a station number ([OMRON Digital Temperature Controller])

**(1) Indirect specification of a station number ([OMRON Digital Temperature Controller])**

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the relationship between the specified station number and the GOT data register (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	[0] to [99] Setting a value outside the above range causes a device range error.

### ■1 Device setting dialog ([KEYENCE KV-700/1000/3000/5000/7000/8000])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of ..000000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

## ■2 Monitoring-supported bit devices ([KEYENCE KV-700/1000/3000/5000/7000/8000])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.9 ■3 Availability of writing/reading data to/from bit devices ([KEYENCE KV-700/1000/3000/5000/7000/8000])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
..*2	Relay	Decimal ..(Channel No.)(Bit No.) Notation example: ..199900 • Channel No. (decimal): 0000 to 1999 • Bit No. (decimal): 00 to 15	○	×
B*3	Link relay	Hexadecimal 0000 to 7FFF	○	×
MR*2	Internal auxiliary relay	Decimal MR(Channel No.)(Bit No.) Notation example: MR399900 • Channel No. (decimal): 0000 to 3999 • Bit No. (decimal): 00 to 15	○	×
LR	Latch relay	Decimal LR(Channel No.)(Bit No.) Notation example: LR99900 • Channel No. (decimal): 000 to 999 • Bit No. (decimal): 00 to 15	○	×
T*3	Timer (contact)	Decimal 0000 to 3999	○	×
C*3	Counter (contact)	Decimal 0000 to 3999	○	×
CR	Control relay	Decimal CR(Channel No.)(Bit No.) Notation example: CR8900 • Channel No. (decimal): 00 to 89 • Bit No. (decimal): 00 to 15	○	×
CTC*3*4	High-speed counter comparators (contact)	Decimal 0 to 7	×	×
VB*3	Work relay	Hexadecimal 0000 to F9FF	○	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 When communication is performed through the following extension unit, the readable/writable device range is 00000 to 99915.

- KV-L2□V
- KV-LE2□V
- KV-EP21V

\*3 Monitoring by GOT is possible only when a device is used in the sequence program.

\*4 In writing, only resetting of a contact is possible.

### ■3 Availability of writing/reading data to/from bit devices ([KEYENCE KV-700/1000/3000/5000/7000/8000])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
..	R/W	-/-	R/W	R/W	-/-
B	R/W	-/-	R/W	R/W	-/-
MR	R/W	-/-	R/W	R/W	-/-
LR	R/W	-/-	R/W	R/W	-/-
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-
CR	R/W	-/-	R/W	R/W	-/-
CTC	R/W	-/-	-/-	-/-	-/-
VB	R/W	-/-	R/W	R/W	-/-

### ■4 Monitoring-supported word devices ([KEYENCE KV-700/1000/3000/5000/7000/8000])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.9 ■5 Availability of writing/reading data to/from word devices ([KEYENCE KV-700/1000/3000/5000/7000/8000])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
DM	Data memory	Decimal	00000 to 65534	○	○
CM	Control memory	Decimal	00000 to 11998	○	○ (Not usable as bit data)
W	Link register	Hexadecimal	0000 to 7FFF	○	○
EM	Extension data memory	Decimal	00000 to 65534	○	○
Z	Index register	Decimal	01 to 12	○	○ (Not usable as bit data)
FM	Extension data memory 2	Decimal	00000 to 32767	○	○

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
ZF*2	File register	Decimal	000000 to 032767 032768 to 065535 065536 to 098303 098304 to 131071 131072 to 163839 163840 to 196607 196608 to 229375 229376 to 262143 262144 to 294911 294912 to 327679 327680 to 360447 360448 to 393215 393216 to 425983 425984 to 458751 458752 to 491519 491520 to 524287	○	○
TM	Temporary data memory	Decimal	000 to 511	○	○ (Not usable as bit data)
VM	Work memory	Decimal	00000 to 63999	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 The restrictions differ depending on GT Designer3 version.

- 1.250L or earlier: Continuous access across banks is not available.
- 1.255R or later: Access across banks is available only for the Ethernet connection.

## ■ 5 Availability of writing/reading data to/from word devices ([KEYENCE KV-700/1000/3000/5000/7000/8000])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
DM	R/W	R/W	-/-	R/W
CM	R/W	R/W	-/-	-/-
W	R/W	R/W	-/-	R/W
EM	R/W	R/W	-/-	R/W
Z*1	R/W	R/W	-/-	-/-
FM	R/W	R/W	-/-	R/W
ZF	R/W	R/W	-/-	R/W
TM	R/W	R/W	-/-	-/-
VM	R/W	R/W	-/-	-/-

\*1 With KV-3000 and KV-5000, Z devices cannot be specified as double-word (32-bit) data.  
Use DZ devices.

## ■6 Monitoring-supported double-word devices ([KEYENCE KV-700/1000/3000/5000/7000/8000])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.9 ■7 Availability of writing/reading data to/from double-word devices ([KEYENCE KV-700/1000/3000/5000/7000/8000])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
TC*2	Timer (current value)	Decimal	0000 to 3999	×	×
CC*2	Counter (current value)	Decimal	0000 to 3999	×	×
TS*2	Timer (set value)	Decimal	0000 to 3999	×	×
CS*2	Counter (set value)	Decimal	0000 to 3999	×	×
CTH*2	High-speed counter (current value)	Decimal	0 to 3	×	×
CTC*2	High-speed counter comparators (set value)	Decimal	0 to 7	×	×
DZ	Index register	Decimal	01 to 12	×	×
TRM	Digital trimmer	Decimal	0 to 7	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Monitoring by GOT is possible only when a device is used in the sequence program.

## ■7 Availability of writing/reading data to/from double-word devices ([KEYENCE KV-700/1000/3000/5000/7000/8000])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
TC	-/-	R/W	-/-	-/-
CC	-/-	R/W	-/-	-/-
TS	-/-	R/W	-/-	-/-
CS	-/-	R/W	-/-	-/-
CTH	-/-	R/W	-/-	-/-
CTC	-/-	R/W	-/-	-/-
DZ	-/-	R/W	-/-	-/-
TRM	-/-	R/-	-/-	-/-

## ■8 Precautions ([KEYENCE KV-700/1000/3000/5000/7000/8000])

### (1) Notation of KEYENCE equipment devices

The KEYENCE notation and XYM notation are available for the devices of KEYENCE PLCs.

The KEYENCE notation is used in GT Designer3.

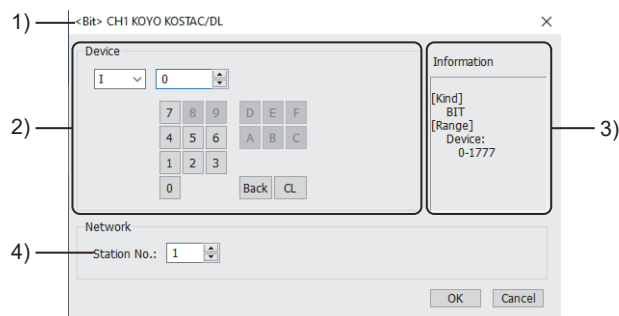

## 12.4.10 KOYO EI equipment ([KOYO KOSTAC/DL])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([KOYO KOSTAC/DL])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([KOYO KOSTAC/DL])
	→ ■3 Availability of writing/reading data to/from bit devices ([KOYO KOSTAC/DL])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([KOYO KOSTAC/DL])
	→ ■5 Device R definitions ([KOYO KOSTAC/DL])
	→ ■6 Availability of writing/reading data to/from word devices ([KOYO KOSTAC/DL])

### ■1 Device setting dialog ([KOYO KOSTAC/DL])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of I0

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

Specify a station number.

The setting range is [1] to [90].

### ■2 Monitoring-supported bit devices ([KOYO KOSTAC/DL])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.10 ■3 Availability of writing/reading data to/from bit devices ([KOYO KOSTAC/DL])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
I	Input	Octal	0 to 1777	○	○ (Not usable as word data)
Q	Output	Octal	0 to 1777	○	○ (Not usable as word data)
GI	Link relay	Octal	0 to 3777	○	○ (Not usable as word data)
M	Internal relay	Octal	0 to 3777	○	○ (Not usable as word data)

## ■6 Availability of writing/reading data to/from word devices ([KOYO KOSTAC/DL])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
R*1*2	R/W	R/W	-/-	-/-

\*1 The GOT cannot write data to R7377 when SU-5M or SU-6M is used.

\*2 The GOT cannot write data to devices from R7766 to R7774 (calendar area).

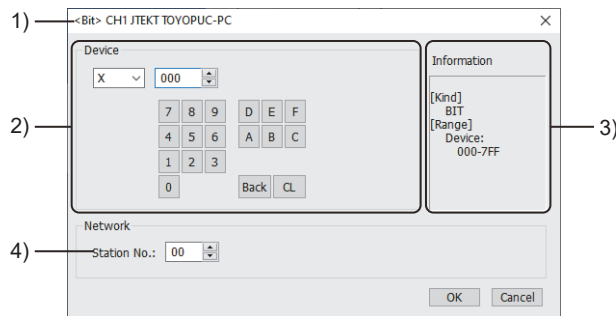

## 12.4.11 JTEKT equipment ([JTEKT TOYOPUC-PC])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([JTEKT TOYOPUC-PC])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([JTEKT TOYOPUC-PC])
	→ ■3 Availability of writing/reading data to/from bit devices ([JTEKT TOYOPUC-PC])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([JTEKT TOYOPUC-PC])
	→ ■5 Availability of writing/reading data to/from word devices ([JTEKT TOYOPUC-PC])

### ■1 Device setting dialog ([JTEKT TOYOPUC-PC])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of X000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

Specify a station number.

The setting range is [00] to [37] (octal number).

### ■2 Monitoring-supported bit devices ([JTEKT TOYOPUC-PC])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.11 ■3 Availability of writing/reading data to/from bit devices ([JTEKT TOYOPUC-PC])

For the formats of devices, refer to the following.

6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
X*2	Input relay	Hexadecimal	000 to 7FF	○	×
Y*2	Output relay	Hexadecimal	000 to 7FF	○	×
L	Link relay	Hexadecimal	P(Program No.)-L(Device) Notation example: P1-L7FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 000 to 7FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
M	Internal relay	Hexadecimal	P(Program No.)-M(Device) Notation example: P1-M7FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 000 to 7FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
K	Keep relay	Hexadecimal	P(Program No.)-K(Device) Notation example: P1-K2FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 000 to 2FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
P	Edge detection	Hexadecimal	P(Program No.)-P(Device) Notation example: P1-P1FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 000 to 1FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
T*2	Timer	Hexadecimal	P(Program No.)-T(Device) Notation example: P1-T1FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 000 to 1FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
C*2	Counter	Hexadecimal	P(Program No.)-C(Device) Notation example: P1-C1FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 000 to 1FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
V	Special relay	Hexadecimal	P(Program No.)-V(Device) Notation example: P1-V0FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 000 to 0FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
EX*2	Extended input	Hexadecimal	000 to 7FF	○	×
EY*2	Extended output	Hexadecimal	000 to 7FF	○	×
EM	Extended internal relay	Hexadecimal	0000 to 1FFF	○	×
EK	Extended keep-relay	Hexadecimal	000 to FFF	○	×
EV	Extended special relay	Hexadecimal	000 to FFF	○	×
ET*2	Extended timer	Hexadecimal	000 to 7FF	○	×

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
EC <sup>*2</sup>	Extended counter	Hexadecimal	000 to 7FF	○	×
EL	Extended link relay	Hexadecimal	0000 to 1FFF	○	×
EP	Extended edge detection	Hexadecimal	000 to FFF	○	×
GX <sup>*2*3</sup>	Extended input 2	Hexadecimal	0000 to FFFF	○	×
GY <sup>*2*3</sup>	Extended output 2	Hexadecimal	0000 to FFFF	○	×
GM <sup>*3</sup>	Extended internal relay 2	Hexadecimal	0000 to FFFF	○	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Overlapped device specification of an input (X, EX, GX) and an output (Y, EY, GY), or a timer (T, ET) and a counter (C, EC) is not allowed.

Example) X0000 and Y0000, EX0000 and EY0000

\*3 The device can be used only in the PC3JG separate mode.

Access to the device through a link module is not possible.

### ■ 3 Availability of writing/reading data to/from bit devices ([JTEKT TOYOPUC-PC])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	R/W	R/W	-/-
Y	R/W	-/-	R/W	R/W	-/-
L	R/W	-/-	R/W	R/W	-/-
M	R/W	-/-	R/W	R/W	-/-
K	R/W	-/-	R/W	R/W	-/-
P	R/W	-/-	R/W	R/W	-/-
T	R/W	-/-	R/W	R/W	-/-
C	R/W	-/-	R/W	R/W	-/-
V	R/W	-/-	R/W	R/W	-/-
EX	R/W	-/-	R/W	R/W	-/-
EY	R/W	-/-	R/W	R/W	-/-
EM	R/W	-/-	R/W	R/W	-/-
EK	R/W	-/-	R/W	R/W	-/-
EV	R/W	-/-	R/W	R/W	-/-
ET	R/W	-/-	R/W	R/W	-/-
EC	R/W	-/-	R/W	R/W	-/-
EL	R/W	-/-	R/W	R/W	-/-
EP	R/W	-/-	R/W	R/W	-/-
GX	R/W	-/-	R/W	R/W	-/-
GY	R/W	-/-	R/W	R/W	-/-
GM	R/W	-/-	R/W	R/W	-/-

#### ■4 Monitoring-supported word devices ([JTEKT TOYOPUC-PC])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.11 ■5 Availability of writing/reading data to/from word devices ([JTEKT TOYOPUC-PC])

For the formats of devices, refer to the following.

→6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
B	File register	Hexadecimal 0000 to 1FFF	○	×
D	Data register	Hexadecimal P(Program No.)-D(Device) Notation example: P1-D2FFF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 0000 to 2FFF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
R	Link register	Hexadecimal P(Program No.)-R(Device) Notation example: P1-R07FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 0000 to 07FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
N	Current value register	Hexadecimal P(Program No.)-N(Device) Notation example: P1-N01FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 0000 to 01FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
S	Special register	Hexadecimal P(Program No.)-S(Device) Notation example: P1-S03FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 0000 to 03FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×
EN	Extended present value register	Hexadecimal 0000 to 07FF	○	×
H	Extended setup value register	Hexadecimal 0000 to 07FF	○	×
ES	Extended special register	Hexadecimal 0000 to 07FF	○	×
U	Extended data register	Hexadecimal 0000 to 7FFF	○	×
EB*2	Extended buffer register	Hexadecimal 00000 to 1FFFF	○	×
TCS*3	Setup value register	Hexadecimal P(Program No.)-TCS(Device) Notation example: P1-TCS01FF • Program No. (decimal): None, 1 to 3 • Device (hexadecimal): 0000 to 01FF When "NONE" is shown for [Program No.], it is not necessary to set "P(Program No.)-".	○	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 The device can be used only in the PC3JG separate mode.  
Access to the device through a link module is not possible.

\*3 To store a setting value of T or C, use TCS.  
The setting value of T or C is stored in TCS.  
TCS cannot be used if T or C is not in a program.

## ■5 Availability of writing/reading data to/from word devices ([JTEKT TOYOPUC-PC])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
B	R/W	R/W	-/-	R/W
D	R/W	R/W	-/-	R/W
R	R/W	R/W	-/-	R/W
N	R/W	R/W	-/-	R/W
S	R/W	R/W	-/-	R/W
EN	R/W	R/W	-/-	R/W
H	R/W	R/W	-/-	R/W
ES	R/W	R/W	-/-	R/W
U	R/W	R/W	-/-	R/W
EB	R/W	R/W	-/-	-/-
TCS	R/W	-/-	-/-	-/-

## 12.4.12 SHARP equipment ([SHARP JW])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([SHARP JW])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([SHARP JW])
	→ ■3 Availability of writing/reading data to/from bit devices ([SHARP JW])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([SHARP JW])
	→ ■5 Availability of writing/reading data to/from word devices ([SHARP JW])

### ■1 Device setting dialog ([SHARP JW])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of ..00000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([SHARP JW])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.12 ■3 Availability of writing/reading data to/from bit devices ([SHARP JW])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
.. <sup>*2</sup>	Relay	Octal	..(Device address)(Bit address) Notation example: ..15770 The rightmost digit is a bit address. • Device (octal): 0000 to 1577, 2000 to 7577 • Bit address (octal): 0 to 7	○	○
T <sup>*3*4</sup>	Timer (contact)	Octal	0000 to 1777	○	○ (Not usable as word data)
C <sup>*3*4</sup>	Counter (contact)	Octal	0000 to 1777	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 To use the device as word data, set an even number for the device address and set 0 (fixed) for the bit address.

\*3 Device settings for T and C must not overlap one another in the same address range.

Even if the address ranges overlap one another, the GOT displays no error.

The GOT monitors the timer and counter devices according to their address range instead of their device name.

Accordingly, if a device invalid as a SHARP PLC parameter is specified on GT Designer3, the GOT monitors a different device that covers the address range of the specified device.

Example) Parameter settings on the SHARP PLC side: T0000 to T1000, C1001 to C1777

When "C0000" is set in GT Designer3, GOT will monitor "T0000".

\*4 Writing is possible only while the CPU is running (while the timer and counter is in operation).

### ■3 Availability of writing/reading data to/from bit devices ([SHARP JW])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
..	R/W	-/-	R/W	R/W	-/-
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-

### ■4 Monitoring-supported word devices ([SHARP JW])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.12 ■5 Availability of writing/reading data to/from word devices ([SHARP JW])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
T <sup>*2</sup>	Timer (Current value)	Octal	0000 to 1777	○	○
C <sup>*2</sup>	Counter (Current value)	Octal	0000 to 1777	○	○
1 <sup>*3</sup>	File register	Octal	000000 to 177776	○	○
2 <sup>*3</sup>	File register	Octal	000000 to 177776	○	○

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
3*3	File register	Octal	000000 to 177776	○
4*3	File register	Octal	000000 to 177776	○
5*3	File register	Octal	000000 to 177776	○
6*3	File register	Octal	000000 to 177776	○
7*3	File register	Octal	000000 to 177776	○
09*4	Register	Octal	000 to 776	○
19*4	Register	Octal	000 to 776	○
29*4	Register	Octal	000 to 776	○
39*4	Register	Octal	000 to 776	○
49*4	Register	Octal	000 to 776	○
59*4	Register	Octal	000 to 776	○
69*4	Register	Octal	000 to 776	○
79*4	Register	Octal	000 to 776	○
89*4	Register	Octal	000 to 776	○
99*4	Register	Octal	000 to 776	○
E0*4	Register	Octal	000 to 776	○
E1*4	Register	Octal	000 to 776	○
E2*4	Register	Octal	000 to 776	○
E3*4	Register	Octal	000 to 776	○
E4*4	Register	Octal	000 to 776	○
E5*4	Register	Octal	000 to 776	○
E6*4	Register	Octal	000 to 776	○
E7*4	Register	Octal	000 to 776	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Device settings for T and C must not overlap one another in the same address range.

Even if the address ranges overlap one another, the GOT displays no error.

The GOT monitors the timer and counter devices according to their address range instead of their device name.

Accordingly, if a device invalid as a SHARP PLC parameter is specified on GT Designer3, the GOT monitors a different device that covers the address range of the specified device.

Example) Parameter settings on the SHARP PLC side: T0000 to T1000, C1001 to C1777

When "C0000" is set in GT Designer3, GOT will monitor "T0000".

\*3 The file register format includes the file number and the address.

Set the address with an even number.

\*4 The register format includes the type and the address.

Set the address with an even number.

## ■5 Availability of writing/reading data to/from word devices ([SHARP JW])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data

## 12.4.13 SHINKO equipment ([Shinko Technos Controller])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([Shinko Technos Controller])
Specifications of word devices	→ ■2 Monitoring-supported word devices ([Shinko Technos Controller])
	→ ■3 Availability of writing/reading data to/from word devices ([Shinko Technos Controller])

### ■1 Device setting dialog ([Shinko Technos Controller])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of ..0001

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Monitor target specification

Set the monitoring target of the set device.

Item	Description
[All]	Select this item when writing data to all the connected indicating controllers. During monitoring, the indicating controller set for [Host Address] of the [Controller Setting] window is monitored. When data is input from a numerical input object, the data is written to all the connected indicating controllers. When no data is input, the controller set for [Host Address] is monitored.
[Selection]	Select this item when monitoring the indicating controller that has the specified station number.

#### 5) [Station No.]

This item appears when [Selection] is selected for the monitor target specification.

The setting range is [0] to [95] (direct) or [100] to [115] (indirect).

For the monitor target specified when [95] is selected, refer to the description for [All].

For indirect specification of a station number, refer to the following.

⇒(1) Indirect specification of a station number ([Shinko Technos Controller])

### (1) Indirect specification of a station number ([Shinko Technos Controller])

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the relationship between the specified station number and the GOT data register (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	[0] to [94] Setting a value outside the above range causes a device range error.
101	GD11	
:	:	
114	GD24	
115	GD25	

### ■2 Monitoring-supported word devices ([Shinko Technos Controller])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.13 ■3 Availability of writing/reading data to/from word devices ([Shinko Technos Controller])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
..	Data	Hexadecimal	M(Memory No.)/(Device) Notation example: M7/..0001 • Memory No.: None, 0 to 7 • Device: 0001 to 7901 When "NONE" is shown for [Memory No.], it is not necessary to set "M(Memory No.)".	○	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from word devices ([Shinko Technos Controller])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
..	R/W	-/-	-/-	R/W

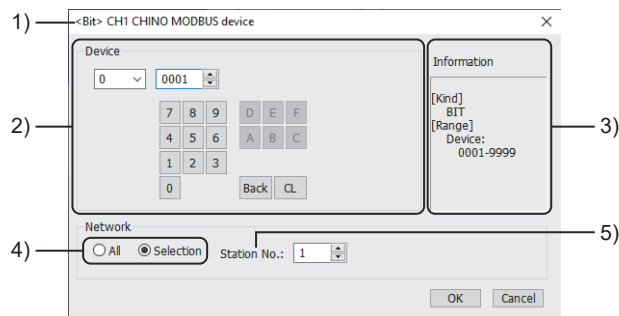

## 12.4.14 CHINO equipment ([CHINO MODBUS device])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([CHINO MODBUS device])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([CHINO MODBUS device])
	→ ■3 Availability of writing/reading data to/from bit devices ([CHINO MODBUS device])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([CHINO MODBUS device])
	→ ■5 Availability of writing/reading data to/from word devices ([CHINO MODBUS device])

### ■1 Device setting dialog ([CHINO MODBUS device])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of 00001

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Monitor target specification

Set the monitoring target of the set device.

Item	Description
[All]	Select this item when writing data to all the connected controllers. During monitoring, the controller set for [Host Address] of the [Controller Setting] window is monitored. When data is input from a numerical input object, the data is written to all the connected controllers. When no data is input, the controller set for [Host Address] is monitored.
[Selection]	Select this item when monitoring the controller that has the specified station number.

#### 5) [Station No.]

This item appears when [Selection] is selected for the monitor target specification.

The setting range is [0] to [99] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

→ (1) Indirect specification of a station number ([CHINO MODBUS device])

### (1) Indirect specification of a station number ([CHINO MODBUS device])

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the correspondence between station number setting values and GOT data registers (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	[0] to [99] Setting a value outside the above range causes a device range error.
101	GD11	
:	:	
114	GD24	
115	GD25	

### ■2 Monitoring-supported bit devices ([CHINO MODBUS device])

The following table shows monitoring-supported bit devices.

Devices are set with reference numbers.

For parameters corresponding to each reference number, refer to the following.

⇒ Manual of the controller used

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.14 ■3 Availability of writing/reading data to/from bit devices ([CHINO MODBUS device])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
0	Digital parameter	Decimal	0001 to 9999	○	○
1	Digital input data	Decimal	0001 to 9999	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from bit devices ([CHINO MODBUS device])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
0	R/W	-/-	-/-	-/-	-/-
1	R/-	-/-	-/-	-/-	-/-

#### ■4 Monitoring-supported word devices ([CHINO MODBUS device])

The following table shows monitoring-supported word devices.

Devices are set with reference numbers.

For parameters corresponding to each reference number, refer to the following.

⇒ Manual of the controller used

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.14 ■5 Availability of writing/reading data to/from word devices ([CHINO MODBUS device])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
3	Analog input data	Decimal	0001 to 9999	○	○
4	Analog parameter	Decimal	0001 to 9999	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■5 Availability of writing/reading data to/from word devices ([CHINO MODBUS device])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
3	R/-	R/-	-/-	R/-
4	R/W	R/W	-/-	R/W

## 12.4.15 TOSHIBA equipment ([TOSHIBA PROSEC T/V])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([TOSHIBA PROSEC T/V])

	→ ■5 Availability of writing/reading data to/from word devices ([TOSHIBA PROSEC T/V])
Notation of devices	→ ■6 Notation of devices ([TOSHIBA PROSEC T/V])

### ■1 Device setting dialog ([TOSHIBA PROSEC T/V])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of X0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([TOSHIBA PROSEC T/V])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.15 ■3 Availability of writing/reading data to/from bit devices ([TOSHIBA PROSEC T/V])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

The notation of device setting is different between the TOSHIBA PLC peripheral software and GOT.

For the notation of devices, refer to the following.

⇒12.4.15 ■6 Notation of devices ([TOSHIBA PROSEC T/V])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
X	External input	Decimal + hexadecimal X(Word address)(Bit address) Notation example: X5110 The rightmost digit is a bit address. • Word address (decimal): 000 to 511 • Bit address (hexadecimal): 0 to F	○	○
Y	External output	Decimal + hexadecimal Y(Word address)(Bit address) Notation example: Y5110 The rightmost digit is a bit address. • Word address (decimal): 000 to 511 • Bit address (hexadecimal): 0 to F	○	○
Z	Link register relay	Decimal + hexadecimal Z(Word address)(Bit address) Notation example: Z9990 The rightmost digit is a bit address. • Word address (decimal): 000 to 999F • Bit address (hexadecimal): 0 to F	○	○ (Not usable as word data)
R*2	Internal relay	Decimal + hexadecimal R(Word address)(Bit address) Notation example: R40950 The rightmost digit is a bit address. • Word address (decimal): 0000 to 4095 • Bit address (hexadecimal): 0 to F	○	○
T*3	Timer (Contact)	Decimal 0 to 999	○	○ (Not usable as word data)
C*3	Counter (Contact)	Decimal 0 to 511	○	○ (Not usable as word data)
L	Link relay	Decimal + hexadecimal L(Word address)(Bit address) Notation example: L2550 The rightmost digit is a bit address. • Word address (decimal): 000 to 255 • Bit address (hexadecimal): 0 to F	○	○
S	Special relay	Decimal + hexadecimal S(Word address)(Bit address) Notation example: S5110 The rightmost digit is a bit address. • Word address (decimal): 000 to 511 • Bit address (hexadecimal): 0 to F	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Although the device is defined as D in the manual of TOSHIBA PLC, R is used for setting as it is used for computer link connection.

\*3 The GOT reads the value from a device and then write a value to the device.

Do not change the device value with a sequence program until the GOT completes writing a value to the device.

■3 Availability of writing/reading data to/from bit devices ([TOSHIBA PROSEC T/V])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X*1	R/W	-/-	-/-	-/-	-/-
Y*1	R/W	-/-	-/-	-/-	-/-
Z	R/W	-/-	-/-	-/-	-/-

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
R*1	R/W	-/-	-/-	-/-	-/-
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-
L*1	R/W	-/-	-/-	-/-	-/-
S*1	R/W	-/-	-/-	-/-	-/-

\*1 To use the device as word data, use the word device that has the same device name appended with "W".  
Example) Use XW for X.

#### ■4 Monitoring-supported word devices ([TOSHIBA PROSEC T/V])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.15 ■5 Availability of writing/reading data to/from word devices ([TOSHIBA PROSEC T/V])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

The notation of device setting is different between the TOSHIBA PLC peripheral software and GOT.

For the notation of devices, refer to the following.

⇒ 12.4.15 ■6 Notation of devices ([TOSHIBA PROSEC T/V])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
T*2	Timer (Current value)	Decimal	0 to 999	○	○
C*2	Counter (Current value)	Decimal	0 to 511	○	○
D*3	Data register	Decimal	0 to 8191	○	○
W	Link register	Decimal	0 to 2047	○	○
F*4	File register	Decimal	0 to 32767	○	○
XW	External input	Decimal	0 to 511	○	○
YW	External output	Decimal	0 to 511	○	○
RW*3	Internal relay	Decimal	0 to 4095	○	○
LW	Link relay	Decimal	0 to 255	○	○
SW	Special relay	Decimal	0 to 511	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 The GOT reads the value from a device and then write a value to the device.

Do not change the device value with a sequence program until the GOT completes writing a value to the device.

\*3 Although the device is defined as DW in the manual of TOSHIBA PLC, D or RW is used for setting as they are used for computer link connection.

D and RW are different names, but practically represent the same device.

\*4 Extension file register is not supported.

## ■5 Availability of writing/reading data to/from word devices ([TOSHIBA PROSEC T/V])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data*1
T	R/W	R/W	-/-	-/-
C	R/W	R/W	-/-	-/-
D*2	R/W	R/W	-/-	R/W
W	R/W	R/W	-/-	R/W
F	R/W	R/W	-/-	R/W
XW*3	R/W	R/W	-/-	-/-
YW*3	R/W	R/W	-/-	-/-
RW*3	R/W	R/W	-/-	-/-
LW*3	R/W	R/W	-/-	-/-
SW*3	R/W	R/W	-/-	-/-

\*1 The GOT reads the value from a device and then write a value to the device.

Do not change the device value with a sequence program until the GOT completes writing a value to the device.

\*2 When the mode switch on the CPU module has been set to P-RUN, writing to D0000 through D4095 is disabled.

\*3 To use the device as bit data, use the bit device that has the same device name without "W".

Example) Use X for XW.

## ■6 Notation of devices ([TOSHIBA PROSEC T/V])

The notation of device setting is different between the TOSHIBA PLC peripheral software and GOT.

### (1) Notation of bit devices ([TOSHIBA PROSEC T/V])

The conversion from the notation for the TOSHIBA PLC to that for the GOT is shown as follows.

Address notation for TOSHIBA PLC  $\div$  16 = Word address (Quotient)...Bit address (Remainder)

Example of address notation for TOSHIBA PLC	Conversion	Example of address notation for GOT
S8191	$8191 \div 16 = 511...15$ • Word address (decimal): 511 • Bit address (hexadecimal): F	S511 F
R65535	$65535 \div 16 = 4095...15$ • Word address (decimal): 4095 • Bit address (hexadecimal): F	R4095 F

### (2) Notation of word devices ([TOSHIBA PROSEC T/V])

Data type	Example of address notation for TOSHIBA PLC	Example of address notation for GOT
16 bits	DW10	D10
32 bits	Integer DD10 (Calculate the device No. in 32-bit unit)	D20
	Real number DF10 (Calculate the device No. in 32-bit unit)	D20

## 12.4.16 TOSHIBA equipment ([TOSHIBA Unified Controller nv])

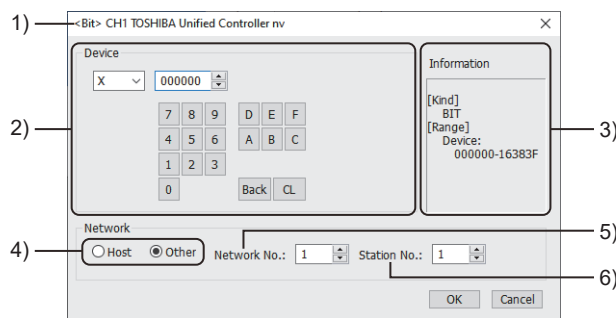

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Not available to GT25-W, GT2505-V, and GT25HS-V.

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([TOSHIBA Unified Controller nv])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([TOSHIBA Unified Controller nv])
	→ ■3 Availability of writing/reading data to/from bit devices ([TOSHIBA Unified Controller nv])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([TOSHIBA Unified Controller nv])
	→ ■5 Availability of writing/reading data to/from word devices ([TOSHIBA Unified Controller nv])

### ■1 Device setting dialog ([TOSHIBA Unified Controller nv])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of X000000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

#### 6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

### ■2 Monitoring-supported bit devices ([TOSHIBA Unified Controller nv])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.16 ■3 Availability of writing/reading data to/from bit devices ([TOSHIBA Unified Controller nv])  
 For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
X	External output	Decimal + hexadecimal X(Word address)(Bit address) Notation example: X163830 The rightmost digit is a bit address. • Word address (decimal): 00000 to 16383 • Bit address (hexadecimal): 0 to F	○	○ (Not usable as word data)
Y	External input	Decimal + hexadecimal Y(Word address)(Bit address) Notation example: Y163830 The rightmost digit is a bit address. • Word address (decimal): 00000 to 16383 • Bit address (hexadecimal): 0 to F	○	○ (Not usable as word data)
R	Internal relay	Decimal + hexadecimal R(Word address)(Bit address) Notation example: R81910 The rightmost digit is a bit address. • Word address (decimal): 0000 to 8191 • Bit address (hexadecimal): 0 to F	○	○ (Not usable as word data)
I	Input variable	Decimal + hexadecimal I(Word address)(Bit address) Notation example: I163830 The rightmost digit is a bit address. • Word address (decimal): 00000 to 16383 • Bit address (hexadecimal): 0 to F	○	○ (Not usable as word data)
Q	Output variable	Decimal + hexadecimal Q(Word address)(Bit address) Notation example: Q163830 The rightmost digit is a bit address. • Word address (decimal): 00000 to 16383 • Bit address (hexadecimal): 0 to F	○	○ (Not usable as word data)
S	Special relay	Decimal + hexadecimal S(Word address)(Bit address) Notation example: S10230 The rightmost digit is a bit address. • Word address (decimal): 0000 to 1023 • Bit address (hexadecimal): 0 to F	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from bit devices ([TOSHIBA Unified Controller nv])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-
Y <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-
R <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-
I <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-
Q <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-
S <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-

\*1 To use the device as word data, use the word device that has the same device name appended with "W".

Example) Use XW for X.

#### ■4 Monitoring-supported word devices ([TOSHIBA Unified Controller nv])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.16 ■5 Availability of writing/reading data to/from word devices ([TOSHIBA Unified Controller nv])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
XW	External input	Decimal	0 to 16383	○	○ (Not usable as bit data)
YW	External output	Decimal	0 to 16383	○	○ (Not usable as bit data)
RW	Internal relay	Decimal	0 to 8191	○	○ (Not usable as bit data)
SW	Special relay	Decimal	0 to 1023	○	○ (Not usable as bit data)
D	Data register	Decimal	0 to 8191	○	○
F	File register	Decimal	0 to 32767	○	○
IW	Input variable	Decimal	0 to 16383	○	○ (Not usable as bit data)
QW	Output variable	Decimal	0 to 16383	○	○ (Not usable as bit data)
UG	User global	Decimal	0 to 262143	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■5 Availability of writing/reading data to/from word devices ([TOSHIBA Unified Controller nv])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
XW*1	R/W	R/W	-/-	-/-
YW*1	R/W	R/W	-/-	-/-
RW*1	R/W	R/W	-/-	-/-
SW*1	R/W	R/W	-/-	-/-
D	R/W	R/W	-/-	R/W
F	R/W	R/W	-/-	R/W
IW*1	R/W	R/W	-/-	-/-
QW*1	R/W	R/W	-/-	-/-
UG	R/W	R/W	-/-	R/W

\*1 To use the device as bit data, use the bit device that has the same device name without "W".

Example) Use X for XW.

## 12.4.17 SHIBAURA MACHINE equipment ([SHIBAURA MACHINE TCmini])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([SHIBAURA MACHINE TCmini])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([SHIBAURA MACHINE TCmini])
	→ ■3 Availability of writing/reading data to/from bit devices ([SHIBAURA MACHINE TCmini])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([SHIBAURA MACHINE TCmini])
	→ ■5 Availability of writing/reading data to/from word devices ([SHIBAURA MACHINE TCmini])

### ■1 Device setting dialog ([SHIBAURA MACHINE TCmini])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of X000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([SHIBAURA MACHINE TCmini])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.17 ■3 Availability of writing/reading data to/from bit devices ([SHIBAURA MACHINE TCmini])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
X	Input relay 1	Hexadecimal + octal + hexadecimal X(Rack No.)(Module position)(Terminal No.) Notation example: XF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
Y	Output relay 1	Hexadecimal + octal + hexadecimal Y(Rack No.)(Module position)(Terminal No.) Notation example: YF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
R	Internal relay	Hexadecimal + octal + hexadecimal R(Rack No.)(Module position)(Terminal No.) Notation example: R77F • Rack No. (hexadecimal): 0 to 7 • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
L	Latch relay	Hexadecimal + octal + hexadecimal L(Rack No.)(Module position)(Terminal No.) Notation example: L07F • Rack No. (hexadecimal): 0 • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
S	Shift relay	Hexadecimal + octal + hexadecimal S(Rack No.)(Module position)(Terminal No.) Notation example: S07F • Rack No. (hexadecimal): 0 • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
E	Edge relay	Hexadecimal + octal + hexadecimal E(Rack No.)(Module position)(Terminal No.) Notation example: E77F • Rack No. (hexadecimal): 0 to 7 • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
T	Timer contact	Hexadecimal + octal + hexadecimal T(Rack No.)(Module position)(Terminal No.) Notation example: T77F • Rack No. (hexadecimal): 0 to 7 • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
C	Counter contact	Hexadecimal + octal + hexadecimal C(Rack No.)(Module position)(Terminal No.) Notation example: C77F • Rack No. (hexadecimal): 0 to 7 • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
I	Input relay 2	Hexadecimal + octal + hexadecimal I(Rack No.)(Module position)(Terminal No.) Notation example: IF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
O	Output relay 2	Hexadecimal + octal + hexadecimal O(Rack No.)(Module position)(Terminal No.) Notation example: OF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
GR	Extended internal relay 1	Hexadecimal + octal + hexadecimal GR(Rack No.)(Module position)(Terminal No.) Notation example: GRF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
H	Extended internal relay 2	Hexadecimal + octal + hexadecimal H(Rack No.)(Module position)(Terminal No.) Notation example: HF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
J	Extended internal relay 3	Hexadecimal + octal + hexadecimal J(Rack No.)(Module position)(Terminal No.) Notation example: JF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
K	Extended internal relay 4	Hexadecimal + octal + hexadecimal K(Rack No.)(Module position)(Terminal No.) Notation example: KF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
A	Special aux relay	Hexadecimal + octal + hexadecimal A(Rack No.)(Module position)(Terminal No.) Notation example: A16F • Rack No. (hexadecimal): 0 to 1 • Module position (octal): 0 to 7 (0 to 6 when the rack No. is 1.) • Terminal No. (hexadecimal): 0 to F	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from bit devices ([SHIBAURA MACHINE TCmini])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

To use the device as word data, use the word device that has the same device name appended with "W".

Example) Use XW for X.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	-/-	-/-	-/-
Y	R/W	-/-	-/-	-/-	-/-
R	R/W	-/-	-/-	-/-	-/-
L	R/W	-/-	-/-	-/-	-/-
S	R/W	-/-	-/-	-/-	-/-
E	R/W	-/-	-/-	-/-	-/-
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-
I	R/W	-/-	-/-	-/-	-/-
O	R/W	-/-	-/-	-/-	-/-
GR	R/W	-/-	-/-	-/-	-/-
H	R/W	-/-	-/-	-/-	-/-

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
J	R/W	-/-	-/-	-/-	-/-
K	R/W	-/-	-/-	-/-	-/-
A	R/W	-/-	-/-	-/-	-/-

#### ■4 Monitoring-supported word devices ([SHIBAURA MACHINE TCmini])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.17 ■5 Availability of writing/reading data to/from word devices ([SHIBAURA MACHINE TCmini])

For the formats of devices, refer to the following.

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
P	Hexadecimal + octal + hexadecimal	P(Rack No.)(Module position)(Register No.) Notation example: P77F • Rack No. (hexadecimal): 0 to 7 • Module position (octal): 0 to 7 • Register No. (hexadecimal): 0 to F	○	○ (Not usable as bit data)
XW	Hexadecimal + octal	XW(Rack No.)(Module position) Notation example: XWF7 • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
IW	Hexadecimal + octal	IW(Rack No.)(Module position) Notation example: IWF7 • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
YW	Hexadecimal + octal	YW(Rack No.)(Module position) Notation example: YWF7 • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
OW	Hexadecimal + octal	OW(Rack No.)(Module position) Notation example: OWF7 • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
RW	Hexadecimal + octal	RW(Rack No.)(Module position) Notation example: RW77 • Rack No. (hexadecimal): 0 to 7 • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
GW	Hexadecimal + octal	GW(Rack No.)(Module position) Notation example: GWF7 • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
HW	Hexadecimal + octal	HW(Rack No.)(Module position) Notation example: HWF7 • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
JW	Hexadecimal + octal	JW(Rack No.)(Module position) Notation example: JWF7 • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
KW	Hexadecimal + octal	KW(Rack No.)(Module position) Notation example: KWF7 • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
TW	Hexadecimal + octal	TW(Rack No.)(Module position) Notation example: TW77 • Rack No. (hexadecimal): 0 to 7 • Module position (octal): 0 to 7	○	○ (Not usable as bit data)

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
CW	Counter contact register	Hexadecimal + octal	CW(Rack No.)(Module position) Notation example: CW77 • Rack No. (hexadecimal): 0 to 7 • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
SW	Shift register	Hexadecimal + octal	SW(Rack No.)(Module position) Notation example: SW07 • Rack No. (hexadecimal): 0 • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
LW	Latch register	Hexadecimal + octal	LW(Rack No.)(Module position) Notation example: LW07 • Rack No. (hexadecimal): 0 • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
EW	Edge register	Hexadecimal + octal	EW(Rack No.)(Module position) Notation example: EW77 • Rack No. (hexadecimal): 0 to 7 • Module position (octal): 0 to 7	○	○ (Not usable as bit data)
AW	Special aux register	Hexadecimal + octal	AW(Rack No.)(Module position) Notation example: AW17 • Rack No. (hexadecimal): 0 to 1 • Module position (octal): 0 to 7 (0 to 6 when the rack No. is 1.)	○	○ (Not usable as bit data)
D	Generic register 1	Hexadecimal + octal + hexadecimal	D(Rack No.)(Module position)(Register No.) Notation example: DF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Register No. (hexadecimal): 0 to F	○	○ (Not usable as bit data)
B	Generic register 2	Hexadecimal + octal + hexadecimal	B(Rack No.)(Module position)(Register No.) Notation example: BF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Register No. (hexadecimal): 0 to F	○	○ (Not usable as bit data)
U	Generic register 3	Hexadecimal + octal + hexadecimal	U(Rack No.)(Module position)(Register No.) Notation example: UF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Register No. (hexadecimal): 0 to F	○	○ (Not usable as bit data)
M	Generic register 4	Hexadecimal + octal + hexadecimal	M(Rack No.)(Module position)(Register No.) Notation example: MF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Register No. (hexadecimal): 0 to F	○	○ (Not usable as bit data)
Q	Generic register 5	Hexadecimal + octal + hexadecimal	Q(Rack No.)(Module position)(Register No.) Notation example: QF7F • Rack No. (hexadecimal): 0 to F • Module position (octal): 0 to 7 • Register No. (hexadecimal): 0 to F	○	○ (Not usable as bit data)
V	Timer/Counter set value	Hexadecimal + octal + hexadecimal	V(Rack No.)(Module position)(Register No.) Notation example: V77F • Rack No. (hexadecimal): 0 to 7 • Module position (octal): 0 to 7 • Register No. (hexadecimal): 0 to F	○	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■5 Availability of writing/reading data to/from word devices ([SHIBAURA MACHINE TCmini])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
P	R/W	-/-	-/-	-/-
XW*1	R/W	R/-	-/-	-/-
IW*1	R/W	R/-	-/-	-/-
YW*1	R/W	R/W	-/-	-/-
OW*1	R/W	R/W	-/-	-/-
RW*1	R/W	R/W	-/-	-/-
GW*1	R/W	R/W	-/-	-/-
HW*1	R/W	R/W	-/-	-/-
JW*1	R/W	R/W	-/-	-/-
KW*1	R/W	R/W	-/-	-/-
TW*1	R/W	R/W	-/-	-/-
CW*1	R/W	R/W	-/-	-/-
SW*1	R/W	R/W	-/-	-/-
LW*1	R/W	R/W	-/-	-/-
EW*1	R/W	R/W	-/-	-/-
AW*1	R/W	R/W	-/-	-/-
D	R/W	R/W	-/-	-/-
B	R/W	R/W	-/-	-/-
U	R/W	R/W	-/-	-/-
M	R/W	R/W	-/-	-/-
Q	R/W	R/W	-/-	-/-
V	R/W	-/-	-/-	-/-

\*1 To use the device as bit data, use the bit device that has the same device name without "W".

Example) Use X for XW.

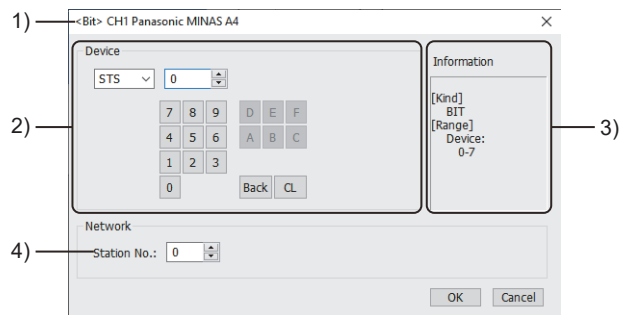

## 12.4.18 PANASONIC equipment ([Panasonic MINAS A4])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([Panasonic MINAS A4])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([Panasonic MINAS A4])
	→ ■3 Availability of writing/reading data to/from bit devices ([Panasonic MINAS A4])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([Panasonic MINAS A4])
	→ ■5 Availability of writing/reading data to/from word devices ([Panasonic MINAS A4])
Specifications of double-word devices	→ ■6 Monitoring-supported double-word devices ([Panasonic MINAS A4])
	→ ■7 Availability of writing/reading data to/from double-word devices ([Panasonic MINAS A4])

### ■1 Device setting dialog ([Panasonic MINAS A4])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of STS0

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

Specify a station number.

The setting range is [0] to [15] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

→ (1) Indirect specification of a station number ([Panasonic MINAS A4])

### (1) Indirect specification of a station number ([Panasonic MINAS A4])

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the relationship between the specified station number and the GOT data register (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	[0] to [15] Setting a value outside the above range causes a timeout error.
101	GD11	
:	:	
114	GD24	
115	GD25	

### ■2 Monitoring-supported bit devices ([Panasonic MINAS A4])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.18 ■3 Availability of writing/reading data to/from bit devices ([Panasonic MINAS A4])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
STS	Status	Decimal	0 to 7	×	×
INP	Input signal	Decimal	0 to 31	○	×
OTP	Output signal	Decimal	0 to 47	○	×
AEST	Absolute encoder (Status)	Decimal	0 to 15	×	×
EPRW	Writing of parameter to EEPROM	Decimal	0	×	×
ALHC	Clear of user alarm history (in EEPROM as well)	Decimal	0	×	×
ALMC	Alarm clear	Decimal	0	×	×
ABSC	Absolute clear	Decimal	0	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from bit devices ([Panasonic MINAS A4])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
STS	R/-	-/-	-/-	-/-	-/-
INP	R/-	-/-	-/-	-/-	-/-
OTP	R/-	-/-	-/-	-/-	-/-
AEST	R/-	-/-	-/-	-/-	-/-
EPRW	-/W	-/-	-/-	-/-	-/-
ALHC	-/W	-/-	-/-	-/-	-/-
ALMC	-/W	-/-	-/-	-/-	-/-
ABSC	-/W	-/-	-/-	-/-	-/-

#### ■4 Monitoring-supported word devices ([Panasonic MINAS A4])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.18 ■5 Availability of writing/reading data to/from word devices ([Panasonic MINAS A4])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
STCM	Status (Control modes)	Decimal	0	×	×
SPD	Present speed	Decimal	0	×	×
TRQ	Present torque output	Decimal	0	×	×
AEID	Absolute encoder (Encoder ID)	Decimal	0	×	×
AEMD	Absolute encoder (Multi-turn data)	Decimal	0	×	×
PRM	Parameter	Hexadecimal	0000 to 007F	○	×
ALM	Present alarm data	Decimal	0	×	×
ALHI	User alarm history	Decimal	1 to 14	○	×
PRMN	User parameter (MIN. value)	Hexadecimal	0000 to 007F	○	×
PRMX	User parameter (MAX. value)	Hexadecimal	0000 to 007F	○	×
PRPR	Attribute	Hexadecimal	0000 to 007F	○	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■5 Availability of writing/reading data to/from word devices ([Panasonic MINAS A4])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data

SPD	R/-	-/-	-/-	-/-
TRQ	R/-	-/-	-/-	-/-
AEID	R/-	-/-	-/-	-/-
AEMD	R/-	-/-	-/-	-/-
PRM	R/W	-/-	-/-	-/-
ALM	R/-	-/-	-/-	-/-
ALHI	R/-	-/-	-/-	-/-
PRMN	R/-	-/-	-/-	-/-
PRMX	R/-	-/-	-/-	-/-
PRPR	R/-	-/-	-/-	-/-

## ■6 Monitoring-supported double-word devices ([Panasonic MINAS A4])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.18 ■7 Availability of writing/reading data to/from double-word devices ([Panasonic MINAS A4])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
FBPC	Feedback pulse counter	Decimal	0	×	×
DVC	Present deviation counter	Decimal	0	×	×
AESD	Absolute encoder (Single turn data)	Decimal	0	×	×
ESA	External scale deviation and sum of pulses	Decimal	0 to 1	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■7 Availability of writing/reading data to/from double-word devices ([Panasonic MINAS A4])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
FBPC	-/-	R/-	-/-	-/-
DVC	-/-	R/-	-/-	-/-
AESD	-/-	R/-	-/-	-/-
ESA	-/-	R/-	-/-	-/-

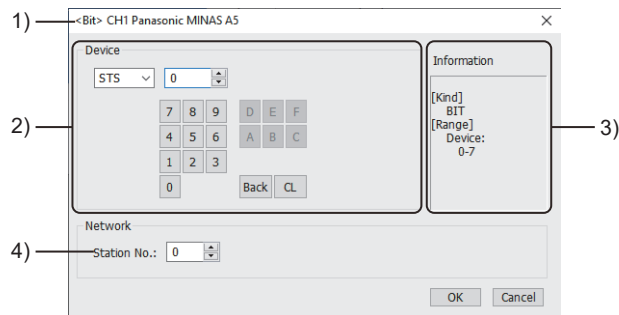

## 12.4.19 PANASONIC equipment ([Panasonic MINAS A5])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([Panasonic MINAS A5])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([Panasonic MINAS A5])
	→ ■3 Availability of writing/reading data to/from bit devices ([Panasonic MINAS A5])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([Panasonic MINAS A5])
	→ ■5 Availability of writing/reading data to/from word devices ([Panasonic MINAS A5])
Specifications of double-word devices	→ ■6 Monitoring-supported double-word devices ([Panasonic MINAS A5])
	→ ■7 Availability of writing/reading data to/from double-word devices ([Panasonic MINAS A5])

### ■1 Device setting dialog ([Panasonic MINAS A5])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of STS0

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

Specify a station number.

The setting range is [0] to [31] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

→ (1) Indirect specification of a station number ([Panasonic MINAS A5])

### (1) Indirect specification of a station number ([Panasonic MINAS A5])

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the relationship between the specified station number and the GOT data register (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	[0] to [31] Setting a value outside the above range causes a timeout error.
101	GD11	
:	:	
114	GD24	
115	GD25	

### ■2 Monitoring-supported bit devices ([Panasonic MINAS A5])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.19 ■3 Availability of writing/reading data to/from bit devices ([Panasonic MINAS A5])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1

	→ ■5 Availability of writing/reading data to/from word devices ([Panasonic MEWNET-FP])

### ■1 Device setting dialog ([Panasonic MEWNET-FP])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of X0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([Panasonic MEWNET-FP])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.20 ■3 Availability of writing/reading data to/from bit devices ([Panasonic MEWNET-FP])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
X*2	Decimal + hexadecimal	X(Word address)(Bit address) Notation example: X5110 The rightmost digit is a bit address. • Word address (decimal): 000 to 511 • Bit address (hexadecimal): 0 to F	○	○
Y*2	Decimal + hexadecimal	Y(Word address)(Bit address) Notation example: Y5110 The rightmost digit is a bit address. • Word address (decimal): 000 to 511 • Bit address (hexadecimal): 0 to F	○	○
L	Decimal + hexadecimal	L(Word address)(Bit address) Notation example: L6390 The rightmost digit is a bit address. • Word address (decimal): 000 to 639 • Bit address (hexadecimal): 0 to F	○	○
R	Internal relay	R(Word address)(Bit address) Notation example: R8860 The rightmost digit is a bit address. • Word address (decimal): 000 to 886 • Bit address (hexadecimal): 0 to F	○	○
	Special relay	R(Word address)(Bit address) Notation example: R9510 The rightmost digit is a bit address. • Word address (decimal): 900 to 951 • Bit address (hexadecimal): 0 to F		
T*3	Decimal	0000 to 3071	○	○ (Not usable as word data)
C*3	Decimal	0000 to 3071	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Only those devices that have been assigned to I/O contacts by peripheral software can be used.

\*3 The number of timer and counter devices differs depending on the head numbers of the counter set by the value of the system register (No. 5).

### ■3 Availability of writing/reading data to/from bit devices ([Panasonic MEWNET-FP])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/-	-/-	-/-	-/-	-/-
Y	R/W	-/-	-/-	-/-	-/-
L	R/W	-/-	-/-	-/-	-/-
R (internal relay)	R/W	-/-	-/-	-/-	-/-
R (special relay)	R/-	-/-	-/-	-/-	-/-
T	R/-	-/-	-/-	-/-	-/-
C	R/-	-/-	-/-	-/-	-/-

#### ■4 Monitoring-supported word devices ([Panasonic MEWNET-FP])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.20 ■5 Availability of writing/reading data to/from word devices ([Panasonic MEWNET-FP])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
EV*2	Timer/Counter (Elapsed value)	Decimal	0 to 3071	○	○
DT	Data register	Decimal	0 to 65532 90000 to 90999	○	○
LD	Link register	Decimal	0 to 8447	○	○
FL*3	File register	Decimal	0 to 32764	○	○
WX	Input relay	Decimal	000 to 511	○	○
WY	Output relay	Decimal	000 to 511	○	○
WR	Internal relay	Decimal	000 to 886	○	○
	Special relay		900 to 951		
WL	Link relay	Decimal	000 to 639	○	○
SV*2	Timer/Counter set value	Decimal	0 to 3071	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 The number of timer and counter devices differs depending on the head numbers of the counter set by the value of the system register (No. 5).

\*3 When FP2SH is used, only one bank of 32765 × 3 banks can be monitored.

#### ■5 Availability of writing/reading data to/from word devices ([Panasonic MEWNET-FP])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
EV	R/W	R/W	-/-	R/W
DT	R/W	R/W	-/-	R/W
LD	R/W	R/W	-/-	R/W
FL	R/W	R/W	-/-	R/W
WX	R/-	R/-	-/-	-/-
WY	R/W	R/W	-/-	-/-
WR (internal relay)	R/W	R/W	-/-	-/-
WR (special relay)	R/-	R/-	-/-	-/-
WL	R/W	R/W	-/-	-/-
SV	R/W	R/W	-/-	R/W

## 12.4.21 PANASONIC IDS equipment ([Panasonic FP7])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([Panasonic FP7])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([Panasonic FP7])
	→ ■3 Availability of writing/reading data to/from bit devices ([Panasonic FP7])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([Panasonic FP7])
	→ ■5 Availability of writing/reading data to/from word devices ([Panasonic FP7])
Specifications of double-word devices	→ ■6 Monitoring-supported double-word devices ([Panasonic FP7])
	→ ■7 Availability of writing/reading data to/from double-word devices ([Panasonic FP7])

### ■1 Device setting dialog ([Panasonic FP7])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of X0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([Panasonic FP7])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.21 ■3 Availability of writing/reading data to/from bit devices ([Panasonic FP7])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
X	Input relay	Decimal + hexadecimal X(Word address)(Bit address) Notation example: X5110 The rightmost digit is a bit address. • Word address (decimal): 000 to 511 • Bit address (hexadecimal): 0 to F	×	×
Y	Output relay	Decimal + hexadecimal Y(Word address)(Bit address) Notation example: Y5110 The rightmost digit is a bit address. • Word address (decimal): 000 to 511 • Bit address (hexadecimal): 0 to F	×	×
L	Link relay	Decimal + hexadecimal L(Word address)(Bit address) Notation example: L10230 The rightmost digit is a bit address. • Word address (decimal): 0000 to 1023 • Bit address (hexadecimal): 0 to F	×	×
R	Internal relay	Decimal + hexadecimal R(Word address)(Bit address) Notation example: R20470 The rightmost digit is a bit address. • Word address (decimal): 0000 to 2047 • Bit address (hexadecimal): 0 to F	×	×
T	Timer contact	Decimal 0000 to 4095	×	×
C	Counter contact	Decimal 0000 to 1023	×	×
SR	System relay	Decimal + hexadecimal SR(Word address)(Bit address) Notation example: SR2230 The rightmost digit is a bit address. • Word address (decimal): 000 to 223 • Bit address (hexadecimal): 0 to F	×	×
P	Pulse relay	Decimal + hexadecimal P(Word address)(Bit address) Notation example: P2550 The rightmost digit is a bit address. • Word address (decimal): 000 to 255 • Bit address (hexadecimal): 0 to F	×	×
E	Error alarm relay	Decimal 0000 to 4095	×	×
IN	Direct input	Decimal + hexadecimal S(Slot No.):IN(Word address)(Bit address) Notation example: S64:IN620 The rightmost digit is a bit address. • Slot No. (decimal): 1 to 64 • Word address (decimal): 00 to 62 • Bit address (hexadecimal): 0 to F	×	×
OT	Direct output	Decimal + hexadecimal S(Slot No.):OT(Word address)(Bit address) Notation example: S64:OT620 The rightmost digit is a bit address. • Slot No. (decimal): 1 to 64 • Word address (decimal): 00 to 62 • Bit address (hexadecimal): 0 to F	×	×
_X	Input relay	Decimal + hexadecimal PB(Program block No.)_X(Word address)(Bit address) Notation example: PB468_X5110 The rightmost digit is a bit address. • Program block No. (decimal): 1 to 468 • Word address (decimal): 000 to 511 • Bit address (hexadecimal): 0 to F	×	×

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
_Y	Output relay	Decimal + hexadecimal PB(Program block No.)_Y(Word address)(Bit address) Notation example: PB468_Y5110 The rightmost digit is a bit address. • Program block No. (decimal): 1 to 468 • Word address (decimal): 000 to 511 • Bit address (hexadecimal): 0 to F	x	x
_L	Link relay	Decimal + hexadecimal PB(Program block No.)_L(Word address)(Bit address) Notation example: PB468_L10230 The rightmost digit is a bit address. • Program block No. (decimal): 1 to 468 • Word address (decimal): 0000 to 1023 • Bit address (hexadecimal): 0 to F	x	x
_R	Internal relay	Decimal + hexadecimal PB(Program block No.)_R(Word address)(Bit address) Notation example: PB468_R20470 The rightmost digit is a bit address. • Program block No. (decimal): 1 to 468 • Word address (decimal): 0000 to 2047 • Bit address (hexadecimal): 0 to F	x	x
_T	Timer contact	Decimal PB(Program block No.)_T(Word address) Notation example: PB468_T4095 • Program block No. (decimal): 1 to 468 • Word address (decimal): 0000 to 4095	x	x
_C	Counter contact	Decimal PB(Program block No.)_C(Word address) Notation example: PB468_C1023 • Program block No. (decimal): 1 to 468 • Word address (decimal): 0000 to 1023	x	x
_P	Pulse relay	Decimal + hexadecimal PB(Program block No.)_P(Word address)(Bit address) Notation example: PB468_P2550 The rightmost digit is a bit address. • Program block No. (decimal): 1 to 468 • Word address (decimal): 000 to 255 • Bit address (hexadecimal): 0 to F	x	x

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■ 3 Availability of writing/reading data to/from bit devices ([Panasonic FP7])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	-/-	-/-	-/-
Y	R/W	-/-	-/-	-/-	-/-
L	R/W	-/-	-/-	-/-	-/-
R	R/W	-/-	-/-	-/-	-/-
T	R/-	-/-	-/-	-/-	-/-
C	R/-	-/-	-/-	-/-	-/-
SR	R/-	-/-	-/-	-/-	-/-
P	R/-	-/-	-/-	-/-	-/-

_X	R/W	-/-	-/-	-/-	-/-
_Y	R/W	-/-	-/-	-/-	-/-
_L	R/W	-/-	-/-	-/-	-/-
_R	R/W	-/-	-/-	-/-	-/-
_T	R/-	-/-	-/-	-/-	-/-
_C	R/-	-/-	-/-	-/-	-/-
_P	R/-	-/-	-/-	-/-	-/-

#### ■4 Monitoring-supported word devices ([Panasonic FP7])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.21 ■5 Availability of writing/reading data to/from word devices ([Panasonic FP7])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
DT	Data register	Decimal	0 to 999423	○	○
LD	Link register	Decimal	0 to 16383	○	○
WX	Input relay	Decimal	000 to 511	○	○ (Not usable as bit data)
WY	Output relay	Decimal	000 to 511	○	○ (Not usable as bit data)
WR	Internal relay	Decimal	0000 to 2047	○	○ (Not usable as bit data)
WL	Link relay	Decimal	0000 to 1023	○	○ (Not usable as bit data)
WI	Direct input	Decimal	S(Slot No.):WI(Word address) Notation example: S64:WI62 • Slot No. (decimal): 1 to 64 • Word address (decimal): 00 to 62	×	×
WO	Direct output	Decimal	S(Slot No.):WO(Word address) Notation example: S64:WO62 • Slot No. (decimal): 1 to 64 • Word address (decimal): 00 to 62	○	○ (Not usable as bit data)
WS	System relay	Decimal	0 to 223	×	×
UM	Unit memory	Decimal	S(Slot No.):UM(Word address) Notation example: S64:UM524287 • Slot No. (decimal): 1 to 64 • Word address (decimal): 0 to 524287	○	○
SD	System data register	Decimal	0 to 255	×	×
_DT	Data register	Decimal	PB(Program block No.)_DT(Word address) Notation example: PB468_DT999423 • Program block No. (decimal): 1 to 468 • Word address (decimal): 0 to 999423	○	○
_LD	Link register	Decimal	PB(Program block No.)_LD(Word address) Notation example: PB468_LD16383 • Program block No. (decimal): 1 to 468 • Word address (decimal): 0 to 16383	○	○

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
_WX	Input relay	Decimal	PB(Program block No.)_WX(Word address) Notation example: PB468_WX511 • Program block No. (decimal): 1 to 468 • Word address (decimal): 000 to 511	○ (Not usable as bit data)
_WY	Output relay	Decimal	PB(Program block No.)_WY(Word address) Notation example: PB468_WY511 • Program block No. (decimal): 1 to 468 • Word address (decimal): 000 to 511	○ (Not usable as bit data)
_WR	Internal relay	Decimal	PB(Program block No.)_WR(Word address) Notation example: PB468_WR2047 • Program block No. (decimal): 1 to 468 • Word address (decimal): 0000 to 2047	○ (Not usable as bit data)
_WL	Link relay	Decimal	PB(Program block No.)_WL(Word address) Notation example: PB468_WL1023 • Program block No. (decimal): 1 to 468 • Word address (decimal): 0000 to 1023	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■5 Availability of writing/reading data to/from word devices ([Panasonic FP7])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
DT	R/W	R/W	-/-	R/W
LD	R/W	R/W	-/-	R/W
WX	R/W	R/W	-/-	-/-
WY	R/W	R/W	-/-	-/-
WR	R/W	R/W	-/-	-/-
WL	R/W	R/W	-/-	-/-
WI	R/-	R/-	-/-	-/-

_TS	-/-	R/W	-/-	-/-
_TE	-/-	R/W	-/-	-/-
_CS	-/-	R/W	-/-	-/-
_CE	-/-	R/W	-/-	-/-

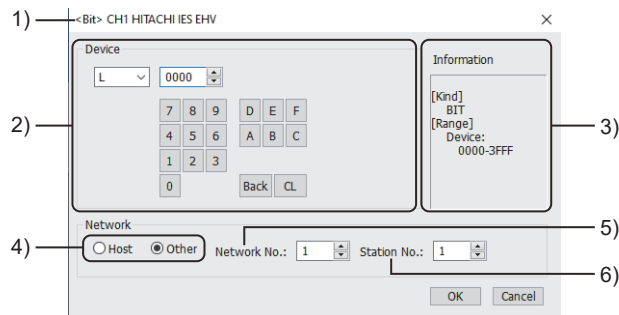

## 12.4.22 HITACHI IES equipment ([HITACHI IES EHV])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([HITACHI IES EHV])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([HITACHI IES EHV])
	→ ■3 Availability of writing/reading data to/from bit devices ([HITACHI IES EHV])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([HITACHI IES EHV])
	→ ■5 Availability of writing/reading data to/from word devices ([HITACHI IES EHV])

### ■1 Device setting dialog ([HITACHI IES EHV])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of L0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

The setting range is [1] to [239].

#### 6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

The setting range is [1] to [254].

## ■2 Monitoring-supported bit devices ([HITACHI IES EHV])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.22 ■3 Availability of writing/reading data to/from bit devices ([HITACHI IES EHV])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

	Device name	Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
X <sup>2</sup>	External input	Decimal + decimal + hexadecimal + decimal	X(Remote No.)(Unit No.)(Slot No.)(Module bit No.) Notation example: X05A95 • Remote No. (decimal): 0 • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 00 to 95	○	○
	Remote external input	Decimal + decimal + hexadecimal + decimal	X(Remote No.)(Remote slave station)(Slot No.)(Module bit No.) Notation example: X19A95 • Remote No. (Remote master station) (decimal): 1 to 4 • Remote slave station (decimal): 0 to 9 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 00 to 95	○	○
Y <sup>2</sup>	External output	Decimal + decimal + hexadecimal + decimal	Y(Remote No.)(Unit No.)(Slot No.)(Module bit No.) Notation example: Y05A95 • Remote No. (decimal): 0 • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 00 to 95	○	○
	Remote external output	Decimal + decimal + hexadecimal + decimal	Y(Remote No.)(Remote slave station)(Slot No.)(Module bit No.) Notation example: Y19A95 • Remote No. (Remote master station) (decimal): 1 to 4 • Remote slave station (decimal): 0 to 9 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 00 to 95	○	○
L	1st CPU link	Hexadecimal	0000 to 3FFF	○	○
M	Data area	Hexadecimal	00000 to 7FFFF	○	○
TD	On-delay timer	Decimal	0 to 2559	○	○ (Not usable as word data)
CU	Up counter	Decimal	0 to 511	○	○ (Not usable as word data)
L1	2nd CPU link	Hexadecimal	0000 to 3FFF	○	○
SS	Single-shot timer	Decimal	0 to 2559	○	○ (Not usable as word data)
WDT	Watchdog timer	Decimal	0 to 2559	○	○ (Not usable as word data)
MS	Monostable timer	Decimal	0 to 2559	○	○ (Not usable as word data)

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
TMR	Retentive timer	Decimal	0 to 2559	○	○ (Not usable as word data)
RCU	Ring counter	Decimal	0 to 511	○	○ (Not usable as word data)
CT	Up/Down counter	Decimal	0 to 511	○	○ (Not usable as word data)
R	Bit internal output	Hexadecimal	000 to 7BF	○	○ (Not usable as word data)
EX	Extended external input	Decimal + hexadecimal + hexadecimal	EX(Unit No.)(Slot No.)(Module bit No.) Notation example: EX5A7FF • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (hexadecimal): 000 to 7FF	○	○
EY	Extended external output	Decimal + hexadecimal + hexadecimal	EY(Unit No.)(Slot No.)(Module bit No.) Notation example: EY5A7FF • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (hexadecimal): 000 to 7FF	○	○
TDN	Off-delay timer	Decimal	0 to 2559	○	○ (Not usable as word data)
CTU	Up coil up/down counter	Decimal	0 to 511	○	○ (Not usable as word data)
CTD	Down coil up/down counter	Decimal	0 to 511	○	○ (Not usable as word data)
CL	Counter clear	Decimal	0 to 2559	○	○ (Not usable as word data)
L2	3rd CPU link	Hexadecimal	0000 to 3FFF	○	○
L3	4th CPU link	Hexadecimal	0000 to 3FFF	○	○
L4	5th CPU link	Hexadecimal	0000 to 3FFF	○	○
L5	6th CPU link	Hexadecimal	0000 to 3FFF	○	○
L6	7th CPU link	Hexadecimal	0000 to 3FFF	○	○
L7	8th CPU link	Hexadecimal	0000 to 3FFF	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Do not use a device range containing a device number to which I/O is not assigned.

If used, a device range error occurs during writing/reading, which results in system alarm 322.

### ■3 Availability of writing/reading data to/from bit devices ([HITACHI IES EHV])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	-/-	-/-	-/-
Y	R/W	-/-	-/-	-/-	-/-
L	R/W	-/-	-/-	-/-	-/-
M	R/W	-/-	-/-	-/-	-/-
TD	R/W	-/-	-/-	-/-	-/-
CU	R/W	-/-	-/-	-/-	-/-
L1	R/W	-/-	-/-	-/-	-/-
SS	R/W	-/-	-/-	-/-	-/-
WDT	R/W	-/-	-/-	-/-	-/-

### ■4 Monitoring-supported word devices ([HITACHI IES EHV])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.22 ■5 Availability of writing/reading data to/from word devices ([HITACHI IES EHV])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
TC	Timer/Counter (Elapsed value)	Decimal	0 to 2559	○	○
WR	Word internal output	Hexadecimal	0000 to EFFF	○	○

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
WX*2	External input	Decimal + decimal + hexadecimal + decimal WX(Remote No.)(Unit No.)(Slot No.)(Module bit No.) Notation example: WX05A7 • Remote No. (decimal): 0 • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 0 to 7	○	○
	Remote external input	Decimal + decimal + hexadecimal + decimal WX(Remote No.)(Remote slave station)(Slot No.)(Module bit No.) Notation example: WX19A7 • Remote No. (Remote master station) (decimal): 1 to 4 • Remote slave station (decimal): 0 to 9 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 0 to 7	○	○
WY*2	External output	Decimal + decimal + hexadecimal + decimal WY(Remote No.)(Unit No.)(Slot No.)(Module bit No.) Notation example: WY05A7 • Remote No. (decimal): 0 • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 0 to 7	○	○
	Remote external output	Decimal + decimal + hexadecimal + decimal WY(Remote No.)(Remote slave station)(Slot No.)(Module bit No.) Notation example: WY19A7 • Remote No. (Remote master station) (decimal): 1 to 4 • Remote slave station (decimal): 0 to 9 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 0 to 7	○	○
WL1	2nd CPU link	Hexadecimal 000 to 3FF	○	○
WL	1st CPU link	Hexadecimal 000 to 3FF	○	○
WM	Data area	Hexadecimal 0000 to 7FFF	○	○
WEX	Extended external input	Decimal + hexadecimal + hexadecimal WEX(Unit No.)(Slot No.)(Module bit No.) Notation example: WEX5A7F • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (hexadecimal): 00 to 7F	○	○
WEY	Extended external output	Decimal + hexadecimal + hexadecimal WEY(Unit No.)(Slot No.)(Module bit No.) Notation example: WEY5A7F • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (hexadecimal): 00 to 7F	○	○
WN	Internal output	Hexadecimal 00000 to 1FFFF	○	○
WL2	3rd CPU link	Hexadecimal 000 to 3FF	○	○
WL3	4th CPU link	Hexadecimal 000 to 3FF	○	○
WL4	5th CPU link	Hexadecimal 000 to 3FF	○	○
WL5	6th CPU link	Hexadecimal 000 to 3FF	○	○
WL6	7th CPU link	Hexadecimal 000 to 3FF	○	○
WL7	8th CPU link	Hexadecimal 000 to 3FF	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Do not use a device range containing a device number to which I/O is not assigned.  
 If used, a device range error occurs during writing/reading, which results in system alarm 322.

## ■5 Availability of writing/reading data to/from word devices ([HITACHI IES EHV])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TC	R/W	R/W	-/-	-/-
WR	R/W	R/W	-/-	R/W
WX	R/W	R/W	-/-	-/-
WY	R/W	R/W	-/-	-/-
WL1	R/W	R/W	-/-	-/-
WL	R/W	R/W	-/-	-/-
WM	R/W	R/W	-/-	-/-
WEX	R/W	R/W	-/-	-/-
WEY	R/W	R/W	-/-	-/-
WN	R/W	R/W	-/-	R/W
WL2	R/W	R/W	-/-	-/-
WL3	R/W	R/W	-/-	-/-
WL4	R/W	R/W	-/-	-/-
WL5	R/W	R/W	-/-	-/-
WL6	R/W	R/W	-/-	-/-
WL7	R/W	R/W	-/-	-/-

## 12.4.23 HITACHI IES equipment ([HITACHI IES HIDIC H])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([HITACHI IES HIDIC H])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([HITACHI IES HIDIC H])
	→ ■3 Availability of writing/reading data to/from bit devices ([HITACHI IES HIDIC H])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([HITACHI IES HIDIC H])
	→ ■5 Availability of writing/reading data to/from word devices ([HITACHI IES HIDIC H])

### ■1 Device setting dialog ([HITACHI IES HIDIC H])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of L0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([HITACHI IES HIDIC H])

The following table shows monitoring-supported bit devices.

Do not set device outside the range.

If the set device is outside the range, the object set by the device within the range cannot be displayed.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.23 ■3 Availability of writing/reading data to/from bit devices ([HITACHI IES HIDIC H])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
X*2	External input	Decimal + decimal + hexadecimal + decimal X(Remote No.)(Unit No.)(Slot No.)(Module bit No.) Notation example: X05A95 • Remote No. (decimal): 0 • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 00 to 95	○	○
	Remote external input	Decimal + decimal + decimal + decimal X(Remote No.)(Remote slave station)(Slot No.)(Module bit No.) Notation example: X19995 • Remote No. (Remote master station) (decimal): 1 to 4 • Remote slave station (decimal): 0 to 9 • Slot No. (decimal): 0 to 9 • Module bit No. (decimal): 00 to 95	○	○
Y*2	External output	Decimal + decimal + hexadecimal + decimal Y(Remote No.)(Unit No.)(Slot No.)(Module bit No.) Notation example: Y05A95 • Remote No. (decimal): 0 • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 00 to 95	○	○
	Remote external output	Decimal + decimal + decimal + decimal Y(Remote No.)(Remote slave station)(Slot No.)(Module bit No.) Notation example: Y19995 • Remote No. (Remote master station) (decimal): 1 to 4 • Remote slave station (decimal): 0 to 9 • Slot No. (decimal): 0 to 9 • Module bit No. (decimal): 00 to 95	○	○
L	1st CPU link	Hexadecimal	0000 to 3FFF	○
M	Data area	Hexadecimal	0000 to 3FFF	○
TD*3	On-delay timer	Decimal	0 to 1023	○ (Not usable as word data)
CU*3	Up counter	Decimal	0 to 2047	○ (Not usable as word data)
L1	2nd CPU link	Hexadecimal	0000 to 3FFF	○
SS*3	Single-shot timer	Decimal	0 to 1023	○ (Not usable as word data)
WDT*3	Watchdog timer	Decimal	0 to 1023	○ (Not usable as word data)
MS*3	Monostable timer	Decimal	0 to 1023	○ (Not usable as word data)
TMR*3	Retentive timer	Decimal	0 to 1023	○ (Not usable as word data)
RCU*3	Ring counter	Decimal	0 to 2047	○ (Not usable as word data)
CT*3	Up/Down counter	Decimal	0 to 2047	○ (Not usable as word data)

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
R	Bit internal output	Hexadecimal	000 to 7BF	○	○ (Not usable as word data)
DIF	Rising edge detection	Decimal	0 to 511	○	○ (Not usable as word data)
DFN	Falling edge detection	Decimal	0 to 511	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Do not use a device range containing a device number to which I/O is not assigned.  
Writing/reading is not performed normally.

\*3 The same number cannot be used repeatedly.

### ■3 Availability of writing/reading data to/from bit devices ([HITACHI IES HIDIC H])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	-/-	-/-	-/-
Y	R/W	-/-	-/-	-/-	-/-
L	R/W	-/-	-/-	-/-	-/-
M	R/W	-/-	-/-	-/-	-/-
TD	R/W	-/-	-/-	-/-	-/-
CU	R/W	-/-	-/-	-/-	-/-
L1	R/W	-/-	-/-	-/-	-/-
SS	R/W	-/-	-/-	-/-	-/-
WDT	R/W	-/-	-/-	-/-	-/-
MS	R/W	-/-	-/-	-/-	-/-
TMR	R/W	-/-	-/-	-/-	-/-
RCU	R/W	-/-	-/-	-/-	-/-
CT	R/W	-/-	-/-	-/-	-/-
R	R/W	-/-	-/-	-/-	-/-
DIF	R/W	-/-	-/-	-/-	-/-
DFN	R/W	-/-	-/-	-/-	-/-

## ■4 Monitoring-supported word devices ([HITACHI IES HIDIC H])

The following table shows monitoring-supported word devices.

Do not set device outside the range.

If the set device is outside the range, the object set by the device within the range cannot be displayed.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.23 ■5 Availability of writing/reading data to/from word devices ([HITACHI IES HIDIC H])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
TC <sup>*2</sup>	Timer/Counter (Elapsed value)	Decimal	0000 to 2047	○	○
WR	Word internal output	Hexadecimal	0000 to C3FF	○	○
WX <sup>*3</sup>	External input	Decimal + decimal + hexadecimal + decimal	WX(Remote No.)(Unit No.)(Slot No.)(Module bit No.) Notation example: WX05A7 • Remote No. (decimal): 0 • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 0 to 7	○	○
	Remote external input	Decimal + decimal + decimal + decimal	WX(Remote No.)(Remote slave station)(Slot No.)(Module bit No.) Notation example: WX1997 • Remote No. (Remote master station) (decimal): 1 to 4 • Remote slave station (decimal): 0 to 9 • Slot No. (decimal): 0 to 9 • Module bit No. (decimal): 0 to 7	○	○
WY <sup>*3</sup>	External output	Decimal + decimal + hexadecimal + decimal	WY(Remote No.)(Unit No.)(Slot No.)(Module bit No.) Notation example: WY05A7 • Remote No. (decimal): 0 • Unit No. (decimal): 0 to 5 • Slot No. (hexadecimal): 0 to A • Module bit No. (decimal): 0 to 7	○	○
	Remote external output	Decimal + decimal + decimal + decimal	WY(Remote No.)(Remote slave station)(Slot No.)(Module bit No.) Notation example: WY1997 • Remote No. (Remote master station) (decimal): 1 to 4 • Remote slave station (decimal): 0 to 9 • Slot No. (decimal): 0 to 9 • Module bit No. (decimal): 0 to 7	○	○
WL1	2nd CPU link	Hexadecimal	000 to 3FF	○	○
WL	1st CPU link	Hexadecimal	000 to 3FF	○	○
WM	Data area	Hexadecimal	000 to 3FF	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 The same number cannot be used repeatedly.

\*3 Do not use a device range containing a device number to which I/O is not assigned.

Writing/reading is not performed normally.

## ■5 Availability of writing/reading data to/from word devices ([HITACHI IES HIDIC H])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TC	R/W	R/W	-/-	R/W
WR	R/W	R/W	-/-	R/W
WX	R/W	R/W	-/-	-/-
WY	R/W	R/W	-/-	-/-
WL1	R/W	R/W	-/-	-/-
WL	R/W	R/W	-/-	-/-
WM	R/W	R/W	-/-	-/-

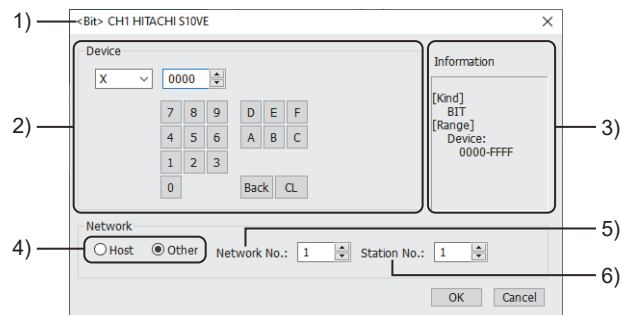

## 12.4.24 HITACHI equipment ([HITACHI S10VE])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([HITACHI S10VE])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([HITACHI S10VE])
	→ ■3 Availability of writing/reading data to/from bit devices ([HITACHI S10VE])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([HITACHI S10VE])
	→ ■5 Availability of writing/reading data to/from word devices ([HITACHI S10VE])
Specifications of double-word devices	→ ■6 Monitoring-supported double-word devices ([HITACHI S10VE])
	→ ■7 Availability of writing/reading data to/from double-word devices ([HITACHI S10VE])

### ■1 Device setting dialog ([HITACHI S10VE])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of X0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

#### 6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

## ■2 Monitoring-supported bit devices ([HITACHI S10VE])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.24 ■3 Availability of writing/reading data to/from bit devices ([HITACHI S10VE])

For the formats of devices, refer to the following.

→6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
X	External input	Hexadecimal X(Address)(Bit position) Notation example: XFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
Y	External output	Hexadecimal Y(Address)(Bit position) Notation example: YFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
GL*2	Global link register	Hexadecimal GL(Address)(Bit position) Notation example: GLFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
R	Internal register	Hexadecimal R(Address)(Bit position) Notation example: RFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
K	Keep relay	Hexadecimal K(Address)(Bit position) Notation example: KFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
E	Event register	Hexadecimal E(Address)(Bit position) Notation example: EFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
T	On-delay timer	Hexadecimal T(Address)(Bit position) Notation example: T7F0 • Address (word unit) (hexadecimal): 00 to 7F • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
C	Up-down counter	Hexadecimal C(Address)(Bit position) Notation example: CF0 • Address (word unit) (hexadecimal): 0 to F • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
U	One-shot timer	Hexadecimal U(Address)(Bit position) Notation example: U0F0 • Address (word unit) (hexadecimal): 00 to 0F • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
M	Extended internal register	Hexadecimal M(Address)(Bit position) Notation example: MFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
A	Extended internal register	Hexadecimal A(Address)(Bit position) Notation example: AFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
S	System register	Hexadecimal	S(Address)(Bit position) Notation example: SBFF0 • Address (word unit) (hexadecimal): 000 to BFF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
J	Transfer register	Hexadecimal	J(Address)(Bit position) Notation example: JFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
Q	Receive register	Hexadecimal	Q(Address)(Bit position) Notation example: QFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
LB	Extended internal register	Hexadecimal	LB(Address)(Bit position) Notation example: LBFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
LR	Converter-specific internal register	Hexadecimal	LR(Address)(Bit position) Notation example: LR0FF0 • Address (word unit) (hexadecimal): 000 to 0FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
LV	Converter-specific edge contact register	Hexadecimal	LV(Address)(Bit position) Notation example: LV0FF0 • Address (word unit) (hexadecimal): 000 to 0FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
P	Process register	Hexadecimal	P(Address)(Bit position) Notation example: P080 • Address (word unit) (hexadecimal): 00 to 08 • Bit position (hexadecimal): 0 to F (Set 1 when the address is 00. Set 0 when the address is 08.)	○	○ (Not usable as word data)
V	Edge contact	Hexadecimal	V(Address)(Bit position) Notation example: VFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
CU	Up-down counter (up counter)	Hexadecimal	00 to FF	○	○ (Not usable as word data)
CD	Up-down counter (down counter)	Hexadecimal	00 to FF	○	○ (Not usable as word data)
CR	Up-down counter (reset)	Hexadecimal	00 to FF	○	○ (Not usable as word data)
NM	Nesting coil (master control)	Hexadecimal	00 to FF	○	○ (Not usable as word data)
NZ	Nesting coil (zone control)	Hexadecimal	00 to FF	○	○ (Not usable as word data)
N	Nesting coil	Hexadecimal	N(Address)(Bit position) Notation example: NF0 • Address (word unit) (hexadecimal): 0 to F • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 The global link register (GL) corresponds to the global link register (G) of the PLU CPU.

### ■3 Availability of writing/reading data to/from bit devices ([HITACHI S10VE])

The following shows whether writing/reading data to/from bit devices is available by device type. When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	-/-	-/-	-/-
Y	R/W	-/-	-/-	-/-	-/-
GL	R/W	-/-	-/-	-/-	-/-
R	R/W	-/-	-/-	-/-	-/-
K	R/W	-/-	-/-	-/-	-/-
E	R/W	-/-	-/-	-/-	-/-
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-
U	R/W	-/-	-/-	-/-	-/-
M	R/W	-/-	-/-	-/-	-/-
A	R/W	-/-	-/-	-/-	-/-
S	R/-	-/-	-/-	-/-	-/-
J	R/W	-/-	-/-	-/-	-/-
Q	R/W	-/-	-/-	-/-	-/-
LB	R/W	-/-	-/-	-/-	-/-
LR	R/W	-/-	-/-	-/-	-/-
LV	R/W	-/-	-/-	-/-	-/-
P	R/W	-/-	-/-	-/-	-/-
V	R/W	-/-	-/-	-/-	-/-
CU	R/W	-/-	-/-	-/-	-/-
CD	R/W	-/-	-/-	-/-	-/-
CR	R/W	-/-	-/-	-/-	-/-
NM	R/W	-/-	-/-	-/-	-/-
NZ	R/W	-/-	-/-	-/-	-/-
N	R/W	-/-	-/-	-/-	-/-

### ■4 Monitoring-supported word devices ([HITACHI S10VE])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.24 ■5 Availability of writing/reading data to/from word devices ([HITACHI S10VE])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
TC	On-delay timer (count value)	Hexadecimal	000 to 1FF	○	○ (Not usable as bit data)
CC	Up-down counter (count value)	Hexadecimal	000 to 0FF	○	○ (Not usable as bit data)

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
UC	One-shot timer (count value)	Hexadecimal	000 to 0FF	○	○ (Not usable as bit data)
DW*2	Function data register	Hexadecimal	000 to FFF	○	○
AW	Extension internal register	Hexadecimal	AW(Address)(Bit position) Notation example: AWFFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
SW	System register	Hexadecimal	SW(Address)(Bit position) Notation example: SWBFFF0 • Address (word unit) (hexadecimal): 000 to BFF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
JW	Transfer register	Hexadecimal	JW(Address)(Bit position) Notation example: JWFFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
QW	Receive register	Hexadecimal	QW(Address)(Bit position) Notation example: QWFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)

US	One-shot timer (set value)	Hexadecimal	000 to 0FF	○	○ (Not usable as bit data)
CS	Up-down counter (set value)	Hexadecimal	000 to 0FF	○	○ (Not usable as bit data)
FW*2	Function work register	Hexadecimal	000 to BFF	○	○
LWW*2	Extension function work register	Hexadecimal	0000 to FFFF	○	○
LXW*2	Backup work register	Hexadecimal	0000 to 3FFF	○	○
XW	External input	Hexadecimal	XW(Address)(Bit position) Notation example: XWFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
YW	External output	Hexadecimal	YW(Address)(Bit position) Notation example: YWFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
RW	Internal register	Hexadecimal	RW(Address)(Bit position) Notation example: RWFFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
MW	Extension internal register	Hexadecimal	MW(Address)(Bit position) Notation example: MWFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
KW	Keep relay	Hexadecimal KW(Address)(Bit position) Notation example: KWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
TW	On-delay timer	Hexadecimal TW(Address)(Bit position) Notation example: TW7F0 • Address (word unit) (hexadecimal): 00 to 7F • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
UW	One-shot timer	Hexadecimal UW(Address)(Bit position) Notation example: UW0F0 • Address (word unit) (hexadecimal): 00 to 0F • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
CW	Up-down counter	Hexadecimal CW(Address)(Bit position) Notation example: CW0F0 • Address (word unit) (hexadecimal): 00 to 0F • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
GW	Global link register	Hexadecimal GW(Address)(Bit position) Notation example: GWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
EW	Event register	Hexadecimal EW(Address)(Bit position) Notation example: EWFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
NW	Nesting coil	Hexadecimal NW(Address)(Bit position) Notation example: NW0F0 • Address (word unit) (hexadecimal): 00 to 0F • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
PW	Process register	Hexadecimal PW(Address)(Bit position) Notation example: PW080 • Address (word unit) (hexadecimal): 00 to 08 • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
IW	I/O input register	Hexadecimal 000 to FFF	○	○ (Not usable as bit data)
OW	I/O output register	Hexadecimal 000 to FFF	○	○ (Not usable as bit data)
BW	Function data register	Hexadecimal 000 to 1FE	○	○ (Not usable as bit data)
LBW	Extension internal register	Hexadecimal LBW(Address)(Bit position) Notation example: LBWFFF0 • Address (word unit) (hexadecimal): 000 to FFF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
LRW	Converter-specific internal register	Hexadecimal LRW(Address)(Bit position) Notation example: LRW0FF0 • Address (word unit) (hexadecimal): 000 to 0FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
LVW	Converter-specific edge contact register	Hexadecimal	LVW(Address)(Bit position) Notation example: LVW0FF0 • Address (word unit) (hexadecimal): 000 to 0FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
VW	Edge contact	Hexadecimal	VW(Address)(Bit position) Notation example: VWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 When it is used with bit specification of word device, the offset function cannot be used.

## ■ 5 Availability of writing/reading data to/from word devices ([HITACHI S10VE])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TC	R/W	-/-	-/-	-/-
CC	R/W	-/-	-/-	-/-
UC	R/W	-/-	-/-	-/-
DW <sup>*1</sup>	R/W	R/W	-/-	R/W
AW	R/W	R/W	-/-	-/-
SW	R/-	R/-	-/-	-/-
JW	R/W	R/W	-/-	-/-
QW	R/W	R/W	-/-	-/-
TS	R/W	-/-	-/-	-/-
US	R/W	-/-	-/-	-/-
CS	R/W	-/-	-/-	-/-
FW <sup>*1</sup>	R/W	R/W	-/-	R/W
LWW <sup>*1</sup>	R/W	R/W	-/-	R/W
LXW <sup>*1</sup>	R/W	R/W	-/-	R/W
XW	R/W	R/W	-/-	-/-
YW	R/W	R/W	-/-	-/-
RW	R/W	R/W	-/-	-/-
MW	R/W	R/W	-/-	-/-
KW	R/W	R/W	-/-	-/-
TW	R/W	R/W	-/-	-/-
UW	R/W	R/W	-/-	-/-
CW	R/W	R/W	-/-	-/-
GW	R/W	R/W	-/-	-/-
EW	R/W	R/W	-/-	-/-
NW	R/W	R/W	-/-	-/-
PW	R/W	R/W	-/-	-/-
IW	R/W	R/W	-/-	-/-
OW	R/W	R/W	-/-	-/-

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
BW	R/W	R/W	-/-	-/-
LBW	R/W	R/W	-/-	-/-
LRW	R/W	R/W	-/-	-/-
LVW	R/W	R/W	-/-	-/-
VW	R/W	R/W	-/-	-/-

\*1 When bit specification of word device is performed, the uppermost bit is b0 and the lowermost bit is b15.

## 6 Monitoring-supported double-word devices ([HITACHI S10VE])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.24 ■ 7 Availability of writing/reading data to/from double-word devices ([HITACHI S10VE])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
LLL	Long-word work register	Hexadecimal 0000 to 1FFF	×	×
LML	Backup long-word work register	Hexadecimal 0000 to 1FFF	×	×
LF	Floating-point work register	Hexadecimal 0000 to 1FFF	×	×
LG	Backup single-precision floating-point work register	Hexadecimal 0000 to 1FFF	×	×
DL	Function data register	Hexadecimal 000 to FFE	×	×
AL	Extension internal register	Hexadecimal AL(Address)(Bit position) Notation example: ALFE0 • Address (word unit) (hexadecimal): 00 to FE • Bit position (hexadecimal): 0	×	×
SL	System register	Hexadecimal SL(Address)(Bit position) Notation example: SLBFE0 • Address (word unit) (hexadecimal): 000 to BFE • Bit position (hexadecimal): 0	×	×
JL	Transfer register	Hexadecimal JL(Address)(Bit position) Notation example: JLFE0 • Address (word unit) (hexadecimal): 00 to FE • Bit position (hexadecimal): 0	×	×
QL	Receive register	Hexadecimal QL(Address)(Bit position) Notation example: QLFFE0 • Address (word unit) (hexadecimal): 000 to FFE • Bit position (hexadecimal): 0	×	×
FL	Function work register	Hexadecimal 000 to BFE	×	×
LWL	Extension function work register	Hexadecimal 0000 to FFFE	×	×
LXL	Backup work register	Hexadecimal 0000 to 3FFE	×	×

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
XL	External input	Hexadecimal	XL(Address)(Bit position) Notation example: XLFFE0 • Address (word unit) (hexadecimal): 000 to FFE • Bit position (hexadecimal): 0	×	×
YL	External output	Hexadecimal	YL(Address)(Bit position) Notation example: YLFFE0 • Address (word unit) (hexadecimal): 000 to FFE • Bit position (hexadecimal): 0	×	×
RL	Internal register	Hexadecimal	RL(Address)(Bit position) Notation example: RLFE0 • Address (word unit) (hexadecimal): 00 to FE • Bit position (hexadecimal): 0	×	×
ML	Extension internal register	Hexadecimal	ML(Address)(Bit position) Notation example: MLFFE0 • Address (word unit) (hexadecimal): 000 to FFE • Bit position (hexadecimal): 0	×	×
KL	Keep relay	Hexadecimal	KL(Address)(Bit position) Notation example: KLFE0 • Address (word unit) (hexadecimal): 00 to FE • Bit position (hexadecimal): 0	×	×
TL	On-delay timer	Hexadecimal	TL(Address)(Bit position) Notation example: TL7E0 • Address (word unit) (hexadecimal): 00 to 7E • Bit position (hexadecimal): 0	×	×
UL	One-shot timer	Hexadecimal	UL(Address)(Bit position) Notation example: UL0E0 • Address (word unit) (hexadecimal): 00 to 0E • Bit position (hexadecimal): 0	×	×
CL	Up-down counter	Hexadecimal	CL(Address)(Bit position) Notation example: CL0E0 • Address (word unit) (hexadecimal): 00 to 0E • Bit position (hexadecimal): 0	×	×
GWL <sup>*2</sup>	Global link register	Hexadecimal	GWL(Address)(Bit position) Notation example: GWLFE0 • Address (word unit) (hexadecimal): 00 to FE • Bit position (hexadecimal): 0	×	×
EL	Event register	Hexadecimal	EL(Address)(Bit position) Notation example: ELFFE0 • Address (word unit) (hexadecimal): 000 to FFE • Bit position (hexadecimal): 0	×	×
NL	Nesting coil	Hexadecimal	NL(Address)(Bit position) Notation example: NL0E0 • Address (word unit) (hexadecimal): 00 to 0E • Bit position (hexadecimal): 0	×	×
PL	Process register	Hexadecimal	PL(Address)(Bit position) Notation example: PL060 • Address (word unit) (hexadecimal): 00 to 06 • Bit position (hexadecimal): 0	×	×
IL	I/O input register	Hexadecimal	000 to FFE	×	×

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
OL	I/O output register	Hexadecimal	000 to FFEF	x	x
BL	Function data register	Hexadecimal	000 to 1FE	x	x
LBL	Extension internal register	Hexadecimal	LBL(Address)(Bit position) Notation example: LBLFFE0 • Address (word unit) (hexadecimal): 000 to FFE • Bit position (hexadecimal): 0	x	x
LRL	Converter-specific internal register	Hexadecimal	LRL(Address)(Bit position) Notation example: LRL0FE0 • Address (word unit) (hexadecimal): 000 to 0FE • Bit position (hexadecimal): 0	x	x
LVL	Converter-specific edge contact register	Hexadecimal	LVL(Address)(Bit position) Notation example: LVL0FE0 • Address (word unit) (hexadecimal): 000 to 0FE • Bit position (hexadecimal): 0	x	x
VL	Edge contact	Hexadecimal	VL(Address)(Bit position) Notation example: VLFE0 • Address (word unit) (hexadecimal): 00 to FE • Bit position (hexadecimal): 0	x	x
BD	Internal register	Hexadecimal	000 to 1FE	x	x

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 The global link register (GWL) corresponds to the global link register (GL) of the PLU CPU.

## ■7 Availability of writing/reading data to/from double-word devices ([HITACHI S10VE])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
LLL	-/-	R/W	-/-	-/-
LML	-/-	R/W	-/-	-/-
LF	-/-	R/W	-/-	-/-
LG	-/-	R/W	-/-	-/-
DL	-/-	R/W	-/-	-/-
AL	-/-	R/W	-/-	-/-
SL	-/-	R/-	-/-	-/-
JL	-/-	R/W	-/-	-/-
QL	-/-	R/W	-/-	-/-
FL	-/-	R/W	-/-	-/-
LWL	-/-	R/W	-/-	-/-
LXL	-/-	R/W	-/-	-/-
XL	-/-	R/W	-/-	-/-
YL	-/-	R/W	-/-	-/-
RL	-/-	R/W	-/-	-/-
ML	-/-	R/W	-/-	-/-
KL	-/-	R/W	-/-	-/-
TL	-/-	R/W	-/-	-/-
UL	-/-	R/W	-/-	-/-
CL	-/-	R/W	-/-	-/-
GWL	-/-	R/W	-/-	-/-
EL	-/-	R/W	-/-	-/-
NL	-/-	R/W	-/-	-/-
PL	-/-	R/W	-/-	-/-
IL	-/-	R/W	-/-	-/-

BL	-/-	R/W	-/-	-/-
LBL	-/-	R/W	-/-	-/-
LRL	-/-	R/W	-/-	-/-
LVL	-/-	R/W	-/-	-/-
VL	-/-	R/W	-/-	-/-
BD	-/-	R/W	-/-	-/-

## 12.4.25 HITACHI equipment ([HITACHI S10mini/S10V])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([HITACHI S10mini/S10V])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([HITACHI S10mini/S10V])
	→ ■3 Availability of writing/reading data to/from bit devices ([HITACHI S10mini/S10V])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([HITACHI S10mini/S10V])
	→ ■5 Availability of writing/reading data to/from word devices ([HITACHI S10mini/S10V])
Specifications of double-word devices	→ ■6 Monitoring-supported double-word devices ([HITACHI S10mini/S10V])
	→ ■7 Availability of writing/reading data to/from double-word devices ([HITACHI S10mini/S10V])

### ■1 Device setting dialog ([HITACHI S10mini/S10V])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of X000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([HITACHI S10mini/S10V])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.25 ■3 Availability of writing/reading data to/from bit devices ([HITACHI S10mini/S10V])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
X	External input	Hexadecimal X(Address)(Bit position) Notation example: XFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
Y	External output	Hexadecimal Y(Address)(Bit position) Notation example: YFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
GL <sup>*2</sup>	Global link register	Hexadecimal GL(Address)(Bit position) Notation example: GLFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
R	Internal register	Hexadecimal R(Address)(Bit position) Notation example: RFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
K	Keep relay	Hexadecimal K(Address)(Bit position) Notation example: KFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
E	Event register	Hexadecimal E(Address)(Bit position) Notation example: EFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
T	On-delay timer	Hexadecimal T(Address)(Bit position) Notation example: T1F0 • Address (word unit) (hexadecimal): 00 to 1F • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
C	Up-down counter	Hexadecimal C(Address)(Bit position) Notation example: CF0 • Address (word unit) (hexadecimal): 0 to F • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
U	One-shot timer	Hexadecimal U(Address)(Bit position) Notation example: U0F0 • Address (word unit) (hexadecimal): 00 to 0F • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
M	Extended internal register	Hexadecimal M(Address)(Bit position) Notation example: MFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
A	Extended internal register	Hexadecimal A(Address)(Bit position) Notation example: AFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
S	System register	Hexadecimal S(Address)(Bit position) Notation example: SBF0 • Address (word unit) (hexadecimal): 00 to BF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
J	Transfer register	Hexadecimal J(Address)(Bit position) Notation example: JFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)
Q	Receive register	Hexadecimal Q(Address)(Bit position) Notation example: QFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0 to F	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 The global link register (GL) corresponds to the global link register (G) of the PLU CPU.

### ■3 Availability of writing/reading data to/from bit devices ([HITACHI S10mini/S10V])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/W	-/-	-/-	-/-	-/-
Y	R/W	-/-	-/-	-/-	-/-
GL	R/W	-/-	-/-	-/-	-/-
R	R/W	-/-	-/-	-/-	-/-
K	R/W	-/-	-/-	-/-	-/-
E	R/W	-/-	-/-	-/-	-/-
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-
U	R/W	-/-	-/-	-/-	-/-
M	R/W	-/-	-/-	-/-	-/-
A	R/W	-/-	-/-	-/-	-/-
S	R/-	-/-	-/-	-/-	-/-
J	R/W	-/-	-/-	-/-	-/-
Q	R/W	-/-	-/-	-/-	-/-

### ■4 Monitoring-supported word devices ([HITACHI S10mini/S10V])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.25 ■5 Availability of writing/reading data to/from word devices ([HITACHI S10mini/S10V])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
TC	On-delay timer (count value)	Hexadecimal 000 to 1FF	○	○ (Not usable as bit data)

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
CC	Up-down counter (count value)	Hexadecimal	00 to FF	○	○ (Not usable as bit data)
UC	One-shot timer (count value)	Hexadecimal	000 to 0FF	○	○ (Not usable as bit data)
DW*2	Function data register	Hexadecimal	000 to FFF	○	○
AW	Extension internal register	Hexadecimal	AW(Address)(Bit position) Notation example: AWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
SW	System register	Hexadecimal	SW(Address)(Bit position) Notation example: SWBF0 • Address (word unit) (hexadecimal): 00 to BF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
JW	Transfer register	Hexadecimal	JW(Address)(Bit position) Notation example: JWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
QW	Receive register	Hexadecimal	QW(Address)(Bit position) Notation example: QWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
TS	On-delay timer (set value)	Hexadecimal	000 to 1FF	○	○ (Not usable as bit data)
US	One-shot timer (set value)	Hexadecimal	000 to 0FF	○	○ (Not usable as bit data)
CS	Up-down counter (set value)	Hexadecimal	00 to FF	○	○ (Not usable as bit data)
FW*2	Function work register	Hexadecimal	000 to BFF	○	○
LWW*2	Extension function work register	Hexadecimal	0000 to FFFF	○	○
LXW*2	Backup work register	Hexadecimal	0000 to 3FFF	○	○
XW	External input	Hexadecimal	XW(Address)(Bit position) Notation example: XWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
YW	External output	Hexadecimal	YW(Address)(Bit position) Notation example: YWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
RW	Internal register	Hexadecimal	RW(Address)(Bit position) Notation example: RWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
MW	Extension internal register	Hexadecimal MW(Address)(Bit position) Notation example: MWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
KW	Keep relay	Hexadecimal KW(Address)(Bit position) Notation example: KWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
TW	On-delay timer	Hexadecimal TW(Address)(Bit position) Notation example: TW1F0 • Address (word unit) (hexadecimal): 00 to 1F • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
UW	One-shot timer	Hexadecimal UW(Address)(Bit position) Notation example: UW0F0 • Address (word unit) (hexadecimal): 00 to 0F • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
CW	Up-down counter	Hexadecimal CW(Address)(Bit position) Notation example: CWF0 • Address (word unit) (hexadecimal): 0 to F • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
GW	Global link register	Hexadecimal GW(Address)(Bit position) Notation example: GWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)
EW	Event register	Hexadecimal EW(Address)(Bit position) Notation example: EWFF0 • Address (word unit) (hexadecimal): 00 to FF • Bit position (hexadecimal): 0	○	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 When it is used with bit specification of word device, the offset function cannot be used.

## ■ 5 Availability of writing/reading data to/from word devices ([HITACHI S10mini/S10V])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TC	R/W	-/-	-/-	-/-
CC	R/W	-/-	-/-	-/-
UC	R/W	-/-	-/-	-/-
DW*1	R/W	R/W	-/-	R/W
AW	R/W	R/W	-/-	-/-
SW	R/-	R/-	-/-	-/-
JW	R/W	R/W	-/-	-/-
QW	R/W	R/W	-/-	-/-
TS	R/W	-/-	-/-	-/-
US	R/W	-/-	-/-	-/-
CS	R/W	-/-	-/-	-/-

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
FW <sup>*1</sup>	R/W	R/W	-/-	R/W
LWW <sup>*1</sup>	R/W	R/W	-/-	R/W
LXW <sup>*1</sup>	R/W	R/W	-/-	R/W
XW	R/W	R/W	-/-	-/-
YW	R/W	R/W	-/-	-/-
RW	R/W	R/W	-/-	-/-
MW	R/W	R/W	-/-	-/-
KW	R/W	R/W	-/-	-/-
TW	R/W	R/W	-/-	-/-
UW	R/W	R/W	-/-	-/-
CW	R/W	R/W	-/-	-/-
GW	R/W	R/W	-/-	-/-
EW	R/W	R/W	-/-	-/-

\*1 When bit specification of word device is performed, the uppermost bit is b0 and the lowermost bit is b15.

## 6 Monitoring-supported double-word devices ([HITACHI S10mini/S10V])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.25 7 Availability of writing/reading data to/from double-word devices ([HITACHI S10mini/S10V])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
LLL	Long-word work register	Hexadecimal 0000 to 1FFF	×	×
LML	Backup long-word work register	Hexadecimal 0000 to 1FFF	×	×
LF	Floating-point work register	Hexadecimal 0000 to 1FFF	×	×
LG	Backup single-precision floating-point work register	Hexadecimal 0000 to 1FFF	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■7 Availability of writing/reading data to/from double-word devices ([HITACHI S10mini/S10V])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
LLL	-/-	R/W	-/-	-/-
LML	-/-	R/W	-/-	-/-
LF	-/-	R/W	-/-	-/-
LG	-/-	R/W	-/-	-/-

### 12.4.26 HIRATA equipment ([Hirata HNC])

Contact our company for the device specifications when connecting the GOT to HIRATA equipment.

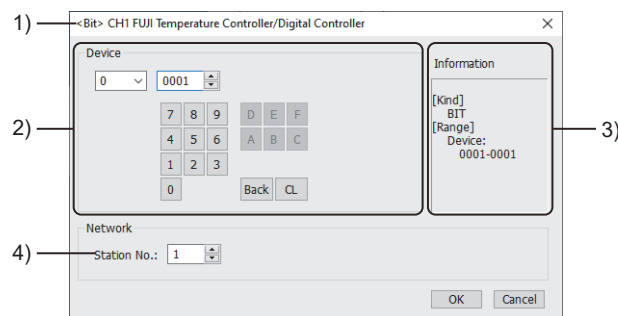

## 12.4.27 FUJI equipment ([FUJI Temperature Controller/Digital Controller])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([FUJI Temperature Controller/Digital Controller])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([FUJI Temperature Controller/Digital Controller])
	→ ■3 Availability of writing/reading data to/from bit devices ([FUJI Temperature Controller/Digital Controller])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([FUJI Temperature Controller/Digital Controller])
	→ ■5 Availability of writing/reading data to/from word devices ([FUJI Temperature Controller/Digital Controller])

### ■1 Device setting dialog ([FUJI Temperature Controller/Digital Controller])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of 00001

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

Specify a station number.

The setting range is [1] to [199] (direct), [200] to [215] (indirect), or [216] to [255] (direct).

For indirect specification of a station number, refer to the following.

→ (1) Indirect specification of a station number ([FUJI Temperature Controller/Digital Controller])

**(1) Indirect specification of a station number ([FUJI Temperature Controller/Digital Controller])**

When you specify any of 200 to 215 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the correspondence between station number setting values and GOT data registers (GD).

Station No.	GOT data register (GD)	Setting range
200	GD10	[1] to [119], [216] to [255] Setting a value outside the above range causes a device range error.
201	GD11	
:	:	
214	GD24	
215	GD25	

**■2 Monitoring-supported bit devices ([FUJI Temperature Controller/Digital Controller])**

The following table shows monitoring-supported bit devices.

Devices are set with the coil and register numbers of the temperature controller.

For the coil numbers, register numbers, and their corresponding parameters' address maps, refer to the following.

⇒ Manual of the temperature controller used

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.27 ■3 Availability of writing/reading data to/from bit devices ([FUJI Temperature Controller/Digital Controller])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
0	Bit data	Decimal	0001	×	○
1	Bit data	Decimal	0001 to 0016	×	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

**■3 Availability of writing/reading data to/from bit devices ([FUJI Temperature Controller/Digital Controller])**

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
0	R/W	-/-	-/-	-/-	-/-
1	R/-	-/-	-/-	-/-	-/-

#### ■4 Monitoring-supported word devices ([FUJI Temperature Controller/Digital Controller])

The following table shows monitoring-supported word devices.

Devices are set with the coil and register numbers of the temperature controller.

For the coil numbers, register numbers, and their corresponding parameters' address maps, refer to the following.

⇒ Manual of the temperature controller used

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.27 ■5 Availability of writing/reading data to/from word devices ([FUJI Temperature Controller/Digital Controller])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
3	Word data	Decimal	0001 to 4907	○	○
4	Word data	Decimal	0001 to 5032	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■5 Availability of writing/reading data to/from word devices ([FUJI Temperature Controller/Digital Controller])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
3	R/-	R/-	-/-	R/-
4	R/W	R/W	-/-	R/W

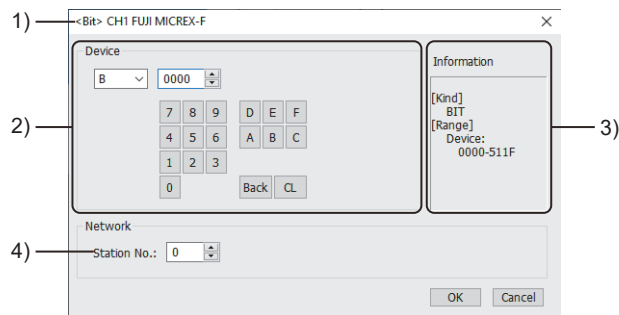

## 12.4.28 FUJI equipment ([FUJI MICREX-F])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([FUJI MICREX-F])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([FUJI MICREX-F])
	→ ■3 Availability of writing/reading data to/from bit devices ([FUJI MICREX-F])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([FUJI MICREX-F])
	→ ■5 Availability of writing/reading data to/from word devices ([FUJI MICREX-F])
Specifications of double-word devices	→ ■6 Monitoring-supported double-word devices ([FUJI MICREX-F])
	→ ■7 Availability of writing/reading data to/from double-word devices ([FUJI MICREX-F])

### ■1 Device setting dialog ([FUJI MICREX-F])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of B0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

Specify a station number.

The setting range is [0] to [99].

### ■2 Monitoring-supported bit devices ([FUJI MICREX-F])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.28 ■3 Availability of writing/reading data to/from bit devices ([FUJI MICREX-F])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
B	I/O relay	Decimal + hexadecimal	B(Word No.)(Bit No.) Notation example: B5110 • Word No. (decimal): 000 to 511 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
L	Link memory	Decimal + hexadecimal	L(Word No.)(Bit No.) Notation example: L5110 • Word No. (decimal): 000 to 511 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
M	Auxiliary relay	Decimal + hexadecimal	M(Word No.)(Bit No.) Notation example: M5110 • Word No. (decimal): 000 to 511 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
K	Keep relay	Decimal + hexadecimal	K(Word No.)(Bit No.) Notation example: K0630 • Word No. (decimal): 000 to 063 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
A	Annunciator relay	Decimal + hexadecimal	A(Word No.)(Bit No.) Notation example: A0450 • Word No. (decimal): 000 to 045 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
T	Timer output (0.01 s)	Decimal	000 to 511	○	○ (Not usable as word data)
	Timer output (0.1 s)	Decimal	512 to 999	○	○ (Not usable as word data)
C	Counter output	Decimal	000 to 511	○	○ (Not usable as word data)
F	Special relay	Decimal + hexadecimal	F(Word No.)(Bit No.) Notation example: F1250 • Word No. (decimal): 000 to 125 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
D	Differential relay	Decimal + hexadecimal	D(Word No.)(Bit No.) Notation example: D0630 • Word No. (decimal): 000 to 063 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

■3 Availability of writing/reading data to/from bit devices ([FUJI MICREX-F])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
B	R/W	-/-	-/-	-/-	-/-
L	R/W	-/-	-/-	-/-	-/-
M	R/W	-/-	-/-	-/-	-/-
K	R/W	-/-	-/-	-/-	-/-
A	R/W	-/-	-/-	-/-	-/-

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-
F	R/-	-/-	-/-	-/-	-/-
D	R/W	-/-	-/-	-/-	-/-

#### ■4 Monitoring-supported word devices ([FUJI MICREX-F])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.28 ■5 Availability of writing/reading data to/from word devices ([FUJI MICREX-F])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
WF	Special relay	Decimal	000 to 125	○	○ (Not usable as bit data)
WD	Differential relay	Decimal	000 to 063	○	○ (Not usable as bit data)
W24*2	Direct access	Decimal	W24:(Word No.) Notation example: W24:0255 • Word No. (decimal): 0000 to 0255	○	○
W*2*3	User file	Decimal	W(File No.):(Word No.) Notation example: W30:4095 • File No. (decimal): 30 to 109 • Word No. (decimal): 0000 to 4095	○	○
WB	I/O relay	Decimal	000 to 511	○	○ (Not usable as bit data)
WM	Auxiliary relay	Decimal	000 to 511	○	○ (Not usable as bit data)
WK	Keep relay	Decimal	000 to 063	○	○ (Not usable as bit data)
WA	Annunciator relay	Decimal	000 to 045	○	○ (Not usable as bit data)
WL	Link memory	Decimal	000 to 511	○	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 When it is used with bit specification of word device, the offset function cannot be used.

\*3 When writing/reading data to/from a user file, set SI data for the data format of the PLC CPU, and 16 bits for the data length in GT Designer3.

With any setting other than the above, the PLC does not operate normally.

## ■5 Availability of writing/reading data to/from word devices ([FUJI MICREX-F])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
WF	R/-	R/-	-/-	-/-
WD	R/W	R/W	-/-	-/-
W24 <sup>*1</sup>	R/W	R/W	-/-	R/W
W <sup>*1</sup>	R/W	-/-	-/-	R/W
WB	R/W	R/W	-/-	-/-
WM	R/W	R/W	-/-	-/-
WK	R/W	R/W	-/-	-/-
WA	R/W	R/W	-/-	-/-
WL	R/W	R/W	-/-	-/-

\*1 When bit specification of word device is performed, the uppermost bit is b0 and the lowermost bit is b15.

## ■6 Monitoring-supported double-word devices ([FUJI MICREX-F])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.28 ■7 Availability of writing/reading data to/from double-word devices ([FUJI MICREX-F])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
TR <sup>*2</sup>	Timer current value (0.01 s)	Decimal	000 to 511	×
CR <sup>*2</sup>	Counter current value	Decimal	000 to 511	×
BD	Data memory	Decimal	0000 to 4095	×
TS <sup>*2</sup>	Timer set value (0.01 s)	Decimal	000 to 511	×
W9 <sup>*2</sup>	Timer current value (0.1 s)	Decimal	W9:(Word No.) Notation example: W9:0487 • Word No. (decimal): 0000 to 0487	×
CS <sup>*2</sup>	Counter set value	Decimal	000 to 511	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Decimal points are not displayed.

## ■7 Availability of writing/reading data to/from double-word devices ([FUJI MICREX-F])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
TR	-/-	R/W	-/-	-/-
CR	-/-	R/W	-/-	-/-
BD	-/-	R/W	-/-	-/-
TS	-/-	R/W	-/-	-/-
W9	-/-	R/W	-/-	-/-
CS	-/-	R/W	-/-	-/-

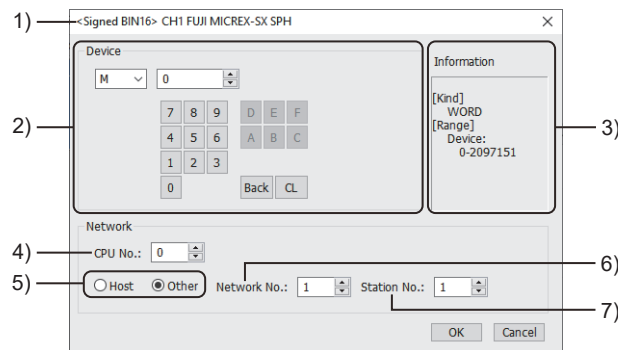

## 12.4.29 FUJI equipment ([FUJI MICREX-SX SPH])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([FUJI MICREX-SX SPH])
Specifications of word devices	→ ■2 Monitoring-supported word devices ([FUJI MICREX-SX SPH])
	→ ■3 Availability of writing/reading data to/from word devices ([FUJI MICREX-SX SPH])
Notation of devices	→ ■4 Notation of devices ([FUJI MICREX-SX SPH])

### ■1 Device setting dialog ([FUJI MICREX-SX SPH])

Set a device to be monitored.

1) Title

Data type and channel number of the device to be set

2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of M0

3) [Information]

Displays the setting range of each setting item according to the selected device.

4) [CPU No.]

Set the CPU number of the controller.

5) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

6) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

7) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

## ■2 Monitoring-supported word devices ([FUJI MICREX-SX SPH])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.29 ■3 Availability of writing/reading data to/from word devices ([FUJI MICREX-SX SPH])

For the formats of devices, refer to the following.

→6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
M	Non-retain memory	Decimal	0 to 2097151	○	○
L	Retain memory	Decimal	0 to 2097151	○	○
SM	System memory	Decimal	0 to 511	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from word devices ([FUJI MICREX-SX SPH])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data*1
M	R/W	R/W	-/-	R/W
L	R/W	R/W	-/-	R/W
SM	R/W	R/W	-/-	R/W

\*1 The GOT reads the value from a device and then write a value to the device.

Do not change the device value with a sequence program until the GOT completes writing a value to the device.

## ■4 Notation of devices ([FUJI MICREX-SX SPH])

The notation of devices differs between the FUJI PLC programming software and GT Designer3.

The notation also differs according to the type of FUJI PLC programming software.

### (1) Notation of devices in the single CPU system ([FUJI MICREX-SX SPH])

n: Device number

Device	Notation of devices in GT Designer3	Notation of devices in the PLC programming software		
		SX-Programmer Expert (D300win)	SX-Programmer Standard	
Non-retain memory	Word device	Mn	%MW1.n	WMn
	Double-word device		%MD1.n	DMn
	Bit-specified word device		Mn.b0 to Mn.b15	%MX1.n.01 to %MX1.n.15
Retain memory	Word device	Ln	%MW3.n	WLn
	Double-word device		%MD3.n	DLn
	Bit-specified word device		Ln.b0 to Ln.b15	%MX3.n.01 to %MX3.n.15
System memory	Word device	SMn	%MW10.n	WSMn
	Double-word device		%MD10.n	DSMn
	Bit-specified word device		SMn.b0 to SMn.b15	%MX10.n.01 to %MX10.n.15

\*1 The device number is not displayed when it is 0.

## (2) Notation of devices in the multiple CPU system ([FUJI MICREX-SX SPH])

n: Device number

p: CPU number

Device		Notation of devices in GT Designer3	Notation of devices in the PLC programming software	
			SX-Programmer Expert (D300win)	SX-Programmer Standard
Non-retain memory	Word device	0-FF/p Mn	%MWp.1.n	WMp.n
	Double-word device		%MDp.1.n	DMp.n
	Bit-specified word device	0-FF/p Mn.b0 to 0-FF/p Mn.b15	%Mxp.1.n.01 to %Mxp.1.n.15	Mp.n0 to Mp.nF <sup>*1</sup>
Retain memory	Word device	0-FF/p Ln	%MWp.3.n	WLp.n
	Double-word device		%MDp.3.n	DLp.n
	Bit-specified word device	0-FF/p Ln.b0 to 0-FF/p Ln.b15	%Mxp.3.n.01 to %Mxp.3.n.15	Lp.n0 to Lp.nF <sup>*1</sup>
System memory	Word device	0-FF/p SMn	%MWp.10.n	WSMp.n
	Double-word device		%MDp.10.n	DSMp.n
	Bit-specified word device	%Mxp.10.n.01 to %Mxp.10.n.15	%MX10.n.01 to %MX10.n.15	SMp.n0 to SMp.nF <sup>*1</sup>

\*1 The device number is not displayed when it is 0.

### 12.4.30 MURATEC equipment ([Muratec MPC/MCR])

Contact our company for the device specifications when connecting the GOT to MURATEC equipment.

## 12.4.31 YASKAWA equipment ([YASKAWA GL/PROGIC8])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([YASKAWA GL/PROGIC8])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([YASKAWA GL/PROGIC8])
	→ ■3 Availability of writing/reading data to/from bit devices ([YASKAWA GL/PROGIC8])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([YASKAWA GL/PROGIC8])
	→ ■5 Display values of link register and holding register ([YASKAWA GL/PROGIC8])
	→ ■6 Availability of writing/reading data to/from word devices ([YASKAWA GL/PROGIC8])

### ■1 Device setting dialog ([YASKAWA GL/PROGIC8])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of O1

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([YASKAWA GL/PROGIC8])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.31 ■3 Availability of writing/reading data to/from bit devices ([YASKAWA GL/PROGIC8])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>		
			Assignment to EG devices	Access using a client	
I <sup>2</sup>	Input relay	Decimal	1 to 63424	○	○
O <sup>3</sup>	Coil	Decimal	1 to 63424	○	○

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
D	Link coil	Decimal	D(Channel No.)(Device) Notation example: D12048 • Channel No. (decimal): 0 to 2 • Device (decimal): 1 to 2048 When [Channel No.] is [0], (Channel No.) is unnecessary.	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Change the input relay 10001 to 14096 to I1 to I4096 for setting. (When set in default)

\*3 Set the internal coil N1 to N1536 as O513 to O2048.

However, setting must not exceed O1 to O512 and O513 to O2048.

### ■3 Availability of writing/reading data to/from bit devices ([YASKAWA GL/PROGIC8])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
I	R/-	-/-	R/-	R/-	-/-
O	R/W	-/-	R/W	R/W	-/-
D	R/W	-/-	R/W	R/W	-/-

### ■4 Monitoring-supported word devices ([YASKAWA GL/PROGIC8])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.31 ■6 Availability of writing/reading data to/from word devices ([YASKAWA GL/PROGIC8])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
Z <sup>*3</sup>	Input register	Decimal	1 to 31840	○	○
R <sup>*2</sup>	Link register	Decimal	R(Channel No.)(Device) Notation example: R12048 • Channel No. (decimal): 0 to 2 • Device (decimal): 1 to 2048 When [Channel No.] is [0], (Channel No.) is unnecessary.	○	○
W <sup>*2*4</sup>	Holding register	Decimal	1 to 28291	○	○
K <sup>*5</sup>	Constant register	Decimal	1 to 4096	○	○
SW <sup>*2</sup>	Holding register	Decimal	1 to 28291	○	○
SR <sup>*2</sup>	Link register	Decimal	SR(Channel No.)(Device) Notation example: SR12048 • Channel No. (decimal): 0 to 2 • Device (decimal): 1 to 2048 When [Channel No.] is [0], (Channel No.) is unnecessary.	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 For the relationship between SR/SW and R/W, refer to the following.

- ⇒ 12.4.31 ■5 Display values of link register and holding register ([YASKAWA GL/PROGIC8])
- \*3 Change the input register 30001 to 30512 to Z1 to Z512 for setting. (When set in default)
- \*4 Change the holding register 40001 to 49999 to W1 to W9999 for setting. (When set in default)
- \*5 Change the constant register 31001 to 35096 to K1 to K4096 for setting. (When set in default)

## ■5 Display values of link register and holding register ([YASKAWA GL/PROGIC8])

SR and SW are virtual registers compatible with the data format used to display internal data of PLCs using R or W. The following shows the difference between the display values of SR/SW and those of R/W corresponding to the values of PLC internal data.

PLC internal data (16 bits)	SR, SW	R, W
9999	9999	9999
1001	1001	1001
1000	1000	1000
999	999	999
0	0	0
-1	-1	32769
-999	-999	33767
-1000	-1000	33768
-1001	-1001	33769
-9999	-9999	42767

## ■6 Availability of writing/reading data to/from word devices ([YASKAWA GL/PROGIC8])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
Z	R/-	R/-	-/-	R/-
R	R/W	R/W	-/-	R/W
W	R/W	R/W	-/-	R/W
K	R/W	R/W	-/-	R/W
SW	R/W	R/W	-/-	R/W
SR	R/W	R/W	-/-	R/W

## 12.4.32 YASKAWA equipment ([YASKAWA CP9200(H)])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([YASKAWA CP9200(H)])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([YASKAWA CP9200(H)])
	→ ■3 Availability of writing/reading data to/from bit devices ([YASKAWA CP9200(H)])

	→ ■5 Availability of writing/reading data to/from word devices ([YASKAWA CP9200(H)])

### ■1 Device setting dialog ([YASKAWA CP9200(H)])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of OB0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([YASKAWA CP9200(H)])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.32 ■3 Availability of writing/reading data to/from bit devices ([YASKAWA CP9200(H)])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
IB*2	Input relay	Hexadecimal	0000 to 07FF	○	○
OB*2	Coil	Hexadecimal	0000 to 07FF	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 During operation of CP-9200H, specify the reference No. and quantities so that they do not cover both IB\*\*\* and OB\*\*\*.

### ■3 Availability of writing/reading data to/from bit devices ([YASKAWA CP9200(H)])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
IB	R/W	-/-	R/W	R/W	-/-
OB	R/W	-/-	R/W	R/W	-/-

### ■4 Monitoring-supported word devices ([YASKAWA CP9200(H)])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.32 ■5 Availability of writing/reading data to/from word devices ([YASKAWA CP9200(H)])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
DW	Data register	Decimal	0 to 2047	○	○
MW*2	Common register	Decimal	0 to 7694	○	○
IW	Input register	Hexadecimal	0000 to 007F	○	○
OW	Output register	Hexadecimal	0000 to 007F	○	○
ZD	Data register	Decimal	0 to 2047	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 To use data registers of CPU #1 during operation of CP-9200, copy them to MW0 to MW7694.

### ■5 Availability of writing/reading data to/from word devices ([YASKAWA CP9200(H)])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
DW	R/W	R/W	-/-	R/W
MW	R/W	R/W	-/-	R/W

Specifications of word devices	→ ■4 Monitoring-supported word devices ([YASKAWA MP2000/MP900/CP9200SH])
	→ ■5 Availability of writing/reading data to/from word devices ([YASKAWA MP2000/MP900/CP9200SH])

### ■1 Device setting dialog ([YASKAWA MP2000/MP900/CP9200SH])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of MB000000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

#### 6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

## ■2 Monitoring-supported bit devices ([YASKAWA MP2000/MP900/CP9200SH])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.34 ■3 Availability of writing/reading data to/from bit devices ([YASKAWA MP2000/MP900/CP9200SH])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices *1	
			Assignment to EG devices	Access using a client
IB	Input relay	Hexadecimal 00000 to 7FFFF	○	○
MB	Coil	Decimal + hexadecimal MB(Word address)(Bit No.) Notation example: MB655340 The rightmost digit is a bit address. • Channel No. (decimal): 00000 to 65534 • Bit No. (hexadecimal): 0 to F	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from bit devices ([YASKAWA MP2000/MP900/CP9200SH])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
IB	R/-	-/-	R/-	R/-	-/-
MB	R/W	-/-	R/W	R/W	-/-

## ■4 Monitoring-supported word devices ([YASKAWA MP2000/MP900/CP9200SH])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.34 ■5 Availability of writing/reading data to/from word devices ([YASKAWA MP2000/MP900/CP9200SH])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices *1	
			Assignment to EG devices	Access using a client
IW	Input register	Hexadecimal 0000 to 7FFF	○	○
MW	Holding register	Decimal 0 to 65534	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■ 5 Availability of writing/reading data to/from word devices ([YASKAWA MP2000/MP900/CP9200SH])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
IW	R/-	R/-	-/-	R/-
MW*1	R/W	R/W	-/-	R/W

\*1 For the CP-317, only reading is possible for bit specification of word devices.

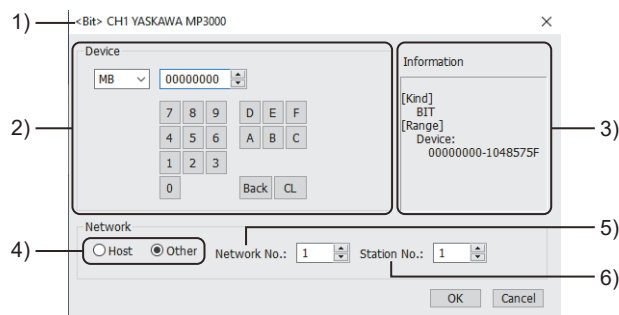

## 12.4.35 YASKAWA equipment ([YASKAWA MP3000])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference

Specifications of word devices	→ ■4 Monitoring-supported word devices ([YASKAWA MP3000])
	→ ■5 Availability of writing/reading data to/from word devices ([YASKAWA MP3000])

### ■1 Device setting dialog ([YASKAWA MP3000])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of MB00000000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

#### 6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

## ■2 Monitoring-supported bit devices ([YASKAWA MP3000])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.35 ■3 Availability of writing/reading data to/from bit devices ([YASKAWA MP3000])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
IB	Input register	Hexadecimal	000000 to 21FFFF	○	○
OB	Output register	Hexadecimal	000000 to 21FFFF	○	○
MB	Data register	Decimal + hexadecimal	MB(Word address)(Bit No.) Notation example: MB10485750 The rightmost digit is a bit address. • Channel No. (decimal): 0000000 to 1048575 • Bit No. (hexadecimal): 0 to F	○	○
YGB <sup>*2</sup>	G register	Decimal + hexadecimal	YGB(Word address)(Bit No.) Notation example: YGB20971510 The rightmost digit is a bit address. • Channel No. (decimal): 0000000 to 2097151 • Bit No. (hexadecimal): 0 to F	○	○
SB	System register	Decimal + hexadecimal	SB(Word address)(Bit No.) Notation example: SB655340 The rightmost digit is a bit address. • Channel No. (decimal): 00000 to 65534 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 This device is displayed as GB in the peripherals of the YASKAWA PLC.

## ■3 Availability of writing/reading data to/from bit devices ([YASKAWA MP3000])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
IB	R/-	-/-	R/-	R/-	-/-
OB	R/W	-/-	R/W	R/W	-/-
MB	R/W	-/-	R/W	R/W	-/-
YGB	R/W	-/-	R/W	R/W	-/-
SB	R/W	-/-	R/W	R/W	-/-

#### ■4 Monitoring-supported word devices ([YASKAWA MP3000])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.35 ■5 Availability of writing/reading data to/from word devices ([YASKAWA MP3000])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices *1	
			Assignment to EG devices	Access using a client
IW	Input register	Hexadecimal 00000 to 21FFF	○	○
OW	Output register	Hexadecimal 00000 to 21FFF	○	○
MW	Data register	Decimal 0 to 1048575	○	○
YGW*2	G register	Decimal 0 to 2097151	○	○
SW	System register	Decimal 0 to 65534	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

### ■ 1 Device setting dialog ([YASKAWA Robot Controller])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of IO10

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

The setting range is [1] (fixed).

6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

The setting range is [1] to [120].

## ■2 Monitoring-supported bit devices ([YASKAWA Robot Controller])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.36 ■4 Availability of writing/reading data to/from bit devices ([YASKAWA Robot Controller])

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
IO	IO Data	Decimal + octal	IO(Byte address)(Bit address) Notation example: IO87200 The rightmost digit is a bit address. • Byte address (decimal): 1 to 8720 • Bit address (octal): 0 to 7 For the relationship between the data and device range of the robot controller, refer to the following. ⇒ 12.4.36 ■3 IO Data device details ([YASKAWA Robot Controller])	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 IO Data device details ([YASKAWA Robot Controller])

The following shows the relationship between the data and device range of the robot controller.

The rightmost digit of each device number is a bit address.

Device range	Virtual device name
10 to 5127	Robot general-purpose input
10010 to 15127	Robot general-purpose output
20010 to 25127	External input
27010 to 29567	Network input
30010 to 35127	External output
37010 to 39567	Network output
40010 to 42567	Robot-dedicated input
50010 to 55127	Robot-dedicated output
60010 to 60647	Interface panel input
70010 to 79997	Auxiliary relay
80010 to 85127	Robot control status
87010 to 87207	Pseudo input

#### ■4 Availability of writing/reading data to/from bit devices ([YASKAWA Robot Controller])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
IO*1	R/W	-/-	R/W	-/-	-/-

\*1 Availability of reading/writing depends on the device number.

⇒ 12.4.36 ■3 IO Data device details ([YASKAWA Robot Controller])

#### ■5 Monitoring-supported byte devices ([YASKAWA Robot Controller])

The following table shows monitoring-supported byte devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.36 ■6 Availability of writing/reading data to/from byte devices ([YASKAWA Robot Controller])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
B	Byte Variable	Decimal 0 to 1999	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■6 Availability of writing/reading data to/from byte devices ([YASKAWA Robot Controller])

The following shows whether writing/reading data to/from byte devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
B	-/-	R/W	-/-	-/-	-/-

#### ■7 Monitoring-supported word devices ([YASKAWA Robot Controller])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.36 ■9 Availability of writing/reading data to/from word devices ([YASKAWA Robot Controller])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
I	Integer Variable	Decimal 0 to 1999	○	○
M	Resister Data	Decimal 0 to 999	○	○

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
RC <sup>*2</sup>	Robot Control	Hexadecimal + decimal + decimal RC(Command No.)-(Instance)((Attribute)) Notation example: RC70-8720(13) • Command No. (hexadecimal): 70 to 8C, 300 to 30C • Instance (decimal): 0 to 8720 • Attribute (decimal): 0 to 13 For the relationship between data that can be acquired using Robot Control and the virtual GOT devices, refer to the following. ➡ 12.4.36 ■ 8 Robot Control device details (YASKAWA Robot Controller)	x	x

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

    ➡ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Not available for a text display or text input object.

## ■ 8 Robot Control device details (YASKAWA Robot Controller)

Data that can be acquired using the Robot Control is assigned to the GOT virtual device (RC device).

Specify the Command No., Instance, and Attribute for the RC device to enable monitoring of the corresponding data.

Note the following when using the RC device.

Precautions	Description
Basic use of the RC device	Read all the elements to a GOT internal device in a batch using the script function or device data transfer function to monitor the data stored in the device. Setting the RC device to an object or others to monitor each element individually will decrease the monitoring speed.
Setting of the device data type and number of devices	Check the size of each data corresponding to the Command No., Instance, and Attribute to be specified. Set the data type and number of devices in the device settings so that the corresponding data can be stored.
Objects for which the RC device cannot be used	Do not specify the RC device directly in the following object settings for which consecutive devices are used. • Text display: Monitor device • Text input: Monitor device • Parts movement: [Device] (When [Position] is selected for [Move Way]) • Simple alarm display: Monitor device (When [Continuous] is selected for [Device No.]) • Recipe display (record list): [Control target record name], [Narrow down record names], or [Cursor row record name] • Trend graph: Monitor device (When [Continuous] is selected for [Device Setting]) • Document display: [Keyword Device] • Text print: Monitor device As described in the column for Basic use of the RC device, read all the elements to a GOT internal device in a batch to monitor the data stored in the device.

For details on each command, refer to the following.

    ➡ Manual of the YASKAWA robot controller

The GOT supports the following commands.

Command No. (hexadecimal)	Command name
72	Status information read command
73	Execution job information read command
74	Axis configuration information read command
75	Robot position data read command
76	Position deviation read command
77	Torque data read command
7F	Robot position variable (P) read/write command
82	Alarm reset/error cancel command
88	Control time acquisition command
307	Robot position variable (P) multi-read/-write command
30A	Alarm data read command (subcode character string supported)
30B	Alarm history read command (subcode character string supported)

## ■9 Availability of writing/reading data to/from word devices ([YASKAWA Robot Controller])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
I	R/W	-/-	-/-	-/-
M	R/W	-/-	-/-	-/-
RC	R/W	R/W	-/-	R/-

## ■10 Monitoring-supported double-word devices ([YASKAWA Robot Controller])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.36 ■11 Availability of writing/reading data to/from double-word devices ([YASKAWA Robot Controller])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
D	Double Int Variable	Decimal	0 to 1999	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■11 Availability of writing/reading data to/from double-word devices ([YASKAWA Robot Controller])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
D	-/-	R/W	-/-	-/-

## ■12 Precautions ([YASKAWA Robot Controller])

### (1) Precautions when writing devices in a batch ([YASKAWA Robot Controller])

When many devices are written in a batch using the recipe function or device data transfer function, system alarm 402 (communication timeout error) may occur.

Take either of the following corrective actions.

- Specifying a longer communication timeout period
- Reducing the number of devices written in a batch

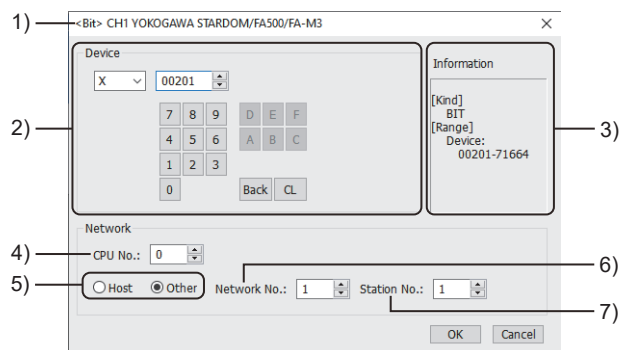

## 12.4.37 YOKOGAWA equipment ([YOKOGAWA STARDOM/FA500/FA-M3])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([YOKOGAWA STARDOM/FA500/FA-M3])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([YOKOGAWA STARDOM/FA500/FA-M3])
	→ ■3 Availability of writing/reading data to/from bit devices ([YOKOGAWA STARDOM/FA500/FA-M3])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([YOKOGAWA STARDOM/FA500/FA-M3])
	→ ■5 Availability of writing/reading data to/from word devices ([YOKOGAWA STARDOM/FA500/FA-M3])

### ■1 Device setting dialog ([YOKOGAWA STARDOM/FA500/FA-M3])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of X00201

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [CPU No.]

Set the CPU number of the controller.

When monitoring a single CPU system, set the CPU No. to [0].

When monitoring a multiple CPU system, set the CPU No. to any of [0] to [4].

When [0] is set, the GOT monitors CPU No. 1.

#### 5) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 6) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

#### 7) [Station No.]

This item appears when [Other] is selected for the station type.  
Specify a station number.

## ■2 Monitoring-supported bit devices ([YOKOGAWA STARDOM/FA500/FA-M3])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.37 ■3 Availability of writing/reading data to/from bit devices ([YOKOGAWA STARDOM/FA500/FA-M3])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

If a device outside the setting range is set for an object, the value display at the object is indefinite.

However, no error is displayed for system alarm.

A device to be set for an object must be in the device range of YOKOGAWA PLC.

For the device range of YOKOGAWA PLC, refer to the manual below.

⇒Manual of YOKOGAWA PLC

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
X	Input relay	Decimal + decimal	X(Slot No.)(Terminal No.) Notation example: X71601 • Slot No. (decimal): 002 to 716 • Terminal No. (decimal): 01 to 64	○	○
Y	Output relay	Decimal + decimal	Y(Slot No.)(Terminal No.) Notation example: Y71601 • Slot No. (decimal): 002 to 716 • Terminal No. (decimal): 01 to 64	○	○
I	Internal relay	Decimal	1 to 65535	○	○
TU	Timer	Decimal	1 to 3072	○	○ (Not usable as word data)
CU	Counter	Decimal	1 to 3072	○	○ (Not usable as word data)
M	Special relay	Decimal	1 to 9984	○	○
L	Link relay	Decimal + decimal	L(FA link relay No. - 1)(Link relay No.) Notation example: L70001 • FA link module No. - 1 (decimal): 0 to 7 (Set the link module No. minus 1.) • Link relay No. (decimal): 0001 to 8192	○	○
E	Shared relay	Decimal	1 to 4096	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from bit devices ([YOKOGAWA STARDOM/FA500/FA-M3])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
X	R/-	-/-	R/-	R/-	-/-
Y	R/W	-/-	R/W	R/W	-/-
I	R/W	-/-	R/W	R/W	-/-
TU	R/W	-/-	-/-	-/-	-/-

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
CU	R/W	-/-	-/-	-/-	-/-
M	R/W	-/-	R/W	R/W	-/-
L	R/W	-/-	R/W	R/W	-/-
E	R/W	-/-	R/W	R/W	-/-

#### ■4 Monitoring-supported word devices ([YOKOGAWA STARDOM/FA500/FA-M3])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.37 ■5 Availability of writing/reading data to/from word devices ([YOKOGAWA STARDOM/FA500/FA-M3])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
TP	Timer	Decimal	1 to 3072	○	○ (Not usable as bit data)
CP	Counter	Decimal	1 to 3072	○	○ (Not usable as bit data)
D	Data register	Decimal	1 to 65535	○	○
Z	Special register	Decimal	1 to 1024	○	×
B	File register	Decimal	1 to 262144	○	○
V	Index register	Decimal	1 to 256	○	○
TS	Timer	Decimal	1 to 3072	○	○ (Not usable as bit data)
CS	Counter	Decimal	1 to 3072	○	○ (Not usable as bit data)
R	Shared register	Decimal	1 to 4096	○	○
W	Link register	Decimal + decimal	W(FA link module No. - 1)(Link register No.) Notation example: W70001 • FA link module No. - 1 (decimal): 0 to 7 (Set the link module No. minus 1.) • Link register No. (decimal): 0001 to 8192	○	×
F	Cache register	Decimal	000001 to 524288	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■5 Availability of writing/reading data to/from word devices ([YOKOGAWA STARDOM/FA500/FA-M3])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TP	R/W	R/W	-/-	-/-
CP	R/W	R/W	-/-	-/-
D	R/W	R/W	-/-	R/W
Z	R/W	R/W	-/-	R/W
B	R/W	R/W	-/-	R/W
V	R/W	R/W	-/-	R/W
TS	R/-	R/-	-/-	-/-
CS	R/-	R/-	-/-	-/-
R	R/W	R/W	-/-	R/W
W	R/W	R/W	-/-	R/W
F	R/W	R/W	-/-	R/W

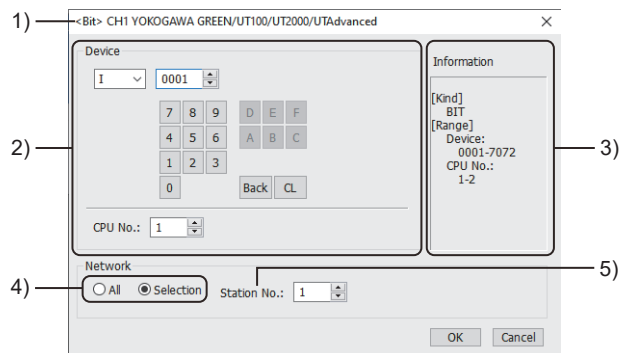

## 12.4.38 YOKOGAWA equipment ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])
	→ ■3 Availability of writing/reading data to/from bit devices ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])
	→ ■5 Availability of writing/reading data to/from word devices ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

### ■1 Device setting dialog ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

Set a device to be monitored.

- 1) Title  
Data type and channel number of the device to be set
- 2) [Device]  
Set the device name and device number.  
If a bit number needs to be specified, the setting item is displayed.  
Example) Setting of I0001

- 3) [Information]  
Displays the setting range of each setting item according to the selected device.
- 4) Monitor target specification  
Set the monitor target of the set device.

Item	Description
[All]	Select this item when writing data to all the connected temperature controllers. During monitoring, the temperature controller set for [Host Address] of the [Controller Setting] window is monitored. When data is input from a numerical input object, the data is written to all the connected temperature controllers. When no data is input, the temperature controller set for [Host Address] is monitored. When bit specification of word device is performed, data is written to the temperature controller set for [Host Address].

Item	Description
[Selection]	Select this item when monitoring the temperature controller that has the specified station number.

### 5) [Station No.]

This item appears when [Selection] is selected for the monitor target specification.

The setting range is [0] to [99] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

→(1) Indirect specification of a station number ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

## (1) Indirect specification of a station number ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the correspondence between station number setting values and GOT data registers (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	[0] to [99] Setting a value outside the above range causes a device range error.
101	GD11	
:	:	
114	GD24	
115	GD25	

## ■2 Monitoring-supported bit devices ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.38 ■3 Availability of writing/reading data to/from bit devices ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

For the formats of devices, refer to the following.

→6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
I Internal relay	Decimal	C(CPU No.)-I(Device) Notation example: C2-I0001 • CPU No. (decimal): 1 to 2 • Device (decimal): 0001 to 7072 When there is no setting for the CPU No. in the communication settings on the temperature controller side, set the CPU No. on the GOT side to 1 (default).	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from bit devices ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
I	R/W	-/-	R/W	-/-	-/-

#### ■4 Monitoring-supported word devices ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.38 ■5 Availability of writing/reading data to/from word devices ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

For the formats of devices, refer to the following.

→6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
D	Data register	Decimal C(CPU No.)-D(Device) Notation example: C2-D0001 • CPU No. (decimal): 1 to 2 • Device (decimal): 0001 to 9000 When there is no setting for the CPU No. in the communication settings on the temperature controller side, set the CPU No. on the GOT side to 1 (default).	○	○
B	File register	Decimal	0001 to 1600	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■5 Availability of writing/reading data to/from word devices ([YOKOGAWA GREEN/UT100/UT2000/UTAdvanced])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
D	R/W	-/-	-/-	R/W
B	R/W	-/-	-/-	R/W

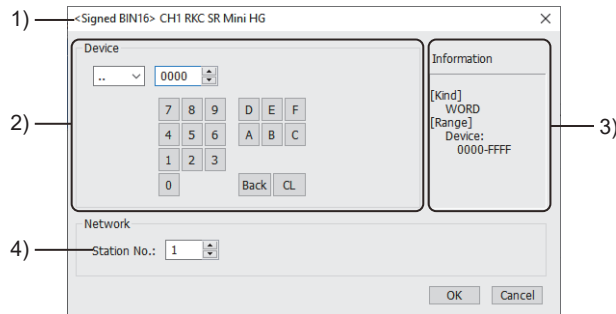

## 12.4.39 RKC equipment ([RKC SR Mini HG])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([RKC SR Mini HG])
Specifications of word devices	→ ■2 Monitoring-supported word devices ([RKC SR Mini HG])
	→ ■3 Availability of writing/reading data to/from word devices ([RKC SR Mini HG])

### ■1 Device setting dialog ([RKC SR Mini HG])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of ..0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

Specify a station number.

Set it by a value of unit address +1 in decimal.

Example 1) When the unit address is 0: Set 1.

Example 2) When the unit address is F: Set 16.

The setting range is [0] to [99] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

→ (1) Indirect specification of a station number ([RKC SR Mini HG])

### (1) Indirect specification of a station number ([RKC SR Mini HG])

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the correspondence between station number setting values and GOT data registers (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	[0] to [99] Setting a value outside the above range causes a device range error.
101	GD11	
:	:	
114	GD24	
115	GD25	

### ■2 Monitoring-supported word devices ([RKC SR Mini HG])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.39 ■3 Availability of writing/reading data to/from word devices ([RKC SR Mini HG])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices *1	
			Assignment to EG devices	Access using a client
..	Data	Hexadecimal 0000 to FFFF	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from word devices ([RKC SR Mini HG])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
..	R/W	R/W	-/-	R/W

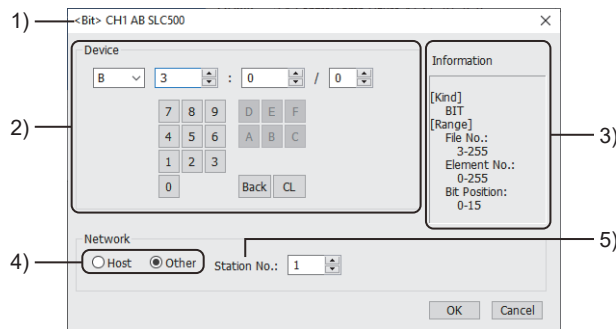

## 12.4.40 ALLEN-BRADLEY equipment ([AB SLC500])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([AB SLC500])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([AB SLC500])
	→ ■3 Availability of writing/reading data to/from bit devices ([AB SLC500])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([AB SLC500])
	→ ■5 Availability of writing/reading data to/from word devices ([AB SLC500])

### ■1 Device setting dialog ([AB SLC500])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of B3:0/0

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 5) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

## ■2 Monitoring-supported bit devices ([AB SLC500])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.40 ■3 Availability of writing/reading data to/from bit devices ([AB SLC500])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

The GOT reads the value from a device and then write a value to the device.

Do not change the device value with a sequence program until the GOT completes writing a value to the device.

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices *1	
			Assignment to EG devices	Access using a client
T	Decimal	T(File No.):(Element No.)/13(DN) Notation example: T4:255/13(DN) • File No. (decimal): 4 to 255 • Element No. (decimal): 0 to 255	○	×
		T(File No.):(Element No.)/14(TT) Notation example: T4:255/14(TT) • File No. (decimal): 4 to 255 • Element No. (decimal): 0 to 255		
C	Decimal	C(File No.):(Element No.)/13(DN) Notation example: C5:255/13(DN) • File No. (decimal): 5 to 255 • Element No. (decimal): 0 to 255	○	×
		C(File No.):(Element No.)/14(CD) Notation example: C5:255/14(CD) • File No. (decimal): 5 to 255 • Element No. (decimal): 0 to 255		
		C(File No.):(Element No.)/15(CU) Notation example: C5:255/15(CU) • File No. (decimal): 5 to 255 • Element No. (decimal): 0 to 255		
B	Decimal	B(File No.):(Element No.)/(Bit position) Notation example: B3:255/0 • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255 • Bit position (decimal): 0 to 15	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from bit devices ([AB SLC500])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-
B	R/W	-/-	-/-	-/-	-/-

#### ■4 Monitoring-supported word devices ([AB SLC500])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.40 ■5 Availability of writing/reading data to/from word devices ([AB SLC500])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
T	Timer (set value)	Decimal	T(File No.):(Element No.).1(PRE) Notation example: T4:255.1(PRE) • File No. (decimal): 4 to 255 • Element No. (decimal): 0 to 255	○	×
	Timer (current value)		T(File No.):(Element No.).2(ACC) Notation example: T4:255.2(ACC) • File No. (decimal): 4 to 255 • Element No. (decimal): 0 to 255		
C	Counter (set value)	Decimal	C(File No.):(Element No.).1(PRE) Notation example: C5:255.1(PRE) • File No. (decimal): 5 to 255 • Element No. (decimal): 0 to 255	○	×
	Counter (current value)		C(File No.):(Element No.).2(ACC) Notation example: C5:255.2(ACC) • File No. (decimal): 5 to 255 • Element No. (decimal): 0 to 255		
N	Integer	Decimal	N(File No.):(Element No.) Notation example: N7:255 • File No. (decimal): 7 to 255 • Element No. (decimal): 0 to 255	○	○
B	Bit	Decimal	B(File No.):(Element No.) Notation example: B3:255 • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■5 Availability of writing/reading data to/from word devices ([AB SLC500])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data*1
T	R/W	R/-	-/-	R/W
C	R/W	R/-	-/-	R/W
N	R/W	R/W	-/-	R/W
B	R/W	R/W	-/-	-/-

\*1 The GOT reads the value from a device and then write a value to the device.

Do not change the device value with a sequence program until the GOT completes writing a value to the device.

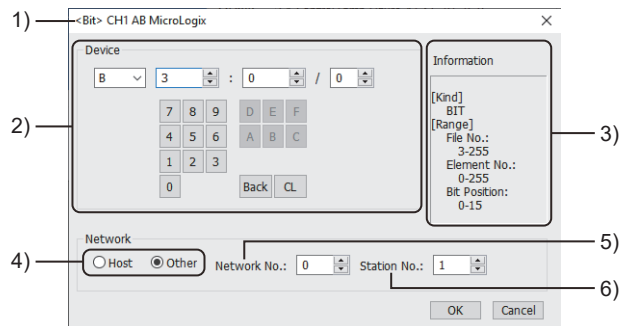

## 12.4.41 ALLEN-BRADLEY equipment ([AB MicroLogix])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([AB MicroLogix])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([AB MicroLogix])
	→ ■3 Availability of writing/reading data to/from bit devices ([AB MicroLogix])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([AB MicroLogix])
	→ ■5 Availability of writing/reading data to/from word devices ([AB MicroLogix])
Specifications of double-word devices	→ ■6 Monitoring-supported double-word devices ([AB MicroLogix])
	→ ■7 Availability of writing/reading data to/from double-word devices ([AB MicroLogix])

### ■1 Device setting dialog ([AB MicroLogix])

Set a device to be monitored.

- 1) Title  
Data type and channel number of the device to be set
- 2) [Device]  
Set the device name and device number.  
If a bit number needs to be specified, the setting item is displayed.  
Example) Setting of B3:0/0

- 3) [Information]  
Displays the setting range of each setting item according to the selected device.
- 4) Station type specification  
Select the station type (host or other) for the controller to be monitored.
  - [Host]: The controller to be monitored is the host station.
  - [Other]: The controller to be monitored is not the host station.
- 5) [Network No.]  
This item appears when [Other] is selected for the station type.  
Specify a network number.
- 6) [Station No.]  
This item appears when [Other] is selected for the station type.  
Specify a station number.

## ■2 Monitoring-supported bit devices ([AB MicroLogix])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.41 ■3 Availability of writing/reading data to/from bit devices ([AB MicroLogix])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

The GOT reads the value from a device and then write a value to the device.

Do not change the device value with a sequence program until the GOT completes writing a value to the device.

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
T	Decimal	T(File No.):(Element No.)/13(DN) Notation example: T3:255/13(DN) • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255	○	×
		T(File No.):(Element No.)/14(TT) Notation example: T3:255/14(TT) • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255		
C	Decimal	C(File No.):(Element No.)/13(DN) Notation example: C3:255/13(DN) • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255	○	×
		C(File No.):(Element No.)/14(CD) Notation example: C3:255/14(CD) • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255		
		C(File No.):(Element No.)/15(CU) Notation example: C3:255/15(CU) • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255		
I	Decimal	I:(Slot No.):(Element No.)/(Bit position) Notation example: I:16.7/0 • Slot No. (decimal): 0 to 16 • Element No. (decimal): 0 to 7 • Bit position (decimal): 0 to 15	○	○
O	Decimal	O:(Slot No.):(Element No.)/(Bit position) Notation example: O:16.7/0 • Slot No. (decimal): 0 to 16 • Element No. (decimal): 0 to 7 • Bit position (decimal): 0 to 15	○	○
B	Decimal	B(File No.):(Element No.)/(Bit position) Notation example: B3:255/0 • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255 • Bit position (decimal): 0 to 15	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from bit devices ([AB MicroLogix])

The following shows whether writing/reading data to/from bit devices is available by device type. When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-
I	R/W	-/-	-/-	-/-	-/-
O	R/W	-/-	-/-	-/-	-/-
B	R/W	-/-	-/-	-/-	-/-

### ■4 Monitoring-supported word devices ([AB MicroLogix])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.41 ■5 Availability of writing/reading data to/from word devices ([AB MicroLogix])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
I	Input	Decimal	I:(Slot No.)(Element No.) Notation example: I:16.0 • Slot No. (decimal): 0 to 16 • Element No. (decimal): 0 to 7	○	○
O	Output	Decimal	O:(Slot No.)(Element No.) Notation example: O:16.0 • Slot No. (decimal): 0 to 16 • Element No. (decimal): 0 to 7	○	○
T	Timer (set value)	Decimal	T(File No.)(Element No.).1(PRE) Notation example: T3:255.1(PRE) • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255	○	×
	Timer (current value)		T(File No.)(Element No.).2(ACC) Notation example: T3:255.2(ACC) • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255		
C	Counter (set value)	Decimal	C(File No.)(Element No.).1(PRE) Notation example: C3:255.1(PRE) • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255	○	×
	Counter (current value)		C(File No.)(Element No.).2(ACC) Notation example: C3:255.2(ACC) • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255

B	Bit	Decimal	B(File No.)(Element No.) Notation example: B3:0 • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255	○	○

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
S	Status	Decimal S(File No.):(Device) Notation example: S2:163 • File No. (decimal): 2 • Device (decimal): 0 to 163	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■5 Availability of writing/reading data to/from word devices ([AB MicroLogix])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data <sup>*1</sup>
I	R/W	R/W	-/-	-/-
O	R/W	R/W	-/-	-/-
T	R/W	R/-	-/-	R/W
C	R/W	R/-	-/-	R/W
N	R/W	R/W	-/-	R/W
B	R/W	R/W	-/-	-/-
S	R/W	R/W	-/-	R/W

\*1 The GOT reads the value from a device and then write a value to the device.

Do not change the device value with a sequence program until the GOT completes writing a value to the device.

## ■6 Monitoring-supported double-word devices ([AB MicroLogix])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.41 ■7 Availability of writing/reading data to/from double-word devices ([AB MicroLogix])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
L	32bit integer	Decimal L(File No.):(Element No.) Notation example: L3:0 • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255	×	×
F	32bit float	Decimal F(File No.):(Element No.) Notation example: F3:0 • File No. (decimal): 3 to 255 • Element No. (decimal): 0 to 255	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■7 Availability of writing/reading data to/from double-word devices ([AB MicroLogix])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
L	-/-	R/W	-/-	-/-
F	-/-	R/W	-/-	-/-

### 12.4.42 ALLEN-BRADLEY equipment ([AB MicroLogix (Extended)])

Contact our company for the device specifications when connecting the GOT to ALLEN-BRADLEY equipment.

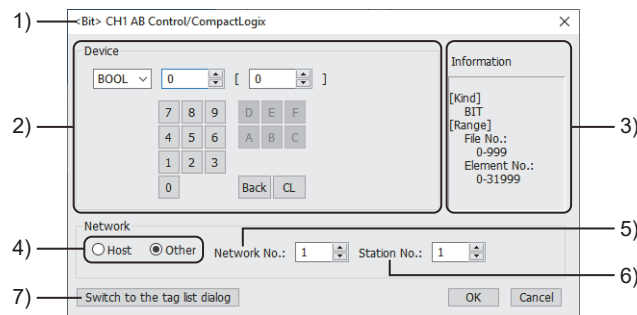

## 12.4.43 ALLEN-BRADLEY equipment ([AB Control/CompactLogix])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([AB Control/CompactLogix])

	→ ■7 Availability of writing/reading data to/from double-word devices ([AB Control/CompactLogix])

### ■ 1 Device setting dialog ([AB Control/CompactLogix])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of BOOL0[0]

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

#### 6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

#### 7) [Switch to the tag list dialog] button

You can open the tag list dialog to check the tags imported to GT Designer3.

→6.1.8 ■4 Tag list dialog (RSLogix 5000 tag)

## ■2 Monitoring-supported bit devices ([AB Control/CompactLogix])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.43 ■3 Availability of writing/reading data to/from bit devices ([AB Control/CompactLogix])

For the formats of devices, refer to the following.

→6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
BOOL	Bit data	Decimal	BOOL(File No.):{(Element No.)} Notation example: BOOL999[0] • File No. (decimal): 0 to 999 • Element No. (decimal): 0 to 31999	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from bit devices ([AB Control/CompactLogix])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
BOOL	R/W	-/-	-/-	-/-	-/-

## ■4 Monitoring-supported word devices ([AB Control/CompactLogix])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

#### ■5 Availability of writing/reading data to/from word devices ([GE Series 90])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
R	R/W	R/W	-/-	R/W
AI	R/W	R/W	-/-	R/W
AQ	R/W	R/W	-/-	R/W

## 12.4.46 LS IS equipment ([LS Industrial Systems XGK])

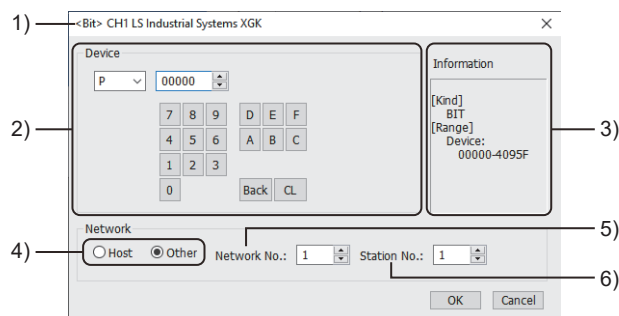

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Not available to GT2105-Q.

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([LS Industrial Systems XGK])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([LS Industrial Systems XGK])
	→ ■3 Availability of writing/reading data to/from bit devices ([LS Industrial Systems XGK])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([LS Industrial Systems XGK])
	→ ■5 Availability of writing/reading data to/from word devices ([LS Industrial Systems XGK])

### ■1 Device setting dialog ([LS Industrial Systems XGK])

Set a device to be monitored.

1) Title

Data type and channel number of the device to be set

2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of P00000

3) [Information]

Displays the setting range of each setting item according to the selected device.

4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

The setting range is [1] to [239].

6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

The setting range is [1] to [64].

## ■2 Monitoring-supported bit devices ([LS Industrial Systems XGK])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.46 ■3 Availability of writing/reading data to/from bit devices ([LS Industrial Systems XGK])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
P	I/O Relay	Decimal + hexadecimal P(Device)(Bit No.) Notation example: P40950 The rightmost digit is a bit address. • Device (decimal): 0 to 4095 • Bit No. (hexadecimal): 0 to F	○	○
L	Link relay	Decimal + hexadecimal L(Device)(Bit No.) Notation example: L112630 The rightmost digit is a bit address. • Device (decimal): 0 to 11263 • Bit No. (hexadecimal): 0 to F	○	○
M	Auxiliary relay	Decimal + hexadecimal M(Device)(Bit No.) Notation example: M40950 The rightmost digit is a bit address. • Device (decimal): 0 to 4095 • Bit No. (hexadecimal): 0 to F	○	○
K	Keep Relay	Decimal + hexadecimal K(Device)(Bit No.) Notation example: K40950 The rightmost digit is a bit address. • Device (decimal): 0 to 4095 • Bit No. (hexadecimal): 0 to F	○	○
T	Timer contact	Decimal 0000 to 8191	○	○ (Not usable as word data)
C	Counter contact	Decimal 0000 to 4095	○	○ (Not usable as word data)
F	Special relay	Decimal + hexadecimal F(Device)(Bit No.) Notation example: F40950 The rightmost digit is a bit address. • Device (decimal): 0 to 4095 • Bit No. (hexadecimal): 0 to F	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from bit devices ([LS Industrial Systems XGK])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
P	R/W	-/-	R/W	-/-	-/-
L	R/W	-/-	R/W	-/-	-/-
M	R/W	-/-	R/W	-/-	-/-
K	R/W	-/-	R/W	-/-	-/-
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-
F*1	R/W	-/-	R/W	-/-	-/-

\*1 Data cannot be written to F00000 to F1023F.

#### ■4 Monitoring-supported word devices ([LS Industrial Systems XGK])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.46 ■5 Availability of writing/reading data to/from word devices ([LS Industrial Systems XGK])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
D	Data Register	Decimal	000000 to 524287	○	○
R	File Register	Decimal	00000 to 32767	○	○
ZR	File Register	Decimal	000000 to 524287	○	○
U*2	Analog Data Register	Hexadecimal + decimal	U(BaseNo.)(SlotNo.)(Special module No.) Notation example: U7F.00 • BaseNo. (hexadecimal): 0 to 7 • SlotNo. (hexadecimal): 0 to F • Special module No. (decimal): 00 to 31	○	○
N	Comm. Data Register	Decimal	00000 to 21503	○	○
Z	Index Register	Decimal	000 to 255	○	○
T	Timer current value	Decimal	0000 to 8191	○	○ (Not usable as bit data)
C	Counter current value	Decimal	0000 to 4095	○	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 When the device type is the double-word (32 bits) type, set an even number for the special module number only.

#### ■5 Availability of writing/reading data to/from word devices ([LS Industrial Systems XGK])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
D	R/W	R/W	-/-	R/W
R	R/W	R/W	-/-	R/W
ZR	R/W	R/W	-/-	R/W
U	R/W	R/W	-/-	R/W
N	R/W	R/W	-/-	R/W
Z	R/W	R/W	-/-	R/W
T	R/W	R/W	-/-	-/-
C	R/W	R/W	-/-	-/-

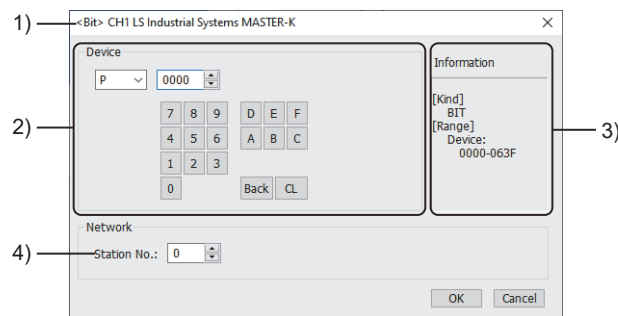

## 12.4.47 LS IS equipment ([LS Industrial Systems MASTER-K])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([LS Industrial Systems MASTER-K])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([LS Industrial Systems MASTER-K])
	→ ■3 Availability of writing/reading data to/from bit devices ([LS Industrial Systems MASTER-K])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([LS Industrial Systems MASTER-K])
	→ ■5 Availability of writing/reading data to/from word devices ([LS Industrial Systems MASTER-K])

### ■1 Device setting dialog ([LS Industrial Systems MASTER-K])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of P0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

This item appears when [Selection] is selected for the monitor target specification.

The setting range is [0] to [31] (direct) or [100] to [115] (indirect).

For indirect specification of a station number, refer to the following.

- (1) Indirect specification of a station number ([LS Industrial Systems MASTER-K])

### (1) Indirect specification of a station number ([LS Industrial Systems MASTER-K])

When you specify any of 100 to 115 for the station number, the value of the corresponding GOT data register (GD10 to GD25) is used as the station number.

The following shows the correspondence between station number setting values and GOT data registers (GD).

Station No.	GOT data register (GD)	Setting range
100	GD10	[0] to [31] Setting a value outside the above range causes a device range error.
101	GD11	
:	:	
114	GD24	
115	GD25	

### ■2 Monitoring-supported bit devices ([LS Industrial Systems MASTER-K])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.47 ■3 Availability of writing/reading data to/from bit devices ([LS Industrial Systems MASTER-K])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
P	I/O relay	Decimal + hexadecimal	P(Device)(Bit No.) Notation example: P0630 • Device (decimal): 000 to 063 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
L	Link relay	Decimal + hexadecimal	L(Device)(Bit No.) Notation example: L0630 • Device (decimal): 000 to 063 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
M	Auxiliary relay	Decimal + hexadecimal	M(Device)(Bit No.) Notation example: M1910 • Device (decimal): 000 to 191 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
K	Keep relay	Decimal + hexadecimal	K(Device)(Bit No.) Notation example: K0310 • Device (decimal): 000 to 031 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)
T	Timer (contact)	Decimal	0 to 255	○	○ (Not usable as word data)
C	Counter (contact)	Decimal	0 to 255	○	○ (Not usable as word data)
F	Special relay	Decimal + hexadecimal	F(Device)(Bit No.) Notation example: F0630 • Device (decimal): 000 to 063 • Bit No. (hexadecimal): 0 to F	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from bit devices ([LS Industrial Systems MASTER-K])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
P	R/W	-/-	-/-	-/-	-/-
L	R/W	-/-	-/-	-/-	-/-
M	R/W	-/-	-/-	-/-	-/-
K	R/W	-/-	-/-	-/-	-/-
T	R/W	-/-	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-	-/-
F	R/-	-/-	-/-	-/-	-/-

### ■4 Monitoring-supported word devices ([LS Industrial Systems MASTER-K])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.47 ■5 Availability of writing/reading data to/from word devices ([LS Industrial Systems MASTER-K])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
T	Timer (current value)	Decimal	0 to 255	○	○ (Not usable as bit data)
C	Counter (current value)	Decimal	0 to 255	○	○ (Not usable as bit data)
D	Data register	Decimal	0 to 9999	○	○ (Not usable as bit data)
F	Special relay	Decimal	000 to 063	○	○ (Not usable as bit data)
P	I/O relay	Decimal	000 to 063	○	○ (Not usable as bit data)
M	Auxiliary relay	Decimal	000 to 191	○	○ (Not usable as bit data)
K	Keep relay	Decimal	000 to 031	○	○ (Not usable as bit data)
L	Link relay	Decimal	000 to 063	○	○ (Not usable as bit data)
S	Step controller	Decimal	0 to 99	○	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■5 Availability of writing/reading data to/from word devices ([LS Industrial Systems MASTER-K])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
T	R/W	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-
D	R/W	R/W	-/-	-/-
F	R/-	R/-	-/-	-/-
P	R/W	R/W	-/-	-/-
M	R/W	R/W	-/-	-/-
K	R/W	R/W	-/-	-/-
L	R/W	R/W	-/-	-/-
S	R/W	-/-	-/-	-/-

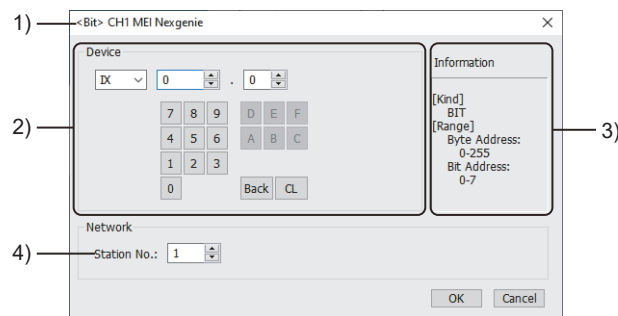

## 12.4.48 MITSUBISHI INDIA equipment ([MEI Nexgenie])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([MEI Nexgenie])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([MEI Nexgenie])
	→ ■3 Availability of writing/reading data to/from bit devices ([MEI Nexgenie])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([MEI Nexgenie])
	→ ■5 Availability of writing/reading data to/from word devices ([MEI Nexgenie])

### ■1 Device setting dialog ([MEI Nexgenie])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of IX0.0

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [Station No.]

This item appears when [Selection] is selected for the monitor target specification.

The setting range is [1] to [247].

## ■2 Monitoring-supported bit devices ([MEI Nexgenie])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.48 ■3 Availability of writing/reading data to/from bit devices ([MEI Nexgenie])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
IX	Input	Decimal + octal IX(Byte address).(Bit address) Notation example: IX255.0 • Byte address (decimal): 0 to 255 • Bit address (octal): 0 to 7	×	×
QX	Output	Decimal + octal QX(Byte address).(Bit address) Notation example: QX255.0 • Byte address (decimal): 0 to 255 • Bit address (octal): 0 to 7	×	×
MX	Marker	Decimal + octal MX(Byte address).(Bit address) Notation example: MX8191.0 • Byte address (decimal): 0 to 8191 • Bit address (octal): 0 to 7	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of writing/reading data to/from bit devices ([MEI Nexgenie])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
IX	R/-	-/-	-/-	-/-	-/-
QX	R/-	-/-	-/-	-/-	-/-
MX	R/W	-/-	-/-	-/-	-/-

## ■4 Monitoring-supported word devices ([MEI Nexgenie])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.48 ■5 Availability of writing/reading data to/from word devices ([MEI Nexgenie])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>		
			Assignment to EG devices	Access using a client	
IW	Input	Decimal	0 to 254	×	×
QW	Output	Decimal	0 to 254	×	×
MW	Marker	Decimal	0 to 32254	○	○ (Not usable as bit data)

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
SW	System Word	Decimal	0 to 468	○	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■ 5 Availability of writing/reading data to/from word devices ([MEI Nexgenie])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
IW	R/-	R/-	-/-	-/-
QW	R/-	R/-	-/-	-/-
MW	R/W	R/W	-/-	-/-
SW <sup>*1</sup>	R/W	R/W	-/-	-/-

\*1 Some devices are read-only.

For the details, refer to the following manual.

⇒ Manual of the PLC used

## 12.4.49 SICK equipment ([SICK Flexi Soft])

The device specifications are the same as those of MELSEC-WS series.

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([SICK Flexi Soft])
Specifications of bit devices	→ 12.3.10 ■1 Monitoring-supported bit devices ([MELSEC-WS])
	→ 12.3.10 ■2 Availability of writing/reading data to/from bit devices ([MELSEC-WS])
Specifications of word devices	→ 12.3.10 ■3 Monitoring-supported word devices ([MELSEC-WS])
	→ 12.3.10 ■4 Availability of writing/reading data to/from word devices ([MELSEC-WS])
Engineering software for SICK equipment and device representation of GT Designer3	→ 12.3.10 ■5 Engineering software for MELSEC-WS and device representation of GT Designer3 ([MELSEC-WS])
Offset specifications	→ 12.3.10 ■6 Offset specification ([MELSEC-WS])

### ■1 Device setting dialog ([SICK Flexi Soft])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of I1.1

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

## 12.4.50 SIEMENS equipment ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

The item selectable for [Controller Type] in the [Controller Setting] window varies by GOT model.

- For GT27, GT25, GT23, and GS25

[SIEMENS S7-200]

- For GT21 and GS21

[SIEMENS S7-200(CN/SMART)]

Item	Reference
Device setting dialog	⇒ ■1 Device setting dialog ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])
Specifications of bit devices	⇒ ■2 Monitoring-supported bit devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])
	⇒ ■3 Availability of writing/reading data to/from bit devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])
Specifications of word devices	⇒ ■4 Monitoring-supported word devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

Specifications of double-word devices	⇒ ■6 Monitoring-supported double-word devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])
	⇒ ■7 Availability of writing/reading data to/from double-word devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

### ■1 Device setting dialog ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of V00000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

- ⇒ 12.4.50 ■3 Availability of writing/reading data to/from bit devices ([SIEMENS S7-200] or [SIEMENS S7-

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range		Specifications of EG devices*1		
		GT27, GT25, GT23, SoftGOT2000, and GS25	GT21 and GS21	Assignment to EG devices	Access using a client	
I	Input relay	Decimal + octal	I(Byte address)(Bit address) Notation example: I70		○	○ (Not usable as word data)
			• Byte address (decimal): 0 to 7 • Bit address (octal): 0 to 7	• Byte address (decimal): 00 to 31 • Bit address (octal): 0 to 7		
Q*2	Output relay	Decimal + octal	Q(Byte address)(Bit address) Notation example: Q70		○	○ (Not usable as word data)
			• Byte address (decimal): 0 to 7 • Bit address (octal): 0 to 7	• Byte address (decimal): 00 to 31 • Bit address (octal): 0 to 7		
M	Bit memory	Decimal + octal	M(Byte address)(Bit address) Notation example: M310 • Byte address (decimal): 00 to 31 • Bit address (octal): 0 to 7		○	○ (Not usable as word data)
S	Sequence control relay	Decimal + octal	S(Byte address)(Bit address) Notation example: S310 • Byte address (decimal): 00 to 31 • Bit address (octal): 0 to 7		○	○
T	Timer	Decimal	0 to 255		×	×
C	Counter	Decimal	0 to 255		×	×
SM	Special memory	Decimal + octal	SM(Byte address)(Bit address) Notation example: SM1940		○	○ (Not usable as word data)
			• Byte address (decimal): 000 to 194 • Bit address (octal): 0 to 7	• Byte address (decimal): 0000 to 2047 • Bit address (octal): 0 to 7		
V	Variable memory	Decimal + octal	V(Byte address)(Bit address) Notation example: V51190		○	○ (Not usable as word data)
			• Byte address (decimal): 0000 to 5119 • Bit address (octal): 0 to 7	• Byte address (decimal): 00000 to 20479 • Bit address (octal): 0 to 7		

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Writing is possible only while the programmable controller is running.

### ■3 Availability of writing/reading data to/from bit devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
I	R/W	-/-	-/-	-/-	-/-
Q	R/W	-/-	-/-	-/-	-/-
M	R/W	-/-	-/-	-/-	-/-
S	R/W	-/-	-/-	-/-	-/-
T	R/-	-/-	-/-	-/-	-/-
C	R/-	-/-	-/-	-/-	-/-

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
SM	R/W	-/-	-/-	-/-	-/-
V	R/W	-/-	-/-	-/-	-/-

#### ■ 4 Monitoring-supported word devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.50 ■ 5 Availability of writing/reading data to/from word devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range		Specifications of EG devices*1

C	Counter	Decimal	0 to 255		○	○ (Not usable as bit data)
VW <sup>*2</sup>	Variable memory	Decimal	0 to 5118	0 to 20478	○	○ (Not usable as bit data)
IW <sup>*2</sup>	Input relay	Decimal	0 to 6	0 to 30	○	○ (Not usable as bit data)
QW <sup>*2*</sup> <sub>3</sub>	Output relay	Decimal	0 to 6	0 to 30	○	○ (Not usable as bit data)
MW <sup>*2</sup>	Bit memory	Decimal	0 to 30		○	○ (Not usable as bit data)
AIW <sup>*2</sup>	Analog input	Decimal	0 to 30	0 to 110	×	×
AQW <sup>*</sup> <sub>2*3</sub>	Analog output	Decimal	0 to 30	0 to 110	○	○ (Not usable as bit data)
SMW <sup>*</sup> <sub>2</sub>	Special memory	Decimal	0 to 192	0 to 2046	○	○ (Not usable as bit data)
SW <sup>*2</sup>	Sequence control relay	Decimal	0 to 30		○	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 When the device type is the word (16 bits) type, set an even number for the device number.

When the device type is the double-word (32 bits) type, set the device number in multiples of 4.

\*3 Writing is possible only while the programmable controller is running.

## ■5 Availability of writing/reading data to/from word devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
T	R/W	-/-	-/-	-/-
C	R/W	-/-	-/-	-/-
VW	R/W	R/W	-/-	-/-
IW	R/W	R/W	-/-	-/-
QW	R/W	R/W	-/-	-/-
MW	R/W	R/W	-/-	-/-
AIW	R/-	R/-	-/-	-/-
AQW	R/W	R/W	-/-	-/-
SMW	R/W	R/W	-/-	-/-
SW	R/W	R/W	-/-	-/-

## ■6 Monitoring-supported double-word devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.50 ■7 Availability of writing/reading data to/from double-word devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range		Specifications of EG devices*1		
		GT27, GT25, GT23, SoftGOT2000, and GS25	GT21 and GS21	Assignment to EG devices	Access using a client	
HC	High-speed counter	Decimal	0 to 2	0 to 5	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■7 Availability of writing/reading data to/from double-word devices ([SIEMENS S7-200] or [SIEMENS S7-200(CN/SMART)])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
HC	-/-	R/-	-/-	-/-

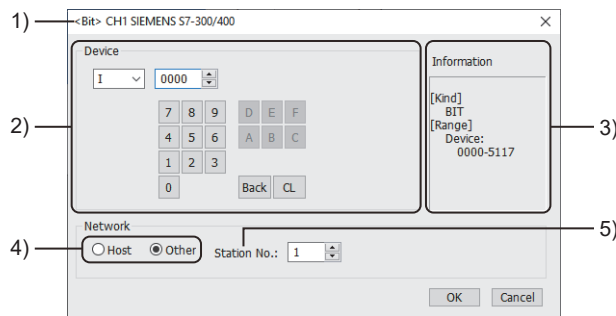

## 12.4.51 SIEMENS equipment ([SIEMENS S7-300/400])

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([SIEMENS S7-300/400])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([SIEMENS S7-300/400])
	→ ■3 Availability of reading data to/from bit devices ([SIEMENS S7-300/400])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([SIEMENS S7-300/400])
	→ ■5 Availability of writing/reading data to/from word devices ([SIEMENS S7-300/400])
Specifications of double-word devices	→ ■6 Monitoring-supported double-word devices ([SIEMENS S7-300/400])
	→ ■7 Availability of writing/reading data to/from double-word devices ([SIEMENS S7-300/400])
Notation of devices	→ ■8 Notation of devices ([SIEMENS S7-300/400])

### ■1 Device setting dialog ([SIEMENS S7-300/400])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of I0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller set for [Host Address] of the [Controller Setting] window is monitored.
- [Other]: The controller having the specified station number (MPI address) is monitored.

#### 5) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

## ■2 Monitoring-supported bit devices ([SIEMENS S7-300/400])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.51 ■3 Availability of reading data to/from bit devices ([SIEMENS S7-300/400])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

The notation of device setting is different between the SIEMENS PLC peripheral software and GOT.

For the notation of devices, refer to the following.

⇒12.4.51 ■8 Notation of devices ([SIEMENS S7-300/400])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
I	Input relay	Decimal + octal I(Byte address)(Bit address) Notation example: I5110 • Byte address (decimal): 000 to 511 • Bit address (octal): 0 to 7	○	○
Q	Output relay	Decimal + octal Q(Byte address)(Bit address) Notation example: Q5110 • Byte address (decimal): 000 to 511 • Bit address (octal): 0 to 7	○	○
M	Bit memory	Decimal + octal M(Byte address)(Bit address) Notation example: M20470 • Byte address (decimal): 0000 to 2047 • Bit address (octal): 0 to 7	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■3 Availability of reading data to/from bit devices ([SIEMENS S7-300/400])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

To use the device as word data, use the word device that has the same device name appended with "W".

Example) Use IW for I.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
I	R/W	-/-	-/-	-/-	-/-
Q	R/W	-/-	-/-	-/-	-/-
M	R/W	-/-	-/-	-/-	-/-

#### ■4 Monitoring-supported word devices ([SIEMENS S7-300/400])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.51 ■5 Availability of writing/reading data to/from word devices ([SIEMENS S7-300/400])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
DB*2*3	Data register	Decimal DB(Data block No.).DBW(Device) Notation example: DB4095.DBW0 • Data block No. (decimal): 1 to 4095 • Device (Data word No.) (decimal): 0 to 65534 (Set an even number.)	○	○
IW*4	Input relay	Decimal 0 to 510	○	○
QW*4	Output relay	Decimal 0 to 510	○	○
MW*4	Bit memory	Decimal 0 to 2046	○	○
T*5	Timer (current value)	Decimal 0 to 511	○	○
C	Counter (current value)	Decimal 0 to 511	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 It is necessary to define the data block using a peripheral software or sequence program, before using this device.

\*3 Continuous access across data blocks is not possible.

\*4 When the device type is the word (16 bits) type, set an even number for the device number.

When the device type is the double-word (32 bits) type, set the device number in multiples of 4.

\*5 Only one device can be set as the write destination.

Do not set this device as the write destination for a function to write data to consecutive devices such as the recipe function.

#### ■5 Availability of writing/reading data to/from word devices ([SIEMENS S7-300/400])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
DB	R/W	R/W	-/-	R/W
IW*1	R/W	R/W	-/-	-/-
QW*1	R/W	R/W	-/-	-/-
MW*1	R/W	R/W	-/-	-/-
T	R/W	R/W	-/-	-/-
C	R/W	R/W	-/-	-/-

\*1 To use the device as bit data, use the bit device that has the same device name without "W".

Example) Use I for IW.

## ■6 Monitoring-supported double-word devices ([SIEMENS S7-300/400])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.51 ■7 Availability of writing/reading data to/from double-word devices ([SIEMENS S7-300/400])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
DB <sup>*2*3</sup> Data register	Decimal	DB(Data block No.).DBD(Device) Notation example: DB4095.DBD0 • Data block No. (decimal): 1 to 4095 • Device (Data word No.) (decimal): 0 to 65532 (Set the number in multiples of 4.)	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 It is necessary to define the data block using a peripheral software or sequence program, before using this device.

\*3 Continuous access across data blocks is not possible.

## ■7 Availability of writing/reading data to/from double-word devices ([SIEMENS S7-300/400])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
DB	R/W	R/W	-/-	-/-

## ■8 Notation of devices ([SIEMENS S7-300/400])

The notation of device setting is different between the SIEMENS PLC peripheral software and GOT.

### (1) Notation of bit devices ([SIEMENS S7-300/400])

Notation in the GOT	Notation in the PLC
Q0007	Q0.7

### (2) Notation of bit-specified data register ([SIEMENS S7-300/400])

Notation in the GOT	Notation in the PLC
DB1.DBW0.b0	DB1.DBX1.0
DB1.DBW0.b1	DB1.DBX1.1
:	:
DB1.DBW0.b7	DB1.DBX1.7
DB1.DBW0.b8	DB1.DBX0.0
:	:
DB1.DBW0.b15	DB1.DBX0.7
DB1.DBW2.b0	DB1.DBX3.0
:	:
DB1.DBW2.b7	DB1.DBX3.7
DB1.DBW2.b8	DB1.DBX2.0
:	:
DB1.DBW2.b15	DB1.DBX2.7
:	:

### ■1 Device setting dialog ([SIEMENS OP(Ethernet)])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of I000000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller set for [Host Address] of the [Controller Setting] window is monitored.
- [Other]: The controller having the specified station number is monitored.

5) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

6) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

## ■2 Monitoring-supported bit devices ([SIEMENS OP(Ethernet)])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.53 ■3 Availability of writing/reading data to/from bit devices ([SIEMENS OP(Ethernet)])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

The notation of device setting is different between the SIEMENS PLC peripheral software and GOT.

For the notation of devices, refer to the following.

⇒12.4.51 ■8 Notation of devices ([SIEMENS S7-300/400])

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
I	Input relay	Decimal + octal I(Byte address)(Bit address) Notation example: I655350 • Byte address (decimal): 00000 to 65535 • Bit address (octal): 0 to 7	○	○ (Not usable as word data)
Q*2	Output relay	Decimal + octal Q(Byte address)(Bit address) Notation example: Q655350 • Byte address (decimal): 00000 to 65535 • Bit address (octal): 0 to 7	○	○ (Not usable as word data)
V	Variable memory	Decimal + octal V(Byte address)(Bit address) Notation example: V204790 • Byte address (decimal): 00000 to 20479 • Bit address (octal): 0 to 7	○	○ (Not usable as word data)
M	Bit memory	Decimal + octal M(Byte address)(Bit address) Notation example: M655350 • Byte address (decimal): 00000 to 65535 • Bit address (octal): 0 to 7	○	○ (Not usable as word data)
S	Sequence control relay	Decimal + octal S(Byte address)(Bit address) Notation example: S310 • Byte address (decimal): 00 to 31 • Bit address (octal): 0 to 7	○	○
T	Timer	Decimal 0 to 255	○	×
C	Counter	Decimal 0 to 255	○	×
SM	Special memory	Decimal + octal SM(Byte address)(Bit address) Notation example: SM20470 • Byte address (decimal): 0000 to 2047 • Bit address (octal): 0 to 7	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Writing is possible only while the programmable controller is running.

### ■3 Availability of writing/reading data to/from bit devices ([SIEMENS OP(Ethernet)])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
I <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-
Q <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-
V <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-
M <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-
S <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-
T	R/-	-/-	-/-	-/-	-/-
C	R/-	-/-	-/-	-/-	-/-
SM <sup>*1</sup>	R/W	-/-	-/-	-/-	-/-

\*1 To use the device as word data, use the word device that has the same device name appended with "W".

Example) Use IW for I.

### ■4 Monitoring-supported byte devices ([SIEMENS OP(Ethernet)])

The following table shows monitoring-supported byte devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.53 ■5 Availability of writing/reading data to/from byte devices ([SIEMENS OP(Ethernet)])

For the formats of devices, refer to the following.

⇒ 6.1.1 Formats of devices, labels, and tags

o: Available

x: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
IB	Input relay	Decimal	0 to 65535	x	x
QB	Output relay	Decimal	0 to 65535	x	x
MB	Bit memory	Decimal	0 to 65535	x	x

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■5 Availability of writing/reading data to/from byte devices ([SIEMENS OP(Ethernet)])

The following shows whether writing/reading data to/from byte devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of byte data
IB	R/W	-/-	-/-	-/-	-/-
QB	R/W	-/-	-/-	-/-	-/-
MB	R/W	-/-	-/-	-/-	-/-

## ■6 Monitoring-supported word devices ([SIEMENS OP(Ethernet)])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.53 ■7 Availability of writing/reading data to/from word devices ([SIEMENS OP(Ethernet)])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices *1	
			Assignment to EG devices	Access using a client
T*2	Timer	Decimal	0 to 65535	○ (Not usable as bit data)
C	Counter	Decimal	0 to 65535	○ (Not usable as bit data)
DB*3*4	Data register	Decimal	DB(Data block No.).DBW(Device) Notation example: DB65535.DBW0 • Data block No. (decimal): 1 to 65535 • Device (Data word No.) (decimal): 0 to 65534 (Set an even number.)	○
VW*5	Variable memory	Decimal	0 to 20478	○ (Not usable as bit data)
IW*5	Input relay	Decimal	0 to 65534	○ (Not usable as bit data)
QW*5*6	Output relay	Decimal	0 to 65534	○ (Not usable as bit data)
MW*5	Bit memory	Decimal	0 to 65534	○ (Not usable as bit data)
AIW*5	Analog input	Decimal	0 to 110	○ ×
AQW*5*6	Analog output	Decimal	0 to 110	○ (Not usable as bit data)
SMW*5	Special memory	Decimal	0 to 2046	○ (Not usable as bit data)
SW*5	Sequence control relay	Decimal	0 to 30	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Only one device can be set as the write destination.

Do not set this device as the write destination for a function to write data to consecutive devices such as the recipe function.

\*3 It is necessary to define the data block using a peripheral software or sequence program, before using this device.

\*4 Continuous access across data blocks is not possible.

\*5 When the device type is the word (16 bits) type, set an even number for the device number.

When the device type is the double-word (32 bits) type, set the device number in multiples of 4.

\*6 Writing is possible only while the programmable controller is running.

## ■7 Availability of writing/reading data to/from word devices ([SIEMENS OP(Ethernet)])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
T	R/W	R/W	-/-	-/-
C	R/W	R/W	-/-	-/-
DB	R/W	R/W	-/-	R/W
VW <sup>*1</sup>	R/W	R/W	-/-	-/-
IW <sup>*1</sup>	R/W	R/W	-/-	-/-
QW <sup>*1</sup>	R/W	R/W	-/-	-/-
MW <sup>*1</sup>	R/W	R/W	-/-	-/-
AIW	R/-	R/-	-/-	-/-
AQW	R/W	R/W	-/-	-/-
SMW <sup>*1</sup>	R/W	R/W	-/-	-/-
SW <sup>*1</sup>	R/W	R/W	-/-	-/-

\*1 To use the device as bit data, use the bit device that has the same device name without "W".

Example) Use I for IW.

## ■8 Monitoring-supported double-word devices ([SIEMENS OP(Ethernet)])

The following table shows monitoring-supported double-word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.53 ■9 Availability of writing/reading data to/from double-word devices ([SIEMENS OP(Ethernet)])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
				Assignment to EG devices	Access using a client
ID	Input relay	Decimal	0 to 65532 (Set the number in multiples of 4.)	×	×
QD	Output relay	Decimal	0 to 65532 (Set the number in multiples of 4.)	×	×
MD	Bit memory	Decimal	0 to 65532 (Set the number in multiples of 4.)	×	×
DB <sup>*2*3</sup>	Data register	Decimal	DB(Data block No.).DBD(Device) Notation example: DB4095.DBD0 • Data block No. (decimal): 1 to 4095 • Device (Data word No.) (decimal): 0 to 65532 (Set the number in multiples of 4.)	○	○
HC	High-speed counter	Decimal	0 to 3	×	×

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 It is necessary to define the data block using a peripheral software or sequence program, before using this device.

\*3 Continuous access across data blocks is not possible.

## ■9 Availability of writing/reading data to/from double-word devices ([SIEMENS OP(Ethernet)])

The following shows whether writing/reading data to/from double-word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of double-word data
ID	-/-	R/W	-/-	-/-
QD	-/-	R/W	-/-	-/-
MD	-/-	R/W	-/-	-/-
DB	R/W	R/W	-/-	-/-
HC	-/-	R/-	-/-	-/-

## ■10 Offset specifications ([SIEMENS OP(Ethernet)])

The following shows the offset specifications of each device when using the offset function.

For the notation and range of devices, refer to the following.

- 12.4.53 ■2 Monitoring-supported bit devices ([SIEMENS OP(Ethernet)])
- 12.4.53 ■4 Monitoring-supported byte devices ([SIEMENS OP(Ethernet)])
- 12.4.53 ■6 Monitoring-supported word devices ([SIEMENS OP(Ethernet)])
- 12.4.53 ■8 Monitoring-supported double-word devices ([SIEMENS OP(Ethernet)])

Device	Offset specifications		
	GT27, GT25, GT23, SoftGOT2000, and GS25	GT21 and GS21	
Bit device	I	When the bit address is increased by 8 bits, the byte address is increased by 1 byte. Example) Offset for I000000 When offset value is 10, I000012 is monitored.	
	Q		
	V		
	M		
	S		
	SM		
	T		
Byte device	IB	Example) Offset for IB0 When offset value is 10, IB10 is monitored.	
	QB		
	MB		
Word device	T	Example) Offset for T0 When offset value is 10, T10 is monitored.	
	C		
	DB	The offset target is device number (data word number). When a bit is specified, the bit is not supported for the bit number offset.	The offset value is changed and the value is specified for offset according to the data type. Example) Offset for DB1.DBW0 When offset value is 10, DB1.DBW20 is monitored.
	VW	The offset value is specified as offset regardless of the data type. Example) Offset for VW0 When offset value is 10, VW10 is monitored.	The offset value is changed and the value is specified for offset according to the data type. Example) Offset for VW0 When offset value is 10, VW20 are monitored.
	IW		
	QW		
	MW		
	AIW		
	AQW		
	SMW		
SW			

Device		Offset specifications	
		GT27, GT25, GT23, SoftGOT2000, and GS25	GT21 and GS21
Double-word device	ID	The offset value is specified as offset regardless of the data type. Example) Offset for ID0	The offset value is changed and the value is specified for offset according to the data type. Example) Offset for ID0
	QD		
	MD	When offset value is 10, DB1.DBW10 is monitored.	When offset value is 10, ID40 is monitored.
		The offset target is device number (data word number).	
	DB	The offset value is specified as offset regardless of the data type. Example) Offset for DB1.DBD0 When offset value is 10, DB1.DBD10 is monitored.	The offset value is changed and the value is specified for offset according to the data type. Example) Offset for DB1.DBD0 When offset value is 10, DB1.DBD20 is monitored.
	HC	Example) Offset for HC0 When offset value is 1, HC1 is monitored.	

## 12.4.54 CLPA ([CC-Link IE Field Network Basic])

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([CC-Link IE Field Network Basic])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([CC-Link IE Field Network Basic])
	→ ■3 Availability of writing/reading data to/from bit devices ([CC-Link IE Field Network Basic])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([CC-Link IE Field Network Basic])
	→ ■5 Availability of writing/reading data to/from word devices ([CC-Link IE Field Network Basic])
Remote device setting of the GOT (remote station)	→ ■6 Remote device setting of the GOT (remote station) ([CC-Link IE Field Network Basic])

### ■1 Device setting dialog ([CC-Link IE Field Network Basic])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of RX000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([CC-Link IE Field Network Basic])

The following table shows monitoring-supported bit devices.

The device range shown in this section indicates the maximum settable values in GT Designer3.

The range of devices that can actually be monitored depends on the number of stations occupied by remote stations that are set in the master station.

Before setting the device range, check the number of occupied stations that are assigned to the GOT.

If a non-existent device or a device number out of the range is set for an object, other objects for which correct devices are set may not be monitored.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.54 ■3 Availability of writing/reading data to/from bit devices ([CC-Link IE Field Network Basic])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
RX	Remote input	Hexadecimal	000 to 3FF	○	○
RY	Remote output	Hexadecimal	000 to 3FF	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from bit devices ([CC-Link IE Field Network Basic])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
RX	R/W	-/-	R/W	R/W	-/-
RY	R/W	-/-	R/W	R/W	-/-

### ■4 Monitoring-supported word devices ([CC-Link IE Field Network Basic])

The following table shows monitoring-supported word devices.

The device range shown in this section indicates the maximum settable values in GT Designer3.

The range of devices that can actually be monitored depends on the number of stations occupied by remote stations that are set in the master station.

Before setting the device range, check the number of occupied stations that are assigned to the GOT.

If a non-existent device or a device number out of the range is set for an object, other objects for which correct devices are set may not be monitored.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.54 ■5 Availability of writing/reading data to/from word devices ([CC-Link IE Field Network Basic])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
Ww	Remote register	Hexadecimal	000 to 1FF	○	○
Wr	Remote register	Hexadecimal	000 to 1FF	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

## ■5 Availability of writing/reading data to/from word devices ([CC-Link IE Field Network Basic])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
Ww	R/W	R/W	-/-	R/W
Wr	R/W	R/W	-/-	R/W

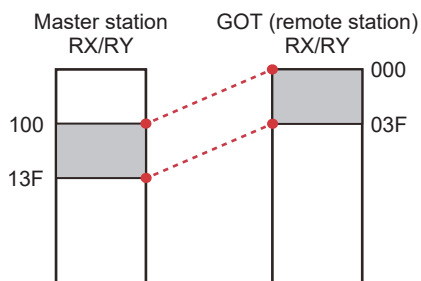

## ■6 Remote device setting of the GOT (remote station) ([CC-Link IE Field Network Basic])

The devices assigned to the GOT in the master station are allocated in the range starting from the first number in the GOT.

The following shows the examples of device assignment in the master station and in the GOT (remote station).

In the example of remote device assignment (RX/RX 1 station occupied), the remote devices assigned to the GOT (remote station) are RX100 to RX13F and RY100 to RY13F in the master station. Note that the corresponding remote devices in the GOT are RX000 to RX03F and RY000 to RY03F.

Example of remote device assignment  
RX/RX 1 station occupied

Example of remote device assignment  
Ww/Wr 1 station occupied

Example of remote device assignment  
RX/RX 2 station occupied

Example of remote device assignment  
Ww/Wr 2 station occupied

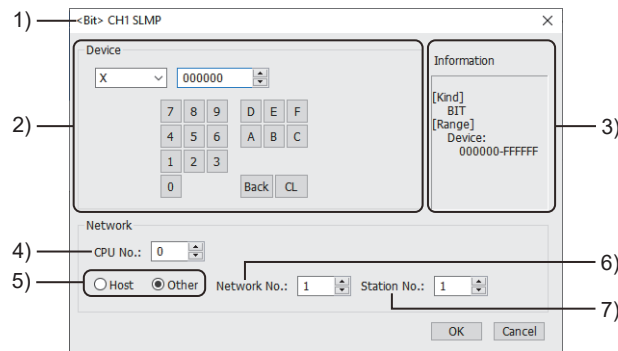

## 12.4.55 CLPA ([SLMP])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	➡ 1 Device setting dialog ([SLMP])
Specifications of bit devices	➡ 2 Monitoring-supported bit devices ([SLMP])
	➡ 3 Availability of writing/reading data to/from bit devices ([SLMP])
Specifications of word devices	➡ 4 Monitoring-supported word devices ([SLMP])
	➡ 5 Availability of writing/reading data to/from word devices ([SLMP])

### 1 Device setting dialog ([SLMP])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of X000000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

#### 4) [CPU No.]

Set the CPU number of the controller.

#### 5) Station type specification

Select the station type (host or other) for the controller to be monitored.

- [Host]: The controller to be monitored is the host station.
- [Other]: The controller to be monitored is not the host station.

#### 6) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

#### 7) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

## ■2 Monitoring-supported bit devices ([SLMP])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.55 ■3 Availability of writing/reading data to/from bit devices ([SLMP])

For the formats of devices, refer to the following.

→6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1

### ■4 Monitoring-supported word devices ([SLMP])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒ 12.4.55 ■5 Availability of writing/reading data to/from word devices ([SLMP])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name		Device No. representation	Setting range	Specifications of EG devices*1	
				Assignment to EG devices	Access using a client
TN	Timer (current value)	Decimal	0 to 16777215	○	○ (Not usable as bit data)
CN	Counter (current value)	Decimal	0 to 16777215	○	○ (Not usable as bit data)
STN	Retentive timer (current value)	Decimal	0 to 16777215	○	○ (Not usable as bit data)
D	Data register	Decimal	0 to 16777215	○	○
SD	Special register	Decimal	0 to 16777215	○	○
W	Link register	Hexadecimal	000000 to FFFFFFFF	○	○
SW	Link special register	Hexadecimal	000000 to FFFFFFFF	○	○
R	File register (Block switching method)	Decimal	0 to 16777215	○	○
ZR	File register (Serial number access method)	Hexadecimal	000000 to FFFFFFFF	○	○
Z	Index register	Decimal	0 to 16777215	○	○
G*2	Module access device (buffer memory)	Decimal	U(Unit No.)-G(Device) Notation example: UFF-G0 • Unit No.(hexadecimal): 00 to FF • Device (decimal): 0 to 16777215	○	○
U3E0G*2	CPU buffer memory	Decimal	U3E0-G(Device) Notation example: U3E0-G0 • Device (decimal): 0 to 16777215	○	○
U3E1G*2	CPU buffer memory	Decimal	U3E1-G(Device) Notation example: U3E1-G0 • Device (decimal): 0 to 16777215	○	○
U3E2G*2	CPU buffer memory	Decimal	U3E2-G(Device) Notation example: U3E2-G0 • Device (decimal): 0 to 16777215	○	○
U3E3G*2	CPU buffer memory	Decimal	U3E3-G (Device) Notation example: U3E3-G0 • Device (decimal): 0 to 16777215	○	○
U3E0HG*2	Fixed-cycle area of the CPU buffer memory (multiple CPU high speed transmission memory)	Decimal	U3E0-HG(Device) Notation example: U3E0-HG0 • Device (decimal): 0 to 16777215	○	○
U3E1HG*2	Fixed-cycle area of the CPU buffer memory (multiple CPU high speed transmission memory)	Decimal	U3E1-HG(Device) Notation example: U3E1-HG0 • Device (decimal): 0 to 16777215	○	○
U3E2HG*2	Fixed-cycle area of the CPU buffer memory (multiple CPU high speed transmission memory)	Decimal	U3E2-HG(Device) Notation example: U3E2-HG0 • Device (decimal): 0 to 16777215	○	○
U3E3HG*2	Fixed-cycle area of the CPU buffer memory (multiple CPU high speed transmission memory)	Decimal	U3E3-HG(Device) Notation example: U3E3-HG0 • Device (decimal): 0 to 16777215	○	○
JnW*2	Link register (link direct device)	Hexadecimal	J(Network No.)-W(Device) Notation example: J1-W000000 • Network No. (decimal): 1 to 239 • Device (hexadecimal): 000000 to FFFFFFFF	○	○

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>		
			Assignment to EG devices	Access using a client	
JnSW <sup>*2</sup>	Link special register (link direct device)	Hexadecimal	J(Network No.)-SW(Device) Notation example: J1-SW000000 • Network No. (decimal): 1 to 239 • Device (hexadecimal): 000000 to FFFFFF	○	○
RD <sup>*2</sup>	Refresh data register	Decimal	0 to 4294967295	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 Not available to GT21 and GS21.

## ■ 5 Availability of writing/reading data to/from word devices ([SLMP])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
TN	R/W	R/W	-/-	-/-
CN	R/W	R/W	-/-	-/-
STN	R/W	R/W	-/-	-/-

\*1 When bit specification of word device is performed, the GOT reads the value from a device and then write a value to the device.

Do not change the device value with a sequence program until the GOT completes writing a value to the device.

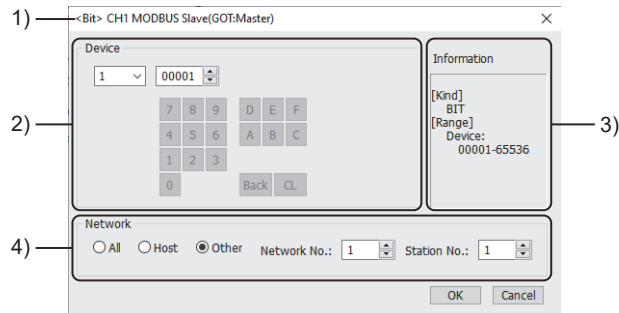

## 12.4.56 MODBUS ([MODBUS Slave(GOT:Master)])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	➔ ■1 Device setting dialog ([MODBUS Slave(GOT:Master)])
Specifications of bit devices	➔ ■2 Monitoring-supported bit devices ([MODBUS Slave(GOT:Master)])
	➔ ■3 Availability of writing/reading data to/from bit devices ([MODBUS Slave(GOT:Master)])
Specifications of word devices	➔ ■4 Monitoring-supported word devices ([MODBUS Slave(GOT:Master)])
	➔ ■5 Availability of writing/reading data to/from word devices ([MODBUS Slave(GOT:Master)])
Notation of devices	➔ ■6 Notation of devices ([MODBUS Slave(GOT:Master)])
Function code	➔ ■7 Function code ([MODBUS Slave(GOT:Master)])

### ■1 Device setting dialog ([MODBUS Slave(GOT:Master)])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of 100001

#### 3) [Information]

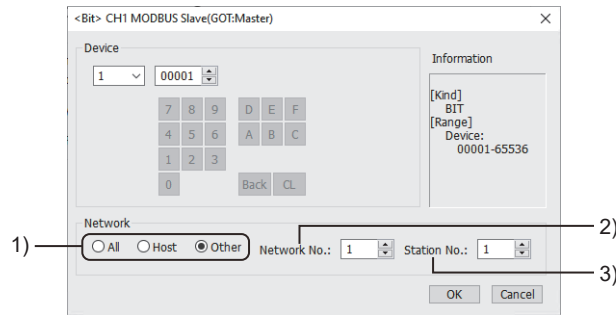

Displays the setting range of each setting item according to the selected device.

#### 4) [Network Setting]

The setting depends on the connection type.

- ➔ (1) Network setting for the MODBUS/RTU connection ([MODBUS Slave(GOT:Master)])
- (3) Network setting for the MODBUS/TCP connection ([MODBUS Slave(GOT:Master)])

## (1) Network setting for the MODBUS/RTU connection ([MODBUS Slave(GOT:Master)])

### 1) Monitor target specification

Set the monitoring target of the set device.

Item	Description
[All]	Select this item when writing data to all the connected controllers. During monitoring, the controller set for [Host Address] of the [Controller Setting] window is monitored. When data is input from a numerical input object, the data is written to all the connected controllers. When no data is input, the controller set for [Host Address] is monitored.
[Host]	Select this item when monitoring the controller set as the host station.
[Other]	Select this item when monitoring the controller that has the specified station number.

### 2) [Network No.]

This item appears when [Other] is selected for the station type.  
For the MODBUS/RTU connection, set 1.

### 3) [Station No.]

This item appears when [Other] is selected for the station type.  
Specify a station number.  
The setting range is [1] to [247] (direct) or [248] to [254] (indirect).  
For indirect specification of a station number, refer to the following.

→ (2) Indirect specification of a station number for the MODBUS/RTU master connection ([MODBUS Slave(GOT:Master)])

## (2) Indirect specification of a station number for the MODBUS/RTU master connection ([MODBUS Slave(GOT:Master)])

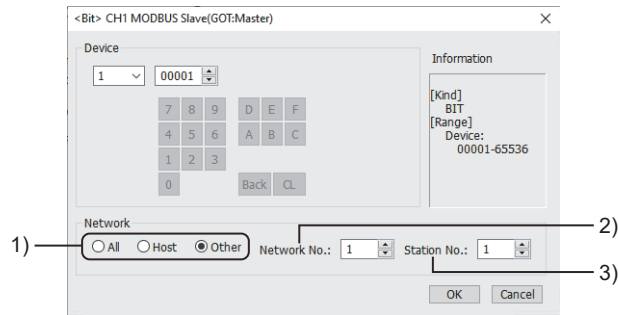

When you specify any of 248 to 254 for the station number, the value of the corresponding GOT data register (GD10 to GD16) is used as the station number.

The following shows the correspondence between station number setting values and GOT data registers (GD).

Station No.	GOT data register (GD)	Setting range
248	GD10	[0] to [255] Setting a value outside the above range causes a device range error. When "0" is set, "All station specification (broadcast)" is specified. When "255" is set, the host station is specified.
249	GD11	
:	:	
253	GD15	
254	GD16	

### (3) Network setting for the MODBUS/TCP connection ([MODBUS Slave(GOT:Master)])

#### 1) Monitor target specification

Set the monitoring target of the set device.

Item	Description
[All]	Not available to the MODBUS/TCP connection.
[Host]	Select this item when monitoring the controller set as the host station.
[Other]	Select this item when monitoring the controller that has the specified station number.

#### 2) [Network No.]

This item appears when [Other] is selected for the station type.

Specify a network number.

The setting range is [1] to [239].

#### 3) [Station No.]

This item appears when [Other] is selected for the station type.

Specify a station number.

The setting range is [1] to [247].

## ■2 Monitoring-supported bit devices ([MODBUS Slave(GOT:Master)])

The following table shows monitoring-supported bit devices.

The device range of MODBUS equipment varies by model.

When a model whose device range is not a specified using a multiple of 16 is used, monitoring to the maximum within the range may not be possible.

In this case, the device range is up to the number divisible by 16.

Example) For a model whose coil device range is from 0 to 9999

The range that can be actually monitored is from 0 to 9984.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.56 ■3 Availability of writing/reading data to/from bit devices ([MODBUS Slave(GOT:Master)])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
1	Input relay	Decimal 00001 to 65536	○	○ (Not usable as word data)
0	Coils	Decimal 00001 to 65536	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from bit devices ([MODBUS Slave(GOT:Master)])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
1	R/-	-/-	-/-	-/-	-/-
0	R/W	-/-	-/-	-/-	-/-

### ■4 Monitoring-supported word devices ([MODBUS Slave(GOT:Master)])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

⇒12.4.56 ■5 Availability of writing/reading data to/from word devices ([MODBUS Slave(GOT:Master)])

For the formats of devices, refer to the following.

⇒6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
4	Holding register	Decimal	00001 to 65536	○ (Not usable as bit data)
3	Input register	Decimal	00001 to 65536	○ (Not usable as bit data)
6	Extension file register	Decimal	(File No.)-6(Device) Notation example: 418-600000 • File No. (decimal): 0 to 418 • Device (decimal): 00000 to 09999	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■5 Availability of writing/reading data to/from word devices ([MODBUS Slave(GOT:Master)])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
4	R/W	R/W	-/-	R/W
3	R/-	R/-	-/-	R/-
6	R/W	R/W	-/-	R/W

## ■6 Notation of devices ([MODBUS Slave(GOT:Master)])

The notation of addresses and that of devices differ between the MODBUS/RTU communication protocol and GT Designer3.

Set the devices using the notation used in GT Designer3.

Notation in the communication protocol		Notation in the GOT	
Device name	Address (hexadecimal)	Device name	Device No. (decimal)
Coils	0000 to FFFF	0	00001 to 65536
Input relay	0000 to FFFF	1	00001 to 65536
Input register	0000 to FFFF	3	00001 to 65536
Holding register	0000 to FFFF	4	00001 to 65536
Extension file register	0000 to 270F	6	00000 to 09999

Example) Monitoring the holding register 1234 (hexadecimal)

Set 404661 in GT Designer3.

## ■7 Function code ([MODBUS Slave(GOT:Master)])

The GOT supports the following function codes.

Function code	Function	Number of devices that are accessible with one message [Unit: point(s)]	
		MODBUS/RTU	MODBUS/TCP
0x01	Read Coils	1 to 2000	1 to 1000
0x02	Read Discrete Inputs	1 to 2000	1 to 1000
0x03	Read Holding Registers	1 to 125	1 to 125
0x04	Read Input Registers	1 to 125	1 to 125
0x05	Write Single Coil	1	1
0x06	Write Single Register	1	1
0x0F	Write Multiple Coils	1 to 1968	1 to 800
0x10	Write Multiple Register	1 to 123	1 to 123
0x14	Read File Record	1 to 124	1 to 124
0x15	Write File Record	1 to 122	1 to 122

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

⇒10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■5 Availability of writing/reading data to/from word devices ([MODBUS Master(GOT:Slave)])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
4	R/W	R/W	-/-	R/W
3	R/W	R/W	-/-	R/W

## ■ 6 Function code ([MODBUS Master(GOT:Slave)])

The GOT supports the following function codes.

Function code	Function	Number of devices that are accessible with one message [Unit: point(s)]	
		MODBUS/RTU	MODBUS/TCP
0x01	Read Coils	1 to 2000	1 to 2000
0x02	Read Discrete Inputs	1 to 2000	1 to 2000
0x03	Read Holding Registers	1 to 125	1 to 125
0x04	Read Input Registers	1 to 125	1 to 125
0x05	Write Single Coil	1	1
0x06	Write Single Register	1	1
0x08*1	Diagnostics	-	-
0x0F	Write Multiple Coils	1 to 1968	1 to 1968
0x10	Write Multiple Register	1 to 123	1 to 123

\*1 Only available to the loopback (sub function code 0x0000).

### ■3 Availability of writing/reading data to/from word devices ([DeviceNet])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
I	R/W	R/W	-/-	R/W
O	R/-	R/-	-/-	R/-

## 12.4.59 OPC ([OPC UA])

GT27 GT25 GT23 GT21 **SoftGOT2000** GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([OPC UA])
Device specifications	→ ■2 Monitoring-supported devices ([OPC UA])

### ■1 Device setting dialog ([OPC UA])

Set a device to be monitored.

In the device setting dialog, only GOT internal devices are settable.

For information on setting OPC UA tags, refer to the following.

→ 6.1.10 How to set OPC UA tags

1) Title

Data type and channel number of the device to be set

2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported devices ([OPC UA])

To monitor an OPC UA server, use OPC UA tags.

For the usable OPC UA tags, refer to the following.

→ 6.1.10 ■1 Usable OPC UA tags

## 12.4.60 PROFIBUS ([PROFIBUS DP])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

Item	Reference
Device setting dialog	→ ■1 Device setting dialog ([PROFIBUS DP])
Specifications of bit devices	→ ■2 Monitoring-supported bit devices ([PROFIBUS DP])
	→ ■3 Availability of writing/reading data to/from bit devices ([PROFIBUS DP])
Specifications of word devices	→ ■4 Monitoring-supported word devices ([PROFIBUS DP])
	→ ■5 Availability of writing/reading data to/from word devices ([PROFIBUS DP])

### ■1 Device setting dialog ([PROFIBUS DP])

Set a device to be monitored.

#### 1) Title

Data type and channel number of the device to be set

#### 2) [Device]

Set the device name and device number.

If a bit number needs to be specified, the setting item is displayed.

Example) Setting of PI0000

#### 3) [Information]

Displays the setting range of each setting item according to the selected device.

### ■2 Monitoring-supported bit devices ([PROFIBUS DP])

The following table shows monitoring-supported bit devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.60 ■3 Availability of writing/reading data to/from bit devices ([PROFIBUS DP])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices <sup>*1</sup>	
			Assignment to EG devices	Access using a client
PI	Input relay	PI(Byte address)(Bit address) Notation example: PI2430 • Byte address (decimal): 000 to 243 • Bit address (octal): 0 to 7	○	○ (Not usable as word data)

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
PQ	Output relay	Decimal + octal PQ(Byte address)(Bit address) Notation example: PQ2430 • Byte address (decimal): 000 to 243 • Bit address (octal): 0 to 7	○	○ (Not usable as word data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■3 Availability of writing/reading data to/from bit devices ([PROFIBUS DP])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

To use the device as word data, use the word device that has the same device name appended with "W".

Example) Use PIW for PI.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
PI	R/W	-/-	-/-	-/-	-/-
PQ	R/-	-/-	-/-	-/-	-/-

### ■4 Monitoring-supported word devices ([PROFIBUS DP])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→12.4.60 ■5 Availability of writing/reading data to/from word devices ([PROFIBUS DP])

For the formats of devices, refer to the following.

→6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1	
			Assignment to EG devices	Access using a client
PIW*2	Input relay	Decimal 0 to 242	○	○ (Not usable as bit data)
PQW*2	Output relay	Decimal 0 to 242	○	○ (Not usable as bit data)

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→10.13 Monitoring a Controller through a GOT (Server/Client Function)

\*2 When the device type is the word (16 bits) type, set an even number for the device number.

When the device type is the double-word (32 bits) type, set the device number in multiples of 4.

## ■5 Availability of writing/reading data to/from word devices ([PROFIBUS DP])

The following shows whether writing/reading data to/from word devices is available by device type. To use the device as bit data, use the bit device that has the same device name without "W".

Example) Use PI for PIW.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
PIW	R/W	R/W	-/-	-/-
PQW	R/-	R/-	-/-	-/-

## 12.4.61 Microcomputer ([Computer])

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

### ■3 Availability of writing/reading data to/from bit devices ([Computer])

The following shows whether writing/reading data to/from bit devices is available by device type.

When the device type is other than the bit type, set the device No. in multiples of 16.

R/W: Both read and write

R/-: Read only

-/W: Write only

-/-: No read/write access

Device name	Device type				
	Bit	Byte (8 bits)	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)
M	R/W	-/-	R/W	R/W	-/-
L	R/W	-/-	R/W	R/W	-/-
SM	R/W	-/-	R/W	R/W	-/-

### ■4 Monitoring-supported word devices ([Computer])

The following table shows monitoring-supported word devices.

To check whether writing/reading data to/from each device is available, refer to the following.

→ 12.4.61 ■5 Availability of writing/reading data to/from word devices ([Computer])

For the formats of devices, refer to the following.

→ 6.1.1 Formats of devices, labels, and tags

○: Available

×: Not available

Device name	Device No. representation	Setting range	Specifications of EG devices*1		
			Assignment to EG devices	Access using a client	
D	Data register	Decimal	0 to 4095	○	○
SD	Special register	Decimal	0 to 15	○	○
R	File register	Decimal	0 to 4095	○	○

\*1 For the devices assigned to EG devices (gateway devices) and the compatible clients, refer to the following.

→ 10.13 Monitoring a Controller through a GOT (Server/Client Function)

### ■5 Availability of writing/reading data to/from word devices ([Computer])

The following shows whether writing/reading data to/from word devices is available by device type.

R/W: Both read and write

R/-: Read only

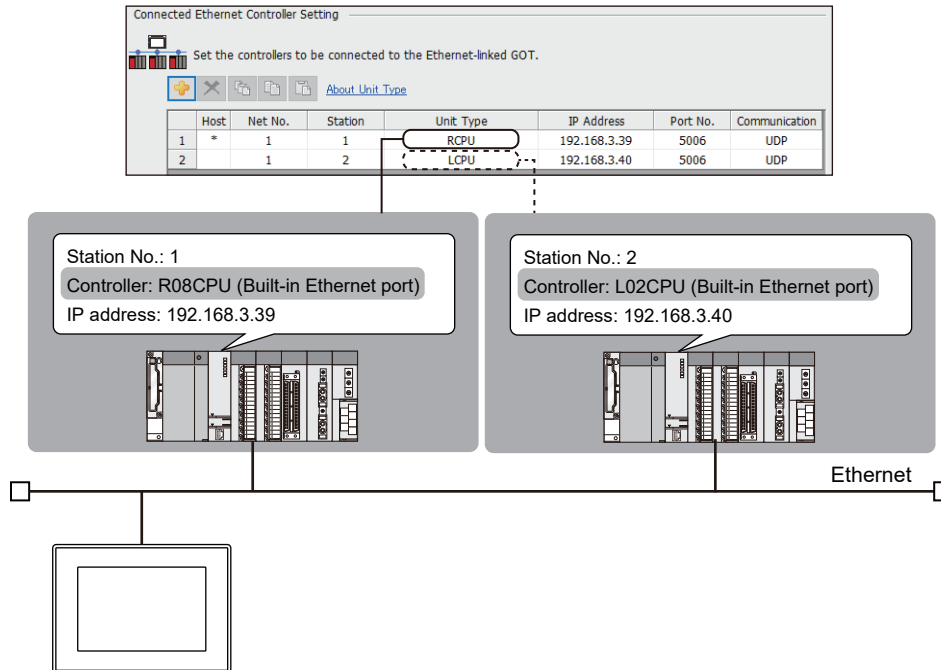

-/W: Write only

-/-: No read/write access

Device name	Device type			
	Word (16 bits)	Double-word (32 bits)	Quad-word (64 bits)	Bit of word data
D	R/W	R/W	-/-	R/W
SD	R/W	R/W	-/-	R/W
R	R/W	R/W	-/-	R/W

## 12.5 [Unit Type] in [Connected Ethernet Controller Setting]

In the [Controller Setting] window, if you select an Ethernet interface, [Connected Ethernet Controller Setting] appears. Register the controller to be connected to the GOT by Ethernet. Set [Unit Type] according to the connected controller or communication module.

The selectable items for [Unit Type] vary according to the selection for [Controller Type]. For the selectable items for each controller type, refer to the following.

⇒ 12.5.1 Selectable items for [Unit Type]

For the correspondence between the selectable items for [Unit Type] and the controllers or communication modules, refer to the following.

⇒ 12.5.2 Correspondence between the selection for [Unit Type] and the equipment used

### 12.5.1 Selectable items for [Unit Type]

The selectable items for [Unit Type] in [Connected Ethernet Controller Setting] vary according to the selection for [Controller Type].

- ⇒ ■1 Selectable items for connection to Mitsubishi Electric equipment
- ⇒ ■2 Selectable items for connection to non-Mitsubishi Electric equipment

## 1 Selectable items for connection to Mitsubishi Electric equipment

The following shows the selectable items when [MITSUBISHI ELECTRIC] is selected for [manufacturer].

[Controller Type] (When [Ethernet: Multi] is set to [I/F])	[Unit Type] in [Connected Ethernet Controller Setting]
[MELSEC iQ-R, RnMT/NC/RT, CR800-D] <sup>*1</sup>	[RCPU] [RnCCPU/RnWCPU] [RnNCCPU] <sup>*1</sup> [LHCPU] [FX5CPU] [QnUD(P)/QnUDE(H)] [Q17nNC] <sup>*1</sup> [QnD(H)CCPU] [RJ71GN11-T2/RD78G(H)] [RJ71EN71]
[MELSEC iQ-R, RnMT/RT, CR800-D] <sup>*2*3</sup>	[FX5-CCLGN-MS/FX5-nSSC-G] [FX5-ENET] [QJ71E71/LJ71E71] [LCPU] [NZ2GF-ETB] [AJ71QE71] <sup>*1</sup> [AJ71E71] <sup>*1</sup> [CR800] [CRnD-700] [Q17nDSR]
[MELSEC iQ-L]	[RCPU] [RnCCPU/RnWCPU]
[MELSEC iQ-F]	[RnNCCPU] <sup>*1</sup>
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700] <sup>*1</sup>	[LHCPU] [FX5CPU]
[MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700] <sup>*2*3</sup>	[QnUD(P)/QnUDE(H)]
[MELSEC-QnA, MELDAS C6] <sup>*1</sup>	[Q17nNC] <sup>*1</sup> [QnD(H)CCPU]
[MELSEC-L]	[RJ71GN11-T2/RD78G(H)] [RJ71EN71]
[MELSEC-A] <sup>*1</sup>	[FX5-CCLGN-MS/FX5-nSSC-G] [FX5-ENET] [QJ71E71/LJ71E71] [LCPU] [NZ2GF-ETB] [AJ71QE71] <sup>*1</sup> [AJ71E71] <sup>*1</sup> [CR800] [CRnD-700] [Q17nDSR]
[MELSEC-FX]	[FX]
[MELIPC]	[MELIPC] [RCPU] [RnCCPU/RnWCPU] [RnNCCPU] <sup>*1</sup> [LHCPU] [FX5CPU] [QnUD(P)/QnUDE(H)] [Q17nNC] <sup>*1</sup> [QnD(H)CCPU] [RJ71GN11-T2/RD78G(H)] [RJ71EN71] [FX5-CCLGN-MS/FX5-nSSC-G] [FX5-ENET] [QJ71E71/LJ71E71] [LCPU] [NZ2GF-ETB] [AJ71QE71] <sup>*1</sup> [AJ71E71] <sup>*1</sup> [CR800] [CRnD-700] [Q17nDSR]

[Controller Type] (When [Ethernet: Multi] is set to [I/F])	[Unit Type] in [Connected Ethernet Controller Setting]
[MELSERVO-JE-*C] <sup>*2</sup>	[MR-JE-C]
[MELSERVO-J5(W)-*G(-RJ), -JET-*G]	[MR-J5(D)-G/MR-JET-G]
[FREQROL 800] <sup>*2</sup>	[FREQROL]
[FREQROL 800/E700NE(Batch monitor)]	

\*1 Not available to GT21 and GS21.

\*2 Not available to GT SoftGOT2000.

\*3 Not available to GT27, GT25, GT23, and GS25.

## ■2 Selectable items for connection to non-Mitsubishi Electric equipment

The following shows the selectable items when any option other than [MITSUBISHI ELECTRIC] is selected for [manufacturer].

[Controller Type] (When [Ethernet: Multi] is set to [I/F])	[Unit Type] in [Connected Ethernet Controller Setting]
[OMRON SYSMAC]	[OMRON]
[OMRON NJ/NX]	[OMRON NJ/NX] [CJ1W-EIP21]
[KEYENCE KV-700/1000/3000/5000/7000/8000]	[KEYENCE]
[TOSHIBA Unified Controller nv] <sup>*1</sup>	[TOSHIBA]
[HITACHI IES EHV] <sup>*1*2</sup>	[HITACHI IES]
[HITACHI S10VE]	[HITACHI]
[FUJI MICREX-SX SPH] <sup>*2</sup>	[FUJI]
[YASKAWA MP2000/MP900/CP9200SH]	[YASKAWA]
[YASKAWA MP3000]	
[YASKAWA Robot Controller]	[YASKAWA(YRC1000)]
[YOKOGAWA STARDOM/FA500/FA-M3] <sup>*1</sup>	[YOKOGAWA]
[AB MicroLogix] <sup>*1*2</sup>	[AB(MicroLogix)]
[AB Control/CompactLogix] <sup>*2</sup>	[AB]
[AB Control/CompactLogix(Tag)] <sup>*1</sup>	[AB(Tag)]
[LS Industrial Systems XGK]	[XGK-CPU] [XGL-EFMT(B)]
[SIEMENS S7(Ethernet)] <sup>*1</sup>	[SIEMENS S7]
[SIEMENS OP(Ethernet)]	[S7-200 OP] [S7-200 SMART OP] [S7-300/400 OP] [S7-1200 OP] [S7-1500 OP]
[SLMP]	[SLMP]
[MODBUS Slave(GOT:Master)]	[MODBUS/TCP] [MODBUS/TCP(unit ID fixed)]

\*1 Not available to GT21 and GS21.

\*2 Not available to GT SoftGOT2000.

## 12.5.2 Correspondence between the selection for [Unit Type] and the equipment used

Set [Unit Type] according to the connected controller or communication module

- ➔ ■1 When connecting a Mitsubishi Electric equipment
- 2 When connecting a non-Mitsubishi Electric equipment

### ■1 When connecting a Mitsubishi Electric equipment

	SIMATIC S7-1500	[S7-1500 OP]	
SLMP-compatible equipment		[SLMP]	
MODBUS equipment		To connect a controller under the following conditions, select [MODBUS/TCP]. • The unit ID is fixed to 255 (for connecting with the GOT as the host station). • The unit ID is not fixed.  To connect a controller of another station, whose unit ID is fixed to 255, with the GOT, select [MODBUS/TCP(unit ID fixed)].	

## 12.6 ASCII Code List

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

The following shows of the list of ASCII Codes. (The blanks represent control code.)  
 0xA1 to 0xDF can be displayed only when the GOT's system language is Japanese.

	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
0			(SP)	0	@	P	`	p				ー	タ	ミ		
1			!	1	A	Q	a	q			。	ア	チ	ム		
2			"	2	B	R	b	r			「	イ	ツ	メ		
3			#	3	C	S	c	s			」	ウ	テ	モ		
4			\$	4	D	T	d	t			、	エ	ト	ヤ		
5			%	5	E	U	e	u			・	オ	ナ	ユ		
6			&	6	F	V	f	v			ヲ	カ	ニ	ヨ		
7			'	7	G	W	g	w			ア	キ	ヌ	ラ		
8			(	8	H	X	h	x			イ	ク	ネ	リ		
9			)	9	I	Y	i	y			ウ	ケ	ノ	ル		
A			*	:	J	Z	j	z			エ	コ	ハ	レ		
B			+	:	K	[	k	{			オ	サ	ヒ	ロ		
C			,	<	L	\	l	!			ヤ	シ	フ	ワ		
D			-	=	M	]	m	}			ユ	ス	ヘ	ン		
E			.	>	N	^	n	~			ヨ	セ	ホ	*		
F			/	?	O	_	o				ッ	ソ	マ	°		

## 12.7 Restrictions for Folder Names and File Names used in GOT

### ■1 Characters which can be used in folder names and file names

- One-byte alphanumeric characters
- Symbols other than the followings  
"\*/:<>?\\|"  
(A one-byte space cannot be used.)

### ■2 Character strings which cannot be used in folder names and file names

Folder names and file names containing only the following character strings (case-insensitive) cannot be used. However, the character strings are usable as part of folder names and file names.

- COM1 to COM9
- LPT1 to LPT9
- AUX
- CON
- NUL
- PRN
- CLOCK\$

The use of the following folder and file names is prohibited.

- Folder names starting with G2 (Except for file operation functions of script function used as arguments)
- Folder and file names starting with . (period) or \
- Folder and file names ending with . (period) or \
- Folder and file named as only . (one period) or .. (two periods)

### ■3 Number of characters for folder names and file names

GOTs recognize the location of a file with the following path.

Set a folder name and file name so that the total number of characters used for the path is 78 or less.

Only the folder name and file name in the path can be set by the user.

(Other part of the path is automatically specified.)

Example) File path stored by GT27 in the data storage (for CSV files)

When setting the folder name, enter \ between folder names.

(\ is counted as one character.)

Up to 20 hierarchy levels can be created.

## 12.8 Precautions for Using CSV File

---

This section describes precautions for using an imported/exported CSV file in GT Designer3.

### ■1 How to save CSV files

To edit a CSV file in Microsoft Excel and use the file in GT Designer3, save the file in the CSV (comma delimited) file format (\*.csv).

The file cannot be used if saved in the CSV UTF-8 (comma delimited) file format (\*.csv).

### ■2 Editing the exported file

If a device in use has a name starting from 0, the 0 may be deleted by a function of applications for editing files (spreadsheet software and others).

If a file is saved with the leading zero removed from a device name, the file cannot be imported normally.

When using a device that has a name starting from 0, edit the file with a text editor.

## 12.9 Precautions for Using Unicode Text File

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

This section explains for using a Unicode text file imported/exported by GT Designer3.

### ■1 How to save Unicode text files

To edit and use a Unicode text file exported by GT Designer3, save the file in the Unicode text file format (\*.txt).  
The character code applicable to Unicode text files is Unicode (file format: UTF16 LittleEndian).

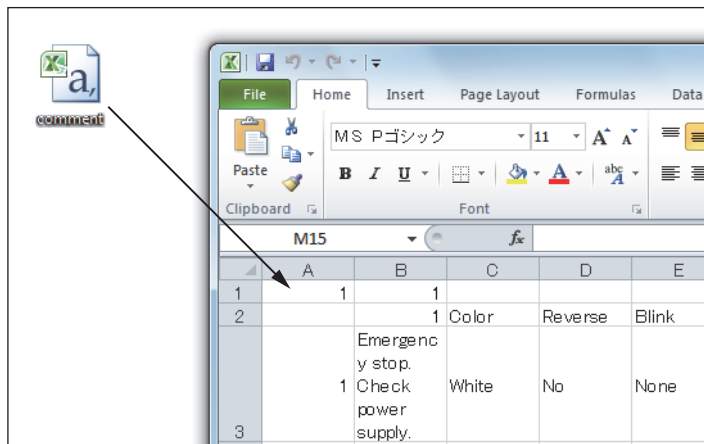

### ■2 Displaying Unicode text files

To display Unicode text files on a personal computer and others, use software compatible to the Unicode.  
Software that is not compatible with the Unicode cannot display Unicode text files properly.

### ■3 Displaying Unicode text files by Microsoft Excel

To open a Unicode text file that contains a comment of multiple lines by Microsoft Excel, drag the Unicode text file to the Microsoft Excel.

Methods other than above cannot display Unicode text files by Microsoft Excel properly.

## 12.10 Data Transferred to the GOT and Storage Destination

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

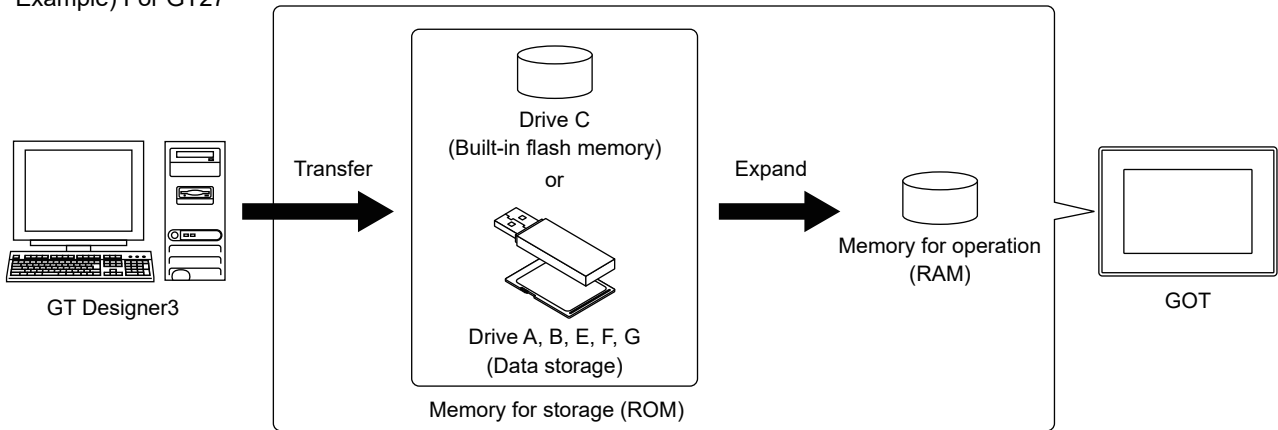

Transfer the created project to the GOT with system application in units of the package data.

The GOT operates after expanding the data stored in the memory for storage to the memory for operation (RAM).

Some data is stored in the memory for storage with being compressed. When the data is expanded to the memory for operation (RAM), the data capacity increases.

The capacity of the package data to be transferred must be less than or equal to the available space of the memory for storage (ROM) and the memory for operation (RAM) at the destination.

Example) For GT27

The following shows the data transferred to the GOT and destination drive.

Data type		Storage destination (ROM)	Expansion destination (RAM)
BootOS		Stored in the built-in flash memory (system area). The data capacity to be stored in the system area is unnecessary to be considered.	Stored in the memory for operation (RAM) (system area). The data capacity to be stored in the system area is unnecessary to be considered.
Package data	Project Data	Stored in either of the following. • Drive A • Drive B • Drive C • Drive E • Drive F • Drive G For the available drives by GOT model, refer to the following. ⇒ 1.2.8 Drive configuration of the target GOT for data transfer	Memory for operation (RAM) (user area) ⇒ 2 Capacity of each drive of the GOT Some data points are expanded to the memory for operation (RAM) (system area). ⇒ 12.10.1 1 (2) Capacity of the package data expanded to the memory for operation (RAM)
	System Application		
	Special Data *1		

\*1 Not available to GT23, GT21, and GS21.

## 12.10.1 Data transferred to the GOT and capacity of the destination drive

### 1 Capacity of package data

For how to check the capacity of the package data, refer to the following.

→ 12.10.1 ■3 (1) Checking the capacity of the package data

#### (1) Capacity of the package data transferred to the memory for storage (ROM)

The total capacity of the project data, system application, and the special data must be less than or equal to the available space of the memory for storage (ROM).

- GT27, GT25, GT23, GS25

\*1 Not available to GT23.

- GT21 and GS21

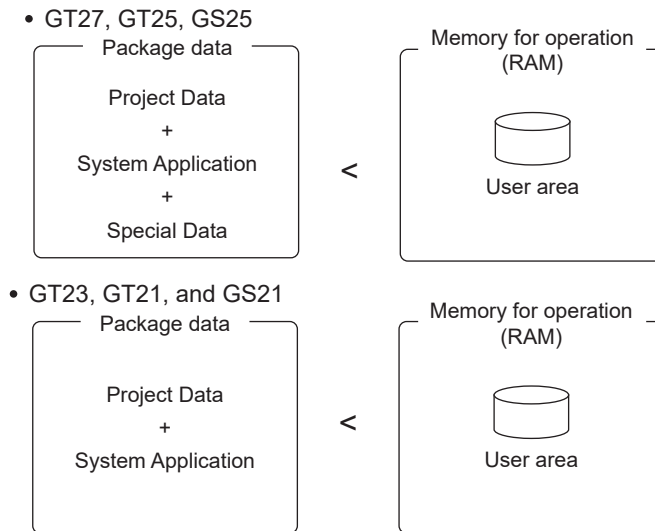

\*1 Drive E is not available for GS21.

For the available drives by GOT model, refer to the following.

→ 1.2.8 Drive configuration of the target GOT for data transfer

## (2) Capacity of the package data expanded to the memory for operation (RAM)

The total capacity of the project data, system application, and the special data must be less than or equal to the available space of the memory for operation (RAM).

The following data points of the system application are expanded to the system area of the memory for operation (RAM). Considering the data capacity is unnecessary.

Data type		Data stored in the memory for operation (RAM) (system area)
System Application	Standard Function	Standard System Application
		Standard Font
	Extended Function	GOT Platform Library
		GOT Function Expansion Library

## ■2 Capacity of each drive of the GOT

### (1) GT27

Drive	Name	Capacity
Storage memory (ROM)	Drive A	Standard SD card
	Drive B	USB Drive
	Drive C	Built-in flash memory (user area)
	Drive E	USB Drive
	Drive F	USB Drive
	Drive G	USB Drive
	Drive X	Current drive
Operation memory (RAM)	-	Memory for operation (RAM) (user area)

Capacity details for Storage memory (ROM):

- Drive A: Depends on the data storage used.
- Drive B: Depends on the data storage used.
- Drive C: GT27 (except GT2705-V): 57 MB  
GT2705-V: 32 MB
- Drive E: Depends on the data storage used. The following models do not have drive E.
  - GT2712-STWA
  - GT2712-STWD
  - GT2710-VTWA
  - GT2710-VTWD
- Drive F: Depends on the data storage used.
- Drive G: Depends on the data storage used.
- Drive X: Depends on the data storage used.

Capacity details for Operation memory (RAM):

- GT27 (except GT2705-V)
  - Function version A and B: 128 MB
  - Function version C or later: 256 MB
- If the system application version is 01.38.\*\*\* or earlier, the capacity is 128 MB even though the function version is C or later.
- GT2705-V: 80 MB

## (2) GT25, GS25

Drive	Name	Capacity	
Storage memory (ROM)	Drive A	Standard SD card	Depends on the data storage used.
	Drive B	USB Drive	Depends on the data storage used. The following models do not have drive B. • GT2505-V • GT25HS-V
	Drive C	Built-in flash memory (user area)	32 MB
	Drive E	USB Drive	Depends on the data storage used. The following models do not have drive E. • GT2512F-STNA • GT2512F-STND • GT2510-VTWA • GT2510-VTWD • GT2510F-VTNA • GT2510F-VTND • GT2508-VTWA • GT2508-VTWD • GT2508F-VTNA • GT2508F-VTND • GT2507T-WTSD
	Drive F	USB Drive	Depends on the data storage used.
	Drive G	USB Drive	Depends on the data storage used.
	Drive X	Current drive	Depends on the data storage used.
Operation memory (RAM)	-	Memory for operation (RAM) (user area)	GT25-W, GS25: 128 MB GT25-S, GT25-V, GT25HS-V: 80 MB

## (3) GT23

Drive	Name	Capacity	
Storage memory (ROM)	Drive A	Standard SD card	Depends on the data storage used.
	Drive B	USB Drive	Depends on the data storage used.
	Drive C	Built-in flash memory (user area)	9 MB
	Drive E	USB Drive	Depends on the data storage used.
	Drive F	USB Drive	Depends on the data storage used.
	Drive G	USB Drive	Depends on the data storage used.
	Drive X	Current drive	Depends on the data storage used.
Operation memory (RAM)	-	Memory for operation (RAM) (user area)	9 MB

## (4) GT21 and GS21

Drive	Name	Capacity	
Storage memory (ROM)	Drive A*1	Standard SD card	Depends on the data storage used.
	Drive C	Built-in flash memory (user area)	• GT2107-W:15 MB • GT2105-Q:9 MB • GT2104-R:9 MB • GT2104-P:6 MB • GT2103-P:3 MB • GS21-W-N: 15 MB • GS21-W: 9 MB
	Drive E	USB Drive	Depends on the data storage used. The following models do not have drive E. • GT2105-Q • GT2104-R • GT2104-P • GT2103-P • GS21
	Drive X	Current drive	Depends on the data storage used.

Drive	Name	Capacity
Operation memory (RAM)	Memory for operation (RAM) (user area)	<ul style="list-style-type: none"> <li>• GT2107-W: 15 MB</li> <li>• GT2105-Q: 9 MB</li> <li>• GT2104-R: 9 MB</li> <li>• GT2104-P: 6 MB</li> <li>• GT2103-P: 3 MB</li> <li>• GS21-W-N: 15 MB</li> <li>• GS21-W: 9 MB</li> </ul>
	Memory for operation (RAM) (buffering area)	1 MB

\*1 To use an SD card on GT2103-P, mount the SD card unit (GT21-03SDCD) on the GOT.

### ■3 Checking the capacity of the package data and available space of the destination drive

#### (1) Checking the capacity of the package data

- Checking in the [Data Size (Project)] dialog
  - ⇒ 11.11.2 Checking data size of project
- Checking in the [Write Option] dialog
  - ⇒ 4.8.3 [Write Option] dialog (for writing data to one GOT)

#### (2) Checking the available space of the destination drive

- Checking [Communicate with GOT] dialog ([GOT Write] tab) or the [GOT Information - Detail] dialog
  - ⇒ 4.8.2 [Communicate with GOT] dialog

### ■4 Reducing the capacity of the package data

Reduce the capacity of the package data by the following methods when the capacity of the package data exceeds the capacity of the memory for storage (ROM) and the memory for operation (RAM).

#### (1) Using a set overlay screen

When you placing the same object on multiple screens, reduce the capacity of the data by using the set overlay screen.

⇒ 8.29 Placing Another Screen on a Screen

#### (2) Reducing the number of figures and objects

Reduce the number of figures and objects placed on the screen.

#### (3) Reducing the number of the project settings

Delete unnecessary settings.

#### (4) Reducing the number of system applications transferred to the GOT

In the [Application Selection] dialog, deselect unnecessary system applications (extended functions) and special data.

⇒ 4.2 Setting a System Application to be Written to the GOT

For the size of the system applications (extended functions) and the special data, refer to the following.

⇒ 12.10.2 Transferred data size list

## 12.10.2 Transferred data size list

The following shows the data size of the system applications and special data used in the GOT.

- ■1 Data size of system applications
- 2 Data size of special data

### ■1 Data size of system applications

- (1) Communication driver (GT27)

## ■2 Data size of special data

GT27
GT25
GT23
GT21
SoftGOT2000
GS25
GS21

The data size in the user area varies with the selection for [Language] in the [Application Selection] dialog.

- (1) [Japanese]
- (2) [English]

### (1) [Japanese]

Special Data	Data size in the user area	
	Built-in flash memory (ROM)	User memory (RAM)
[Intelligent module monitor data]	13294KB	13294KB
[R motion monitor data]	292KB	292KB
[Q motion monitor data]	606KB	606KB
[Servo amplifier monitor data]	273KB	273KB

### (2) [English]

Special Data	Data size in the user area	
	Built-in flash memory (ROM)	User memory (RAM)
[Intelligent module monitor data]	13761KB	10067KB
[R motion monitor data]	321KB	98KB
[Q motion monitor data]	639KB	552KB
[Servo amplifier monitor data]	273KB	196KB

## 12.11 Specifications of Resource Data

- ⇒ 12.11.1 Common specifications of CSV files and Unicode text files
- 12.11.2 Size of the resource data file

### 12.11.1 Common specifications of CSV files and Unicode text files

Binary files created using the following functions can be viewed on a personal computer when the files are converted to CSV files or Unicode text files.

- User alarm observation
- System alarm observation
- Logging
- Recipe
- Operation log

The following shows the specifications of the file formats.

File format	Specifications
CSV format (*.CSV)	<ul style="list-style-type: none"> <li>• Character codes: ASCII and Shift JIS</li> <li>• Delimiter: Comma (,)</li> </ul> <p>Before converting a data file containing any character other than the ASCII and Shift JIS code characters to a CSV file, turn on GS522.b2. Then, the file is converted to a file with an extension of CSV in the following specifications, and the characters are correctly displayed.</p> <ul style="list-style-type: none"> <li>• Character codes: Unicode</li> <li>• Delimiter: Tab</li> </ul> <p>⇒ 12.1.3 ■5 (60) Special Control During Specific Function Execution (GS522)</p>
Unicode text format (*.TXT)	<ul style="list-style-type: none"> <li>• Character codes: Unicode</li> <li>• Delimiter: Tab</li> </ul>

### 12.11.2 Size of the resource data file

Some functions of the GOT store the resource data into a data storage.

The following shows the expressions for calculating the size of the resource data to be stored into a data storage by each function.

The sizes determined by the expressions are approximate.

A determined size may be different from the actual size of the resource data.

- ⇒ ■1 User alarm observation
- 2 System Alarm Observation
- 3 Logging
- 4 Recipe
- 5 Operation Log
- 6 Hard copy
- 7 MES interface function
- 8 Label name resolution information

## ■1 User alarm observation

### (1) Binary file (\*.G2A)

#### (a) Historical mode

$144 + (A \times 2) + (18 \times B) + (20 \times C)$  bytes

- A: Number of characters of the alarm name
- B: Number of alarms
- C: Number of stored events

#### (b) Cumulative mode (when [Display the same alarm occurring multiple times as another item] is deselected)

$144 + (A \times 2) + (48 \times B)$  bytes

- A: Number of characters of the alarm name
- B: Number of alarms

#### (c) Cumulative mode (when [Display the same alarm occurring multiple times as another item] is selected)

$144 + (A \times 2) + (26 \times B) + (32 \times C)$  bytes

- A: Number of characters of the alarm name
- B: Number of alarms
- C: Number of stored events

### (2) CSV file

#### (a) Historical mode

$422 + (A \times 2) + (14 + B + C + D + (E \times 2) + (F \times 3) + G + H) \times I$  byte

- A: Number of characters of the alarm name
- B: Number of digits of the upper comment No.
- C: Number of digits of the middle comment No.
- D: Number of digits of the basic alarm comment No.
- E: Average number of characters of comments
- F: Length of the date and time string
- G: Number of digits of the level
- H: Number of digits of the group
- I: Number of alarms

When counting the number of characters in an alarm name or the average number of characters in a comment, count a one-byte character as 0.5 character and a two-byte character as 1 character.

#### (b) Cumulative mode

$457 + (A \times 2) + (39 + B + C + D + (E \times 2) + (F \times 3) + G + H + I) \times J$  bytes

- A: Number of characters of the alarm name
- B: Number of digits of the upper comment No.
- C: Number of digits of the middle comment No.
- D: Number of digits of the basic alarm comment No.
- E: Average number of characters of comments
- F: Length of the date and time string
- G: Number of digits of the level
- H: Number of digits of the group
- I: Number of digits of the frequency of alarm occurrences
- J: Number of alarms

When counting the number of characters in an alarm name or the average number of characters in a comment, count a one-byte character as 0.5 character and a two-byte character as 1 character.

### (3) Unicode text file

Size of the CSV file  $\times 2$  bytes

## ■2 System Alarm Observation

### (1) Binary file (\*.G2A)

#### (a) When [Get detailed alarm information] is deselected

128 + (24 × A) bytes

- A: Number of stored events

#### (b) When [Get detailed alarm information] is selected

128 + (52 × A) bytes

- A: Number of stored events

### (2) CSV file

447 + (20 + A + (B × 2) + C + D + E + F + G + H + I + (J × 2) + K) × L bytes

- A: Average number of digits of alarm numbers
- B: Average number of characters of comments
- C: Length of the data and time string
- D: Number of digits of the channel No.
- E: Number of characters of the network No., station No., and module No.
- F: Number of characters of the device name
- G: Number of digits of the screen No.
- H: Number of digits of the definition screen No.
- I: Number of digits of the object ID
- J: Number of characters of the function name
- K: Number of characters of the drive name
- L: Number of alarms

When counting the average number of characters in a comment or the number of characters in a function name, count a one-byte character as 0.5 character and a two-byte character as 1 character.

### (3) Unicode text file

Size of the CSV file × 2 bytes

### ■3 Logging

#### (1) Binary file (\*.G2L)

152 + A + B + D + E + F + G bytes

The following describes characters A to S used in the mathematical expressions.

Character	Description
A *1	$2 + 2 \times$ Number of characters used in [Logging Name]
B *1	C $\times$ Total device points set in each block in the [Device] tab
C *1	$2 + 2 \times$ Number of characters used in [Device Comment]
D	4 $\times$ Total device points set in each block in the [Device] tab
E	12 $\times$ Number of blocks
F	4 $\times$ Number of blocks
G	H $\times$ Number of logs per file
H	4 + J + K
J *1	$2 + ((L \times 2) + 7) / 8$
K *1	L $\times$ 2
L	M + N + P + Q + R $\times$ 2 + S $\times$ 4
M	Total device points set in the blocks when the device type is as follows: [Bit]
N	Total device points set in the blocks when the device type is as follows: [Signed BIN8] or [Unsigned BIN8]
P	Total device points set in the blocks when the device type is as follows: [Signed BIN16], [Unsigned BIN16], or [BCD16]
Q	Total device points set in the blocks when the device type is as follows: [String]
R	Total device points set in the blocks when the device type is as follows: [Signed BIN32], [Unsigned BIN32], [BCD32], or [Real(32bit)]
S	Total device points set in the blocks when the device type is as follows: [Signed BIN64], [Unsigned BIN64], [BCD64], or [Real(64bit)]

\*1 Rounded up to a multiple of 4.

#### (2) CSV file

215 + A + D  $\times$  F bytes

The following describes characters A to F used in the mathematical expressions.

Character	Description
A	(B + 17) $\times$ C
B	Average number of characters of device comments
C	Total number of the devices set to the block
D	20 + (E + 1) $\times$ C
E	Number of displayed digits Add 5 when the digits are displayed in real type (exponential expression). Apply this number when the digits are displayed in real type (fixed decimal) and decimal places are 0. Add the number of decimal places and 1 when the digits are displayed in real type (fixed type) and decimal places are 1 or higher.
F	Number of logs in the file

#### (3) Unicode text file

Size of the CSV file  $\times$  2 bytes

## ■4 Recipe

### (1) Binary file (\*.G2P)

$216 + 16 \times A + 4 \times B + C + D \times M$  bytes

The following describes characters A to M used in the mathematical expressions.

Character	Description
A	Value set for [Block Number] in the [Device] tab
B	Total device points set in each block in the [Device] tab
C *1	$(2 + (2 \times \text{Number of characters})) \times B$
D *1	$80 + E \times 2$
E	$F + G + H + J + K \times 2 + L \times 4$
F	Total device points set in the blocks when the device type is as follows: [Bit]
G	Total device points set in the blocks when the device type is as follows: [Signed BIN8] or [Unsigned BIN8]
H	Total device points set in the blocks when the device type is as follows: [Signed BIN16], [Unsigned BIN16], or [BCD16]
J	Total device points set in the blocks when the device type is as follows: [String]
K	Total device points set in the blocks when the device type is as follows: [Signed BIN32], [Unsigned BIN32], [BCD32], or [Real(32bit)]
L	Total device points set in the blocks when the device type is as follows: [Signed BIN64], [Unsigned BIN64], [BCD64], or [Real(64bit)]
M	Value set for [Record Number] in the [Device] tab

\*1 Rounded up to a multiple of 4.

### (2) CSV file

$240 + A + B + H$  bytes

The following describes characters A to J used in the mathematical expressions.

Character	Description
A	Number of characters of the record name
B	$(C + D + E + F) \times (18 + G)$
C	Number of bit devices
D	Number of word devices
E	Number of double-word devices
F	Number of blocks with the device type [Text]
G	Number of characters of the device comment
H	$I \times (25 + C \times 2 + D \times 7 + E \times 12 + F \times 2)$
I	Number of records (when the recipe file format is CSV or Unicode text, regardless of the recipe settings: the number of records = 1)
J	Total number of words in devices (with the device type [Text])

### (3) Unicode text file

Size of the CSV file  $\times 2$  bytes

## ■5 Operation Log

### (1) Binary file (\*.G2O)

64 + (N1 + N2 + ... + Nm) bytes

"N1 + N2 + ... + Nm" indicates the total size of each log.

The following table shows the size per log for each log type.

Log type	Size (byte)	Log type	Size (byte)
GOT startup	Max.88	Touch switch: Application switching	Max.256
GOT termination	12	Touch switch: Screen switching	Max.260
GOT simple restart	12	Touch switch: Station No. switching	Max.260
GOT project restart	12	Touch switch: Auto repeat start	Max.256
GOT restart by reset	12	Touch switch: Auto repeat end	Max.260
GOT offline mode transition	12	Touch switch: Screen gesture	Max.256
GOT background processing stop	12	Touch switch: Recipe operation import	Max.420
GOT background processing restart	12	Touch switch: Recipe operation export	Max.420
Application switching	16	Numerical input: Base device	Max.456
Application startup, exit	20	Numerical input: Option write device	Max.276
Clock setting (External device to GOT)	16	Numerical input: Option write completion device	Max.276
Clock setting (SNTP)	16	Text input	Max.1080
Clock setting (GS)	16	Text input: Option write completion device	Max.276
Time zone change	24	Alarm display (list, history): User alarm deletion	Max.256
Displayed system language	Max.48	Alarm display (list, history): Deletion of all the user alarms	Max.256
Screen switching	Max.84	Alarm display (list, history): System alarm deletion	Max.256
Station No. switching	16	Alarm display (list, history): Deletion of all the system alarms	Max.256
Switching between languages	16	Alarm display (list, history): System alarm reset	Max.256
Buffer memory unit No. switching	16	Alarm display (list, history): User alarm reset	Max.288
Security level change (Device value change)	16	Slider control	Max.336
SoftGOT-GOT link connection	16	Recipe display (record list): Record name change	Max.396
SoftGOT-GOT link disconnection	16	Recipe display (record list): Read	Max.328
SoftGOT-GOT link authorization transfer	20	Recipe display (record list): Write	Max.328
VNC server connection	16	Recipe display (record list): Deletion	Max.328
VNC server disconnection	16	Object script (trigger type [Key Code Input])	Max.280
VNC server authorization transfer	20	Operator authentication: Login successful	Max.36
Screen gesture	20	Operator authentication: Login/re-login failed	Max.36
System language switching	Max.72	Operator authentication: Logout	Max.36
Security level change (Password entry)	Max.40	Operator authentication: Automatic logout	Max.36
Clock function (changed in the utility)	Max.40	Operator authentication: Forced logout	Max.36
Time zone change (in the utility)	Max.48	Operator authentication: Operator switching successful	Max.36
GOT No. switching	Max.40	Operator authentication: Operator switching failed	Max.36
Touch switch: Bit set	Max.280	Operator authentication: Password changed	Max.36
Touch switch: Bit reset	Max.280	Operator authentication: Password change failed	Max.36
Touch switch: Bit alternate	Max.280	Operator authentication: Operator account lock	Max.32
Touch switch: Bit momentary	Max.280	Operator management: Started	Max.40
Touch switch: Word set	Max.288	Operator management: Start failed	Max.40

Log type	Size (byte)	Log type	Size (byte)
Operator management: End	Max.40	File print: Aborted (User)	Max.188
Operator management operation: Save	Max.36	File print: Complete	Max.164
Operator management operation: Undo	Max.36	File print: Aborted (Access error)	Max.164
Operator management operation: Import	Max.196	File print: Aborted (Printer error)	Max.164
Operator management operation: Export	Max.196	File print: Aborted (Timeout error)	Max.164
Operator management changed (function settings): Authentication type	Max.44	File print: Aborted (System)	Max.164
Operator management changed (function settings): Automatic logout	Max.44	Network drive connection	Max.208
Operator management changed (function settings): Password expiration date	Max.48	Network drive connection failed	Max.208
Operator management changed (function settings): External authentication ID	Max.48	GOT Mobile: Connection established	Max.295
Operator management changed (function settings): Authentication prohibited	Max.48	GOT Mobile: Trial connection established	Max.295
Operator management changed (function settings): Operator account lock	Max.44	GOT Mobile: Connection authentication failed	Max.295
Operator management changed (function settings): Password requirements	Max.48	GOT Mobile: Number of clients exceeded the upper limit	Max.295

## (3) Unicode text file

Size of the CSV file × 2 bytes

## ■6 Hard copy

### (1) BMP file

The file size depends on the resolution of the GOT.

GOT resolution	Size (byte)
WXGA (1280×800)	3072054
XGA (1024 × 768)	2359350
SVGA (800 × 600)	1440054
WVGA (800×480)	1152054
VGA (640 × 480)	921654
QVGA (320 × 240)	230454
480 × 272 dots	391734
384 × 128 dots	147510
320 × 128 dots	122934

### (2) JPEG file

The file size depends on the contents displayed on the GOT screen.

## ■7 MES interface function

File	Size
Execution log file	Max. 512 K bytes per file
Event log file of the job execution	Max. 1 M byte per file

## ■8 Label name resolution information

The following shows the size of the label name resolution file by channel.

$56 + (A \times 52) + (B \times 98) + (C \times 2)$  bytes

- A: Number of the monitored controllers per CPU No. by channel
- B: Total number of the labels by channel used on the GOT
- C: Total number of characters of the labels by channel used on the GOT

## 12.12 Specifications of the SRAM user area

Some functions of the GOT use the SRAM user area.

For functions that use the SRAM user area and the size of data stored in the SRAM user area, refer to the following.

- 12.12.1 Functions that use the SRAM user area
- 12.12.2 Size of data stored in the SRAM user area

### 12.12.1 Functions that use the SRAM user area

The following functions save data to the SRAM user area.

- User alarm observation
- System alarm observation
- Logging function
- Recipe function
- Internal device retention

Applicable function	Number of settings	Size
User alarm observation	Max. 10	500 KB (total)
System alarm observation	Max. 1	
Logging function	Max. 20	
Recipe function	Max. 20	
Internal device retention	Max. 1	

### 12.12.2 Size of data stored in the SRAM user area

Some functions of the GOT use the SRAM user area.

The following shows the expressions for calculating the size of the SRAM user area used by each function.

- ■1 User alarm observation
  - 2 System Alarm Observation
  - 3 Logging
  - 4 Recipe
  - 5 Internal device retention

The expressions only determine the approximate sizes.

The actual sizes may differ.

Check the actual sizes in the following setting dialogs.

- 9.1.2 ■7 [User Alarm Observation] dialog
- 9.1.3 ■5 [System Alarm Observation] dialog
- 9.2.7 [Logging] dialog (traditional display)
- 9.3.7 [Recipe] dialog
- 5.2.12 ■3 [Internal Device Retention]

#### ■1 User alarm observation

##### (1) Current alarm only

$((256 + A) \text{ rounded up to a multiple of } 64) \times 2 \text{ bytes}$

- A:  $16 \times \text{number of alarms}$

##### (2) Historical mode

$((256 + A + B) \text{ rounded up to a multiple of } 64) \times 2 \text{ bytes}$

- A:  $20 \times \text{number of stored events}$
- B:  $(2 \times \text{number of alarms}) \text{ rounded up to a multiple of } 4$

**(3) Cumulative mode (when [Display the same alarm occurring multiple times as another item] is deselected)**

$((256 + A) \text{ rounded up to a multiple of } 64) \times 2 \text{ bytes}$

- A:  $32 \times \text{number of alarms}$

**(4) Cumulative mode (when [Display the same alarm occurring multiple times as another item] is selected)**

$((256 + A + B + C) \text{ rounded up to a multiple of } 64) \times 2 \text{ bytes}$

- A:  $(10 \times \text{number of alarms}) \text{ rounded up to a multiple of } 4$
- B:  $32 \times \text{number of stored events}$
- C:  $(2 \times \text{number of alarms}) \text{ rounded up to a multiple of } 4$

## ■2 System Alarm Observation

**(1) Current alarm only (when [Get detailed alarm information] is deselected)**

$((256 + A) \text{ rounded up to a multiple of } 64) \times 2 \text{ bytes}$

- A:  $(20 \times \text{number of stored events})$

**(2) Current alarm only (when [Get detailed alarm information] is selected)**

$((256 + A) \text{ rounded up to a multiple of } 64) \times 2 \text{ bytes}$

- A:  $(48 \times \text{number of stored events})$

**(3) Historical mode (when [Get detailed alarm information] is deselected)**

$((256 + A) \text{ rounded up to a multiple of } 64) \times 2 \text{ bytes}$

- A:  $(24 \times \text{number of stored events})$

**(4) Historical mode (when [Get detailed alarm information] is selected)**

$((256 + A) \text{ rounded up to a multiple of } 64) \times 2 \text{ bytes}$

- A:  $(52 \times \text{number of stored events})$

**(5) When [Record label/tag name at the time of alarm generation] is selected**

$(\text{One of the results of (1) to (4)}) + A \times (\text{number of stored events}) \text{ bytes}$

- A:  $(2 + (\text{number of characters to be recorded} \times 2)) \text{ rounded up to a multiple of } 4$

### ■3 Logging

$(192 + (A \times \text{number of stored logs}) + B)$  rounded up to a multiple of 64 bytes

- A:  $C + D$
- B:  $(4 \times \text{number of blocks})$
- C:  $(6 + E / 4)$  rounded up to a multiple of 4
- D:  $(E \times 2)$  rounded up to a multiple of 4
- E:  $(\text{Total number of logs (with the device types [Signed BIN32], [Unsigned BIN32], [BCD32], and [Real])} \times 2) + (\text{total number of logs (with the device types [Bit], [Signed BIN16], [Unsigned BIN16], [BCD16], and [String])})$

### ■4 Recipe

$256 + A + (B \times E)$  bytes

- A:  $(16 \times \text{number of blocks})$
- B:  $80 + ((C + D) \times 2)$
- C: Total number of blocks (with the device types [Bit], [Signed BIN16], [Unsigned BIN16], [BCD16] and [String])
- D: Total number of blocks (with the device types [Signed BIN32], [Unsigned BIN32], [BCD32], and [Real])  $\times 2$
- E: Number of records

### ■5 Internal device retention

$(192 + A) \times 2$  bytes

- A:  $(44 + B + C)$  rounded up to a multiple of 64
- B:  $32 + (2 \times \text{number of GOT data registers (GD)})$   
If the number of GD devices is 0, apply 0 to B.
- C:  $32 + 4 \times ((E / 32) - (F / 32) + 1)$   
If the number of GB devices is 0, apply 0 to C.  
In the result of  $(E / 32)$  and  $(F / 32)$ , omit the numbers after the decimal point.
- E:  $F + G - 1$
- F: Start device number of GOT bit registers (GB)
- G: Number of GOT bit registers (GB)

## 12.13 Compatibility with Conventional Products

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

⇒ 12.13.1 Compatibility of projects

12.13.2 Specifications of the project conversion from GOT1000 to GOT2000

12.13.3 Specifications of the project conversion from GOT2000 to GOT2000

12.13.4 Data copy between drawing software

### 12.13.1 Compatibility of projects

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

⇒ ■1 Project that can be handled with GT Designer3

■2 Converting a project by changing the GOT type

#### ■1 Project that can be handled with GT Designer3

The following shows each project format and the compatibility with GT Designer3.

Project format		Operation				
		Open	Save		Utilize other projects	
			GT Designer3 (GOT2000)	GT Designer3 (GOT1000)	GT Designer3 (GOT2000)	GT Designer3 (GOT1000)
GOT2000 project	Workspace format	○	○	×	○	×
	*.GTX	○	○	×	○	×
	*.GTXS	○	○	×	○	×
	*.G2	○	○*1	×	×	×
	*.GTCNV	○	×	×	×	×
GOT1000 project	Workspace format	○*2	×	○	×	○
	*.GTW	○*2	×	○	×	○
	*.G1 (Created with GT Designer3)	○*2	×	○*1	×	×
	*.GTE	○*2	×	×	×	○
	*.G1 (Created with GT Designer2)	○*2	×	×	×	×
GOT900 project	*.GTD	○*3	×	×	×	×

\*1 This format is a project format for writing to the data storage.

This format cannot be saved with the [Project] menu.

\*2 There are two alternatives: convert a project into the GOT2000 equivalent, or start GT Designer3 (GOT1000) to edit the project with keeping a GOT1000 project.

\*3 Open the project after converting into the GOT1000 equivalent by using GT Designer3 (GOT1000).

To edit the project as a GOT900 project, use GT Designer2 Classic.

To convert the project into the GOT2000 equivalent, convert the project into the GOT1000 equivalent in advance.

#### ■2 Converting a project by changing the GOT type

You can change the opened project to another GOT project by changing the GOT type.

⇒ 5.1 Changing the GOT Type of the Project ([GOT Type Setting])

GT Designer3 is compatible with the following project conversion.

Project before conversion	Project after conversion	
	GOT2000 project	GOT1000 project
GOT2000 project	The project can be converted.	The project cannot be converted.
GOT1000 project	The project can be converted.	The project can be converted.

## 12.13.2 Specifications of the project conversion from GOT1000 to GOT2000

The following shows the project settings after the GOT1000 project is converted into the GOT2000 project.

- Settings configured for both GOT1000 and GOT2000  
The settings are held.
- Settings configured only for GOT2000  
Default values are set.  
(For some settings, default values are not set.)
- Settings configured only for GOT1000  
The settings are deleted.
- Settings configured for both GOT1000 and GOT2000, but have difference  
The settings are changed according to the setting specifications of GOT2000.

Device settings are changed as follows.

- Device settings for devices within the device range that is compatible with the GOT model after the conversion are held.  
[??] is displayed for devices outside the device range for the GOT model after the conversion.
- When no network setting is configured for the GOT model after the conversion, the NW No. setting and the PLC station No. settings are deleted.
- All devices of all channels are converted as the devices of a controller set for CH1 after the conversion.

### ■ 1 Whole project

#### (1) Font

Before conversion (setting for GOT1000)	After conversion (setting for GOT2000)	Specifications of the conversion
[Font]	[Font]	<ul style="list-style-type: none"> <li>• For converting the GOT type to GT27, GT25, GT23, GT SoftGOT2000, or GS25 [Stroke] is converted into [Outline Gothic].</li> <li>• For converting the GOT type to GT2107-W or GS21-W-N [Stroke] is converted into [Outline Gothic].</li> <li>• For converting the GOT type to GT2105-Q, GT2104-R, GT2104-P, GT2103-P, or GS21-W [Stroke] is converted into [16dot Standard].</li> </ul>

#### (2) Drive name

Before conversion (setting for GOT1000)	After conversion (setting for GOT2000)	Specifications of the conversion
[Drive Name]	[Drive Name]	<p>The drive name is converted as below.</p> <ul style="list-style-type: none"> <li>• [A:Standard Memory Card] is converted into [A:Standard SD Card].</li> <li>• [B:Extended Memory Card] is converted into [B:USB Drive].</li> <li>• [C:Built-in Flash Memory] is held.</li> <li>• [D:Built-in SRAM] is converted into [X:Current Drive].</li> </ul> <p>For converting the GOT type to GT2107-W, GT2105-Q, GT2104-R, or GT2104-P, the setting is held.</p> <ul style="list-style-type: none"> <li>• [E:USB Memory] is converted into [E:USB Drive].</li> </ul>

#### (3) Report screen

All the settings for the report screens are held.

## ■2 Screen

### (1) Property of screens

Before conversion (setting for GOT1000)	After conversion (setting for GOT2000)	Specifications of the conversion
[Screen No.]	[Screen No.]	If [Display the screen of value stored in screen switching device +1] is enabled in [GOT Environmental Setting] ([Screen Switching/Windows]), all the screen numbers decrease by one after conversion. If the item is disabled, the setting is held after conversion.
[Front Layer Transparent]	[Front Layer Transparent Color]	The settings are held. For GT21 and GS21, the setting is deleted after conversion.
[Popup the display of advanced alarm]	[Display alarms as popups]	The settings are held.
[Specify the touch area]	-	The settings are deleted.
[Display alarm flow]	[Display alarms as popups]	The settings are held.
[Backlight]	[Backlight]	<ul style="list-style-type: none"> <li>For converting GT1020 or GT1030 to GT21-P The conversion result depends on the backlight color selected in [Type Setting]. When [Green/Red/Orange] is selected, [Green/White] is changed to [Green], and [Orange/Pink] is changed to [Orange]. When [White/Red/Pink] is selected, [Green/White] is changed to [White], and [Orange/Pink] is changed to [Pink]. Regardless of the selection, [Red] is held.</li> <li>For converting any other than GT1020 and GT1030 to GT21-P The setting is changed to [White].</li> <li>For converting GOT1000 series to any other than GT21-P The settings are deleted.</li> </ul>
[Blink Backlight]	[Blink Backlight]	<ul style="list-style-type: none"> <li>For converting GT1020 or GT1030 to GT21-P The settings are held.</li> <li>For converting any other than GT1020 and GT1030 to GT21-P The setting is changed to [None].</li> <li>For converting GOT1000 series to any other than GT21-P The settings are deleted.</li> </ul>
[Option Selection]	[Option Selection]	The settings are held. For GT23, GT21 (except GT2107-W), and GS21, the setting is deleted after conversion.

### (2) Report setting

Before conversion (setting for GOT1000)	After conversion (setting for GOT2000)	Specifications of the conversion
-	[Printer Language]	[Japanese] is set.

## ■3 Common setting

### (1) Script

Before conversion (setting for GOT1000)	After conversion (setting for GOT2000)	Specifications of the conversion
[Trigger Type]	[Trigger Type]	<ul style="list-style-type: none"> <li>[Ordinary] is converted into [Sampling] (Cycle time: [1] x 100 ms).</li> <li>[ON] is converted into [ON Sampling] (Cycle time: [1] x 100 ms).</li> <li>[OFF] is converted into [OFF Sampling] (Cycle time: [1] x 100 ms).</li> </ul>

## ■4 Precautions

### (1) HQ font setting for the comment display

When a GOT1000 project created with GT Designer2 is converted into a GOT2000 project, the HQ font setting may not be migrated.

For the details, refer to the following Technical News.

→Precautions when Replacing GOT1000 Series with GOT2000 Series(GOT-A-0061)

### 12.13.3 Specifications of the project conversion from GOT2000 to GOT2000

---

The following shows the project settings after the GOT2000 project is converted into another GOT2000 project.

- Settings configured for both the GOT model before the conversion and the one after the conversion  
The settings are held.
- Settings configured only for the GOT model after the conversion  
Default values are set.
- Settings configured only for the GOT model before the conversion  
The settings are deleted.
- Settings configured for both the GOT models before the conversion and after the conversion, but have difference  
The settings are changed according to the setting specifications of the GOT model after the conversion.

For the GOT models compatible with each function, refer to the following.

⇒ 1.1.3 List of the supported models for each function

### 12.13.4 Data copy between drawing software

---

You can edit data among the drawing software, such as copying and pasting, by using multiple drawing software.

#### ■1 When using GT Designer3 (GOT2000)

Copying and pasting data among other GT Designer3 (GOT2000)s are available.

Copying and pasting data between GT Designer3 (GOT2000) and GT Designer3 (GOT1000) are unavailable.

#### ■2 When using GT Designer3 (GOT1000)

Copying and pasting data among other GT Designer3 (GOT1000)s are available.

Copying and pasting data between GT Designer3 (GOT1000) and GT Designer3 (GOT2000) are unavailable.

## 12.14 Data Compatibility between the Graphics Modes

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

- 12.14.1 Project conversion specifications when the graphics mode is changed to GOT Graphic Ver.2
- 12.14.2 Project conversion specifications when the graphics mode is changed to GOT Graphic Ver.1

### 12.14.1 Project conversion specifications when the graphics mode is changed to GOT Graphic Ver.2

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

The following shows the current settings to be changed or deleted after the setting of [Graphics Setting] is changed to [GOT Graphic Ver.2] in the [Type Setting] dialog.

The items available only in the new graphics mode are set to their default.

The screen design will be the basic black after the graphic mode change.

To change the screen design, select your preference in the [Screen Design] dialog.

- 2.4.3 [Screen Design] dialog

#### ■ 1 Screen

##### (1) Screen properties (Base screen, window screen, and mobile screen)

Item	Specifications after the graphics mode change
[Front Layer Transparent Color] (for base screens and window screens)	The setting of this item is deleted. Setting the transparent color for the front layer is not available.
[Background Color]	The setting of each item is migrated to the [Pattern] tab of the [Fill Effects] dialog. However, the following cases exist depending on the settings made before the graphics mode change. <ul style="list-style-type: none"> <li>• If [None] has been selected for [Pattern], the settings of [Background Color], [Pattern], and [Pattern Color] are deleted.</li> <li>• If [8] has been selected for [Pattern], the settings of [Background Color] and [Pattern] are deleted and the setting of [Pattern Color] is migrated to [Background Color].</li> <li>• If [37] has been selected for [Pattern], the settings of [Pattern] and [Pattern Color] are deleted and the setting of [Background Color] is migrated to [Background Color].</li> </ul>
[Pattern]	
[Pattern color]	

#### ■ 2 Common settings

##### (1) Type Setting

Item	Specifications after the graphics mode change
[Enable the graphics accelerator to smooth the screen gesture and document display operations]	The setting of this item is deleted. The graphics accelerator is not available.
[Enable the antialiasing to smooth jagged text edges]	This item is nonexistent. Antialiasing is always enabled.
[Adjust object display order in GOT to the one in GT Designer3]	This item is nonexistent. The object stacking order adjustment is always enabled.

##### (2) Parts Setting

Item	Specifications after the graphics mode change
[Show overlapping areas of shapes in XOR when Display Mode of Parts Display is XOR]	The setting of this item is deleted. The XOR synthesis is not available.

#### ■ 3 Figure

Item	Specifications after the graphics mode change
Paint	The setting of this item is deleted. The paint is not available.

## ■ 4 Object

Item	Specifications after the graphics mode change
Touch Switch	The setting of [Reverse Switch Area] is deleted. Inverting the colors in the touch switch area is not available.
Lamp Area	The setting of this item is deleted. The lamp area is not available.
Numerical display	[Display Mode] is nonexistent.
Numerical input	The [Transparent] mode is applied.
Comment display (bit)	[Display Mode] is nonexistent.
Comment display (word)	The [Transparent] mode is applied.
Bit Parts Display	[Display Mode] is nonexistent.
Word Parts Display	The [Replace] mode is applied.
Fixed Parts Display	
Parts movement (bit)	[Display Mode] is nonexistent.
Parts movement (word)	The [Movement] mode is applied.
Parts movement (fixed)	
Alarm Display (User)	[Text color on cursor display] is nonexistent.
Alarm Display (System)	The [Reverse] mode is applied.
Level object	<p>The setting of [Boundary Color] is deleted. As the boundary color setting is invalid, the level display does not appear in the figure accordingly.</p> <div style="text-align: center;">  </div> <p>[Boundary Color] is valid.                      [Boundary Color] is invalid.</p> <p>To appropriately display the level object in GOT Graphic Ver.2, place a parts display on the level object. For the setting, refer to the following. ⇒ 8.23.2 How to use the level object (GOT Graphic Ver.2)</p>

## 12.14.2 Project conversion specifications when the graphics mode is changed to GOT Graphic Ver.1

The following shows the current settings to be changed or deleted after the setting of [Graphics Setting] is changed to [GOT Graphic Ver.1] in the [Type Setting] dialog.

The items available only in the new graphics mode are set to their default.

### ■1 Screen

#### (1) Screen design

Item		Specifications after the graphics mode change
Design	Preset	If the selected design is available in GOT Graphic Ver.1, the design setting is migrated as-is. If the selected design is not available in GOT Graphic Ver.1, the design is changed to an available design.
	Custom	The settings available in GOT Graphic Ver.1 are migrated as-is. The settings unavailable in GOT Graphic Ver.1 are discarded.

#### (2) Screen properties (Base screen, window screen, and mobile screen)

Item	Specifications after the graphics mode change
When a solid color background is set	[Pattern] is set to [8]. The background color setting is migrated to [Background Color] and [Pattern Color].
When a gradient background is set	[Pattern] is set to [8]. The setting of [Color 1] is migrated to [Pattern Color]. The setting of [Color 2] is migrated to [Background Color]. The setting of [Variation] is deleted.
When a pattern background is set	The setting is migrated to the [Basic] tab of the [Screen Property] dialog.
[Transparency] (for window screens only)	The setting of this item is deleted.
[Screen Contour] (for window screens only)	The setting of this item is deleted.
[Radius] (for window screens only)	The setting of this item is deleted.

### ■2 Common settings

#### (1) Type Setting

Item	Specifications after the graphics mode change
[Expand base screen sizes]	The setting of this item is deleted. The expanded base screens are resized to the size of the GOT screen. For information on how the on-screen figures and objects are changed, refer to the following. → 5.1.1 ■4 (3) How the expanded base screen data is converted (when disabling the base screen size expansion for the newly-selected GOT)
[Adjust object display order in GOT to the one in GT Designer3]	This item is deselected.

### ■3 Object

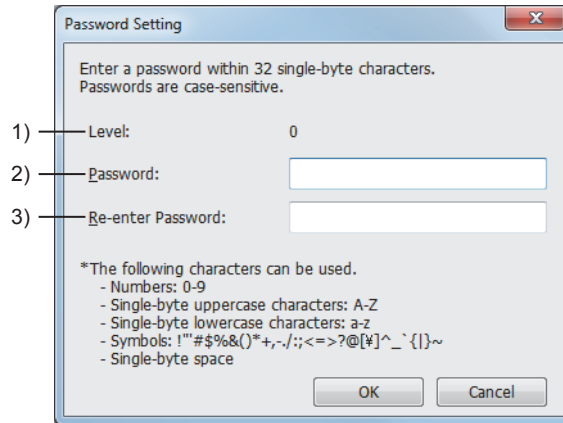

Item	Specifications after the graphics mode change
Parts Movement	When [Circle] is selected for [Move Way], the selection is changed to [Line].

## 12.15 Common Dialog

---

### 12.15.1 [Password Setting] dialog

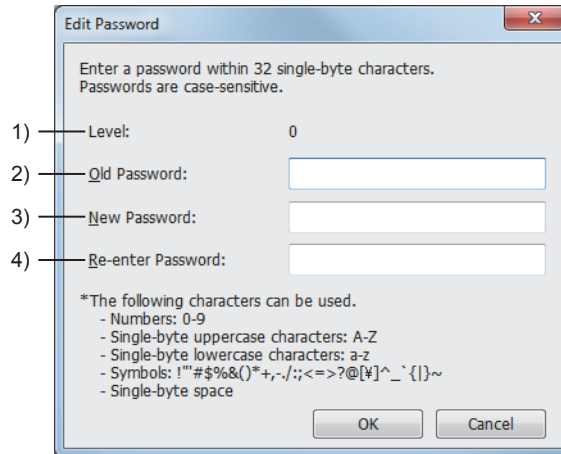

---

- 1) **[Level]**  
Displays the security level for the password.  
Displayed when a password is edited in the [Screen Security] tab.
- 2) **[Password]**  
Set a password.
- 3) **[Re-enter Password]**  
Input the password set in [Password] for the confirmation.

## 12.15.2 [Edit Password] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

- 1) **[Level]**  
Displays the security level for the password.  
Displayed when a password is edited in the [Screen Security] tab.
- 2) **[Old Password]**  
Set the password currently set for the project.
- 3) **[New Password]**  
Set a new password.
- 4) **[Re-enter Password]**  
Input the password set in [New Password] for the confirmation.

## 12.15.3 [Delete Password] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

- 1) **[Password]**  
Set the password currently set for the project.

## 12.15.4 [Edit Comment] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

### 1) [Column No.]

Select the column No. of the comment to be edited.

### 2) [Comment]

Edit the comment in the comment group.

If an unregistered comment group No. or comment No. is displayed, create a new comment.

Up to 1024 characters can be set for the comment.

The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field.

- Number of characters:  
A character is counted as one character.  
The line feed is counted as two characters.
- Number of digits:  
The number of digits of the row with the largest number of digits is displayed.
- Number of rows:  
The number of rows of the comment is displayed.  
Even though a line feed is inserted without characters, the line feed is counted as one row.

## 12.15.5 [Detail Setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS25 GS21

When the driver is set to [Ethernet(MITSUBISHI ELECTRIC), Gateway]

### 1) [Driver]

Displays the driver that is currently set.

### 2) Detail Setting

Setting items and setting ranges to be displayed vary depending on the driver to be used.

Item	Description
[Transmission Speed(BPS)]	Select the transmission speed.
[Data Bit]	Select the data length.
[Stop Bit]	Select the stop bit length.
[Parity]	Select the type for a parity check.
[Sum Check]	Select whether to perform a sum check.
[Sum Check Type]	Select the type for a sum check.
[Retry(Times)]	Set the number of retries to be performed when a communication error occurs. When no response is received after the retries, the communication times out.
[Startup Time(Sec)]	Set the time period from the GOT startup to the beginning of the communication with the PLC CPU.
[Timeout Time(Sec)]	Set the interval for communication to time out.
[Adapter Address]	Set the adapter address in the connected network.
[Host]	Set the host address in the connected network.
[Delay Time(ms)]	Set the send delay time to lower the load of the network and the connected PLC CPUs.
[GOT Station]	Set a station number of the host in the system configuration.
[Format]	Select the communication format.
[Interrupt Data Byte]	Select the number of bytes of the interrupt data.
[Station No. Selection]	Select whether to use a station number at the communication or not.
[Special Interrupt Code]	Select whether to have the special interrupt code output or not.
[Control method]	Set this item when XON or XOFF control is used.
[Message Format]	Select a message format.
[Communication data code]	Select a communication data code.
[32bit Storage]	Select an order for storing two words (32-bit data).
[Monitor Speed]	Set the monitor speed of the GOT.
[Negotiation Time(Sec)]	Set the time period that the GOT side communication setting is sent to the inverter.
[Initialization Wait Time(Sec)]	Set the wait time from when the communication setting is changed until when the communication starts.
[Automatic Negotiation]	Select whether to use the automatic negotiation.
[Function Code[0F]]	Select whether to use the function code [0F] or not.
[Function Code[10]]	Select whether to use the function code [10] or not.
[Read coil points]	Set the maximum number of read coils.
[Read input relay points]	Set the maximum number of read input relays.
[Read holding register points]	Set the maximum number of read holding registers.
[Read input register points]	Set the maximum number of read input registers.
[Write coil points]	Set the maximum number of write multiple coils.
[Write holding register points]	Set the maximum number of write multiple holding registers.
[Device read points(Points)]	Set the number of consecutive devices from which data is read in one communication.
[Device write points(Points)]	Set the number of consecutive devices to which data is written in one communication.
[Device read random points(Points)]	Set the number of separate devices from which data is read in one communication.
[Device write random points(Points)]	Set the number of separate devices to which data is written in one communication.
[Stage No.]	Set the number of extension base units.
[Slot No.]	Set the slot No.
[GOT Net No.]	Set the network No. of the GOT.
[GOT Station]	Set the GOT's station number.
[GOT Communication Port No.]	Set the port No. used by the GOT for the connection with the Ethernet module.
[Protocol]	Select a communication protocol.
[Interrupt Data Length]	Set the number of bytes of the interrupt data.

Item	Description
[Existence Confirmation]	Select whether to perform an existence confirmation.
[Existence Confirmation Cycle(Sec)]	Set the cycle to perform an existence confirmation.
[Network Type]	Select a network type.
[Network No.]	Set the network No.
[Station No.]	Set the GOT's station number.
[Group No.]	Group No.
[Mode]	Set a mode.
[Transmission Speed(Mbps)]	Select a transmission speed.
[Refresh Interval(Times)]	Set how many times is the block data assurance per station (refresh) performed for the send data and the receive data.
[Transmission Speed(Gbps)]	Select a transmission speed.
[Communication Speed]	Select a communication speed.
[Refresh Interval(ms)]	Set the interval for performing the block data assurance per station (refresh) for the send data and the receive data.
[Input for Error Station]	Select whether to clear or hold the error at an error occurrence.
[Transmission Rate]	Set the transmission speed and a mode of the GOT.
[Expanded Cyclic]	Select the cyclic counts expansion.
[Occupied Station]	Select the number of stations occupied by the GOT.
[Video Input Signal]	Select the video input signal
[Video Resolution]	Select the video resolution.
[IP Address]	Set the IP address of the multimedia unit.
[Subnet Mask]	Set the subnet mask.
[Default Gateway]	Set the default gateway.
[Connection CH No.]	Set the channel number used for the connection to the GOT (Extended computer).
[Transmission method]	Set the CC-Link transmission method.
[CPU No. switching GD device first No. (3 points)]	Set the start device number of the GOT data registers (GD) to specify CPU numbers.
[Module No. switching GD device first No. (16 points)]	Set the start device number of the GOT data registers (GD) to specify module numbers.
[Servo axis switching GD device first No. (16 points)]	Set the start device number of the GOT data registers (GD) to specify an axis number.
[Output HOLD/CLEAR Setting]	Select whether the GOT (remote station) holds the device values received from and sent to the master station when the master station stops running.
[Destination module I/O number]	Specify a destination module I/O number to be returned from the GOT to the host station.

For the detail settings of peripheral devices including barcodes and RFIDs, refer to the following.

- ⇒ 10.1.5 [Bar Code] dialog
- ⇒ 10.2.5 [RFID] dialog
- ⇒ 10.6.5 [Video/RGB Input] dialog
- ⇒ 10.8.6 [Multimedia] dialog
- ⇒ 10.11.8 [Printer] dialog

## 12.16 Open Source Software

```

## 12.16.5 FreeTypeProject

The copyright and permission notices of FreeTypeProject are described below.  
The FreeType Project LICENSE

-----

2006-Jan-27

Copyright 1996-2002, 2006 by

David Turner, Robert Wilhelm, and Werner Lemberg

Introduction

=====

The FreeType Project is distributed in several archive packages; some of them may contain, in addition to the FreeType font engine, various tools and contributions which rely on, or relate to, the FreeType Project.

This license applies to all files found in such packages, and which do not fall under their own explicit license. The license affects thus the FreeType font engine, the test programs, documentation and makefiles, at the very least.

This license was inspired by the BSD, Artistic, and IJG (Independent JPEG Group) licenses, which all encourage inclusion and use of free software in commercial and freeware products alike. As a consequence, its main points are that:

- o We don't promise that this software works. However, we will be interested in any kind of bug reports. ('as is' distribution)
- o You can use this software for whatever you want, in parts or full form, without having to pay us. ('royalty-free' usage)
- o You may not pretend that you wrote this software. If you use it, or only parts of it, in a program, you must acknowledge somewhere in your documentation that you have used the FreeType code. ('credits')

We specifically permit and encourage the inclusion of this software, with or without modifications, in commercial products.

We disclaim all warranties covering The FreeType Project and assume no liability related to The FreeType Project.

Finally, many people asked us for a preferred form for a credit/disclaimer to use in compliance with this license. We thus encourage you to use the following text:

"

Portions of this software are copyright 息 <year> The FreeType Project (www.freetype.org). All rights reserved.

"

Please replace <year> with the value from the FreeType version you actually use.

Legal Terms

=====

0. Definitions

-----

Throughout this license, the terms 'package', 'FreeType Project', and 'FreeType archive' refer to the set of files originally distributed by the authors (David Turner, Robert Wilhelm, and Werner Lemberg) as the 'FreeType Project', be they named as alpha, beta or final release.

'You' refers to the licensee, or person using the project, where 'using' is a generic term including compiling the project's source code as well as linking it to form a 'program' or 'executable'.

This program is referred to as 'a program using the FreeType engine'.

This license applies to all files distributed in the original FreeType Project, including all source code, binaries and documentation, unless otherwise stated in the file in its original, unmodified form as distributed in the original archive.

If you are unsure whether or not a particular file is covered by this license, you must contact us to verify this.

The FreeType Project is copyright (C) 1996-2000 by David Turner, Robert Wilhelm, and Werner Lemberg. All rights reserved except as specified below.

#### 1. No Warranty

-----  
THE FREETYPE PROJECT IS PROVIDED 'AS IS' WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT WILL ANY OF THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY DAMAGES CAUSED BY THE USE OR THE INABILITY TO USE, OF THE FREETYPE PROJECT.

#### 2. Redistribution

-----  
This license grants a worldwide, royalty-free, perpetual and irrevocable right and license to use, execute, perform, compile, display, copy, create derivative works of, distribute and sublicense the FreeType Project (in both source and object code forms) and derivative works thereof for any purpose; and to authorize others to exercise some or all of the rights granted herein, subject to the following conditions:

- o Redistribution of source code must retain this license file ('FTL.TXT') unaltered; any additions, deletions or changes to the original files must be clearly indicated in accompanying documentation. The copyright notices of the unaltered, original files must be preserved in all copies of source files.

- o Redistribution in binary form must provide a disclaimer that states that the software is based in part of the work of the FreeType Team, in the distribution documentation. We also encourage you to put an URL to the FreeType web page in your documentation, though this isn't mandatory.

These conditions apply to any software derived from or based on the FreeType Project, not just the unmodified files. If you use our work, you must acknowledge us. However, no fee need be paid to us.

#### 3. Advertising

-----  
Neither the FreeType authors and contributors nor you shall use the name of the other for commercial, advertising, or promotional purposes without specific prior written permission.

We suggest, but do not require, that you use one or more of the following phrases to refer to this software in your documentation or advertising materials: 'FreeType Project', 'FreeType Engine', 'FreeType library', or 'FreeType Distribution'.

As you have not signed this license, you are not required to accept it. However, as the FreeType Project is copyrighted material, only this license, or another one contracted with the authors, grants you the right to use, distribute, and modify it. Therefore, by using, distributing, or modifying the FreeType Project, you indicate that you understand and accept all the terms of this license.

#### 4. Contacts

-----  
There are two mailing lists related to FreeType:

- o [freetype@nongnu.org](mailto:freetype@nongnu.org)

Discusses general use and applications of FreeType, as well as future and wanted additions to the library and distribution.

If you are looking for support, start in this list if you haven't found anything to help you in the documentation.

o freetype-devel@nongnu.org  
Discusses bugs, as well as engine internals, design issues,  
specific licenses, porting, etc.  
Our home page can be found at  
<https://www.freetype.org>  
--- end of FTL.TXT ---

## 12.16.6 JQuery

---

The copyright and permission notices of JQuery are described below.

Copyright 2014 jQuery Foundation and other contributors

<http://jquery.com/>

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the Software), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

## 12.16.7 JQuery Marquee

---

The copyright and permission notices of JQuery Marquee are described below.

MIT License

Copyright (c) 2017 Aamir Afridi <http://www.aamirafri.com>

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

## 12.16.8 JQuery UI

---

The copyright and permission notices of JQuery UI are described below.

Copyright OpenJS Foundation and other contributors, <https://openjsf.org/>

This software consists of voluntary contributions made by many individuals. For exact contribution history, see the revision history available at <https://github.com/jquery/jquery-ui>

The following license applies to all parts of this software except as documented below:

====

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the Software), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

====

Copyright and related rights for sample code are waived via CC0. Sample code is defined as all source code contained within the demos directory.

CC0: <http://creativecommons.org/publicdomain/zero/1.0/>

====

All files located in the node\_modules and external directories are externally maintained libraries used by this software which have their own licenses; we recommend you read them, as their terms may differ from the terms above.

## 12.16.9 CreateJS

---

The copyright and permission notices of CreateJS are described below.

MIT License

Copyright (c) 2018 CreateJS

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

## 12.16.10 Web Font Loader

---

The copyright and permission notices of Web Font Loader are described below.

Web Font Loader Copyright (c) 2010 Adobe Systems Incorporated, Google Incorporated.

Licensed under the Apache License, Version 2.0 (the "License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at <http://www.apache.org/licenses/LICENSE-2.0>

## 12.17 Upgraded Additional Function List

- 12.17.1 Supported hardware
- 12.17.2 Supported controller
- 12.17.3 Functions of GT Designer3
- 12.17.4 Drawing Setting
- 12.17.5 GOT functions

This section explains functions added by upgraded GT Designer (GOT2000).

The following shows the version of the system application that GT Designer 3 of each version supplies.

GT Designer3 version	System application version	BootOS version	CoreOS version	Version and revision date of this manual	
1.100E	01.00.***	A	-	SH-081220ENG-A	September 2013
1.104J	01.01.***	C	-	SH-081220ENG-B	November 2013
1.108N	01.02.***	• GT27: D • GT23: D • GT21: B	D	SH-081220ENG-C	January 2014
1.109P	01.02.***	• GT27: D • GT23: D • GT21: B	D	SH-081220ENG-D	April 2014
1.110Q	01.02.***	• GT27: D • GT23: D • GT21: B	D		
1.111R	01.02.***	• GT27: D • GT23: D • GT21: C • GS21: C	D		
1.112S	• GT27: 01.03.*** • GT25: 01.03.*** • GT23: 01.03.*** • GT21: 01.02.*** • GS21: 01.02.***	• GT27: E • GT25: E • GT23: E • GT21: C • GS21: C	• GT27: E • GT25: B • GT23: D	SH-081220ENG-E	June 2014
1.117X	• GT27: 01.04.*** • GT25: 01.04.*** • GT23: 01.04.*** • GT21: 01.03.*** • GS21: 01.03.***	• GT27: F • GT25: F • GT23: F • GT21: C • GS21: C	• GT27: F • GT25: F • GT23: D

## 12.17.2 Supported controller

---

For the controller supported by each communication driver, refer to the following.

⇒12.2 Correspondence between the setting of [Controller Type] and the controller used

### ■1 Mitsubishi equipment

- ⇒(1) Serial(MELSEC)(formerly Q/L/QnA/A CPU, QJ71C24, LJ71C24)
- (2) Serial(MELSEC)(formerly MELSEC-Q/L/QnA)
- (3) AJ71QC24, MELDAS C6\*
- (4) AJ71C24/UC24
- (5) MELSEC-FX
- (6) MELSEC-WS
- (7) CC-Link(G4)
- (8) MELSERVO-J4,J3,J2S/M,JE(formerly MELSERVO-J4,J3,J2S/M)
- (9) Multidrop (Slave)
- (10) FREQROL 500/700/800,SENSORLESS SERVO
- (11) FREQROL 800
- (12) FREQROL(Batch monitor)
- (13) Laser Displacement Sensor MH11
- (14) Ethernet(MITSUBISHI ELECTRIC), Gateway (formerly Ethernet (MELSEC), Q17nNC, CRnD-700, Gateway)
- (15) Ethernet(FX),Gateway
- (16) Ethernet(MELSERVO), Gateway
- (17) Ethernet(FREQROL), Gateway
- (18) Ethernet(FREQROL(Batch monitor)), Gateway
- (19) Bus A/QnA
- (20) Bus Q
- (21) MELSECNET/H
- (22) CC-Link IE TSN
- (23) CC-Link IE Controller Network
- (24) CC-Link IE Field Network
- (25) CC-Link Ver.2(ID)

For the controllers compatible with GT SoftGOT2000, refer to the following.

⇒GT SoftGOT2000 Version1 Operating Manual

## (1) Serial(MELSEC)(formerly Q/L/QnA/A CPU, QJ71C24, LJ71C24)

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	The connection to Q24DHCCPU-VG is supported.	 SoftGOT2000
01.04.***	<ul style="list-style-type: none"> <li>The driver name has been changed. (Unified with MELSEC-Q/L/QnA.)</li> <li>The connection to RCPUR is supported.</li> <li>The global label is supported.</li> </ul>	 SoftGOT2000
GT27, GT25, GT23: 01.08.*** GT21, GS21: 01.09.***	<ul style="list-style-type: none"> <li>The connection to MELSEC iQ-F is supported.</li> <li>The connection to the Motion CPU (MELSEC iQ-R series) is supported.</li> </ul>	 SoftGOT2000
01.10.***	<ul style="list-style-type: none"> <li>The connection to RnPCPU is supported.</li> <li>The connection to the C Controller module (MELSEC iQ-R series) is supported.</li> </ul>	 SoftGOT2000
01.12.***	The connection to RnENCPU is supported.	
GT27, GT25, GT23: 01.14.*** GT21, GS21: 01.15.***	<ul style="list-style-type: none"> <li>The connection to RnSFCPU is supported.</li> <li>The connection to R64MTCPU is supported.</li> <li>The connection to MR-J4(W)-*B(-RJ) or MR-JE-*B through a motion controller or a simple motion module is supported.</li> </ul>	
GT27, GT25, GT23: 01.15.*** GT21, GS21: 01.16.***	The connection to Q26DHCCPU-LS is supported.	
GT27, GT25, GT23: 01.16.*** GT21, GS21: 01.18.***	The connection to CNC C80 is supported.	
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The redundant system using RCPUR is supported.	
GT27, GT25, GT23: 01.19.*** GT21, GS21: 01.21.***	The connection to MR-J4-GF(-RJ) through a motion controller or a simple motion module is supported.	
GT27, GT25, GT23: 01.20.*** GT21, GS21: 01.22.***	The connection to MR-JE-*BF through a motion controller or a simple motion module is supported.	
GT27, GT25, GT23: 01.21.*** GT21, GS21: 01.23.***	The connection to CR800-R is supported.	
GT27, GT25, GT23: 01.24.*** GT21, GS21: 01.26.***	The connection to R00CPU, R01CPU, or R02CPU is supported.	
GT27, GT25, GT23: 01.25.*** GT21, GS21: 01.27.***	The connection to FR-A800, FR-A800-E, FR-F800, FR-F800-E, or FR-A800-GF through a PLC CPU is supported.	
GT27, GT25, GT23: 01.26.*** GT21, GS21: 01.28.***	<ul style="list-style-type: none"> <li>The connection to SIL2 Process CPU is supported.</li> <li>The connection to FR-E700-NE through a PLC CPU is supported.</li> <li>Automatically switching the monitoring target while the GOT is monitoring the equipment on a different network through the Redundant CPU on a relay station is supported.</li> </ul>	
GT27, GT25, GT23: 01.27.*** GT21, GS21: 01.29.***	The connection to CR800-Q is supported.	
GT27, GT25, GT23: 01.31.*** GT21, GS21: 01.33.***	The connection to FR-A800 Plus (CRN and R2R) through a PLC CPU is supported.	
GT27, GT25, GT23: 01.32.*** GT21, GS21: 01.34.***	The connection to FX5UJ is supported.	
GT27, GT25, GT23: 01.33.*** GT21, GS21: 01.35.***	The connection to FR-A800-GN, FR-E800, or FR-E800-E through a PLC CPU is supported.	
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to FR-A800 Plus (AWH and LC) through a PLC CPU is supported.	
GT27, GT25, GT23: 01.37.*** GT21, GS21: 01.38.***	Monitoring BL or BLS when connecting with FX5U or FX5UC is supported.	
01.43.***	<ul style="list-style-type: none"> <li>The connection to R102WCPU-W is supported.</li> <li>The connection to MR-J5(W)-□B(-RJ) through a Motion controller (Q17nDSCPU) or a Simple Motion module (QD77MS) is supported.</li> </ul>	
01.45.***	The connection to FX5S is supported.	

## (2) Serial(MELSEC)(formerly MELSEC-Q/L/QnA)

Version of communication driver	Added and edited function	Supported models
01.02.***	- (first edition)	 SoftGOT2000
01.03.***	The connection to Q24DHCCPU-VG is supported.	 SoftGOT2000
01.04.***	The driver name has been changed. (Unified with Q/L/QnA/A CPU, QJ71C24, LJ71C24)	 SoftGOT2000

## (3) AJ71QC24, MELDAS C6\*

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

## (4) AJ71C24/UC24

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	 SoftGOT2000

## (5) MELSEC-FX

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.02.***	The connection to FX3GE is supported.	 SoftGOT2000
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	 SoftGOT2000

## (6) MELSEC-WS

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.05.*** GT21, GS21: 01.04.***	The connection to WS0-CPU3 is supported.	 SoftGOT2000

## (7) CC-Link(G4)

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.14.*** GT21, GS21: 01.15.***	The connection to MR-J4(W)-*B(-RJ) or MR-JE-*B through a motion controller or a simple motion module is supported.	 SoftGOT2000
GT27, GT25, GT23: 01.15.*** GT21, GS21: 01.16.***	The connection to Q26DHCCPU-LS is supported.	
GT27, GT25, GT23: 01.19.*** GT21, GS21: 01.21.***	The connection to MR-J4-GF(-RJ) through a motion controller or a simple motion module is supported.	
GT27, GT25, GT23: 01.20.*** GT21, GS21: 01.22.***	The connection to MR-JE-*BF through a motion controller or a simple motion module is supported.	
01.43.***	The connection to MR-J5(W)-□B(-RJ) through a Motion controller (Q17nDSCPU) or a Simple Motion module (QD77MS) is supported.	

## (8) MELSERVO-J4,J3,J2S/M,JE(formerly MELSERVO-J4,J3,J2S/M)

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.02.***	The connection to the MELSERVO-JE series is supported.	 SoftGOT2000
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	 SoftGOT2000
01.06.***	The connection to MR-J4-*A-RJ is supported.	
GT27, GT25, GT23: 01.14.*** GT21, GS21: 01.15.***	The connection to MR-J4-*A-RJ using the indexer positioning operation is supported.	

## (9) Multidrop (Slave)

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	
01.03.***	-	
Models other than GT21: 01.15.*** GT21: 01.16.***	The connection to Q26DHCCPU-LS is supported.	

## (10)FREQROL 500/700/800,SENSORLESS SERVO

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	
01.02.***	The connection to the FR-800 series or the sensorless servo is supported.	
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	
GT27, GT25, GT23: 01.16.*** GT21, GS21: 01.18.***	The connection to FR-B (A700 specification) or FR-B3 (A700 specification) is supported.	
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection to FR-A800 Plus, FR-B (A800 specification), or FR-B3 (A800 specification) is supported.	
GT27, GT25, GT23: 01.18.*** GT21, GS21: 01.20.***	The connection to FR-F800-E is supported.	
GT27, GT25, GT23: 01.33.*** GT21, GS21: 01.35.***	The connection to FR-A800-GN or FR-E800 is supported.	
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to FR-A800 Plus (AWH and LC) is supported.	

## (11)FREQROL 800

Version of communication driver	Added and edited function	Supported models
01.02.***	The connection to the FR-800 series (Automatic connection and the use of the PLC function) is supported.	
01.03.***	-	

Version of communication driver	Added and edited function	Supported models
01.10.***	The connection to the FR-800 series (Automatic connection and the use of the PLC function) is supported.	
GT27, GT25, GT23: 01.16.*** GT21, GS21: 01.18.***	The connection to FR-A800-E is supported.	
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection to FR-A800 Plus, FR-B (A800 specification), or FR-B3 (A800 specification) is supported.	
GT27, GT25, GT23: 01.18.*** GT21, GS21: 01.20.***	The connection to FR-F800-E is supported.	
GT27, GT25, GT23: 01.33.*** GT21, GS21: 01.35.***	The connection to FR-A800-GN or FR-E800 is supported.	
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to FR-A800 Plus (AWH and LC) is supported.	

### (12)FREQROL(Batch monitor)

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.27.*** GT21, GS21: 01.29.***	- (first edition)	
GT27, GT25, GT23: 01.31.*** GT21, GS21: 01.33.***	The connection to FR-A800 Plus (CRN and R2R) is supported.	
GT27, GT25, GT23: 01.33.*** GT21, GS21: 01.35.***	The connection to FR-A800-GN or FR-E800 is supported.	
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to FR-A800 Plus (AWH and LC) is supported.	

### (13)Laser Displacement Sensor MH11

Version of communication driver	Added and edited function	Supported models
01.20.***	The connection to MH11CTMF-N, MH11CTMF-NNA, MH11CTMF-P, and MH11CTMF-PNA is supported. (Only available to GT2104-PMBDS2)	

### (14)Ethernet(MITSUBISHI ELECTRIC), Gateway (formerly Ethernet (MELSEC), Q17nNC, CRnD-700, Gateway)

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	The connection to Q24DHCCPU-VG is supported.	
GT27, GT25, GT23: 01.04.*** GT21, GS21: 01.03.***	<ul style="list-style-type: none"> <li>The connection to RCPU is supported.</li> <li>The global label is supported.</li> </ul>	
GT27, GT25, GT23: 01.08.*** GT21, GS21: 01.09.***	<ul style="list-style-type: none"> <li>The connection to MELSEC iQ-F is supported.</li> <li>The connection to the Motion CPU (MELSEC iQ-R series) is supported.</li> </ul>	
01.10.***	<ul style="list-style-type: none"> <li>The connection to RnPCPU is supported.</li> <li>The connection to the C Controller module (MELSEC iQ-R series) is supported.</li> </ul>	
01.12.***	The connection to RnENCPU is supported.	
GT27, GT25, GT23: 01.14.*** GT21, GS21: 01.15.***	<ul style="list-style-type: none"> <li>The connection to RnSF CPU is supported.</li> <li>The connection to R64MTCPU is supported.</li> <li>The connection to MR-J4(W)-*B(-RJ) or MR-JE-*B through a motion controller or a simple motion module is supported.</li> </ul>	

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.15.*** GT21, GS21: 01.16.***	The connection to Q26DHCCPU-LS is supported.	  
GT27, GT25, GT23: 01.16.*** GT21, GS21: 01.18.***	The connection to CNC C80 is supported.	
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	<ul style="list-style-type: none"> <li>The redundant system using RCPU is supported.</li> <li>The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)</li> </ul>

GT27, GT25, GT23: 01.31.*** GT21, GS21: 01.33.***	The connection to FR-A800 Plus (CRN and R2R) is supported.	
GT27, GT25, GT23: 01.33.*** GT21, GS21: 01.35.***	The connection to FR-A800-GN or FR-E800-E is supported.	
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to FR-A800 Plus (AWH and LC) is supported.	

### (18)Ethernet(FREQROL(Batch monitor)), Gateway

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.25.*** GT21, GS21: 01.27.***	- (first edition)	 SoftGOT2000
GT27, GT25, GT23: 01.26.*** GT21, GS21: 01.28.***	The connection to FR-E700-NE is supported.	 SoftGOT2000
GT27, GT25, GT23: 01.31.*** GT21, GS21: 01.33.***	The connection to FR-A800 Plus (CRN and R2R) is supported.	
GT27, GT25, GT23: 01.33.*** GT21, GS21: 01.35.***	The connection to FR-A800-GN or FR-E800-E is supported.	
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to FR-A800 Plus (AWH and LC) is supported.	

### (19)Bus A/QnA

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000

Version of communication driver	Added and edited function	Supported models
01.03.***	-	 SoftGOT2000

## (20)Bus Q

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	The connection to Q24DHCCPU-VG is supported.	 SoftGOT2000
01.14.***	The connection to MR-J4(W)-*B(-RJ) or MR-JE-*B through a motion controller or a simple motion module is supported.	
01.15.***	The connection to Q26DHCCPU-LS is supported.	
01.19.***	The connection to MR-J4-GF(-RJ) through a motion controller or a simple motion module is supported.	
01.20.***	The connection to MR-JE-*BF through a motion controller or a simple motion module is supported.	
01.25.***	The connection to FR-A800, FR-A800-E, FR-F800, FR-F800-E, or FR-A800-GF through a PLC CPU is supported.	
01.26.***	The connection to FR-E700-NE is supported.	
01.27.***	The connection to CR800-Q is supported.	
01.31.***	The connection to FR-A800 Plus (CRN and R2R) through a PLC CPU is supported.	
01.33.***	The connection to FR-A800-GN, FR-E800, or FR-E800-E through a PLC CPU is supported.	
01.36.***	The connection to FR-A800 Plus (AWH and LC) through a PLC CPU is supported.	
01.43.***	The connection to MR-J5(W)-□B(-RJ) through a Motion controller (Q17nDSCPU) or a Simple Motion module (QD77MS) is supported.	

## (21)MELSECNET/H

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
01.14.***	The connection to MR-J4(W)-*B(-RJ) or MR-JE-*B through a motion controller or a simple motion module is supported.	
01.15.***	The connection to Q26DHCCPU-LS is supported.	
01.19.***	The connection to MR-J4-GF(-RJ) through a motion controller or a simple motion module is supported.	
01.20.***	The connection to MR-JE-*BF through a motion controller or a simple motion module is supported.	
01.25.***	The connection to FR-A800, FR-A800-E, FR-F800, FR-F800-E, or FR-A800-GF through a PLC CPU is supported.	
01.26.***	Automatically switching the monitoring target while the GOT is monitoring the equipment on a different network through the Redundant CPU on a relay station is supported.	
01.27.***	The connection to CR800-Q is supported.	
01.31.***	The connection to FR-A800 Plus (CRN and R2R) through a PLC CPU is supported.	
01.33.***	The connection to FR-A800-GN, FR-E800, or FR-E800-E through a PLC CPU is supported.	
01.36.***	The connection to FR-A800 Plus (AWH and LC) through a PLC CPU is supported.	
01.43.***	The connection to MR-J5(W)-□B(-RJ) through a Motion controller (Q17nDSCPU) or a Simple Motion module (QD77MS) is supported.	

## (22)CC-Link IE TSN

Version of communication driver	Added and edited function	Supported models
01.30.***	- (first edition)	
01.32.***	<ul style="list-style-type: none"> <li>• Transient transmission is supported.</li> <li>• The connection to MR-J4-B(-RJ) is supported.</li> </ul>	
01.33.***	<ul style="list-style-type: none"> <li>• The connection to FR-A800, FR-A800-GN, FR-F800, or FR-E800-E is supported.</li> <li>• The connection to a Mitsubishi Electric inverter through a PLC CPU is supported.</li> </ul>	
01.36.***	The connection to FR-A800 Plus (AWH and LC) through a PLC CPU is supported.	
01.37.***	<ul style="list-style-type: none"> <li>• Monitoring BL or BLS when connecting with FX5U or FX5UC is supported.</li> <li>• Ring connection is supported.</li> <li>• The connection to R08SFPCPU, R16SFPCPU, R32SFPCPU, or R120SFPCPU is supported.</li> </ul>	
01.40.***	The connection to the C Controller module (MELSEC iQ-R series) is supported.	
01.43.***	The connection to R102WCPU-W is supported.	
01.46.***	<ul style="list-style-type: none"> <li>• The connection to RnCPU, RnENCPU, or RnSFPCPU through the CC-Link IE TSN Motion module (RD78G(H)) is supported.</li> <li>• The connection to RnCPU or RnENCPU through the CC-Link IE TSN Plus master/local module (RJ71GN11-EIP) is supported.</li> </ul>	
01.47.***	The connection to MR-J5(W)-□B(-RJ) through a Motion controller or a Simple Motion module is supported.	
01.49.***	<ul style="list-style-type: none"> <li>• The connection to FR-A800 Plus (GF and E-R2R) through the CC-Link IE TSN Motion module (RD78G(H)) is supported.</li> <li>• The connection to FR-A800 Plus (GF and E-R2R) through the CC-Link IE TSN Plus master/local module (RJ71GN11-EIP) is supported.</li> <li>• The connection to MR-JET-G through the CC-Link IE TSN Plus master/local module (RJ71GN11-EIP) is supported.</li> </ul>	

## (23)CC-Link IE Controller Network

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	The connection to Q24DHCCPU-VG is supported.	 SoftGOT2000
01.04.***	The connection to RCPUI is supported.	
01.10.***	<ul style="list-style-type: none"> <li>The connection to RnPCPU is supported.</li> <li>The connection to the C Controller module (MELSEC iQ-R series) is supported.</li> </ul>	 SoftGOT2000

For the controllers compatible with GT SoftGOT2000, refer to the following.

→GT SoftGOT2000 Version1 Operating Manual

### (1) IAI X-SEL

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.08.*** GT21, GS21: 01.09.***	-	 SoftGOT2000

### (2) IAI robocylinder

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.08.*** GT21, GS21: 01.09.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.33.*** GT21, GS21: 01.35.***	<ul style="list-style-type: none"> <li>• The connection to a CB type controller (PCON-CB, PCON-CFB, ACON-CB, or SCON-CB) is supported.</li> <li>• The connection to the ELECYLINDER EC series is supported.</li> </ul>	 SoftGOT2000
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The driver name has been changed.	
GT27, GT25, GT23: 01.40.*** GT21, GS21: 01.41.***	The connection to the RCON series is supported.	

### (3) AZBIL SDC/DMC

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	-	 SoftGOT2000

### (4) AZBIL DMC50

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.02.***	The connection to AHC2001 is supported.	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	-	 SoftGOT2000

### (5) OMRON SYSMAC

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to CP2E-E, CP2E-S, or CP2E-N is supported.	 SoftGOT2000

### (6) Ethernet(OMRON),Gateway

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

Version of communication driver	Added and edited function	Supported models
01.06.***	-	
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to CP2E-N is supported.	

### (7) Ethernet(OMRON NJ/NX), Gateway

Version of communication driver	Added and edited function	Supported models
01.20.***	The connection to the NJ series (NJ501-□□□□, NJ301-□□□□, and NJ101-□□□□) is supported.	
01.22.***	The connection using the CJ series EtherNet/IP unit (CJ1W-EIP21) is supported.	
GT27, GT25, GT23: 01.25.*** GT21, GS21: 01.27.***	<ul style="list-style-type: none"> <li>The driver name has been changed.</li> <li>The connection to the NX series (NX1P2-□□□□□□) is supported.</li> </ul>	
01.48.***	The driver name has been changed.	

### (8) OMRON THERMAC/INPANEL NEO

Version of communication driver	Added and edited function	Supported models
01.00.***	-(first edition)	
01.03.***	-	
GT27, GT25, GT23: 01.15.*** GT21, GS21: 01.16.***	-	

### (9) OMRON Digital Temperature Controller

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.19.*** GT21, GS21: 01.21.***	The connection to the THERMAC NEO series (E5AN-H, E5CN-H, E5EN-H, E5CN-HT, E5AN-HT, and E5EN-HT), E5□C series, and THERMAC R series is supported.	
GT27, GT25, GT23: 01.25.*** GT21, GS21: 01.27.***	The connection to the E5□D series is supported.	

### (10) Serial(KEYENCE)(formerly KEYENCE KV-700/1000)

Version of communication driver	Added and edited function	Supported models
01.00.***	-(first edition)	
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	
GT27, GT25, GT23: 01.19.*** GT21, GS21: 01.21.***	<ul style="list-style-type: none"> <li>The driver name has been changed.</li> <li>The connection to the KV-7000 series is supported.</li> </ul>	
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to the KV-8000 series is supported.	

### (11)Ethernet(KEYENCE),Gateway

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.14.*** GT21, GS21: 01.15.***	-	
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	
GT27, GT25, GT23: 01.19.*** GT21, GS21: 01.21.***	The connection to the KV-7000 series is supported.	
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to the KV-8000 series is supported.	

### (12)KOYO KOSTAC/DL

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

### (13)JTEKT TOYOPUC-PC

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

### (14)SHARP JW

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

**(15)SHINKO TECHNOS CONTROLLER**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

**(16)CHINO MODBUS device(formerly CHINO Controllers (MODBUS))**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
01.39.***	The driver name has been changed.	 SoftGOT2000

**(17)TOSHIBA PROSEC T/V**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

**(18)Ethernet(TOSHIBA nv), Gateway**

Version of communication driver	Added and edited function	Supported models
01.12.***	-	 SoftGOT2000

**(19)SHIBAURA MACHINE TCmini(formerly TOSHIBA MACHINE TCmini)**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

Version of communication driver	Added and edited function	Supported models
01.06.***	-	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
01.36.***	The driver name has been changed.	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000

### (20)Panasonic MINAS A4

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
01.03.***	-	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000

### (21)Panasonic MINAS A5

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
01.03.***	-	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000

### (22)PANASONIC MEWNET-FP

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
GT27, GT25, GT23: 01.36.*** GT21, GS21: 01.37.***	The connection to FP0H is supported.	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
GT27, GT25, GT23: 01.40.*** GT21, GS21: 01.41.***	The connection to FP-XH is supported.	

### (23)PANASONIC MEWTOCOL-7

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	- (first edition)	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000

**(24)Ethernet(HITACHI IES), Gateway**

Version of communication driver	Added and edited function	Supported models
01.39.***	- (first edition)	

**(25)HITACHI IES HIDIC H(formerly HITACHI HIDIC H)**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	
01.03.***	-	
01.39.***	The driver name has been changed.	

**(26)HITACHI IES HIDIC H(Protocol2)(formerly HITACHI HIDIC H (Protocol2))**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	
01.03.***	-	
01.39.***	The driver name has been changed.	

**(27)Ethernet(HITACHI), Gateway**

Version of communication driver	Added and edited function	Supported models
01.37.***	- (first edition)	
01.39.***	The connection to the S10VE series is supported.	

**(28)HITACHI S10mini/S10V**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	
01.03.***	-	

### (29)Hirata HNC

Version of communication driver	Added and edited function	Supported models
01.20.***	-	

### (30)FUJI Temperature Controller/Digital Controller(formerly FUJI PXR/PXG/PXH)

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	
01.03.***	-	
GT27, GT25, GT23: 01.23.*** GT21, GS21: 01.25.***	<ul style="list-style-type: none"> <li>The driver name has been changed.</li> <li>The connection to the following temperature controllers is supported: PXF series (PXF4, PXF5, and PXF9) and PUM series (PUMA and PUMB).</li> </ul>	

### (31)FUJI MICREX-F

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	
01.03.***	-	

### (32)FUJI MICREX-SX SPH

Version of communication driver	Added and edited function	Supported models
01.09.***	The connection to MICREX-SX is supported.	
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	-	

### (33)Ethernet(FUJI),Gateway

Version of communication driver	Added and edited function	Supported models
01.09.***	The connection to MICREX-SX is supported.	

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	

### (34) Muratec MPC

Version of communication driver	Added and edited function	Supported models
01.23.***	- (first edition)	

### (35) Muratec MCR

Version of communication driver	Added and edited function	Supported models
01.23.***	- (first edition)	

### (36) YASKAWA GL

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	
01.03.***	-	

### (37) YASKAWA CP9200 (H)

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	
01.03.***	-	

### (38) YASKAWA CP9300MS (MC compatible)

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	

Version of communication driver	Added and edited function	Supported models
01.03.***	-	 SoftGOT2000

### (39)YASKAWA MP2000/MP900/CP9200SH

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.08.*** GT21, GS21: 01.09.***	-	 SoftGOT2000

### (40)Ethernet(YASKAWA),Gateway

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.14.*** GT21, GS21: 01.15.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	 SoftGOT2000

### (41)Ethernet(YASKAWA MP3000), Gateway

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.14.*** GT21, GS21: 01.15.***	The connection to YASKAWA MP3000 series is supported.	 SoftGOT2000
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	 SoftGOT2000

### (42)Ethernet(YASKAWA High Speed Ethernet Server), Gateway

Version of communication driver	Added and edited function	Supported models
01.42.***	- (first edition)	 SoftGOT2000
01.46.***	The connection to the YRC1000micro is supported.	 SoftGOT2000

**(43)YOKOGAWA FA500/FA-M3/STARDOM**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
01.06.***	The FA-M3 series supports the multiple CPU system.	 SoftGOT2000

**(44)YOKOGAWA GREEN/UT100/UT2000/UTAdvanced**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

**(45)Ethernet(YOKOGAWA),Gateway**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
01.06.***	The FA-M3 series supports the multiple CPU system.	 SoftGOT2000
01.17.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	

**(46)RKC SR Mini HG (MODBUS)**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
01.25.***	The connection to the SRJ series (J-TI-A/B) is supported.	
01.36.***	The connection to the PZ series (PZ400/PZ900) and GZ series (GZ400/GZ900) is supported.	

### (47)AB SLC500 AB 1:N connection

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
01.10.***	-	 SoftGOT2000

### (48)AB MicroLogix

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
01.10.***	-	 SoftGOT2000

### (49)Ethernet(AB MicroLogix), Gateway

Version of communication driver	Added and edited function	Supported models
01.26.**	The connection to the AB MicroLogix series via EtherNet/IP is supported.	 SoftGOT2000
01.48.***	The driver name has been changed.	

### (50)AB Control/CompactLogix

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

### (51)Ethernet(AB), Gateway

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.16.*** GT21, GS21: 01.18.***	-	
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	
01.48.***	The driver name has been changed.	

### (52)Ethernet(AB Tag), Gateway

Version of communication driver	Added and edited function	Supported models
01.05.***	The AB native tag is supported.	 SoftGOT2000
01.17.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	
01.45.***	Bit-specified word devices of DINT, REAL, and UDINT data types are supported.	
01.48.***	The driver name has been changed.	

### (53)GE (SNP-X)

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

### (54)Ethernet(LS Industrial Systems XGK), Gateway

Version of communication driver	Added and edited function	Supported models
01.42.***	- (first edition)	 SoftGOT2000

### (55)LS Industrial Systems MASTER-K

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000

Version of communication driver	Added and edited function	Supported models
01.10.***	-	 SoftGOT2000

### (56)MEI Nexgenie

Version of communication driver	Added and edited function	Supported models
01.06.***	-	 SoftGOT2000

### (57)SICK Flexi Soft

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.05.*** GT21, GS21: 01.04.***	The connection to FX3-CPU320002 is supported.	 SoftGOT2000

### (58)SIEMENS S7-300/400

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.05.*** GT21, GS21: 01.04.***	-	 SoftGOT2000

### (59)SIEMENS S7-200

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	  SoftGOT2000
GT27, GT25, GT23: 01.25.*** GT21, GS21: 01.27.***	The connection to the SIMATIC S7-200 SMART series and the SIMATIC S7-200 CN series is supported. (GT21)	  SoftGOT2000

### (60) Ethernet(SIEMENS S7), Gateway

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	  SoftGOT2000
01.03.***	-	  SoftGOT2000
01.17.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	  SoftGOT2000

### (61) Ethernet(SIEMENS OP), Gateway

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	  SoftGOT2000
01.03.***	-	  SoftGOT2000
01.12.***	-	  SoftGOT2000
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	  SoftGOT2000
GT27, GT25, GT23: 01.25.*** GT21, GS21: 01.27.***	The connection to the SIMATIC S7-200 SMART series and the SIMATIC S7-200 CN series is supported. (GT21)	  SoftGOT2000
GT27, GT25, GT23: 01.39.*** GT21, GS21: 01.40.***	<ul style="list-style-type: none"> <li>The connection to the SIMATIC S7-1500 series is supported.</li> <li>The connection to the SIMATIC S7-200 CN series is supported. (GT27, GT25, and GT23)</li> </ul>	  SoftGOT2000

### (62) Ethernet(CC-Link IE Field Network Basic)

Version of communication driver	Added and edited function	Supported models
01.18.***	The CC-Link IE Field Network Basic connection is supported.	  SoftGOT2000
GT27, GT25, GT23: 01.20.*** GT21, GS21: 01.22.***	-	  SoftGOT2000

### (63) Ethernet(SLMP), Gateway

Version of communication driver	Added and edited function	Supported models
01.12.***	-	  SoftGOT2000

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.15.*** GT21, GS21: 01.16.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	 SoftGOT2000
GT27, GT25, GT23: 01.31.*** GT21, GS21: 01.33.***	The connection to the master station on a CC-Link IE TSN network is supported.	

**(64)MODBUS/RTU Master(formerly MODBUS/RTU)**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.19.*** GT21, GS21: 01.21.***	The driver name has been changed.	 SoftGOT2000

**(65)MODBUS/TCP Master, Gateway(formerly MODBUS/TCP, Gateway)**

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	 SoftGOT2000
01.03.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.08.*** GT21, GS21: 01.09.***	-	 SoftGOT2000
GT27, GT25, GT23: 01.17.*** GT21, GS21: 01.19.***	The connection using the GOT Ethernet communication unit is supported. (GT27 and GT25 only)	 SoftGOT2000
GT27, GT25, GT23: 01.19.*** GT21, GS21: 01.21.***	The driver name has been changed.	
GT27, GT25, GT23: 01.26.*** GT21, GS21: 01.28.***	The connection to multiple controllers with unit ID 255 is supported.	

**(66)MODBUS/RTU Slave**

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.19.*** GT21, GS21: 01.21.***	The MODBUS/RTU slave connection is supported.	 SoftGOT2000

**(67)MODBUS/TCP Slave, Gateway**

Version of communication driver	Added and edited function	Supported models
GT27, GT25, GT23: 01.19.*** GT21, GS21: 01.21.***	The MODBUS/TCP slave connection is supported.	 SoftGOT2000

## (68)DeviceNet

Version of communication driver	Added and edited function	Supported models
01.10.***	-	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
01.16.***	The HMS communication module is supported. (Product name: ABCC-M40-DEV, article number: AB6909-C)	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000

## (69)PROFIBUS DP

Version of communication driver	Added and edited function	Supported models
01.10.***	-	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
01.16.***	The HMS communication module is supported. (Product name: ABCC-M40-DPV1, article number: AB6910-C)	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000

## (70)Computer

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
GT27, GT25, GT23: 01.03.*** GT21, GS21: 01.02.***	-	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000

## (71)Ethernet(MICROCOMPUTER)

Version of communication driver	Added and edited function	Supported models
01.00.***	- (first edition)	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
01.03.***	-	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
01.12.***	-	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000
GT27, GT25, GT23: 01.26.***	Specifying a destination module I/O number to be returned from the GOT to the host station is supported.	GT27 GT25 GT23 GT21 GS25 GS21 SoftGOT2000

## 12.17.3 Functions of GT Designer3

### ■1 Functions for the project

Added and edited function	Version corresponding with GT Designer3
- (first edition)	1.100E
The interaction with iQ Works is supported.	1.104J
Project format "*.GTCNV" has been added.	1.108N
Registering device comments or device definitions as a comment group is supported.	1.117X
Importing global labels is supported.	1.118Y
Importing AB native tags is supported.	1.122C
Verifying the items set in each screen (screen property, object, or others) is supported.	1.123D
Labels (GT Designer3) are supported.	1.126G
Assigning a security key is supported.	1.144A
Global labels created with MT Developer2 is supported.	1.155M
The system label Ver.2 is supported.	1.170C
Printing label group data is supported.	1.175H
String-type system labels are supported.	1.185T
Importing labels created on GX Works3, GX Works2, or MT Developer2 as labels (GT Designer3) is supported.	1.195D
Array-type labels (GT Designer3) are supported.	1.215Z
Copying data from a cell in the [Label Group] window to one in Excel (and vice versa) is supported.	1.235V
Outputting the MELSOFT iQ AppPortal information file is supported.	1.235V
The bit specification of word devices for system labels or labels (GT Designer3) is supported.	1.235V
System labels Ver.1 and Ver.2 of the Unicode string type are supported.	1.235V
Global labels of the string type or Unicode string type are supported.	1.235V
String-type AB native tags are supported.	1.235V
Importing OMRON NJ tags is supported.	1.235V
Applying the offset setting to OMRON NJ tags is supported.	1.235V
Importing global labels from a GX Works3 project is supported.	1.235V
Registering the labels (GT Designer3) created from profile (CSP+) data is supported.	1.235V
Importing OPC UA tags is supported.	1.235V
The double-precision real number system labels are supported.	1.235V
The double-precision real number global labels are supported.	1.235V
The global labels of Motion Control Setting Function are supported.	1.235V
The 8-bit or 64-bit labels (GT Designer3) are supported.	1.235V
The 8-bit or 64-bit OMRON NJ tags are supported.	1.235V

### ■2 Functions for editing the screen, figure, and object

Added and edited function	Version corresponding with GT Designer3
- (first edition)	1.100E
<ul style="list-style-type: none"> <li>• The objects support registering the characters (text type [Text]) for a comment group and making the registered comment be automatically referred.</li> <li>• For the following figures, the setting items have been divided into tabs. <ul style="list-style-type: none"> <li>Line, freeform line, rectangle, polygon, circle, and piping</li> </ul> </li> </ul>	1.112S
The copy direction setting is supported for the consecutive copy.	1.130L
Reading 24-bit PNG files is supported.	1.155M
Anchoring a figure or object to align figures and objects is supported.	1.170C
Editing objects with fixed shape frame widths is supported.	1.175H

Added and edited function	Version corresponding with GT Designer3
Customizing screen designs is supported.	1.215Z
Expanding the base screen size is supported.	1.225K
Incrementing the comment group number, comment number, user ID, and move destination ID using the consecutive copy function are supported.	1.235V
Copying a base screen or window screen to a mobile screen is supported.	1.265B

### ■3 Functions for the search and replacement

Added and edited function	Version corresponding with GT Designer3
- (first edition)	1.100E
<ul style="list-style-type: none"> <li>• Device list, text list Report screens have been added as a search target.</li> <li>• Batch edit Report screens have been added as a batch edit target.</li> </ul>	1.104J
Importing and exporting the device batch edit data are supported.	1.108N
Setting the display type in the device batch edit is supported.	1.126G
Displaying the data browser from the [Search/Replace] menu is supported.	1.130L
Listing the OMRON NJ tags in the device list is supported.	1.175H
OMRON NJ tags have been added as a batch edit target.	
The unit numbers and axis numbers have been targeted for the batch edit.	
Searching the whole project at a batch edit is supported.	1.185T
Searching the specified scripts at a batch edit of channel numbers is supported.	
Searching the scripts of a script parts object at a batch edit is supported.	1.195D
The device search is supported.	1.205P
Listing OPC UA tags in the device list is supported.	
OPC UA tags have been added as a batch edit target.	1.215Z
The device search supports exporting the search result data.	
8-bit and 64-bit devices have been added as search targets.	
Listing 8-bit or 64-bit devices in the device list are supported.	1.235V
8-bit and 64-bit devices have been added as a device batch edit.	
[IP Address List] window is supported.	
Displaying a comment (character string) on the data browser is supported.	1.260W

### ■4 Functions for the display

Added and edited function	Version corresponding with GT Designer3
- (first edition)	1.100E
Switching the states of the object displayed on the screen editor is supported.	1.108N
The [Verify Result] window is supported.	1.118Y
The display language switching is supported.	1.122C
The buttons to expand and collapse all attribute items have been added to the property sheet.	1.134Q
Displaying guidelines for a table figure is supported.	1.144A
Displaying guidelines for enlarging or reducing an object is supported.	
[25%] and [Whole Screen] have been added to specify the zoom magnification.	1.165X
Displaying the scroll bar areas for editing the expanded base screens is supported.	1.225K
[IP Address List] window is supported.	1.235V

### ■5 Functions for communication with GOT

Added and edited function	Version corresponding with GT Designer3
- (first edition)	1.100E

Added and edited function	Version corresponding with GT Designer3
The communication between the GOT and a personal computer by the wireless LAN function is supported.	1.108N
Installing CoreOS with a data storage is supported.	
The communication between the GOT and a personal computer via an RCPUCPU is supported.	1.118Y
Writing resource data is supported.	1.165X
The [CSP+ for iQSS Data Write] command has been moved from the [Tools] menu.	
Writing, reading, and verifying data through the Ethernet extended port or Ethernet standard port 2 of the GOT are supported.	1.175H
Writing package data to multiple GOTs in one go is supported.	1.185T

## ■6 Functions for the window display

Added and edited function	Version corresponding with GT Designer3
Displaying errors recorded in the GOT and their causes and corrective actions is supported.	1.130L
The GOT internal device monitor is supported.	1.175H

## ■7 Tools and option

Added and edited function	Version corresponding with GT Designer3
- (first edition)	1.100E
The simulation function supports MT Simulator2.	1.108N
Restructuring the project data when saving the project is supported.	1.112S
Writing iQSS profile data is supported.	1.126G
The simulation function supports GT2705-V.	1.130L
The simulation function supports referring to resource data.	
The simulation function supports GT2104-P.	1.131M
The simulation function supports GT2105-Q.	
Simulating the connection to RnSFPCPU is supported.	1.144A
Simulating the connection to R64MTCPU is supported.	
The [iQSS Profile Data Write] command in the menu is renamed with [CSP+ for iQSS Data Write].	1.150G
The [CSP+ for iQSS Data Write] command has been moved to the [Communication] menu.	1.165X
Disabling IME to specify a device is supported.	
The simulation function supports GT2107-W.	
The simulation function supports using a keyboard in the simulation of GT21.	1.170C
The simulation function supports importing or exporting a free registration list of the device monitor function.	
The simulation function supports GT25-W.	1.175H
The simulation function supports global labels when GX Simulator3 is connected.	1.190H
Specifying CPU numbers and module numbers with devices is supported.	1.215Z
Retaining GOT internal device data at intervals is supported.	
The device monitor of the simulation function supports monitoring of 8-bit and 64-bit devices.	1.235V
The GOT offline monitor is supported.	1.236W
The simulation function supports GT2512-WX and GS21-W-N.	1.250L
Respectively displaying the sizes of GT SoftGOT2000 screen data and project data stored in the storage memory (ROM) and in the operation memory (RAM) is supported.	1.280S

## ■8 Functions for the window display

Added and edited function	Version corresponding with GT Designer3
- (first edition)	1.100E

## ■ 9 Help

Added and edited function	Version corresponding with GT Designer3
- (first edition)	1.100E
Displaying Help with e-Manual Viewer is supported.	1.155M

## ■ 10 Others

Added and edited function	Version corresponding with GT Designer3
GT Designer3 is compatible with Windows8.1.	1.108N
The input assist supports the system label.	
The input assist supports the device definitions for FR-A800, FR-A700, FR-F700, FR-F700P, FR-F700PJ, FR-E700, and sensorless servo.	1.112S
The input assist supports the global label.	1.117X
The input assist supports the device definitions for FR-F800.	
The input assist supports the AB native tag.	1.118Y
The input assist supports the label (GT Designer3).	1.122C
Support for GT Designer3 running on Windows XP Service Pack2 and Windows 2000 has ended.	
Narrowing the search scope of the sample projects by category is supported when a screen is created by utilizing existing data.	1.130L
GT Designer3 is compatible with Windows 10.	1.155M
GT Designer3 is compatible with the Italian version of Windows OSs.	1.165X
The input assist supports the bit specification of word devices for system labels or labels (GT Designer3).	1.170C
The GOT Ethernet setting has been added to the new project wizard.	1.175H
The input assist supports the OMRON NJ tag.	
Editing a sound file by using speech synthesis is supported.	
The graphics setting has been added to the new project wizard.	1.185T
The usability of the screen utilization has been improved.	
Utilizing an add-on project is supported.	1.205P
The input assist supports OPC UA tags.	1.215Z
Specifying CPU numbers and module numbers with devices is supported.	
The input assist supports the device definitions for FR-A800 Plus (CRN and R2R).	1.225K
Notifying a change in the global labels is supported.	
MELSEC iQ-L supports the global label.	1.230Q
The input assist supports the device definitions for MELSEC iQ-L and FR-E800 series.	
Support for GT Designer3 running on Windows XP and Windows Vista has ended.	1.235V
GT Designer3 is compatible with Windows 11.	1.275M
Support for GT Designer3 running on Windows 8.1, Windows 8, and Windows 7 has ended.	1.295H

## 12.17.4 Drawing Setting

### ■ 1 Functions for the edit and settings of the screen

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
- (first edition)	Standard system application	01.00.***	1.100E
Report function • Settings for the report screen are added.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Report</li> <li>Printer (PictBridge)</li> <li>Printer (Serial)</li> </ul>	01.01.***	1.104J
GOT type setting • GT27**-X, GT25**-V, and GT2103-P have been added as a GOT type. • The setup direction setting has been added. • The backlight color setting for GT21 has been added. • The graphics accelerator setting has been added.	Standard system application <ul style="list-style-type: none"> <li>Standard system application</li> <li>Graphic Acceleration Driver (only for using the graphics accelerator)</li> </ul>	01.03.***	1.112S
	CoreOS (only for using the graphics accelerator)	E	
Base screen and window screen • The setting range of the screen number has been changed. (0 to 32767)	Standard system application	01.03.***	1.112S
GOT type setting • The vertical installation setting for GT27, GT25, and GT23 is supported.	Standard system application	01.04.***	1.117X
GOT type setting • GT25**-S and GT2104-R have been added as a GOT type.	Standard system application	01.06.***	1.122C
Report function • The maximum number of settable report screens has been changed to 32. • The maximum number of settable data collection times has been changed to 1000. • The maximum number of settable repeat times has been changed to 999. • The footer is supported. (Not applicable to GT21) • The alarm print is supported. (Not applicable to GT21) • The text print is supported. (Not applicable to GT21)	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Report</li> </ul>	01.10.***	1.130L
GOT type setting • GT2705-V has been added as a GOT type. • Switching between the Simplified Chinese character codes used for the outline font is supported. • A setting to use the easily-distinguishable font for the numeral zero and the capital letter I is supported.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Standard Font</li> <li>Outline Font (Gothic) (Chinese(Simplified))</li> <li>Outline Font (Kaisho) (Chinese(Simplified))</li> </ul>	01.10.***	1.130L
GOT type setting • GT2104-P has been added as a GOT type.	Standard system application	01.11.***	1.131M
Report function • GT21 supports the footer. • GT21 supports the alarm print. • GT21 supports the text print.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Report</li> </ul>	01.12.***	1.134Q
Superimpose window • A setting to close a target window upon switching base screens has been added.	Standard system application	01.12.***	1.134Q
GOT type setting • GT2105-Q has been added as a GOT type.	Standard system application	01.14.***	1.144A
GOT Mobile function • The mobile screen setting has been added.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>GOT Mobile Setting</li> </ul>	01.14.***	1.144A
	CoreOS	L	
GOT type setting • GT2107-W has been added as a GOT type. • Selecting a typeface for the outline font is supported. (Only available to GT2107-W)	Standard system application	01.19.***	1.170C
GOT type setting • GT25**-WX and GT25**-W have been added as a GOT type.	Standard system application	01.20.***	1.175H

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
GOT type setting • The graphics setting has been added.	Standard system application	01.23.***	1.185T
The screen design setting has been added.	Standard system application	01.23.***	1.185T
Report function • The report screen setting dialog has been revamped. • The operation log has been added as an output target. • The file output settings are supported. • The page header and page footer settings are supported.	• Standard system application • Report	01.26.***	1.200J
GOT Mobile function • The setting range of the mobile screen size has been extended.	• Standard system application • GOT Mobile Setting	01.26.***	1.200J
Report function • Saving report files into the network drive is supported.	• Standard system application • Report	01.27.***	1.205P
Customizing screen designs is supported.	Standard system application	01.29.***	1.215Z
GOT type setting • Setting the base screen size expansion is supported.	Base Screen Size Expansion	01.32.***	1.225K
Report function • The maximum number of settable report screens has been changed to 99.	Report	01.32.***	1.225K
Report function • Outputting a report from a Brightek's serial printer is supported. (GT21, GS21)	• Standard system application • Report	01.36.***	1.235V
GOT type setting • GS21**-W-N has been added as a GOT type. • Selecting a typeface for the outline font is supported. (Only available to GS21-W-N)	Standard system application	01.39.***	1.250L
Report function • Process notification device settings have been added.	• Standard system application • Report	01.43.***	1.270G

## ■2 Functions for the common setting

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
-(first edition)	Standard system application	01.00.***	1.100E
Hard copy • Settings for the printer output (PictBridge and serial) are added.	• Standard system application • Printer (PictBridge) • Printer (Serial)	01.01.***	1.104J
KANA-KANJI Conversion • Settings for the Kana-kanji conversion function are added to the GOT environmental settings.	• Standard system application • KANA-KANJI Conversion	01.01.***	1.104J
Wireless LAN function • The wireless LAN setting is added to the GOT setup. • Settings for the wireless LAN are added to the I/F communication setting. • Settings for the wireless LAN are added to the gateway function connection setting. • Settings for the wireless LAN are added to the GOT setting list.	• Standard system application • Wireless LAN • Gateway (server and client) • Gateway (mail) • Gateway (FTP server) • Gateway (FTP client)	01.02.***	1.108N
	BootOS	D	
Comment group • Switching the comment number notations (between decimal and hexadecimal) is supported.	Standard system application	01.02.***	1.108N
User alarm observation • The setting range for the alarm observation cycle has been changed to 0.1 second to 3600 seconds. (GT27 and GT SoftGOT2000)	Standard system application	01.02.***	1.108N
MES interface function • The MES interface function settings have been added.	• Standard system application • MES Interface	01.02.***	1.108N
	BootOS	D	

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
Screen switching/windows (GOT environmental setting) <ul style="list-style-type: none"> <li>The setting to specify the screen number of the window screen to be hidden has been added.</li> <li>The setting to enable screen switching by device while the screen is being touched has been added.</li> </ul>	Standard system application	01.03.***	1.112S
System information (GOT environmental setting) <ul style="list-style-type: none"> <li>The backlight color selection for 3-color control has been added.</li> </ul>	Standard system application	01.03.***	1.112S
Brightness adjustment mode <ul style="list-style-type: none"> <li>The brightness adjustment mode setting has been added to the GOT setup.</li> </ul>	Standard system application	01.03.***	1.112S
	BootOS	E	
POWER LED shutoff <ul style="list-style-type: none"> <li>The POWER LED setting has been added to the GOT setup.</li> </ul>	Standard system application	01.03.***	1.112S
System alarm observation <ul style="list-style-type: none"> <li>Recording global label names is supported.</li> </ul>	Standard system application	01.04.***	1.117X
Script <ul style="list-style-type: none"> <li>The global label is supported.</li> </ul>	Standard system application	01.04.***	1.117X
Backup/restoration <ul style="list-style-type: none"> <li>GT21 supports this function.</li> </ul>	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Backup/restoration</li> </ul>	01.05.***	1.118Y
System alarm observation <ul style="list-style-type: none"> <li>Recording AB native tag names is supported.</li> </ul>	Standard system application	01.05.***	1.118Y
Script <ul style="list-style-type: none"> <li>The AB native tag is supported.</li> </ul>	Standard system application	01.05.***	1.118Y
Script <ul style="list-style-type: none"> <li>Labels (GT Designer3) are supported.</li> </ul>	Standard system application	01.06.***	1.122C
Controller setting <ul style="list-style-type: none"> <li>The buffer memory unit No. switching is supported.</li> </ul>	Standard system application	01.06.***	1.122C
IP filter function <ul style="list-style-type: none"> <li>The IP filter settings have been added to the controller setting.</li> <li>The IP filter settings have been added to the connection settings for the gateway function.</li> </ul>	Standard system application	01.06.***	1.122C
	CoreOS	H	
System launcher <ul style="list-style-type: none"> <li>The system launcher setting has been added to the GOT setup.</li> </ul>	<ul style="list-style-type: none"> <li>Standard system application</li> <li>System launcher</li> </ul>	01.08.***	1.126G
iQSS utility <ul style="list-style-type: none"> <li>The iQSS utility setting has been added to the GOT setup.</li> </ul>	<ul style="list-style-type: none"> <li>Standard system application</li> <li>iQSS utility</li> </ul>	01.08.***	1.126G
User alarm observation <ul style="list-style-type: none"> <li>Unicode has been added as a character code.</li> </ul>	Standard system application	01.08.***	1.126G
Logging <ul style="list-style-type: none"> <li>Unicode has been added as a character code.</li> </ul>	Standard system application	01.08.***	1.126G
Recipe <ul style="list-style-type: none"> <li>Unicode has been added as a character code.</li> </ul>	Standard system application	01.08.***	1.126G
Script <ul style="list-style-type: none"> <li>The following file operation functions are supported. file_getfolderlist, file_unilinedread, #pragma use_character_code unicode</li> <li>The following string operation functions are supported. str_uniscanf, str_uniprintf, str_unistrlen, str_unistrmid, str_lc2uni, str_uni2lc</li> </ul>	Standard system application	01.08.***	1.126G
I/F communication setting <ul style="list-style-type: none"> <li>Assigning a channel number ranging from 5 to 8 to the standard I/F-1 is supported.</li> </ul>	Standard system application	01.08.***	1.126G
Video/RGB input <ul style="list-style-type: none"> <li>A setting to use GT27-R2 is supported.</li> </ul>	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Video/RGB (Object)</li> </ul>	01.10.***	1.130L
	BootOS	N	
User alarm observation <ul style="list-style-type: none"> <li>Printing alarm details is supported. (Not applicable to GT21)</li> </ul>	Standard system application	01.10.***	1.130L

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
Operation log (GOT environmental setting) • A setting to log the previous device value with each touch switch operation has been added.	Standard system application	01.12.***	1.134Q
Comment group • Collectively copying, cutting, and pasting multiple cells are supported.	Standard system application	01.12.***	1.134Q
Script • Setting the execution cycle time in units of 100 ms is supported.	Standard system application	01.12.***	1.134Q
Operation log (GOT environmental setting) • The GOT network interaction function and the GOT Mobile function have been added as the operation log target. • A setting to log operations performed on a GOT Mobile function client has been added.	Standard system application	01.14.***	1.144A
Wireless LAN function • The access point mode has been added as an operation mode.	• Standard system application • Wireless LAN BootOS	01.14.*** D	1.144A
System alarm observation • A setting to monitor errors of a GOT Mobile function client has been added.	Standard system application	01.14.***	1.144A
Controller setting • The setting range of the port number has been changed in the Ethernet setting for the MODBUS/TCP connection (1 to 65535).	Standard system application	01.14.***	1.144A
GOT network interaction function • The GOT network interaction function setting has been added.	• Standard system application • GOT Network Interaction	01.14.***	1.144A
GOT Mobile function • The GOT Mobile function setting has been added.	• Standard system application • GOT Mobile Setting CoreOS	01.14.*** L	1.144A
Logging • The setting dialog has been revamped.	Standard system application	01.15.***	1.150G
Screen switching/windows (GOT environmental setting) • The setting to specify the stacking order of overlap windows has been added. • The setting to disable the touch operation on the window screen that is behind an overlap window has been added.	Standard system application	01.16.***	1.155M
Controller setting • The menu name [Q Redundant] has been changed to [MELSEC Redundant].	Standard system application	01.17.***	1.160S
GOT Mobile function • The ANDON setting has been added.	Standard system application	01.17.***	1.160S
Comment group • Setting Windows fonts is supported.	Standard system application	01.18.***	1.165X
GOT Mobile function • The historical data list display, statistics bar graph, statistics pie graph, scatter graph, and graphical meter are supported.	• Standard system application • GOT Mobile Setting	01.18.***	1.165X
User alarm observation • Setting the device to change the status of an alarm to "Checked" is supported. • Setting the device to notify that the status of an alarm has been changed to "Checked" is supported.	Standard system application	01.19.***	1.170C
Operation log (GOT environmental setting) • The setting to log operations performed on a numerical input or a text input has been added.	Standard system application	01.20.***	1.175H
GOT internal device monitor of the GOT diagnostics function (GOT setup) • The setting to enable the GOT internal device monitor has been added.	Standard system application	01.20.***	1.175H

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
VNC server (GOT setup) • This function is supported by GT2107-W.	• Standard system application • VNC server	01.20.***	1.175H
System launcher (GOT setup) • The setting to display the servo network configuration has been added.	• Standard system application • System Launcher (Basic) • System Launcher (Servo Network)	01.20.***	1.175H
Ethernet interface setting (GOT Ethernet setting) • The IP address settings have been moved to the [GOT IP Address Setting] tab. • The default gateway and other common settings have been moved to the [GOT Ethernet Common Setting] tab. • The IP filter settings have been moved to the [IP Filter Setting] tab.	Standard system application	01.20.***	1.175H
Controller setting • The IP filter settings have been moved to the [GOT Ethernet Setting] window.	Standard system application	01.20.***	1.175H
Barcode (Peripheral setting) • The USB barcode settings have been added.	• Standard system application • Bar Code (USB)	01.20.***	1.175H
I/F communication setting • The Ethernet interface settings have been moved to the [GOT Ethernet Setting] window.	Standard system application	01.20.***	1.175H
Trigger action • Selecting the sound output in the action setting is supported. • Playing the sound files specified in the playlist is supported.	Standard system application	01.20.***	1.175H
Time action • The setting range of the sound file number has been changed to 1 to 500.	Standard system application	01.20.***	1.175H
Hard copy • The setting to use the image file output and the printer output is supported.	Standard system application	01.20.***	1.175H
Script • The OMRON NJ tag is supported.	Standard system application	01.20.***	1.175H
GOT Mobile function • The setting to clear the values of the GOT Mobile devices (VGD and VGB) for the target client upon connection is supported.	• Standard system application • GOT Mobile Setting	01.20.***	1.175H
Sound output function • The maximum number of sound files has been expanded to 500 files. • Settings to play, stop, and mute the sound are supported. • [Message], [Sound Effect], and [Melody] have been added as a sound type.	• Standard system application • Sound Output	01.20.***	1.175H
Sound output function • The WAV file format conversion is supported. • Setting [File No.] in the [Create New Sound File] or [Edit Sound File] dialog is supported.	• Standard system application • Sound Output	01.22.***	1.180N
Operation log (GOT environmental setting) • The operator management has been added as the operation log target.	Standard system application	01.23.***	1.185T
Script • The project script has been added as the screen-related setting to be utilized automatically at the screen utilization.	Standard system application	01.23.***	1.185T
GOT Mobile function • The hard copy function is supported.	• Standard system application • GOT Mobile Setting	01.23.***	1.185T
Recipe • Saving recipe data to the SRAM user area is supported. • The date format setting has been moved to the [Basic] tab.	• Standard system application	01.24.***	1.190Y
Logging • Enabling the SRAM power-failure backup function for a maximum of 20 logging settings is supported.	• Standard system application	01.24.***	1.190Y

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
IP filter function • GT21 supports this function.	Standard system application	01.25.***	1.195D
Comment group • Displaying comments from a comment text file is supported.	Standard system application	01.25.***	1.195D
GOT Mobile function • File manipulations are supported.	• Standard system application • GOT Mobile Setting	01.25.***	1.195D
Controller setting • The channel setting window has been revamped.	Standard system application	01.26.***	1.200J
Operation log (GOT environmental setting) • The file print has been added as an operation log target. • The object operation name settings are supported. • Setting an item to be output using the report function is supported.	Standard system application	01.26.***	1.200J
Barcode (Peripheral setting) • Specifying values as the header or terminator is supported.	• Standard system application • Bar Code (Serial)	01.26.***	1.200J
RFID (Peripheral setting) • Specifying values as the header or terminator is supported.	• Standard system application • RFID	01.26.***	1.200J
Printer (Peripheral setting) • The Ethernet printer setting is supported.	• Standard system application • Printer (ESC/P-R)	01.26.***	1.200J
Hard copy • The Ethernet printer setting is supported.	Standard system application	01.26.***	1.200J
Network drive • The network drive settings have been added to the GOT setup.	• Standard system application • Network Drive	01.27.***	1.205P
Logging • Saving logging files into the network drive is supported.	Standard system application	01.27.***	1.205P
Hard copy • Saving image files into the network drive is supported.	Standard system application	01.27.***	1.205P
Controller setting • [Ethernet Controller Setting] has been renamed to [Connected Ethernet Controller Setting].	-	-	1.210U
Printer (Peripheral setting) • The Ethernet printer setting (PCL5) is supported.	• Standard system application • Printer(PCL5)	01.29.***	1.215Z
Hard copy • The Ethernet printer setting (PCL5) is supported.	Standard system application	01.29.***	1.215Z
Multi-channel • Channel No. 1 to 4 settings are supported for GT SoftGOT2000.	Standard system application	01.29.***	1.215Z
Operation log (GOT environmental setting) • Recording the operator name with the character string stored in the device is supported.	Standard system application	01.32.***	1.225K
8-bit and 64-bit devices are supported.	-	-	1.235V
Controller setting • Displaying the controller and IP address in the tree view when the Ethernet connection is used.	-	-	1.235V
Script • The global labels of Motion Control Setting Function are supported.	Standard system application	01.34.***	1.235V
Operation log (GOT environmental setting) • GT2107-W supports this function.	Standard system application	01.38.***	1.245F
Controller setting • GS21-W-N supports the multidrop (slave) connection.	• Standard system application • Multidrop(Slave)	01.39.***	1.250L

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
Operation log (GOT environmental setting) • GS21-W-N supports this function.	Standard system application	01.39.***	1.250L
VNC server (GOT setup) • GS21-W-N supports this function.	• Standard system application • VNC Server	01.39.***	1.250L
Screen switching/windows (GOT environmental setting) • The setting to output an overlap window via HDMI/RGB has been added.	Standard system application	01.39.***	1.255R
GOT network interaction function • The model selection for the master GOT is supported.	• Standard system application • GOT Network Interaction	01.42.***	1.265B
Mail send function • Setting a DNS server is supported. • Specifying an SMTP server and POP3 server with the host name is supported.	• Standard system application • Gateway (mail)	01.43.***	1.270G
User alarm observation • Outputting alarms (when checked) using the report function is supported.	• Standard system application • Report	01.43.***	1.270G
Kana-Kanji/Pinyin conversion • Entering Simplified Chinese characters using Pinyin conversion is supported.	• Standard system application • Kana-Kanji/Pinyin conversion	01.46.***	1.280S
Hard copy • Outputting PDF format files is supported. • Specifying an output target screen is supported. • Outputting multiple screen images is supported.	• Standard system application • Hard copy PDF output function	01.47.***	1.285X
Backup/restoration • GT SoftGOT2000 (Multiple channels) is supported.	• Standard system application • Backup/restoration	01.47.***	1.285X

### ■3 Functions for the edit and settings of the figure

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
- (first edition)	Standard system application	01.00.***	1.100E
Line, freeform line, rectangle, polygon, circle, and piping • The setting items have been divided into tabs.	Standard system application	01.03.***	1.112S
Text • Registering text to a comment group and converting the text figure to a simple comment display object are supported.	Standard system application	01.04.***	1.117X
Figure • Changing the coordinates of a grouping of figures on the property sheet or toolbar is supported.	Standard system application	01.12.***	1.134Q
Figure • Independently editing each figure of a grouping is supported.	Standard system application	01.14.***	1.144A
Table • The table setting has been added.	Standard system application	01.14.***	1.144A
Figure • The maximum number of characters for a figure name has been changed to 100.	Standard system application	01.23.***	1.185T

### ■4 Functions for the edit and settings of the object

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
- (first edition)	Standard system application	01.00.***	1.100E
Text input • Settings for the KANA-KANJI conversion are added.	• Standard system application • KANA-KANJI Conversion	01.01.***	1.104J
Print object • Settings for the numerical print, bit comment print, and word comment print are added.	• Standard system application • Report	01.01.***	1.104J

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
Object • Selecting the ON display or OFF display is available for displaying and hiding the object.	Standard system application	01.02.***	1.108N
Key code switch • The setting not to specify the character code is supported.	Standard system application	01.02.***	1.108N
Slider • The slider settings have been added.	Standard system application	01.02.***	1.108N
Special function switch • The R motion monitor is supported. • The CNC monitor is supported. • The CNC data I/O is supported. • The CNC machining program edit is supported. • The recipe operation is supported.	Standard system application	01.04.***	1.117X
Key code switch • The key code (FFBFh) for displaying the first alarm is supported.	Standard system application	01.04.***	1.117X
Alarm display (user), Alarm display (system) • Indirectly specifying the display start row is supported. • The setting ranges for the numbers of the displayed rows and digits have been expanded. • Setting items of [Flow all] and [Flow the selected row] have been added. • Externally outputting the alarm status and the number of displayed alarms is supported.	Standard system application	01.04.***	1.117X
Logging • The string has been added as a device type.	Standard system application	01.06.***	1.122C
Historical data list • The string has been added as a device type.	Standard system application	01.06.***	1.122C
Panelmeter • The beginning angle and end angle settings have been added. • The triangle and the inverted triangle have been added as a needle shape. • Specifying the distance from the meter center to the drawing start position of the needle is supported.	Standard system application	01.06.***	1.122C
Special function switch • The system launcher is supported. • The iQSS utility is supported.	Standard system application	01.08.***	1.126G
Key code switch • Unicode has been added as a character code.	Standard system application	01.08.***	1.126G
Text display, text input • Unicode has been added as a character code.	Standard system application	01.08.***	1.126G
Slider • GT21 supports this function.	Standard system application	01.08.***	1.126G
Document display • The setting range of the document ID has been expanded. (1 to 32767) • Specifying the document ID by setting a device is supported.	Standard system application	01.08.***	1.126G
Key code switch • The key code (FFBAh) for starting the sequence program monitor (R ladder) from the alarm display (user) is supported.	Standard system application	01.09.***	1.127H
Special function switch • The motion program editor is supported. • The motion program I/O is supported.	Standard system application	01.10.***	1.130L
Print object • Settings for the text print have been added. (Not applicable to GT21)	• Standard system application • Report	01.10.***	1.130L
Video/RGB display object • Settings for the video/RGB display object have been added.	• Standard system application • Video/RGB (Object)	01.10.***	1.130L
	BootOS	N	

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
Object • Changing the coordinates of a grouping of objects on the property sheet or toolbar is supported.	Standard system application	01.12.***	1.134Q
Object • Independently editing each object of a grouping is supported.	Standard system application	01.14.***	1.144A
Hyperlink • The hyperlink setting has been added.	Standard system application	01.14.***	1.144A
Special function switch • The file management function is supported.	Standard system application	01.15.***	1.150G
Text display, text input • HQ fonts have been added.	Standard system application	01.15.***	1.150G
Special function switch • The CNC monitor 2 is supported. • The drive recorder is supported. • The recipe data operation is supported.	Standard system application	01.16.***	1.155M
Recipe Display (Record List) • The settings for the recipe display (record list) have been added.	Standard system application	01.16.***	1.155M
Graphical Meter • The graphical meter settings have been added.	Standard system application	01.16.***	1.155M
Special function switch • The CC-Link IE Field Network diagnostics is supported.	Standard system application	01.18.***	1.165X
Switch • Setting the offset device for the lamp function is supported.	Standard system application	01.19.***	1.170C
Bit Switch • Setting the offset device for the lamp function is supported.	Standard system application	01.19.***	1.170C
Word Switch • Setting the offset device for the lamp function is supported.	Standard system application	01.19.***	1.170C
Go To Screen Switch • Setting the offset device for the lamp function is supported.	Standard system application	01.19.***	1.170C
Change Station No. Switch • Setting the offset device for the lamp function is supported.	Standard system application	01.19.***	1.170C
Key window display switch • Setting the offset device for the lamp function is supported.	Standard system application	01.19.***	1.170C
Switch • The sound output has been added to the switch action setting.	Standard system application	01.20.***	1.175H
Special function switch • The output destination setting for the hard copy is supported.	Standard system application	01.20.***	1.175H
Text input • The write completion device setting is supported.	Standard system application	01.20.***	1.175H
Document display • The setting to display a PDF file as-is is supported.	• Standard system application • Document Display (PDF)	01.20.***	1.175H
Object • The maximum number of characters for an object name has been changed to 100.	Standard system application	01.23.***	1.185T
Numerical display, numerical input • Indirect specification of the number of decimal places is supported.	Standard system application	01.23.***	1.185T
Document display • The search and bookmark functions for PDF files are supported.	• Standard system application • PDF Search/bookmark Function	01.23.***	1.185T

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
Special function switch • The servo amplifier graph is supported.	Standard system application	01.25.***	1.195D
Script parts • The script parts object settings have been added.	Standard system application	01.25.***	1.195D
Recipe Display (Record List) • GT21 supports this function.	Standard system application	01.25.***	1.195D
Special function switch • The file print is supported.	Standard system application	01.26.***	1.200J
Alarm display (user) • Placing key code switches together with this object is supported.	Standard system application	01.27.***	1.205P
Alarm display (system) • Placing key code switches together with this object is supported.	Standard system application	01.27.***	1.205P
Document display • Selecting a drive to store documents is supported.	• Document Display (Document Converter) • Document Display (PDF)	01.28.***	1.210U
Document display • The setting to display a page by searching for a keyword is supported.	Document Display (PDF)	01.28.***	1.210U
Slider • The setting range of [Knob Width], [Knob Height], [Bar Width], and [Bar Height] of the object on a base screen has been extended.	Standard system application	01.32.***	1.225K
Special function switch • The R motion SFC monitor is supported.	Standard system application	01.33.***	1.230Q
8-bit and 64-bit devices are supported.	-	-	1.235V
Special function switch • The vision sensor monitor is supported.	• Standard system application • Vision Sensor Monitor	01.34.***	1.235V
Special function switch • GT2107-W supports the operation log information. • Drive recorder supports the settings through a Motion module (CC-Link IE TSN).	Standard system application	01.37.***	1.245F
Parts display • Image files (automatic update) have been added as a parts type.	Standard system application	01.37.***	1.245F
Parts movement • [Circle] has been added as a movement method.	Standard system application	01.37.***	1.245F
Special function switch • GS21-W-N supports the operation log information.	Standard system application	01.39.***	1.250L
Special function switch • The sequence program monitor (iQ-F ladder) is supported.	Standard system application	01.39.***	1.255R
Key code switch • The key code (FFC3h) for starting the sequence program monitor (iQ-F ladder) is supported.	Standard system application	01.39.***	1.255R
Special function switch • The servo amplifier graph supports the settings through a Motion module (CC-Link IE TSN).	Standard system application	01.40.***	1.260W
Special function switch • GT SoftGOT2000 supports the system launcher, drive recorder, and servo amplifier graph. • The CC-Link IE TSN/CC-Link IE Field Network diagnostics is supported.	Standard system application	01.42.***	1.265B
Text input • Entering Simplified Chinese characters using Pinyin conversion is supported.	• Standard system application • Kana-Kanji/Pinyin conversion	01.46.***	1.280S
Special function switch • GT SoftGOT2000 (Multiple channels) supports the backup/restoration.	• Standard system application • Backup/restoration	01.47.***	1.285X

## 12.17.5 GOT functions

### ■ 1 Basic functions

#### (1) Utility function

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
- (first edition)	Standard system application	01.00.***	1.100E
The wireless LAN setting is added.	• Standard system application • Wireless LAN	01.02.***	1.108N
	BootOS	D	
The license management for the MES interface function is supported.	BootOS	D	1.108N
The brightness adjustment mode setting has been added.	Standard system application	01.03.***	1.112S
	BootOS	E	
The POWER LED setting has been added.	Standard system application	01.03.***	1.112S
• The operation button has been added to the operation log list screen. • Displaying the operation log screen in a reduced size is supported.	Standard system application	01.03.***	1.112S
The R motion monitor is supported.	• Standard system application • R motion monitor	01.04.***	1.117X
The CNC monitor is supported.	• Standard system application • CNC Monitor	01.04.***	1.117X
The CNC data I/O is supported.	• Standard system application • CNC Data I/O	01.04.***	1.117X
The CNC machining program edit is supported.	• Standard system application • CNC Manufacturing Program Editor	01.04.***	1.117X
The recipe operation is supported.	Standard system application	01.04.***	1.117X
Deleting the label name resolution file is supported.	Standard system application	01.04.***	1.117X
GT21 supports the backup/restoration.	• Standard system application • Backup/restoration	01.05.***	1.118Y
The IP filter setting is supported.	Standard system application	01.06.***	1.122C
	CoreOS	H	
The system launcher setting is supported.	• Standard system application • System launcher	01.08.***	1.126G
The iQSS utility setting is supported.	• Standard system application • iQSS utility	01.08.***	1.126G
The motion program editor is supported.	• Standard system application • Motion Program Editor	01.10.***	1.130L
The motion program I/O is supported.	• Standard system application • Motion Program Input/Output	01.10.***	1.130L
Displaying information on the station connected to the GOT (wireless LAN access point) is supported.	• Standard system application • Wireless LAN	01.14.***	1.144A
	BootOS	T	
The license management for the GOT Mobile function is supported.	• Standard system application • GOT Mobile Setting	01.14.***	1.144A
	CoreOS	L	
The GOT Mobile information is supported.	Standard system application	01.15.***	1.150G
The file manager is supported.	• Standard system application • File Manager	01.15.***	1.150G
The CNC monitor 2 is supported.	• Standard system application • CNC Monitor 2	01.16.***	1.155M
The drive recorder is supported.	• Standard system application • Drive Recorder	01.16.***	1.155M

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
The ANDON connection is supported.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>GOT Mobile Setting</li> </ul>	01.17.***	1.160S
The CC-Link IE Field Network diagnostics is supported.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>CC-Link IE Field Network diagnostics</li> </ul>	01.18.***	1.165X
The system launcher (servo network) is supported.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>System Launcher (Basic)</li> <li>System Launcher (Servo Network)</li> </ul>	01.20.***	1.175H
The GOT Mobile function supports the file manager.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>GOT Mobile Setting</li> </ul>	01.20.***	1.175H
The SRAM management function supports recipe data.	<ul style="list-style-type: none"> <li>Standard system application</li> </ul>	01.24.***	1.190Y
The servo amplifier graph is supported.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Servo amplifier graph</li> </ul>	01.25.***	1.195D
GT21 supports the IP filter settings.	Standard system application	01.25.***	1.195D
The GOT Mobile function supports file manipulations.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>GOT Mobile Setting</li> </ul>	01.25.***	1.195D
The GOT Mobile function supports disconnecting the clients by operating the GOT.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>GOT Mobile Setting</li> </ul>	01.26.***	1.200J
The file print is supported.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>File Print</li> </ul>	01.26.***	1.200J
The network drive settings are supported.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Network Drive</li> </ul>	01.27.***	1.205P
	CoreOS	L	
	BootOS	AK	
File print <ul style="list-style-type: none"> <li>Printing a report file in the network drive is supported.</li> </ul>	<ul style="list-style-type: none"> <li>Standard system application</li> <li>File Print</li> </ul>	01.27.***	1.205P
File manager <ul style="list-style-type: none"> <li>Manipulating the folders and files in the network drive is supported.</li> </ul>	<ul style="list-style-type: none"> <li>Standard system application</li> <li>File Manager</li> </ul>	01.27.***	1.205P
The SRAM management function supports displaying information on the data saved by the internal device retention function.	Standard system application	01.29.***	1.215Z
GT2107-W supports the operation log information window.	Standard system application	01.38.***	1.245F
GS21-W-N supports the VNC server screen.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>VNC Server</li> </ul>	01.39.***	1.250L
GS21-W-N supports the license management screen.	Standard system application	01.39.***	1.250L
GS21-W-N supports the operation log information screen.	Standard system application	01.39.***	1.250L
The CC-Link IE TSN diagnostics is supported.	Standard system application	01.42.***	1.265B
GT SoftGOT2000 supports [ANDON connection] and [GOT Mobile information].	Standard system application	01.42.***	1.265B
GT SoftGOT2000 (Multiple channels) supports the backup/restoration.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Backup/restoration</li> </ul>	01.47.***	1.285X

## (2) Project function

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
-(first edition)	Standard system application	01.00.***	1.100E
The screen gesture function supports the key code (FF91h) for performing the full scale display (100%).	Standard system application	01.01.***	1.104J
The screen gesture function supports the graphics accelerator.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Graphic Acceleration Driver</li> </ul>	01.03.***	1.112S
	CoreOS	E	
Screen switching while the screen is being touched is supported.	Standard system application	01.03.***	1.112S

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
Automatically creating a recipe file (*.G2P) by converting an advanced recipe file (*.G1P) is supported.	Standard system application	01.03.***	1.112S
Assigning a security key is supported.	Standard system application	01.06.***	1.122C
	BootOS	J	
Specifying the unit of the drive free space is supported.	Standard system application	01.17.***	1.160S
The recipe special control is supported.	Standard system application	01.17.***	1.160S
The comment group supports Windows fonts.	Standard system application	01.18.***	1.165X
The operator authentication supports the following settings. • Password requirements • Password expiration prenotification • Password change notification at the next login • Enabling or disabling an operator account	• Standard system application • Operator Authentication	01.20.***	1.175H
The operator authentication supports the sub administrator setting.	• Standard system application • Operator Authentication	01.23.***	1.185T
A setting to display or hide the title bar of a user-created key window is supported.	• Standard system application • Key Window Design Information	01.23.***	1.185T
The operation log function supports recording file print operations.	• Standard system application	01.26.***	1.200J
The hard copy function supports Ethernet printers.	• Standard system application	01.26.***	1.200J
	BootOS	AJ	
Operator authentication • The operator authentication with a USB device is supported.	• Standard system application • Operator Authentication	01.27.***	1.205P
The hard copy function supports Ethernet printers (PCL5).	Standard system application	01.29.***	1.215Z
The operation log function supports recording the operator name substituted by a character string stored in the device.	Standard system application	01.32.***	1.225K
Operator authentication • Saving the password history (up to 5 passwords) set for the operator authentication is supported.	• Standard system application • Operator Authentication	01.34.***	1.235V
Operation log • Recording the change in the password for operator authentication is supported. • Recording the vision sensor monitor at startup is supported.	Standard system application	01.34.***	1.235V
GT2107-W supports the operation log function.	Standard system application	01.38.***	1.245F
GS21-W-N supports the VNC server function.	• Standard system application • VNC Server	01.39.***	1.250L
GS21-W-N supports the operation log function.	Standard system application	01.39.***	1.250L
Standard key windows that support KANA-KANJI conversion are supported.	Standard system application	01.45.***	1.275M
Hard copy • Outputting PDF format files is supported. • Specifying an output target screen is supported. • Outputting multiple screen images is supported.	• Standard system application • Hard copy PDF output function	01.47.***	1.285X
Switching to secure mode for security keys is supported.	Standard system application	01.49.***	1.295H
	BootOS	AD	

### (3) Figures and objects

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
-(first edition)	Standard system application	01.00.***	1.100E
The KANA-KANJI conversion for the text input is supported.	• Standard system application • KANA-KANJI Conversion	01.01.***	1.104J

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
Printing reports is supported.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Report</li> </ul>	01.01.***	1.104J
The slider is supported.	Standard system application	01.02.***	1.108N
Line, freeform line, rectangle, polygon, circle, and piping support the display/hidden control.	Standard system application	01.03.***	1.112S
The objects on the key window support the following fonts. <ul style="list-style-type: none"> <li>[6x8dot]</li> <li>[12dot Standard]</li> <li>[Outline Kaisho]</li> <li>[Outline Gothic]</li> </ul>	Standard system application	01.03.***	1.112S
The document display function supports the graphics accelerator.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Graphic Acceleration Driver</li> </ul>	01.03.***	1.112S
	CoreOS	E	
GT21 supports the slider.	Standard system application	01.08.***	1.126G
The text print is supported. (Not applicable to GT21)	Standard system application	01.10.***	1.130L
GT21 supports the text print.	Standard system application	01.12.***	1.134Q
The table is supported.	Standard system application	01.14.***	1.144A
The hyperlink is supported.	Standard system application	01.14.***	1.144A
GT21 supports the graphical meter.	Standard system application	01.18.***	1.165X
The document display supports the display of a PDF file without conversion to JPEG format.	<ul style="list-style-type: none"> <li>Standard system application</li> <li>Document Display (PDF)</li> </ul>	01.20.***	1.175H
Making the background of a logo text transparent is supported.	Standard system application	01.25.***	1.195D
The parts display supports automatic updates of image files used as the parts.	Standard system application	01.37.***	1.245F
The parts movement supports movement in a circular direction.	Standard system application	01.37.***	1.245F
GT SoftGOT2000 supports the hyperlink.	Standard system application	01.42.***	1.265B

#### (4) Standard font

Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
- (first edition)	Standard font <ul style="list-style-type: none"> <li>Japanese</li> <li>Chinese (Simplified)</li> <li>Chinese (Traditional)</li> </ul>	01.00.***	1.100E
- (first edition)	True Type numerical font	01.00.***	1.100E
The easily-distinguishable font for the numeral zero and the capital letter I is supported.	Standard font <ul style="list-style-type: none"> <li>Japanese</li> <li>Chinese (Simplified)</li> <li>Chinese (Traditional)</li> </ul>	01.10.***	1.130L

## ■2 Extended function

Item	Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
Base screen size expansion	Creating a base screen larger than the GOT screen is supported.	Base Screen Size Expansion	01.32.***	1.225K
Graphics accelerator	The function to smooth the operations of the screen gesture function and the document display function is supported.	Graphic Acceleration Driver	01.03.***	1.112S
		CoreOS	E	
Standard font	- (first edition)	Standard font • Japanese • Chinese (Simplified) • Chinese (Traditional)	01.00.***	1.100E
Outline font (Gothic)	- (first edition)	Gothic • Alphanumeric characters /KANA • Japanese (Kanji) • Chinese (Simplified) • Chinese (Traditional) • Hangul	01.00.***	1.100E
	Character code GBK for Simplified Chinese is supported.	Gothic • Chinese (Simplified)	01.10.***	1.130L
	Character code GB18030-2022 for Simplified Chinese is supported.	Gothic • Chinese (Simplified)	01.50.***	1.300N
	GT21 and GS21 support character code GB18030-2022 for Simplified Chinese.	Gothic • Chinese (Simplified)	01.51.***	1.302Q
Outline font (Square style)	- (first edition)	Kaisho • Alphanumeric characters /KANA • Japanese (Kanji) • Chinese (Simplified) • Chinese (Traditional) • Hangul	01.00.***	1.100E
	Character code GBK for Simplified Chinese is supported.	Kaisho • Chinese (Simplified)	01.10.***	1.130L
	Character code GB18030-2022 for Simplified Chinese is supported.	Kaisho • Chinese (Simplified)	01.50.***	1.300N
	GT21 and GS21 support character code GB18030-2022 for Simplified Chinese.	Kaisho • Chinese (Simplified)	01.51.***	1.302Q
SoftGOT-GOT Link Function	- (first edition)	SoftGOT-GOT Link Function	01.00.***	1.100E
	Under the authorization control of the GOT network interaction function, connecting multiple GT SoftGOT2000 modules to one GOT is supported.	SoftGOT-GOT Link Function	01.14.***	1.144A
	• Synchronization of the built-in memory (SRAM) is supported. • Selecting the timing to synchronize the resource data is supported.	SoftGOT-GOT Link Function	01.33.***	1.230Q
	Selecting the timing to synchronize the project data is supported.	SoftGOT-GOT Link Function	01.36.***	1.240A

Item	Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3
System launcher	The system launcher is supported.	System Launcher	01.08.***	1.126G
	Starting the drive recorder is supported.	System Launcher	01.16.***	1.155M
	Starting the sequence program monitor (R ladder), the R motion monitor, and the CNC monitor 2 is supported.	System Launcher	01.19.***	1.170C
	Starting the system launcher (servo network) is supported.	System Launcher	01.20.***	1.175H
	CR800-R(R16RTCPU) is supported.	System Launcher	01.21.***	1.178L
	Starting the servo amplifier graph is supported.	System Launcher	01.25.***	1.195D
	<ul style="list-style-type: none"> <li>CR800-Q(Q172DSRCPU) is supported.</li> <li>Displaying the product information list and outputting product information to files are supported.</li> </ul>	System Launcher	01.27.***	1.205P
	<ul style="list-style-type: none"> <li>The CC-Link IE TSN connection is supported.</li> <li>RnPSFCPU is supported.</li> </ul>	System Launcher	01.32.***	1.225K
	The CC-Link IE TSN connection is supported.	System Launcher (Servo Network)		
	GT SoftGOT2000 (Multiple channels) is supported.	-	-	1.265B
iQSS utility	The iQSS utility is supported.	iQSS Utility	01.08.***	1.126G
	RCPU is supported.	iQSS Utility	01.20.***	1.175H
	Profile data has been added.	iQSS Utility	01.32.***	1.225K
	FX5U, FX5UC, and FX5UJ are supported.	iQSS Utility	01.45.***	1.275M
Kana-Kanji/Pinyin conversion function (formerly, KANA KANJI conversion function)	KANA-KANJI conversion function is supported.	KANA-KANJI Conversion	01.01.***	1.104J
	The Pinyin conversion function is supported.	Kana-Kanji/Pinyin Conversion	01.46.***	1.280S
Wireless LAN function	Wireless LAN function is supported.	Wireless LAN	01.02.***	1.108N
		BootOS	D	
	The operation mode to make the GOT operate as a wireless LAN access point is supported.	Wireless LAN	01.14.***	1.144A
		BootOS	D	
Sequence program monitor (ladder)	- (first edition)	Sequence Program Monitor • Sequence program monitor (Common)	01.00.***	1.100E
		GOT Platform Library	01.00.***	1.100E
		GOT Function Expansion Library	01.00.***	1.100E

Item	Added and edited function	Version of application/BootOS		Version corresponding with GT Designer3	
Sequence program monitor (iQ-R/iQ-L ladder) (formerly sequence program monitor (iQ-R ladder))	The sequence program monitor (R ladder) is supported.	Sequence Program Monitor • Sequence Program Monitor(R Ladder)	01.09.***	1.127H	
		GOT Platform Library	01.09.***	1.127H	
		GOT Function Expansion Library	01.09.***	1.127H	
		GOT Function Expansion Library (Additional/MELSEC iQ-R)	01.09.***	1.127H	
	Editing programs with the sequence program monitor (R ladder) is supported.	Sequence Program Monitor • Sequence Program Monitor(R Ladder)	01.18.***	1.165X	
		GOT Platform Library	01.18.***	1.165X	
		GOT Function Expansion Library	01.18.***	1.165X	
	The function name has been changed to the sequence program monitor (iQ-R ladder).	Sequence Program Monitor • Sequence Program Monitor(iQ-R Ladder)	01.23.***	1.185T	
		• The function name has been changed to the sequence program monitor (iQ-R/iQ-L ladder) • LHCPU is supported.	Sequence Program Monitor • Sequence Program Monitor (iQ-R/iQ-L Ladder)	01.36.***	1.240A
		Displaying a program that uses a macro type function block that is not protected by the block password is supported.	Sequence Program Monitor • Sequence Program Monitor (iQ-R/iQ-L Ladder)	01.42.***	1.265B
Sequence program monitor (SFC)	- (first edition)	Sequence Program Monitor • Sequence program monitor (SFC)	01.00.***	1.100E	
		GOT Platform Library	01.00.***	1.100E	
		GOT Function Expansion Library	01.00.***	1.100E

# Warranty

---

Please check the following product warranty details before using this product.

## ■1. Gratis Warranty Term and Gratis Warranty Range

If any faults or defects (hereinafter "Failure") found to be the responsibility of Mitsubishi occurs during use of the product within the gratis warranty term, the product shall be repaired at no cost via the sales representative or Mitsubishi Service Company. However, if repairs are required onsite at domestic or overseas location, expenses to send an engineer will be solely at the customer's discretion.

Mitsubishi shall not be held responsible for any re-commissioning, maintenance, or testing on-site that involves replacement of the failed module.

### (1) Gratis Warranty Term

The gratis warranty term of the product shall be for thirty-six (36) months after the date of purchase or delivery to a designated place.

Note that after manufacture and shipment from Mitsubishi, the maximum distribution period shall be six (6) months, and the longest gratis warranty term after manufacturing shall be forty-two (42) months.

The gratis warranty term of repair parts shall not exceed the gratis warranty term before repairs.

### (2) Gratis Warranty Range

- (a) The customer shall be responsible for the primary failure diagnosis unless otherwise specified. If requested by the customer, Mitsubishi Electric Corporation or its representative firm may carry out the primary failure diagnosis at the customer's expense. The primary failure diagnosis will, however, be free of charge should the cause of failure be attributable to Mitsubishi Electric Corporation.
- (b) The range shall be limited to normal use within the usage state, usage methods, and usage environment, etc., which follow the conditions and precautions, etc., given in the instruction manual, user's manual and caution labels on the product.
- (c) Even within the gratis warranty term, repairs shall be charged in the following cases.
  - Failure occurring from inappropriate storage or handling, carelessness or negligence by the user. Failure caused by the user's hardware or software design.
  - Failure caused by unapproved modifications, etc., to the product by the user.
  - When the Mitsubishi product is assembled into a user's device, Failure that could have been avoided if functions or structures, judged as necessary in the legal safety measures the user's device is subject to or as necessary by industry standards, had been provided.
  - Failure that could have been avoided if consumable parts designated in the instruction manual had been correctly serviced or replaced.
  - Replacing consumable parts such as a battery, backlight, and fuse.
  - Failure caused by external irresistible forces such as fires or abnormal voltages, and Failure caused by force majeure such as earthquakes, lightning, wind and water damage.
  - Failure caused by reasons that could not be predicted by scientific technology standards at the time of shipment from Mitsubishi.
  - Any other failure found not to be the responsibility of Mitsubishi or that admitted not to be so by the user.

## ■2. Onerous repair term after discontinuation of production

- (1) Mitsubishi shall accept onerous product repairs for seven (7) years after production of the product is discontinued. Discontinuation of production shall be notified with Mitsubishi Technical Bulletins, etc.
- (2) Mitsubishi shall not accept a request for product supply (including spare parts) after production is discontinued.

## ■3. Overseas service

Overseas, repairs shall be accepted by Mitsubishi's local overseas FA Center.

Note that the repair conditions at each FA Center may differ.

## ■4. Exclusion of loss in opportunity and secondary loss from warranty liability

Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation to:

- (1) Damages caused by any cause found not to be the responsibility of Mitsubishi.
- (2) Loss in opportunity, lost profits incurred to the user by Failures of Mitsubishi products.
- (3) Special damages and secondary damages whether foreseeable or not, compensation for accidents, and compensation for damages to products other than Mitsubishi products.
- (4) Replacement by the user, maintenance of on-site equipment, start-up test run and other tasks.

## ■5. Changes in product specifications

The specifications given in the catalogs, manuals, or technical documents are subject to change without prior notice.

## ■6. Product application

- (1) In using the Mitsubishi graphic operation terminal, the usage conditions shall be that the application will not lead to a major accident even if any problem or fault should occur in the graphic operation terminal device, and that backup and fail-safe functions are systematically provided outside of the device for any problem or fault.
- (2) The Mitsubishi graphic operation terminal has been designed and manufactured for applications in general industries, etc. Thus, applications in which the public could be affected such as in nuclear power plants and other power plants operated by respective power companies, and applications in which a special quality assurance system is required, such as for Railway companies or Public service shall be excluded from the graphic operation terminal applications. In addition, applications in which human life or property could be greatly affected, such as in aircraft, medical, railway applications, incineration and fuel devices, manned transportation equipment, recreation and amusement devices, safety devices, shall also be excluded from the graphic operation terminal. Even for the above applications, however, Mitsubishi Electric Corporation may consider the possibility of an application, provided that the customer notifies Mitsubishi Electric Corporation of the intention, the application is clearly defined and any special quality is not required, after the user consults the local Mitsubishi representative.
