

Auxiliary Power Supply System

50 to 100kVA models

Ensuring High Levels of Safety and Reliability

1. Compact and Lightweight

Size/Weight reduced 34% compared to conventional auxiliary power supply (APS) system

- Dimensions: 1,900×900×500mm(L×W×D)
- Weight: Approx. 640kg
- More compact high-frequency transformer
- Function module adopted

2. High Efficiency

Advanced power device achieving up to 95%* efficiency

- High-efficiency system contributing to energy savings and low operating costs

* Maximum efficiency using AC output only; may vary depending on system configuration and service conditions.

3. Excellent Output Voltage Control

Ensures stable output voltage in response to load changes

- High-speed instantaneous voltage waveform control realizing stable operation even after sudden load changes or short circuits

Specifications for APS (including low-voltage power supply)

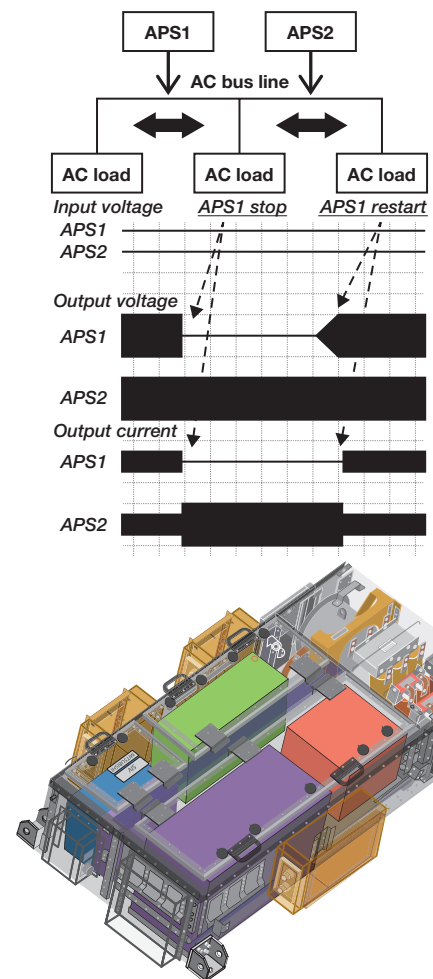

50 to 100kVA model

Normal input voltage: 750VDC	Three-phase AC output: Output voltage 208 to 400VAC $\pm 5\%$ (selectable) Output power 90kVA (rated)
Dimensions (mm): 1,900x900x500 (when roof-mounted) LxWxD	
Weight: Approx. 640kg	DC output: Output voltage 24 to DC110V $\pm 1\%$ (selectable) Output power 10kW (rated)
Cooling system: Cooling fan	
Mounting: Roof-mounted or Under floor	Degree of protection for electrical equipment: IP65
Applicable standards: IEC60077-1 IEC61287-1 EN50121-3-2	Options: (not included in standard specifications) - Single-phase AC output - Power supply to start flat battery - AC output parallel synchronous function - Shore power supply function

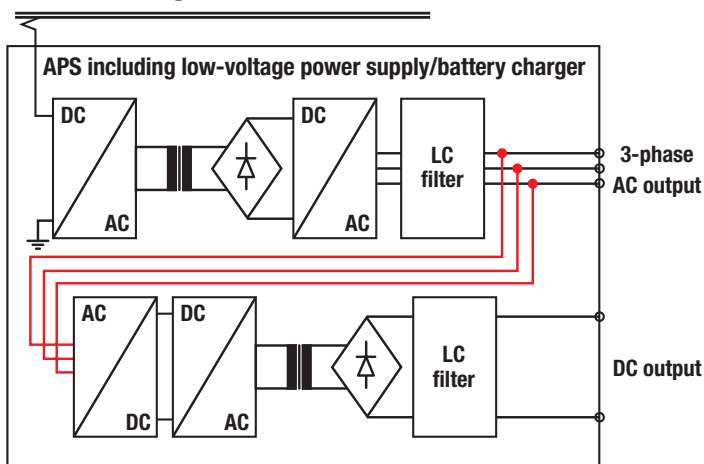

High-redundancy Design (Option)

Prevents interruption of power supply to load and enables simple back-up operation

- Compatible with AC output parallel synchronous operation
→ No interruption of power supply to loads even if one APS unit stops due to a loss of contact between the pantograph and contact wire
