Changes for the Better

FACTORY AUTOMATION

## Low Voltage Air Circuit Breakers <Catalog>

## Mitsubishi Presents the WS Series, Satisfied with the High Demands of the 21st Century Global Market.

Line up ( 630 to 6300A )

## Warranty period and warranty coverage

If any faults or defects (hereinafter "Failure") found to be the responsibility of Mitsubishi Electric occurs during use of the product within the warranty period, the product shall be repaired at no cost via the sales representative or Mitsubishi Electric Sales office. However, if repairs are required on-site at domestic or overseas locations, expenses to send an engineer will be charged.

## 1. Warranty period

The warranty period of the product shall be for twelve (12) months after the date of purchase or delivery to the designated place. Note that after manufacture and shipment from Mitsubishi Electric, the maximum distribution period shall be six (6) months, and the longest warranty period after manufacturing shall be eighteen (18) months.
The warranty period of the repaired parts shall not exceed the warranty period of the original product before repairs.
2. Warranty coverage
(1) The primary failure diagnosis should be performed by users. However, if required by users, Mitsubishi Electric or Mitsubishi Electric Sales office may be able to perform the diagnosis. In that case, for damages caused by any cause found to be the responsibility of Mitsubishi Electric, the diagnosis will be performed at no cost. For details, contact a distributor.
(2) The coverage shall be limited to ordinary use within the usage state, usage methods, usage environment, and other conditions which follow the instructions and precautions given in the instruction manual, user's manual, and caution labels on the product.
(3) Even within the warranty period, repair cost shall be charged for the following cases.
[1] Failure occurring from inappropriate storage or handling, carelessness or negligence by the user. Failure caused by selection of hardware or software design on the user side.
[2] Failure caused by modifications, etc. to the product by the user without any approvals from Mitsubishi Electric.
[3] In case Mitsubishi Electric product is assembled into a user's device, failure that could have been avoided if functions or structures, judged as necessary in the legal safety measures the user's device is subject to or as necessary by industry standards, had been provided.
[4] Failure that could have been avoided if the maintenance described in the user's manual has been performed.
[5] Failure caused by external irresistible forces such as fires or abnormal voltages, and failure caused by natural disasters such as earthquakes, lightning, wind and water damages.
[6] Failure caused by reasons unpredictable based on scientific technology standards at the time of shipment from Mitsubishi Electric.
[7] Any other failure found not to be the responsibility of Mitsubishi Electric or that admitted not to be so by the user. In addition, the warranty applies only to the product delivered. It does not apply to the damage that is caused by the failure of the product.
3. The period to supply the spare parts after discontinuation of production

Mitsubishi Electric shall supply spare parts for five years after discontinuation of production.
After five years, Mitsubishi Electric shall supply spare parts until the spare parts run out of stock.

## Exclusion of loss in opportunity and secondary loss from warranty liability

Regardless of the warranty period, Mitsubishi Electric shall not be liable for compensation to:
(1) Damages caused by any cause found not to be the responsibility of Mitsubishi Electric.
(2) Loss in opportunity, lost profits incurred to the user by failures of Mitsubishi Electric product.
(3) Damages whether foreseeable or not, secondary damages, compensation for accidents, and compensation for damages to products other than Mitsubishi Electric products, caused by exceptional situations.
(4) Compensation for cost occurring secondarily from replacement work by the user, maintenance of on-site equipment and start-up test run and other operations.

## Product applications

(1) When using the products listed in this catalogue, the following conditions must be confirmed and obeyed. The product must be used so that a failure that occurs to the product does not lead to a serious accident. When a damage or failure occurs, the external backup function or fail-safe function must be executed systematically.
(2) The products listed in this catalogue are designed and manufactured as general-purpose products for application to the general industry field. Therefore, the warranty does not apply to the following special uses.
[1] The use that has a significant influence on the public facilities such as nuclear power plants and other power plants of power companies.
[2] The use for railway companies, government offices, etc. that require to build the special quality assurance system.
[3] The use for aerospace equipment, medical equipment, railway equipment, combustion and fuel equipment, passenger vehicles, manned transportation equipment, recreational equipment, safety equipment, and air conditioner for servers and the cooling facilities that are expected to have a significant influence on life, body, and property.
If the products listed in this catalogue are used for the above mentioned special uses, Mitsubishi Electric does not take any responsibility for the quality, performance, and safety of the product, which includes, but is not limited to, default liability, defect liability, quality assurance liability, tort liability, and product liability. However, in case the special quality (beyond general specifications) is not required and the use is a limited purpose and the backup/ fail-safe functions are equipped with the facility, Mitsubishi Electric may determine that the products listed in this catalogue can be guaranteed. For details, consult a distributor or Mitsubishi Electric.

## Safety precautions

- Before using this product, read "Safety precautions" and the user's manual carefully and use it correctly.
- Important safety instructions are given below. Strictly observe the instructions.
- Be sure to instruct the end user with these safety precautions.

## Meaning of indications

| ! DANGER | Incorrect handling of the product will result in a hazardous situation, such as death or serious injury. |
| :---: | :---: |
| A CAUTION | Incorrect handling of the product may result in a hazardous situation according to circumstances. |
| $\bigcirc$ | This means prohibition. Never ignore this instruction. |
| 蕆 | Warning for possible outbreak of a fire under certain conditions. |

## § DANGER

- Do not use the product under the conditions with over-rated current. Otherwise, ground-fault or short circuit fault could occur due to dielectric breakdown, or explosion could occur due to a short circuit protection failure.
- Do not touch terminal area. There is a risk of electrical shock.

## CAUTION

- The electrical work shall be performed by qualified personnel (electrical expert).
- Inspection and maintenance should be performed by qualified personnel (electrical expert). Before performing wiring works, turn off the upstream circuit breaker. Failure to do so may expose you to electrical shock.
- Tighten the terminal screw with the torque specified in the instruction manual. Failure to do so may cause a fire.
- Do not install or store in an abnormal environment with high temperature, high humidity, dust, corrosive gas, vibrations, or shocks, etc. To do so may cause a fire, malfunction of the circuit breaker or make it inoperative.
- Protect the circuit breaker so that foreign particles, such as dust, concrete powder and iron powder, and rain water will not enter the circuit breaker. Failure to do so may cause malfunction or fire.
- When the circuit breaker trips automatically, remove the cause before turning on the handle. Failure to do so may cause an electric shock or a fire.
- Retighten the terminals periodically. Failure to do so may cause a fire.
- Use the product in $50 / 60 \mathrm{~Hz}$. Failure to do so may cause malfunction, inoperativeness or fire.
- Dispose of the product as industrial waste.

## Changes in product specifications

The specifications of the product listed in this catalogue, manuals or technical documents are subject to change without prior notice.

## Best Solution

Through Flexible and Various Options,To be Built up the Suitable Functions.

## Electronic Trip Relay

## Main setting module

1
With interchangeable \& add-on modules, flexible functions built up.

Protection with power from Internal CT The Over current protection and Ground fault protection can work with power from Internal CT, even if the control power source is off. For the Trip indicator LED and the additional functions like EX1/EX2, DP1/DP2, TAL and Network, the control power source is required.

## -Secure protection by actual effective value detection

 For spread of electronic devices such as inverter, the actual effective value detection method is adopted, which is strong against deformed waveform and is detected from each phase independently .

WS relay with ampere meter and fault memory (DP3)

## Network

| CC-Link | Current, Voltage*, Power*, Harmonics*, etc. |
| :--- | :--- |
|  | Tripping cause, Tripping current |
|  | Olarm (PAL, TAL, Self diagnosis, etc.) |
| Breaker status | Spring charge by MD |
|  | On or OFF or Charge state |
|  | Drawout position |
|  | ETR Setting value |

Note*: The VT unit is required to display the measured data except for the load current.

Communication items

## I/O unit

ON, OFF, Spring charge, Digital input
Option to interface unit I/O unit enables to turn ON/OFF the breaker and the spring charge via network. And by addition of the drawout position switch, it is possible to transmit the breaker drawout position.

## Display unit for Panel board

It has the same function as the breaker display unit (DP1). In the case where the breaker is installed in the panel, it becomes possible to view the measurement information from the outside of the panel board.

Note : The VT unit is required to display the measured data except for the load current.

## VT unit

VT
VT unit enables to measure voltages, electric powers, harmonics and etc.

Electronic Trip Relay type code

## Product Features

## ■ High-Performance High-Reliability The safety of valuable circuits can be securely maintained.

Higher short circuit protection performance by improving breaking capacity

In case of 690V AC, Icu = Ics improved from 50 kA to 65 kA for AE630-SW~AE2000-SWA from 50 kA to 75 kA for AE2000-SW~AE4000-SWA from 50 kA to 85 kA for AE4000-SW~AE6300-SW

Wide coordination range by improving rated short-time withstand current

Icw (1s) improved
from 65 kA to 75 kA for AE2000-SW~AE4000-SWA
from 85 kA to 100 kA for AE4000-SW~AE6300-SW

ICW (1s) (Rated short-time withstand current)

(1) For 600 to 690 VAC , Icw at 1 s is 85 kA
(kA)
Icw

Higher safety by improving insulation performance
Rated impulse withstand voltage (Uimp) for the main circuit is improved from 8 kV to 12 kV .

Uimp (Rated impulse withstand voltage)
$8 \mathrm{kv}>12 \mathrm{kV}$

Higher reliability by High operating durability

## Mechanical

AE-SW series are sharply improved in mechanical durability compared to the former model.

## $\square$ Customer Friendly

## Convenience for Customer

3 sizes

Replacement from the former model (AE-SS)
AE-SS Manufacturing period 1991 ~ 2007

- Due to the same installation dimension and outline dimension, the former model (AE-SS) can be replaced with AE-SW series.

■ For the replacement of Drawout type, the Drawout fames (Cradle) for AE-SS have to be replaced with one for AE-SW.

- AE-SW can be installed to the existing connection bus bar without any special connection kit.
(Except for AE2000-SWA and AE4000-SWA)

Replacement from the old model (AE-S)
AE-S Manufacturing period 1982 ~ 1991
For the replacement from the old model (AE-S), the special adapter for AE-SW is prepared. (It is available for Drawout type only.) For details, please contact us.

## Zero arc space

Arc exhaust to the outside of the breaker is drastically reduced for safer operation.
(For AE630-SW~AE4000-SWA models, 600V AC or less)
(Refer to page 60 : Insulation distance)

## Compact size AE2000-SWA!

The compact AE2000-SWA can reduce the panel size.

## Reverse connection available

Line and Load are not defined on the Main circuit terminals. Therefore, reverse connection is available without any limitation.

## Appearance and Product structure

## Product Specification

## - Specification

(Note 1) This is the Icu value when the bare main body and the external relay are combined.
(Note 2) The number of operating cycles without rated current also includes the number of operating cycles with rated current.
(Note 3) AE2000-SWA, AE4000-SWA and AE4000-SW~AE6300-SW apply for only vertical terminal of connecting terminal.
(Note 4) This value is max. operating cycle for just ACB body without any accessories.
(The max. operating cycles for the accessories like AX, MD, CC, SHT and UVT are half of this value.)
(Note 5) Products with low rating types are available. For AE630-SW low rating types (250A, 315A, 500A), DP3 is not available.

AE 630-SW 3 kinds of products with low rating types are available. 250-275-300-325-350-375-400-425-450-475-500(CT 500A) - 157.5-173.3-189-204.8-220.5-236.3-252-267.8-283.5-299.3-315(СТ 315A) - 125-137.5-150-162.5-175-187.5-200-212.5-225-237.5-250(CT 250A)

AE 2000-SW 2 kinds of products with low rating types are available.
. 800-880-960-1040-1120-1200-1280-1360-1440-1520-1600(CT 1600A) - 625-687.5-750-812.5-875-937.5-1000-1062.5-1125-1187.5-1250(CT 1250A)
$\Gamma$

(Note 6) This value means the instantaneous breaking time at shortcircuit interruption As for accessories (SHT, UVT), refer to page 13 and 14.
(Note 7) 4(HN) means the neutral poles current capacity is $50 \%$ of the rated current, for 4 poles. $4(\mathrm{FN})$ means the neutral poles current capacity is $100 \%$ of the rated current, for 4 poles
(Note 8) () shows the value for 4P FN type.
(Note 9) Marine approval value is 138 kA .
(Note 10) For WM relay, the current setting Ir can be set by 1 A except AE630-SW low rating types "CT315A" and "CT250A". For AE630-SW with "CT315A" and "CT250A", it can be set by 0.1 A
(Note 11) As for selectable connection, please refer to page 13.
(Note 12) These weights include an electronic relay, but don't include other accessories (Note 13) For $600 \sim 690 \mathrm{~V}$ AC, Icw at 1 s is 85 kA
(Note 14) This product is designed on the basis of environment $A$. When used under environment $B$, it might cause electromagnetic interference, and the user would be asked to do countermeasures to reduce these interference.
(Note 15) The number of operating cycles is the guideline for the life of the open/close operation in the standard operation environment. These are not guaranteed values.
(Note 16) This is the guideline for the life of the open/close operation when periodic inspection and maintenance are performed and consumable parts are not replaced
(Note 17) This is the guideline for the life of the open/close operation when periodic inspection and maintenance are performed and consumable parts are replaced.

## Connections

## Over view (AE630~1600-SW, AE2000~3200-SW)

## Manual charging

1

## Motor charging device (MD)

## Option

The closing spring is charged by an electric motor. When the breaker is closed, the spring is charged automatically (ON-charge method). The closing coil (CC) is required to remotely close the breaker, and the shunt trip device is required to remotely open the breaker.

- Manual charging operation is also possible.

Pumping prevention is assured both electrically and mechanically.
As the charging completion contact is separate from the electrical charging circuit, its function in the control scheme can be arranged as desired.

OFF charging method

OFF charging method is also available. The closing spring is charged automatically when the breaker is opened. This is available only by externally connecting $b$ contact (AXb) of the auxiliary switch to the motor charging circuit in series. In case of DC power supply, please use high capacity auxiliary switch (HAX).

The closing spring is charged by the manual charging handle. The breaker is closed when the ON button is pressed, and opened when the OFF button is pressed.

When the closing spring is completely charged, the charging indicator will show "CHARGED".

- Please close the breaker after the charging indicator turned to "CHARGED".
- The indicator shows the ON or OFF state of the main contacts.
- The breaker cannot be closed while the OFF button is being pressed. (Safety design)

OFF lock is enabled by padlock (See P9, P19) as standard.

Polarity of DC circuit use

Motor charging rating

| Rated voltage (V) | Applicable voltage range (V) | Applied voltage (V) | Inrush |  | Steady current <br> (A) | Charging time (s) | Criterion for power requirement (VA, W) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Current [Peak value] <br> (A) | time (s) |  |  |  |
| 24DC | 18~26.4 | 24 | 22 | < 0.4 | 6 | $\leq 5$ |  |
| 48DC | 36 ~ 52.8 | 48 | 14 | $<0.4$ | 3 |  |  |
| AC/DC | $85 \sim 137.5$ | 100 | 10(10) | $\begin{aligned} & \mathrm{AC}:<0.45 \\ & \mathrm{DC}:<0.25 \\ & \hline \end{aligned}$ | 3(4) |  | 700 |
| 100-125 |  | 125 | 12(12) |  | 3(4) |  | 1000 |
| AC/DC | 170 ~ 275 | 200 | 5(7) | $\begin{aligned} & \mathrm{AC}:<0.45 \\ & \mathrm{DC}:<0.25 \\ & \hline \end{aligned}$ | 1(2) |  | 700 |
| 200-250 |  | 250 | 6(8) |  | 1(2) |  | 1000 |

Values in parentheses show values for AE4000-SWA 4 pole and AE4000-SW ~ AE6300-SW.
We cannot manufacture AE4000-SWA 4 pole and AE4000-SW ~ AE6300-SW in 24 V DC and 48V DC rating.
These values are for reference, not guaranteed values. Common use for 50 and 60 Hz in AC.

Charging completion contact rating

| Voltage (V) | Current (A) |  |  |
| :---: | :---: | :---: | :---: |
|  | Resistance load | Inductive load |  |
| AC <br> $(50 / 60 \mathrm{~Hz})$ | 460 | 5 | 2.5 |
|  | 250 | 10 | 10 |
|  | 125 | 10 | 10 |
| DC | 250 | 3 | 1.5 |
|  | 125 | 10 | 6 |
|  | 30 | 10 | 10 |

## Accessories (for breaker unit)

8

## Closing coil (CC)

## Option

2

The closing coil is a device to close the breaker by remote control.

- An interlock to prevent pumping is provided electrically

| Rated voltage (Applicable voltage range) | Operating voltage - Operating inrush current (VA) |  | Closing time (Note1) |
| :---: | :---: | :---: | :---: |
|  | AC | DC |  |
| $\underset{(18 \sim 52.8)}{24-48 \mathrm{VC}}$ | - | 24 V DC 3.0A (100W) | $0.08 \mathrm{~s}$or less |
|  | - | 48V DC 6.0A (200W) |  |
| $100-250 \mathrm{VAC} \cdot \mathrm{DC}$ common (75-275) | 100 V AC 0.7 A ( 100 VA ) | 100 V DC 0.8A (100W) |  |
|  | 250 V AC 1.7A (200VA) | 250 V DC 1.8A (250W) |  |

Note 1) In case of double rating of rated voltage, it is the value for the lower rating. (Example) In case of $24-48 \mathrm{~V}$ DC, it is operating time for 24 V DC
Note 2) After completing closing spring charging, wait for an interval of at least 0.5 After completing closing spring charging, wait for an in
seconds before applying the closing instruction to CC.
Note 3) When closing again after applying voltage to SHT, an interval of at least 0.5 When closing again
Note 4) These values are for reference, not guaranteed values.
Note 5) Common use for 50 and 60 Hz in AC.

- Closing time means time from the initial energization of the closing coil up to the complete closing of the main contacts.
- As CC is one-pulse driven, it is not necessary to insert AXb for burning prevention purposes. Inserting AXb will cause anti-pumping function to be ineffective.

## Shunt trip device (SHT)

Diode rectifier is not used for control source 24~48V DC.

The shunt trip device is a device to open the breaker by remote control. A cut-off switch is included.

| Rated voltage <br> (Applicable voltage range) | Operating voltage • Operating inrush current (VA) |  | Operating |
| :---: | :---: | :---: | :---: |
|  |  |  |  |$|$

Note 1) In case of double rating of rated voltage, it is the value for the lower rating (Example) In case of $24-48 \mathrm{~V} D C$, it is operating time for 24 V DC.
Note 2) Operating time for AE4000-SW~AE6300-SW is 0.05 s or less.
Note 3) These values are for reference, not guaranteed values
Note 4) Common use for 50 and 60 Hz in AC

Diode rectifier is not used for control source 24~48V DC.

## Under voltage trip device (UVT)

This is the device that automatically trips the breaker when the circuit voltage drops below the nominal voltage, and comprises UVT coil and UVT controller. There are 3 kinds of tripping time, INST, 0.5 s and 3.0 s . A trip terminal for forced OFF function is included as standard equipment.

| Rated voltage | Frequency | operating time (time delay) | Pick-up voltage | Drop-out voltage | Trip function | Power consumption |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 100-120V AC | 50/60Hz | $\begin{aligned} & \square \mathrm{Inst}(0.2 \mathrm{~s}) \\ & \square 0.5 \mathrm{~s}(\text { Min. }) \\ & \square 3.0 \mathrm{~s}(\text { Min. }) \end{aligned}$ | 65~85V | 45~70V | With open circuit of DT1,DT2 terminals. | Steady: 20VA <br> Inrush : 200VA <br> $\leqq 0.4 \mathrm{~S}$ |
| 200-240V AC |  |  | 130~170V | 90~140V |  |  |
| $380-460 \mathrm{~V} \mathrm{AC}$ |  |  | 247~323V | 171~266V |  |  |
| 24 V DC |  |  | $15.6 \sim 20.4 \mathrm{~V}$ | 10.8~16.8V |  |  |
| 48 V DC | - |  | 31.2~40.8V | 21.6~33.6V |  | 24 V DC |
| 100-110V DC |  |  | 65~85V | 45~70V |  | (Inush:100VA 515 |
| 120-125V DC |  |  | 78~102V | 54~84V |  |  |

Note1) In case of $380-460 \mathrm{~V} \mathrm{AC}$, the external unit is attached additionally.
Note2) The operating time is a guarantee value when it drops from $85 \%$ or more of rated voltage
Note3) Time delay should be allowed for 1.5 s between applying the voltage to the UVT and closing the breaker.
Note4) If a remote trip function is required, remove the shorting bar (DT1 DT2) and connect a If a remote trip function is required, remove the shorting bar
normally closed switch, rated 0.5 A at 150 V DC across them.
Note5) If a forced OFF function is used, the shorting (signal input to DT1 and DT2) should be held for 0.2 sec . and more
Note6) When an ambient temperature is at $60^{\circ} \mathrm{C}$, this device is installed outside of the ACB body
Note7) The operating time in the above table does not include the operating time of the ACB. Note8) Common use for 50 and 60 Hz in AC .

## OCR alarm (AL)

UVT circuit diagram (In case of 380~460V AC)

OCR alarm (AL) is provided as standard if ETR is equipped. OCR alarm (AL) is the contact (1a) of short-time operation $(30 \mathrm{~ms})$, being output when the breaker is tripped by the electronic trip relay. Two types of automatic reset type (standard) and manual reset type (optional) are available. When ordering, specify either automatic reset or Manual reset.

Switch rating

| Voltage (V) |  | Current (A) |  |
| :---: | :---: | :---: | :---: |
|  | Resistive load | Inductive load |  |
| $\left.\begin{array}{c}\text { AC } \\ (50 / 60 H z\end{array}\right)$ | 240 | 3 | 2 |
|  | 125 | 5 | 3 |
|  | 240 | 0.2 | 0.2 |
|  | 125 | 0.4 | 0.4 |
|  | 30 | 4 | 3 |

Note1) Though the control power supply is unnecessary to activate OCR alarm (AL), the self-holding circuit is necessary since the contac
Note2) This works when tripping occurs in LTD, STD, INST, GFR or ER.
Note3) If any continuous output of OCR alarm (AL) is necessary, use the ip indicator (TI) output contact of the electronic trip relay.
Choose P3, P4 or P5 for power supply type.

OCR alarm (AL) [MRE : Manual reset type]
On the manual reset type (optional), the gray manual reset button on the front side of the breaker will stick out to continuously output OCR alarm (AL) if the breaker is tripped by the electronic trip relay. After tripping, the breaker can not be turned on unless the manual reset button is pressed for resetting.

## Auxiliary switch <br> Standard (AX) • High capacity type (HAX)

This is the contact that remotely indicates the ON or OFF status of the breaker.

6

Switch rating

| Voltage (V) |  | Current (A) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Standard (AX) |  | High capacity type (HAX) |  |
|  |  | Resistive load | Inductive load | oad Resistive load | Inductive load |
| $\begin{array}{\|c\|} \hline A C \\ (50 / 60 \mathrm{~Hz}) \end{array}$ | 250 | 10 | 10 | 10 | 10 |
|  | 125 | 10 | 10 | 10 | 10 |
| DC | 250 | 0.3 | 0.3 | 3 | 1.5 |
|  | 125 | 0.6 | 0.6 | 10 | 6 |
|  | 30 | 10 | 6 | 10 | 10 |
| Maximum contacts |  | 5a5b |  | 5a5b |  |
| Change-over sequence |  | Breaker state |  | a-contact ( NO ) | b-contact ( NC ) |
|  |  | ON |  | ON | OFF |
|  |  | OFF |  | OFF | ON |

The a and b conacts may turn simultaneously to ON instantaneously at the time of changing the contact; Pay attention to the contact state when designing circuits.

- The chattering time at the time of contact ON-OFF is below 0.025 s .

## Accessories (for breaker unit)

## Mechanical interlock (MI)

This is the device to prevent parallel charge of 2 or 3 units of breakers, and it can interlock the breakers mechanically without fail.
All combinations are available among any models from AE630-SW to AE6300-SW.
Please make inquiries about installation to AE4000-SW~AE6300-SW.
Further the interlock is possible among the different connection types or poles, such as fixed type or drawout type, 3 pole or 4 pole.
In combination with electric interlock, the higher safety interlock system can be secured.

- For drawout type, the interlock works at "CONNECTED" position, and in another position the interlock is released, which assures easy maintenance and inspection of the breaker.
- When turning OFF one breaker and then turning ON another breakers, please take an interval 0.5 seconds or more.
- MI for 3 breakers can not be installed by combining with Door Interlock (DI).

## Condenser trip device (COT)

Please prepare by the customer. Refer to Page 15 for the specifications of combined SHT.

## Dust cover (DUC)

## Option

Dust cover prevents the dust or water entering into the panel board from the breaker panel cut. Protection degree is IP54.

## Accessories(for drawout type)

## Drawout interlock (standard equipment)

This is the safety device that prevents insertion and drawout operation. When the breaker is ON, the drawout handle cannot be inserted, and insertion and drawout operation cannot be done unless the OFF button is pressed.

## Position lock (standard equipment)

This is the device that locks automatically the drawout mechanism at "TEST" or "CONNECTED" positions during insertion and drawout operation. When the lock plate is pushed in, lock is released and operation can be continued.

Outline dimensions (reference)

## Padlock

* This padlock should be supplied by customer.

A padlock can be arranged at the lock plate. Thereby, it is possible to prevent the connection position from being changed unnecessarily.
As for outline dimensions of the padlock, please refer to the left figure.

## Operating position of drawout type

## Cell switch (CL)

This is the switch to show the drawout position (CONNECTED, TEST, and DISCONNECTED) of the breaker. An arbitrary combination up to 4 pieces is available.

Note 1: The setting can be changed by customer later.
A preliminary setting of CL at factory shipment is as follows. CL1:1C CL2:1C1D CL3:1C1T1D CL4:2C1T1D

| Switch rating |
| :--- |
| Voltage (V)  Current (A)   <br>  AC Resistive load Inductive load  <br> AC 250 10 10  <br>  125  1.5  <br> DC 250 3 6  <br>  125 10 10  <br>  30 10 Total 4c max.  |

Standard pattern

|  | CL-C | CL-T | CL-D |

| CL1 | 1 | - | - |
| CL2 | 1 | - | 1 |
| CL3 | 1 | 1 | 1 |
| CL4 | 2 | 1 | 1 |

## Shorting b-contact (SBC)

## Option

When moving the breaker from the connected to the test positions, this contact is used to short circuit auxiliary switch (AXb), thus maintaining the correct sequence of operation of the external control circuit. When ordering, SBC with the same number of contacts as auxiliary switches (AXb) will be provided. SBC can be provided for all AX b contacts. At the time of shipment from factory, SBC is already connected to control circuit terminal block.
Only one more crimp terminal can be added on contact, overlapping with SBC's contact on Terminal: 11~51.

Switch rating

| Voltage (V) |  | Current (A) |  |
| :---: | :---: | :---: | :---: |
|  | Resistive load | Inductive load |  |
| AC <br> $(50 / 60 \mathrm{~Hz})$ | 250 | 10 | 2 |

|  | 250 | 0.2 | 0.2 |
|  | 125 | 0.4 | 0.4 |
|  | 30 | 4 | 3 |

Refer to the Min. load range graph in Page 16.

## Lifting hook (HP)

## Option

This is the metal fitting to suspend the main body when the breaker is removed from the drawout cradle. The fixed type breaker is equipped with HP as standard.
This is attached to the left and right sides of the main body to suspend it. One set contains two products.

## Safety shutter (SST)

The safety shutters cover the conductors (cradle side) and prevent contact with them when the breaker is drawn out.

## Safety shutter lock (SST-Lock)

## Option

This kit is used to lock the safety shutters using 2 padlocks (the padlocks to be customer's supply) The safety shutters close when the breakers are drawn out to prevent accidental contact with the main contacts.

## Mis-insertion preventor (MIP)

This prevents other breakers unspecified from inserting into the cradle, and 5 patterns in maximum are available.
Not available for AE4000-SW~AE6300-SW

## Test jumper (TJ)

With the breaker taken out of its cradle, this device enables the breaker to be electrically opened and closed, and the operating sequence to be checked. 3 m cable is equipped as standard shipment.

## Electronic trip relay(Feature)

Several measuring data (current, voltage, power etc) and alarms/can be displayed with this module.Extension module (option)
This module is required to install VT unit, display module and each interface unit.

Load current LED (standard)
This indicator shows the actual current-carrying level.RUN and ERR. LED (standard)
This indicator displays the ETR situation (Run or Error)Trip indicator LED (standard)
This indicator displays the trip cause. (Self-holding type) If output contact for this Trip indicator is required, Power supply module should be selected from P3, P4 or P5

## OCR alarm (AL) (standard)

When tripped by Over current, Ground fault (GFR) and Earth leakage (ER), this device outputs alarm signal.
There are two types of OCR alarms. One is Automatic reset type with 30 ms one pulse output (standard) and the other is Manual reset type with self-holding (optional). For details, refer to Page 16.

Neutral pole overcurrent protection (NP) (standard)
When Harmonics in load current become higher, the current on Neutral pole may exceed the rated current. This Neutral pole overcurrent protection prevents the troubles caused by higher Harmonics.

## Electronic trip relay (ETR) Type designation breakdown

P4: 24-60V DC with output contact P5: 100-240V DC with output contact (SSR)
$-\square$ Neutral CT(NCT)
$\square$ External ZCT

Additional function

(F)Pre-alarm (PAL LED and Current setting dial) (standard) This indicator displays the Pre-Alarm situation when the setting current is exceeded. If output contact for this Prealarm is required, Power supply module should be selected from P3, P4 or P5. And by adding the Optional setting module "AP", 2nd Pre-alarm can be added.

RESET button (standard)
With this Reset button, Trip indicator, Display data like fault cause and fault current and Pre-alarm are reseted. When Power supply module P3, P4 or P5 is equipped, the resetting from Control circuit terminal becomes possible. Additionally, this Reset button provides a lock function of LTD and STD characteristics on the INST testing with Mitsubishi Tester "Y-2005".
(H) TEST terminal (standard)

This Test terminal is used for the field testing of characteristics with Mitsubishi Tester "Y-2005" (refer to Page 36).

| - | Pre-alarm time | Tp | 1/2 TL at IL $\times 1.2$ (after 1/2 TL, PAL contact output turns on.) | $\pm 20 \%$ | - |

The table and the figure include both optional display and MCR.
For WM relay only, when Pre-alarm current lp is set at "OVER", the Ip value becomes equal to "IL x 1.0".
The table includes MCR (option). If MCR is not included, there is no MCR setting position.
*: When used without voltage applied to the control power supply (ETR power supply module) Tsd, li operation time may increase max. 20ms.

■Operating characteristic curve (for generator protection use : WM)

## Electronic trip relay (for special use : WB)

This WB relay is effective for the combination with the external OCR without severely decreasing the breaking capacity.
Actually, if ACB is combined with the external OCR only without WB relay, its breaking capacity comes to be reduced drastically. (e.g. For AE1600-SW, it's reduced to 25kA.)

[^0]■Operating characteristic curve (for special use : WB)

## Electronic trip relay (for protective coordination use : WF)

WF relay incorporates five kinds of LTD characteristics.
Protective coordination with upstream OCRs and/or Fuses can be more easily achieved.

Adjustable setting range

| No. | Setting item | Mark | Adjustable setting range | Accuracy | Factory default value |
| :---: | :---: | :---: | :---: | :---: | :---: |
| G | Current setting | Ir | $0.5 \sim 1.0$ (0.05step) x In (CT rating) LTD pick-up current : 1.15 x Ir | 1.10 x \|r"...Non Pick-up $1.20 \times$ Ir $\ldots$ Pick-up | 1.0 |
| H | LTD time | TL | 1-2-3-4-5-6-8-10-12-15-18s at $\operatorname{lr} \times 4$ | $\pm 30 \%$ ( $1.51 \mathrm{r} \leqq$ Soad current < 41 r ) <br> $\pm 20 \%$ (4lr $\leq 10 a d$ current) | 18 |
| 1 | LTD curve setting | a | 0.02-1-2-3-4 | - | 2 |
| J | STD pick-up current | Isd | $1.5-2-2.5-3-4-5-6-7-8-9-10 \times \mathrm{lr}$ | $\pm 15 \%$ | 10 |
| K | STD time | Tsd | $\frac{0.5-0.4-0.3-0.2-0.1-0.06}{\left(1^{2} \mathrm{t} \text { ON }\right)} \frac{0.06-0.1-0.2-0.3-0.4-0.5 \mathrm{~s}}{\left(1^{2}+\mathrm{OFF}\right)}$ at Isd $\times 1.5$ | $\pm 20 \%$ <br> It operates in the range between 0.04 and 0.08 when the time set at 0.06 s . | 0.5 (12t ON) |
| L | INST/MCR pick-up current | li | AE630-SW~AE1600-SW AE2000-SW~AE3200-SW <br> $\frac{16-12-10-8-6-4-2-2-4-6-8-10-12-16}{\text { (INST) }} \times \operatorname{lr}$ AE4000-SW WF1 | $\pm 15 \%$ | WF1 $\cdots 16$ (INST) |
|  |  |  | AE2000-SWA, AE4000-SWA AE5000-SW $\frac{12-10-8-6-4-2-2-4-6-8-10-12}{\text { (INST) }} \times$ Ir Ir $^{\text {(MCR) }}$ WF2 |  | WF2 $\cdots 12$ (INST) |
|  |  |  | $\text { AE6300-SW } \quad \frac{10-8-6-4-2-2-4-6-8-10}{(\text { INST })} \times \operatorname{lr} \quad \text { WF3 }$ |  | WF3 $\cdots 10$ (INST) |
| N | Pre-alarm current | Ip | Ir $\times 0.68 \sim 1.0$ (0.04step) -OVER | $\pm 5 \%$ | OVER |
| - | Pre-alarm time | Tp | 1/2 TL at Ir 4 (after 1/2 TL, PAL contact output turns on.) | $\pm 30 \%$ ( $1.5 \mid$ \|r三oad current $<41$ r) <br> $\pm 20 \%$ (4\|rミload current) | - |

The table and the figure include both optional display and MCR.
For WF relay, when Pre-alarm current Ip is set at "OVER", the Ip value is "Ir x 1.15".
The table includes MCR (option). If MCR is not included, there is no MCR setting position.

## ■Operating characteristic curve (for protective coordination use : WF)

[LTD curve setting " $\mathrm{a}=0.02$ "]

[LTD curve setting " $\mathrm{a}=3$ "]

current (\% of current setting Ir)
Note 1: LTD operating time tLTD is calculated by to foling equations.
$\operatorname{LLTD}=\frac{(4 / 1.1155)^{\mathrm{a}}-1}{(\mathrm{I} 1.1155 \mathrm{I} \mathrm{r})^{\mathrm{a}-1}} \times T \mathrm{~L} \quad\left(\begin{array}{l}\mathrm{a}=\mathrm{LTD} \text { curve setting } \\ 1 \\ \text { I load current (A) } \\ \text { Ir } \\ =0.5 \sim 1.0 \times \ln (\mathrm{A})\end{array}\right)$
$\mathrm{TL}=1 \sim 18$ (s)
[LTD curve setting " $\mathrm{a}=1$ "]

[LTD curve setting "a=4"]

current (\% of current setting Ir)
Note 2: PAL operating time tpaL is calculated by the following equation.

## Electronic trip relay

## Accessories

## Ground fault protection (GFR)

Option

The ground fault protection (GFR) of several hundred amperes is possible. This function can be selected for trip and alarm (no trip). With an Ig setting of 0.2 or higher, function is possible even without a control power supply. However, a control power supply is required with an $\lg$ setting of 0.1 .
$\left.\begin{array}{|l|c|l|l|c|}\hline \text { Setting item } & \text { Mark } & \text { Adjustable setting range } & \text { Accuracy } & \begin{array}{c}\text { Factory } \\ \text { default value }\end{array} \\ \hline \text { GFR pick-up current } & \operatorname{Ig} & 0.1-0.2-0.3-0.4-0.5-0.6-0.7-0.8-0.9-1.0 \times \ln & \pm 20 \% & 1.0 \\ \hline \text { GFR time } & \operatorname{Tg} & \frac{3-1.5-0.8-0.5-0.3-0.15-<0.1-\leq 0.1-0.15-0.3-0.5-0.8-1.5-3 \mathrm{~s}}{\text { TRIP }} & \pm 20 \% * & 3 \mathrm{ALARM} \text { (TRIP) } \\ (\text { at } 1.5 \times \mathrm{Ig})\end{array}\right)$
*: Operates in the range of 0.04 s to 0.1 s when Tg is set to 0.1 .
Note) Ground fault protection for AE630-SW low rating types (250A, 315A, and 500A) is not available.

## Neutral CT (NCT)

The Neutral CT is used for ground fault protection when the 3 pole breaker is used on a 3 phase 4 wires system and for over current protection on $N$ phase. Please use this CT in combination with ground fault protection (GFR). As for outline dimensions, refer to page 56.
The length of the cable (attached) for NCT is $2 m$.

GFR function block diagram (In case of 4pole breaker)

NCT type name

| NCT type name | ACB type name / CT rating |  |
| :---: | :---: | :---: |
| NCT06 | AE630-SW 630A |  |
| NCT10 | AE1000-SW 1000A |  |
| NCT12 | AE1250-SW 1250A | AE2000-SW 1250A |
| NCT16 | AE1600-SW 1600A | AE2000-SW 1600A |
| NCT20 | AE2000-SWA 2000A | AE2000-SW 2000A |
| NCT25 |  | AE2500-SW 2500A |
| NCT32 |  | AE3200-SW 3200A |
| NCT40 |  | AE4000-SWA 4000A AE4000-SW 4000A |
| NCT50 |  | AE5000-SW 5000A |
| NCT63 |  | AE6300-SW 6300A |

Refer to Outline dimensions in page 56.

## Earth leakage protection (ER)

By combining the ETR with earth leakage protection (ER) and External ZCT, earth leakage protection is possible. Earth leakage protection, earth leakage tripping and earth leakage alarm can
 be selected. Control supply is necessary for this function.

| Setting item | Mark | Adjustable setting range | Accuracy | Factory <br> default value |
| :--- | :--- | :--- | :--- | :---: |
| ER pick-up current | $I \Delta \mathrm{n}$ | $1 \mathrm{~A}-2 \mathrm{~A}-3 \mathrm{~A}-5 \mathrm{~A}-10 \mathrm{~A}$ | 0 <br> $-30 \%$ | 10 A |
| ER time | Te | $\frac{3-1.5-0.8-0.5-0.3-0.15-<0.1-<0.1-0.15-0.3-0.5-0.8-1.5-3 \mathrm{~s}}{\text { TRIP }}$ | $\pm 20 \%^{*}$ | 3 s (TRIP) |
| alarm output | - | TRIP side : Self-holding/ALARM side : Automatic reset | - | TRIP side <br> (Self-holding) |

*: Operates in the range of 0.04 s to 0.1 s when Te is set to 0.1 .

## External ZCT

This option is used to detect several amperes of earth leakage when used in combination with a electronic trip relay that has the earth leakage tripping (ER) option.
Two methods are available. The first is where the all load conductors pass through the ZCT.
The other method uses a smaller ZCT through which the supply transformer's ground wire passes through to the earth.

| ZCT type name | Breaker type name |
| :---: | :---: |
| ZCT163 | AE630-SW ~AE1600-SW 3-pole |
| ZCT323 | AE630-SW $\sim$ AE1600-SW 4-pole <br> AE2000-SW $\sim$ AE3200-SW 3-pole |
| ZCT324 | AE2000-SW ~AE3200-SW 4-pole |

As for outline dimensions refer to page 56. Make a choice of suitable ZCT in comformity to the BUSBAR size.
ZCT for transformer ground wire

| ZT15B | ZT30B | ZT40B | ZT60B | ZT80B | ZT100B |
| :--- | :--- | :--- | :--- | :--- | :--- |

ZCT with primary conductors

| ZCT type name | Breaker type name / Pole |
| :---: | :---: |
| ZTA1200A | AE630-SW / 3P, AE1000-SW / 3P |
| ZTA2000A | AE1250-SW / 3P, AE1600-SW / 3P |
|  | AE2000-SWA / 3P, AE2000-SW / 3P |

ER function block diagram (for load circuit method)

ER function block diagram (transformer ground wire method)

On a circuit containing harmonic content, the zero-phase current transformer (ZCT) of the circuit breaker will be overheated owing to iron loss. Use circuit breakers at a load device leakage current distortion of 5 kHz or less and at 3A or less.

## Electronic trip relay

## Accessories

## 2nd Additional Pre-alarm (AP)

## Option

The Pre-Alarm (1st) function is already installed in standard breaker, the 2nd additional Pre-Alarm function can be installed as option, thereby it is possible to monitor (observer) electric circuit in more detail by 2nd additional Pre-Alarm function.
Note that this optional module unit is not available for WB main setting module.

| Setting item | Mark | Adjustable setting range | Accuracy | Factory default value |
| :---: | :---: | :---: | :---: | :---: |
| 2nd Additional Pre-alarm pick-up current | Ip2 | 0.5-0.6-0.7-0.8-0.84-0.88-0.92-0.96-1.0 $\times$ lu WS | $\pm 10 \%$ WS | 1.0 |
|  |  | 0.5-0.6-0.7-0.8-0.84-0.88-0.92-0.96-1.0 x lL WM | $\pm 5 \%$ WM |  |
| 2nd Additional Pre-alarm time | Tp2 | $\frac{0.9-0.8-0.7-0.6-0.5-0.4-0.3 \times T L}{(\times \mathrm{TL})}-\frac{5-10-15-20-30-40-60 \mathrm{~s}}{(\mathrm{FLAT})}$ | $\pm 20 \%$ | 0.9 (x TL) |

## <Pre-alarm timing chart>

PAL LED starts to blink at time when the actual current exceeds the setting current. Then after it passes a half of LTD time (TL), it starts to light and simultaneously the contact output starts. As for its operating time, refer to the Operating characteristic curves in Page 24, 26, 28 and 30.

## Neutral pole 50\% protection (N5)

When used OA equipment or DC power source that brings the third higher harmonic in 3 phases 4 wires circuit, is sometimes it electrically damages the other peripheral equipments due to the superposition of the third higher harmonic on Neutral pole.
This Neutral Pole 50\% Protection (N5) is useful to protect the other peripheral equipments from such an electrical damage and also to prevent some troubles with the Pre-Alarm function. Neutral pole overcurrent protection (operating at $100 \%$ of rated current) is already equipped with ETR as standard features.
But, if the operation at $50 \%$ of rated current is required on Neutral pole, it becomes available with this optional module unit.
Note that this optional module unit is not available for WB main setting module.

## MCR switch (MCR-SW)

With this MCR switch, at the time of breaker closing from OFF to ON the INST (Instantaneous) characteristic works, and then after breaker is in closed (ON) position the INST characteristic becomes ineffective. This controlling function of INST characteristic is useful for the protection on the short-circuit fault at the time of closing and also for expanding the selective combination with branch breakers after closed.
The factory default setting of "INST/MCR pick-up current setting dial" is usually at "INST", so if the function of this MCR switch is required, the dial should be changed to "MCR".

## Temperature alarm (TAL)

When TAL sensor is installed in the breaker, temperature alarm is operative. When an abnormal main contact temperature is detected, temperature alarm is indicated by LED on main setting module and also the output contact is made energize if power supply with output contact is installed. It is possible to know temperature rising which is caused by wear of main contact because TAL sensor is installed near main contact. When the temperature of main contact goes down to the normal level, temperature alarm turns off automatically.
The addition of extension units allows the temperature measured with TAL sensor to be displayed and transmitted.

## Field test device (Y-2005)

Option

The electronic trip relay can be checked by this field test device when the breaker is at the test

Y-2005 specification

| Test items | LTD, STD, INST, GFR, PAL |
| :--- | :--- |
| Range of signal output | Voltage signal equivalent to $1 \% \sim 2500 \%$ of Rated current In (CT rating) |
| Dimensions | $220 \mathrm{~mm}(\mathrm{~W}) \times 150 \mathrm{~mm}(\mathrm{H}) \times 340 \mathrm{~mm}(\mathrm{D})$ |
| Time counter | $0.000 \sim 999.999 \mathrm{~s}$ |
| Input voltage | $100-240 \mathrm{~V} \mathrm{AC} 50 / 60 \mathrm{~Hz}$ |
| Weight | 4.8 kg |

## Electronic trip relay

## Additional functions

By adding the extension module unit in ETR, additional functions like measuring, display and communication become available.

List of extension unit (Option)

| Name | Type |  |
| :--- | :---: | :--- |
| Extension module | EX1/EX2 | Base module for display and interface function (indispensable) |
| Display module (relay attachment) | DP1 | Display module for ETR |
| Display module (panel attachment) | DP2 | Display module for panel board |
| VT unit | VT | Module for measuring voltage, active power and active energy |
| CC-Link interface unit | BIF-CC | Interface unit for CC-Link |
| MODBUS (RS-485) interface unit | BIF-MD | Interface unit for MODBUS (RS-485) |
| I/O unit | BIF-CON | Module for breaker remote control (Interface unit is required) |
| Drawout position switch | BIF-CL | Switch for detecting the drawout position of the breaker <br> (Interface unit and I/O unit are required.) |

Note: The above extension units are not available for WS relay with DP3.

Electronic trip relay (ETR) Type designation breakdown

## Extension module (EX1/EX2)

This is the base module that provides various additional functions when combined with Display module (DP1 / DP2), Interface unit (BIF-CC / BIF-MD) and VT unit (VT).

1 Diverse measurement elements and high measurement accuracy
High-performance ASIC built into EX1 allows for high measurement accuracy and diverse measurement elements such as load current, voltage, power, and harmonic current.

2 Simple measurement function
Simply select EX2 and the display or interface unit to support simple measurement of and a transmission function for load current. We can suggest the optimal selections for your application.

## 3 Communication function

With the advanced internal communication function of this EX1/EX2 module, it is achieved rapid transmission of data between ETR and Displays or Interface units. Besides, it can be extended the function by connecting with Max. 2 display modules and 1 interface unit in parallel.

## Display module (DP1/DP2)

## Option

This is the module for display and setting of the various information like measured value, trip and alarm status, ETR status for display and output contacts setting etc...

1 Multi display of measuring element
It enables to easily monitor the comparison of each measuring element with its multi display ( 4 phases multi display of load current and voltage) on one screen.

## 2 Two-color back light

Under trip or alarm, back light color changes from green to red automatically, which visually shows an abnormal situation.

## 3 Graphical display

By adopting dot matrix type LCD, graphical display such as bar graph display of load current, harmonic currents and characteristic curve are available.

There are 2 types of display module. One is the ETR attachment type (DP1). The other is the
 panel attachment type (DP2), which can be connected to extension terminals of control circuit with $2 m$ cable. 2 units of display modules (DP1 and DP2) can be attached on one breaker. (As for outline dimensions of DP2, refer to page 57.)

Note;

- Extension module (EX1/EX2) is required.
- VT unit (VT) is required to display the measured data except load current.

## VT unit (VT)

## Option

Using this unit in combination with the extension module (EX1) allows for measurement elements
 such as voltage, power, electric energy, and harmonic current. It also allows for circuit protection by detecting circuit abnormalities on the basis of the measured voltage. The result is detailed support for energy monitoring. (outline dimensions are shown in page 58.)

## Note;

- The length of the cable attached for VT unit is 2 m .

| Protection function | Description |
| :---: | :--- |
| Undervoltage protection (UV) | Monitors the circuit voltage, generating an alarm or tripping the <br> breaker when the voltage drops below the set value. |
| Overvoltage protection (OV) | Monitors the circuit voltage, generating an alarm or tripping the <br> breaker when the voltage exceeds the set value. |
| Voltage unbalance protection (UB) | Monitors the circuit voltage, generating an alarm or tripping the <br> breaker when the voltage unbalance factor exceeds the set value. |

## Electronic trip relay

Network

BIF-CC (CC-Link)

## Interface unit (BIF-CC/BIF-MD)

## Option

These Interface units can expand the future possibility in various communication and Intelligent control.
1 Applicable to various open networks.
These units are applicable to various open network systems such as CC-Link, and MODBUS (RS-485), which can be built in easily.

2 Intelligent control by Multi-data communication
It can be the Intelligent control by Multi-data communication from PLC/SCADA to these interface units. These interface units receive the measurement information, setting values, error information and trip and alarm information from PLC/SCADA.

BIF-MD (MODBUS(RS-485)) 5)) )

The length of the cable for interface unit is 2 m .
Note: In the case of CC-Link.
Note:

- Extension module (EX1/EX2) is required.
- VT unit (VT) is required to transmit the measured data except load current.

## I/O unit (BIF-CON)

The Input \& Output Controlling Unit (BIF-CON) is available for the remote controlling and the remote monitoring of the breaker condition through the various network systems.
With this BIF-CON unit in addition to the Interface Unit, it becomes possible to control the breaker

BIF-CON remotely, like a ON or OFF operations or Spring-charging.

| Function | Description | Note |
| :--- | :--- | :--- |
| Control | Breaker ON operation | 1a contact for Closing coil (CC) |
|  | Breaker OFF operation | 1a contact for Shunt trip device (SHT) <br> (not applicable for 380-500V AC rating) |
|  | Spring charge | 1a contact for Motor charging (MD) |
| Monitor | Digital Input (DI) monitoring | For BIF-CC and BIF-MD, Max. 3 contacts <br> monitoring are available. |

## Drawout position switch (BIF-CL)

## Option

With this Drawout position switch (BIF-CL) in addition to Interface unit and I/O unit (BIF-CON), the remote monitoring of draw-out position becomes available for the breaker draw-out type.

| Function | Description | Note |
| :--- | :---: | :---: |
| Monitor | Breaker Drawout position | Position : Connect or Test or Disconnect |

BIF-CL

Chart of additional functions

## Electronic trip relay

Electronic trip relay circuit diagram

(1) Power supply CT

Energy is supplied for the operation of the overcurrent tripping and ground fault tripping(GFR) function of the electronic trip relay.

## (2) Current sensor coil

The current in each phase flowing through the breaker is detected. An air core coil which has good linearity is adopted.

## (3) Power supply circuit

This part converts power supply CT energy to constant voltage for respective circuits in the ETR.
(4) ASIC

This ASIC ampplifies the signal detected by the current sensor coil and the detected signal of ground fault current which is vector composed of the detected signals of each phase.
(5) Microprocessor

The microprocessor integrates each phase current waveform from the ASIC and performs processing for overcurrent protection and others.
(6) Characteristic setting module

The module for the characteristic setting of the ETR.
(7) Several LEDs

The load current LED gives a figure of current in percent by CT energy.
Trip indicator and pre-alarm are indicated by control power supply.
RUN and ERR. LED indicate breaker's condition by control power supply or ten-odd percent of CT energy.

## (8) Power supply with contact output

This outputs contact signals of fault cause (including pre-alarm) and an other alarms.
A control supply is necessary for this function.

## Setting procedure

1 Prepare a small flat tipped screwdriver.

2 Insert the flat tipped screwdriver into the opening of the ETR cover. Then, lightly turn the screwdriver to the upside as shown in the left figure, and the ETR cover will open.

3 There are two kinds of switches for characteristics setting and for trip indicator reset. They should be used as follows.
(1) Adjustable in steps

Rotary code switch is used. Do not set the switch at points between steps. The setting value is the same when the switch is positioned at the thick line. (Set the switch with a torque of $0.02 \mathrm{~N} \cdot \mathrm{~m}$ or below.)
Note) If the switch is set at points between steps, the characteristics setting value will be decided at either end of steps.
(2) Push-button

This is for temporary operation, and press it with force of 3 N or less.

4 For WS relay with DP3, there is a slide type switch (Frequency selector switch) as the left side picture shows.
(1) Frequency selector switch

Do not set the switch at points between the slide.
When operating the switch, use a flat tipped screwdriver of the following size.

5 When the characteristic is set up, use a device like a field tester, etc to make sure that the required characteristic has been set.

6 At sealing, seal the ETR cover by using the sealing hole at the top of the ETR cover.

___ Internal wiring
_ External wiring (user's wiring)

- Control circuit connecter (drawout type)

## Control circuit terminal block Terminal placement

Fig. 1
UVT controller wiring

| 100-120V AC type <br> 200-240V AC type <br> DC types | $380-460 \mathrm{~V}$ AC type |
| :--- | :--- |
|  |  |

Control circuit

## Recommended crimp-type terminals

for M3.5 screw
(wire size $1.25 \mathrm{~mm}^{2} \sim 2.0 \mathrm{~mm}^{2}$ )

Max. 7.2mm

## Note;

- For the drawout type, the cables should have the length which allow the control circuit terminal block to be moved to the left or right by 5 mm .
- When a coil load is connected in the same control circuit as the ETR, surge absorbers are required to absorb the surge voltage.
- OCR alarm (AL)

The contact output of the OCR alarm (Standard type AL) is the one-pulse output and the output time is $30 \sim 50 \mathrm{~ms}$.
For this reason, this output needs self-holding circuit.

- For Power supply type P3 and P4, the high sensitive relay used in contact output may cause the chattering noise (wrong output of 1 ms level) during ON and OFF operation, depending on the Panel placing condition. When it is used in the quick responsive sequence, the filter circuit of a few milli-second (ms) should be provided or the double reading sampling should be implemented.
- Closing coil (CC)

As CC is one-pulse driven, it is not necessary to insert AXb for burning prevention purposes. Inserting AXb will cause anti-pumping function to be ineffective.

- Under voltage trip device (UVT)

Use the switch that can open and close 150 V DC, 0.5 A for remote trip.
Remote trip terminal has short bar at shipment, so remove it before using this function.
Disconnect the voltage input wires during dielectric testing of main circuit.

- Since some terminals are polarized, the wiring should be done correctly as the polarity shown in the wiring diagram when the control voltage is DC. Auxiliary switch (AX) Standard type has no polarity.
- Alarm reset (Terminal: RS1 and RS2) is available only for Power supply type P3, P4 and P5. For Power supply type P1 and P2, it can not be reset from the Control circuit terminal block (RS1 and RS2).
- Alarm contacts (Terminal : 513~574) are available only for power supply type P3, P4 and P5. For output contacts, refer to page 22 Note2.
- FG (Terminal: P4 ) is the protective earth for power supply (Terminal: P1, P2). It is recommended to use this terminal to reduce surge (M8 screw required).
- Shorting b-contact (SBC)

SBC can be provided for all AX b contacts. At the time of shipment from factory, SBC is already connected to control circuit terminal block. Only one more crimp terminal can be added on contact, overlapping with SBC's contact on Terminal: 11 ~ 51.

## Technical information

## Pre-cautions when making connections

Use M12 screws (made of copper), spring washers, and small washers to connect to the conductors.
Clean the contact surface and securely tighten the screws with a appropriate torque.
The connecting area on main circuit terminal of ACB is different depending on the shape of the ACB's terminal.
Refer to the outline dimensions of P. 45 to P. 55 .
A Appropriate tightening torque

| Screw size | Tightening torque(N•m) |
| :---: | :---: |
| M12 | $45 \pm 5$ |

Please secure insulation distances between the conductors basing on the standard for switchgear assemblies like IEC 61439.

Please use small washer in order that washers don't overlap with each other.

Please tighten screws after checking ACB's terminal and connecting conductor certainly contact with each other. Make sure the conductor doesn't apply the force to ACB's terminal in any direction.

Since fault current flowing through the conductors causes large electromagnetic forces, the conductors should be secured firmly, using the values in the below table as a reference. Max. distance between fixing support and ACB bus bar should be less than 200 mm .

Electromagnetic force in N per 1 m conductor (in the case of three phase short circuit)
(N)

When selecting conductors to be connected to AE breakers, ensure that they have a sufficient current capacity. Refer to the right table.

Conductor Size(IEC 60947-1; Ambient Temp. $40^{\circ} \mathrm{C}$, Open air)

| Rated current Max.(A) | Connecting conductors(copper bus bar) |  |  |
| :---: | :---: | :---: | :---: |
|  | Quantity | Conductor size(mm) | Arrangement |
| 630 | 2 | $40 \times 5$ | With long surface vertical |
| 1000 | 2 | $60 \times 5$ |  |
| 1250 | 2 | $80 \times 5$ |  |
| 1600 | 2 | $100 \times 5$ |  |
| 2000 | 3 | $100 \times 5$ |  |
| 2500 | 4 | $100 \times 5$ |  |
| 3150(3200)*1 | 3 | $100 \times 10$ |  |
|  | 2 | $150 \times 10$ |  |
| $\left(\begin{array}{c} 4000 \\ \binom{\text { AE4000-SWA }}{\text { Drawout type }} \end{array}\right.$ | 4 | $150 \times 10$ |  |
| $\left(\begin{array}{c} 4000 \\ \binom{\text { AE4000-SWA }}{\text { Fixed type }} \end{array}\right.$ | 3 | $150 \times 10$ |  |
| $\begin{gathered} 4000 \\ (\mathrm{AE} 4000-\mathrm{SW}) \end{gathered}$ | 4 | $100 \times 10$ |  |
| 5000 | 4 | $150 \times 10$ |  |
| 6300 | 4 | $200 \times 10$ |  |

The left table shows the suitable connecting conductor size based on IEC 60947-1, which is assured from the test under Ambient temp. $40^{\circ} \mathrm{C}$, Open air and testing configuration as shown in the following drawing.

[^1] the connecting conductor size of a rated current 3150A. In case of more than 3200A, conductor sizes are not defined in IEC 60947-1. (Specification by the manufacturer)

## Insulation distance

When a short-circuit current is interrupted, discharged hot gas blows out from the exhaust port of the arc extinguishing chamber, so provide a clearance as shown in the following table by " B ".

Note1:On the fixed type, maintenance is possible with following clearance.

Dimensions

| Dimensions (mm) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Type |  | AE630-SW~AE3200-SW AE2000-SWA AE4000-SWA |  | $\begin{aligned} & \text { AE4000-SW~ } \\ & \text { AE6300-SW } \end{aligned}$ |
| Applicable voltage |  | 600 V AC or less | $660 \mathrm{~V} \mathrm{AC}, 690 \mathrm{~V} \mathrm{AC}$ | 690 V AC or less |
| Fixed type | A | (Note 1) 0 | (Note 1) 100 | (Note 1) 200 |
|  | B | (Note 3) 50 | (Note 3) 50 | (Note 3) 50 |
|  | C | 162 | 162 | - |
|  | D | (Note 2) 50 | (Note 2) 50 | 200 |
| Drawout type | A | 0 | 100 | 200 |
|  | B | (Note 3) 50 | (Note 3) 50 | (Note 3) 50 |
|  | C | 240 | 240 | - |
|  | D | (Note 2) 50 | (Note 2) 50 | (Note 2) 200 |

Note1: 300 mm or more clearance is necessary to inspect the arc-extinguishing chamber and contacts
Note2 : The wiring space reguired for the control terminal block.
Note3 : When using mechanical interlock, door interlock, etc., dimension B becomes larger.

## Service conditions

## 1. Service condition

1. Ambient temperature:
$-25^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ (ETR: $-20^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ )
(standard ambient temperature: $+40^{\circ} \mathrm{C}$ )
(1)Standard operation environment:

Ambient temperature: $-5^{\circ} \mathrm{C}$ to $+40^{\circ} \mathrm{C}$
And the average over 24 hours must not exceed $+35^{\circ} \mathrm{C}$.
In the operation environments listed for (1) above, use the product with the periodic maintenance and inspection described in the instruction manual.
2. Storage temperature: $-40^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$

And the average over 24 hours must be within the range of $-20^{\circ} \mathrm{C}$ to $+35^{\circ} \mathrm{C}$.
Before using the product, perform the initial inspection described in the instruction manual.
3. Altitude

2,000m (6,600 feet) or less
4. Environmental conditions
(1)The air must be clean, and the relative humidity must be $85 \%$ or less at max. temp. $+40^{\circ} \mathrm{C}$. Do not use and store in atmospheres with sulfide gas and ammonia gas etc.
( $\mathrm{H}_{2} \mathrm{~S} \leq 0.01 \mathrm{ppm}, \mathrm{SO}_{2} \leq 0.05 \mathrm{ppm}, \mathrm{NH}_{3} \leq 0.25 \mathrm{ppm}$.)
(2)AE-SW has undergone the following tests. (Except for AE4000-SW ~AE6300-SW)
IEC 60068-2-1: Cold test at $-25^{\circ} \mathrm{C}$ (usage) $/-40^{\circ} \mathrm{C}$ (storage)
IEC 60068-2-2: Dry Heat test at $+70^{\circ} \mathrm{C}$
IEC 60068-2-30: Dump heat, cyclic test $\left(+55^{\circ} \mathrm{C}\right.$ and $95 \%$ RH $)$
IEC 60068-2-52: Salt mist, cyclic test/level 2
(3) Vibration (Except for AE4000-SW ~AE6300-SW)
$\mathrm{AE}-\mathrm{SW}$ has undergone the following vibration test.
IEC $60068-2-6$ : 5 Hz to 13.2 Hz , amplitude of $\pm 1 \mathrm{~mm}, 13.2 \mathrm{~Hz}$ to $100 \mathrm{~Hz}, \pm 0.7 \mathrm{~g}$
5. Installation conditions

When installing the AE Series air circuit breaker, refer to the installation instructions in the catalogue and instruction manual.
6. Guideline for replacement

Within approx. 15 years. Please refer to the instruction manual.

## 2. Special service conditions

In case of special service condition, service life may become shorter in some cases.

1. Special environmental conditions High/Low temperature and/or corrosive gas
2. High/Low ambient temperature

If the ambient temperature exceeds $+40^{\circ} \mathrm{C}$, the uninterrupted current rating will be reduced. Since the derating value is different depending on the applicable standard, refer to P62. (1)Special operation environment:

Ambient temperature: $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$ (AE4000-SW,
AE5000-SW, AE6300-SW)
And the average over 24 hours must not exceed $+35^{\circ} \mathrm{C}$. (2) Special operation environment:

Ambient temperature: $-25^{\circ} \mathrm{C}$ to $-5^{\circ} \mathrm{C}$ (lower than $-5^{\circ} \mathrm{C}$ ), $+50^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ (AE630-SW to AE3200-SW, AE2000-SWA, AE4000-SWA)
However, the average temperature over 24 hours must be within the range of $0^{\circ} \mathrm{C}$ to $+35^{\circ} \mathrm{C}$ (over $0^{\circ} \mathrm{C}$ ).
In the operation environments listed for (1) and (2) above, use the product with the periodic maintenance and inspection described in the instruction manual. Contact us to use the product in the special ambient temperature for (2).
3. High altitude
(1)Standard operation environment: 2000 m or less
(2) Since the heat radiation rate is reduced for use at the $2,000 \mathrm{~m}$ or higher, accordingly the operating voltage, continuous current capacity and breaking capacity are derated. Moreover the insulation durability is also decreased owing to the atmospheric pressure.
Corrections to rated voltage and rated current at high altitudes

| Altitude | Rated current | Rated voltage |
| :---: | :---: | :---: |
| 3000 m | 0.98 | 0.91 |
| 4000 m | 0.96 | 0.82 |
| 5000 m | 0.94 | 0.73 |

## Precautions for mounting

- Standard tightening torque

| Screw size | Tightening torque $(\mathrm{N} \cdot \mathrm{m})$ |
| :---: | :---: |
| M 12 | $45 \pm 5$ |

## - Earth terminal

Unless there are any special circumstances, connect the earth terminal to the ground.

- Mounting
direction

* The above table shows the maximum rated current per each ambient temperature for both drawout type breaker and fixed type (at brandnew product), when breaker and bus bar are installed in open air.
* Connection bus bar is according to IEC60947-1. For AE3200-SW, AE4000-SWA, AE4000-SW, AE5000-SW and AE6300-SW, it is required to follow the manufacturer recommended size shown in Page 59.
* The values mentioned in the table above are calculated basing on the experiment result of JIS C 8201-2 and IEC 60947-2. So, the real values could be different due to configuration within the panel. Therefore, please make sure to confirm the real values basing on assembly's standard like IEC 61439.
* Necessary to adjust the derating of Max. current taking into account the influences like a fever from other components inside the panel, the heats from conductors and air flows whithin the panel.

## Technical information

## Discrimination table

AE-SW Series air circuit breakers provide easy selective co-ordination with branch circuit breakers. For selective co-crdinations, refer to the following table.

230V AC sym kA

[^2]440V AC sym kA

| Branch |  |  | AE-SW |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The values in the table represent the max.rated current for both Series AE-SW air circuit breakers and branch breakers, and the selective co-ordination applies when the AE-SW series air circuit
breakers instantaneous pick up is set to maximum.
The numerals shown in parentheses are for AE-SW with MCR.(When set MCR).

Note 1: For AE630-SW and AE2000-SW Low rating type, please specify CT rating. Refer to Page 11 and Page 22.
Note2: There is a case to be derated by ambient temperature. Refer to Page 62. Specify LSP-N1459 for use in an environment with a temperature in the range of $-5^{\circ} \mathrm{C}$ to $-25^{\circ} \mathrm{C}$ or $+50^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$. (lower than $-5^{\circ} \mathrm{C}$ )
Note3: As for the terminal for AE2000-SWA, AE4000-SWA and AE4000-SW~AE6300-SW, Vertical terminal type only is available. (FIX-VT or DR-VT)
Note 4: Refer to Page 13 and Page 45-47.
Note5: This setting is available for change by customer later. A preliminary setting of CL at factory shipment is as follows.
CL1:1C CL2:1C1D CL3:1C1T1D CL4: 2C1T1D
Note6: Not available for AE630-SW with CT rating : 250A or 315A or 500A.
Note7: Not available for WB1, WB2 and WB3 Main setting module. N5 optional setting module is used for 3 phase 4 wires system. (4 Pole breaker or 3 pole breaker with Neutral CT)
Note8: Neutral CT is required for Ground fault or Neutral pole protection, when 3 Pole breaker is used for 3 phase 4 wires system.
Note9: For Earth leakage protection, it is required External ZCT.
Note10: 24 V DC and 48 V DC are not available for AE4000-SWA 4P and AE4000-SW~AE6300-SW. Note11: The combined installation of DI and MI 3 is not available.
Note12: Some module types are not provided BA. Refer to Page17.
Note13: Power Supply comes from the top terminals.
Note14: Power Supply comes from the bottom terminals.
Note15: Current capacity of the neutral poles
HN: 50\% of the rated current
FN: $100 \%$ of the rated current (See page 49, 54 for the outline and dimensions.) Note16: Not available for WF1, WF2 and WF3 Main setting module.
Note17: Not available for WB1, WB2 and WB3 Main setting module.

## Remark

Ordering information for MITSUBISHI AE-SW series air circuit breaker (General use…WS relay with Ampere Meter and Fault Memory "DP3")

Note1: For AE2000-SW, low rating current types are available
Low rating types (250A, 315A, 500A) are not available for AE630-SW
Note2: There is a case to be derated by ambient temperature. Refer to Page 62. The ambient temperature range is $-5^{\circ} \mathrm{C}$ to $+50^{\circ} \mathrm{C}$.
Note3: As for the terminal for AE2000-SWA, AE4000-SWA and AE4000-SW~AE6300-SW, Vertical terminal type only is available. (FIX-VT or DR-VT)
Note 4: This setting is available for change by customer later. A preliminary setting of CL at factory shipment is as follows.
CL1:1C CL2:1C1D CL3:1C1T1D CL4:2C1T1D
Note5: Neutral CT is required for Ground fault or Neutral pole protection, when 3-pole breaker is used for 3 phase 4 wire system
Note6: 24V DC and 48V DC are not available for AE4000-SWA 4P or AE4000 to 6300-SW.
Note7: The combined installation of DI and MI3 is not available.
Note8: Some module types are not provided BA. Refer to Page17.
Note9: Current capacity of the neutral poles
HN: $50 \%$ of the rated current
FN: 100\% of the rated current (See page 49, 54 for the outline and dimensions.)
Note10: If MCR switch is ordered, INST/MCR characteristic will be installed INST/MCR characteristics can be switched using a setting dial.
Note11: For WS relay with ampere meter and fault memory (DP3),
ETR including optinal setting such as "G1" has integrated structure.
So, optinal setting such as G1 for WS relay with DP3 should be specified before ordering as those parts cannot be installed with ETR after factory shipment.

## Index

## Revising history

The main revising contents are below.
*from 20A (Y-0622K printed on December 2020) to 22 A (Y-0622L printed on September 2022)

- : Logo changed, EX2 added.
- : Functions (Number of times open/close, Body temperature, Voltage protection) added.
- Page 11-12 : Add Note 15,16,17 for Number of operating cycles
- Page 17 : Add Note for Interphase Barrier (BA)
- Page 27 : Add "*: When used without voltage applied to the control power supply (ETR power supply module) Tsd,li operation time may increase max. 20ms."
- Page 33 : Add Note for Ground fault protection (GFR)
- Page 34 : Add "*: Operates in the range of 0.04 s to 0.1 s when Te is set to 0.1 ."
- Page 36 : The weight of $\mathrm{Y}-2005$ is changed to 4.8 kg . P40 Add Note 8)
- Page 60 : Add "Special operation environment" for Service conditions Storage temperature was $-20^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$ Correction table for high altitude added.

## MEMO

[^0]:    The table and the figure include both optional display and MCR.
    For WB relay, when Pre-alarm current Ip is set at "OVER", the Ip value is "Ir x 1.15".
    The table includes MCR (option). If MCR is not included, there is no MCR setting position.

[^1]:    *1 The temperature rise of rated current 3200A conforms to the requirement of IEC60947-1 for

[^2]:    The values in the table represent the max.rated current for both Series AE-SW air circuit breakers and branch breakers, and the selective co-ordination applies when the AE-SW series air circuit
    breakers instantaneous pick up is set to maximum.

[^3]:    Mechanical $\square$ Push button cover(BC-L)
