ELEVATOR MONITORING AND CONTROL SYSTEM

Eco Changes is the Mitsubishi Electric Group's environmental statement, and expresses the Group's stance on environmental management. Through a wide range of businesses, we are helping contribute to the realization of a sustainable society.

In recent years, the need for monitoring systems utilizing network technologies has increased. In large-scale international airports, for example, interfacing with the building and facility management control system has proved to be essential. In order to meet these requirements, Mitsubishi Electric has developed a sophisticated monitoring system - **MelEye** which utilizes web-based technologies.

**MelEye** closely observes the operational status of elevators and escalators that handle continually changing passenger traffic. This allows building managers to rapidly respond to changing traffic patterns, thus optimizing the performance of elevators and escalators and maximizing the added value of the whole building. The application of the latest network technologies has also greatly increased the number of controllable elevators and escalators, which minimizes the cost spent on facilities such as supervisory rooms and monitors. **MelEye** is our solution to futuristic building traffic monitoring systems.

### Supervisory System MelEye Enhances Elevator and Escalator Operation Management with the Latest Network Technologies

#### Latest Network Technologies

- **Application of web server and web browser**
  Because the system configuration is hosted on a web server, the elevators and escalators can be monitored by multiple computers at any location desired within the network provided. The use of a web browser interface allows various functions.

- **Application of Ethernet** *
  The high-speed broadband network using Ethernet facilitates smooth data communication between the server and the elevators and escalators. Connecting to a special high-security network** enables monitoring from anywhere in the building.

  * Ethernet is a trademark of Xerox Corporation in the U.S.A.
  ** A special high-security network needs to be provided in addition to the general LAN circuit.

#### Optional Features

- **Remote control**
  A computer connected to the MelEye system can control the special and emergency* operations of the elevators: for example, Floor Lockout, VIP Operation, Operation by Emergency Power Source or Fire Emergency Return.

  * For more details on special and emergency operations, please refer to “Main functions” on page 5 or in our product brochures.

- **Scheduling of operations**
  In all buildings, there are flows of people moving to specific floors at specific time periods. Scheduling of special operations such as Intense Up Peak or Lunchtime Service can be preset to meet the demand inside the building.

- **Statistical information**
  The past fault logs of the elevators and escalators and the operation logs of computers are recorded*. In addition, the traffic analysis function counts the calls of the elevators and measures the user waiting time. These functions enable the building manager to analyze the traffic flow statistically, and help optimize the efficiency of elevator and escalator operations.

  * This function is a standard feature.

- **Locations of elevators and escalators**
  The locations within the building of the grouped elevators and escalators are displayed and any fault is highlighted in order to facilitate a timely response under emergency conditions or for troubleshooting.

### User-friendly Screens

- **Versatile monitoring screens**
  The system displays the operation mode of each elevator or escalator, or the operational status of each group, on user-friendly screens.

- **Easy selection of screens**
  Straightforward mouse operation enables speedy selection of the required information.

- **Reliable indications and alarm* for safety**
  To ensure passenger safety, indications to warn of all failures of elevators and escalators are provided. An optional alarm, which is activated for specific events such as group or individual car control failure can be added to the warning indications.

  * The alarm is optional and requires speakers for the computer.

- **Play back information**
  The movement of any elevator at any selected time within the past 30 days can be replayed.

- **Locations of elevators and escalators**
  The locations within the building of the grouped elevators and escalators are displayed and any fault is highlighted in order to facilitate a timely response under emergency conditions or for troubleshooting.
Versatile Features for Elevator and Escalator Operation Management

- **Monitoring screens**
  MelEye's user-friendly screens show the detailed operational status of the elevators and escalators in real time.

- **Remote control**
  A computer allows remote control of special and emergency operations.

- **Scheduling of special operations**
 ustin monitoring
  A computer allows remote control of special and emergency operations.

- **Statistical information**
  The past fault logs of the elevators and escalators are recorded in addition to the operation logs of the computer.

- **Operational data**
  Operational data of the elevators, such as the number of calls, the average waiting time and long wait rate, are analyzed statistically.

- **Playback information**
  The movement of any elevator at any selected time within the past 30 days can be replayed.

- **Locations of elevators and escalators**
  The locations within the building of the grouped elevators and escalators are displayed and any fault is highlighted.

*Optional feature*
Specifications

Main Functions

<table>
<thead>
<tr>
<th>Classification</th>
<th>Function</th>
<th>Description</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monitoring screens</td>
<td>Status monitoring</td>
<td>- Monitors the operational status of elevators on three displays: &quot;plan view,&quot; &quot;sectional view&quot; and &quot;status monitoring.&quot;</td>
<td>S</td>
</tr>
<tr>
<td>Remote control and scheduling of operations*1</td>
<td>Special operation control</td>
<td>Controls or schedules the following special operations** manually via a computer: · Floor Lockout (NS) · VIP Operation (VIP-S) · Intense Up Peak (IUP) · Lunchtime Service (LTS) · Up Peak Service (UPS) · Down Peak Service (DPS) · Bank-separation Operation (BSO) · Out-of-service − Remote (KCS) · Return Operation (RET) · Main Floor Changeover Operation (TFS)</td>
<td>0</td>

**Notes**: 1. If the group or the unit number exceeds the maximum value in the above table, the network needs to be divided. In such cases, please consult our local agents.

2. This table contains only some of the available operations. For further details, please refer to our product brochures.

3. If neither the special operation control nor the emergency operation control is applied, the operation control logs are not recorded.

4. Scheduled operation does not apply to emergency operations and some of the special operations.

5. Uninterruptible power supply for power failure is not included.

6. Depending on the monitoring functions or the number of elevators/escalators, some capacities in the table on the left will be increased.

7. Provision of power supplies is not included.

8. Workstation equipment such as desks and chairs is not included.

9. Provision of power supplies is not included.

10. Uninterruptible power supply for power failure is not included.

The Number of Connectable Elevators or Escalators

<table>
<thead>
<tr>
<th>Classification</th>
<th>In case only elevators are installed</th>
<th>In case both elevators and escalators are installed</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 32 groups/96 units</td>
<td>Elevators: Up to 31 groups/64 units</td>
<td>Escalators: Up to 30 units</td>
</tr>
</tbody>
</table>

**Notes**: 1. If the group or the unit number exceeds the maximum value in the above table, the network needs to be divided. In such cases, please consult our local agents.
