## Safety instructions

Thank you for choosing this Mitsubishi Electric inverter control terminal option.
This Instruction Manual provides handling information and precautions for use of the equipment. Incorrect handling might cause an unexpected fault. Before using this product, always read this Instruction Manual carefully to use this product correctly.
Please forward this Instruction Manual to the end user.
Do not attempt to install, operate, maintain or inspect the product until you have read through this Instruction Manual and supplementary documents carefully to use the equipment correctly. Do not use this product until you have a full knowledge of the equipment, safety carefully. Do not use this product until you have a full knowledge of this product mechanism, safety information and instructions. In this Instruction Manual, the safety instruction levels are classified into "WARNING" and "CAUTION".
§ WARNING Incorrect handling may cause hazardous conditions, resulting in death or severe injury.
\} \mathbf { ~ C A U T I O N } Incorrect handling may cause hazardous conditions, resulting in medium or slight injury, or may cause only material damage.

Note that even the $\qquad$ level may lead to a serious consequence depending on conditions. Be sure to follow the instructions of both levels as they are critical to personnel safety.

## - Electric Shock Prevention

## 1. WARNING

- Do not remove the front cover or the wiring cover while the power of the inverter is ON, and do not run the inverter with the front cover or the wiring cover removed as the exposed high voltage terminals or the charging part of the circuitry can be touched. Doing so may cause an electric shock.
- Even if power is OFF, do not remove the front cover of the inverter except for wiring or periodic inspection as the inside of this product is charged. Doing so may cause an electric shock.
- Before wiring or inspection, check that the display of the inverter operation panel is OFF. Any person who is involved in wiring or inspection shall wait for 10 minutes or longer after the power supply has been cut off, and check that there are no residual voltage using a tester or the like.
- Any person who is involved in wiring or inspection of this equipment shall be fully competent to do the work.
- The control terminal option must be installed before wiring. Otherwise you may get an electric shock or be injured.
- Do not touch the control terminal option or handle the cables with wet hands. Doing so may cause an electric shock.
- Do not subject the cables to scratches, excessive stress, heavy loads or pinching. Doing so may cause an electric shock.

## $\triangle$ CAUTION

- The voltage applied to each terminal must be as specified in the Instruction Manual. Otherwise an explosion or damage may occur.
- The cables must be connected to the correct terminals. Otherwise an explosion or damage may occur.
- The polarity (+ and -) must be correct. Otherwise an explosion or damage may occur.
- While power is ON or for some time after power OFF, do not touch the inverter as it will be extremely hot. Doing so may cause burns.

## - Additional instructions

The following instructions must be also followed. If the product is handled incorrectly, it may cause unexpected fault, an injury, or an electric shock.

## $\triangle$ CAUTION

## Transportation and installation

- Do not install or operate the control terminal option if it is damaged or has parts missing.
- Do not stand or place heavy objects on the product.
- Ensure the mounting orientation of this product is correct.
- Foreign conductive objects must be prevented from entering the inverter. That includes screws and metal fragments or flammable substance such as oil.
- If halogens (including fluorine, chlorine, bromine, and iodine) contained in fumigants for wood packages enter this product, the product may be damaged. Prevent the entry of fumigant residuals or use an alternative method such as heat disinfection. Note that sterilization or disinfection of wood packages should be performed before packing the product.
Test operation
- Before starting the test operation, confirm or adjust the parameter settings. Failure to do so may cause some machines to make unexpected motions.

## 1. WARNING

Usage

- Do not modify this product.
- Do not remove any part which is not instructed to be removed in the Instruction Manuals. Doing so may lead to a failure or damage of the product.

## ©CAUTION

Usage

- As all parameters return to their initial values after the Parameter clear or All parameter clear is performed, the parameters must be set again
as required before the operation is started.
- To avoid damage due to static electricity, static electricity in your body must be discharged before you touch this product.

Maintenance, inspection and parts replacement

- Do not carry out a megger (insulation resistance) test.

Disposal

- The product must be treated as industrial waste.

## General instruction

- For clarity, illustrations in this Instruction Manual may be drawn with covers or safety guards removed. Ensure all covers and safety guards are properly installed prior to starting operation.

## 1 PRE-OPERATION INSTRUCTIONS

### 1.1 Unpacking and product confirmation

Take the control terminal option out of the package, check the product name, and confirm that the product is as you ordered and intact.
The product is a control terminal option made for the FR-A800 series.

### 1.1.1 Product confirmation

Check the enclosed items.

- Connection diagrams in this Instruction Manual appear with the control logic of the input terminals as sink logic, unless otherwise specified. (For the control logic, refer to the Instruction Manual of the inverter.)

### 1.1.2 SERIAL number check

The FR-A8TP can be used for the inverter models listed below with the following SERIAL number or later. Check the SERIAL number indicated on the inverter rating plate or package. For the location of the rating plate, refer to the Instruction Manual (Detailed) of the inverter.
Rating plate example

|  | MITSUBISH1 INVERTER PASSED MODELRE FR-A820-0. 4K-1 INPUT $:$ XXXXX OUTPUT $: ~ X X X X X ~$ |
| :---: | :---: |
| SERIAL <br> number <br> Country of origin | SERIAL : XXXXXXXXX DATE:XXXX-XX <br> MADE in XXXXX |

The SERIAL consists of one symbol, two characters indicating the production year and month, and six characters indicating the control number.
The last digit of the production year is indicated as the Year, and the Month is indicated by 1 to $9, \mathrm{X}$ (October), Y (November), or Z (December).

- FR-A800 series

| Model | Country of <br> origin indication | SERIAL number |
| :--- | :--- | :--- |
| FR-A820-00046(0.4K) to 04750(90K) | MADE in Japan | $\square 510000 \bigcirc \bigcirc$ or later |
| FR-A840-00023(0.4K) to 06830(280K) | FR-A842-07700(315K) to 12120(500K) | MADE in China |
| FR-A846-00023(0.4K) to 00470(18.5K) | $\square 5300000 \circ$ or later |  |

### 1.1.3 Component names

### 1.1.4 Terminal layout

### 1.1.5 Control logic switchover

Switch the control logic of input signals as necessary.
To change the control logic, change the jumper connector position on the control circuit board.
Connect the jumper connector to the connector pin of the desired control logic using a pair of needle-nose pliers etc. The control logic of input signals is initially set to the sink logic (SINK).
For details on the control logic, refer to the Instruction Manual of the inverter

### 1.1.6 Terminal OH control logic switchover

Change the external thermal relay switch (SW5A) position to switch the terminal OH control logic (sink logic or source logic) as necessary. The control logic of input signals is initially set to the sink logic (SINK).

## NOTE

- The terminal OH control logic cannot be switched by page 11.

### 1.3 Control terminal specification

## Input signal

| Function | Terminal symbol | Common | Terminal name | Terminal function description |  | Rated specification |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Contact input | STF | SD (sink (negative common)) PC (source (positive common)) | Forward rotation start | Turn ON the STF signal to start forward rotation and turn it OFF to stop. <br> The function of terminal can be changed with Pr. 178 (Input terminal function selection). | When the STF and STR signals are turned ON simultaneously, the stop command is given. | Input resistance: <br> $4.7 \mathrm{k} \Omega$ <br> Voltage when contacts are open: <br> 21 to 27 VDC <br> Current when <br> contacts are short- <br> circuited: 4 to 6 <br> mADC <br> *When terminal DI4 <br> is used as a pulse train input terminal: Input resistance: 2 k $\Omega$ <br> When contacts are short-circuited: 8 to 13 mADC |
|  | STR |  | Reverse rotation start | Turn ON the STR signal to start reverse rotation and turn it OFF to stop. <br> The function of terminal can be changed with Pr. 179 (Input terminal function selection). |  |  |
|  | DI1 to DI4 |  | Digital input terminal 1 to 4 | Functions can be assigned to terminals by the input terminal function selection (Pr. 180 to Pr.182, Pr.185). |  |  |
|  | OH |  | Thermal protector input | Temperature detector input terminal for overheat protection of a motor. <br> When the OH signal turns OFF, the external thermal relay (E.OHT) protective function is activated <br> Use Pr. 876 to switch valid/invalid status of terminal function. <br> Switches the control logic (sink logic or source logic) independently by the external thermal relay switch (SW5A). |  | Input resistance: <br> $940 \Omega$ <br> Voltage when contacts are open: <br> 21 to 27 VDC <br> Current when contacts are shortcircuited: 140 to 180 mADC |

| Function | Terminal symbol | Common | Terminal name | Terminal function description | Rated specification |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Contact input | RES | SD (sink (negative common)) PC (source (positive common)) | Reset | Use this signal to reset a fault output provided when a protective function is activated. Turn ON the RES signal for 0.1 s or longer, then turn it OFF. <br> In the initial setting, reset is always enabled. By setting Pr. 75 , reset can be enabled only at an inverter fault occurrence. The inverter recovers about 1 s after the reset is released. The function of terminal can be changed with Pr. 189 (Input terminal function selection). | Input resistance: <br> $4.7 \mathrm{k} \Omega$ <br> Voltage when contacts are open: 21 to 27 VDC When contacts are short-circuited: 4 to 6 mADC |

| Function | Terminal symbol | Common | Terminal name | Terminal function description | Rated specification |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency setting | 10E | 5 | Frequency setting power supply | Change the input specification of the terminal 2 using Pr. 73 when connecting it to the terminal 10 E . | 10 VDC $\pm 0.4 \mathrm{~V}$ Permissible load current: 10 mA |
|  | 2 |  | Frequency setting (voltage) | Inputting 0 to 5 VDC (or 0 to $10 \mathrm{~V}, 0$ to 20 mA ) provides the maximum output frequency at 5 V ( $10 \mathrm{~V}, 20 \mathrm{~mA}$ ) and makes input and output proportional. Use Pr. 73 to switch among input 0 to 5 VDC (initial setting), 0 to 10 VDC , and 0 to 20 mA . Set the voltage/current input switch in the ON position to select current input ( 0 to 20 mA ). ${ }^{* 1}$ | When voltage is input: <br> Input resistance: 10 <br> to $11 \mathrm{k} \Omega$ <br> Maximum <br> permissible <br> voltage: 20 VDC <br> When current is input: Input resistance: $245 \Omega$ $\pm 5 \Omega$ <br> Permissible maximum current: 30 mA <br> Voltage/Current input switch $\square$ switch2 switch1 $\square$ 2 204 |
|  | 1 |  | Frequency setting auxiliary | Inputting 0 to $\pm 5$ VDC or 0 to $\pm 10$ VDC adds this signal to terminal 2 frequency setting signal. Use Pr 73 to switch between input 0 to $\pm 5$ VDC and 0 to $\pm 10$ VDC (initial setting). Use Pr. 868 to switch terminal functions. | Input resistance: 10 to $11 \mathrm{k} \Omega$ Permissible maximum: voltage $\pm 20$ VDC |

| Function | Terminal symbol | Common | Terminal name | Terminal function description | Rated specification |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Encoder signal | PA3 | Differential line driver: Complementary: SD | Control terminal option / A-phase signal input terminal | A-, B- and Z-phase signals are input from the encoder. | Differential line driver/ Complementary |
|  | PAR3 |  | Control terminal option / A-phase inverse signal input terminal |  | Differential line driver |
|  | PB3 |  | Control terminal option / B-phase signal input terminal |  | Differential line driver/ Complementary |
|  | PBR3 |  | Control terminal option / B-phase inverse signal input terminal |  | Differential line driver |
|  | PZ3 |  | Control terminal option / Z-phase signal input terminal |  | Differential line driver/ Complementary |
|  | PZR3 |  | Control terminal option / Z-phase inverse signal input terminal |  | Differential line driver |

| Function | Terminal symbol | Common | Terminal name | Terminal function description | Rated specification |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Encoder signal | PG | SD | Encoder power supply terminal (positive side) | Input power for the encoder power supply. Connect the external power supply ( $5 \mathrm{~V}, 12 \mathrm{~V}, 15$ V ) and the encoder power cable. When the encoder output is the differential line driver type, only 5 V can be input. Make sure the voltage of the external power supply the same as the encoder output voltage. (Check the encoder specification.) <br> Short terminals PG24 and PG for using the 24 VDC power supply of the FR-A8TP. | - |
| External power supply input | +24 |  | 24 V external power supply input | For connecting a 24 V external power supply. If a 24 V external power supply is connected, power is supplied to the control circuit while the main power circuit is OFF. | Input voltage: 23 to 25.5 VDC <br> Input current: 1.4 A or less |

*1 Set Pr.73, Pr.267, and the voltage/current input switch correctly, then input an analog signal in accordance with the setting. (Refer to the Instruction Manual (Detailed) of the inverter.)
Applying a voltage with the voltage/current input switch ON (current input is selected) or a current with the switch OFF (voltage input is selected) could cause component damage of the inverter or analog circuits of output devices.

Output signal

| Type | Terminal symbol | Common | Terminal name | Terminal function description | Rated specification |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Relay | A, B, C | - | Relay output (fault output) | 1 changeover contact output that indicates that an inverter's protective function has been activated and the outputs are stopped. <br> Fault: discontinuity across B and C (continuity across $A$ and $C$ ), Normal: continuity across Band $C$ (discontinuity across A and C ) <br> The function of terminals can be changed with the output terminal function selection (Pr.195). | Contact capacity: 230 <br> VAC <br> 0.3 A (power factor $=$ <br> 0.4) <br> 30 VDC 0.3 A |
| Open collector | $\begin{aligned} & \text { DO1 to } \\ & \text { DO3 } \end{aligned}$ | SE | Digital output terminal 1 to 3 | The function can be assigned to an output terminal by the output terminal function selection (Pr. 190 to Pr.192). | Open collector output Permissible load: 24 to 27 VDC, 0.1 A |
| Analog | AM | 5 | Analog voltage output | Outputs a selected monitored item (such as output frequency) among several monitored items according to the Pr. 158 setting. The signal is not output during an inverter reset. <br> The output signal is proportional to the magnitude of the corresponding monitoring item. <br> Use Pr.55, Pr.56, and Pr. 866 to set full scales for the monitored output frequency, output current, and torque. | Output signal: 0 to $\pm 10$ <br> VDC <br> Permissible load current: 1 mA <br> (load impedance: 10 <br> $\mathrm{k} \Omega$ or more) <br> Resolution: 13 bits |
| Encoder pulse dividing output | FPA5 | SD | Control terminal option / Encoder Aphase output terminal | Outputs A-, B- and Z-phase (home position and mark pulse) signals from the encoder. The A- and B-phase signals can be divided by the ratio ( $1 / \mathrm{n}$ ) and output. <br> $\mathrm{n}=1$ to 32767 (an integer) <br> Use Pr. 863 Encoder pulse division ratio for division. <br> Common terminal is terminal SD. | Open collector output Permissible load: 24 to 27 VDC, maximum 50 mA |
|  | FPB5 |  | Control terminal option / Encoder Bphase output terminal |  |  |
|  | FPZ5 |  | Control terminal option / Encoder Zphase output terminal |  |  |

| Type | Terminal symbol | Common | Terminal name | Terminal function description | Rated specification |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Encoder pulse dividing output | FPA4 | - | Control terminal option / Encoder differential A-phase output terminal | Outputs A-, B- and Z-phase (home position and mark pulse) signals from the encoder. The A- and B-phase signals can be divided by the ratio ( $1 / n$ ) and output. <br> $\mathrm{n}=1$ to 32767 (an integer) <br> Use Pr. 863 Encoder pulse division ratio for division. | Differential line driver output Permissible load: 40 mA |
|  | FPAR4 |  | Control terminal option / Encoder differential A-phase inverse signal output terminal |  |  |
|  | FPB4 |  | Control terminal option / Encoder differential B-phase output terminal |  |  |
|  | FPBR4 |  | Control terminal option / Encoder differential B-phase inverse signal output terminal |  |  |
|  | FPZ4 |  | Control terminal option / Encoder differential Z-phase output terminal |  |  |
|  | FPZR4 |  | Control terminal option / Encoder differential Z-phase inverse signal output terminal |  |  |
| Power supply output for encoder | PG24 | SD | Encoder power supply terminal(positive side) | Used for the 24 VDC power supply for an encoder. If used, connect this terminal to terminal PG, and this will supply power from the terminal PG to the encoder. | $\begin{aligned} & 24 \text { to } 26.4 \mathrm{VDC} \\ & 90 \mathrm{~mA} \end{aligned}$ |

- Safety stop signal

| Terminal symbol | Common | Terminal name | Terminal function description | Rated specification |
| :---: | :---: | :---: | :---: | :---: |
| S1 | SIC | Safety stop input (Channel 1) | The terminals S1 and S2 are used for the safety stop input signal for the safety relay module. The terminals S1 and S2 are used at the same time (dual channel). <br> Inverter output is shutoff by shortening/opening between terminal S1 and SIC, or between S2 and SIC. <br> In the initial status, terminal S1 and S2 are shorted with the terminal PC by shorting wires. The terminal SIC is shorted with the terminal SD. <br> Remove the shorting wires and connect the safety relay module when using the safety stop function. | Input resistance: $4.7 \mathrm{k} \Omega$ Input current: 4 to 6 mADC (with 24 VDC input) |
| S2 |  | Safety stop input (Channel 2) |  |  |
| So (SO) | SOC | Safety monitor output (open collector output) | Indicates the safety stop input signal status. <br> Switched to LOW when the status is other than the internal safety circuit failure. Switched to HIGH during the internal safety circuit failure status. <br> (LOW is when the open collector output transistor is ON (conducted). HIGH is when the transistor is OFF (not conducted).) <br> Refer to the Safety stop function instruction manual (BCN-A23228-001) when the signal is switched to HIGH while both terminals S1 and S2 are open. (Please contact your sales representative for the manual.) | Permissible load: 24 VDC <br> (27 VDC at maximum), 0.1 A <br> (The voltage drop is 3.4 V at maximum while the signal is ON.) |

-Common terminal

| Terminal symbol | Terminal name | Terminal function description | Rated specification |
| :---: | :---: | :---: | :---: |
| SD | Contact input common (sink) | Common terminal for the contact input terminal (sink logic). | - |
|  | External transistor common (source) | Connect this terminal to the power supply common terminal of a transistor output (open collector output) device, such as a programmable controller, in the source logic to avoid malfunction by undesirable current. |  |
|  | 24 VDC power supply common | Common terminal for the 24 VDC power supply (terminal PC, terminal $+24)$. <br> Isolated from terminals 5 and SE. |  |
|  | Encoder pulse dividing output common | Common terminal for the encoder pulse dividing output terminal. |  |
|  | 24 V encoder power supply common | Common terminal for the 24 V encoder power supply terminal (terminal PG24). |  |
| PC | External transistor common (sink) | Connect this terminal to the power supply common terminal of a transistor output (open collector output) device, such as a programmable controller, in the source logic to avoid malfunction by undesirable current. | Power supply voltage range: 19.2 to 28.8 VDC Permissible load current: 100 mA |
|  | Contact input common (source) | Common terminal for contact input terminal (source logic). |  |
|  | 24 VDC power supply | Can be used as a 24 VDC 0.1 A power supply. |  |
| 5 | Frequency setting common | Common terminal for frequency setting signal (terminal 2 or 1 ) and analog output terminal AM. Do not earth (ground). | - |
|  | Analog signal output common |  |  |
| SE | Open collector output common | Common terminal for terminals DO1, DO2, DO3. Isolated from terminals SD and 5. | - |
| SIC | Safety stop input terminal common | Common terminal for terminals S1 and S2. | - |
| SOC | Safety monitor output terminal common | Common terminal for terminal So (SO). | - |

## NOTE

- The parameter names for function assignment to the terminals listed below or the terminal names for I/O terminal monitor (Pr.52) are the standard control circuit terminal names of the inverter.

| FR-A8TP terminal name | Pr. |  | I/O terminal monitor |
| :---: | :---: | :---: | :---: |
| DI1 | 180 | RL terminal function selection | RL |
| DI2 | 181 | RM terminal function selection | RM |
| DI3 | 182 | RH terminal function selection | RH |
| DI4 | 185 | JOG terminal function selection | JOG |
| OH | - | - | AU |
| DO1 | 190 | RUN terminal function selection | RUN |
| DO2 | 191 | SU terminal function selection | SU |
| DO3 | 192 | IPF terminal function selection | IPF |
| ABC | 195 | ABC1 terminal function selection | ABC1 |

For the details of the parameter setting or the I/O terminal monitor, refer to the Instruction Manual (Detailed) of the inverter.

- Same terminal has same specification between the terminal or the FR-A8TP and the standard control circuit terminal of the inverter.
Use Pr.178, Pr.179, Pr.189, or Pr. 158 to change the function of terminal STF, STR, RES, or AM respectively, same as the standard control circuit terminal of the inverter.
- Even when the FR-A8TP is installed in the inverter, the following standard control circuit I/O terminals of the inverter can be used only via communication (the RS-485 communication or other communication options) as if the standard control circuit is installed in the inverter.

| Terminal name | Terminal symbol |
| :--- | :--- |
| Input terminal | RT, AU, STP, CS |
| Output terminal | OL, FU, ABC2 |

## 2 Installation

### 2.1 Pre-installation instructions

Check that the inverter's input power and the control circuit power are both OFF.

## $\triangle$ CAUTION

- Do not mount or remove the control terminal option while the input power is ON. Doing so may damage the inverter or the control terminal option.
- To avoid damage due to static electricity, static electricity in your body must be discharged before you touch the product.

### 2.2 Installation procedure

1. Loosen the two mounting screws at the both side of the standard control circuit terminal block. (These screws cannot be removed.) Slide down the control circuit terminal block to remove it.

2. Be careful not to bend the pins of the inverter's control circuit connector, install the control terminal option and fix it with the mounting screws for the control terminal option. (Tightening torque: 0.33 to $0.4 \mathrm{~N} \cdot \mathrm{~m}$ )

## NOTE

- The inverter will recognize the control terminal option at next power-ON.

### 2.3 Precautions for removal and reinstallation of the control circuit terminal block

The following are the precautions to remove or reinstall the control circuit terminal block.
Observe the following for proper handling to avoid malfunctions or failures of the inverter.

- To remove or reinstall the control circuit terminal block, keep it upright so that it is parallel with the inverter.
- To install the control circuit terminal block, slide it upward so that the groove on the terminal block fits over the tongue on the inverter. Adjust the terminal block position for alignment with the screw fixing bases.
- Check that the terminal block is parallel with the inverter and the pins of the inverter's control circuit connector are not bent. After checking the proper connection, fix the terminal block with two screws.

Control circuit terminal block

Control circuit terminal block
Inverter's control circuit connector

- Do not tilt the terminal block while tightening the screws or removing it from the inverter. (Otherwise, a stress applied to the control circuit terminal block or the control circuit connector may cause damage to them.)

## 3 wiring

### 3.1 Encoder specification / terminating resistor switch setting

## - Encoder specification selection switch (SW3)

Selects either differential line driver or complementary.
It is initially set to the complementary. Switch its position according to the output circuit.

Differential line
driver

## - Terminating resistor selection switch (SW1)

Selects "ON"/"OFF" of the internal terminating resistor.
Set the switch to "OFF (initial status)" when an encoder output type is complementary and set to "ON" when differential line driver.
ON: with internal terminating resistor
OFF: without internal terminating resistor (initial status)
Internal terminating
resistor-OFF
(initial status)

Internal terminating
resistor-ON

## $\bigcirc$ NOTE

- Set all switches to the same setting ("ON"/"OFF").
- Set the switch "OFF" when sharing an encoder with another unit (NC (computerized numerical controller), etc.) having a terminating resistor under the differential line driver setting.
- Motor used and switch setting

| Motor |  | Encoder specification selection switch (SW3) | Terminating resistor selection switch (SW1) | Power supply specification ${ }^{* 2}$ |
| :---: | :---: | :---: | :---: | :---: |
| Mitsubishi Electric standard motor with encoder <br> Mitsubishi Electric high-efficiency motor with encoder | SF-JR | Differential | ON | 5 V |
|  | SF-HR | Differential | ON | 5 V |
|  | Others | *1 | *1 | *1*3 |
| Mitsubishi Electric constant-torque motor with encoder | SF-JRCA | Differential | ON | 5 V |
|  | SF-HRCA | Differential | ON | 5 V |
|  | Others | *1 | *1 | *1*3 |
| Mitsubishi Electric high-performance energysaving motor with encoder | SF-PR-SC | Complementary | OFF | 12 to 24 V |
| Vector control dedicated motor | SF-V5RU | Complementary | OFF | 12 to 24 V |
|  | SF-THY | Complementary | OFF | 12 to 24 V |
| Other manufacturer's motor with encoder |  | *1 | *1 | *1*3 |

*1 Set according to the motor (encoder) to be used.
*2 Prepare an encoder's power supply ( $5 \mathrm{~V} / 12 \mathrm{~V} / 15 \mathrm{~V}$ ) according to the encoder to be used. Use terminal PG24 for the 24 V encoder's power supply.
*3 When the encoder output is the differential line driver type, only 5 V can be input.

## NOTE

- When power is not supplied to the control circuit of the inverter, also turn OFF the power supply to the encoder. Otherwise, the plug-in option may be damaged.

### 3.2 Encoder

- Position detector (pulse encoder)

Output pulse specifications
Differential line driver
A/ $\bar{A}$ signal 1000 P/R to 4096 P/R
B/B signal 1000 P/R to 4096 P/R
Z/Z̄ signal 1 P/R

Complementary

Position detector
Encoder

- When rotation is counterclockwise as viewed from the shaft end (A) of the encoder. a, b, c, d should be $1 / 4 \pm 1 / 8$ pulses.

## NOTE

- The encoder can be shared under orientation control, encoder feedback control or vector control. Use an encoder which has a pulse count of 1000 to 4096 ppr (pulse per revolution).
- Couple the encoder with the motor shaft or with the shaft that stops the main shaft at the specified position. Couple it with the speed ratio of $1: 1$ and without any mechanical looseness.
- To ensure correct operation, the encoder must be set in the proper rotation direction, and the $A$ and $B$ phases must be connected correctly.

## - Power supply

Prepare an encoder's power supply ( $5 \mathrm{~V}, 12 \mathrm{~V}, 15 \mathrm{~V}$, etc.) according to the encoder to be used. When the encoder output is the differential line driver type, only 5 V can be input. Make the voltage of the external power supply same as the encoder output voltage. (Check the encoder specification.) Use terminal PG24 for the 24 V encoder's power supply.
The encoder's power supply is shared under orientation control, encoder feedback control or vector control.

- Specifications of the encoders equipped in the motors with encoders and the vector-control dedicated motors

| Item | Encoder for SF-PR-SC, SF-V5RU, SF-THY | Encoder for SF-JR/HR/JRCA/HRCA |
| :--- | :--- | :--- |
| Resolution | 2048 pulses/rev | 1024 pulses/rev |
| Power supply voltage | $12 \mathrm{VDC} \pm 10 \%, 24 \mathrm{VDC} \pm 10 \%$ | $5 \mathrm{VDC} \pm 10 \%$ |
| Current consumption | 90 mA or less | 150 mA or less |
| Output signal form | A, B phases (90 <br> Z phase shift) <br> Z phalse/rev |  |
| Output circuit | Complementary | Equivalent or the differential line driver <br> AM26LS31 |
| Output voltage | H level: (Power supply for encoder-3 V) or more <br> L level: 3 V or less | H level: 2.4 V or more <br> L level: 0.5 V or less |

## NOTE

- When the input power supply voltage to the encoder and its output voltage differ, the protective function (E.ECT) may be activated.
- When an external power supply is used for the encoder, turn OFF the encoder's power supply while power is not supplied to the control circuit of the inverter. Otherwise, the plug-in option may be damaged.

### 3.3 Wiring of control circuit

### 3.3.1 Wiring method

1. Refer to page 35 and treat the wires.
2. Loosen the terminal screw and insert the cable into the terminal.
3. Tighten the screw according to the specified tightening torque.

Undertightening may cause cable disconnection or malfunction. Overtightening may cause a short circuit or malfunction due to damage to the screw or unit.

| Terminal name | Tightening torque |  |
| :--- | :--- | :--- |
| A, B, C | $0.5 \mathrm{~N} \cdot \mathrm{~m}$ to $0.6 \mathrm{~N} \cdot \mathrm{~m}$ | Screwdriver |
| Other than the above | $0.22 \mathrm{~N} \cdot \mathrm{~m}$ to $0.25 \mathrm{~N} \cdot \mathrm{~m}$ |  |

## NOTE

- For the connection to the terminal 5 , use a screwdriver with a diameter of 1.6 mm or less. Put the screwdriver to avoid contact with the mounting screw area.

- When one position detector is shared between the FR-A8TP and the CNC (computerized numerical controller), its output signal should be connected as shown below. In this case, the wiring length between the FR-A8AP and the CNC should be as short as possible, within 5 m .

### 3.3.2 Wire treatment

- For the control circuit wiring except for terminals related to the encoder, strip off the sheath of a cable and use as it is.
- Untwist the shielded twisted pair cables after stripping its sheath. Also, treat the shielding wires of the shielded twisted pair cable to ensure that they will not contact conductive areas.

- Strip the signal wires as follows. If too much of the wire is stripped, a short circuit may occur with neighboring wires. If not enough of the wire is stripped, wires may become loose and fall out. Twist the stripped end of wires to prevent them from fraying. Do not solder them. Use a crimp terminal as necessary.

Wire strip length

| Terminal name | $\mathbf{L}(\mathbf{m m})$ |
| :--- | :--- |
| A, B, C | 6 |
| Other than the above | 5 |

Recommended wire gauge: $0.75 \mathrm{~mm}^{2}$

## NOTE

Crimp terminals commercially available (as of October 2020. The product may be changed without notice.)

- Phoenix Contact Co., Ltd.

| Terminal screw size | Wire gauge ( $\mathrm{mm}^{2}$ ) | Ferrule part No. |  | Crimping tool model No. |
| :---: | :---: | :---: | :---: | :---: |
|  |  | With insulation sleeve | Without insulation sleeve |  |
| M3 (Terminals A, B, C) | 0.75 | AI 0,75-6GY | A 0,75-6 | CRIMPFOX 6 |
| M2 (Terminals other than the above) | 0.3 | AI 0,34-6TQ | A 0,34-7 |  |
|  | 0.5 | AI 0,5-6WH | A 0,5-6 |  |

- NICHIFU Co., Ltd.

| Terminal screw size | Wire gauge <br> ( $\mathbf{m m}^{2}$ ) | Blade terminal <br> part No. | Insulation cap <br> part No. | Crimping tool <br> model No. |
| :--- | :--- | :--- | :--- | :--- |
| M3 (Terminals A, B, C) <br> M2 (Terminals other than the above) | 0.3 to 0.75 | BT $0.75-7$ | VC 0.75 | NH 69 |

- When using the crimp terminal without insulation sleeve, make sure that the twisted stripped end do not come out of the terminal.

### 3.3.3 Wiring of terminals related to the encoder

Use shielded twisted pair cables ( $0.2 \mathrm{~mm}^{2}$ or larger) for connection the encoder. For the wiring to the terminals PG and SD, use several cables in parallel or use a thick cable, according to the wiring length. To protect the cables from noise, run them away from any source of noise (e.g. the main circuit and power voltage).

Example of parallel connection with two cables
(with complementary encoder output)

| Wiring length | Parallel connection <br> (Cable gauge $\mathbf{0 . 2} \mathbf{~ m m}^{\mathbf{2}}$ ) | Larger-size cable |
| :--- | :--- | :--- |
| Within 10 m | At least two cables in parallel | $0.4 \mathrm{~mm}^{2}$ or larger |
| Within 20 m | At least four cables in parallel | $0.75 \mathrm{~mm}^{2}$ or larger |
| Within $100 \mathrm{~m}^{* 1}$ | At least six cables in parallel | $1.25 \mathrm{~mm}^{2}$ or larger |

*1 When differential line driver is set and a wiring length is 30 m or more.
The wiring length can be extended to 100 m by increasing the 5 V power supply (approximately to 5.5 V ) while using six or more $0.2 \mathrm{~mm}^{2}$ gauge cables in parallel or a $1.25 \mathrm{~mm}^{2}$ or larger gauge cable. The voltage applied must be within power supply specifications of encoder.

To reduce noise of the encoder cable, earth (ground) the encoder's shielded cable to the enclosure (as close as possible to the inverter) with a metal P-clip or U-clip.

> Earthing (grounding)

- For details of the optional encoder dedicated cable (FR-JCBL/FR-V7CBL), refer to page 39.
- The FR-V7CBL is provided with a P-clip for earthing (grounding) shielded cables.

### 3.4 Encoder cables dedicated to Mitsubishi Electric motors

Use dedicated encoder cables to connect with Mitsubishi Electric encoder-equipped motors.

## - FR-V7CBL

For SF-PR-SC, SF-V5RU and SF-THY

- A P-clip for earthing (grounding) a shielded cable is provided.

| Type | Length L(m) |
| :--- | :--- |
| FR-V7CBL5 | 5 |
| FR-V7CBL15 | 15 |
| FR-V7CBL30 | 30 |

## - FR-JCBL

For SF-JR/HR/JRCA/HRCA (with encoder)

Positioning keyway

D/MS3106B20-29S
(As viewed from wiring side)

| Type | Length L(m) |
| :--- | :--- |
| FR-JCBL5 | 5 |
| FR-JCBL15 | 15 |
| FR-JCBL30 | 30 |

*1 As the terminal block of the FR-A8TP is an insertion type, earth (ground) cables need to be modified. (Refer to page 35.)

- Connection terminal compatibility table

| Motor |  | SF-PR-SC, SF-V5RU, SF-THY | SF-JR/HR/JRCA/HRCA (with encoder) |
| :--- | :--- | :--- | :--- |
| Encoder cable |  |  |  |
|  | PA3 | PA | FR-JCBL |
|  | PAR3 | Keep this open. | PA |
|  | PB3 | PB | PAR |
|  | PBR3 | Keep this open. | PB |

|  | PZR3 | Keep this open. | PZ |
|  | PG | PG | PZR |
|  | SD | SD | 5E |

### 4.1 Extended parameter list

When the FR-A8TP is installed in the inverter, the following parameters are extended.

| Pr. | Pr. group | Name | Setting range | Minimum setting increments | Initial value | Refer to page |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 350 | A510 | Stop position command selection | 0, 1, 9999 | 1 | 9999 | *1 |
| 351 | A526 | Orientation speed | 0 to 30 Hz | 0.01 Hz | 2 Hz | *1 |
| 352 | A527 | Creep speed | 0 to 10 Hz | 0.01 Hz | 0.5 Hz | *1 |
| 353 | A528 | Creep switchover position | 0 to 16383 | 1 | 511 | *1 |
| 354 | A529 | Position loop switchover position | 0 to 8191 | 1 | 96 | *1 |
| 355 | A530 | DC injection brake start position | 0 to 255 | 1 | 5 | *1 |
| 356 | A531 | Internal stop position command | 0 to 16383 | 1 | 0 | *1 |
| 357 | A532 | Orientation in-position zone | 0 to 255 | 1 | 5 | *1 |
| 358 | A533 | Servo torque selection | 0 to 13 | 1 | 1 | *1 |
| 360 | A511 | 16-bit data selection | 0 to 127 | 1 | 0 | *1 |
| 361 | A512 | Position shift | 0 to 16383 | 1 | 0 | *1 |
| 362 | A520 | Orientation position loop gain | 0.1 to 100 | 0.1 | 1.0 | *1 |
| 363 | A521 | Completion signal output delay time | 0 to 5 s | 0.1 s | 0.5 s | *1 |
| 364 | A522 | Encoder stop check time | 0 to 5 s | 0.1 s | 0.5 s | *1 |
| 365 | A523 | Orientation limit | 0 to $60 \mathrm{~s}, 9999$ | 1 s | 9999 | *1 |
| 366 | A524 | Recheck time | 0 to $5 \mathrm{~s}, 9999$ | 0.1 s | 9999 | *1 |
| 367 | G240 | Speed feedback range | 0 to $590 \mathrm{~Hz}, 9999$ | 0.01 Hz | 9999 | *1 |

| Pr. | Pr. group | Name | Setting range | Minimum setting increments | Initial value | Refer to page |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 368 | G241 | Feedback gain | 0 to 100 | 0.1 | 1 | *1 |
| 393 | A525 | Orientation selection | 0 to 2, 10 to 12 | 1 | 0 | *1 |
| 394 | A540 | Number of machine side gear teeth | 0 to 32767 | 1 | 1 | 54 |
| 395 | A541 | Number of motor side gear teeth | 0 to 32767 | 1 | 1 | 54 |
| 396 | A542 | Orientation speed gain (P term) | 0 to 1000 | 1 | 60 | *1 |
| 397 | A543 | Orientation speed integral time | 0 to 20 s | 0.001 s | 0.333 s | *1 |
| 398 | A544 | Orientation speed gain ( D term) | 0 to 100 | 0.1 | 1 | *1 |

| 635 | M610 | Cumulative pulse clear signal selection | 0, 1, 2, 3 | 1 | 0 | *1 |
| 636 | M611 | Cumulative pulse division scaling factor | 1 to 16384 | 1 | 1 | *1 |
| 637 | M612 | Control terminal option-Cumulative pulse division scaling factor | 1 to 16384 | 1 | 1 | *1 |
| 638 | M613 | Cumulative pulse storage | 0, 1, 2, 3 | 1 | 0 | *1 |
| 823 | G215 | Speed detection filter 1 | 0 to 0.1 s | 0.001 s | 0.001 s | *1 |
| 833 | G315 | Speed detection filter 2 | 0 to $0.1 \mathrm{~s}, 9999$ | 0.001 s | 9999 | *1 |
| 851 | C240 | Control terminal option-Number of encoder pulses | 0 to 4096 | 1 | 2048 | 46 |
| 852 | C241 | Control terminal option-Encoder rotation direction | 0, 1, 100, 101 | 1 | 1 | 46 |
| 853 | H417 | Speed deviation time | 0 to 100 s | 0.1 s | 1 s | *1 |
| 855 | C248 | Control terminal option-Signal loss detection enable/disable selection | 0, 1 | 1 | 0 | 46 |
| 862 | C242 | Encoder option selection | 0,1 | 1 | 0 | 46 |
| 863 | M600 | Control terminal option-Encoder pulse division ratio | 1 to 32767 | 1 | 1 | 68 |

| Pr. | Pr. <br> group | Name | Setting range | Minimum <br> setting <br> increments | Initial <br> value | Refer to <br> page |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 871 | C 243 | Control terminal option-Encoder position <br> tuning setting/status | 0,1 | 1 | 0 | $* 1$ |
| 873 | H 415 | Speed limit | 0 to 400 Hz | 0.01 Hz | 20 Hz | $* 1$ |
| 876 | H 022 | Thermal protector input | 0,1 | 1 | 1 | 45 |
| 887 | C 244 | Control terminal option—Encoder magnetic <br> pole position offset | 0 to 16383,65535 | 1 | 65535 | $* 1$ |

*1 Refer to the Instruction Manual (Detailed) of the inverter.

### 4.2 Thermal protector input

| Pr. | Pr. <br> group | Name | Initial <br> value | Setting <br> range | Description |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 876 | H022 | Thermal protector input | 1 | 0 | Terminal OH is invalid. |
|  |  |  |  | Terminal OH is valid. |  |

- When the motor with a temperature detector for overheat protection is used, use terminal OH to input contact signals of the thermal relay, etc. for overheat protection of a motor.
- Use Pr. 876 to set valid/invalid status of terminal OH function when the FR-A8TP is installed.
- When terminal OH is valid and the OH signal turns OFF, the protective function (E.OHT) is activated.
- Set "7" in any of Pr. 180 to Pr.182, or Pr. 185 (input terminal function selection) to assign the OH signal to another terminal.

## $\therefore$ NOTE

- Change the external thermal relay switch (SW5A) position to switch the terminal OH control logic (sink logic or source logic) as necessary.
Sink: When the connection between terminals OH and SD is open, E.OHT is activated.
Source: When the connection between terminals OH and PC is open, E.OHT is activated.
- Terminal OH is always for the OH signal. Any other signals cannot be assigned to terminal OH .

### 4.3 Encoder input selection

| Pr. | Pr. group | Name | Initial value | Setting range | Description |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 851 | C240 | Control terminal optionNumber of encoder pulses | 2048 | 0 to 4096 | Set the number of pulses output from the encoder connected to the FR-A8TP. <br> Set the number of pulses before it is multiplied by 4 . |  |
| 852 | C241 | Control terminal optionEncoder rotation direction | 1 | 0 | Set when using a motor (encoder) for  <br> which forward rotation is clockwise Set for the operation at 120 <br> (CW) viewed from the shaft <br> Hz or less.  |  |
|  |  |  |  | $100^{* 1}$ |  | Set for the operation at a frequency higher than 120 Hz . |
|  |  |  |  | 1 | Set when using a motor (encoder) for which forward rotation is counterclockwise (CCW) viewed from | Set for the operation at 120 Hz or less. |
|  |  |  |  | $101^{* 1}$ |  | Set for the operation at a frequency higher than 120 Hz . |
| 855 | C248 | Control terminal optionSignal loss detection enable/disable selection | 0 | 0 | Signal loss detection disabled |  |
|  |  |  |  | 1 | Signal loss detection enabled |  |
| 862 | C242 | Encoder option selection | 0 | 0 | First motor: FR-A8AP, Second motor: FR-A8TP |  |
|  |  |  |  | 1 | First motor: FR-A8TP, Second motor: FR-A8AP |  |

*1 Under PM vector control, the operation for the setting of " 0 " is performed when " 100 " is set. The operation for the setting of "1" is performed when "101" is set.

## NOTE

- If operating at a frequency higher than 120 Hz with Pr. $852=$ "0 or 1 ", the motor rotation will be unstable.
- Using the FR-A8TP together with the Vector control compatible plug-in option enables Vector control or machine end orientation control by switching between two encoder-equipped motors. Use Pr. 862 to set the combination of the motors (first/second) and the options (FR-A8TP / Vector control compatible plug-in option).

| $\text { Pr. } 862$ <br> Encoder option selection | $\text { Pr. } 393$ <br> Orientation selection | RT=OFF <br> (First motor) | $\begin{gathered} \mathrm{RT}=\mathrm{ON} \\ \text { (Second motor) }{ }^{* 1} \end{gathered}$ | Machine end orientation control |
| :---: | :---: | :---: | :---: | :---: |
| 0 (initial value) | 0, 1, 2 | Vector control compatible plug-in option | FR-A8TP | Disabled |
|  | 10, 11, 12 |  |  |  |
|  | 0, 1, 2 | FR-A8TP | Vector control compatible plug-in option |  |
| 1 | 10, 11, 12 | Motor end: FR-A8TP Machine end: Vector control compatible plug-in option | - | Enabled |

*1 When Pr. 450 Second applied motor ="9999", the first motor is selected even if the RT signal turns ON.

- Use the following parameters for the encoder input setting. The encoder input setting can be made regardless of the Pr. 862 setting and first/second motor setting.

| Parameter name | Parameter for control terminal option <br> (FR-A8TP) | Parameter for plug-in option |
| :--- | :--- | :--- |
| Encoder rotation direction | 852 | 359 |
| Number of encoder pulses | 851 | $369^{* 2}$ |
| Encoder signal loss detection <br> enable/disable selection | 855 | 376 |

*2 The number of pulses is fixed to 1024 for the FR-A8APR.

- To input the RT signal, set "3" in any of Pr. 178 to Pr.182, Pr. 185, or Pr. 189 (input terminal function selection) to assign the function to a terminal.

## NOTE

- Pr. 862 setting is valid even when either the FR-A8TP or Vector control compatible plug-in option is installed. For using the FR-A8TP alone, the motor does not run when Pr. 862 is the initial value as it is. (When the RT signal is OFF)

### 4.4 Function differences between induction motors and PM motors

- This section describes function differences between induction motors and PM motors.
- Control method

| Control method | Induction <br> motor | PM motor |
| :--- | :--- | :--- |
| V/F control | $\circ$ | - |
| Advanced magnetic flux vector control | $\circ$ | - |
| Vector control | $\circ$ | $\circ$ |
| Encoder pulse dividing output | $\circ$ | $\circ$ |

०: Supported, -: Not supported

- Major functions list

| Function | Induction motor | PM motor |
| :--- | :--- | :--- |
| Vector control (speed control) | $\circ$ | $\circ$ |
| Vector control (torque control) | $\circ$ | - |
| Vector control (position control) | $\circ$ | $\circ$ |
| Orientation control | $\circ$ | $\circ$ |
| Encoder feedback control | $\circ$ | - |
| Automatic restart after instantaneous power failure | $\circ$ | $\circ$ |
| Servo lock | $\circ$ | $\circ$ |
| Online auto tuning (adaptive magnetic flux observer) | $\circ$ | - |
| Protective function (E.OS, E.OSD, E.ECT) | $\circ$ | $\circ$ |
| Notch filter | $\circ$ | $\circ$ |
| Easy gain tuning | $\circ$ | $\circ$ |
| Model adaptive speed control / Speed feed forward control | $\circ$ | $\circ$ |
| Torque bias | $\circ$ | - |
| Droop control | $\circ$ | $\circ$ |
| Anti-sway control | $\circ$ | $\circ$ |

| Function | Induction motor | PM motor |
| :--- | :--- | :--- |
| Brake sequence function | $\circ$ | $\circ$ |
| Offline auto tuning | $\circ$ (Sensorless) | $\circ$ |
| Forward rotation signal (Y30)/ Reverse rotation signal (Y31)/ <br> Regenerative status signal (Y32) | $\circ$ | $\circ$ |
| Deceleration check | $\circ$ | $\circ$ |
| Speed limit | $\circ$ | - |
| X18 signal switchover | $\circ$ | - |
| Encoder position tuning | - | $\circ$ |

○: Supported, —: Not supported
*1 Applied when the load inertia ratio manual input is selected (Pr.819 = "2").

## 5 ORIENTATION CONTROL

The inverter can adjust the stop position (Orientation control) using a position detector (encoder) attached to a place such as the main shaft of the machine.
For the details of the parameters used for orientation control, refer to the Instruction Manual (Detailed) of the inverter.

### 5.1 Connection diagram

*1 The power supply of the fan for a 7.5 kW or lower dedicated motor is single phase. ( $200 \mathrm{~V} / 50 \mathrm{~Hz}, 200$ to $230 \mathrm{~V} / 60 \mathrm{~Hz}$ )
*2 The pin number differs according to the encoder used.
*3 Use Pr. 178 to Pr.182, Pr.185, or Pr. 189 (input terminal function selection) to assign the function to a terminal. For the details, refer to the Instruction Manual (Detailed) of the inverter.
*4 Use Pr. 190 to Pr.192, or Pr. 195 (output terminal function selection) to assign the function to a terminal. For the details, refer to the Instruction Manual (Detailed) of the inverter.
*5 Connect the encoder so that there is no looseness between the motor and motor shaft. Speed ratio must be 1:1.
*6 Earth (ground) the shield of the encoder cable to the enclosure using a tool such as a P-clip. (Refer to page 37.)
*7 For the differential line driver, set the terminating resistor selection switch to the ON position. (Refer to page 28.)
Note that the terminating resistor switch should be set to the OFF position (initial status) when sharing the same encoder with another unit ( NC , etc.) having a terminating resistor under the differential line driver setting.
For the complementary, set the terminating resistor selection switch to the OFF position (initial status).
*8 For terminal compatibility of the FR-JCBL, FR-V7CBL, and FR-A8TP, refer to page 41.
*9 A separate power supply of $5 \mathrm{~V} / 12 \mathrm{~V} / 15 \mathrm{~V}$ is necessary according to the encoder power specification. When the encoder output is the differential line driver type, only 5 V can be input. If using the 24 V power supply of the FR-A8TP, 24 V power can be supplied from terminal PG24.
Make the voltage of the external power supply the same as the encoder output voltage, and connect the external power supply between PG and SD.
The encoder and the power supply can be shared under orientation control, encoder feedback control, or vector control.
*10 When a stop position command is input from outside, a plug-in option FR-A8AX is required. For the details of the external stop position command, refer to the Instruction Manual (Detailed) of the inverter.
*11 To enable terminal OH, set Pr. 876 Thermal protector input = "1 (initial value)".

### 5.2 Terminals

- Option FR-A8AX terminal

| Terminal symbol | Terminal name | Description |
| :--- | :--- | :--- |
| X0 to X15 | Digital signal input terminal | Input the digital signal at the relay contact or open collector terminal. <br> Using Pr.360, speed or position command is selected as the command signal entered. |
| DY | Data read timing <br> input signal terminal | Use this terminal when a digital signal read timing signal is necessary. Data is read only <br> during the DY signal is ON. <br> The X0 to X15 data before the signal is turned OFF is retained by turning OFF the DY <br> signal. |

- Inverter terminal

| Terminal (signal) |  | Terminal (signal) name | Description |
| :--- | :--- | :--- | :--- |
| Input | X22 | Orientation command | Used to enter an orientation signal for orientation. <br> For the X22 signal input, set "22" in any of Pr. 178 to Pr.182, Pr.185, or Pr. 189 to assign <br> the function. ${ }^{* 1}$ |
| Output | ORA | Orientation complete | Output switches to Low if the orientation has stopped within the orientation complete <br> width while the start and X22 signals are input. <br> For the ORA signal output, set "27 (positive logic)" or "127 (negative logic)" in any of <br> Pr. 190 to Pr.192, or Pr.195. ${ }^{* 1}$ |
|  | ORM | Orientation fault | Output switches to Low if the orientation has not stopped within the orientation complete <br> width while the start and X22 signals are input. <br> For the ORM signal output, set "28 (positive logic)" or "128 (negative logic)" in any of <br> Pr. 190 to Pr.192, or Pr.195. ${ }^{* 1}$ |

*1 Refer to the Instruction Manual (Detailed) of the inverter for the details of Pr. 178 to Pr.182, Pr.185, or Pr. 189 (input terminal function selection) and Pr. 190 to Pr.192, or Pr. 195 (output terminal function selection).

### 5.3 Specifications

| Item | Description |
| :--- | :--- |
| Repeated positioning <br> accuracy | $\pm 1.5^{\circ}$ <br> Depends on the load torque, moment of inertia of the load, orientation, creep speed, or position loop switching <br> position, etc. |
| Permissible speed | Encoder-mounted shaft speed (6000 r/min with 1024 pulse encoder) <br> The drive shaft and encoder-mounted shaft must be coupled directly or via a belt without any slip. Gear changing <br> shafts cannot be applied. |
| Functions | Orientation, creep speed setting, stop position command selection, DC injection brake start position setting, <br> creep speed and position loop switch position setting, position shift, orientation in-position, position pulse <br> monitor, etc. |
| Holding force after <br> positioning | Under V/F control, Advanced magnetic flux vector control ...... without servo lock function <br> Under vector control ..... with servo lock function |
| Input signal <br> (contact input) | Orientation command, forward and reverse rotation commands, stop position command (open collector signal <br> input (complementary) is enabled) <br> Binary signal of maximum 16 bits (when used with the FR-A8AX) |
| Output signal <br> (open collector output) | Orientation completion signal, orientation fault signal |

### 5.4 Parameter related to orientation control

### 5.4.1 Encoder orientation gear ratio setting

Set the encoder orientation gear ratio for machine end orientation control.
To perform machine end orientation control, the FR-A8TP and the plug-in option FR-A8AP must be installed.
Set "1" in Pr. 862 Encoder option selection. Connect the motor-end encoder to the FR-A8TP, and connect the machine-end encoder to the FR-A8AP.

| Pr. | Pr. <br> group | Name | Initial <br> value | Setting <br> range | Description |
| :---: | :--- | :--- | :---: | :---: | :---: |
| 394 | A540 | Number of machine side <br> gear teeth | 1 | 0 to 32767 | Set the encoder orientation gear ratio. |
| 395 | A541 | Number of motor side <br> gear teeth |  |  |  |

Set the encoder orientation gear ratio.

- An accurate gear ratio (or pulley ratio) from the motor shaft to the spindle is necessary.

Set correct numbers of gear teeth in Pr. 394 and Pr. 395.
Pr. $394=A \times C \times E$
Pr. $395=B \times D \times F$
Exercise care so that the $A \times C \times E$ and $B \times D \times F$ settings do not exceed 32767 .
If either or both of them exceed that value, make approximations.

- Pulley ratio ...... Ratio of vector-driven motor side pulley diameter to spindle side pulley diameter

Setting example (When the numbers of gear teeth are as follows)
A:15, C: 43, E: 60, B: 10, D: 28, F:55
Pr. $394=15 \times 43 \times 60=38700$
Pr. $395=10 \times 28 \times 55=15400$
Since Pr. 394 setting exceeds 32767 at this time, make approximations as follows.
$\underline{P r . ~} 394=\underline{38700}=\underline{3870}$
Pr. $39515400 \quad 1540$

## 6 ENCODER FEEDBACK CONTROL

Mount FR-A8TP to an FR-A800 series inverter to perform encoder feedback control under V/F control or Advanced magnetic flux vector control.
This controls the inverter output frequency so that the motor speed is constant to the load variation by detecting the motor speed with the speed detector (encoder) to feed back to the inverter.
For the details of the parameters used for encoder feedback control, refer to the Instruction Manual (Detailed) of the inverter.

### 6.1 Connection diagram

*1 The pin number differs according to the encoder used.
*2 Connect the encoder so that there is no looseness between the motor and motor shaft. Speed ratio must be 1:1.
*3 Earth (ground) the shield of the encoder cable to the enclosure using a tool such as a P-clip. (Refer to page 37.)
*4 For the differential line driver, set the terminating resistor selection switch to the ON position. (Refer to page 28.)
Note that the terminating resistor switch should be set to the OFF position (initial status) when sharing the same encoder with another unit (NC, etc.) having a terminating resistor under the differential line driver setting.
For the complementary, set the terminating resistor selection switch to the OFF position (initial status).
*5 For terminal compatibility of the FR-JCBL, FR-V7CBL, and FR-A8TP, refer to page 41.
*6 A separate power supply of $5 \mathrm{~V} / 12 \mathrm{~V} / 15 \mathrm{~V}$ is necessary according to the encoder power specification. When the encoder output is the differential line driver type, only 5 V can be input. If using the 24 V power supply of the FR-A8TP, 24 V power can be supplied from terminal PG24.
Make the voltage of the external power supply the same as the encoder output voltage, and connect the external power supply between PG and SD.
The encoder and the power supply can be shared under encoder feedback control, or orientation control.

### 6.2 Specifications

| Item | Description |
| :--- | :--- |
| Speed variation ratio | $\pm 0.1 \%(100 \%$ means $3600 \mathrm{r} / \mathrm{min})$ |
| Function | - Setting of the speed feedback range <br> - Setting of the feedback gain <br> •Setting of the encoder rotation direction |
| Maximum speed | V/F control: 590 Hz , Advanced magnetic flux vector control: 400 Hz <br> (102400 pulses/s or less encoder pulses) |

## 7 VECTOR CONTROL

When the FR-A8TP is mounted on the FR-A800 series, full-scale vector control operation can be performed using a motor with encoder. (For the details, refer to the Instruction Manual (Detailed) of the inverter.)
Speed control, torque control, and position control are enabled under Vector control for induction motors.
Speed control and position control are enabled under Vector control for PM motors.

### 7.1 Connection diagram

- Speed control

- Torque control (available with induction motors only)

- Position control

*1 The pin number differs according to the encoder used.
Speed, control, torque control, and position control by pulse train input are available with or without the Z-phase being connected.
*2 Connect the encoder so that there is no looseness between the motor and motor shaft. Speed ratio must be 1:1.
*3 Earth (ground) the shield of the encoder cable to the enclosure using a tool such as a P-clip. (Refer to page 33.)
*4 For the complementary, set the terminating resistor selection switch to the OFF position (initial status). (Refer to page 33.)
*5 A separate power supply of $5 \mathrm{~V} / 12 \mathrm{~V} / 15 \mathrm{~V}$ is necessary according to the encoder power specification. When the encoder output is the differential line driver type, only 5 V can be input.
Make the voltage of the external power supply the same as the encoder output voltage, and connect the external power supply between PG and SD.
For the 24 V encoder, 24 V power can be supplied from terminal PG24 on the FR-A8TP.
*6 For terminal compatibility of the FR-JCBL, FR-V7CBL, and FR-A8TP, refer to page 41.
*7 For the fan of the 7.5 kW or lower dedicated motor, the power supply is single phase. ( $200 \mathrm{~V} / 50 \mathrm{~Hz}, 200$ to $230 \mathrm{~V} / 60 \mathrm{~Hz}$ )
*8 To enable terminal OH, set Pr. 876 Thermal protector input = "1 (initial value)".
*9 Assign the function using Pr. 178 to Pr.182, Pr.185, or Pr. 189 (input terminal function selection).
*10 When position control is selected, terminal DI4 function is invalid and simple position pulse train input terminal becomes valid.
*11 Assign the function using Pr. 190 to Pr.192, or Pr. 195 (output terminal function selection).
*12 The SF-PR-SC does not have a cooling fan
*13 Some SF-PR-SC models have a thermal protector.

### 7.2 Setting procedure of Vector control for motor with encoder

Follow the following procedure to change the setting for the Vector control for the motor with encoder. (For the details, refer to the Instruction Manual (Detailed) of the inverter.)

## - Induction motor

1. Set the applied encoder. (Pr.852, Pr.851)

Set Pr. 852 Control terminal option-Encoder rotation direction and Pr. 851 Control terminal option-Number of encoder pulses in accordance with the encoder specification.
2. Set the applied motor. (Pr.9, Pr.71, Pr.80, Pr.81, Pr.83, Pr.84)

Set Pr. 71 Applied motor, Pr. 9 Rated motor current, Pr 80 Motor capacity, Pr. 81 Number of motor poles, Pr. 83
Rated motor voltage, and Pr. 84 Rated motor frequency according to the motor specifications.
(Setting "9999 (initial value)" in Pr. 80 or Pr. 81 selects V/F control.)
3. Select Vector control (other than position control). (Pr.800)
4. Perform offline auto tuning. (Pr.96)

Set Pr. 96 and perform tuning.
5. Test run

Set Pr. 800 again according to the control mode to be used.

## - PM motor

1. Set the applied encoder. (Pr.852, Pr.851)

Set Pr. 852 Control terminal option-Encoder rotation direction and Pr. 851 Control terminal option-Number of encoder pulses in accordance with the encoder specification.
2. Set the applied motor. (Pr.9, Pr.71, Pr.80, Pr.81, Pr.83, Pr.84)

Set Pr. 71 Applied motor, Pr. 9 Rated motor current, Pr. 80 Motor capacity, Pr. 81 Number of motor poles, Pr 83
Rated motor voltage, and Pr. 84 Rated motor frequency according to the motor specifications.
(Setting "9999 (initial value)" in Pr. 80 or Pr. 81 selects V/F control.)
Set Pr.702, Pr.706, Pr.707, Pr. 724 and Pr. 725 as required.
3. Select Vector control (other than position control). (Pr.800)
4. Perform offline auto tuning and encoder position tuning. (Pr.96, Pr.871)

Set Pr. 96 and Pr. 871 and perform tuning.
5. Configure the initial setting for the PM sensorless vector control using Pr.998.

When the setting for the PM motor is selected in Pr. 998 PM parameter initialization, the PM vector control is selected.
"8009": Parameter (rotations per minute) settings for an IPM motor other than MM-CF
"8109": Parameter (frequency) settings for an IPM motor other than MM-CF
"9009": Parameter (rotations per minute) settings for an SPM motor
"9109": Parameter (frequency) settings for an SPM motor
6. Test run

For position control, set Pr. 800 again.

### 7.3 Specifications

| Item |  | Description |
| :---: | :---: | :---: |
| Speed control | Speed control range | 1:1500 (both driving/regeneration ${ }^{* 1}$ ) |
|  | Speed variation ratio | $\pm 0.01 \%$ (100\% means $3000 \mathrm{r} / \mathrm{min}$ ) |
|  | Speed response | 130 Hz |
|  | Maximum speed | 400 Hz (102400 pulses/s or less encoder pulses) |
| Torque control | Torque control range | 1:50 |
|  | Absolute torque accuracy | $\pm 10 \%{ }^{*}$ |
|  | Repeated torque accuracy | $\pm 5 \%{ }^{*}{ }^{2}$ |
| Position control | Repeated positioning accuracy | $\pm 1.5^{\circ}$ (at motor shaft end) |
|  | Maximum input pulse frequency | 100k pulses/s (terminal DI4) |
|  | Positioning feedback pulse | Number of encoder pulses per motor rotation (Pr.851) $\times 4$ |
|  | Electronic gear setting | 1/50 to 20 |
|  | In-position width | 0 to 32767 pulses |
|  | Error excess | 0 to 400k pulses |
| Function |  | - Setting of the speed feedback range <br> - Setting of the feedback gain <br> - Setting of the encoder rotation direction |

*1 Regeneration unit (option) is necessary for regeneration.
*2 With online auto tuning (adaptive magnetic flux observer), dedicated motor, rated load

## 8 ENCODER PULSE DIVIDING OUTPUT

Pulse input of encoder connected to the inverter is divided and output from the FR-A8TP terminal.

### 8.1 Connection diagram

- For open collector output, the signal may become unstable if the input resistance of the connected device is large and the device may detect the signal incorrectly. In this case, adding a pull-up resistor as shown below will improve the phenomenon. Select a pull-up resistor in consideration of the input current of the connected device so that the open collector output current will not exceed the output permissible load current.

### 8.2 Parameter related to encoder pulse dividing output

| Pr. | Pr. <br> group | Name | Initial <br> value | Setting <br> range | Description |
| :---: | :---: | :--- | :---: | :---: | :--- |
| 863 | M600 | Control terminal option- <br> Encoder pulse division <br> ratio | 1 | 1 to 32767 | The encoder pulse signal at the motor end can be divided in <br> division ratio set in Pr.863 and output. <br> Use this parameter to make the response of the machine to be <br> input slower, etc. |

- Division waveform by division ratio

Both ON-OFF width is division times. ( $50 \%$ duty)

- Pulse waveform example at 1000 pulse input when $\operatorname{Pr} .863=$ "2"

## NOTE

- Control of forward rotation/reverse rotation by phase difference between A phase and B phase.

When A phase is $90^{\circ}$ advanced as compared to B phase: forward rotation
When A phase is $90^{\circ}$ behind as compared to $B$ phase: reverse rotation

## APPENDIX

## Appendix 1 Restricted Use of Hazardous Substances in Electronic and Electrical Products

The mark of restricted use of hazardous substances in electronic and electrical products is applied to the product as follows based on the＂Management Methods for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products＂of the People＇s Republic of China．

电器电子产品有害物质限制使用标识要求

本产品中所含有的有害物质的名称，含量，含有部件如下表所示。
－产品中所含有害物质的名称及含量

| 部件名称＊2 | 有害物质＊1 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \begin{array}{c} \text { 铅 } \\ (\mathrm{Pb}) \end{array} \end{gathered}$ | $\begin{gathered} \text { 汞 } \\ (\mathrm{Hg}) \end{gathered}$ | $\begin{aligned} & \begin{array}{c} \text { 镉 } \\ (\mathrm{Cd}) \end{array} \end{aligned}$ | $\begin{gathered} \text { 六价铬 } \\ (\operatorname{Cr}(\mathrm{VI})) \end{gathered}$ | 多溴联苯 （PBB） | 多溴二苯醚 <br> （PBDE） |
| 电路板组件（包括印刷电路板及其构成的零部件，如电阻，电容，集成电路，连接器等），电子部件 | $\times$ | $\bigcirc$ | $\times$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| 金属壳体，金属部件 | $\times$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | 0 | $\bigcirc$ |
| 树脂壳体，树脂部件 | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| 螺丝，电线 | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |

上表依据 SJ／T11364 的规定编制。
○：表示该有害物质在该部件所有均质材料中的含量均在 GB／T26572 规定的限量要求以下。
$\times$ ：表示该有害物质在该部件的至少一种均质材料中的含量超出 $\mathrm{GB} / \mathrm{T} 26572$ 规定的限量要求。
＊1 即使表中记载为 $\times$ ，根据产品型号，也可能会有有害物质的含量为限制值以下的情况。
＊2 根据产品型号，一部分部件可能不包含在产品中。

## Appendix 2 Regarding Directive on Waste Electrical and Electronic Equipment

This symbol mark is for EU countries only, and is according to the directive 2012/19/ EU Article 14 Information for users and Annex IX.
This symbol mark means that electrical and electronic equipment, at their end-of-life, should be disposed of separately from your household waste.

## MEMO

## REVISIONS

*The manual number is given on the bottom left of the back cover.
