## MITSUBISHI ELECTRIC

Numerical Protection Relay

MELPRO ${ }^{\text {w}}-\mathrm{D}$ Series TRANSFORMER PROTECTION RELAY MODEL CAC1-A41D1<br>INSTRUCTION MANUAL

Before installation, operation, maintenance, and inspection, please be sure to read this instruction manual and all other attached documents thoroughly in order to work safely with the equipment. Please ensure that you fully understand the equipment, safety information, and precautions that need to be taken before working with the equipment.
Safety precautions are classified as "Danger" and "Caution."

The case where a dangerous situation can arise and there is the possibility that death or seriously injury can occur if the equipment is handled incorrectly.

Caution
The case where a dangerous situation can arise and there is the possibility that moderate or minor injuries canl occur, or property damage can take place if the equipment is handled incorrectly.

Furthermore, even with items described as $\triangle$ Caution, there is the possibility of serious consequences depending on the situation. All of the described contents are important. Therefore, be sure to comply with them.

## [Transportation]

- Transport the equipment in the correct orientation.
-Do not apply excessive shock and/or vibration as this could affect the performance and life of the product.

## [Storage]

The storage environment shall comply with the following conditions. Otherwise, there is a risk of reducing the performance and life of the product.

- Ambient temperature $\quad-40$ to $+85^{\circ} \mathrm{C}$

The state where dew condensation or freezing does not occur.

- Relative humidity 5 to $95 \%$ on daily average
- Altitude $\quad 2000 \mathrm{~m}$ or lower
- The equipment must not be exposed to abnormal vibration, shock, inclination, or magnetic fields.
- The equipment must not be exposed to harmful smoke/gas, saline gas, water droplets or vapor, excessive dust or fine powder, explosive gas or fine powder, wind \& rain.

## [Installation, wiring work]

- The equipment must be correctly grounded using the designated grounding terminals where they exist. Failure to do so may lead to the risk of electric shock, equipment failure, malfunction or failure to operate.
- Be sure to return all terminal covers, protection covers to their original positions once any work is complete. If they remain uncovered there is a risk of electrical shock.
- Ensure that the equipment is mounted and connected correctly. Otherwise, there are risks of failure, burning, or mal-operation.
- Securely tighten the terminal connection screws. Otherwise, there are risks of failure and burning.
- For tightening torque of screws, refer to the following Table.

| Place of use | Nominal dia. | Standard value of torque <br> (steel screw) | Allowable range |
| :--- | :--- | :--- | :--- |
| Terminal block | M3.5 | $1.10 \mathrm{~N} \cdot \mathrm{~m}(11.2 \mathrm{kgf} \cdot \mathrm{cm})$ | 0.932 to $1.27 \mathrm{~N} \cdot \mathrm{~m}(9.5 \mathrm{to} 12.9 \mathrm{kgf} \cdot \mathrm{cm})$ |
| Panel mounting | M5.0 | $3.24 \mathrm{~N} \cdot \mathrm{~m}(33 \mathrm{kgf} \cdot \mathrm{cm})$ | 2.75 to $3.63 \mathrm{~N} \cdot \mathrm{~m}(28 \mathrm{to} 37 \mathrm{kgf} \cdot \mathrm{cm})$ |

- Ensure that the equipment is connected correctly in accordance with the details shown on the connection terminals. Otherwise, there is the risk of failure, burning, malfunction, or mal-operation.
- Ensure that the equipment is connected correctly in accordance with the phase sequence details shown on the connection terminals. Otherwise, there is the risk of failure, burning, malfunction, or maloperation.
- All power supplies to the equipment must be of suitable capacity and rated load to avoid the risk of malfunction and mal-operation.
- The appropriate connectors must be used to ensure compatibility with the connector terminals to avoid the risks of failure or fire.

## [Operating and Setting the equipment]

- The equipment must only be operated and handled by qualified personnel. Otherwise, there are risks of electric shock, injury, failure, malfunction, and mal-operation.
- Handling and maintenance of the equipment must only be carried out after gaining a thorough understanding of the instruction manual. Otherwise, there is the risk of electric shock, injury, failure, malfunction, or mal-operation.

## ! ${ }_{\text {Caution }}$

- The equipment must be used within the following range limits. Otherwise, there is a risk of reducing the performance and life of the product.
- Variation range of control power supply voltage Within $-15 \%$ to $+10 \%$ of the rated voltage
- Frequency variation
- Ambient temperature
- Relative humidity Within $\pm 5 \%$ of the rated frequency -40 to $+60^{\circ} \mathrm{C}$ The state where dew condensation or freezing does not occur
- Altitude 2000 m or lower
- The state where abnormal vibration, shock, inclination, magnetic field are not applied
- The state where it is not exposed to harmful smoke/gas, saline gas, water droplet or vapor, excessive dust or fine powder, explosive gas or fine powder, wind \& rain
-While energized, do not tamper with or remove any components other than those which have been designated. Otherwise, there is a risk of failure, malfunction, or maloperation.
-While energized, do not draw out the internal unit (subunit). Otherwise, there is a risk of electric shock, injury, failure, malfunction, or maloperation.
-When changing the setting value during the energized state, ensure that all trip circuits are locked in order not to operate. Otherwise, there is a risk of malfunction.

## [Maintenance and Inspection]

Danger

- The equipment must only be operated and handled by qualified personnel. Otherwise, there are risks of electric shock, injury, failure, malfunction, and maloperation.
- Handling and maintenance of the equipment must only be carried out after gaining a thorough understanding of the instruction manual. Otherwise, there is the risk of electric shock, injury, failure, malfunction, or maloperation.
-Do not touch any live parts, such as terminals, etc. Otherwise, there is a risk of electric shock.

Caution
-When replacing the equipment, use a product of same model, rating, and specifications. Otherwise, there is the risk of failure or fire.. If any other product is to be used, the manufacturer must be consulted.
-We recommend that any tests or inspections are carried out under the following conditions, as well as any additional conditions described in the instruction manual.

- Ambient temperature
- Relative humidity
- External magnetic field
- Atmospheric pressure
- Mounting angle
- Frequency
- Waveform (in the case of AC)
) Distortion factor $2 \%$ or less Distortion Effective value of higher harmonics only $\times 100$ (\%)
- AC component (in the case ofRipple factor $3 \%$ or less DC)
Ripple
factor $=$$\quad$ Max. value - Min. value $\quad$ Average value of DC $100(\%)$
- Control power supply voltage Rated voltage $\pm 2 \%$
-Do not exceed the overload capacity for voltage and current. Otherwise,equipment failure or fire could occur.
-Do not clean the equipment while energised. When the cover needs to be cleaned, make use of a damp cloth.

## [Repair and modification]

Caution
-When carrying out repair and/or modification, please consult with the manufacturer in advance.of carrying out the work. We will not take any responsibility for any repair and/or modification (including software) which has been carried out without prior consent.

## [Disposal]

-Disposal must take place in accordance with the applicable legislation

## - Improvement on the reliability of protection function -

Any parts and materials applied to the protection relay have limited life time which will bring the degradation to the relay.
The degree of degradation will be variable and depend on the purpose, period in use, applied circumstance and unevenness on the performance of each part.
MITSUBISHI ELECTRIC CORPORATION design the relay so as to realize that the recommended replaced duration is more than 15 years.
However, there may be some possibilities to occur some defects before reaching 15 years due to above mentioned the degree of degradation of parts and materials being depended on the condition in use.
To prevent unwanted operation or no operation of relay due to above reasons, it is recommended to apply the relay with self-diagnosis function and/or multiplexing relay system such as dual or duplex scheme.

1.2. Front view of relay

Fig. 1-3 Front view of relay

### 1.3. Terminal layout on the back plane of relay

Slot D: LAN ports
(when selecting the incorporated type of IEC61850 communication interface

Fig. 1-4 Terminal layout on the back terminals of relay

Fig. 1-5 Terminal number on the back plane of relay

### 1.4. External view of relay

The relay is of draw-out construction to facilitate inspection and testing. Therefore, it is possible to draw out the sub-unit without disconnecting the external wiring
When drawing out the subunit, be sure to take the following steps to avoid the unwanted operation of primary equipment:

- Isolate the relay supplies
- Take care that the appropriate circuit is isolated
- Separate / bridge the CT circuit
- Lock out the operation of circuit breakers etc
- Disconnect the control circuits

As an additional precaution, the CT circuit is provided with an automatic short-circuiting mechanism. This will ensure that the CT secondary circuit is not opened when the sub-unit is removed even if the CT circuits have not been separately bridged.

Fig. 1-6 External view of relay
1.4.1. Procedures for draw out the subunit
(1) Removing screws

To draw out the subunit from the case, remove upper \& lower screws at the front side of the subunit.
(2) Draw out the subunit

Then, draw out the subunit using fingers on the upper \& lower grooves of it.
1.4.2. Procedures for insert the subunit
(1) Insert the subunit

To insert the subunit into the case, using fingers on the upper \& lower grooves of it.

Ensure that there is no gap between front side of the subunit and outer case.
(2) Fixing screws

Then, fix upper \& lower screws at the front side of the subunit.

### 1.5. Mounting

When inserting this relay into control panel, take care in order not to damage it.
After inserting, fix this relay with washers and nuts which are supplied with the product.

## 2. Rating, Specification

### 2.1. Features

(1) Multi-function

- The relay incorporates a variety of protection functions which are required for transformer protection. Therefore, it is possible to protect the transformer with the use of a single relay.
- The relay has two Group settings sets. Therefore, it can be used for different purposes, such as operation/test, or quickly adapted to meet load conditions.
- Control of a circuit breaker is possible via the font panel, PC-HMI, or remote communication (option).
(2) High-precision measuring functions
- Measurement functions are enhanced.

Current, voltage, electric power, quantity of electricity, frequency, can be viewed via the front panel display on the relay or using interface software on a PC.

- Fault / Disturbance Recording

The relay stores up to 5 fault / disturbance records which can be used for fault investigations.
Fault record function is the record of analog input values (as RMS) at the time when relay elements are operated. Disturbance record function is the record of waveform data for the prescribed period before and after occurrence of fault at sampling rate of 24 samples/cycle.
(3) Selection of communication networks

- Modbus (RS485)

Modbus communication function is incorporated as standard.

- IEC61850 (Ethernet Station Bus)

An optional communication card will enable communication based on IEC61850 with GOOSE messaging.
A two-port optical connector or a single port electrical connector is provided. If the optical two-port connector is selected, HSR (High-availability Seamless Redundancy) and PRP (Parallel Redundancy Protocol) can be configured to improve the reliability of communication.
(4) Programmable Output Contacts provide flexibility

The configuration of output contact is possible by PLC (Programmable Logic Controller), which enables to apply the relay to various systems.
(5) Advanced constant monitoring function improves reliability

The relay continuously monitors the electronic circuits and can detect internal component failure, which enables to improve reliability.
The relay's behavior is as follows:

- In normal conditions: RUN LED lights.
- In abnormal conditions: ALARM LED lights.

During serious abnormal conditions, the protection elements are locked to prevent an unnecessary output, and the relay fail alarm is issued.
(6) The draw-out Subunit improves maintainability

The provision of an automatic CT shorting mechanism at the time of drawing out the unit makes it very easy to maintain the relay.
Remarks: This mechanism is installed only in the input terminals of relay devices with connected to current transformer.

### 2.2. Standard Ratings

| Item |  |  | Contents |
| :---: | :---: | :---: | :---: |
| Rating | Current |  | 5A type |
|  | Zero-phase current |  | 5 A type (neutral or residual current) |
|  | Frequency |  | $60 \mathrm{~Hz} / 50 \mathrm{~Hz}$ |
|  | Power | Voltage | DC110 ~ 250 V , AC100 ~ 240 V |
|  | Supply | Variation range | DC88 ~ 300 V , AC85 ~ 264 V |
| Communication function (*Note) | Modbus |  | Option |
|  | IEC61850 |  | Option (Optical 2 ch ) |
| Time synchronization function | IRIG-B |  | Standard equipment |
|  | SNTP |  | Provided in the case where the IEC61850 communication card is mounted. |

*Note: When IEC61850 is used, Modbus cannot be used and vice-versa. (Only one communications protocol can be selected at a time)
2.3. Protection elements

Type 1 (Y-D Transformer)

Type 1 (Y-Y Transformer) without neutral CT

| Device No. | Protection element (Abbreviated name) | Operating value | Operating time | Other settings |
| :---: | :---: | :---: | :---: | :---: |
| 87T | Ratio Differential Current | 20~100\% | 0.0~110.0s |  |
| 87TH | Differential Current | $5 \sim 12$ | 0.0 ~ 110.0s |  |
| 87TN | Restricted Earth Fault (Zero-sequence Differential Current) | 10 ~ 200\% | $\begin{aligned} & 0.0 \sim \\ & 1600.0 \mathrm{~s} \end{aligned}$ |  |
| 50P | Instantaneous Overcurrent element (OC1~3) | 5A type: $0.5 \sim 1100.0 \mathrm{~A}$ | 0.0 ~ 110.0s |  |
| 51P | Definite time or IDMT overcurrent element (OC4) | 5 A type: $0.5 \sim 100.0$ A | - | 14 types of operating time characteristics, 3 types of reset time characteristics |
| $50 \mathrm{~N} \cdot 50 \mathrm{G}$ | Instantaneous ground (earth) fault overcurrent element (by residual current or neutral current) (OCN1~3 / OCG1~3) | IO = 5 A type: $0.1 \sim 100.0$ A | $0.0 \sim 110.0 \mathrm{~s}$ |  |
| $51 N \cdot 51 G$ | Definite time or IDMT ground (earth) fault overcurrent element (by residual current or neutral current) (OCN4 / OCG4) | $10=5$ A type: $0.1 \sim 100.0$ A | - | 14 types of operating time characteristics, 3 types of reset time characteristics |
| 46 | Negative sequence overcurrent element (OCNEG1~2) | 5 A type: $0.25 \sim 5.00 \mathrm{~A}$ | 0.0 ~ 110.0s |  |
| 50BF | CB failure protection(CBF) | 5 A type: $0.15 \sim 10.00$ A | 0.0 ~ 110.0s |  |
| $\begin{array}{\|l\|} \hline \text { 50BFN • } \\ \text { 50BFG } \\ \hline \end{array}$ | Ground (Earth) fault CB failure protection (CBFG) | 5 A type: $0.15 \sim 10.00$ A | $0.0 \sim 110.0 \mathrm{~s}$ |  |
| 49 | Thermal Overload | 5A type: $1.0 \sim 110.0 \mathrm{~A}$ | - |  |

*As the factory settings, a default of "Non-use" for the products with 'Use/Non-use setting' is set. If the setting items don't have 'Use/Non-use setting', the minimum setting value is set.

* For details, refer to Chapter 3.
* As factory default, protection element is disabled, i.e., set to "OFF", for "*** EN" setting if the element is selectable from enabled and disabled. For protection elements which have no such settings, the minimum value is set as the operating value.

### 2.4. Measuring element

## 3. Protection Function

The CAC1-A41D1 Relay incorporates protective elements which are necessary and sufficient for the protection of the double wounded transformer. In this chapter, the protection elements incorporated in CAC1-A41D1 are explained.

Example: Y-D Transformer

### 3.1. Differential Current Element

The CAC1-A41D1 Relay incorporates 4 types of differential current element, listed in the table below, which achieve a quick detection of the transformer fault. The relay features a software-based phase and amplitude adjustments to be applicable with various transformer winding configuration. And then, it is not necessary to provide an auxiliary CT installed externally for this purpose. Further, the relay has a 2nd and 5th harmonic blocking function built into its DIFF element, which prevents unnecessary relay operation for a transformer excitation inrush current or over-excitation.

| Device No. | Display name | Protective function |
| :--- | :--- | :--- |
| $87 T$ | DIFF | Current ratio differential element with a 2nd and 5th harmonic <br> blocking function |
| $87 T H$ | DIFFH | Differential overcurrent element |
| 87 TN | RGFH | Zero-sequence current ratio differential element at high-voltage <br> side |
|  | RGFL | Zero-sequence current ratio differential element at low-voltage <br> side |

### 3.1.1. DIFF Element (Current Ratio Differential Element)

DIFF is a ratio differential current element with a 2 nd and 5 th harmonic blocking function. The internal function block diagram is shown in Fig. 3-1.

DIFF element takes in input currents on both high- and low-voltage sides of the transformer and compensates both phase difference of both sides' current at load current and zero phase current at each side which generate at external earth fault due to the transformer's winding configuration. The element provides the phase configuration setting and CT ratio-matching setting to active the no- differential current at through fault current, and calculates differential current and restraint current. The element extracts 2nd and 5th harmonics from the differential current to detect the transformer inrush current or transformer over-exciting current for blocking the element's unnecessary operation.

DIFF outputs the trip signal after the lapse of an operation timer (Ope. Time) if the relation of differential and restraint current is in the set ratio-differential characteristics shown in Fig. 3-2 under no detection of 2nd/5th harmonics blocking function.

An off-delay timer of $200-\mathrm{ms}$ is added on the reset side of DIFF to prevent chattering on the contact.
In addition, this element outputs an operating signal only when its enable/disable setting (DIFF EN) is set ON. If this protective element is not necessary, switch the setting to OFF. 'DIFF EN =OFF' setting prevents the unnecessary operation of the element.

Fig. 3-1 Ratio Differential Current Element (DIFF) - internal function block diagram

* [ ] shows setting value.

Fig. 3-2 Operating characteristics of Current Ratio Differential Element (DIFF)

### 3.1.1.1. Phase / Zero-Sequence Compensation

When a transformer winding configuration is such that phases differ between its high-voltage side and lowvoltage side, phase compensation shall be required in accordance with Table 3-1 to calculate a correct differential current. And since there may be an unnecessary differential current at external earth fault due to a zero phase current even if the correct phase/gain matching settings are set, the additional zero-phase compensation is provided.
Table 3-2 shows a correspondence between a typical transformer winding configuration and setting values for phase /zero-sequence compensation.

These phase / zero-sequence compensation mean calculating phase rotation. Generally, how to compensation is selected from 2 way - first way is conducted by CT connection and second way is conducted by relay setting. When the phase compensation or zero-sequence compensation are carried out by the CT connection (such as Fig. 7-1 ~ Fig. 7-4 is adopted), please set " 0 " for setting "TRH Con.", "TRH Zero", "TRL Con." And "TRL Zero". Following shows examples of adopting each method.

## e.g. Transformer: Yd1

Condition of CT connection
Delta (D) connection of CT is adopted for High side winding.
Star ( Y ) connection of CT is adopted for Low side winding.
Relay Settings
TRH Con. $=0$, TRH Zero $=0$, TRL Con. $=0$, TRL Zero $=0$.
e.g. Transformer: Yd1

Condition of CT connection
Star ( Y ) connection of CT is adopted for High side winding. Star ( Y ) connection of CT is adopted for Low side winding.
Relay Settings
TRH Con. $=1$, TRH Zero $=0$, TRL Con. $=0$, TRL Zero $=0$.
More detail of these relay setting, please refer to Table 3-2.

Table 3-1 Phase compensation setting
(1) Phase compensation setting TRH Con. and TRL Con.

| $\begin{aligned} & \text { TRH (L) } \\ & \text { Con. } \\ & \hline \end{aligned}$ | Conversion table |  |  | Remark |
| :---: | :---: | :---: | :---: | :---: |
|  | A phase | B phase | C phase |  |
| 0 | la | lb | Ic | No conversion |
| 1 | (la-lc)/ $\sqrt{3}$ | ( lb -la)/ $\sqrt{3}$ | (lc-lb) $/ \sqrt{3}$ | $\Delta$ conversion, $-30^{\circ}$ phase shift |
| 2 | (la-lb) $\sqrt{3}$ | (lb-lc)/ $\sqrt{3}$ | (lc-la) $/ \sqrt{3}$ | $\Delta$ conversion, $+30^{\circ}$ phase shift |
| 3 | ( (b-la) $/ \sqrt{3}$ | (Ic-lb) $/ \sqrt{3}$ | (la-lc) $/ \sqrt{3}$ | $\Delta$ conversion, $-150^{\circ}$ phase shift |
| 4 | ( (lb-lc) $/ \sqrt{3}$ | (Ic-la)/ $\sqrt{3}$ | (la-lb) $/ \sqrt{3}$ | $\Delta$ conversion, $-90^{\circ}$ phase shift |
| 5 | (Ic-lb) $/ \sqrt{3}$ | (la-lc)/ $\sqrt{3}$ | (lb-la) $/ \sqrt{3}$ | $\Delta$ conversion, $+90^{\circ}$ phase shift |
| 6 | (Ic-la) $/ \sqrt{3}$ | (la-lb)/ $\sqrt{3}$ | (lb-lc)/ $\sqrt{3}$ | $\Delta$ conversion, $+150^{\circ}$ phase shift |
| 7 | - la | - lb | - Ic | $-180^{\circ}$ phase shift |
| 8 | lb | Ic | la | $-120^{\circ}$ phase shift |
| 9 | - lb | - Ic | - la | $+60^{\circ}$ phase shift |
| 10 | Ic | la | lb | $+120^{\circ}$ phase shift |
| 11 | - Ic | - la | - lb | $-60^{\circ}$ phase shift |

(2) Zero-sequence compensation setting TRH Zero and TRL Zero

TRH Zero and TRL Zero = ' 0 ': No IO compensation after conversions of TRH Con. and TRL Con. TRH Zero and TRL Zero = ' 1 ': 10 compensation (with ( $\mathrm{la}+\mathrm{lb}+\mathrm{lc}$ ) / 3 being subtracted) after conversions to TRH Con. and TRL Con.
Note: IO compensation is performed on a terminal current-by-terminal current basis.

| TRH(L) <br> Zero | Conversion table |  | Remark |
| :--- | :---: | :---: | :--- |
|  | HV -side | LV -side |  |
| 0 | - | - | No I0 correction |
| 1 | $-(11 \mathrm{a}+\|1 \mathrm{~b}+\| 1 \mathrm{c}) / 3 / I T H$ | $-(12 \mathrm{a}+\|2 \mathrm{~b}+\| 2 \mathrm{c}) / 3 / I T \mathrm{~L}$ | (la $+\mathrm{Ib}+\mathrm{Ic}) / 3$ being subtracted <br> from phase differential current |

### 3.1.1.2. CT Matching Tap

After the phase/zero-phase compensation step, a current amplitude matching according to the transformer ratio and CT ratios on the transformer's high-voltage side and low-voltage side shall be set so that no differential current can be calculated at load current and external fault by the following equation.

```
\(11 \square_{\text {CT }}=11 / \mathrm{ITH}\)
\(11 \mathrm{~N}_{\mathrm{CT}}=11 \mathrm{~N} /\) ITNH
\(12 \square_{\text {ст }}=12 / \mathrm{ITL}\)
\(12 \mathrm{~N}_{\text {CT }}=\mathrm{I} 2 \mathrm{~N} / \mathrm{ITNL}\)
```

* 11םст: HV-side current value after CT matching

11: CT secondary current of HV -side
ITH: Relay setting of HV-side CT matching
I1 $\mathrm{N}_{\text {ст: }} \mathrm{HV}$-side zero-sequence current value after CT matching
$11 \mathrm{~N}: ~ \mathrm{CT}$ secondary current of HV -side zero-sequence
ITNH: Relay setting of HV-side zero-sequence CT matching
12口ст: LV-side current value after CT matching
12: CT secondary current of LV-side
ITL: Relay setting of LV-side CT matching
I2N $\mathrm{N}_{\text {т }}$ : LV-side zero-sequence current value after CT matching
I2N: CT secondary current of LV-side zero-sequence
ITNL: Relay setting of LV-side zero- sequence CT matching
$\square$ : Phase indication (A, B, C)
3.1.1.3. Calculation of the differential and restraint current
(1) Calculation of the differential current
(1.1) For $A$ phase (same as for $B$ phase and $C$ phase)

A phase differential current IdA $=11 A_{\text {ct }}+I 2 A_{\text {ct }}$
(1.2) For zero phase

HV-side zero-phase differential current I1d0 $=11$ ACT + I1BCT + I1CCT + I1NCT
$L V$-side zero-phase differential current I2d0 $=12 A C T+I 2 B C T+I 2 C C T+I 2 N C T$
(2) Calculation of the restraint current
(2.1) Restraint current of DIFF

The restraint current can be selected by setting as follows;
The following applies to $A$ phase (same as to $B$ phase and $C$ phase).
(a) 'Ires Meth. = Max'

The restraint current is calculated by a maximum (rms) current of high or low voltage side.
Restraint current IR = MAX of (I1ACT, I2ACT)
(b) 'Ires Meth. $=$ SUM'

The restraint current is calculated by a half of scalar (rms) sum of high or low voltage side.
Restraint current IR $=($ I1ACT + I2ACT $) / 2$
(2.2) Restraint current of RGFH and RGFL

Restraint current is calculated by a maximum value of all input current
Restraint current of RGFH (HV-side) IR10 = MAX (3110ct, I1N $\mathrm{N}_{\mathrm{CT}}$ )
3110 ст: $: 11 A_{C T}+11 B_{C T}+11 C_{c t}$
Restraint current of RGFL (LV-side) IR20 $=$ MAX ( 3120 ст, $12 \mathrm{~N}_{\text {ст }}$ ) 3120 ст: 12 Act + I2B $_{\text {ст }}+12 \mathrm{C}_{\text {ct }}$

### 3.1.1.4. 2nd harmonic blocking function (for DIFF element)

DIFF element incorporates a 2nd harmonic blocking function to block DIFF element from the unnecessary operation by the transformer (excitation) inrush current.
The internal function block diagram is shown in Fig. 3-3.
Since the content ratio of 2 nd harmonic (2f) component compared with fundamental (1f) component under inrush current is much larger than that under fault current generally, $2^{\text {nd }}$ harmonic component in differential current is used to distinguish the inrush current and fault current.

1 f component and 2 f component of differential current are individually extracted and the detection is effective when the 1 f component is greater than minimum operation setting value ( $1 \mathrm{f}-\mathrm{Min}$. Ope.) and the 2 f component compared with 1 f component is greater than the content-ratio setting value (2f-lock ratio). Also, in order to be stable detection, $2^{\text {nd }}$ harmonic detection circuit has latch circuit, 'set' needs continuous 1 cycle detection and 'reset' needs continuous 1.5 cycles no-detection.
(*1) One cycle is calculated from the following equation:
One cycle (in seconds) $=1$ / system frequency $\cdots \cdot(16.7 \mathrm{~ms}$ at $60 \mathrm{~Hz}, 20 \mathrm{~ms}$ at 50 Hz )
The CAC1-A41D1 Relay also incorporates 4 types of $2 f$ lock methods as shown in following;

| $2 f$ lock method | Contents |
| :---: | :---: |
| ANY 1 PH | When one or more phase(s) of 2 ${ }^{\text {nd }}$ harmonic is (are) detected, it blocks all phases. |
|  | Upon the detection of DIF2f-AD, DIFF-A, DIFF-B and DIFF-C elements are locked. |
| ANY 2 PH | When two or three phases of $2^{\text {nd }}$ harmonic are detected, it blocks all phases. |
|  | Upon the detection of DIF2f-AD and DIF2f-BD, DIFF-A, DIFF-B and DIFF-C Elements are locked. |
| EACH PH | When one or more phase(s) of $2^{\text {nd }}$ harmonic is (are) detected, it blocks only the detected phase(s). |
|  | Upon the detection of DIF2f-AD, DIFF-A Element is locked. |
| 3-PH AVG | When the three-phase average of $2^{\text {nd }}$ harmonic is greater than $2 f$-lock ratio, it blocks all phases. |
|  | The detection level of DIF2f-AD is $\left\{\left(\mathrm{ID}_{2 \mathrm{fA}}+\mathrm{ID}_{2 \mathrm{FB}}+\mathrm{ID}_{2 \mathrm{fC}}\right) / 3\right\} / \mathrm{ID}_{1 \mathrm{fA}}>$ setting value. Once detected, DIFF-A, DIFF-B and DIFF-C Elements are locked. |

Fig. 3-3 2nd harmonic blocking function -internal function block diagram

Table 3-3 2nd harmonic detection element (differential current) - setting items

| Display <br> name | Setting <br> value name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  | 2f-lock ratio | $5 \sim 40 \%$ | step |  |
|  | 1 f -Min. Ope. | 5 A type: $0.4 \sim 2.5 \mathrm{~A}$ | 5 A type: 0.1 A | 2f/1f content ratio <br> value on $2 \mathrm{f} / 1 \mathrm{f}$ content ratio |

### 3.1.1.5. 5thHarmonic blocking Function (for DIFF element)

DIFF incorporates a 5th harmonic blocking function to protect DIFF element from unnecessary operation by transformer over-excitation.
The internal function block diagram is shown in Fig. 3-4.
Since 5th harmonic is much contained in transformer over-excitation current which generates under the overvoltage on the transformer, 1f component and $5 f$ component of differential current are individually extracted and the detection is effective when the 1 f component is greater than minimum operation setting value ( $1 \mathrm{f}-\mathrm{Min}$. Ope.) and the 5 f component ratio compared with 1 f component is greater than the content-ratio setting value ( 5 f -lock ratio). Also, in order to be stable detection, $5^{\text {th }}$ harmonic detection circuit has latch circuit, 'set' needs continuous 1cycle detection and 'reset' needs continuous 1.5 cycles no-detection.
(*1) One cycle is calculated from the following equation:
One cycle (in seconds) $=1 /$ system frequency $\cdots \cdot(16.7 \mathrm{~ms}$ at $60 \mathrm{~Hz}, 20 \mathrm{~ms}$ at 50 Hz )

Fig. 3-4 5th Harmonic Suppression Function (Differential Current) - internal function block diagram

Table 3-4 5th harmonic detection element (differential current) - setting items

| Display <br> name | Setting <br> value name | Setting |  | Description |
| :--- | :---: | :---: | :---: | :---: |
|  |  | $30 \sim 50 \%$ | - |  |
|  | 1f-Min. Ope. | 5 A type: $0.4 \sim 2.5 \mathrm{~A}$ | 5 A type: 0.1 A | 1f component minimum operation <br> value on 5f/1f content ratio |

### 3.1.2. DIFSV Element (Ratio Differential Current Supervision Element)

This element is used to detect abnormal differential current, such as incorrect wiring, wrong setting or any failure at transformer, CT or the relay's current input circuits.
The internal function block diagram is shown in Fig. 3-5.
DIFSV Element is a ratio differential characteristics using the same differential and restraint current as DIFF Element. It outputs a detection signal when the differential and restraint current remains within the operating area shown in Fig. 3-6 for 20 seconds or more.

Also, this element outputs an operating signal only when its enable/disable setting (SV EN) is set ON. Therefore, if this element is not necessary, set the setting to OFF. SV_EN = OFF prevents the unnecessary detection.

Fig. 3-5 Current Ratio Differential Supervision Element (DIFSV) - internal function block diagram

* [ ] shows setting value.

Fig. 3-6 Operating characteristics of Current Ratio Differential Supervision Element (DIFSV)

### 3.1.3. DIFFH Element (Differential Overcurrent Element)

DIFFH element is a differential current element without a $2 \mathrm{nd} / 5$ th harmonic blocking function. It provides a fast operation for a large fault current.
The internal function block diagram is shown in Fig. 3-7.
DIFFH element uses the same differential current as DIFF element. It outputs a detection signal after the lapse of an operation timer period (Ope. Time) if differential current is greater than operating value (Ope. Curt.). A $200-\mathrm{ms}$ reset timer is added on the reset side to prevent chattering on the contact. In addition, it outputs an operating signal only when its enable/disable setting (DIFFH EN) is set ON. If this element is not necessary, set the setting to OFF. DIFFH EN= OFF setting prevents the unnecessary detection.

Fig. 3-7 Differential Overcurrent Element (DIFFH) - internal function block diagram

Table 3-5 Differential Current Elements (DIFF, DIFSV, DIFFH) - setting items

| Display name | Name of setting value | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| TR | TRH Con. | $0 \sim 11$ | 1 | HV-side phase compensation |
|  | TRH Zero | 0~1 | 1 | HV-side zero-phase compensation |
|  | TRL Con. | $0 \sim 11$ | 1 | LV-side phase compensation |
|  | TRL Zero | 0~1 | 1 | LV-side zero-phase compensation |
| MT | ITH | 5A type: 2.2~12.5A | 5A type:0.1A | HV-side positive phase matching tap |
|  | ITL | 5A type: 2.2 ~ 12.5A | 5A type:0.1A | LV-side positive phase matching tap |
|  | ITNH | 5A type: 2.2~12.5A | 5A type:0.1A | HV -side zero-phase matching tap |
|  | ITNL | 5A type: 2.2~12.5A | 5A type:0.1A | LV-side zero-phase matching tap |
| DIFF | DIFF EN | OFF, ON | - | OFF: disable, ON: enable DIFF element is effective at ON. |
|  | Ires Meth. | MAX, SUM | - | Configuration of restraint current (MAX - maximum value, SUM - scalar sum) |
|  | Ope. Curt. | 20~100\% | 1\% | Minimum operating current |
|  | Ratio K1 | 15 ~ 100\% | 1\% | Ratio K1 for small current region |
|  | Ratio K2 | 15~100\% | 1\% | Ratio K2 for large current region |
|  | Is Curt. | 100~1000\% | 1\% | Break point of ratio differential characteristics |
|  | Ope. Time | $0.00 \sim 10.00 \mathrm{~s}$ | 0.01 s | Operating time (INST $\leq 50 \mathrm{~ms}$ ) |
|  | SV EN | OFF, ON | - | OFF: disable, ON: enable DIFSV element is effective at ON |
|  | SV Curt. | 5~100\% | 1\% | Min. operating current of DIFSV element |
|  | SV ratio | 0~20\% | 1\% | Ratio setting of DIFSV element |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable 2nd Harmonic blocking is effective at ON. |
|  | 2f-lock Meth. | ANY 1 PH, ANY 2 PH, EACH PH, 3-PH AVG | - | Lock method of $2^{\text {nd }}$ harmonic blocking logic ANY 1 PH: When one or more phase(s) of $2^{\text {nd }}$ harmonic is (are) detected, it blocks all phases. <br> ANY 2 PH: When two or three phases of $2^{\text {nd }}$ harmonic are detected, it blocks all phases. EACH PH: When one or more phase(s) of $2^{\text {nd }}$ harmonic is (are) detected, it blocks only the detected phase(s). <br> 3-PH AVG: When the three-phase average of $2^{\text {nd }}$ harmonic is greater than $2 f$-lock ratio, it blocks all phases. |
|  | 5 flock EN | OFF, ON | - | OFF: disable, ON: enable $5^{\text {th }}$ harmonic blocking is effective at ON. |
| DIFFH | DIFFH EN | OFF, ON | - | OFF: disable, ON: enable DIFFH element is effective at ON. |

Operating value for high side $[\mathrm{A}]=$ (ITH [A]) $\times$ (DIFFH.Ope.Curt.) Operating value for low side $[\mathrm{A}]=$ (ITL [A]) $\times$ (DIFFH.Ope.Curt.) |
|  | Ope. Time | $0.00 \sim 10.00 \mathrm{~s}$ | 0.01s | Operating time (INST $\leq 30 \mathrm{~ms}$ ) |

### 3.1.4. Setting guidance for differential element

### 3.1.4.1. Relationship between setting 'ratio K1' and 'ratio K2'

This section shows the recommend setting of 'ratio K1' and 'ratio K2'.
Normally, the characteristic slope by Eq. (3) is set as Fig. 3-8. In this case, 'ratio K2' set bigger than the 'ratio K1' (ratio K1 < ratio K2). It is because, the slope of Eq. (3) avoids unwanted trip by abnormal conditions (e.g. CT saturation).

Fig. 3-8 Tripping characteristic of differential element (ratio K1 < ratio K2)

Fig. 3-9 shows when 'ratio K1' set same as 'ratio K2'. If you select the CT which considered not to saturate even in the maximum fault current, the differential element would be set like this.

Fig. 3-9 Tripping characteristic of differential element (ratio K1 = ratio K2)

We don't recommend that 'ratio K1' set bigger than the 'ratio K2' (ratio K1 > ratio K2) as shown in Fig. 3-10. In this case, the setting 'Ope. Curt.' cannot work in the region of small restraint current.

Fig. 3-10 Tripping characteristic of differencial element (ratio K1 > ratio K2)

### 3.1.4.2. Calculation procedure of CT matching tap setting

### 3.1.4.2.1. Power system parameters

To obtain the setting value of CT matching tap, following parameters are used.

- The rated apparent power of the power transformer (S [kVA]).
- The rated line-line voltage of high winding side $\left(\mathrm{V}_{\mathrm{H}}[\mathrm{KV}]\right)$ and low winding side $\left(\mathrm{V}_{\mathrm{L}}[\mathrm{kV}]\right)$.
- The CT turn ratio of high winding side ( CTR $_{H}$ ) and low winding side (CTRL).
- The CT secondary winding impedance at $25^{\circ} \mathrm{C}$ ( $\mathrm{R}_{\mathrm{CT}}[o h m]$ ).
- The CT connection (star or delta).
- The CT excitation characteristics such as hysteresis (but not essential values).

### 3.1.4.2.2. Define of parameters

- IPH: Rated current of CT primary side (at high winding side).
- IPL: Rated current of CT primary side (at low winding side).
- $I_{\text {RH: }}$ Rated current of relay input (CT secondary side at high winding side).
- IRL: Rated current of relay input (CT secondary side at low winding side).
- ITH: Relay setting value of matching tap (at high winding side).
- ITL: Relay setting value of matching tap (at low winding side).
- $\mathrm{Z}_{\text {Total }}$ Total impedance of CT secondary.

### 3.1.4.2.3. Calculation process

(1) Selection of CT turn ratio

Selecting CT turn ratio, please consider that the CT secondary current value is greater than or equal to minimum relay setting of ITH or ITL. To check setting range and minimum value of matching tap of ITH and ITL, please refer to Table 3-5 (p. 36).
(2) CT turn ratio compensation (Matching Tap setting)

To eliminate the differential current by the CT turn ratio on both ends, the CT ratio should be compensated.
This protection relay has a can set a compensation value by 'Matching Tap Setting'.
The matching tap setting is obtained by following formula.

$$
\begin{equation*}
\text { Matching Tap Setting }[A]=\frac{\text { Rated Current }[A]}{\text { CT Turn Ratio }} \tag{3-2}
\end{equation*}
$$

The calculation of matching tap setting both high winding and low winding is necessary.

$$
\left\{\begin{array}{l}
\text { Setting } \operatorname{ITH}[A]=\frac{I_{P H}[A]}{C T R_{H}}  \tag{3-3}\\
\text { Setting } \operatorname{ITL}[A]=\frac{I_{P L}[A]}{C T R_{L}}
\end{array}\right.
$$

where the variable names are defined in sub-clause 3.1.4.2.1 and 3.1.4.2.2.
When you use a transformer with tap changer, the rated current ( $\mathrm{I}_{\mathrm{PH}}$ and $\mathrm{I}_{\mathrm{PL}}$ ) i is calculated using the center position of the tap.
(3) Confirm the percentage of mismatching ratio after matching tap setting

However, due to the setting range or setting step, the CT ratio compensation sometimes would not be match perfectly. In this situation, please confirm the percentage of mismatching ratio.
The percentage of mismatching ratio is obtained by following equation.

$$
\begin{equation*}
\text { Percentage of Mismatching Ratio }[\%]=\frac{\frac{I_{R H}[A]}{I_{R L}[A]}-\frac{\text { setting ITH }[A]}{\text { setting ITL[A] }}}{\min \left(\frac{I_{R H}[A]}{I_{R L}[A]}, \frac{\text { setting ITH }[A]}{\text { setting } \operatorname{ITL}[A]}\right)} \times 100 \text {. } \tag{3-4}
\end{equation*}
$$

where the variable names are defined in sub-clause 3.1.4.2.1 and 3.1.4.2.2.
In above equation, the denominator means that the smaller value is selected from $\frac{I_{R H}}{I_{R L}}$ and $\frac{I T H}{I T L}$.
When you use a transformer with tap changer, please consider the percentage of mismatching ratio including a tap position.
Please confirm that the percentage of mismatching ratio does not exceed $15 \%$.

## (4) Considering the CT excitation characteristic

To consider the influence for a differential element by a CT error, the CT secondary voltage is needed. The CT secondary voltage is able to be calculated from a CT secondary impedance ( $Z_{\text {Total }}$ ) and following shows as example.

$$
\begin{align*}
Z_{\text {Total }} & =1.13 \times \text { CTSecondary Winding Impedance }+ \text { Relay Burden } \\
& =1.13 \times R_{C T}+\text { Relay Burden } \tag{3-5}
\end{align*}
$$

where the variable names are defined in sub-clause 3.1.4.2.1 and 3.1.4.2.2.
In this equation, we assume the coefficient of $\mathrm{R}_{\text {CT }}$ is set as 1.13 . This value means the temperature rise increases these impedance during a fault current flowing.
Above equation are in case of a CT star-connection. If a CT is connected as a delta, the CT secondary impedance ( $\mathrm{Z}_{\text {Total }}$ ) becomes 3 times higher than star-connection. It is because, in delta-connection, all winding impedance is summed.

Therefore you can obtain the CT secondary voltage in fault condition using a theoretical fault current of CT secondary winding and the total impedance of CT secondary winding ( $\mathrm{Z}_{\text {Total }}$ ). Normally a theoretical fault current of CT secondary winding is calculated by the CT primary current and the CT turn ratio.
From the CT secondary voltage, an actual assumed CT secondary current (CT excitation current) can be obtained by the CT exciting curve. The difference between an actual CT secondary current and a theoretical CT secondary current is called a CT composite error.
In other words, the worst case of the CT error is assumed by the composite error. E.g. using 5P10 as a CT accuracy class, the CT error keeps within 5\% until 10 times of a rated current.
The total error is summation of a CT composite error and a percentage of mismatching ratio (eq.(3-4)).
Last, please confirm that this total error should not exceed a setting 'ratio K1' value of the differential element.
3.1.4.3. Example calculation to obtain CT matching tap setting

Fig. 3-11 Example circuit parameters

Table 3-6 Power system parameters

|  | High Winding Side | Low Winding Side |
| :--- | :--- | :--- |
| Rated Voltage | $\mathrm{V}_{\mathrm{H}}=22 \mathrm{kV}$ | $\mathrm{V}_{\mathrm{L}}=6.6 \mathrm{kV}$ |
| Rated Capacity | 7500 kVA | 7500 kVA |
| Transformer Winding | Star-winding | Delta-winding |
| CT Turn Ratio | $300 \mathrm{~A} / 5 \mathrm{~A}$ <br> $\rightarrow \mathrm{CTR}_{\mathrm{H}}=60$ | $1000 \mathrm{~A} / 5 \mathrm{~A}$ <br> $\rightarrow$ CTR <br>  |
| Delta-connection | Star-connection |  |

(1) Calculate rated current

The rated current of CT primary side at high winding side (IPH) and low winding side (IPL) are calculated by following equation.

$$
\begin{align*}
& I_{P H}[\mathrm{~A}]=\frac{S[\mathrm{kVA}]}{V_{H} \times \sqrt{3}}=\frac{7500[\mathrm{kVA}]}{22[\mathrm{kVA}] \times \sqrt{3}}=196.8[\mathrm{~A}]  \tag{3-6}\\
& I_{P L}[A]=\frac{S[\mathrm{kVA}]}{V_{L} \times \sqrt{3}}=\frac{7500[\mathrm{kVA}]}{6.6[\mathrm{kVA}] \times \sqrt{3}}=656.1[\mathrm{~A}] \tag{3-7}
\end{align*}
$$

(2) Calculate CT turn ratio

The CT turn ratios were calculated in Table 3-6.

$$
\begin{align*}
& C T R_{H}=300[A] / 5[A]=60 \cdot .  \tag{3-8}\\
& C T R_{L}=1000[A] / 5[A]=200 \tag{3-9}
\end{align*}
$$

(3) Calculate rated current of relay input

The rated current of relay inputs (IRH, $\mathrm{I}_{\mathrm{RL}}$ ) are calculated by following equation.

$$
\begin{align*}
& I_{R H}=\frac{\text { Rated Current }}{C T \text { Turn Ratio }}=\frac{I_{P H}[A]}{C T R_{H}}=\frac{196.8[\mathrm{~A}]}{60} \times \sqrt{3}=5.68[\mathrm{~A}]  \tag{3-10}\\
& I_{R L}=\frac{\text { Rated Current }}{C T \text { Turn Ratio }}=\frac{I_{P L}[\mathrm{~A}]}{C T R_{L}}=\frac{656.1[\mathrm{~A}]}{200}=3.28[\mathrm{~A}] \cdots \cdots \tag{3-11}
\end{align*}
$$

The sqrt (3) is multiplied because the CT is set a delta-connection in a high side. (Eq. (3-10))
(4) Decide matching tap

By Eq. (3-10) and (3-11), the rated current of relay inputs ware got.
If these values are fitted to the matching tap setting (ITH, ITL), you can set setting ' $I T H$ ' $=I_{R H}$ and setting ' $I T L$ ' $=I_{\text {RL }}$.
However, in this case, above calculations already rounded to 2 decimal places. The CAC1-A41D1 supports a 1 decimal place as a matching tap setting. Therefore, to get matching tap setting, please round to 1 decimal
place from Eq. (3-10) and (3-11).
$I_{R H}=5.68[\mathrm{~A}]$
$\Rightarrow I T H \approx 5.7[A]$
$I_{R L}=3.28[A]$
$\Rightarrow I T L \approx 3.3[A]$
(5) Confirm the percentage of mismatching ratio

Using Eq. (3-4), the percentage of mismatching ratio is calculated.
Percentage of Mismatching Ratio $[\%]=\frac{\frac{I_{R H}[A]}{I_{R L}[A]}-\frac{\text { setting } \operatorname{ITH}[A]}{\text { setting } \operatorname{ITL}[A]}}{\min \left(\frac{I_{R H}[A]}{I_{R L}[A]}, \frac{\text { setting } \operatorname{ITH}[A]}{\text { setting } \operatorname{ITL}[A]}\right)} \times 100$
Next, substitute the values of this example for above equation.
Percentage of Mismatching Ratio $[\%]=\frac{\frac{5.68[A]}{3.28[A]}-\frac{5.7[A]}{3.3[A]}}{\min \left(\frac{5.68[A]}{3.28[A]}, \frac{5.7[A]}{3.3[A]}\right)} \times 100$
When we focus on denominator, $\mathrm{I}_{\mathrm{RH}} / \mathrm{I}_{\mathrm{RL}}=5.68[\mathrm{~A}] / 3.28[\mathrm{~A}] \fallingdotseq$ 1.7317. And we similarly check next member: setting ITH / setting ITL $=5.7[A] / 3.3[A] \fallingdotseq 1.7272$. Therefore, setting ITH / setting ITL value is selected which is smaller than $I_{R H} / I_{R L}$ ( $\min$ function).

$$
\text { Percentage of Mismatching Ratio }[\%]=\frac{\frac{5.68[A]}{3.28[A]}-\frac{5.7[A]}{3.3[A]}}{\frac{5.7[A]}{3.3[A]}} \times 100=0.2567 \%
$$

The percentage of Mismatching Ratio $=0.2567 \%$ is smaller than $15 \%$ and this matching tap is available.
(6) Recalculate matching tap when the $I_{R H}$ and $I_{R L}$ is beyond the setting range

In this situation (Eq. (3-12) and (3-13)), these values are within setting range (ITH, ITL = $2.2 \mathrm{~A} \sim 12.5 \mathrm{~A}$ ).
However, when the rated current of relay inputs ( $I_{R H}, I_{R L}$ ) is exceed the setting value, please recalculate and start from matching tap value.

In case of $\mathrm{I}_{\mathrm{RH}}=2 \mathrm{~A}$, the 2.2 A which is minimum value of the matching tap setting is selected as a new setting of 'ITH'. And recalculation is started from new setting 'ITH ${ }_{\text {NewSetting' }}=2.2 \mathrm{~A}$.
The new setting 'ITL $L_{\text {Newsetting' }}$ 's obtained by following equation.

$$
\begin{aligned}
& I T L_{\text {NewSeting }}=I T L_{\text {OldSeting }} \times \frac{I T H_{\text {NewSetting }}}{I T H_{\text {OldSeting }}} \\
& =3.3[\mathrm{~A}] \times \frac{2.2[\mathrm{~A}]}{2[\mathrm{~A}]}=3.63[\mathrm{~A}] \\
& \text { where, } \\
& \text { ITLoldsetting }=3.3 \mathrm{~A} \text { by Eq. (3-13), } \\
& \text { ITH }{ }_{\text {NewSetting }}=2.2 \mathrm{~A} \text { by this assumed new condition, } \\
& \text { ITH Oldsetting }=2 \mathrm{~A} \text { by this assumed old condition }
\end{aligned}
$$

Therefore, by above recalculated values, setting ' $I T H$ ' $=2.2[A]$ and setting 'ITL’ $=3.6[A]$ should be set as new setting values.

### 3.1.5. RGFH Element (Zero-sequence Current Ratio Differential Element)

RGFH element is a zero-sequence current ratio differential element for protecting earth fault on the high-voltage side of the transformer.
The internal function block diagram shown in Fig. 3-12explains how the RGFH element detects.
RGFH element takes in 3 phase terminal-current and neutral current of the neutral earth line of the high-voltage winding of the transformer to obtain the zero phase differential current. Then, it requires a CT on the neutral earth line of the high-voltage winding of the transformer. It provides a CT matching function to compensate the difference between CT ratio of the high-voltage terminal side of the transformer and CT ratio of the neutral line of the HV-winding using a CT matching tap for calculating zero-phase differential current and zero-phase restraint current.
Since it calculates the zero phase current by summing 3 phase terminal current and zero phase current on earth line, it incorporates overcurrent blocking function for preventing an unnecessary operation due to the large error caused by the CT error, CT saturation error and etc. of large fault current. The overcurrent blocking function is effective at 'RGFH IO EN = ON' and the overcurrent setting is 'Ope. Curt'. And also RGFH element provides the CT saturation countermeasure function, which increasing the collation time for operation when detecting the external fault at fault initiating state before starting CT saturation. This CT saturation countermeasure can be set ineffective by setting "CT Sat. Meas." to OFF.

If the calculated zero-phase differential current and restraint current remains within an operating area shown in Fig. 3-13 and no detection of overcurrent blocking function, RGFH outputs a detection signal after the lapse of the operating timer period (Ope. Time).
A 200-ms resetting timer is incorporated to prevent chattering on the contact.
In addition, this element outputs an operating signal only when its enable/disable setting (RGFH EN) is set ON. By setting it OFF, it prevents the unnecessary operation of the element.

Fig. 3-12 Zero-sequence Current Ratio Differential Element (RGFH) - internal function block diagram

* [ ] shows setting value.

Fig. 3-13 Operating characteristics of Zero-sequence Current Ratio Differential Element (RGFH)

### 3.1.6. RGFL Element (Zero-sequence Current Ratio Differential Element)

RGFL element is a zero-sequence current ratio differential element for protecting earth fault on the low-voltage side of the transformer.
RGFL has the same operating characteristics as RGFH element.
For more information about the element's internal function block diagram and how it works, see Section 3.1.5.

Table 3-7 Zero-sequence Current Ratio Differential Elements (RGFH, RGFL) - setting items

| Display name | Setting value name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| TR | TRH Con. | 0-11 | 1 | HV-side phase correction |
|  | TRH Zero | 0-1 | 1 | HV-side zero-phase correction |
|  | TRL Con. | 0-11 | 1 | LV-side phase correction |
|  | TRL Zero | 0-1 | 1 | LV-side zero-phase correction |
| MT | ITH | 2.2-12.5A | 0.1A | HV-side positive phase matching tap |
|  | ITL | 2.2-12.5A | 0.1A | LV-side positive phase matching tap |
|  | ITNH | 2.2-12.5A | 0.1A | HV-side zero-phase matching tap |
|  | ITNL | 2.2-12.5A | 0.1A | LV-side zero-phase matching tap |
| RGFH | RGFH EN | OFF, ON | - | OFF: disable, ON: enable RGFH element is effective at ON. |
|  | Ope. Curt. | 10-200\% | 1\% | Minimum operating current |

|  | ratio K2 | 10-100\% | 1\% | Ratio K2 |
|  | is Curt. | 100-1000\% | 1\% | Ratio breaking point |
|  | Ope. Time | 0.0-600.0s | 0.1s | Operating time <br> (INST $\leq 30 \mathrm{~ms}$ ) |
|  | CT Sat. Meas. | OFF, ON | - | OFF: disable, ON: enable CT saturation countermeasure is effective at ON. |
|  | RGFH IO EN | OFF, ON | ${ }^{-}$ | OFF: disable, ON: enable Overcurrent blocking function is effective at ON. |
|  | 10 Ope. Curt. | 5.0-50.0A | 0.1A | Operating current of Overcurrent blocking function |
| RGFL | RGFL EN | OFF, ON | - | OFF: disable, ON: enable RGFL element is effective at ON. |
|  | Ope. Curt. | 10-200\% | 1\% | Minimum operating current |
|  | ratio K1 | 10-100\% | 1\% | Ratio K1 |
|  | ratio K2 | 10-100\% | 1\% | Ratio K2 |
|  | is Curt. | 100-1000\% | 1\% | Ratio breaking point |
|  | Ope. Time | 0.0-600.0s | 0.1s | Operating time (INST $\leq 30 \mathrm{~ms}$ ) |
|  | CT Sat. Meas. | OFF, ON | - | OFF: disable, ON: enable CT saturation countermeasure is effective at ON. |
|  | RGFL IO EN | OFF, ON | - | OFF: disable, ON: enable Overcurrent blocking function is effective at ON. |
|  | 10 Ope. Curt. | 5.0-50.0A | 0.1A | Operating current of Overcurrent blocking function |

### 3.2. Overcurrent Element

The CAC1-A41D1 Relay provides 8 ground (earth) overcurrent elements listed in the table below, which permit a quick detection of accident within the transformer. It contains a wide variety of operation/reset time characteristics, as well, which facilitate time coordination as shown in Fig. 3-14 and thus assure applicability to the protection of diverse systems. Further, the relay has a built-in 2nd harmonic suppression function, providing a protection against unnecessary actuation resulting from an excitation in-rush current.

| Device No. | Display name | Protective function |
| :---: | :---: | :---: |
| 50P | OC1H | HV-side overcurrent instantaneous element |
|  | OC1L | LV-side overcurrent instantaneous element |
|  | OC2H, OC3H | HV -side overcurrent instantaneous element with a 2nd harmonic suppression function ( 2 stages) |
|  | OC2L, OC3L | LV-side overcurrent instantaneous element with a 2nd harmonic suppression function ( 2 stages) |
| 51P | OC4H | HV-side overcurrent time-delay element with a 2nd harmonic suppression function <br> - 14 types of operating time characteristics <br> - 3 types of resetting time characteristics |
|  | OC4L | LV-side overcurrent time-delay element with a 2nd harmonic suppression function <br> - 14 types of operating time characteristics <br> - 3 types of resetting time characteristics |

Fig. 3-14 An example of Overcurrent Element's operating time-limit coordination curve

### 3.2.1. OC1H Element (Overcurrent Instantaneous Element)

OC1H element is an overcurrent instantaneous element for detecting the fault current from the CT on the highvoltage side of the transformer.
Since this element is the operation without a 2 nd harmonic blocking, it can provide a fast operation at large fault current.

Since the internal function block diagram shown in Fig. 3-15 explains how OC1H Element works.
OC1H Element outputs a detection signal after the lapse of the operating timer period (Ope. Time) in case the current is greater than operation setting value (Ope. Curt.).
A 200-ms resetting timer is incorporated on the resetting side to prevent chattering on the contact. In addition, this element outputs an operating signal only when its enable/disable setting (OC1H EN) is set ON. If the setting of 'OC1H EN=OFF' is set OFF, it prevents the unnecessary operation of the element.

Fig. 3-15 Overcurrent Instantaneous Element (OC1H) - internal function block diagram

Table 3-8 Overcurrent Instantaneous Element (OC1H) - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OC1H | OC1H EN | OFF, ON | - | OFF: disable, ON: enable OC1H element is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time <br> (INST $\leq 30 \mathrm{~ms}$ ) |

### 3.2.2. OC1L Element (Overcurrent Instantaneous Element)

OC1L is an overcurrent instantaneous element for detecting the fault current from the CT on the low-voltage side of the transformer.
OC1L Element has the same operating characteristics as OC1H Element.
For more information about the element's internal function block diagram and how it works, see Section 3.2.1.

Table 3-9 Overcurrent Instantaneous Element (OC1L) - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OC1L | OC1L EN | OFF, ON | - | OFF: disable, ON: enable OC1L element is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time (INST $\leq 30 \mathrm{~ms}$ ) |

### 3.2.3. OC2H Elemrnt (Overcurrent Instantaneous Element with a 2nd Harmonic Blocking Function)

OC2H is an overcurrent instantaneous element with a 2nd harmonic blocking function for detecting the fault current from the CT on the high-voltage side of the transformer.
Since this element provides 2nd harmonic blocking function, it prevents unnecessary operation from a transformer excitation in-rush current.
The internal function block diagram shown in Fig. 3-16 explains how OC2H Element works.
OC2H outputs a detection signal after the lapse of the operating timer period (Ope. Time) if input current is greater than the operating setting value (Ope. Curt.) without 2nd harmonic detection.
When 2 nd harmonic blocking function is "disabled" ( 2 f -lock ON=OFF), 2nd harmonic blocking signal is not blocked the operation of the OC2 Element.
A $200-\mathrm{ms}$ reset timer is incorporated on the reset side to prevent chattering on the contact. In addition, this element outputs an operating signal only when its enable/disable setting (OC2H EN) is set ON . 'OC2H EN= OFF' setting prevents the unnecessary operation of the element.

Fig. 3-16 OC2H Element - internal function block diagram

Table 3-10 OC2H Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OC2H | OC2H EN | OFF, ON | - | OFF: disable, ON: enable OC2H element is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time <br> (INST $\leq 40 \mathrm{~ms}$ at 2 f-lock EN=ON) |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable $2 f$ blocking function is effective at ON |

### 3.2.3.1. 2nd Harmonic Blocking Function

The CAC1-A41D1 Relay incorporates 2nd harmonic blocking function to provide a protection against unnecessary operation due to transformer excitation inrush current.
The internal function block diagram shown in Fig. 3-17 explain how the 2nd harmonic blocking function works.
Since 2nd harmonic is much contained in an excitation in-rush current compared with the normal fault current, it extracts 1 f component and 2 f component of input current individually and detects when the 1 f component is greater than minimum operation setting value ( $1 \mathrm{f}-\mathrm{Min}$. Ope.) and the ratio of 2 f component compeared with 1 f component is greater than content-ratio setting value (2f-lock ratio). Also, in order to be stable detection, $2^{\text {nd }}$ harmonic detection circuit has latch circuit,'set' needs continuos 1cycle detection and 'reset' needs continuous 1.5 cycles no-detection.

Fig. 3-17 2nd Harmonic Suppression Function - internal function block diagram

Table 3-11 2nd Harmonic Detection Element - setting items

| Display <br> name | Setting name | Setting |  | Description |
| :--- | :--- | :---: | :---: | :---: |
|  |  | Step |  |  |
| OC 2F | 2f-lock ratio | $10-30 \%$ | $1 \%$ | 2 2f/1f content ratio |
|  | 1f-Min. Ope. | $0.4-2.5 \mathrm{~A}$ | 0.1 A | 1 f component minimum <br> operating value |

### 3.2.4. OC2L Element (Overcurrent Instantaneous Element with a 2nd Harmonic Blocking Function)

OC2L is an overcurrent instantaneous element with a 2nd harmonic blocking function for the fault current from the CT on the low-voltage side of the transformer.
OC2L has the same operating characteristics as OC2H Element.
For more information about the element's internal function block diagram and how the element works, see Section 3.2.3.

Table 3-12 OC2L Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OC2L | OC2L EN | OFF, ON | - | OFF: disable, ON: enable OC2L is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time <br> (INST $\leq 40 \mathrm{~ms}$ at 2f-lock EN $=\mathrm{ON}$ ) |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable $2 f$ blocking function is effective at ON. |

### 3.2.5. OC3H Element (Overcurrent Instantaneous Element with a 2nd Harmonic Blocking Function)

OC3H is an overcurrent instantaneous element with a 2 nd harmonic blocking function for the fault current from the CT on the high-voltage side of the transformer.
OC 3 H has the same operating characteristics as OC2H Element.
For more information about the element's internal function block diagram and how the element works, see Section 3.2.3.

Table 3-13 OC3H Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OC3H | OC3H EN | OFF, ON | - | OFF: disable, ON: enable OC3H is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time <br> (INST $\leq 40 \mathrm{~ms}$ at 2f-lock EN $=\mathrm{ON}$ ) |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable $2 f$ blocking function is effective at ON. |

### 3.2.6. OC3L Element (Overcurrent Instantaneous Element with a 2nd harmonic Blocking Function)

OC3L is an overcurrent instantaneous element with a $2 n d$ harmonic blocking function for the fault current from the CT on the low-voltage side of the transformer.
OC3L has the same operating characteristics as OC2L Element.
For more information about the element's internal function block diagram and how the element works, see Section 3.2.3.1.

Table 3-14 OC3L Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OC3L | OC3L EN | OFF, ON | - | OFF: disable, ON: enable OC3L is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time <br> (INST $\leq 40 \mathrm{~ms}$ at 2 f-lock EN $=\mathrm{ON}$ ) |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable 2f blocking function is effective at ON. |

3.2.7. OC4H element (Overcurrent Element with dependent time characteristic and 2nd harmonic blocking function)

OC4H is an overcurrent element with dependent time characteristic and 2nd harmonic blocking function for the fault current from the CT on the high-voltage side of the transformer.
This element incorporates 14 types of dependent time characteristics and 3 types of reset time characteristics. The internal function block diagram shown in Fig. 3-18 explains how OC4H Element works.

The OC4H element outputs a detection signal at setting "enabled".
And it outputs the detection signal when input current is greater than the detection current setting which is selected by 'Ope. Curt.' setting (IEC Chr. EN = OFF) or 'Ope. Curt.' x 1.15 (IEC Chr.EN = ON) without 2nd harmonic detection. The selection of 'Ope. Curt.' x 1.15 is provided to meat with the time characteristic of IEC60255-151.
The time-limit timer counts up in accordance with the dependent time characteristic (Ope. Chr.) when input current is greater than operation setting value (Ope. Curt.) without 2nd harmonic detection.
Note that the 2 nd harmonic blocking function can be disabled by setting ' 2 ff -lock EN $=$ OFF'.
The reset time characteristic of internal time-limit timer is settable by the setting 'Rst. Chr'.
If the reset time characteristic setting is IDMT (inverse time) or DT (definite time), the output signal has 200ms reset timer for preventing the contact chattering besides the reduction of internal time-limit timer counter of the rest time characteristic.
The instantaneous reset of the contact can be set by 'Rst. Chr. to INST (instantaneous)'.
This element outputs an operating signal only when its "enable/disable" setting (OC4H EN) is set ON. The setting 'OC4H EN= OFF' prevents the unnecessary operation.

Fig. 3-18 OC4H Element - internal function block diagram

Table 3-15 OC4H Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OC4H | OC4H EN | OFF, ON | - | OFF: disable, ON: enable OC4H EN element is effective at ON. |

|  | Ope. TM | 0.25-50.00 | 0.01 | Operating time multiplier setting The value "TM" is the time multiplier setting of the characteristic equation in Section 3.2.8.3. |
|  | Ope. Chr. | NI01, VI01, EI01, LIO1, LIO2, DT01, NI11, El11, El12, NI21, VI21, LI21, NI31, VI31 | - | Inverse definite minimum time characteristics For more information, refer to Section 3.2.8.3. |
|  | Rst. Chr. | IDMT,DT,INST | - | Reset time counter characteristics of internal timer <br> IDMT: Inverse-time reset <br> DT: Definite time (fixed at 200 ms ) <br> INST: Instantaneous (less than 50 ms ) <br> Refer to Section3.2.8.3. |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable $2^{\text {nd }}$ harmonic blocking function is effective at ON. |
|  | $\begin{aligned} & \text { IEC Chr. } \\ & \text { EN } \end{aligned}$ | OFF, ON | - | OFF: detection current = Ope.Curt <br> ON: detection current = Ope.Curt x 1.15 <br> It shall be set ON to meat with the dependent time characteristic of IEC60255 151 operating characteristics. <br> Refer to Section3.2.8.1. |

3.2.8. OC4L element (Overcurrent Element with dependent time characteristic and 2nd Harmonic blocking Function)

OC4L is the overcurrent with dependent time characteristic and 2nd harmonic blocking function for the fault current from the CT on the low-voltage side of the transformer.
OC4L has the same operating characteristics as OC4H Element.
Refer to Section 3.2.7 for the internal function block diagram.

Table 3-16 OC4L Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OC4L | OC4L EN | OFF, ON | - | OFF: disable, ON: enable OC4L element is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current setting |
|  | Ope. TM | 0.25-50.00 | 0.01 | Operating time multiplier setting The value "TM" is the time multiplier setting of the characteristic equation in Section3.2.8.3. |
|  | Ope. Chr. | NI01, VI01, EI01, LI01, LIO2, DT01, NI11, El11, El12, NI21, VI21, LI21, NI31, VI31 | - | Inverse definite minimum time lag characteristic For more information, refer to Section3.2.8.3. |

|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable $2^{\text {nd }}$ harmonic blocking function is effective at ON. |
|  | $\begin{aligned} & \text { IEC Chr. } \\ & \text { EN } \end{aligned}$ | OFF, ON | - | OFF: detection current = Ope.Curt ON : detection current $=$ Ope.Curt $\times 1.15$ It shall be set ON to meat with the dependent time characteristic of IEC60255 151 operating characteristics. <br> Refer to Section 3.2.8.1. |

### 3.2.8.1. Operating Time Characteristics

The dependent time characteristic of OC4H and OC4L elements comply with the characteristic specified by IEC60255-151. The operating time characteristic is settable by 'IEC Chr. EN' setting.
Fig. 3-19 shows the operation of the element.

Fig. 3-19 Comparison of the operation between IEC Chr. EN = ON and IEC Chr. EN = OFF

### 3.2.8.2. Reset Time counter Characteristic

There are 3 types of resetting time characteristics associated with the OC4 element which can be selected.

- Instantaneous reset
- Definite time reset
- IDMT (Inverse definite minimum time) reset

These resetting characteristics are illustrated in Fig. 3-20 and Fig. 3-21 and to be selected in accordance with the customer's requirements.

Fig. 3-20 Reset time characteristic (1)

Fig. 3-21 Reset time characteristic (2)

### 3.2.8.3. Inverse definite minimum time lag Characteristics

OC4H and OC4L Elements provides settable 14 types of operation time characteristic and 3 types of reset time counter characteristic.

$$
t_{r}=\frac{8}{1-I^{2}} \times \frac{M}{10}(s)
$$

tr: Reset time (s)
I: Multiple of input current relative to setting value ( n times)
$M$ : Magnification of operating time ( n times)

Fig. 3-24 Dependent Reset Time Characteristics
*Note for the IDMT reset characteristic
Although the output contact resets at the definite time ( 0.2 s ) after the input current is smaller than the pickup current, the internal operation counter will be decreased by the IDMT characteristic which is similar characteristic of the reset characteristic of an induction disk type electromechanical overcurrent relay. This reset characteristic may be useful for intermittent overload detection at motor start-up and etc. For details, refer to Section 3.2.8.2.

Table 3-31 Reset Time Characteristics
Input: setting value $\times 300 \% \rightarrow 0$

| Reset time setting <br> (Rst. Chr.) | Output contact | Reset time of internal timer counter |
| :--- | :---: | :---: |
| IDMT: Definite time $(200 \mathrm{~ms})$ | $200 \mathrm{~ms} \pm 25 \mathrm{~ms}$ | Instant |
| DT: Definite time | $200 \mathrm{~ms} \pm 25 \mathrm{~ms}$ | About 8 s |
| INST: Instant $(50 \mathrm{~ms})$ | 50 ms or less | Instant |

-How to read the operating time accuracy table

* " $300 \%, 500 \%$, and $1000 \%$ " which are listed in the table are a multiple to be applied to the current setting value, respectively.
* The upper row shows the theoretical operating time, and the lower row shows the operating time range with accuracy added (The operating time range can be calculated from the below equation).

| Operating time range |
| :---: |
| $\varepsilon=\frac{T_{M}-\frac{M}{10} \times T_{10}}{\frac{M}{10} \times T_{10}}$ |

Where,

| $\mathrm{T}_{10}$ | : Nominal operating time at reference operating time setting ( $\mathrm{M}=10)$ |
| :--- | :--- |
| $\mathrm{T}_{\mathrm{M}}$ | : Operating time range at the operating time multiplier setting M |
| $\varepsilon$ | : Accuracy (\%) |
| M | : Operating time multiplier setting |

Note: that if the operating time range which has been calculated from the above equation is smaller than the lower limits of $\pm 100 \mathrm{~ms}$, accuracy are taken as $\pm 100 \mathrm{~ms}$. However, in case of definite time characteristic (DT01), the accuracy lower limit is set to $\pm 50 \mathrm{~ms}$.

* The underlined 50 ms marked with * in the tables is a fixed time, as the minimum operating time.

### 3.3. Ground (Earth) Fault Overcurrent Element

The Relay incorporates the 4 stages of ground (earth) fault overcurrent element which enable rapid detection of ground-faults. And it provides a variety of operations \& reset time characteristics as same as the overcurrent elements in Fig. 3-14. Therefore, the relay can be applied to protect various systems. Second harmonic restraint is included and this can prevent unnecessary operation due to transformer magnetizing inrush current.

| Device No. | Display name | Protective function |
| :--- | :--- | :--- |
| 50 ON | OCN1H | Instantaneous ground fault overcurrent element. <br> (HV-side) |
|  | OCN1L | Instantaneous ground fault overcurrent element. <br> (LV-side) |
|  | OCN2H, <br> OCN3H | Instantaneous ground fault overcurrent element (two-stage) <br> with 2nd harmonic restraint. <br> (HV-side) |
|  | OCN2L, <br> OCN3L | Instantaneous ground fault overcurrent element (two-stage) <br> with 2nd harmonic restraint. <br> (LV-side) |
| 51N | OCN4H | Definite time or IDMT ground fault overcurrent element with <br> second harmonic restraint. (HV-side) <br> -Selection of 14 operating time characteristics <br> - Selection of 3 reset characteristics |
|  | OCN4L | Definite time or IDMT ground fault overcurrent element with <br> second harmonic restraint. (LV-side) <br> -Selection of 14 operating time characteristics <br> - Selection of 3 reset characteristics |

### 3.3.1. OCN1H Element (Ground Fault Overcurrent Element)

As this element has no 2nd harmonic restraint function on high-voltage side of the transformer, it is possible to achieve high-speed operation for large fault currents.

Fig. 3-25 shows the internal function blocks of the element.
The OCN1H element outputs a definitive signal after a preset time of the operation timer (Ope. Time) has passed, when zero-sequence current is greater than or equal to the operation setting value (Ope. Curt.).
An off-delay timer of 200 ms is added in order to prevent chattering of the output contacts.
Furthermore, this element outputs the definitive signal only when the Use/Non-use setting of OCN1H element (OCN1H EN) is ON. Therefore, when this element is not used, unnecessary operation can be prevented by setting to OFF. It is not necessary to adjust any other settings with regard to the OCN1H element.

logical sequence by using PLC.
Fig. 3-25 OCN1H Element - internal function block diagram

Table 3-32 OCN1H Element - setting items

| Display <br> name | Setting <br> name | Setting |  | Description |  |
| :---: | :---: | :---: | :---: | :--- | :---: |
|  | Setting range | Step |  |  |  |
| OCN1H | OCN1H EN | OFF, ON | - | OFF: disable, ON: enable <br> OCN1H element is effective at ON. |  |
|  | Ope. Curt. | $0.5-100.0 \mathrm{~A}$ | 0.1 A | Operating current |  |
|  | Ope. Time | $0.00-10.00 \mathrm{~s}$ | 0.01 s | Operating time <br> (INST $\leq 30 \mathrm{~ms}$ ) |  |

### 3.3.2. OCN1L Element (Ground Fault Overcurrent Element)

As this element has no 2nd harmonic restraint function on high-voltage side of the transformer, it is possible to achieve high-speed operation for large fault currents.
The OCN1L Element has the same operating characteristics as OCN1H Element.
For more information about the element's internal function block diagram, refer to Section 3.3.1.

Table 3-33 OCN1L Element - setting items

| Display <br> name | Setting <br> name | Setting |  | Description |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| OCN1L | Oetting range | Step |  |  |  |
|  |  |  |  | OFF: disable, ON: enable <br> If you want to use this element, set it ON. |  |
|  | Ope. Curt. | $0.5-100.0 \mathrm{~A}$ | 0.1 A | Operating current |  |
|  | Ope. Time | $0.00-10.00 \mathrm{~s}$ | 0.01 s | Operating time INST $\leq 30 \mathrm{~ms}$ |  |

### 3.3.3. OCN2H Element (Ground Fault Overcurrent Element with $2^{\text {nd }}$ harmonic restraint)

This is the definite time ground-fault element on the high-voltage side of the transformer with selectable second harmonic restraint.
Second harmonic restraint function can prevent unnecessary operation due to transformer magnetizing inrush current.
Fig. 3-26 shows the internal function blocks of the element.
The OCN2H element outputs a definitive signal after a preset time of the operation timer (Ope. Time) has passed, when the zero-sequence current is greater than or equal to the operation setting value (Ope. Curt.), and when $2^{\text {nd }}$ harmonic restraint is not operated.
When the $2^{\text {nd }}$ harmonic restraint function is not used (2f-lock EN=OFF), it is not linked to the operation of the OCN2H element.
An off-delay timer of 200 ms is added in order to prevent chattering of the output contacts.
This element outputs the definitive signal only when the setting of Use/Non-use of OCN2H element (OCN2H EN ) is ON. Therefore, when this element is not used, unnecessary operation can be prevented by setting it to OFF. It is not necessary to adjust any other settings with regard to the OCN2H element.

Fig. 3-26 OCN2H Element - internal function block diagram

Table 3-34 OCN2H Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OCN2H | OCN2H EN | OFF, ON |  | OFF: disable, ON: enable OCN2H element is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time <br> (INST $\leq 40 \mathrm{~ms}$ at 2 f-lock EN=ON) |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable When $2^{\text {nd }}$ harmonic restraint function is used, set to ON . |

### 3.3.4. OCN2L Element (Ground Fault Overcurrent Element with $2^{\text {nd }}$ harmonic restraint)

This is the definite time ground-fault element on the low-voltage side of the transformer with selectable 2nd harmonic restraint.
The OCN2L Element has the same operating characteristics as OCN2H Element. For more information, refer to Section 3.3.3.

Table 3-35 OCN2L Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OCN2L | OCN2LEN | OFF, ON | - | OFF: disable, ON: enable OCN2L element is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time <br> (INST $\leq 40 \mathrm{~ms}$ at $2 f$-lock EN=ON) |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable When $2^{\text {nd }}$ harmonic restraint function is used, set to ON . |

### 3.3.5. OCN3H Element (Ground Fault Overcurrent Element with $2^{\text {nd }}$ harmonic restraint)

This is the definite time ground-fault element on the high-voltage side of the transformer with selectable second harmonic restraint.
The OCN3H Element has the same operating characteristics as OCN2H Element.
For more information, refer to Section 3.3.3.

Table 3-36 OCN3H Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OCN3H | OCN3H EN | OFF, ON | - | OFF: disable, ON: enable OCN3H element is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1 A | Operating current |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time <br> (INST $\leq 40 \mathrm{~ms}$ at 2 f -lock EN=ON) |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable $2^{\text {nd }}$ harmonic blocking function is effective at ON. |

### 3.3.6. OCN3L Element (Ground Fault Overcurrent Element with $2^{\text {nd }}$ harmonic restraint)

This is the definite time ground-fault element on the low-voltage side of the transformer with selectable second harmonic restraint.
The OCN3L Element has the same operating characteristics as OCN2L Element.
For more information, refer to Section 3.3.4.

Table 3-37 OCN3L Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OCN3L | OCN3LEN | OFF, ON |  | OFF: disable, ON: enable OCN3L element is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time <br> (INST $\leq 40 \mathrm{~ms}$ at 2 f-lock EN=ON) |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable $2^{\text {nd }}$ harmonic blocking function is effective at ON. |

3.3.7. OCN4H Element (Definite time or IDMT ground fault Overcurrent Element with second harmonic restraint)

This is the definite time or IDMT ground fault element on the high-voltage side of the transformer with selectable 2nd harmonic restraint. Second harmonic restraint can prevent unnecessary operation due to transformer magnetizing inrush current.
Furthermore, 14 types of operating time characteristics and 3 types of reset time characteristics are incorporated.
Fig. 3-27 shows the internal function blocks of the element.
The OCN4H element outputs a definitive signal when detection signal operates for longer than a definite time setting.
The detection signal is issued when zero-sequence current is greater than or equal to the operation setting value (Ope. Curt. or Ope. Curt. $\times 1.15$ is to be selected by setting of IEC Chr. EN), and when $2^{\text {nd }}$ harmonic restraint is not operated.

The DT or IDMT timer counts up in accordance with the operating time characteristic (Ope. Chr.), when zerosequence current is greater than or equal to the operation setting value (Ope. Curt.), and when 2nd harmonic restraint is not operated.
Furthermore, when the 2nd harmonic restraint function is not used (2f-lock EN=OFF), it is not linked to the operation of the OCN4H element.

The reset time characteristic can be selected by setting (Rst. Chr.).
When set to IDMT (inverse definite minimum time) or DT (definite time), it is included an off-delay timer of 200 ms to prevent chattering of the contacts.
When instantaneous reset of the contact is required, the setting (Rst. Chr.) should be set to INST (instantaneous).

Furthermore, this element operates only when the setting of Use/Non-use of OCN4H element (OCN4H EN) is ON. Therefore, when this element is not used, unnecessary operation can be prevented by setting to OFF. It is not necessary to adjust any other settings with regard to the OCN4H element.

Fig. 3-27 OCN4H Element - internal function block diagram

Table 3-38 OCN4H Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OCN4H | OCN4H EN | OFF, ON | - | OFF: disable, ON: enable OCN4H element is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. TM | 0.25-50.00 | 0.01 | Operating time multiplier. <br> This is indicated as " M " in the characteristic formula shown in sub-clause 3.2.8.3. |
|  | Ope. Chr. | NI01, VI01, EI01, LI01, LIO2, DT01, NI11, El11, El12, NI21, VI21, LI21, NI31, VI31 | - | Choice of DT and IDMT operating characteristics. <br> (Refer to IDMT characteristic formula in sub-clause 3.2.8.3.) |
|  | Rst. Chr. | IDMT,DT,INST | - | Reset time characteristic. IDMT: Inverse definite minimum time DT: Definite time (fixed to 200 ms ) INST: Instantenious ( 50 ms or less) (Refer to IDMT characteristic formula in sub-clause 3.2.8.3. |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable When $2^{\text {nd }}$ harmonic restraint is used, set to ON. |
|  | IEC Chr. EN | OFF, ON | - | OFF: Normal characteristic, ON: Characteristic according to IEC When this element is used with the operating characteristic compliant with IEC60255-151, set this parameter to ON. By setting this parameter to ON, the operating value for detection becomes 1.15 times the 'Ope. Curt.' as shown in sub-clause3.2.8.1. |

3.3.8. OCN4L Element (Definite time or IDMT ground fault Overcurrent Element with second harmonic restraint)

This is the definite time or IDMT ground fault element on the low-voltage side of the transformer with selectable 2nd harmonic restraint. Second harmonic restraint can prevent unnecessary operation due to transformer magnetizing inrush current.
The OCN4L Element has the same operating characteristics as OCN4H Element.
For more information about the element's internal function block diagram, refer to Section 3.3.7.

Table 3-39 OCN4L Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OCN4L | OCN4L EN | OFF, ON | - | OFF: disable, ON: enable OCN4L element is effective at ON. |
|  | Ope. Curt. | 0.5-100.0A | 0.1A | Operating current |
|  | Ope. TM | 0.25-50.00 | 0.01 | Operating time multiplier. <br> This is indicated as " M " in the characteristic formula shown in sub-clause 3.2.8.3. |
|  | Ope. Chr. | NI01, VI01, EI01, LI01, LIO2, DT01, NI11, El11, El12, NI21, VI21, LI21, NI31, VI31 | - | Choice of DT and IDMT operating characteristics. <br> (Refer to IDMT characteristic formula in sub-clause 3.2.8.3.) |
|  | Rst. Chr. | IDMT,DT,INST | - | Reset time characteristic. <br> IDMT: Inverse definite minimum time DT: Definite time (fixed to 200 ms ) INST: Instantenious (50 ms or less) (Refer to IDMT characteristic formula in sub-clause 3.2.8.3.) |
|  | 2f-lock EN | OFF, ON | - | OFF: disable, ON: enable When $2^{\text {nd }}$ harmonic restraint is used, set to ON. |
|  | IEC Chr. EN | OFF, ON | - | OFF: Normal characteristic, <br> ON: Characteristic according to IEC When this element is used with the operating characteristic compliant with IEC60255-151, set this parameter to ON. By setting this parameter to ON, the operating value for detection becomes 1.15 times the Ope. Curt., as shown in sub-clause 3.2.8.1. |

### 3.4. Thermal Overload Element

This relay incorporates 2 overload elements for the current on HV side and LV side. Both element have 2 userselectable operating time characteristics.

| Device No. | Display name | Protective function |
| :--- | :--- | :--- |
| 49 | THOLH | Thermal Overload element on HV-side <br>  |
|  |  | 2 types of operating time characteristic. |

### 3.4.1. THOLH Element (Thermal Overload Element)

This is an overload detection element for the current on the high-voltage side of the transformer.
There are two types of operating time characteristics, COLD and HOT.
Fig. 3-28 shows the internal function blocks of the element.
THOLH Element calculates positive and negative-sequence current from a 3-phase current and makes the combined current according to the equation 2. The 'Neg.K' value is the negative-phase heating-magnification factor. This element outputs a detection signal after the lapse of a time interval calculated from the characteristic equation for operate/reset time characteristic setting (THOLH Sel.) when the combined current is larger than the operation setting value (Ope. Curt.).

$$
\begin{equation*}
I o p=\sqrt{I_{1}^{2}+(\text { Neg.K }) \times I_{2}^{2}} \tag{Equation2}
\end{equation*}
$$

Where,
lop: Operating value of THOL element
$\mathrm{I}_{1}$ : Positive sequence current
$\mathrm{I}_{2}$ : Negative sequence current
Neg. K: Negative sequence heat-generation multiplier
An off-delay timer which corresponds to the COLD/HOT characteristic is added in order to prevent chattering of the output contacts.
Furthermore, this element outputs the definitive signal only when the Use/Non-use setting of THOLH element (THOLH EN) is ON. Therefore, when this element is not used, unnecessary operation can be prevented by setting to OFF. It is not necessary to set other setting items with regard to THOLH element.

Fig. 3-28 THOLH Element - internal function block diagram

Table 3-40 THOLH Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| THOLH | THOLH EN | OFF, ON | - | OFF: Non-use, ON: Use When this element is used, set to ON. |
|  | THOLH Sel. | COLD, HOT | - | Operate/reset time characteristics <br> For more information, refer to Section 3.4.2.1. |
|  | Ope. Curt. | 1.0-10.0A | 0.1A | Operating current |
|  | Ope. Kth | 8-240 | 1 | Operating time multiplier setting The value "Kth" in the operating time characteristic equation is in Section 3.4.2.1. |
|  | Neg. K | 1-10 | 1 | Negative sequence heat generation multiplier |

### 3.4.2. THOLL Element (Thermal Overload Element)

This is an overload detecting element for the current on the low-voltage side of the transformer. THOLL Element has the same characteristics as THOLH Element.
For more information about the element's internal function block, see Section 3.4.1.
Table 3-41 THOLL Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| THOLL | THOLL EN | OFF, ON | - | OFF: Non-use, ON: Use When this element is used, set to ON. |
|  | THOLL Sel. | COLD, HOT | ${ }^{-}$ | Operate/reset time characteristics For more information, refer to Section 3.4.2.1. |
|  | Ope. Curt. | 1.0-10.0A | 0.1A | Operating current |
|  | Ope. Kth | 8-240 | 1 | Operating time multiplier setting The value "Kth" in the operating time characteristic equation is in Section 3.4.2.1. |
|  | Neg. K | 1-10 | 1 | Negative sequence heat generation multiplier |

### 3.4.2.1. Operate/Reset Time Characteristics

The operate/reset time characteristics of the THOLH and THOLL Elements are expressed by the following equation:

$$
\text { OperatingTime }[s]=8.49 \times K t h \times \ln \frac{\left(I_{1}{ }^{2}+N e g . K \times I_{2}{ }^{2}\right)-\left(I_{P 1}{ }^{2}+N e g . K \times I_{P 2}{ }^{2}\right)}{\left(I_{1}{ }^{2}+N e g . K \times I_{2}{ }^{2}\right)-1}
$$

$K=\frac{\text { Heating effect by negative phase current }}{\text { Heating effect by positive phase current }}$
Where,
$I_{\mathrm{P} 1}=$ initial positive-phase current ( $\mathrm{I}_{\mathrm{P} 1}=0$ at COLD characteristic)
$\mathrm{I}_{\mathrm{P} 2}=$ initial negative-phase current $\quad\left(\mathrm{I}_{\mathrm{P} 1}=0\right.$ at COLD characteristic)
$l_{1}=$ positive-phase sequence current
$I_{2}=$ negative-phase sequence current

- COLD characteristic

The COLD characteristic starts computations from when input has exceeded an operating current setting.
When the input has reduced below the operating current setting after the operation of element's output, the element resets itself in 200 ms and resets its computations.
On the other hand, if the input has reduced below the operating current setting on the way to the element's output-operation by larger current than the operating current setting, the internal computation value reduces according to the equation.

- HOT characteristic

The HOT characteristic always performs heat-accumulation computations even if input remains below an operating current setting.

Fig. 3-29 An example of operating time and reset time
$0-T_{1}$ : $\quad$ Operating time with input change of $0 \rightarrow 300 \%$
$\mathrm{T}_{1}-\mathrm{T}_{3}$ : Output relay contact operation time at COLD characteristic
$\mathrm{T}_{1}-\mathrm{T}_{4}$ : Output relay contact operation time at HOT characteristic
$T_{2}-T_{3}$ : Output relay reset time at COLD characteristic
$\mathrm{T}_{2}-\mathrm{T}_{4}$ : Output relay reset time at HOT characteristic for the current change of $300 \% \rightarrow 0$ input
$\mathrm{T}_{1}$ : $\quad$ Time at relay-computed value $(\theta n) \geqq 1$
$\mathrm{T}_{2}$ : Time at relay input change from $300 \%$ to 0
$\mathrm{T}_{4}: \quad$ Time at relay-computed value $(\theta \mathrm{n})<1$

Fig. 3-30 Operating time characteristic of overload element

Fig. 3-31 Operating time characteristic of overload element (Variation dependent on prior current value in HOT characteristic)

Fig. 3-32 Operating time characteristic of IDMT overcurrent element

### 3.5. Negative-phase Overcurrent Element

The negative sequence overcurrent elements with 2 stages for high-voltage side and low-voltage side are incorporated in the CAC1-A41D1. As the negative sequence current is obtained from 3-phase current, it is possible to detect unbalance current owing to external wiring errors, open phase condition, etc.

| Component <br> number | Display name | Protective function |
| :--- | :--- | :--- |
| 46 | OCNEG1H, <br> OCNEG2H | Negative sequence overcurrent element (HV-side) |
|  | OCNEG1L, <br> OCNEG2L | Negative sequence overcurrent element (LV-side) |

### 3.5.1. OCNEG1H Element (Negative sequence overcurrent element)

This is a negative-sequence overcurrent instantaneous element on the low-voltage side of the transformer Fig. 3-33 shows the internal function blocks of OCNEG1 element.

The OCNEG1H Element calculates a negative-sequence current from 3-phase input current, and compares it with the operation setting value (Ope. Curt.). It outputs a definitive signal after a preset time of the operation timer (Ope. Time) has passed, when the current is greater than or equal to the setting value.

An off-delay timer of 200 ms is added in order to prevent chattering of the contacts.
Furthermore, this element operates only when the setting of Use/Non-use of OCNEG1H element (OCNEG1H EN ) is ON . Therefore, when this element is not used, unnecessary operation can be prevented by setting it to OFF. It is not necessary to adjust any other settings with regard to the OCNEG1H element.
The relationship between the operation equation and the setting value is following.

$$
I_{2}=\frac{1}{3}\left(I a+a^{2} \times I b+a \times I c\right) \geq(\text { OCNEGOpe.Curt. })
$$

Fig. 3-33 OCNEG1H Element - internal function block diagram

Table 3-42 OCNEG1H Element - setting items

| Display <br> name | Setting <br> parameter | Setting |  | Description |
| :---: | :---: | :---: | :---: | :--- |
|  | Setting range | Step |  |  |
| OCNEG1H | OCNEG1H EN | OFF, ON | - | OFF: disable, ON: enable <br> OCNEG1H element is effective at ON. Ope. Curt. |
|  | $0.25-5.00 \mathrm{~A}$ | 0.01 A | Operating current <br> Please input the triple negative-sequence <br> current (3I2) as this set value. The $I_{2}$ means <br> a negative-sequence current. |  |
|  | Ope. Time | $0.0-10.0 \mathrm{~s}$ | 0.1 s | Operating time <br> (INST $\leq 50 \mathrm{~ms})$ |

### 3.5.2. OCNEG1L Element (Negative sequence overcurrent element)

This is a negative-sequence overcurrent instantaneous element on the low-voltage side of the transformer.
The OCNEG1L Element has the same characteristics as OCNEG1H Element.
For more information about the element's internal function block diagram, refer to Section3.5.1.

Table 3-43 OCNEG1L Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OCNEG1L | $\begin{aligned} & \text { OCNEG1L } \\ & \text { EN } \end{aligned}$ | OFF, ON | - | OFF: disable, ON: enable OCNEG1L element is effective at ON. |
|  | Ope. Curt. | 0.25-5.00A | 0.01A | Operating current Please input the triple negative-sequence current $\left(3 l_{2}\right)$ as this set value. The $I_{2}$ means a negative-sequence current. |
|  | Ope. Time | 0.0-10.0s | 0.1s | Operating time <br> (INST $\leq 50 \mathrm{~ms}$ ) |

### 3.5.3. OCNEG2H Element (Negative sequence overcurrent element)

This is a negative-sequence overcurrent instantaneous element for the current on the high-voltage side of the transformer.
The OCNEG2H Element has the same characteristics as the OCNEG1H Element.
For more information about the element's internal function block diagram, refer to Section 3.5.1.

Table 3-44 OCNEG2H Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| OCNEG2H | OCNEG2H EN | OFF, ON | - | OFF: disable, ON: enable OCNEG2H element is effective at ON. |
|  | Ope. Curt. | 0.25-5.00A | 0.01A | Operating current |
|  | Ope. Time | 0.0-10.0s | 0.1s | Operating time <br> (INST $\leq 50 \mathrm{~ms}$ ) |

### 3.5.4. OCNEG2L Element (Negative sequence overcurrent element)

This is a negative-sequence overcurrent instantaneous element for the current on the low-voltage side of the transformer.
OCNEG2L Element has the same characteristics as the OCNEG1H Element.
For more information about the element's internal function block diagram and how it works, see Section 3.5.1.

Table 3-45 OCNEG2L Element - setting items

| Display <br> name | Setting name | Setting |  | Description |  |
| :---: | :--- | :---: | :---: | :--- | :---: |
|  |  | Step | OFF: disable, ON: enable <br> OCNEG2L | OCNEG2L EN |  |
|  | OFF, ON | - |  | OCNEG2L element is effective at ON. |  |
|  | Ope. Curt. | $0.25-5.00 \mathrm{~A}$ | 0.01 A | Operating current |  |
|  | Ope. Time | $0.0-10.0 \mathrm{~s}$ | 0.1 s | Operating time <br> (INST $\leq 50 \mathrm{~ms})$ |  |

### 3.6. CBF Function

The circuit breaker failure (CBF) elements for high-voltage side and low-voltage side are incorporated in the CAC1-A41D1.

| Component <br> number | Display name | Protective function |
| :--- | :--- | :--- |
| 50 BF | CBFH, CBFNH | HV-side CBF detecting element |
|  | CBFL, CBFNL | LV-side CBF detecting element |

### 3.6.1. CBFH Element

CBFH element is the CB failure detection element for using the current on the high-voltage side of the transformer.
The internal function block diagram is shown in Fig. 3-34.
CBFH Element outputs a detection signal after the lapse of an operation timer period (Ope. Time) if each phase or zero-phase current of the transformer's HV-side is greater than the operation setting value (CBFH Curt. and CBFNH Curt.) and a CB trip signal is received from the external relays.
In other words, when it receives the CB trip signal of other external relay(s) on the occurrence of a power network fault and the current continuous detection for more than a certain set time, it judges that there is a faulty condition in the breaker and outputs the CB failure signal. For the CB trip signal of other external relay(s), $\mathrm{D} / \mathrm{I}(\mathrm{DI} 8)$ terminal is assigned.
[Note] If an optional IEC61850 communication card is installed, it is possible to receive a CB trip signal from other relays via the GOOSE message on communication route. In this case, set a Goose receive setting so that the trip signal may be received by G_TRIP1, G_TRIP2, or G_TRIP3.
In addition, this element is effective only when its enable/disable setting (CBFH EN and CBFNH EN) is set ON. The setting of both CBFH EN and CBFNH EN to OFF prevent the unnecessary operation of the element.

Fig. 3-34 CBFH Element - internal function block diagram

Table 3-46 CBFH Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| CBFH | CBFH EN | OFF, ON | - | OFF - disabled, ON - enabled CBFH element is effective at ON. |
|  | CBFNH EN | OFF, ON | - | OFF: disable, ON: enable CBFNH element is effective at ON. |
|  | CBFH Curt. | 0.15-10.00A | 0.01A | Operating time (for each phase) |
|  | CBFNH Curt. | 0.15-10.00A | 0.01A | Operating time (for zero phase) |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time ( ${ }^{\text {a }}$ (NST $\leq 30 \mathrm{~ms}$ ) |

### 3.6.2. CBFL Element

CBFL element is the CB failure detection element using the current on the low-voltage side of the transformer. The internal function block diagram is shown in Fig. 3-35.

CBFL Element outputs a detection signal after the lapse of an operation timer period (Ope. Time) if each phase or zero-phase current of the transformer's HV-side is greater than the operation setting value (CBFL Curt. and CBFNL Curt.) and a CB trip signal is received from the external relays.
In other words, when it receives the CB trip signal of other external relay(s) on the occurrence of a power network fault and the current continuous detection for more than a certain set time, it judges that there is a faulty condition in the breaker and outputs the CB failure signal. For the CB trip signal of other external relay(s), $\mathrm{D} / \mathrm{I}$ ( DI 7 ) terminal is assigned.
[Note] If an optional IEC61850 communication card is installed, it is possible to receive a CB trip signal from other relays via the GOOSE message on communication route. In this case, set a Goose receive setting so that the trip signal may be received by G_TRIP1, G_TRIP2, or G_TRIP3.
In addition, this element is effective only when its enable/disable setting (CBFL EN and CBFNL EN) is set ON. The setting of both CBFL EN and CBFNL EN to OFF prevent the unnecessary operation of the element.

Fig. 3-35 CBFL Element - internal function block diagram

Table 3-47 CBFL Element - setting items

| Display name | Setting name | Setting |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Setting range | Step |  |
| CBFL | CBFL EN | OFF, ON | - | OFF - disabled, ON - enabled CBFL element is effective at ON. |
|  | CBFNL EN | OFF, ON | - | OFF: disable, ON: enable CBFNL element is effective at ON. |
|  | CBFL Curt. | 0.15-10.00A | 0.01A | Operating time (for each phase) |
|  | CBFNL Curt. | 0.15-10.00A | 0.01A | Operating time (for zero phase) |
|  | Ope. Time | 0.00-10.00s | 0.01s | Operating time ( ${ }^{\text {a }}$ (NST $\leq 30 \mathrm{~ms}$ ) |

## 4. Human machine interface

There are two ways to set and operate the relay:
(1) Operation from the front panel
(2) Operation from a locally connected PC

This chapter describes about "(1) Operation from the front panel" by pushbuttons and the indication display. The operation method (2) will be described in Chapter 11.

### 4.1. Pushbutton switches and indication display

This section describes the pushbutton switches and indication display on the front panel by using Fig. 4-1 and Table 4-1.

Fig. 4-1 Front panel section description

Table 4-1 Front panel section description

### 4.2. List of menus

The operation mode includes the DISPLAY and SETTING modes, which respectively have different menus available.
Table 4-2 lists the menus available in the respective modes.

Table 4-2 List of menus
O: DISPLAY only $\odot$ : DISPLAY and SETTING -: Not shown

| Menu |  | Operation mode |  |
| :---: | :---: | :---: | :---: |
|  |  | DISPLAY | SETTING |
| RECORD <br> (RECORD) | Fault record (FAULT RECORD) | $\bigcirc$ | - |
|  | Event record (EVENT RECORD) | $\bigcirc$ | - |
|  | Access record (ACCESS RECORD) | $\bigcirc$ | - |
|  | Alarm record (ALARM RECORD) | $\bigcirc$ | - |
| Clear record (CLEAR RECORD) | Clear fault record (FAULT REC CLEAR) | - | $\bigcirc$ |
|  | Clear event record (EVENT REC CLEAR) | - | $\bigcirc$ |
|  | Clear alarm record (ALARM REC CLEAR) | - | $\bigcirc$ |
| Status (STATUS) | Clock (CLOCK) | $\bigcirc$ | - |
|  | Measured value (METERING) | $\bigcirc$ | - |
|  | DI/DO status (DIGITAL I/O) | $\bigcirc$ | - |
|  | Trip counter (TRIP COUNTER) | $\bigcirc$ | - |
|  | Device name (DEVICE NAME) | $\bigcirc$ | - |
| Setting <br> (SETTING) | Active group (ACTIVE WG) | $\bigcirc$ | $\bigcirc$ |
|  | Group 1 setting (G1) | $\bigcirc$ | $\bigcirc$ |
|  | Group 2 setting (G2) | $\bigcirc$ | $\bigcirc$ |
| Control (CONTROL) | Control mode (CTRL MODE) | $\bigcirc$ | $\bigcirc$ |
|  | Circuit breaker control (CB CONTROL) | - | $\bigcirc$ |
| Configuration (CONFIG) | Communication setting (COMMUNICATION) | $\bigcirc$ | $\bigcirc$ |
|  | Clock adjustment (CLOCK ADJUST) | - | $\bigcirc$ |
|  | Measured analog value (METERING) | $\bigcirc$ | $\bigcirc$ |
|  | Electric energy (ENERGY) | $\bigcirc$ | $\bigcirc$ |
|  | Trip counter (TRIP COUNTER) | $\bigcirc$ | $\bigcirc$ |
|  | Disturbance record (DISTURBANCE) | $\bigcirc$ | $\bigcirc$ |
|  | DI detection voltage value (DI VOLTAGE) | $\bigcirc$ | $\bigcirc$ |
|  | Password use/non-use (PASSWORD USE) | - | $\bigcirc$ |
|  | Password registration (PASSWORD REGIST) | - | $\odot$ |
| Test (TEST) | DO contact test (CONTACT TEST) | - | $\bigcirc$ |
|  | Test mode (MODE) | - | $\bigcirc$ |
|  | LED/VFD lighting test (LED/VFD TEST) | - | $\bigcirc$ |

### 4.3. Operation method

This section describes the operations for mode selection and various menus.

### 4.3.1. DISPLAY/SETTING mode selection

Press a key except for ESC/C when VFD is OFF to show the DISPLAY/SETTING mode selection screen.
The DISPLAY and SETTING modes offer different sets of menus available.
For the details about the menus available in the respective modes, see Table 4-2.

### 4.3.2. DISPLAY mode menu operations

This subsection describes the menu operations in the DISPLAY mode.
The menu screen has following selectable items. Use the Up and Down keys to select the item and press SELECT.
For the details about the menus available in the DISPLAY mode, see Table 4-2.

### 4.3.2.1. Status (STATUS) menu

This subsection describes the Status (STATUS) menu.
The Status menu allows viewing of the current time, measured value, DI/DO status, trip counter and device name.

### 4.3.2.1.1. Clock (CLOCK)

[Operation path] DISPLAY MODE > STATUS > CLOCK
The Show clock (CLOCK) menu allows viewing of the current time and synchronization type.

$$
\begin{array}{lr}
\hline \text { CLOCK } & \text { (LOCAL) } \\
1970-01-01 & 00: 00: 00
\end{array}
$$

The text in the upper right part of the screen indicates the synchronization type for the time shown. (Part showing "LOCAL" in figure above)

Table 4-3 Clock synchronization type indication

| Synchronization type | Description |
| :--- | :--- |
| SNTP | Synchronizing with SNTP |
| DI | Synchronizing with the synchronization request <br> signal from DI |
| ERR | When RTC (real time clock) error reached at <br> maximum time, the time management is <br> disabled. |
| GPS | Synchronizing with IRIG-B |
| LOCAL | Relay's internal clock |

### 4.3.2.1.2. Measured value (METERING) menu

## [Operation path] DISPLAY MODE > STATUS > METERING

The Measured value (METERING) menu allows viewing of the current measured value.
The Configuration menu can specify the measured value of the primary or secondary value of CT. For the setting procedure, see sub-clause 4.3.4.3.3.

The list of measuring vales is shown in Table 4-4.

Table 4-4 Measured value display items (for 5 A type)

| No. | Signal name | Range <br> (primary/secondary) | remarks |
| :---: | :---: | :---: | :---: |
| 1 | IHa | $\begin{gathered} 0 \sim 60000 \mathrm{~A} / \\ 0.00 \sim 10.00 \mathrm{~A} \end{gathered}$ | - |
| 2 | IHb | $\begin{gathered} 0 \sim 60000 \mathrm{~A} / \\ 0.00 \sim 10.00 \mathrm{~A} \end{gathered}$ | - |
| 3 | IHc | $\begin{gathered} 0 \sim 60000 \mathrm{~A} / \\ 0.00 \sim 10.00 \mathrm{~A} \end{gathered}$ | - |
| 4 | IHN | $\begin{gathered} 0 \sim 60000 \mathrm{~A} / \\ 0.00 \sim 10.00 \mathrm{~A} \end{gathered}$ | - |
| 5 | ILa | $\begin{gathered} 0 \sim 60000 \mathrm{~A} / \\ 0.00 \sim 10.00 \mathrm{~A} \end{gathered}$ | - |
| 6 | ILb | $\begin{gathered} 0 \sim 60000 \mathrm{~A} / \\ 0.00 \sim 10.00 \mathrm{~A} \end{gathered}$ | - |
| 7 | ILc | $\begin{aligned} & 0 \sim 60000 \mathrm{~A} / \\ & 0.00 \sim 10.00 \mathrm{~A} \end{aligned}$ | - |
| 8 | ILN | $\begin{gathered} 0 \sim 60000 \mathrm{~A} / \\ 0.00 \sim 10.00 \mathrm{~A} \end{gathered}$ | - |
| 9 | 3 HO | $\begin{aligned} & 0 \sim 60000 \mathrm{~A} / \\ & 0.00 \sim 10.00 \mathrm{~A} \end{aligned}$ | - |
| 10 | IH1 | $\begin{gathered} 0 \sim 60000 \mathrm{~A} / \\ 0.00 \sim 10.00 \mathrm{~A} \end{gathered}$ | - |
| 11 | IH2 | $\begin{aligned} & 0 \sim 60000 \mathrm{~A} / \\ & 0.00 \sim 10.00 \mathrm{~A} \end{aligned}$ | - |
| 12 | 3IL0 | $\begin{aligned} & 0 \sim 60000 \mathrm{~A} / \\ & 0.00 \sim 10.00 \mathrm{~A} \end{aligned}$ | - |
| 13 | IL1 | $\begin{aligned} & 0 \sim 60000 \mathrm{~A} / \\ & 0.00 \sim 10.00 \mathrm{~A} \end{aligned}$ | - |
| 14 | IL2 | $\begin{aligned} & 0 \sim 60000 \mathrm{~A} / \\ & 0.00 \sim 10.00 \mathrm{~A} \end{aligned}$ | - |
| 15 | Ida | $\begin{gathered} 0 \sim 20000 \% ~ / ~ \\ 0 \sim 20000 \% \end{gathered}$ | In this item, 100\% means relay rated current / matching tap. <br> (e.g. 5A / ITH or 5A / ITL) |
| 16 | Idb | $\begin{gathered} 0 \sim 20000 \% ~ / ~ \\ 0 \sim 20000 \% \end{gathered}$ | Ditto |
| 17 | Idc | $\begin{gathered} 0 \sim 20000 \% ~ / ~ \\ 0 \sim 20000 \% \end{gathered}$ | Ditto |
| 18 | IHdN | $\begin{gathered} 0 \sim 20000 \% / \\ 0 \sim 20000 \% \end{gathered}$ | Ditto |
| 19 | ILdN | $\begin{gathered} 0 \sim 20000 \% / \\ 0 \sim 20000 \% \end{gathered}$ | Ditto |

| No. | Signal <br> name | Range <br> (primary/secondary) | remarks |
| :---: | :---: | :---: | :---: |
| 20 | IHa-ph | $0.0 \sim 359.9^{\circ}$ I <br> $0.0 \sim 359.9^{\circ}$ | - |
| 21 | IHb-ph | $0.0 \sim 359.9^{\circ}$ I <br> $0.0 \sim 359.9^{\circ}$ | - |
| 22 | IHc-ph | $0.0 \sim 359.9^{\circ}$ I <br> $0.0 \sim 359.9^{\circ}$ | - |
| 23 | IHN-ph | $0.0 \sim 359.9^{\circ}$ I <br> $0.0 \sim 359.9^{\circ}$ | - |
| 24 | ILa-ph | $0.0 \sim 359.9^{\circ}$ I <br> $0.0 \sim 359.9^{\circ}$ | - |
| 25 | ILb-ph | $0.0 \sim 359.9^{\circ}$ I <br> $0.0 \sim 359.9^{\circ}$ | - |
| 26 | ILc-ph | $0.0 \sim 359.9^{\circ}$ I <br> $0.0 \sim 359.9^{\circ}$ | - |
| 27 | ILN-ph | $0.0 \sim 359.9^{\circ}$ I <br> $0.0 \sim 359.9^{\circ}$ | - |

### 4.3.2.1.3. DI/DO status (DIGITAL I/O) menu

[Operation path] DISPLAY MODE > STATUS > DIGITAL I/O
The Show DI/DO status (DIGITAL I/O) menu allows viewing of the current DI/DO.
The following describes the operation procedure for showing DI/DO.

Table 4-5 Show DI/DO status Display items

| No. | Signal name | No. | Signal name |
| :---: | :---: | :---: | :---: |
| 1 | DI1 | 14 | DO1 |
| 2 | DI2 | 15 | DO2 |
| 3 | DI3 | 16 | DO3 |
| 4 | DI4 | 17 | DO4 |
| 5 | DI5 | 18 | DO5 |
| 6 | DI6 | 19 | DO6 |
| 7 | DI7 | 20 | DO7 |
| 8 | DI8 | 21 | DO8 |
| 9 | DI9 | 22 | DO9 |
| 10 | DI10 | 23 | DO10 |
| 11 | DI11 | 24 | DO11 |
| 12 | DI12 | 25 | DO12 |
| 13 | DI13 | 26 | DO13 |

### 4.3.2.1.4. Trip counter (TRIP COUNTER) menu

[Operation path] DISPLAY MODE > STATUS > TRIP COUNTER
The Trip counter (TRIP COUNTER) menu allows viewing of the number of trips.
TRIP COUNTER
Trip CNT : 0
4.3.2.1.5. Device name (DEVICE NAME) menu
[Operation path] DISPLAY MODE > STATUS > DEVICE NAME
The Device name (DEVICE NAME) menu allows viewing of the device name.
DEVICE NAME
MELPRO D40

### 4.3.2.2. Record (RECORD) menu

This subsection describes the operation logs in for the Record (RECORD) menu.
The Record menu allows viewing four types of log data.
(Fault record, event record, access record and alarm record)

### 4.3.2.2.1. Fault record (FAULT RECORD) menu

## [Operation path] DISPLAY MODE > RECORD > FAULT RECORD

The Fault record (FAULT RECORD) menu allows viewing of the time, operating values and operating elements when the fault is detected. Fault records of up to five phenomena are stored and the respective fault record can be viewed. For selecting record for display, use the Up and Down keys to select the date of the fault record and press SELECT.

Use $\mathbf{\triangle}$ and $\boldsymbol{\nabla}$ to switch between items and press SELECT to select an item

After a fault record is selected, use the Up and Down keys to view the trip factors and measured values.

Table 4-6 Fault record trip factors

| Element name displayed | Element name displayed |
| :---: | :---: |
| DIFF Trip | OC4H Trip |
| DIFFH Trip | OCN4H Trip |
| RGFFH Trip | OC4L Trip |
| RGFL Trip | OCN4L Trip |
| OCC1H Trip | THOLH Trip |
| OCN1H Trip | THOLL Trip |
| OC1L Trip | OCNEG1H Trip |
| OCN1L Trip | OCNEG1L Trip |
| OC2H Trip | OCNEG2H Trip |
| OCN2H Trip | OCNEG2L Trip |
| OC2L Trip | CBFH Trip |
| OCN2L Trip | CBFNH Trip |
| OC3H Trip | CBFL Trip |
| OCN3H Trip | CBFNL Trip |
| OC3L Trip |  |
| OCN3L Trip |  |

Table 4-7 Fault record measured values displayed

| No. | Item | Range <br> (primary only) | No. | Signal name | Range <br> (primary only) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | IHa | $0 \sim 60000 \mathrm{~A}$ | 15 | Ida | $0 \sim 20000 \%$ |
| 2 | IHb | $0 \sim 60000 \mathrm{~A}$ | 16 | Idb | $0 \sim 20000 \%$ |
| 3 | IHc | $0 \sim 60000 \mathrm{~A}$ | 17 | Idc | $0 \sim 20000 \%$ |
| 4 | IHN | $0 \sim 60000 \mathrm{~A}$ | 18 | IHdN | $0 \sim 20000 \%$ |
| 5 | ILa | $0 \sim 60000 \mathrm{~A}$ | 19 | ILdN | $0 \sim 20000 \%$ |
| 6 | ILb | $0 \sim 60000 \mathrm{~A}$ | 20 | IHa-ph | $0.0 \sim 359.9^{\circ}$ |
| 7 | ILc | $0 \sim 60000 \mathrm{~A}$ | 21 | IHb-ph | $0.0 \sim 359.9^{\circ}$ |
| 8 | ILN | $0 \sim 60000 \mathrm{~A}$ | 22 | IHc-ph | $0.0 \sim 359.9^{\circ}$ |
| 9 | 3 IH0 | $0 \sim 60000 \mathrm{~A}$ | 23 | IHN-ph | $0.0 \sim 359.9^{\circ}$ |
| 10 | IH1 | $0 \sim 60000 \mathrm{~A}$ | 24 | ILa-ph | $0.0 \sim 359.9^{\circ}$ |
| 11 | IH2 | $0 \sim 60000 \mathrm{~A}$ | 25 | ILb-ph | $0.0 \sim 359.9^{\circ}$ |
| 12 | 3 IL0 | $0 \sim 60000 \mathrm{~A}$ | 26 | ILc-ph | $0.0 \sim 359.9^{\circ}$ |
| 13 | IL1 | $0 \sim 60000 \mathrm{~A}$ | 27 | ILN-ph | $0.0 \sim 359.9^{\circ}$ |
| 14 | IL2 | $0 \sim 60000 \mathrm{~A}$ |  |  |  |

### 4.3.2.2.2. Event record (EVENT RECORD) menu

## [Operation path] DISPLAY MODE > RECORD > EVENT RECORD

The Event records (EVENT RECORD) menu allows viewing of event records saved.
Event records of up to 512 events are stored and the respective event record can be viewed.
Press the Up and Down keys to switch the indication on the screen as below.
Date of occurrence > Record description > Date of occurrence...
Press the Right key to display from the current event record to the past $10^{\text {th }}$ record

Use $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ to change the display item Use to move from the record currently shown to the date of the tenth record into past

Table 4-8 Event record List of events

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 1 | DI1 | Status of DI1 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 2 | DI2 | Status of DI2 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 3 | DI3 | Status of DI3 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 4 | DI4 | Status of DI4 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 5 | DI5 | Status of DI5 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 6 | DI6 | Status of DI6 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 7 | DI7 | Status of DI7 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 8 | DI8 | Status of DI8 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 9 | DO1 | Status of DO1 |
| 10 | DO2 | Status of DO2 |
| 11 | DO3 | Status of DO3 |
| 12 | DO4 | Status of DO4 |
| 13 | DO5 | Status of DO5 |
| 14 | DO6 | Status of DO6 |
| 15 | DO7 | Status of DO7 |
| 16 | DO8 | Status of DO8 |
| 17 | TCNT_ALM | Alarm of trip counter |
| 18 | DIFSV-A | Definitive signal of supervision of differential current element. More detail, please refer to sub-clause 3.1, 'Differential current element (87)'. |
| 19 | DIFSV-B | Definitive signal of supervision of differential current element. More detail, please refer to sub-clause 3.1, 'Differential current element (87)'. |
| 20 | DIFSV-C | Definitive signal of supervision of differential current element. More detail, please refer to sub-clause 3.1, 'Differential current element (87)'. |
| 21 | CBa1 | Status of circuit breaker |
| 22 | INT_LK_OP | OPEN signal of INTERLOCK |
| 23 | INT_LK_CL | CLOSE signal of INTERLOCK |
| 24 | $\begin{aligned} & \text { CTL_OP_O } \\ & \mathrm{K} \end{aligned}$ | Condition signal for CB open control. <br> This signal is ON when all conditions are met to control the CB. |
| 25 | CTL_CL_OK | Condition signal for CB close control. <br> This signal is ON when all conditions are met to control the CB. |
| 26 | CB_CTL_OK | Confirmation signal of CB operation success. |
| 27 | $\begin{aligned} & \text { CB_CTL_N } \\ & \underset{G}{-} \end{aligned}$ | Confirmation signal of CB operation failure. |
| 28 | OP_TS | CB open control via local operation. |
| 29 | CL_TS | CB close control via local operation. |
| 30 | MANU_CLS | Operation signal to close a circuit breaker <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 31 | MANU_OPN | Operation signal to open a circuit breaker <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 32 | CB_LR | CB operating authority status signal. (Local / Remote) The "CB LR" = ON means that Local control is authorized. |
| 33 | CTL_BLOP1 | Setting condition signal (Use/Non-use) for blocking CB open status. The "CTL_BLOP1" = ON (=Use) means that the CB open operations is blocked. (This signal is available only in the relay unit with IEC 61850 communication card.) |

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 34 | CTL_BLCL1 | Setting condition signal (Use/Non-use) for blocking CB close status. The "CTL_BLCL1" = ON (=Use) means that the CB close operations is blocked. (This signal is available only in the relay unit with IEC 61850 communication card.) |
| 35 | 43INT_FLG | Setting condition signal (Use/Non-use) for CB control interlock. (This signal is available only in the relay unit with IEC 61850 communication card.) |
| 36 | VL4000000 | Operation failure or setting failure status signal. <br> This "VL4000000" signal = ON when any following conditions. <br> - The interlock condition doesn't meet. <br> - The CB control doesn't be authorized. <br> - The CB control direction is same as current condition. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) |
| 37 | RES_STS00 | Confirmation signal of CB operation success. <br> This "RES_STSOO" signal is same as "CB_CTL_OK" signal. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) |
| 38 | RES_STS02 | Status signal of CB operation failure and cause. <br> This "RES_STSO2" signal is ON when any following conditions. <br> - The CB control doesn't be authorized. <br> - The CB control blocking conditions are met. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) |
| 39 | RES_STS05 | Status signal of CB operation failure and cause. <br> This "RES_STS05" signal is ON when following condition. <br> - The CB control direction is same as current condition. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) |
| 40 | RES_STS0A | Status signal of CB operation failure and cause. <br> This "RES_STSOA" signal is ON when following condition. <br> - The interlock condition doesn't meet. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) |
| 41 | RES_STS10 | Status signal of CB operation failure and cause. <br> This "RES_STS10" signal is ON when following condition. <br> - The time passes over the timeout setting value ( 10 sec ). <br> (This signal is available only in the relay unit with IEC 61850 communication card.) |
| 42 | CL_DI | CB close operation signal. <br> This signal express the condition of "CLOSE CB" on PC-HMI. <br> Fig. 4-2 CB control signal description on PC-HMI and internal signal name. |
| 43 | OP_DI | CB open operation signal. <br> This signal express the condition of "OPEN CB" on PC-HMI. <br> Please refer to Fig. 4-2. |

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 44 | P_INT_LK1 | CB close interlock signal. <br> This signal express the condition of "CLOSE INTLK" on PC-HMI. <br> Please refer to Fig. 4-2. |
| 45 | P_INT_LK2 | CB open interlock signal. <br> This signal express the condition of "OPEN INTLK" on PC-HMI. <br> Please refer to Fig. 4-2. |
| 46 | CB_DI_CTL | Real-time DI status signal for CB control. The "CB_DI_CTL" = ON when the "CL_DI" =ON or the "OP_DI" =ON. <br> The relationship between CB_DI_CTL, CL_DI and OP_DI is following. <br> CB DI_CTL $=O R(C L$ DI, OP DI) |
| 47 | RGFH-D | Detection signal of zero sequence differential current (87TN) element (High winding side) |
| 48 | RGFL-D | Detection signal of zero sequence differential current (87TN) element (Low winding side) |
| 49 | OC1H-ND | Detection signal of 1st stage instantaneous overcurrent (50) element on zero sequence current (High winding side) |
| 50 | OC1L-ND | Detection signal of 1st stage instantaneous overcurrent (50) element on zero sequence current (Low winding side) |
| 51 | OC2H-ND | Detection signal of 2nd stage instantaneous overcurrent (50) element on zero sequence current (High winding side) |
| 52 | OC2L-ND | Detection signal of 2nd stage instantaneous overcurrent (50) element on zero sequence current (Low winding side) |
| 53 | OC3H-ND | Detection signal of 3rd stage instantaneous overcurrent (50) element on zero sequence current (High winding side) |
| 54 | OC3L-ND | Detection signal of 3rd instantaneous overcurrent (50) element on zero sequence current (Low winding side) |
| 55 | OC4H-ND | Detection signal of definite time or IDMT overcurrent (51) element on zero sequence current (High winding side) |
| 56 | OC4L-ND | Detection signal of definite time or IDMT overcurrent (51) element on zero sequence current (Low winding side) |
| 57 | THOLH-D | Detection signal of overload (49) element (High winding side) |
| 58 | THOLL-D | Detection signal of overload (49) element (Low winding side) |
| 59 | NOC1H-D | Detection signal of 1st stage negative sequence overcurrent (46) element (High winding side) |
| 60 | NOC1L-D | Detection signal of 1st stage negative sequence overcurrent (46) element (Low winding side) |
| 61 | NOC2H-D | Detection signal of 2nd stage negative sequence overcurrent (46) element (High winding side) |
| 62 | NOC2L-D | Detection signal of 2nd stage negative sequence overcurrent (46) element (Low winding side) |
| 63 | CBFH-ND | Detection signal of overcurrent element for the detection of CBF (50BF) on zero sequence current (High winding side) <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 64 | CBFL-ND | Detection signal of overcurrent element for the detection of CBF (50BF) on zero sequence current (Low winding side) <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 65 | ALARM | Abnormal condition of constant supervision (heavy alarm) |
| 66 | ALARM-L | Abnormal condition of constant supervision (light alarm) |
| 67 | RY-LOCK | Locking of relay |
| 68 | SV-LK | The operation lock signal for monitoring function such as a DIFSV function. The ON/OFF of this signal is changed via TEST mode. |
| 69 | TCNT-LK | The operation lock signal for a trip counter function (TCNT). The ON/OFF of this signal is changed via TEST mode. |
| 70 | THOL-T | Testing of THOL (49) element. |

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 71 | COMMO | Assignment to IEC 61850 transmitted signals. This "COMMO" signal is assigned Ind1 of GGIO4 in IEC 61850 model. (This signal is available only in the relay unit with IEC 61850 communication card.) <br> Fig. 4-3 COMM signal description on PC-HMI. |
| 72 | COMM1 | Assignment to IEC 61850 transmitted signals. <br> This "COMM1" signal is assigned Ind2 of GGIO4 in IEC 61850 model. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) <br> Please refer to Fig. 4-3. |
| 73 | COMM2 | Assignment to IEC 61850 transmitted signals. <br> This "COMM2" signal is assigned Ind3 of GGIO4 in IEC 61850 model. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) <br> Please refer to Fig. 4-3. |
| 74 | COMM3 | Assignment to IEC 61850 transmitted signals. <br> This "COMM3" signal is assigned Ind4 of GGIO4 in IEC 61850 model. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) <br> Please refer to Fig. 4-3. |
| 75 | COMM4 | Assignment to IEC 61850 transmitted signals. <br> This "COMM4" signal is assigned Ind5 of GGIO4 in IEC 61850 model. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) <br> Please refer to Fig. 4-3. |
| 76 | COMM5 | Assignment to IEC 61850 transmitted signals. <br> This "COMM5" signal is assigned Ind6 of GGIO4 in IEC 61850 model. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) <br> Please refer to Fig. 4-3. |
| 77 | COMM6 | Assignment to IEC 61850 transmitted signals. <br> This "COMM6" signal is assigned Ind7 of GGIO4 in IEC 61850 model. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) <br> Please refer to Fig. 4-3. |
| 78 | COMM7 | Assignment to IEC 61850 transmitted signals. <br> This "COMM7" signal is assigned Ind8 of GGIO4 in IEC 61850 model. <br> (This signal is available only in the relay unit with IEC 61850 communication card.) <br> Please refer to Fig. 4-3. |
| 79 | DIF-3D_O | Detection signal of any DIFF of A, B, and C phase |
| 80 | DIFH-3D_O | Detection signal of any DIFFH of A, B, and C phase |

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 81 | $\begin{array}{\|l\|} \hline \text { OC1H- } \\ \text { 3D_O } \\ \hline \end{array}$ | Detection signal of any OC1H of A, B, and C phase |
| 82 | OC1L-3D_O | Detection signal of any OC1L of A, B, and C phase |
| 83 | $\begin{aligned} & \mathrm{OC} 2 \mathrm{H}- \\ & 3 \mathrm{D} \mathrm{O} \end{aligned}$ | Detection signal of any OC2H of A, B, and C phase |
| 84 | OC2L-3D_O | Detection signal of any OC2L of A, B, and C phase |
| 85 | $\begin{array}{\|l\|} \hline \text { OC3H- } \\ \text { 3D_O } \\ \hline \end{array}$ | Detection signal of any OC3H of A, B, and C phase |
| 86 | OC3L-3D_O | Detection signal of any OC3L of A, B, and C phase |
| 87 | $\begin{array}{\|l} \hline \text { OC4H- } \\ \text { 3D_O } \\ \hline \end{array}$ | Detection signal of any OC4H of A, B, and C phase |
| 88 | OC4L-3D_O | Detection signal of any OC4L of A, B, and C phase |
| 89 | $\begin{aligned} & \hline \text { CBFH- } \\ & \text { 3D_O } \\ & \hline \end{aligned}$ | Detection signal of any CBFH of A, B, and C phase |
| 90 | CBFL-3D_O | Detection signal of any CBFL of A, B, and C phase |
| 91 | DF2f-3D_O | Detection signal of any DIFF2f of A, B, and C phase |
| 92 | DF5f-3D_O | Detection signal of any DIFF5f of A, B, and C phase |
| 93 | C2fH-3D_O | Detection signal of any OC2fH of A, B, and C phase |
| 94 | C2fL-3D_O | Detection signal of any OC2fL of A, B, and C phase |
| 95 | DFSV-3D_O | Detection signal of any DIFFSV of A, B, and C phase |
| 96 | DFSV-3_O | Definitive signal of any DIFFSV of A, B, and C phase |
| 97 | ALLEL-O | Definitive signal of any of all elements. (OR of all definitive signals) |
| 98 | DS_TRIG | Operating status signal of the disturbance recorder (data save function) -which is also called a data save function. <br> While this "DS_TRIG" signal is ON, the waveform data and binary data are captured and saved. |
| 99 | GOOSE1 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 100 | GOOSE2 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 101 | GOOSE3 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 102 | GOOSE4 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 103 | GOOSE5 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 104 | GOOSE6 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 105 | GOOSE7 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 106 | GOOSE8 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 107 | GOOSE9 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 108 | GOOSE10 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 109 | GOOSE11 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 110 | GOOSE12 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 111 | GOOSE13 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 112 | GOOSE14 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 113 | GOOSE15 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 114 | GOOSE16 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 115 | GOOSE17 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 116 | GOOSE18 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 117 | GOOSE19 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 118 | GOOSE20 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 119 | GOOSE21 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 120 | GOOSE22 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 121 | GOOSE23 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 122 | GOOSE24 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 123 | GOOSE25 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 124 | GOOSE26 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 125 | GOOSE27 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 126 | GOOSE28 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 127 | GOOSE29 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 128 | GOOSE30 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 129 | GOOSE31 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 130 | GOOSE32 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 131 | GOOSE33 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 132 | GOOSE34 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 133 | GOOSE35 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 134 | GOOSE36 | Assignment of GOOSE received signals (This signal is available only in the relay unit with IEC61850 communication card.) |
| 135 | GOOSE37 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 136 | G_TRIP1 | Operating condition of CBF/CBFN element (Trip signal from other relay) (This signal is available only in the relay unit with IEC61850 communication card.) |
| 137 | G_TRIP2 | Operating condition of CBF/CBFN element (Trip signal from other relay) (This signal is available only in the relay unit with IEC61850 communication card.) |
| 138 | G_TRIP3 | Operating condition of CBF/CBFN element (Trip signal from other relay) (This signal is available only in the relay unit with IEC61850 communication card.) |
| 139 | DIF-A | Definitive signal of DIFF A-phase or forced operation from PC-HMI. This signal is shown as DIFF-AF in Interface Test function on PC-HMI. <br> Fig. 4-4 Signal description of the forced operation and interface test on PCHMI. |
| 140 | DIF-B | Definitive signal of DIFF B-phase or forced operation from PC-HMI. This signal is shown as DIFF-BF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 141 | DIF-C | Definitive signal of DIFF C-phase or forced operation from PC-HMI. This signal is shown as DIFF-CF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 142 | DIF-3_O | Definitive signal of any DIFF of A, B, and C phase or forced operation from PCHMI. <br> This signal is shown as DIFF-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 143 | DIFH-A | Definitive signal of DIFFH A-phase or forced operation from PC-HMI. This signal is shown as DIFFH-AF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 144 | DIFH-B | Definitive signal of DIFFH B-phase or forced operation from PC-HMI. This signal is shown as DIFFH-BF in Interface Test function on PC-HMI. Please refer to Fig. 4-4. |
| 145 | DIFH-C | Definitive signal of DIFFH C-phase or forced operation from PC-HMI. This signal is shown as DIFFH-CF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 146 | DIFH-3_O | Definitive signal of any DIFFH of A, B, and C phase or forced operation from PCHMI. <br> This signal is shown as DIFFH-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 147 | RGFH | Definitive signal of RGFH or forced operation from PC-HMI. This signal is shown as RGFHF in Interface Test function on PC-HMI. Please refer to Fig. 4-4. |
| 148 | RGFL | Definitive signal of RGFL or forced operation from PC-HMI. This signal is shown as RGFLF in Interface Test function on PC-HMI. Please refer to Fig. 4-4. |
| 149 | OC1H-A | Definitive signal of OC1H A-phase or forced operation from PC-HMI. This signal is shown as OC1H-AF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 150 | OC1H-B | Definitive signal of OC1H B-phase or forced operation from PC-HMI. This signal is shown as OC1H-BF in Interface Test function on PC-HMI. Please refer to Fig. 4-4. |
| 151 | OC1H-C | Definitive signal of OC1H C-phase or forced operation from PC-HMI. This signal is shown as OC1H-CF in Interface Test function on PC-HMI. Please refer to Fig. 4-4. |
| 152 | OC1H-3_O | Definitive signal of any OC 1 H of $\mathrm{A}, \mathrm{B}$, and C phase or forced operation from PCHMI. <br> This signal is shown as OC1H-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 153 | OC1H-N | Definitive signal of OC1H zero-phase or forced operation from PC-HMI. This signal is shown as OC1H-NF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 154 | OC1L-A | Definitive signal of OC1LA-phase or forced operation from PC-HMI. This signal is shown as OC1L-AF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 155 | OC1L-B | Definitive signal of OC1L B-phase or forced operation from PC-HMI. This signal is shown as OC1L-BF in Interface Test function on PC-HMI. Please refer to Fig. 4-4. |
| 156 | OC1L-C | Definitive signal of OC1L C-phase or forced operation from PC-HMI. This signal is shown as OC1L-CF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 157 | OC1L-3_0 | Definitive signal of any OC1L of $A, B$, and $C$ phase or forced operation from PCHMI. <br> This signal is shown as OC1L-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 158 | OC1L-N | Definitive signal of OC1L zero-phase or forced operation from PC-HMI. This signal is shown as OC1L-NF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 159 | OC2H-A | Definitive signal of OC2H A-phase or forced operation from PC-HMI. This signal is shown as OC2H-AF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 160 | OC2H-B | Definitive signal of OC2H B-phase or forced operation from PC-HMI. This signal is shown as OC2H-BF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 161 | OC2H-C | Definitive signal of OC2H C-phase or forced operation from PC-HMI. This signal is shown as OC2H-CF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 162 | OC2H-3_O | Definitive signal of any OC2H of $\mathrm{A}, \mathrm{B}$, and C phase or forced operation from PCHMI. <br> This signal is shown as OC2H-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 163 | OC2H-N | Definitive signal of OC2H zero-phase or forced operation from PC-HMI. This signal is shown as OC2H-NF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 164 | OC2L-A | Definitive signal of OC2LA-phase or forced operation from PC-HMI. This signal is shown as OC2L-AF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 165 | OC2L-B | Definitive signal of OC2L B-phase or forced operation from PC-HMI. This signal is shown as OC2L-BF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 166 | OC2L-C | Definitive signal of OC2L C-phase or forced operation from PC-HMI. This signal is shown as OC2L-CF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 167 | OC2L-3_O | Definitive signal of any OC2L of $A, B$, and $C$ phase or forced operation from PCHMI. <br> This signal is shown as OC2L-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 168 | OC2L-N | Definitive signal of OC2L zero-phase or forced operation from PC-HMI. This signal is shown as OC2L-NF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 169 | OC3H-A | Definitive signal of OC3H A-phase or forced operation from PC-HMI. This signal is shown as OC3H-AF in Interface Test function on PC-HMI. Please refer to Fig. 4-4. |
| 170 | OC3H-B | Definitive signal of OC3H B-phase or forced operation from PC-HMI. This signal is shown as OC3H-BF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 171 | OC3H-C | Definitive signal of OC3H C-phase or forced operation from PC-HMI. This signal is shown as OC3H-CF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 172 | OC3H-3_O | Definitive signal of any OC3H of A, B, and C phase or forced operation from PCHMI. <br> This signal is shown as OC3H-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 173 | OC3H-N | Definitive signal of OC3H zero-phase or forced operation from PC-HMI. This signal is shown as OC3H-NF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 174 | OC3L-A | Definitive signal of OC3LA-phase or forced operation from PC-HMI. This signal is shown as OC3L-AF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 175 | OC3L-B | Definitive signal of OC3L B-phase or forced operation from PC-HMI. This signal is shown as OC3L-BF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 176 | OC3L-C | Definitive signal of OC3L C-phase or forced operation from PC-HMI. This signal is shown as OC3L-CF in Interface Test function on PC-HMI. Please refer to Fig. 4-4. |
| 177 | OC3L-3_O | Definitive signal of any OC3L of $A, B$, and $C$ phase or forced operation from PCHMI. <br> This signal is shown as OC3L-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 178 | OC3L-N | Definitive signal of OC3L zero-phase or forced operation from PC-HMI. This signal is shown as OC3L-NF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 179 | OC4H-A | Definitive signal of OC4H A-phase or forced operation from PC-HMI. This signal is shown as OC4H-AF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 180 | OC4H-B | Definitive signal of OC4H B-phase or forced operation from PC-HMI. This signal is shown as $\mathrm{OC} 4 \mathrm{H}-\mathrm{BF}$ in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 181 | OC4H-C | Definitive signal of OC4H C-phase or forced operation from PC-HMI. This signal is shown as OC4H-CF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 182 | OC4H-3_O | Definitive signal of any OC4H of A, B, and C phase or forced operation from PCHMI. <br> This signal is shown as OC4H-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 183 | OC4H-N | Definitive signal of OC4H zero-phase or forced operation from PC-HMI. This signal is shown as OC4H-NF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 184 | OC4L-A | Definitive signal of OC4LA-phase or forced operation from PC-HMI. This signal is shown as OC4L-AF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |

| No. | Signal name | Description |
| :---: | :---: | :---: |
| 185 | OC4L-B | Definitive signal of OC4L B-phase or forced operation from PC-HMI. This signal is shown as OC4L-BF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 186 | OC4L-C | Definitive signal of OC4L C-phase or forced operation from PC-HMI. This signal is shown as OC4L-CF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 187 | OC4L-3_O | Definitive signal of any OC4L of $A, B$, and $C$ phase or forced operation from PCHMI. <br> This signal is shown as OC4L-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 188 | OC4L-N | Definitive signal of OC4L zero-phase or forced operation from PC-HMI. This signal is shown as OC4L-NF in Interface Test function on PC-HMI. Please refer to Fig. 4-4. |
| 189 | THOLH | Definitive signal of THOLH or forced operation from PC-HMI. This signal is shown as THOLHF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 190 | THOLL | Definitive signal of THOLL or forced operation from PC-HMI. This signal is shown as THOLLF in Interface Test function on PC-HMI. Please refer to Fig. 4-4. |
| 191 | NOC1H | Definitive signal of OCNEG1H or forced operation from PC-HMI. This signal is shown as OCNEG1HF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 192 | NOC1L | Definitive signal of OCNEG1L or forced operation from PC-HMI. <br> This signal is shown as OCNEG1LF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 193 | NOC2H | Definitive signal of OCNEG2H or forced operation from PC-HMI. This signal is shown as OCNEG2HF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 194 | NOC2L | Definitive signal of OCNEG2L or forced operation from PC-HMI. This signal is shown as OCNEG2LF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 195 | CBFH-A | Definitive signal of CBFH A-phase or forced operation from PC-HMI. This signal is shown as CBFH-AF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 196 | CBFH-B | Definitive signal of CBFH B-phase or forced operation from PC-HMI. This signal is shown as CBFH-BF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 197 | CBFH-C | Definitive signal of CBFH C-phase or forced operation from PC-HMI. This signal is shown as CBFH-CF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 198 | CBFH-3_O | Definitive signal of any CBFH of A, B, and C phase or forced operation from PCHMI. <br> This signal is shown as CBFH-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |

| No. | Signal name | Description <br> 199 |
| :--- | :--- | :--- |
| CBFH-N | Definitive signal of CBFH N-phase or forced operation from PC-HMI. <br> This signal is shown as CBFH-NF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |  |
| 200 | CBFL-A | Definitive signal of CBFLA-phase or forced operation from PC-HMI. <br> This signal is shown as CBFL-AF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 201 | CBFL-B | Definitive signal of CBFL B-phase or forced operation from PC-HMI. <br> This signal is shown as CBFL-BF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 203 | CBFL-3_O | Definitive signal of CBFL C-phase or forced operation from PC-HMI. <br> This signal is shown as CBFL-CF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |
| 204 | Definitive signal of any CBFL of A, B, and C phase or forced operation from PC- <br> HMI. <br> This signal is shown as CBFL-3_OF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |  |
| CBFL-N | Definitive signal of CBFL N-phase or forced operation from PC-HMI. <br> This signal is shown as CBFL-NF in Interface Test function on PC-HMI. <br> Please refer to Fig. 4-4. |  |

Table 4-9 Event record List of events (just name table)

| Event name |  |  |  |
| :--- | :--- | :--- | :--- |
| DI1 | INT_LK_CL | OC2H-ND | OC2L-3D_O |
| DI2 | CTL_OP_OK | OC2L-ND | OC3H-3D_O |

### 4.3.2.2.3. Access record (ACCESS RECORD) menu

[Operation path] DISPLAY MODE > RECORD > ACCESS RECORD
The Access record (ACCESS RECORD) menu allows viewing of the saved access records.
Access records of up to 512 accesses are stored and the records for the respective accesses can be viewed. Press the Up and Down keys to switch the indication on the screen as below.

Date of occurrence > Record description > Date of occurrence...
Press the Right key to display from the current access record to the past $10^{\text {th }}$ record.

Use $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ to change the display item Use to move from the record currently shown to the date of the tenth record into past

Table 4-10 Access record description registered (operator)

| Display item | Operation description |
| :--- | :--- |
| FP | Front panel |
| PC | PC-HMI |
| MOD | Modbus |
| SAS | IEC61850 |
| AUT | Automatic cancelation on device |

Table 4-11 Access record description registered (operation description)

| Display item | Operation description |
| :--- | :--- |
| CHG_ACT_SET_G | Change of active setting group |
| CHG_FREQ | Change of rated frequency |
| CHG_DIIVOLTAGE | Change of DI detection voltage value |
| CHG_DIST_REC_T | Change of configuration of disturbance record |
| CHG_USE_PASSWD | Change of password use setting |
| CHG_PASSWD | Change of password |
| CHG_USB_CONN | Change of USB connection channel |
| CHG_VFD_BRIGHT | Change of VFD brightness |
| CHG_TRIP_CNTR | Change of trip counter |
| CHG_MOTOR_TIME | Change of motor operating time |
| CHG_CFG_MODBUS | Change of configuration of Modbus |
| CHG_CFG_CCLINK | Change of configuration of CC-Link |
| CHG_IEC61850 | Change of configuration of IEC61850 |
| CHG_DEV_NAME | Change of device name |
| CHG_CFG_METER | Change of configuration of analog measurement status display |
| CHG_CFG_ENERGY | Change of configuration of electric energy |
| CHG_TIMEMANAGE | Change of configuration of time management |
| CHG_CTRL_MODE | Change of CB control mode |
| CHG_CONTACT_T | Change of configuration of DO contact test |
| CHG_PLC_DATA | Change of PLC data |
| CHG_SET_DATA | Change of relay setting |
| CLR_FAULT_REC | Clearing of fault/disturbance record |
| CLR_ALARM_REC | Clearing of alarm record |
| CLR_EVENT_REC | Clearing of event record |
| CLR_ACCESS_REC | Clearing of access record |
| ADJ_CLOCK_ | Adjustment of system clock |
| ACT_TST_MODE | Activation of test mode |
| DEACT_TST_MODE | Deactivation of test mode |
| RESET_LED | LED reset |
| STA_CONTACTTST | Start of DO contact test |
| STP_CONTACTTST | Stop of DO contact test |
| LOCK_SV | Locking of supervision |
| UNLOCK_SV | Unlocking of supervision |
| OPERATE_CB | Operation to open/close CB |

### 4.3.2.2.4. Alarm record (ALARM RECORD) menu

[Operation path] DISPLAY MODE > RECORD > ALARM RECORD
The ALARM RECORD menu allows viewing of the saved alarm records.
Alarm records of up to 200 alarms are stored and the records for the respective alarms can be viewed. Press the Up and Down keys to switch the indication on the screen as below.

Date of occurrence > Record description > Date of occurrence...
Press the Right key to display from the current alarm record to the past $10^{\text {th }}$ record.

Use $\boldsymbol{\triangle}$ and $\boldsymbol{\nabla}$ to change the display item Use $>$ to move from the record currently shown to the date of the tenth record into past

### 4.3.2.3. Setting (SETTING) menu

The Setting menu can be selected in either DISPLAY or SETTING mode, but the DISPLAY mode only allows viewing of the setting values.
The setting values can be changed only in the SETTING mode.
For operations for the Setting menu, see 4.3.4.1.

### 4.3.2.4. Control (CONTROL) menu

The Control menu can be selected in either DISPLAY or SETTING mode. But the DISPLAY mode only allows viewing of the control mode (CTRL MODE) settings.
The SETTING mode allows viewing and setting of the Control mode and Circuit breaker control (CB CONTROL).
For operations for the Control mode menu, see 4.3.4.2.
4.3.2.5. Configuration (CONFIG) menu

The Configuration menu can be selected in either DISPLAY or SETTING mode. Clock adjustment (CLOCK ADJUST), Password use/unused (PASSWORD USE) and Password registration (PASSWORD REGIST) can be selected only in the SETTING mode.
For other settings, the DISPLAY mode allows only viewing of the setting values. The setting values can be changed only in the SETTING mode.

For operations for the Configuration menu, see 4.3.4.3.

### 4.3.3. Password input screen

If the password use/no-use setting is "USE," a four-digit password is requested when the SETTING mode is selected.

* For the password use/no-use setting, see 4.3.4.3.7.

For how to set the password to input, see 4.3.4.3.8.

If the password input is wrong, a screen as shown below appears.
PASSWORD INCORRECT
TRY AGAIN

The main menu appears when the correct password has been input.
MAIN MENU
: SETTINGS

### 4.3.4. SETTING mode menu operations

This subsection describes the SETTING mode menu.
The menu screen has five selectable items. Use the Up and Down keys to select the item and press SELECT. For the details about the menus available in the SETTING mode, see Table 4-2.

Use $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ to switch between items and press SELECT to select an item

### 4.3.4.1. Setting (SETTING) menu

The Setting (SETTING) menu allows viewing/changing of the active setting group and viewing/changing of the group setting values.
The Setting menu can be selected in either DISPLAY or SETTING mode but the setting values can be changed only in the SETTING mode.
(The DISPLAY mode allows only viewing of the setting values.)

### 4.3.4.1.1. Active group (ACTIVE WG) menu

## [Operation path] SETTING MODE > SETTING > ACTIVE WG

The Active group (ACTIVE WG) menu allows changing of the active group numbers setting. (Active group numbers can be changed only in the SETTING mode. The DISPLAY mode allows only viewing of the current group numbers.)

## ACTIVE WG

:G1
To change the active group number, in the Active group menu, press SELECT. A cursor appears, which allows the selection of a group number with the Up and Down keys.
Select the group number to change and press SELECT to confirm the change.

Use $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ to switch between group
Nos. and press SELECT to confirm the
change

Press ENTER to show the confirmation screen below. Press SELECT to initiate the change to the group number selected.
When the new active group setting is not required, press the Left key to return the display back.

```
CHANGE ACTIVE WG?
YES=SELECT NO=4
```

Press ENTER to show the screen on the left.

The next message shows the Successful or Unsuccessful change of active group number.
Pressing SELECT brings the display back to the Setting menu.

## SETTING <br> HAVE CHANGED

Message for a successful change of the active group.

## SETTING <br> FAILED TO CHANGE

Message for an unsuccessful change of the active group.

The cancel message will appear by pressing the Left key in the Active group menu.
Pressing SELECT exits the Active group menu without changing the active group and brings the display back to the Setting menu.
Pressing the Left key brings the display back to the Active group menu.

> CANSEL ACTIVE WG?
> YES $=$ SELECT $N O=4$
4.3.4.1.2. Group 1 setting (G1) and Group 2 setting (G2) menus
[Operation path] SETTING MODE > SETTING > G1(G2)
The Group 1 setting (G1) and Group 2 setting (G2) menus allow viewing and changing of the setting values for the respective group settings.
(Setting values can be changed only in the SETTING mode. The DISPLAY mode allows only viewing of the setting values)
The operation procedure for changing group settings is explained by changing G 1 (for example).

1. First, select the setting value group in the Setting menu to change and press SELECT.

$$
\begin{aligned}
& \text { SET-SETTING } \\
& : \text { G1 }
\end{aligned}
$$

2. The Group setting menu appears.

Select the protective element to change with pressing the Up and Down key, and press SELECT.

3. The cursor moves to the setting parameter indication.

Use the Up and Down keys to select the setting parameter to be changed and press SELECT. The cursor moves to the setting value indication.

4. Use the Left and Right keys to select the digit to change and use the Up and Down keys to set the value.

| G1 | $1 \mathrm{f}-\mathrm{Min}$. |
| :--- | ---: |
| 2F | $:$ |

For setting a value as shown on the left, use $\boldsymbol{a}$ and $\bullet$ to select the digit to change, and
$\mathbf{\Delta}$ and $\boldsymbol{\nabla}$ to set the value
Press SELECT to confirm the change
5. When the value has been changed, press SELECT to move the cursor to the setting item parameter.

| G1 | $\square \mathrm{f}-\mathrm{Min}$. Ope | $\Delta \nabla$ | Cursor moves to the setting parameter |
| :---: | :---: | :---: | :---: |
| 2 F | $: \quad 1.4 \mathrm{~A}$ |  | indication |

6. Complete setting of all parameters in the element to change by repeating steps 2 to 5 above.
7. Press the Left key to return the cursor back to the protective element indication.

Complete setting of any other protective elements to change by repeating steps 1 to 6 above.

8. When the all necessary change of the setting values has been completed, press ENTER.

A confirmation message of the setting value changes appears as shown in the figure below. After confirmation of correct settings, press SELECT. If discarding the setting value changes, press the Left key.

CHANGE SETTING YES=SELECT NO=」

Press SELECT to change the setting.
Press $\leqslant$ to discard the change.

The following messages are shown respectively to check the successful or unsuccessful setting change, The display returns back to the Setting menu by pressing SELECT while either of the messages below.

```
SETTING
HAVE CHANGED
Message for successful setting value changes
```

## SETTING <br> FAILED TO CHANGE

Message for unsuccessful setting value changes

### 4.3.4.2. CONTROL menu

The Control (CONTROL) menu allows viewing and setting of the Control mode (CTRL MODE) and Circuit breaker control (CB CONTROL).
The Control menu can be selected in either DISPLAY or SETTING mode. In the DISPLAY mode, only viewing of the Control mode settings is possible.
The SETTING mode allows viewing and setting of the Control mode and Circuit breaker control.

Use $\mathbf{\Delta}$ and $\boldsymbol{\nabla}$ to switch between items and press SELECT to select an item
[Operation path] SETTING MODE > CONTROL > CTRL MODE
The Control mode (CTRL MODE) menu allows the setting of the Local/remote control, Interlock selection and Circuit breaker operation inhibit.
(Note that they can be set only in the SETTING mode. The DISPLAY mode only allows viewing of the settings)

1. Use the Up and Down keys to show the control mode item to change and press SELECT for selection.

2. The cursor moves to the setting value. Use the Up and Down keys to change the setting value. (The setting value below shows a selection setting. For a value setting, use the Left and Right key to change the digit for setting)

3. Press SELECT to change the setting value.

4. Complete all settings to be changed by repeating steps 1 to 3 .
5. Press ENTER and the confirmation message of the applied control mode appears as shown in the figure below.
Press SELECT to apply the changed control mode settings by steps 1 to 4 and complete the Control mode setting.
Press the Left key to return the setting menu in (1) above without applying the setting changes.

> CHANGE CTRL MODE?
> YES=SELECT NO=

Table 4-12 Setting items of Control mode

| No | Setting item | Description | Setting value |
| :---: | :--- | :--- | :---: |
| 1 | LOCAL/REMOTE | Local/remote setting | R / L |
| 2 | INTERLOCK | Interlock no-use/use <br> selection setting | UNUSE / USE |
| 3 | CB OPEN | Open side block setting | UNBLK / BLK |
| 4 | CB CLOSE | Close side block setting | UNBLK / BLK |
| 5 | ON TIMER | Control waiting time | Value setting (unit: s) |

### 4.3.4.2.2. Circuit breaker control (CB CONTROL) menu

[Operation path] SETTING MODE > CONTROL > CB CONTROL
The Circuit breaker control (CB CONTROL) menu allows CB OPEN control/CB CLOSE control. This item can be selected for implementing CB control only in the SETTING mode.

For CB control, the Control mode settings must be as shown in the table below.
For the details about operation for the Control mode, see 4.3.4.2.1.

Table 4-13 Control mode settings of circuit breaker control

| Setting item | Description | Setting value |
| :--- | :--- | :--- |
| LOCAL/REMOTE | Local/remote setting | L |
| INTERLOCK | Interlock no-use/use <br> selection setting | No-USE |
| CB OPEN | Open side block setting | For enabling CB open control: <br> UNBLK |
| CB CLOSE | Close side block setting | For enabling CB close control: <br> UNBLK |

If the Control mode settings do not allow the circuit breaker control, an error message for control condition failure appears.
(The figure below shows the control condition failure that appears for CB open control)

## CB OPEN CONTROL CONDITION FAILURE

1. Use the Up and Down keys to show the control mode item to change and press SELECT.

* Select CB OPEN for CB open control and CB CLOSE for CB close control.

Use $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ to switch between items and press SELECT to select an item
2. The display switches to CB status indication.

Press the Up and Down keys to select the display of CB status indication.

* The figure below shows screens that appear when CB OPEN is selected.

3. At pressing ENTER while the CB status indication screen is shown, it displays a CB control instruction. When CB control has been successful, a control succeed message appears.
CB OPEN SUCCEED

When CB control has been unsuccessful, a control failed message appears.
CB OPEN FAILED

At pressing SELECT while either of the control succeed or failed messages, it brings the display of Setting menu.

### 4.3.4.3. Configuration (CONFIG) menu

This subsection describes the operations for the Configuration (CONFIG) menu.
The Configuration menu can be selected in either DISPLAY or SETTING mode. Clock adjustment (CLOCK ADJUST), Password use/no-use (PASSWORD USE) and Password registration (PASSWORD REGIST) can be selected only in the SETTING mode.
The other settings can be changed in the SETTING mode only.
(The DISPLAY mode only allows viewing of the setting values)

### 4.3.4.3.1. Communication setting (COMMUNICATION) menu

[Operation path] SETTING MODE > CONFIG > COMMUNICATION
The Communication setting (COMMUNICATION) menu allows viewing and setting of the Modbus, Station bus of IEC61850 and CC-Link configurations.
(The DISPLAY mode only allows viewing of the setting values)
The following describes the operation procedure for showing and changing communication settings.

1. Use the Up and Down keys to select the communication type and press SELECT.

2. The setting items according to the selected communication type are shown.

Use the Up and Down keys to select the item to change and press SELECT.

3. The cursor moves to the setting value. Use the Up and Down keys to change the setting value.

| MODBUS | $\Delta \nabla$ |
| :---: | :---: |
| MODBUS |  |

4. Press SELECT to change the setting value.

5. Complete all settings to be changed by repeating steps 2 to 4 .
6. Press ENTER and the confirmation message of the selected communication type appears as shown in the figure below.
Press SELECT to apply the communication settings changed by steps 2 . to 5 . and complete the communication setting.
Press the Left key to return the Setting item menu in 2. above without applying the setting changes.

## CHANGE SETTING? <br> YES = SELECT NO=

### 4.3.4.3.2. Clock adjustment (CLOCK ADJUST) menu

[Operation path] SETTING MODE > CONFIG > CLOCK ADJUST
The Clock adjustment (CLOCK ADJUST) menu allows time setting.
This item can be selected only in the SETTING mode.

1. When the Clock adjustment menu is selected, the current time is indicated as shown below.

Pressing SELECT while this screen is shown allows changing of the year, month, day, hour, minute and second settings.

2. Pressing the Up and Down keys cycles through the year, month, day, hour, minute and second selection items.Select the item to change and press SELECT.

3. The cursor moves to the setting value. Use the Up and Down keys to select the value and the Left and Right keys to select the digit to make the change.

| CFG-CLOCK |  | $\Delta \boldsymbol{v}$ |
| :--- | :--- | :--- | :--- |
| MONTH $\quad:$ | 1 ■ |  |

4. Press SELECT to change the setting value.

| CFG-CLOCK |  | $\Delta \boldsymbol{V}$ |  |
| :--- | :--- | :--- | :--- |
| MONTH | $:$ | 11 |  |

5. Complete setting of all other items to change by repeating steps 1 . to 3 ..
6. Press ENTER and the confirmation message of the time setting appears.

Press SELECT to apply the time setting changed by steps 1. to 4 . and complete the Clock adjustment setting.
Press the Left key to go back to the Clock adjustment menu without applying the setting changes.

> CHANGE SETTING?
> YES=SELECT NO=

### 4.3.4.3.3. Measured analog value (METERING) menu

## [Operation path] SETTING MODE > CONFIG > METERING

The Analog value measurement switching (METERING) menu allows configuration of the following settings.
(1) Set the indication type from the primary or secondary side of CT/VT
(2) Set the rating of CT/VT.
(The DISPLAY mode only allows viewing of the setting values)
The following describes the operation procedure for viewing and changing the settings for the Measurement value display switching menu.

1. Use the Up and Down keys to select the item to change and press SELECT for selection.

$$
\begin{aligned}
& \text { CFG-METERING } \\
& \text { AI DISP :PRIMARY }
\end{aligned}
$$

2. The cursor moves to the setting value. Use the Up and Down keys to select the value and the Left and Right keys to select the digit to make the change.
3. Press SELECT to change the setting value.
4. Complete setting of all other items to change by repeating steps 1 . to 3 ..
5. Press ENTER and the confirmation message of the new measurement settings appears as shown in the figure below.
Press SELECT to apply the measurement value settings changed by steps 1. to 4. and complete the setting.
Press the Left key to go back to the Analog value display switching menu without applying the setting changes.

> CHANGE SETTING?
> YES=SELECT NO=

Table 4-14 Setting items of analog value display

| No. | Item | Setting description | Setting range | Unit |
| :---: | :--- | :--- | :--- | :--- |
| 1 | AI DISP | AI display primary value/ <br> secondary value selection | PRIMARY / <br> SECONDARY | - |
| 2 | CTHP | HVside CT primary side rating | $1 \sim 30000$ | A |
| 3 | CTHS | HVside CT secondary side rating | 1,5 | A |
| 4 | CTNHP | HVside CTG primary side rating | $1 \sim 30000$ | A |
| 5 | CTNHS | HVside CTG secondary side rating | 1,5 | A |
| 6 | CTLP | LVside CT primary side rating | $1 \sim 30000$ | A |
| 7 | CTLS | LVside CT secondary side rating | 1,5 | A |
| 8 | CTNLP | LVside CTG primary side rating | $1 \sim 30000$ | A |
| 9 | CTNLS | LVside CTG secondary side rating | 1,5 | A |

### 4.3.4.3.4. Trip counter (TRIP COUNTER) menu

## [Operation path] SETTING MODE > CONFIG > TRIP COUNTER

The Trip counter (TRIP COUNTER) menu allows setting of the initial counter and alarm counter values. The trip counter will count the number of trip times.

1. The trip counter setting menu appears. Use the Up and Down keys to select the item to change and press SELECT.

2. The cursor moves to the setting value. Use the Up and Down keys to select the value and the Left and Right keys to select the digit to make the change.

$$
\begin{aligned}
& \text { CFG-TRIP COUNTER』V } \\
& \text { INITIAL : } 2 \boldsymbol{2}
\end{aligned}
$$

3. Press SELECT to change the setting value.

4. Complete setting of all other items to change by repeating steps 1 . to 3 ..
5. Press ENTER and the confirmation message of the trip counter settings appears.

Press SELECT to apply the trip counter settings changed by steps 1 . to 4 . and complete the setting. Press the Left key to go back to the setting menu in step 1. above without applying the setting changes.

CHANGE SETTING?
YES=SELECT NO=

Table 4-15 Setting items of trip counter

| No. | Item | Setting description | Setting range | Unit |
| :---: | :--- | :--- | :--- | :--- |
| 1 | INITIAL | Initial value of trip counter | $0 \sim 10000$ | Times |
| 2 | ALARM | Alarm value of trip counter | $1 \sim 10000$ | Times |

### 4.3.4.3.5. Disturbance record (DISTURBANCE) menu

[Operation path] SETTING MODE > CONFIG > DISTURBANCE
The Disturbance record (DISTURBANCE) menu allows setting of maximum recording time and pre-fault recording time of each disturbance (fault) record.
(The DISPLAY mode only allows viewing of the setting values)

1. Use the Up and Down keys to select the item to change and press SELECT.

Use $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ to switch between items and press SELECT to select an item
2. The cursor moves to the setting value. Use the Up and Down keys to select the value and the Left and Right keys to select the digit to make the change.

3. Press SELECT to change the setting value.

4. Complete setting of all other items to change by repeating steps 1 . to 3 ..
5. Press ENTER and the message to confirm application of the disturbance record time settings appears.

Press SELECT to apply the disturbance record time settings changed by steps 1 . to 4 . and complete the setting.
Press the Left key to go back to the setting menu in step 1. above without applying the setting changes.

> CHANGE SETTING?
> YES=SELECT NO=

Table 4-16 Disturbance record pre-fault time width setting items

| No. | Item | Setting description | Setting range | Unit |
| :---: | :--- | :--- | :--- | :--- |
| 1 | PRE TIME | Save time of pre-fault waveform data | $20 \sim 4500$ | ms |
| 2 | REC TIME | Save time of waveform data | $100 \sim 5000$ | ms |

Note: The save time of "PRE TIME" is included in that of "REC TIME".
In other words, the setting value of "REC TIME" must be larger than that of "PRE TIME".

### 4.3.4.3.6. DI detection voltage value (DI VOLTAGE) menu

[Operation path] SETTING MODE > CONFIG > DI VOLTAGE
DI detection voltage value (DI VOLTAGE) menu allows setting of the DI rated voltage.
(The DISPLAY mode only allows viewing of the setting values)

| SET-CONFIG <br> :DI VOLTAGE | $\boldsymbol{\nabla}$ |  |
| :--- | :--- | :--- | | CFG-DI VOLTAGE |
| :--- |
| DI |

1. In the DI detection voltage value setting menu, show item "DI" and press SELECT.
*The DI detection voltage value setting menu only has one item: "DI."

$$
\begin{array}{ll}
\text { CFG-DI } & \text { VOLTAGE } \\
\text { DI } & \text { :DC48V }
\end{array}
$$

Press SELECT to select an item
2. The cursor moves to the setting value. Use the Up and Down keys to select the setting to be changed.

$$
\begin{array}{ll}
\text { CFG-DI } & \text { VOLTAGE } \\
\text { DI } & : \quad \text { C48V }
\end{array}
$$

3. Press SELECT to change the setting value.

$$
\begin{array}{ll}
\text { CFG-DI } & \text { VOLTAGE } \\
\text { DI } & \text { :DC220V }
\end{array}
$$

4. Press ENTER and the confirmation message of the DI detection voltage value setting appears.

Press SELECT to apply the DI detection voltage value setting and complete the setting.
Press the Left key to go back to the setting menu in step 1. above without applying the setting changes.

$$
\begin{aligned}
& \text { CHANGE SETTING? } \\
& \text { YES=SELECT } \quad \text { NO= }
\end{aligned}
$$

Table 4-17 Setting items of DI detection voltage value

| No. | Item | Setting description | Setting |
| :---: | :--- | :--- | :---: |
| 1 | DI | DI detection voltage value setting | $24 / 48 / 110 / 220$ VDC |

### 4.3.4.3.7. Password use/unuse (PASSWORD USE) menu

The Password use/no-use (PASSWORD USE) menu specifies whether to use or not use a password input when the SETTING mode is selected.
(This item is not shown in the DISPLAY mode)

| SET-CONFIG <br> :PASSWORD USE | $\longrightarrow$CFG-PW USE |
| :--- | :--- | :--- |
| PASSWORD:UNUSE |  |

1. In the Password use/no-use menu, press SELECT.
```
CFG-PW USE
PASSWORD:USE
```

Press SELECT to select an item
2. The cursor moves to the setting value. Use the Up and Down keys to select the setting to be changed.

$$
\begin{aligned}
& \text { CFG-PW USE } \\
& \text { PASSWORD: }
\end{aligned}
$$

3. Press SELECT to change the setting value.

$$
\begin{aligned}
& \text { CFG-PW USE } \\
& \text { PASSWORD:UNUSE }
\end{aligned}
$$

4. Press ENTER and the confirmation message of the password use/no-use setting changed appears as shown in the figure below.
Press SELECT to apply the password use/no-use setting and complete the setting.
Press the Left key to go back to the setting menu in step 1. above without applying the setting changes.

> CHANGE SETTING?
> YES=SELECT NO=4

Table 4-18 Setting item of Password use/no-use

| No. | Item | Setting description | Setting |
| :---: | :---: | :---: | :---: |
| 1 | PASSWORD | Password use/nonuse setting | USE / UNUSE |

### 4.3.4.3.8. Password registration (PASSWORD REGIST) menu

## [Operation path] SETTING MODE > CONFIG > PASSWORD REGIST

Password registration (PASSWORD REGIST) menu allows the setting of the password input when the SETTING mode is selected.
(This item is not shown in the DISPLAY mode)

1. In the Password registration menu, press SELECT.

Press SELECT to select an item
2. The Password registration screen appears.

For registering a password, press SELECT after each digit is entered.
Pressing SELECT confirms the value for the digit entered and moves the cursor to the digit on the right. It is not possible to return to the previous digit by using the Left key.
Use the Up and Down keys to select a value out of 0 to 9 for each digit.

## PASSWORD:0000

3. When the four digits have been entered, password input is requested again.

Enter the same password as that registered in step 2 above.

4. If the above two password-inputs in steps 2 and 3 are same, the screen shown in step 1 appears.

Press ENTER and the confirmation message of the password registration appears.
Press SELECT to apply the password registration and complete the setting.
Press the Left key to go back to the setting menu in step 1. above without applying the setting changes.

$$
\begin{aligned}
& \text { CHANGE SETTING? } \\
& \text { YES=SELECT NO=4 }
\end{aligned}
$$

If the two password-inputs in steps 2 and 3 are not same, an error message as shown below appears.

$$
\begin{aligned}
& \text { PASSWORD } \\
& \text { MATCHING ERR }
\end{aligned}
$$

### 4.3.4.4. TEST menu

This subsection describes the operations for the Test menu.
The Test menu can be selected only in the SETTING mode.

4.3.4.4.1. DO contact test (CONTACT TEST) menu
[Operation path] SETTING MODE > TEST > CONTACT TEST
The DO contact test (CONTACT TEST) menu allows contact testing of DO signals (DO1 to DO13).

1. When the DO contact test menu has been selected, the caution message appears.

$$
\begin{aligned}
& \text { TRP-CIRCUIT BLOCK? } \\
& \text { YES=SELECT NO=< }
\end{aligned}
$$

When pressing SELECT, the next message appears. Then, press "SELECT" again.
AFTER SPECIFYING.
PRESS 'ENTER‘
2. The setting screen for the DO contact test appears.

Use the Up and Down keys to select the item to set and press SELECT.
CONTACT TEST
DO1-T : OFF
3. The cursor moves to the setting of the selected item.

Use the Up and Down keys to switch the setting.
Select ON to conduct a contact test on the selected DO. If not, select OFF.

4. Press SELECT to change the setting and bring the cursor back to the item name.

$$
\begin{array}{ll}
\text { CONTACT } & \text { TEST } \\
\text { DO1-T } & : O N
\end{array}
$$

5. Complete settings of all the items to change by repeating steps 2. to 4 . above.
6. After the settings are completed, press ENTER while the setting item selection screen in step 4 is shown in order to operate DO contact test.
*The selected DO contact(s) is(are) operated while ENTER is held down. The operation of the respective DO contact corresponds to the settings in steps (2) to (5) above.

To exit the DO contact test setting screen, press the Left key.

Table 4-19 Setting items of DO contact test

| No. | Item |
| :---: | :--- |
| 1 | DO1-T |
| 2 | DO2-T |
| 3 | DO3-T |
| 4 | DO4-T |
| 5 | DO5-T |
| 6 | DO6-T |
| 7 | DO7-T |
| 8 | DO8-T |
| 9 | DO9-T |
| 10 | DO10-T |
| 11 | DO11-T |
| 12 | DO12-T |
| 13 | DO13-T |

### 4.3.4.4.2. Test mode (MODE) menu

[Operation path] SETTING MODE > TEST > MODE
The Test mode (MODE) menu allows setting of the test mode.

1. Use the Up and Down keys to select the item to set and press SELECT.

Use $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ to switch between items and press SELECT to select an item
2. The cursor moves to the setting of the selected item. Use the Up and Down keys to switch the setting.

$$
\begin{aligned}
& \text { MODE } \quad \Delta \boldsymbol{v} \\
& \text { UC-A-LK : } \quad \text { NLOCKED }
\end{aligned}
$$

3. Press SELECT to change the setting.
MODE
UC-A-LK :LOCKED
4. Complete setting of all other items to change by repeating steps 1 . to 3 . above.
5. Press ENTER to be enable the test mode as set in steps 1. to 4. above. The RUN LED flashes during the test mode.

During the test mode, use of the Left or ESC key to exit the SETTING mode is disabled. (Operations implemented in the SETTING mode are enabled)
When turning off the VFD screen or moving to the DISPLAY mode, it exits the test mode.
4.3.4.4.3. LED/VFD lighting test (LED/VFD TEST) menu
[Operation path] SETTING MODE > TEST > LED/VFD TEST
The LED/VFD lighting test (LEDNFD TEST) menu allows lighting of all LEDs/VFDs.
When LED/VFD TEST is selected in the Test menu, a screen as shown below appears. Pressing ENTER and all LEDs and VFDs are lighting while the key is held down. It can be checked the LED/VFD indication visually.

LED/VFD TEST
PREESS 'ENTER'

### 4.3.4.5. Clear record (RECORD-CLR) menu

The Clear record (RECORD-CLR) menu allows clearing three types of log data: fault, event and alarm records. *Access record log data cannot be cleared.

### 4.3.4.5.1. Clear fault record (FAULT REC CLEAR) menu

[Operation path] SETTING MODE > RECORD-CLR > FAULT RECORD
The Clear fault record (FAULT REC CLEAR) menu allows clearing of fault records.
In the Clear record menu, select FAULT RECORD and press ENTER. Then, the next screen appears.
Press SELECT to clear the fault records.
When pressing the Left key, the display returns to the selection screen of Clear record menu without clearing the fault records.

```
FAULT REC CLEAR?
YES=SELECT NO=
```

When clearing of the fault records are completed, the display returns to the Clear record menu.
If the clearing is unsuccessful, a message screen as shown below appears.
Pressing SELECT while the message below is shown brings the display back to the Clear record menu selection screen.

> FAULT RECORD
> CLEAR NG

### 4.3.4.5.2. Clear alarm record (ALARM REC CLEAR) menu

## [Operation path] SETTING MODE > RECORD-CLR > ALARM RECORD

The Clear alarm record (ALARM REC CLEAR) menu allows clearing of alarm records.
In the Clear record menu, select ALARM RECORD and press ENTER. Then, the next screen appears.
Press SELECT to clear the alarm records.
When pressing the Left key, the display returns to the selection screen of Clear record menu without clearing the alarm records.

```
ALARM REC CLEAR?
YES=SELECT NO=<
```

When clearing of the alarm records are completed, the display returns to the Clear record menu.
If the clearing is unsuccessful, a message screen as shown below appears.
Pressing SELECT while the message below is shown brings the display back to the Clear record menu selection screen.

ALARM RECORD
CLEAR NG

### 4.3.4.5.3. Clear event record (EVENT REC CLEAR) menu

[Operation path] SETTING MODE > RECORD-CLR > EVENT RECORD
The Clear event record (EVENT REC CLEAR) menu allows clearing of event records.
In the Clear record menu, select EVENT RECORD and press ENTER. Then, the next screen appears.
Press SELECT to clear the event records.
When pressing the Left key, the display returns to the selection screen of Clear record menu without clearing the event records.

$$
\begin{aligned}
& \text { EVENT REC CLEAR? } \\
& \text { YES=SELECT NO=4 }
\end{aligned}
$$

When clearing of the event records are completed, the display returns to the Clear record menu.
If the clearing is unsuccessful, a message screen as shown below appears.
Pressing SELECT while the message below is shown brings the display back to the Clear record menu selection screen.

> EVENT RECORD CLEAR NG

## 5. Internal Signals for Programmable Logic Controller (PLC) on PC-HMI

Table 5-1 PLC signals of CAC1-A41D1

|  | Signal name | Description |
| :---: | :---: | :---: |
| 1 | DI1 | Status of DI1 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 2 | DI2 | Status of DI2 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 3 | DI3 | Status of DI3 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 4 | DI4 | Status of DI4 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 5 | DI5 | Status of DI5 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 6 | DI6 | Status of DI6 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 7 | DI7 | Status of DI7 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 8 | DI8 | Status of DI8 <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 9 | DIF-A/ | Definitive signal of current ratio differential (87T) element on A phase |
| 10 | DIF-B/ | Definitive signal of current ratio differential (87T) element on B phase |
| 11 | DIF-C/ | Definitive signal of current ratio differential (87T) element on C phase |
| 12 | DIFH-A/ | Definitive signal of differential overcurrent (87TH) element on A phase |
| 13 | DIFH-B/ | Definitive signal of differential overcurrent (87TH) element on B phase |
| 14 | DIFH-C/ | Definitive signal of differential overcurrent (87TH) element on C phase |
| 15 | RGFH/ | Definitive signal of zero-sequence current ratio differential (87TN) element for highvoltage side |
| 16 | RGFL/ | Definitive signal of zero-sequence current ratio differential (87TN) element for lowvoltage side |
| 17 | OC1H-A/ | Definitive signal of 1st instantaneous overcurrent (50) element for high-voltage side on A phase |
| 18 | OC1H-B/ | Definitive signal of 1st instantaneous overcurrent (50) element for high-voltage side on B phase |
| 19 | OC1H-C/ | Definitive signal of 1st instantaneous overcurrent (50) element for high-voltage side on C phase |
| 20 | OC1H-N/ | Definitive signal of 1st instantaneous overcurrent (50) element for high-voltage side on zero phase |
| 21 | OC1L-A/ | Definitive signal of 1st instantaneous overcurrent (50) element for low-voltage side on A phase |
| 22 | OC1L-B/ | Definitive signal of 1st instantaneous overcurrent (50) element for low-voltage side on B phase |
| 23 | OC1L-C/ | Definitive signal of 1st instantaneous overcurrent (50) element for low-voltage side on C phase |
| 24 | OC1L-N/ | Definitive signal of 1st instantaneous overcurrent (50) element for low-voltage side on zero phase |
| 25 | OC2H-A/ | Definitive signal of 2nd instantaneous overcurrent (50) element for high-voltage side on A phase |
| 26 | OC2H-B/ | Definitive signal of 2nd instantaneous overcurrent (50) element for high-voltage side on B phase |
| 27 | OC2H-C/ | Definitive signal of 2nd instantaneous overcurrent (50) element for high-voltage side on C phase |
| 28 | OC2H-N/ | Definitive signal of 2nd instantaneous overcurrent (50) element for high-voltage side on zero phase |
| 29 | OC2L-A/ | Definitive signal of 2nd instantaneous overcurrent (50) element for low-voltage side on A phase |
| 30 | OC2L-B/ | Definitive signal of 2nd instantaneous overcurrent (50) element for low-voltage side on B phase |

|  | Signal name | Description |
| :---: | :---: | :---: |
| 31 | OC2L-C/ | Definitive signal of 2nd instantaneous overcurrent (50) element for low-voltage side on C phase |
| 32 | OC2L-N/ | Definitive signal of 2nd instantaneous overcurrent (50) element for low-voltage side on zero phase |
| 33 | OC3H-A/ | Definitive signal of 3rd instantaneous overcurrent (50) element for high-voltage side on A phase |
| 34 | OC3H-B/ | Definitive signal of 3rd instantaneous overcurrent (50) element for high-voltage side on B phase |
| 35 | OC3H-C/ | Definitive signal of 3rd instantaneous overcurrent (50) element for high-voltage side on C phase |
| 36 | OC3H-N/ | Definitive signal of 3rd instantaneous overcurrent (50) element for high-voltage side on zero phase |
| 37 | OC3L-A/ | Definitive signal of 3rd instantaneous overcurrent (50) element for low-voltage side on A phase |
| 38 | OC3L-B/ | Definitive signal of 3rd instantaneous overcurrent (50) element for low-voltage side on B phase |
| 39 | OC3L-C/ | Definitive signal of 3rd instantaneous overcurrent (50) element for low-voltage side on C phase |
| 40 | OC3L-N/ | Definitive signal of 3rd instantaneous overcurrent (50) element for low-voltage side on zero phase |
| 41 | OC4H-A/ | Definitive signal of definite time or IDMT overcurrent (51) element for high-voltage side on A phase |
| 42 | OC4H-B/ | Definitive signal of definite time or IDMT overcurrent (51) element for high-voltage side on B phase |
| 43 | OC4H-C/ | Definitive signal of definite time or IDMT overcurrent (51) element for high-voltage side on C phase |
| 44 | OC4H-N/ | Definitive signal of definite time or IDMT overcurrent (51) element for high-voltage side on zero phase |
| 45 | OC4L-A/ | Definitive signal of definite time or IDMT overcurrent (51) element for low-voltage side on A phase |
| 46 | OC4L-B/ | Definitive signal of definite time or IDMT overcurrent (51) element for low-voltage side on B phase |
| 47 | OC4L-C/ | Definitive signal of definite time or IDMT overcurrent (51) element for low-voltage side on C phase |
| 48 | OC4L-N/ | Definitive signal of definite time or IDMT overcurrent (51) element for low-voltage side on zero phase |
| 49 | THOLH/ | Definitive signal of overload (49) element for high-voltage side |
| 50 | THOLL/ | Definitive signal of overload (49) element for low-voltage side |
| 51 | NOC1H/ | Definitive signal of 1st negative sequence overcurrent (46) element for high-voltage side |
| 52 | NOC1L/ | Definitive signal of 1st negative sequence overcurrent (46) element for low-voltage side |
| 53 | NOC2H/ | Definitive signal of 2nd negative sequence overcurrent (46) element for high-voltage side |
| 54 | NOC2L/ | Definitive signal of 2nd negative sequence overcurrent (46) element for low-voltage side |
| 55 | CBFH-A/ | Definitive signal of overcurrent element for the detection of CBF (50BF) for highvoltage side on A phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 56 | CBFH-B/ | Definitive signal of overcurrent element for the detection of CBF (50BF) for highvoltage side on B phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 57 | CBFH-C/ | Definitive signal of overcurrent element for the detection of CBF (50BF) for highvoltage side on C phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 58 | CBFH-N/ | Definitive signal of overcurrent element for the detection of CBF (50BF) for highvoltage side on zero phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 59 | CBFL-A/ | Definitive signal of overcurrent element for the detection of CBF (50BF) for lowvoltage side on A phase |

|  | Signal name | Description |
| :---: | :---: | :---: |
|  |  | (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 60 | CBFL-B/ | Definitive signal of overcurrent element for the detection of CBF (50BF) for lowvoltage side on B phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 61 | CBFL-C/ | Definitive signal of overcurrent element for the detection of CBF (50BF) for lowvoltage side on C phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 62 | CBFL-N/ | Definitive signal of overcurrent element for the detection of CBF (50BF) for lowvoltage side on zero phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 63 | TCNT_ALM | Alarm of trip counter |
| 64 | DIFSV-A | Definitive signal of supervision of differential current on A-phase |
| 65 | DIFSV-B | Definitive signal of supervision of differential current on B-phase |
| 66 | DIFSV-C | Definitive signal of supervision of differential current on C-phase |
| 67 | MANU_CLS | Operation signal to close a circuit breaker <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 68 | MANU_OPN | Operation signal to open a circuit breaker <br> (This signal is available only in the relay unit with a DI card in SLOT-C.) |
| 69 | DIF-AD | Detection signal of current ratio differential (87T) element on A phase |
| 70 | DIF-BD | Detection signal of current ratio differential (87T) element on B phase |
| 71 | DIF-CD | Detection signal of current ratio differential (87T) element on C phase |
| 72 | DIFH-AD | Detection signal of differential overcurrent (877H) element on A phase |
| 73 | DIFH-BD | Detection signal of differential overcurrent (87TH) element on B phase |
| 74 | DIFH-CD | Detection signal of differential overcurrent (87TH) element on C phase |
| 75 | RGFH-D | Detection signal of zero-sequence current ratio differential (87TN) element for highvoltage side |
| 76 | RGFL-D | Detection signal of zero-sequence current ratio differential (87TN) element for lowvoltage side |
| 77 | OC1H-AD | Detection signal of 1st instantaneous overcurrent (50) element for high-voltage side on A phase |
| 78 | OC1H-BD | Detection signal of 1st instantaneous overcurrent (50) element for high-voltage side on B phase |
| 79 | OC1H-CD | Detection signal of 1st instantaneous overcurrent (50) element for high-voltage side on C phase |
| 80 | OC1H-ND | Detection signal of 1st instantaneous overcurrent (50) element for high-voltage side on zero phase |
| 81 | OC1L-AD | Detection signal of 1st instantaneous overcurrent (50) element for low-voltage side on A phase |
| 82 | OC1L-BD | Detection signal of 1st instantaneous overcurrent (50) element for low-voltage side on B phase |
| 83 | OC1L-CD | Detection signal of 1st instantaneous overcurrent (50) element for low-voltage side on C phase |
| 84 | OC1L-ND | Detection signal of 1st instantaneous overcurrent (50) element for low-voltage side on zero phase |
| 85 | OC2H-AD | Detection signal of 2nd instantaneous overcurrent (50) element for high-voltage side on A phase |
| 86 | OC2H-BD | Detection signal of 2nd instantaneous overcurrent (50) element for high-voltage side on B phase |
| 87 | OC2H-CD | Detection signal of 2nd instantaneous overcurrent (50) element for high-voltage side on C phase |
| 88 | OC2H-ND | Detection signal of 2nd instantaneous overcurrent (50) element for high-voltage side on zero phase |
| 89 | OC2L-AD | Detection signal of 2nd instantaneous overcurrent (50) element for low-voltage side on A phase |
| 90 | OC2L-BD | Detection signal of 2nd instantaneous overcurrent (50) element for low-voltage side on B phase |
| 91 | OC2L-CD | Detection signal of 2nd instantaneous overcurrent (50) element for low-voltage side on C phase |

|  | Signal name | Description |
| :---: | :---: | :---: |
| 92 | OC2L-ND | Detection signal of 2nd instantaneous overcurrent (50) element for low-voltage side on zero phase |
| 93 | OC3H-AD | Detection signal of 3rd instantaneous overcurrent (50) element for high-voltage side on A phase |
| 94 | OC3H-BD | Detection signal of 3rd instantaneous overcurrent (50) element for high-voltage side on B phase |
| 95 | OC3H-CD | Detection signal of 3rd instantaneous overcurrent (50) element for high-voltage side on C phase |
| 96 | OC3H-ND | Detection signal of 3rd instantaneous overcurrent (50) element for high-voltage side on zero phase |
| 97 | OC3L-AD | Detection signal of 3rd instantaneous overcurrent (50) element for low-voltage side on A phase |
| 98 | OC3L-BD | Detection signal of 3rd instantaneous overcurrent (50) element for low-voltage side on B phase |
| 99 | OC3L-CD | Detection signal of 3rd instantaneous overcurrent (50) element for low-voltage side on C phase |
| 100 | OC3L-ND | Detection signal of 3rd instantaneous overcurrent (50) element for low-voltage side on zero phase |
| 101 | OC4H-AD | Detection signal of definite time or IDMT overcurrent (51) element for high-voltage side on A phase |
| 102 | OC4H-BD | Detection signal of definite time or IDMT overcurrent (51) element for high-voltage side on B phase |
| 103 | OC4H-CD | Detection signal of definite time or IDMT overcurrent (51) element for high-voltage side on C phase |
| 104 | OC4H-ND | Detection signal of definite time or IDMT overcurrent (51) element for high-voltage side on zero phase |
| 105 | OC4L-AD | Detection signal of definite time or IDMT overcurrent (51) element for low-voltage side on A phase |
| 106 | OC4L-BD | Detection signal of definite time or IDMT overcurrent (51) element for low-voltage side on $B$ phase |
| 107 | OC4L-CD | Detection signal of definite time or IDMT overcurrent (51) element for low-voltage side on C phase |
| 108 | OC4L-ND | Detection signal of definite time or IDMT overcurrent (51) element for low-voltage side on zero phase |
| 109 | THOLH-D | Detection signal of overload (49) element for high-voltage side |
| 110 | THOLL-D | Detection signal of overload (49) element for low-voltage side |
| 111 | NOC1H-D | Detection signal of 1st negative sequence overcurrent (46) element for high-voltage side |
| 112 | NOC1L-D | Detection signal of 1st negative sequence overcurrent (46) element for low-voltage side |
| 113 | NOC2H-D | Detection signal of 2nd negative sequence overcurrent (46) element for high-voltage side |
| 114 | NOC2L-D | Detection signal of 2nd negative sequence overcurrent (46) element for low-voltage side |
| 115 | CBFH-AD | Detection signal of overcurrent element for the detection of CBF (50BF) for highvoltage side on A phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 116 | CBFH-BD | Detection signal of overcurrent element for the detection of CBF (50BF) for highvoltage side on B phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 117 | CBFH-CD | Detection signal of overcurrent element for the detection of CBF (50BF) for highvoltage side on C phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 118 | CBFH-ND | Detection signal of overcurrent element for the detection of CBF (50BF) for highvoltage side on zero phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 119 | CBFL-AD | Detection signal of overcurrent element for the detection of CBF (50BF) for lowvoltage side on A phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |

|  | Signal name | Description |
| :---: | :---: | :---: |
| 120 | CBFL-BD | Detection signal of overcurrent element for the detection of CBF (50BF) for lowvoltage side on $B$ phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 121 | CBFL-CD | Detection signal of overcurrent element for the detection of CBF (50BF) for lowvoltage side on C phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 122 | CBFL-ND | Detection signal of overcurrent element for the detection of CBF (50BF) for lowvoltage side on zero phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 123 | DIF2f-AD | Detection signal of 2 f for current ratio differential element on A-phase |
| 124 | DIF2f-BD | Detection signal of 2 f for current ratio differential element on B-phase |
| 125 | DIF2f-CD | Detection signal of 2 f for current ratio differential element on C-phase |
| 126 | DIF5f-AD | Detection signal of 5 f for current ratio differential element on A-phase |
| 127 | DIF5f-BD | Detection signal of 5 f for current ratio differential element on B-phase |
| 128 | DIF5f-CD | Detection signal of 5 f for current ratio differential element on C-phase |
| 129 | OC2fH-AD | Detection signal of 2 f for high-voltage side overcurrent element on A-phase |
| 130 | OC2fH-BD | Detection signal of 2 f for high-voltage side overcurrent element on B-phase |
| 131 | OC2fH-CD | Detection signal of 2 f for high-voltage side overcurrent element on C-phase |
| 132 | OC2fL-AD | Detection signal of 2f for low-voltage side overcurrent element on A-phase |
| 133 | OC2fL-BD | Detection signal of 2 f for low-voltage side overcurrent element on B-phase |
| 134 | OC2fL-CD | Detection signal of 2f for low-voltage side overcurrent element on C-phase |
| 135 | DIFSV-AD | Detection signal of supervision of differential current on A-phase |
| 136 | DIFSV-BD | Detection signal of supervision of differential current on B-phase |
| 137 | DIFSV-CD | Detection signal of supervision of differential current on C-phase |
| 138 | ALARM | Abnormal condition of constant supervision (heavy alarm) |
| 139 | ALARM-L | Abnormal condition of constant supervision (light alarm) |
| 140 | RY-LOCK | Locking of relay |
| 141 | RESET | LED reset signal (activated by pushing the "ESC/C" button on the front panel for more than 3 seconds) |
| 142 | INTER1 | 1st intermediate output signal of PLC |
| 143 | INTER2 | 2nd intermediate output signal of PLC |
| 144 | INTER3 | 3rd intermediate output signal of PLC |
| 145 | INTER4 | 4th intermediate output signal of PLC |
| 146 | INTER5 | 5th intermediate output signal of PLC |
| 147 | INTER6 | 6th intermediate output signal of PLC |
| 148 | INTER7 | 7th intermediate output signal of PLC |
| 149 | INTER8 | 8th intermediate output signal of PLC |
| 150 | DIF-3D_O | Detection signal of any DIFF of A, B, and C phase |
| 151 | DIFH-3D_O | Detection signal of any DIFFH of A, B, and C phase |
| 152 | OC1H-3D_O | Detection signal of any OC1H of A, B, and C phase |
| 153 | OC1H-D_O | Detection signal of any OC1H of A, B, C, and zero phase |
| 154 | OC1L-3D_O | Detection signal of any OC1L of A, B, and C phase |
| 155 | OC1L-D_O | Detection signal of any OC1L of A, B, C, and zero phase |
| 156 | OC2H-3D_O | Detection signal of any OC2H of $\mathrm{A}, \mathrm{B}$, and C phase |
| 157 | OC2H-D_O | Detection signal of any OC2H of A, B, C, and zero phase |
| 158 | OC2L-3D_O | Detection signal of any OC2L of A, B, and C phase |
| 159 | OC2L-D_O | Detection signal of any OC2L of A, B, C, and zero phase |
| 160 | OC3H-3D_O | Detection signal of any OC3H of A, B, and C phase |
| 161 | OC3H-D_O | Detection signal of any OC3H of A, B, C, and zero phase |
| 162 | OC3L-3D_O | Detection signal of any OC3L of A, B, and C phase |
| 163 | OC3L-D_O | Detection signal of any OC3L of A, B, C, and zero phase |
| 164 | OC4H-3D_O | Detection signal of any OC4H of A, B, and C phase |
| 165 | OC4H-D_O | Detection signal of any OC4H of A, B, C, and zero phase |
| 166 | OC4L-3D_O | Detection signal of any OC4L of A, B, and C phase |

|  | Signal name | Description |
| :---: | :---: | :---: |
| 167 | OC4L-D_O | Detection signal of any OC4L of A, B, C, and zero phase |
| 168 | CBFH-3D_O | Detection signal of any CBFH of A, B, and C phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 169 | CBFH-D_O | Detection signal of any CBFH of A, B, C, and zero phase (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 170 | CBFL-3D_O | Detection signal of any CBFL of $\mathrm{A}, \mathrm{B}$, and C phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 171 | CBFL-D_O | Detection signal of any CBFL of A, B, C, and zero phase (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 172 | DF2f-3D_O | Detection signal of any DIFF2f of A, B, and C phase |
| 173 | DF5f-3D_O | Detection signal of any DIFF5f of A, B, and C phase |
| 174 | C2fH-3D_O | Detection signal of any OC2fH of A, B, and C phase |
| 175 | C2fL-3D_O | Detection signal of any OC2fL of A, B, and C phase |
| 176 | DFSV-3D_O | Detection signal of any DIFFSV of A, B, and C phase |
| 177 | OCH-3D_O | Detection signal of any of overcurrent elements on $\mathrm{A}, \mathrm{B}$, and C phase for highvoltage side |
| 178 | OCH-D_O | Detection signal of any of overcurrent elements on A, B, C, and zero phase for highvoltage side |
| 179 | OCL-3D_O | Detection signal of any of overcurrent elements on $\mathrm{A}, \mathrm{B}$, and C phase for low-voltage side |
| 180 | OCL-D_O | Detection signal of any of overcurrent elements on A, B, C, and zero phase for lowvoltage side |
| 181 | OC-3D_O | Detection signal of any of overcurrent elements on A, B, and C phase for both high and low voltage side |
| 182 | OC-D_O | Detection signal of any of overcurrent elements on A, B, C, and zero phase for both high and low voltage side |
| 183 | THOL-D_O | Detection signal of any of overload (THOL) elements |
| 184 | NOCH-D_O | Detection signal of any of negative sequence overcurrent (OCNEG) elements for high-voltage side |
| 185 | NOCL-D_O | Detection signal of any of negative sequence overcurrent (OCNEG) elements for low-voltage side |
| 186 | NOC-D_O | Detection signal of any of negative sequence overcurrent (OCNEG) elements for both high and low voltage side |
| 187 | CBF-3D_O | Detection signal of any CBF (CBFH/CBFL) of A, B, and C phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 188 | CBF-D_O | Detection signal of any CBF (CBFH/CBFL) of A, B, C, and zero phase (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 189 | DIF/RGF-D | Detection signal of any of DIF, RGFH, and RGFL elements |
| 190 | ALLEL-D_O | Detection signal of any of all elements (OR of all detection signals) |
| 191 | DIF-3_O/ | Definitive signal of any DIFF of A, B, and C phase |
| 192 | DIFH-3_O/ | Definitive signal of any DIFFH of A, B, and C phase |
| 193 | OC1H-3_O/ | Definitive signal of any OC1H of A, B, and C phase |
| 194 | $\mathrm{OC} 1 \mathrm{H}-\mathrm{O}$ | Definitive signal of any OC1H of A, B, C, and zero phase |
| 195 | OC1L-3_O/ | Definitive signal of any OC1L of A, B, and C phase |
| 196 | OC1L-O | Definitive signal of any OC1L of A, B, C, and zero phase |
| 197 | OC2H-3_O/ | Definitive signal of any OC2H of A, B, and C phase |
| 198 | $\mathrm{OC} 2 \mathrm{H}-\mathrm{O}$ | Definitive signal of any OC2H of A, B, C, and zero phase |
| 199 | OC2L-3_O/ | Definitive signal of any OC2L of A, B, and C phase |
| 200 | OC2L-O | Definitive signal of any OC2L of A, B, C, and zero phase |
| 201 | OC3H-3_O/ | Definitive signal of any OC3H of A, B, and C phase |
| 202 | $\mathrm{OC} 3 \mathrm{H}-\mathrm{O}$ | Definitive signal of any OC3H of A, B, C, and zero phase |
| 203 | OC3L-3_O/ | Definitive signal of any OC3L of A, B, and C phase |
| 204 | OC3L-O | Definitive signal of any OC3L of A, B, C, and zero phase |
| 205 | OC4H-3_O/ | Definitive signal of any OC4H of A, B, and C phase |
| 206 | $\mathrm{OC} 4 \mathrm{H}-\mathrm{O}$ | Definitive signal of any OC4H of A, B, C, and zero phase |

|  | Signal name | Description |
| :---: | :---: | :---: |
| 207 | OC4L-3_O/ | Definitive signal of any OC4L of A, B, and C phase |
| 208 | OC4L-O | Definitive signal of any OC4L of A, B, C, and zero phase |
| 209 | CBFH-3_O/ | Definitive signal of any CBFH of A, B, and C phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 210 | CBFH-O | Definitive signal of any CBFH of A, B, C, and zero phase (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 211 | CBFL-3_O/ | Definitive signal of any CBFL of $A, B$, and $C$ phase <br> (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 212 | CBFL-O | Definitive signal of any CBFL of A, B, C, and zero phase (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 213 | DFSV-3_O | Definitive signal of any DIFFSV of $A, B$, and $C$ phase |
| 214 | OCH-3_O | Definitive signal of any of overcurrent elements on $A, B$, and $C$ phase for high-voltage side |
| 215 | OCH-O | Definitive signal of any of overcurrent elements on A, B, C, and zero phase for highvoltage side |
| 216 | OCL-3_0 | Definitive signal of any of overcurrent elements on A, B, and C phase for low-voltage side |
| 217 | OCL-O | Definitive signal of any of overcurrent elements on A, B, C, and zero phase for lowvoltage side |
| 218 | OC-3_O | Definitive signal of any of overcurrent elements on $\mathrm{A}, \mathrm{B}$, and C phase for both high and low voltage side |
| 219 | OC-O | Definitive signal of any of overcurrent elements on A, B, C, and zero phase for both high and low voltage side |
| 220 | THOL-O | Definitive signal of any of overload (THOL) elements |
| 221 | NOCH-O | Definitive signal of any of negative sequence overcurrent (OCNEG) elements for high-voltage side |
| 222 | NOCL-O | Definitive signal of any of negative sequence overcurrent (OCNEG) elements for lowvoltage side |
| 223 | NOC-O | Definitive signal of any of negative sequence overcurrent (OCNEG) elements for both high and low voltage side |
| 224 | CBF-3_O | Definitive signal of any CBF (CBFH/CBFL) of $A, B$, and $C$ phase (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 225 | CBF-O | Definitive signal of any CBF (CBFH/CBFL) of A, B, C, and zero phase (This signal is available only in the relay unit with a DI card or IEC61850 GOOSE.) |
| 226 | DIF/RGF | Definitive signal of any of DIF, RGFH, and RGFL elements |
| 227 | ALLEL-O | Definitive signal of any of all elements (OR of all definitive signals) |
| 228 | GOOSE1 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 229 | GOOSE2 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 230 | GOOSE3 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 231 | GOOSE4 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 232 | GOOSE5 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 233 | GOOSE6 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 234 | GOOSE7 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 235 | GOOSE8 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 236 | GOOSE9 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 237 | GOOSE10 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 238 | GOOSE11 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |

|  | Signal name | Description |
| :---: | :---: | :---: |
| 239 | GOOSE12 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 240 | GOOSE13 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 241 | GOOSE14 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 242 | GOOSE15 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 243 | GOOSE16 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 244 | GOOSE17 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 245 | GOOSE18 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 246 | GOOSE19 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 247 | GOOSE20 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 248 | GOOSE21 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 249 | GOOSE22 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 250 | GOOSE23 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 251 | GOOSE24 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 252 | GOOSE25 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 253 | GOOSE26 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 254 | GOOSE27 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 255 | GOOSE28 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 256 | GOOSE29 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 257 | GOOSE30 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 258 | GOOSE31 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 259 | GOOSE32 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 260 | GOOSE33 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 261 | GOOSE34 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 262 | GOOSE35 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 263 | GOOSE36 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 264 | GOOSE37 | Assignment of GOOSE received signals <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 265 | G_TRIP1 | Operating condition of CBF/CBFG element (Trip signal from other relay) <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 266 | G_TRIP2 | Operating condition of CBF/CBFG element (Trip signal from other relay) <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 267 | G_TRIP3 | Operating condition of CBF/CBFG element (Trip signal from other relay) <br> (This signal is available only in the relay unit with IEC61850 communication card.) |
| 268 | DIF-A | Definitive signal of DIFF A-phase or forced operation from PC-HMI |
| 269 | DIF-B | Definitive signal of DIFF B-phase or forced operation from PC-HMI |

|  | Signal name | Description |
| :---: | :---: | :---: |
| 270 | DIF-C | Definitive signal of DIFF C-phase or forced operation from PC-HMI |
| 271 | DIF-3_O | Definitive signal of any DIFF of A, B, and C phase or forced operation from PC-HMI |
| 272 | DIFH-A | Definitive signal of DIFFH A-phase or forced operation from PC-HMI |
| 273 | DIFH-B | Definitive signal of DIFFH B-phase or forced operation from PC-HMI |
| 274 | DIFH-C | Definitive signal of DIFFH C-phase or forced operation from PC-HMI |
| 275 | DIFH-3_O | Definitive signal of any DIFFH of A, B, and C phase or forced operation from PC-HMI |
| 276 | RGFH | Definitive signal of RGFH or forced operation from PC-HMI |
| 277 | RGFL | Definitive signal of RGFL or forced operation from PC-HMI |
| 278 | OC1H-A | Definitive signal of OC1H A-phase or forced operation from PC-HMI |
| 279 | OC1H-B | Definitive signal of OC1H B-phase or forced operation from PC-HMI |
| 280 | OC1H-C | Definitive signal of OC1H C-phase or forced operation from PC-HMI |
| 281 | OC1H-3_O | Definitive signal of any OC1H of A, B, and C phase or forced operation from PC-HMI |
| 282 | OC1H-N | Definitive signal of OC1H zero-phase or forced operation from PC-HMI |
| 283 | OC1L-A | Definitive signal of OC1LA-phase or forced operation from PC-HMI |
| 284 | OC1L-B | Definitive signal of OC1L B-phase or forced operation from PC-HMI |
| 285 | OC1L-C | Definitive signal of OC1L C-phase or forced operation from PC-HMI |
| 286 | OC1L-3_O | Definitive signal of any OC1L of A, B, and C phase or forced operation from PC-HMI |
| 287 | OC1L-N | Definitive signal of OC1L zero-phase or forced operation from PC-HMI |
| 288 | OC2H-A | Definitive signal of OC2H A-phase or forced operation from PC-HMI |
| 289 | OC2H-B | Definitive signal of OC2H B-phase or forced operation from PC-HMI |
| 290 | OC2H-C | Definitive signal of OC2H C-phase or forced operation from PC-HMI |
| 291 | OC2H-3_O | Definitive signal of any OC2H of A, B, and C phase or forced operation from PC-HMI |
| 292 | OC2H-N | Definitive signal of OC2H zero-phase or forced operation from PC-HMI |
| 293 | OC2L-A | Definitive signal of OC2L A-phase or forced operation from PC-HMI |
| 294 | OC2L-B | Definitive signal of OC2L B-phase or forced operation from PC-HMI |
| 295 | OC2L-C | Definitive signal of OC2L C-phase or forced operation from PC-HMI |
| 296 | OC2L-3_O | Definitive signal of any OC2L of A, B, and C phase or forced operation from PC-HMI |
| 297 | OC2L-N | Definitive signal of OC2L zero-phase or forced operation from PC-HMI |
| 298 | OC3H-A | Definitive signal of OC3H A-phase or forced operation from PC-HMI |
| 299 | OC3H-B | Definitive signal of OC3H B-phase or forced operation from PC-HMI |
| 300 | OC3H-C | Definitive signal of OC3H C-phase or forced operation from PC-HMI |
| 301 | OC3H-3_O | Definitive signal of any OC3H of A, B, and C phase or forced operation from PC-HMI |
| 302 | OC3H-N | Definitive signal of OC3H zero-phase or forced operation from PC-HMI |
| 303 | OC3L-A | Definitive signal of OC3L A-phase or forced operation from PC-HMI |
| 304 | OC3L-B | Definitive signal of OC3L B-phase or forced operation from PC-HMI |
| 305 | OC3L-C | Definitive signal of OC3L C-phase or forced operation from PC-HMI |
| 306 | OC3L-3_O | Definitive signal of any OC3L of A, B, and C phase or forced operation from PC-HMI |
| 307 | OC3L-N | Definitive signal of OC3L zero-phase or forced operation from PC-HMI |
| 308 | OC4H-A | Definitive signal of OC4H A-phase or forced operation from PC-HMI |
| 309 | OC4H-B | Definitive signal of OC4H B-phase or forced operation from PC-HMI |
| 310 | OC4H-C | Definitive signal of OC4H C-phase or forced operation from PC-HMI |
| 311 | OC4H-3_O | Definitive signal of any OC4H of A, B, and C phase or forced operation from PC-HMI |
| 312 | OC4H-N | Definitive signal of OC4H zero-phase or forced operation from PC-HMI |
| 313 | OC4L-A | Definitive signal of OC4LA-phase or forced operation from PC-HMI |
| 314 | OC4L-B | Definitive signal of OC4L B-phase or forced operation from PC-HMI |
| 315 | OC4L-C | Definitive signal of OC4L C-phase or forced operation from PC-HMI |
| 316 | OC4L-3_O | Definitive signal of any OC4L of A, B, and C phase or forced operation from PC-HMI |
| 317 | OC4L-N | Definitive signal of OC4L zero-phase or forced operation from PC-HMI |
| 318 | THOLH | Definitive signal of THOLH or forced operation from PC-HMI |
| 319 | THOLL | Definitive signal of THOLL or forced operation from PC-HMI |
| 320 | NOC1H | Definitive signal of OCNEG1H or forced operation from PC-HMI |
| 321 | NOC1L | Definitive signal of OCNEG1L or forced operation from PC-HMI |
| 322 | $\mathrm{NOC2H}$ | Definitive signal of OCNEG2H or forced operation from PC-HMI |

|  | Signal name | Description |
| :--- | :--- | :--- |
| 323 | NOC2L | Definitive signal of OCNEG2L or forced operation from PC-HMI |
| 324 | CBFH-A | Definitive signal of CBFH A-phase or forced operation from PC-HMI |
| 325 | CBFH-B | Definitive signal of CBFH B-phase or forced operation from PC-HMI |
| 326 | CBFH-C | Definitive signal of CBFH C-phase or forced operation from PC-HMI |
| 327 | CBFH-3_O | Definitive signal of any CBFH of A, B, and C phase or forced operation from PC-HMI |
| 328 | CBFH-N | Definitive signal of CBFH zero-phase or forced operation from PC-HMI |
| 329 | CBFL-A | Definitive signal of CBFL A-phase or forced operation from PC-HMI |
| 330 | CBFL-B | Definitive signal of CBFL B-phase or forced operation from PC-HMI |
| 331 | CBFL-C | Definitive signal of CBFL C-phase or forced operation from PC-HMI |
| 332 | CBFL-3_O | Definitive signal of any CBFL of A, B, and C phase or forced operation from PC-HMI |
| 333 | CBFL-N | Definitive signal of CBFL zero-phase or forced operation from PC-HMI |

## 6. Standard (Technical data)

## Guaranteed performance

| Common conditions | Frequency: Rated frequency <br> Control power supply voltage: Rated voltage <br> Ambient temperature: $20^{\circ} \mathrm{C}$ <br> Humidity: $5-95 \%$ | Unless otherwise indicated, <br> the common conditions shall <br> be as described in the left <br> column. |
| :--- | :--- | :--- |

### 6.1. Relay characteristic data

| Item |  | Test condition | Standard |
| :---: | :---: | :---: | :---: |
| Operating value | All elements | 1) Current setting value | 1) Setting value $\pm 5 \%$ |
| Return value | All elements | 1) Current setting value | 2) Current operation value $\times 95 \%$ or more |
|  | Time-limit element of overcurrent (51) Time-limit element of ground-fault overcurrent (51N) | Setting value: <br> Current setting value $=$ Minimum <br> Operating time magnification $=$ Minimum <br> Operating characteristics = All characteristics <br> Current input: <br> Current $=0 \rightarrow$ Current setting value $\times 1000 \%$ <br> Energizing time: <br> Theoretical value of operating time $\times 90 \%$ | The relay shall not operate. |
| Operating time | Overcurrent element <br> (50) <br> Ground-fault overcurrent element (50N) <br> Negative-phasesequence overcurrent element (46) | Setting value: Current setting value $=$ Minimum Input: Current $=0 \rightarrow$ Current setting value $\times 200 \%$ <br> (a) Ope.Time : 0.00 s <br> (b) Ope.Time: $0.01 \sim 1.00 \mathrm{~s}$ <br> (c) Ope.Time: $1.00 \sim 10 \mathrm{~s}$ | (a) Within 30 ms <br> (b) Ope.Time $\pm$ within 50 ms <br> (c) Ope.Time $\pm$ within $5 \%$ |

## 7. Connection

### 7.1. External Connection

Fig. 7-1 Example connection for Star-Star transformer (Yy0)

Fig. 7-2 Example connection for Star-Delta transformer (Yd1)

Fig. 7-3 Example connection for Delta-Star transformer (Dy1)

Fig. 7-4 Example connection for Delta-Star transformer (Dy11)

## 8. Test

Although all necessary functional tests are implemented for this relay before shipment from the factory, it is recommendable to perform the tests with reference to the following items, before use.

### 8.1. Visual inspection

Perform the visual inspection check with reference to the following items.

| Inspection item | Contents of inspection |
| :---: | :--- |
| Unit | (1) No deformation |
| (2) Operational check of the operation key switches |  |
| (working part) | (3) Neither discoloration nor deformation of the front |
| name plate |  |
|  | (4) No damage at the terminal connectors |
| Case | No damage including the terminal connectors |
| Others | No foreign substances, such as dust, iron pieces, etc. |

### 8.2. Characteristic test

### 8.2.1. Notes related to the tests

(1)Recommended test condition

Regarding the ambient conditions, following conditions shall be complied with, as far as possible. If the test is performed at the condition which is significantly different from the next condition, the correct test results may not be obtained.

- Ambient temperature: $20^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}$
- Rated frequency: $\pm 1 \%$
- Waveform (AC): Distortion factor $2 \%$ or less
- Control voltage: Rated voltage $\pm 2 \%$
(2)Functional control points

Refer to Chapter 6.
The functional control point (standard point) of each relay's element shall be checked by the relay alone. Therefore, when the combined test with external devices such as CT, ZCT, etc. is performed, it shall be considered the error factor of external devices.
Furthermore, if user-defined control point is specified (e.g. accracy of relay characteristic is controlled at service conditions), execute the test at the manufacturer-defined control point (mentioned in Section 6.1) before in-service operation and then check accuracy of the relay.

After that, execute the test at the user-defined control point, and set this data to the subsequent standards.
(3) Setting change

Refer to 4.3.4.1 for the setting change.
(4)Judgment of operation

Basically, the measurement of the operating value, operating time, etc. shall be done by open/close of the output relay contact of each element.
(5)Communication card

Regardless of equipping or not of the communication card, the test voltage input to the serial communication circuit shall be avoided at the dielectric test and the impulse voltage test.

Furthermore, when the communication card is equipped with, it is not necessary to disconnect the communication card at the test.
8.2.2. Characteristic test

### 8.2.2.1. Test circuit

The external connection of AC input circuit is as shown below as a reference.
Refer to Fig. 1-5 on Chapter 1 for the terminal arrangement.
[1] Current ratio differential element, Differential overcurrent element
Example of the

| Test <br> phase | Terminal No. |  |
| :---: | :---: | :---: |
| A-phase | IHA-P~IHA-N | ILA-P~ILA-N |
| B-phase | IHB-P $\sim$ IHB-N | ILB-P $\sim$ ILB-N |
| C-phase | IHC-P $\sim$ IHC-N | ILC-P $\sim$ ILC-N |

[2] Zero-phase differential current element, CBF detection element

| Test phase | Terminal No. |
| :---: | :--- |
| A-phase | IHA-P~IHA-N |
|  | ILA-P~ILA-N |
| B-phase | IHB-P~IHB-N |
|  | ILB-P~ILB-N |
| C-phase | IHC-P~IHC-N |
|  | ILC-P~ILC-N |

[4] Negative-phase-sequence overcurrent element

[5] Ground-fault current element

| Test <br> phase | Terminal No. |
| :---: | :---: |
| HV side | $\mathrm{IHN}(\mathrm{G})-\mathrm{P} \sim \mathrm{IHN}(\mathrm{G})-\mathrm{N}$ |
| LV side | $\mathrm{ILN}(\mathrm{G})-\mathrm{P} \sim \operatorname{ILN}(\mathrm{G})-\mathrm{N}$ |

[6] Thermal Overload Element
O In the case where three-phase input

| Test <br> phase | Terminal No. |
| :---: | :---: |
| HV side | IHA-P~IHA-N, IHB-P~IHB-N |
| IHC-P~IHC-N |  |$|$| LV side | ILA-P~ILA-N, ILB-P~ILB-N |
| :---: | :---: |
| ILC-P $\sim$ ILC-N |  |

- In the case where one-phase input

8.2.2.2. Test items and functional control points
[1] Test setting
Before staring test, it is recommended to to use 'Test setting' function in order to lock the operation of un-tested phases and elements for easy testing.
Ex.) When carrying out the test of undervoltage A-phase element, lock the operaion of undervoltage B -phase and C -phase.
As for the method of test setting, refer to 4.3.4.4.2 in Chapter 4.
Furthermore, as for the list of test setting items, refer to the Table shown below.

## List of test setting items

| No. | Name of <br> items | Contents of setting | Setting |
| :---: | :--- | :--- | :--- |
| 1 | SV-LK | Lock of monitoring | UNLOCKED / LOCKED |
|  | TCNT-LK | Lock of trip counter | UNLOCKED / LOCKED |

[2] Forced operation test
Refer to 4.3.4.4.1 in Chapter 4.
[3] Operating value test
Refer to the "Operating value" and "Return value" in Section 6.1.
[4] Operating time test
Refer to the "Operating time" in Section 6.1.
[5] Resetting time test
Refer to the "Recovery time" in Section 6.1.
[6] Phase test
Refer to the "Phase characteristic" in Section 6.1.
[7] LED/VFD full lighting test Refer to 4.3.4.4.3 in Chapter 4.

## 9. Maintenance and self diagnosis

### 9.1. Maintenance

### 9.1.1. Daily inspection

It is recommended to check the following items daily;

- No dust (such as iron powder, etc) is in/on the relay case
- No abnormal noise is generated
- 'RUN' LED is lighting

### 9.1.2. Periodic inspection

It is recommended to test the following items periodically. The recommended perdic cycle is 5 to 7 years.

- Visual inspection check, referring to Section 8.1.
- Characteristic test using current and voltage input, referring to Section 8.2.

### 9.2. Self diagnosis

Monitoring of the electronic circuit as well as the incorporated power supply is performed, and if any trouble is generated, fault display by LED and output by alarm DO (b contact) are executed.

### 9.2.1. Alarm indication

The relay alarm, which would be appeared at relay failure, is divided two types, light alarm and heavy alarm.
Light alarm ----- This alarm may appear by detecting the abnormal current or voltage input, or abnormality of the circuits which would not affect the relay unnecessary trip operation directly.
Heavy alarm --- This alarm may appear by detecting abnormality of the important circuits which would affect the relay unnecessary trip operation directly.
The operation of LED display and alarm DO output are shown in next table.

Table 9-1 LED display, Alarm DO

| Equipment <br> status | Alarm <br> DO | RUN LED | ALARM LED |
| :--- | :--- | :--- | :--- |
| Light alarm | OFF | ON | ON |
| Heavy alarm | ON | OFF | ON |

Furthermore, since the indication of 'ALARM LED' at fault detection is latched, it is necessary to press 'ESC' key for 3 sec or more after removing the cause of trouble.
9.2.2. Handling of Alarm indication

When any trouble is generated, please collect the necessary information as shown below which would be useful for finding the cause of trouble.
[1] Confirm the state of LED display and the contact of alarm DO.
Refer to Fig. 9-1, Fig. 9-2 for LED display and alarm DO.
[2] Confirm the error code in monitoring
Refer to 4.3.2.2.4 in Chapter 4 for the confirmation method of the error code,
[3] Please inquire of our company (the nearest Mitsubishi Electric's branch or sales office).
The inquiry destination is described at the end of the document.

Fig. 9-1 Position of RUN LED, ALARM LED

Fig. 9-2 Position of alarm DO
9.2.3. Error code and self diagnosis items

The self-diagnosis items and error codes are shown on Table 9-2. The error code can be confirmed from ALARM RECORD menu via front panel (refer to chapter 4) or PC-HMI (refer to chapter 11).

Table 9-2 Detail of error code on EVENT RECORD function

| Error code | Detail | Behavior of the protection relay (Severe cases are as follows) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | RUN LED | $\begin{aligned} & \text { ALARM } \\ & \text { LED } \end{aligned}$ | Alarm DO | Relay calculation |
| $00 \sim 07,$ <br> 0A, 0F, 20 | CPU failure | OFF | ON | Close | Lock |
| 10, 11 | RAM check failure | OFF | ON | Close | Lock |
| 12 | ROM check failure | OFF | ON | Close | Lock |
| 13 | CPU calculation failure | OFF | ON | Close | Lock |
| 15 | Communication failure | OFF | ON | Close | Lock |
| 18 | Flash memory failure | OFF | ON | Close | Lock |
| 19, 1A, 30 | Internal data table failure (information about analog input) | OFF | ON | Close | Lock |
| 23, 48 | DO circuit failure | OFF | ON | Close | Lock |
| 25 | A/D accuracy failure | OFF | ON | Close | Lock |
| 33 | Analog input circuit failure | ON | ON | Open | Run |
| 34 | DC offset value of analog circuit failure | ON | ON | Open | Run |
| 35 | Setting data table failure | OFF | ON | Close | Lock |
| 37 | Configuration setting failure of disturbance recorder (data save function) | ON | ON | Open | Run |
| 38 | Internal data failure | ON | ON | Open | Run |
| 42, 43 | Supervision function. | ON | OFF | Close | Run |
| N/A | AUX circuit failure | OFF | OFF | Close | Lock |
| N/A | CPU stop | OFF | ON | Close | Lock |
| N/A | Normal condition | ON | OFF | Open | Run |

Note: Error code in ALARM RECORD menu is indicated as following AA BB CCCCCCCCCCCC
\| $\longleftarrow$ Detail code (for Mitsubishi Electric analysis.)

- Sub error code. (for Mitsubishi Electric analysis.)

Error code (the numbers are shown in above table.)

## 10. Default setting or configuration value

### 10.1. Setting (Rated current is 5 A , order code $\mathrm{E}^{*} \mathrm{H} 55$ type)

Table 10-1 Setting values

### 10.2. Terminal assigned

For details about the "Default signal (PLC signal)", refer to Chapter 5.
Table 10-2 Terminal assigned for digital outputs

|  | Item name <br> (PC-HMI) | Default signal <br> (PLC signal) | Please make a note about <br> setting. |
| :--- | :--- | :--- | :--- |
| Contacts for <br> (DO) | tripping | DO1 | ALLEL-O |
|  | DO2 | ALLEL-D_O |  |
|  | DO2 | - |  |
|  | DO3 | - |  |
|  | DO4 | - |  |
| Contacts <br> annunciator (DO) | for | DO5 | - |
|  |  |  |  |  |
|  | DO6 | - |  |
| DO7 | - |  |
|  | DO8 | - |  |

Table 10-3 Terminal assigned for digital inputs

| Item name | Description |
| :--- | :--- |
| DI1 | - |
| DI2 | - |
| DI3 | - |
| DI4 | - |
| DI5 | All relay elements are locked for trip lock. |
| DI6 | - |
| DI7 | Receiving from other relays trip signal, and CBFL element <br> on this protection relay operates (trip). |
| DI8 | Receiving from other relays trip signal, and CBFH element <br> on this protection relay operates (trip). |

This signals are available only in the relay unit with a DI card in SLOT-C.
The CB control signal assignments between the items and digital inputs can be changed using PC-HMI.

Table 10-4 Terminal assigned for circuit breaker control

| Item name <br> (PC-HMI) | Default signal <br> (PLC signal) | Detail |
| :--- | :--- | :--- |
| CB STATE | DI1 | The "CB STATE" shows a circuit breaker status (condition) <br> such as open or close. |
| CLOSE INTLK | DI2 | The "CLOSE INTLK" means an interlock for close operation <br> of circuit breaker. <br> Disable or enable the interlock can be set. For details, refer <br> to 4.3.4.2 in Chapter 4. |
| OPEN INTLK | DI3 | The "OPEN INTLK" means an interlock for open operation <br> of circuit breaker. <br> Disable or enable the interlock can be set. For details, refer <br> to 4.3.4.2 in Chapter 4. |
| CLOSE CB | DI4 | The "CLOSE CB" means a remote CB operation from other <br> devices. <br> Use Case <br> We assumed that a digital output of another device is <br> connected to digital input (in this case, DI4). |
| This protection relay receives the control signal from |  |  |
| remote device using DI. Next, this protection relay |  |  |
| outputs own DO and operates a connected CB. |  |  |

| OPEN CB | DI5 | The "OPEN CB" means a remote CB operation from other <br> devices. <br> Use Case <br> We assumed that a digital output of another device is <br> connected to digital input (in this case, DI5). <br> This protection relay receives the control signal from <br> remote device using DI. Next, this protection relay <br> outputs own DO and operates a connected CB. |

## 11.PC Software (PC-HMI)

### 11.1. Introduction

The MELPRO-D40 Series provides PC-HMI for implementing analog and digital signal supervision and control (DO contact test and circuit breaker control).
This chapter describes the functions of PC-HMI.

### 11.2. Precautions on software use

Be sure to observe the following precautions when using this software.

## Precautions

1) This software and manual are warranted only against damage to the medium, defects in the product and program execution errors.
2) This manual does not give warranty of merchantability or fitness for a particular purpose for the product. No warranty is given with respect to any damage to equipment or business performance.
3) We shall not be liable for use or reliability of other software not created by us.
4) Use of this software requires one license per PC. When using the software on another PC, purchase a separate copy.
5) Duplicating this software for any purpose other than making a backup copy is strictly prohibited.
6) Exercise sufficient caution in handling the original medium containing this software.
7) Alteration or modification of this software is strictly prohibited.
8) Lending or taking out any part or all of this software to a third party without prior permission is prohibited.
9) This manual and medium can be used only for this software.

Sale of this program or any of its modification to a third party is strictly prohibited
Note) These precautions apply to all of our products.
Some of the product specifications may not apply.

### 11.3. Compatible models

### 11.3.1. PC-HMI operation terminal specifications

The recommended and minimum specifications for the operation terminal to install PC-HMI on are as shown below.

| Item | Recommended specification | Minimum specification |
| :--- | :--- | :--- |
| OS | Windows7 | Windows7 |
| CPU | 2.5 GHz or higher (4 CPUs or more) | 1.5 GHz (2 CPU) |
| Memory | 2 GB or larger | 2 GB |
| Display color | 32 -bit (16,770,000 colors) | 32 -bit (16,770,000 colors) |

Note) For use with the waveform analysis software (see Chapter 12), available HDD space of 100 MB or more and separate available space for saving waveform data are required.

### 11.3.2. Display

The recommended and minimum specifications for the display for PC - HMI are as shown below.

| Item | Recommended specification | Minimum specification |
| :--- | :--- | :--- |
| Screen size | 15.6 in | 11 in |
| Screen resolution | $1366 \times 768$ WXGA | $1366 \times 768$ WXGA |
| Dot pitch $[\mathrm{mm}]$ | 0.253 | 0.188 |
| Exact size $[\mathrm{mm}]$ | W345.598 $\times$ H194.304 | W243.148 $\times \mathrm{H} 136.704$ |

### 11.4. Basic configuration for $\mathrm{PC}-\mathrm{HMI}$

The hardware configuration for $\mathrm{PC}-\mathrm{HMI}$ is as shown below.

### 11.5. Basics for operation of $\mathrm{PC}-\mathrm{HMI}$

This section provides the knowledge and instructions required for operation of PC-HMI. For more information about the operation, see the instruction manual of the PC being used.

### 11.5.1. Mouse operation

This subsection describes the knowledge required for mouse operation.
1)Click

The action of pressing the left mouse button.
2)Double click

Clicking of a mouse button twice successively.
3)Mouse pointer

Moving the mouse causes the arrow on the screen to move according to the mouse movement. To select an item on the screen, move the mouse pointer onto the item and click.
The clicked item is illuminated. When the mouse pointer is moved onto text input, the arrow turns into a cursor.
4)Drag

Dragging refers to moving the mouse pointer while pressing the mouse button.

### 11.6. Screen structure of $\mathrm{PC}-\mathrm{HMI}$

*The screen shown above is different from how the actual screen looks because the individual menus are outlined with borders for ease of understanding.

The screen structure of PC -HMI is as shown below.

Function Menu
Connection Status
LED Status
Operation Mode
Date and Time
: Clicking the individual items calls the corresponding functions.
: Indicates the connection status and operation permission of devices.
: Indicates the operating conditions and failure descriptions of devices.
: Indicates the operation mode.
: Indicates the time synchronization status and date and time.

### 11.7. Operation in offline mode

The Function menu items available in the offline mode are as shown below.
Waveform Analysis : Launches the waveform analysis software.
Offline Setting : Reads, edits and saves setting files.
Offline PLC : Reads, edits and saves PLC configuration files.

### 11.7.1. Launching the waveform analysis software

1. From the Function menu, click Waveform Analysis.
2. The waveform analysis software is launched in a new window.

3. From the File menu of the waveform analysis software, select a waveform data file. (For the details about the waveform analysis software, see Chapter 12.)

### 11.7.2. Reading, editing and saving setting files

[Reading setting files]

1. From the Function menu, click Offline Setting.
2. From $\mathrm{PC}-\mathrm{HMI}$ <-> HDD in the upper right part of the main screen, click "Open."

3. Select the setting file to read from the HDD. (Files in the .csv format can be read)

## 4. The setting file is read as shown below.

## [Editing setting files]

1. Select an item to edit from Category. A list of setting values is shown under Item. Click New Value for the item to make a change.
From the list, make a selection by clicking $\boldsymbol{\nabla}$.
To enter a value, use the keyboard.

Note) If any value out of the setting range is entered, an error indication as shown below is given.

| Online Setting |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Group1 Active | No | Item | Curt. Value | New Value | Range | Step |
| - Category | 1 | 2f-lock ratio | 11 \% |  | 10 to $30 \%$ | 1 \% |
|  | 2 | 1f-Min.Ope. | 0.4 A |  | 0.4 to 2.5 A | 0.1 A |
| OC/OCG | 3 |  |  |  |  |  |
| OCNEG/UC/CBF | 4 |  |  |  |  |  |
| DIRG | 5 | OC1 Enabled | On | - | - | - |
| UV/OV/OVG/OVNEG | 6 | OC1 Ope. Current | 0.5 A | 0.4 | 0.5 to 100.0 A | 0.1 A |
| E | 7 | OC1 Ope. Time | 0.00 s |  | 0.00 to 10.00 s | 0.01 s |

## [Saving setting files]

1. From $\mathrm{PC}-\mathrm{HMI}$ <-> HDD in the upper right part of the main screen, click "Save."

2. Select the destination folder, enter a file name and click "Save." The setting file is saved.

### 11.7.3. Reading, editing and saving PLC files

## [Reading PLC files]

1. From the Function menu, click Offline PLC.
2. From PC-HMI <-> HDD in the upper right part of the main screen, click "Open."

3. Select the PLC file to read from the HDD.
(Files in the .csv format can be read)

4. The PLC file is read as shown below.

## [Editing PLC files]

1. Click the Logic group and Logic to edit.

Logic1-4 : indication and editing screen for logic circuits 1 to 4 Logic5-8 : indication and editing screen for logic circuits 5 to 8
2. The logic circuit editing screen as shown below appears. (The screen below shows a display example)

3. From the Item list, select the signal to input and click. The selected signal is shown in light blue. Click ">>" to select the input signal.

Note) The signal name can be searched by entering it on the Signal List by using the keyboard and clicking "Search."
4. From the list of circuit components, select the logic component to place and click the logic area to place it. The logic component is placed.
After the placement has been completed, click "OK" to go back to the previous screen. Note) Logic components that can and cannot be placed in certain areas are as shown below.

| No | Component | A | B | C | D | E | F | G | H | Note |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | None | Y | Y | Y | Y | Y | Y | Y | Y | (*1) |
| 2 | Line | Y | Y | Y | Y | Y | N | Y | N |  |
| 3 | Not | Y | Y | Y | Y | Y | N | Y | N |  |
| 4 | OffDelay Timer | Y | Y | Y | Y | Y | N | Y | N | (*2) |
| 5 | OnDelay Timer | Y | Y | Y | Y | Y | N | Y | N | (*2) |
| 6 | OneShot Timer | Y | Y | Y | Y | Y | N | Y | N | (*2) |
| 7 | And | Y | Y | Y | Y | Y | N | N | N |  |
| 8 | Or | Y | Y | Y | Y | Y | N | N | N |  |
| 9 | Xor | Y | Y | Y | Y | Y | N | N | N |  |
| 10 | Set FlipFlop | Y | Y | Y | Y | Y | N | N | N |  |
| 11 | Reset FlipFlop | Y | Y | Y | Y | Y | N | N | N |  |

(*1): The component needs to have been placed.
(*2): Up to two timer components can be placed in a logic area. (More than two timers cannot be placed.)

When providing any timer component, specify the time in the Timer Value field.

Note) Attempting to place a logic component that cannot be placed in a certain logic area generates the error as shown below.

To remove any logic component that has been placed, select a None logic component and click the logic area to remove the component from (shown in light blue).

Clicking "Clear" brings back to the initial state with no input signal set, logic component placed or timer setting configured.

## [Saving PLC files]

1. To save a PLC file on the HDD, from PC-HMI <-> HDD in the upper right part of the main screen, click "Save."

2. Select the destination folder, enter a file name and click "Save." The PLC file is saved.

### 11.8. Log In (connection) and Log out (disconnection) to relay device via PC-HMI

### 11.8.1. Log in (connection)

1. From the offline screen, click the [Online Access to Device] button. The screen for selecting the device to access appears.

2. A list of devices that can be accessed appears. Click the radio button for the desired device to access under Model and click "Connect." (To cancel, click "Cancel" to go back to the offline initial screen.)

3. The access authentication screen appears. Click the radio button for the desired access level. (Monitor: view permission, Setting: write permission)

If you do not desire to log in, click "Cancel" to go back to the offline initial screen.

Note) If the Setting permission is selected from the panel, it is not possible to log in from the PC-HMI with the Setting permission. The error message as shown below appears.

4. Enter the password (when a password is used and the device is accessed with the Setting permission).

Note) This operation is required when the device is accessed with the password use setting and Setting permission.
The password use/unuse setting can be changed by operation from the front panel.
(For how to change the password use/unuse setting, see 4.3.4.3.7 of Chapter 4.)
When no password is used or the device is accessed with the Monitor permission, password entry is not required. Simply click "Login" to log in.

After entering the password in the Password field, click "Login."
Only half-width alphanumeric characters are acceptable to be included in a password.
The default password setting is "0000."
If a wrong password is given, the error message as shown below appears. Click "OK" and enter the password again.

5. Successful password authentication switches the device mode from offline to online.

```
Switching to Online mode...
```

Switching to Online mode...
6. After switching to the online mode, the initial screen according to the access level appears.
(1) Online initial screen for the view permission

(2) Online initial screen for the write permission

Operations enabled differ depending on the access level.
Items in blue: enabled
Items in gray: disabled
For operations enabled/disabled depending on the access level, see the list on the next page.

List of operations enabled/disabled for the respective access levels

| Type | Item | Offline mode | Online mode |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | $\begin{gathered} \text { View } \\ \text { permissio } \\ \mathrm{n} \end{gathered}$ | Write permissio |
| Record | Waveform Analysis | Y | N | N |
|  | Disturbance Record | N | Y | Y |
|  | Alarm Record | N | Y | Y |
|  | Event Record | N | Y | Y |
|  | Access Record | N | Y | Y |
|  | Clear Records | N | N | Y |
| Status | Metering | N | Y | Y |
|  | Digital I/O | N | Y | Y |
|  | Monitoring | N | Y | Y |
|  | LED Reset | N | Y | Y |
| Setting | Offline Setting | Y | N | N |
|  | Offline PLC | Y | N | N |
|  | Online Setting G1 | N | Y | Y |
|  | Online Setting G2 | N | Y | Y |
|  | Online PLC | N | Y | Y |
| Control | Control Mode | N | Y | Y |
|  | CB Open/Close | N | N | Y |
| Configuration | Configuration | N | Y | Y |
| Test | Contact Test | N | N | Y |
|  | Test Mode | N | N | Y |
| About | Help | Y | Y | Y |

The symbols in the table above have the following meanings.
$Y$ : The menu can be used to access a function screen.
Display of the function screen and operations other than device write are possible.
N : The menu is shown but grayed out and does not allow access to a function screen.
Neither display nor operation of the function screen is possible.
Note) Attempting an operation not permitted by the access level generates the error message as shown below.

11.8.2. Log off (disconnect) from the online mode

1. Click the [Disconnect] button in the upper left part of the online mode screen.

2. The dialog to confirm disconnection as shown below appears. Click "Yes."

3. The device mode is switched to offline.

### 11.9. PC-HMI operation menu

PC-HMI allows access to the individual items from the list of functions on the left side of the main screen. The name and overview of each item are given in the table below.

| No | Type | Name | Description |
| :---: | :---: | :---: | :---: |
| 1 | Record | Waveform Analysis | Starts the waveform analysis tool, a separate application (*1) |
| 2 |  | Disturbance Record | Disturbance record screen |
| 3 |  | Alarm Record | Supervision alarm record screen |
| 4 |  | Event Record | Event record screen |
| 5 |  | Access Record | Access record screen |
| 6 |  | Clear Records | Clear record screen |
| 7 | Status | Metering | Analog measurement status display screen |
| 8 |  | Digital I/O | DIO status display screen |
| 9 |  | Monitoring | Device supervision status display screen |
| 10 |  | LED Reset | LED reset screen |
| 11 | Setting | Offline Setting | Offline setting screen |
| 12 |  | Offline PLC | Offline PLC screen |
| 13 |  | Online Setting G1 | Online setting screen (Group 1) |
| 14 |  | Online Setting G2 | Online setting screen (Group 2) |
| 15 |  | Online PLC | Online PLC screen |
| 16 | Control | Control Mode | CB control mode screen |
| 17 |  | CB Open/Close | CB control execution screen |
| 18 | Configuration | Configuration | Configuration screen |
| 19 | Test | Contact Test | DO contact test screen |
| 20 |  | Test Mode | Test mode activation screen |
| 21 | About | Help | Shows the operation manual as a PDF file in a new window (*2) |

Note) Items that cannot be selected are grayed out and not enabled for selection.
(*1): Implemented by a different application and the menu only allows starting of the application.
(*2): Only allows starting of PDF. If no application is installed that is required for starting PDF, the instruction manual read error message appears.

### 11.10. Operate record functions

### 11.10.1. Disturbance record function

1. From the Function menu, select Disturbance Record.

2. The dates and times of disturbance occurrences are listed in the descending order of the date and time. Select the data to retrieve.
3. Save it in an arbitrary location on the HDD.
(The waveform analysis tool allows analysis of the waveform data saved.)
Note) The dates and times are represented as "-year-month-day-hour:-minute:-second.-millisecond."
Note) Up to five occurrences can be shown. If the data size is large, the number may be less than five.

### 11.10.2. Alarm record function (by self-diagnosis function)

1. From the Function menu, select Alarm Record.

2. The supervision alarm records are listed in the descending order of the date and time. Select the data to retrieve.
3. From PC-HMI -> HDD, click "Save" to save it in an arbitrary location on the HDD.

Note) If the number of record data exceeds 16, use the scroll bar for display.
Up to 200 data can be shown. For the details of the date and time indication, see 11.10.1

### 11.10.3. Event record function

1. From the Function menu, select Event Record.

2. The record data relating to preregistered events are listed in the descending order of the date and time.

Note) For the events, see 4.3.2.2.2 of Chapter 4.
3. Select the event record to retrieve and, from PC-HMI -> HDD, click "Save" to save it in an arbitrary location on the HDD.

Note) If the number of record data exceeds 16 , use the scroll bar for display.
Up to 512 data can be shown. For the details of the date and time indication, see 11.10.1.

### 11.10.4. Access record function

1. From the Function menu, click Access Record.

2. The record data relating to access to the preregistered device are listed in the descending order of the date and time.
3. From PC-HMI -> HDD, click "Save" to save it in an arbitrary location on the HDD.

Note) If the number of record data exceeds 16, use the scroll bar for display.
Up to 200 data can be shown. For the details of the date and time indication, see 11.10.1.
Note) For access operator and access record description, see the list below.

Access operator list (Operator)

| Access operator | PC-HMI indication |
| :---: | :---: |
| Front panel | Front Panel |
| PC-HMI | PC-HMI |
| Via Modbus communication I/F | via Modbus |
| Via TCP/IP communication I/F | via TCP/IP |
| Via CC-Link communication I/F | via CC-Link |
| Automatic cancellation on device | Automatic |
| Change of active setting group | Changed Active Setting Group |
| Change of DI detection voltage value | Changed DI Voltage |
| Change of configuration of disturbance record | Changed Config. of Disturbance Record |
| Change of password use setting | Changed Use of Password |
| Change of password | Changed Password |
| Change of USB connection channel | Changed USB Connection Channel |
| Change of VFD brightness | Changed VFD Brightness |
| Change of trip counter | Changed Trip Counter |
| Change of configuration of Modbus | Changed Config. of Modbus |
| Change of configuration of CC-Link | Changed Config. of CC-Link |
| Change of configuration of IEC61850 | Changed Config. of IEC61850 |
| Change of device name | Changed Device Name |
| Change of configuration of analog measurement status display | Changed Config. of Metering |
| Change of configuration of electric energy | Changed Config. of Energy |
| Change of configuration of time management | Changed Config. of Time Management |
| Change of CB control mode | Changed CB Control Mode |
| Change of configuration of DO contact test | Changed Config. of Contact Test |
| Change of configuration of SNTP | Changed Config. of SNTP |
| Change of PLC data | Changed PLC data |
| Change of relay setting | Changed Setting data |
| Clearing of fault/disturbance record | Cleared Fault/Disturbance Record |
| Clearing of alarm record | Cleared Alarm Record |
| Clearing of event record | Cleared Event Record |
| Adjustment of system clock | Adjusted System Clock |
| Activation of test mode | Activated Test Mode |
| Deactivation of test mode | Deactivated Test Mode |
| LED reset | Reset LEDs |
| Start of DO contact test | Started Contact Test |
| Stop of DO contact test | Stopped Contact Test |
| Locking of supervision | Locked Supervision |
| Unlocking of supervision | Unlocked Supervision |
| Start of interface test | Started Interface Test |
| Stop of interface test | Stopped Interface Test |
| Operation to open/close CB | Operated to Open/Close CB |

### 11.10.5. Clear record function

1. From the Function menu, click Clear Records.

2. Check the box for the record to clear and, from PC-HMI -> Device, click "Clear."
3. The confirmation dialog as shown below appears. Click "Yes" to start clearing.

4. The clearing completion dialog appears and the relevant record is cleared.

Note) The file clearing operation erases the relevant record file (The system does not allow clearing of access records.)

### 11.11. Showing statuses

11.11.1. Showing analog values measured

In the analog measurement status mode, the current statuses of analog values measured are listed.
11.11.1.1. Showing the current/voltage

1. From the Function menu, click Metering.

曰 Status
Metering
Digital I/O
Monitoring
LED Reset
2. From Category, click V/I.

3. The $\mathrm{V} / \mathrm{I}$ values for the side specified by the configuration are shown.

Primary side

| Metering |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | 13 | DI13 | Off | 29 | D013 | Off | 45 |  |  | 61 |  |  |
|  | 14 |  |  | 30 |  |  | 46 |  |  | 62 |  |  |
|  | 15 |  |  | 31 |  |  | 47 |  |  | 63 |  |  |
|  | 16 |  |  | 32 |  |  | 48 |  |  | 64 |  |  |

### 11.11.3. Showing device supervision status

1. From the Function menu, click Monitoring. The device supervision status values (current and alarm setting values) are listed.

Note) If the current value is equal to or larger than the alarm setting value, an alarm indication is given as shown below.

### 11.11.4. Resetting LEDs

1. From the Function menu, click LED Reset.
2. From PC-HMI -> Device, click "LED Reset."

3. The dialog as shown below appears. Click "Yes."

4. The latched LEDs are reset.

### 11.12. Setting mode

### 11.12.1. Online setting

1. From the Function menu, click the group to set.

Online Setting G1: listing and editing of Group 1
Online Setting G2: listing and editing of Group 2
2. Click the item to set from Category. A list of setting values is shown under Item. Click New Value for the item to make a change.
From the list, make a selection by clicking $\nabla$.
To enter a value, use the keyboard.

Note) If any value out of the setting range is entered, an error indication as shown below is given.

3. From PC-HMI -> Device, click "Write." The confirmation dialog as shown below appears. Click "Yes."

Note) To cancel writing of any setting value, click "No." The confirmation dialog as shown below appears. Click "Yes" to cancel.

4. Writing of the setting values to the device starts. When it has been completed, the completion message as shown below appears.

### 11.12.2. Switching between setting groups to activate

On the Online setting screen, the active group is marked as Active and the inactive group Inactive.

1. From the Function menu, click the setting group to activate.
(In this example, the active group is switched from Group 1 to Group 2.)

## Setting

Offline Setting
Offline PLC
Online Setting G1
Online Setting G2
Online PLC
2. From PC-HMI -> Device, click "Group- Active."

GRIFFIN -> Device

## Group2 Active

3. The confirmation dialog as shown below appears. Click "Yes."

4. The message as shown below appears and the active setting group is switched.

### 11.12.3. Reading/saving setting files from/to the HDD

1. From the Function menu, click the group to read setting values.
2. From PC-HMI <-> HDD in the lower right part of the main screen, click "Open."

3. Select the file to read and click "Open."

4. The read values are shown on the screen.

5. From PC-HMI -> Device in the upper right part of the main screen, click "Write." The confirmation dialog appears.

6. Click "Yes" to write the setting values to the device and activate them.

(To save setting value files)
7. From PC-HMI <-> HDD in the lower right part of the main screen, click "Save."

8. Select the destination folder, enter a file name and click "Save." The setting file is saved.

### 11.12.4. Online PLC

With MELPRO-D, the PLC function allows the user to configure the sequence in the relay. It is customizable according to the system by assigning the user-configured sequence outputs to contacts, for example.
11.12.4.1. Configuring online PLC (logic circuit)

A sequence can be configured for eight outputs. These sequence outputs can be assigned as DO signals described later.

[Adding PLC configuration]

1. From the Function menu, click Online PLC.
2. Click the Logic group and Logic to edit.

Logic 1-4: indication and editing screen for logic circuits 1 to 4 Logic5-8: indication and editing screen for logic circuits 5 to 8
3. The logic circuit editing screen as shown below appears. (The screen below shows a display example)

4. From the Item list on the screen above, select the signal to input and click. The selected signal is shown in light blue.
Click ">>" to select the input signal.
Note) The signal name can be searched by entering it on the Signal List by using the keyboard and clicking "Search."
5. From the list of circuit components, select the logic component to place and click the logic area to place it. The logic component is placed. After the placement has been completed, click "OK" to go back to the previous screen.

When providing any timer component, specify the time in the Timer Value field.
(Up to two timer components can be configured for each of Logics 1 to 8.)

For logic components that can and cannot be placed, see 11.7.3.
Attempting to place a component in an area that does not allow placement, the error message as shown below appears.

To remove any component that has been placed, select a None logic component and click the logic area to remove the component from (shown in light blue).

Clicking "Clear" brings back to the initial state with no input signal set, logic component placed or timer setting configured.

6. From PC-HMI -> Device in the upper right part of the main screen, click "Write." The dialog to confirm writing to the device appears. Click "Yes" to write the setting to the device.

For successful writing, the dialog as shown below appears.

Note) For reading/writing PLC data from/to the PC, perform the following operations.

1) Reading PLC data saved in the PC
1. From PC-HMI <-> HDD in the lower right part of the main screen, click "Open."

2. Select the folder and the file to read and click "Open."

3. The specified PLC data are read to the device.
2) Saving the configured PLC data to the PC
1. From PC-HMI <-> HDD in the lower right part of the main screen, click "Save."

2. Select the destination folder, enter a file name and click "Save."

3. The configured PLC data are saved in the specified folder.

DO allows DO configuration of output assignments from the signal list.

1. From the Function menu, click Online PLC.

## Setting

> Offline Setting
> Offline PLC
> Online Setting G1
> Online Setting G2
> Online PLC
2. Click DO. The DO assignment circuit indication and editing screen appears. Click the button in the red frame to assign input signals.

| Online PLC | Logic1-4 | DO Ctrl/Comm |  |
| :---: | :---: | :---: | :---: |
| INTER2 | DO1 |  | GRIFFIN -> Device |
| INTER3 | DO2 |  |  |
| INTER4 | $-\longdiv { D O 3 }$ |  | Write |
| INTER7 | D04 |  |  |
|  | D05 |  |  |
|  | D06 |  |  |
|  | D07 |  |  |
| TCNT_ALM | D08 |  |  |
|  | D09 |  | GRIFFIN <-> HDD |
|  | D010 |  |  |
|  | D011 |  | Open |
|  |  |  | Save |
|  | D012 |  |  |
|  | D013 |  |  |

3. Click the input signal button. The signal selection dialog as shown below appears.

From the list, select the desired signal and click "OK." (To search for a signal, enter the signal name in the Signal List and click "Search.")

4. From PC-HMI -> Device, click "Write" to write the setting to the device.

Note) For saving/reading PLC data to/from the PC, perform the same operation as 11.12.4.1.

### 11.12.4.3. Assignment of $C B$ control/communication output signals

Ctrl/Comm allows assignment of the CB control and communication output signals.
(COMM0 to COMM7 are used for assignment of communication outputs (IEC61850).)

1. From the Function menu, click Online PLC.
$\boxminus$ Setting
Offline Setting
Offline PLC
Online Setting G1
Online Setting G2
Online PLC
2. Click Ctrl/Comm. The CB control and communication output signal assignment circuit indication and editing screen appears. Click the button in the red frame to assign input signals.

3. Click the input signal button. The signal selection dialog for selecting a signal to assign appears.

From the list, select the signal and click "OK" to assign the signal.
(To search for a signal, enter the signal name in the Signal List and click "Search.")
The signal selected from the list and clicked is shown in light blue. Click "OK" to select the signal as an output signal.
4. From PC-HMI -> Device, click "Write" to write the setting to the device.

Note) For saving/reading PLC data to/from the PC, perform the same operation as 11.12.4.1.

### 11.13. Control functions

### 11.13.1. Setting the CB control mode

1. From the Function menu, select Control Mode.
2. The list of CB control mode items appears. Click New Value for the item to make a change. From the list, make a selection by clicking $\boldsymbol{\nabla}$.
To enter a value, use the keyboard.

3. From PC-HMI -> Device, click "Write." The write confirmation dialog appears. Click "Yes."

4. The new setting value is written to the device and the write completion message appears.

5. As shown below, the new value is set as the Curt. Value (current setting value).

### 11.13.2. Executing CB control

1. From the Function menu, click CB Open/Close.

CB control can be executed either as open control or close control and the button for the unavailable control operation is disabled.
Neither of them may be available depending on the addition status of the respective items.

2. From PC-HMI -> Device, click "Open"/"Close."
3. The dialog to confirm CB control execution appears. Click "Yes" to execute.

4. For successful CB control, the confirmation dialog as shown below appears.

Note) If the selected control failed, the error message as shown below appears.

### 11.14. Device setting

### 11.14.1. Setting the device name

1. From the Function menu, click Configuration.
2. From Category, click Device Name.
3. Enter the new name to set in Next Name.

4. From PC-HMI -> Device, click "Write." The confirmation dialog appears. Click "Yes."

5. The setting is written to the device.

6. The indication is not updated when the setting has been written to the device.

Click "Disconnect" to log off.
MITSUBISHI ELECTRIC MELPRO-GRIFFIN Ver.0.1.2.0

7. Click "Online Access to Device" to log in.
(For the details about logging in, see 11.8.1.)

```
MITSUBISHI ELECTRIC MELPRO-GRIFFIN Ver.0.1.2.0
```

Online Access to Device

## Offline

## Disconnect

8. The device name indication is updated when the device has been logged in.

### 11.14.2. Clock Adjust setting

Clock Adjust allows setting of the date and time.

| MELPRO-GRIFFIN Ver.0.1.2.0 |  |  |  |  | 4. |  | 10 - |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

1. From the Function menu, click Configuration.
2. From Category, click Clock Adjust.
3. Select the date and/or time to adjust.

New Date: year, month and date setting; New Time: hour, minute and second setting
Use the mouse to bring the cursor to the setting to change and directly enter with the keyboard or click the button on the right side of the cell to adjust the date and time.

4. From PC-HMI -> Device, click "Write" to write the setting to the device.

5. When writing has been completed, the adjusted date and time take effect.

Note) The date and time setting is applied immediately.

### 11.14.3. Time Management setting

Time Management allows setting of the daylight saving time and time synchronization.

1. From the Function menu, click Configuration.
2. From Category, click Time Management.
3. Select the Next Value for the item to change.

Select the item from the drop-down list.
For an item that requires entry of a value, use the keyboard to enter directly.
Note) If any value out of the setting range is entered, an error message as shown below appears.
Click "OK" and reenter a value within the range.

4. From PC-HMI -> Device, click "Write" to write the setting to the device.

Note) To change a Time Management item, power cycling is required for updating with the new setting.

### 11.14.4. Metering setting

Metering allows setting of the primary and secondary values of the measurement indication.

1. From the Function menu, click Configuration.
2. From Category, click Metering.
3. Select New Value for the item to change.

Select the item from the drop-down list.
For an item that requires entry of a value, use the keyboard to enter directly.
Note) If any value out of the setting range is entered, an error message as shown below appears.
Click "OK" and reenter a value within the range.

4. From PC-HMI -> Device, click "Write" to write the setting to the device.

### 11.14.5. DI Voltage setting

DI Voltage allows setting of the voltage level to detect with DI.

1. From the Function menu, click Configuration.
2. From Category, click DI Voltage.
3. Select a Next Value item.

Select the value to set from the drop-down list.
4. From PC-HMI -> Device, click "Write" to write the setting to the device.

Note) To change a DI detection voltage item, power cycling is required for updating with the new setting.
11.14.6. Configuring the disturbance record

Dist. Rec. allows setting of the time before relay operation of the waveform record and the maximum time of one phenomenon.

1. From the Function menu, click Configuration.
2. From Category, click Dist. Rec.
3. Select New Value for the item to change.

For an item that requires entry of a value, use the keyboard to enter directly.
Note) If any value out of the setting range is entered, an error message as shown below appears.
Click "OK" and reenter a value within the range.

4. From PC-HMI -> Device, click "Write" to write the setting to the device.

### 11.14.7. DO Contact Test setting

Contact Test allows setting of the output time of a contact test.

1. From the Function menu, click Configuration.
2. From Category, click Contact Test.
3. Select a New Value item.

Use the keyboard to directly enter the value to change.
Note) If any value out of the setting range is entered, an error message as shown below appears.
Click "OK" and reenter a value within the range.

4. From PC-HMI -> Device, click "Write" to write the setting to the device.

Note) The One Shot value set is the operating time for DO contact test in 11.15.1.

### 11.14.8. Electric Energy setting

Energy allows setting of the power flow direction and the initial values of electric energy, reverse electric energy, reactive electric energy and reverse reactive power.

1. From the Function menu, click Configuration.
2. From Category, click Energy.
3. Select New Value for the item to change.

Select the item from the drop-down list.
For an item that requires entry of a value, use the keyboard to enter directly.
Note) If any value out of the setting range is entered, an error message as shown below appears.
Click "OK" and reenter a value within the range.

4. From PC-HMI -> Device, click "Write" to write the setting to the device.

### 11.14.9. Trip Counter setting

Trip Counter allows setting of the trip count initial value and alarm value.

1. From the Function menu, click Configuration.
2. From Category, click Trip Counter.
3. Select New Value for the item to change.

For an item that requires entry of a value, use the keyboard to enter directly.
Note) If any value out of the setting range is entered, an error message as shown below appears.
Click "OK" and reenter a value within the range.

4. From PC-HMI -> Device, click "Write" to write the setting to the device.

SNTP allows setting of SNTP use/unuse and server IP address.

1. From the Function menu, click Configuration.
2. From Category, click SNTP.
3. Select New Value for the item to change.

For an item that requires entry of a value, use the keyboard to enter directly.
Note) If any value out of the setting range is entered, an error message as shown below appears.
Click "OK" and reenter a value within the range.

4. From PC-HMI -> Device, click "Write" to write the setting to the device.

### 11.15. Test functions

### 11.15.1. DO Contact Test

Contact Test forces activation of the relay output contact.

1. From the Function menu, click Contact Test.
2. Click the check box on the left of the item to conduct the DO contact test.
(The Status of the checked item changes from Off to On.)

Note) To change the operating time for the contact test, change One Shot Time in 11.14.7.
3. From PC-HMI -> Device, click "Execute." The dialog to confirm execution appears. Click "Yes" to execute.

4. The execution dialog as shown below appears and the contact test for the specified DO item is executed.

5. During execution, the Testing indication is given in the status area.

## Testing by PC-HMI

Note) If disconnection or PC-HMI termination is attempted during a contact test, the message to confirm contact test cancellation appears.

### 11.15.2. Test Mode

Test Mode allows setting of the temporary test mode for the relay.

1. From the Function menu, click Test Mode.

2. Select the mode for each item.

## Unlocked : Test mode disabled

Locked : Test mode enabled

3. From PC-HMI -> Device, click "Write." The dialog to confirm writing the data to the device appears. Click "Yes" to execute.

4. During the test, the "Testing by PC-HMI" indication is given in the status area.

Note) During a test from the front panel, the "Testing by Front Panel" indication is given.

Note) If disconnection or PC-HMI termination is attempted during a contact test, the message to confirm contact test cancellation appears.

### 11.15.3. Relay Interface Test

Interface Test allows simulated testing of relay operation without inputting any voltage or current.

1. From the Function menu, click Interface Test.

2 . Select the status for each item.
Deactivated : Disables the test.
Activated : Enables the test.

3. From PC-HMI -> Device, click "Write" to write the setting to the device.

During the test, the "Testing by PC-HMI" indication is given in the status area.

Note) If disconnection or PC-HMI termination is attempted during an interface test, the message to confirm interface test cancellation appears. The relay interface test is automatically canceled when 30 minutes have elapsed.

### 11.16. Showing the PC-HMI operation manual

1. From the menu screen, click Help.
2. Acrobat Reader is launched and the PC-HMI operation manual is shown as a pdf file.

Note) If Acrobat Reader is not installed on the PC, an error message appears.

## 12. Waveform Analysis

### 12.1. Introduction

Waveform Analysis tool in PC-HMI is provided, which enables the waveform data, the internal signal conditions, the digital inputs, the digital outputs etc.
The details of PC-HMI are described in PC-HMI instruction manual (JEPF-IL9504).

[^0]:    You can change the Display Style with the Configuration Function.
