Mitsubishi Electric Industrial Robot
CR800-D Controller
RH-3CRH/6CRH

Standard Specifications Manual

RH-3CRH series
RH-6CRH series

## $\triangle$ Safety Precautions

Always read the following precautions and the separate "Safety Manual" before starting use of the robot to learn the required measures to be taken.

All teaching work must be carried out by an operator who has received special training. (This also applies to maintenance work with the power source turned ON.)
Enforcement of safety training

For teaching work, prepare a work plan related to the methods and procedures of operating the robot, and to the measures to be taken when an error occurs or when restarting. Carry out work following this plan. (This also applies to maintenance work with the power source turned ON.)
Preparation of work plan

Prepare a device that allows operation to be stopped immediately during teaching work. (This also applies to maintenance work with the power source turned ON.)
Setting of emergency stop switch
$\triangle$ CAUTION During teaching work, place a sign indicating that teaching work is in progress on the start switch, etc. (This also applies to maintenance work with the power source turned ON.) Indication of teaching work in progress

Provide a fence or enclosure during operation to prevent contact of the operator and robot. Installation of safety fence

CAUTION Establish a set signaling method to the related operators for starting work, and follow this method.
Signaling of operation start

As a principle turn the power OFF during maintenance work. Place a sign indicating that maintenance work is in progress on the start switch, etc. Indication of maintenance work in progress

Before starting work, inspect the robot, emergency stop switch and other related devices, etc., and confirm that there are no errors.
Inspection before starting work

The points of the precautions given in the separate "Safety Manual" are given below.
Refer to the actual "Safety Manual" for details.

When automatic operation of the robot is performed using multiple control devices (GOT, programmable controller, push-button switch), the interlocking of operation rights of the devices, etc. must be designed by the customer.

Use the robot within the environment given in the specifications. Failure to do so could lead to a drop or reliability or faults. (Temperature, humidity, atmosphere, noise environment, etc.)

Transport the robot with the designated transportation posture. Transporting the robot in a non-designated posture could lead to personal injuries or faults from dropping.

Always use the robot installed on a secure table. Use in an instable posture could lead to positional deviation and vibration.

CAUTION
Wire the cable as far away from noise sources as possible. If placed near a noise source, positional deviation or malfunction could occur.

Do not apply excessive force on the connector or excessively bend the cable. Failure to observe this could lead to contact defects or wire breakage.

CAUTION
Make sure that the workpiece weight, including the hand, does not exceed the rated load or tolerable torque. Exceeding these values could lead to alarms or faults.

Securely install the hand and tool, and securely grasp the workpiece. Failure to observe this could lead to personal injuries or damage if the object comes off or flies off during operation.

Securely ground the robot and controller. Failure to observe this could lead to malfunctioning by noise or to electric shock accidents.

Indicate the operation state during robot operation. Failure to indicate the state could lead to operators approaching the robot or to incorrect operation.

When carrying out teaching work in the robot's movement range, always secure the priority right for the robot control. Failure to observe this could lead to personal injuries or damage if the robot is started with external commands.

Keep the jog speed as low as possible, and always watch the robot. Failure to do so could lead to interference with the workpiece or peripheral devices.

After editing the program, always confirm the operation with step operation before starting automatic operation. Failure to do so could lead to interference with peripheral devices because of programming mistakes, etc.

Make sure that if the safety fence entrance door is opened during automatic operation, the door is locked or that the robot will automatically stop. Failure to do so could lead to personal injuries.

Never carry out modifications based on personal judgments, or use nondesignated maintenance parts.
Failure to observe this could lead to faults or failures.

When the robot arm has to be moved by hand from an external area, do not place hands or fingers in the openings. Failure to observe this could lead to hands or fingers catching depending on the posture.

Do not stop the robot or apply emergency stop by turning the robot controller's main power OFF. If the robot controller main power is turned OFF during automatic operation, the robot accuracy could be adversely affected. Moreover, it may interfere with the peripheral device by drop or move by inertia of the arm.

Do not turn off the main power to the robot controller while rewriting the internal information of the robot controller such as the program or parameters.
If the main power to the robot controller is turned off while in automatic operation or rewriting the program or parameters, the internal information of the robot controller may be damaged.

Do not connect the Handy GOT when using the GOT direct connection function of this product. Failure to observe this may result in property damage or bodily injury because the Handy GOT can automatically operate the robot regardless of whether the operation rights are enabled or not.

Do not remove the SSCNET III cable while power is supplied to the multiple CPU system or the servo amplifier. Do not look directly at light emitted from the tip of SSCNET III connectors or SSCNET III cables of the Motion CPU or the servo amplifier. Eye discomfort may be felt if exposed to the light. (Reference: SSCNET III employs a Class 1 or equivalent light source as specified in JIS C 6802 and IEC60825-1 (domestic standards in Japan).)

Do not remove the SSCNET III cable while power is supplied to the controller. Do not look directly at light emitted from the tip of SSCNET III connectors or SSCNET III cables. Eye discomfort may be felt if exposed to the light. (Reference: SSCNET III employs a Class 1 or equivalent light source as specified in JIS C 6802 and IEC60825-1 (domestic standards in Japan).)

Attach the cap to the SSCNET III connector after disconnecting the SSCNET III cable. If the cap is not attached, dirt or dust may adhere to the connector pins, resulting in deterioration connector properties, and leading to malfunction.

Make sure there are no mistakes in the wiring. Connecting differently to the way specified in the manual can result in errors, such as the emergency stop not being released. In order to prevent errors occurring, please be sure to check that all functions (such as the teaching box emergency stop, customer emergency stop, and door switch) are working properly after the wiring setup is completed.

Use the network equipments (personal computer, USB hub, LAN hub, etc) confirmed by manufacturer. The thing unsuitable for the FA environment (related with conformity, temperature or noise) exists in the equipments connected to USB. When using network equipment, measures against the noise, such as measures against EMI and the addition of the ferrite core, may be necessary. Please fully confirm the operation by customer. Guarantee and maintenance of the equipment on the market (usual office automation equipment) cannot be performed.

To maintain the security (confidentiality, integrity, and availability) of the robot and the system against unauthorized access, DoS ${ }^{* 1}$ attacks, computer viruses, and other cyberattacks from unreliable networks and devices via network, take appropriate measures such as firewalls, virtual private networks (VPNs), and antivirus solutions.
Mitsubishi Electric shall have no responsibility or liability for any problems involving robot trouble and system trouble by unauthorized access, DoS attacks, computer viruses, and other cyberattacks.
*1 DoS: A denial-of-service (DoS) attack disrupts services by overloading systems or exploiting vulnerabilities, resulting in a denial-of-service (DoS) state.

## *CR800 controller

Notes of the basic component are shown.

Please install the earth leakage breaker in the primary side power supply of the controller because of leakage protection.

Note 1) Always use the terminal cover for the earth leakage breaker.

1) Prepare the following items.

| Part name | Specifications | Remarks |
| :--- | :--- | :--- |
| Earth leakage breaker | The following is recommended product. <br> Single phase: NV30FAU-2P-10A-AC100-240V-30mA <br> (Terminal cover: TCS-05FA2) | Prepared by customer. |
| Cable for primary power <br> supply | AWG14 $\left(2 \mathrm{~mm}^{2}\right)$ or above | Prepared by customer. <br> Tightening torque for terminal <br> fixing screw is 2 to 3N $\cdot \mathrm{m}$. |
| Grounding cable | AWG14 $\left(2 \mathrm{~mm}^{2}\right)$ or above | Prepared by customer. <br> Tightening torque for terminal <br> fixing screw is 2 to 3N $\cdot \mathrm{m}$. |
| ACIN cable | Terminal: M5, cable length: 3 m | Supplied with the product. |

2) Confirm that the primary power matches the specifications.
3) Confirm that the primary power is OFF and that the earth leakage breaker power switch is OFF.
4) Connect the ACIN cable to the breaker.

Connect the power terminals of the ACIN cable to the secondary side terminals of the earth leakage breaker. Also, ground the FG terminal of the cable.
5) Connect the ACIN cable to the ACIN connector on the rear of the controller.
$<1>$ Face the main key on the ACIN cable plug upwards. (Refer to the "ACIN cable connection" illustration.)
<2> Align the main key of the ACIN cable plug with the grooves on the ACIN connector. Push the plug into the connector as far as it will go.
The plug may be damaged if it is not correctly aligned with the connector.
$<3>$ Tighten the coupling on the ACIN cable, turning it to the right until it locks.
6) Connect one end of the grounding cable to the PE (protective earth) terminal on the controller and ground the other end (2-point grounding) in order to comply with the requirements of EN 61800-5-1 for the touch current of 3.5 mAAC or more.
7) Connect the primary power cable to the primary side terminal of the earth leakage breaker.

Be careful of interference with peripheral equipment.
Especially don't give a shock to the shaft (J3 axis). When you install the hand, be careful not to knock at the shaft end by the hammer etc. The shaft may be damaged.

Take care also of the following items.
(1)The robot's locus of movement may change with specified speed.

Especially as for the corner section, short cut distance may change. Therefore, when beginning automatic operation, moves at low speed at first, and you should gather speed slowly with being careful of interference with peripheral equipment.

Arch movement (example)
(2)It can be confirmed whether the specified position exist in the defined area by using the instruction command "Zone". It can utilize as one of the methods for collision evasion. Refer to the "detailed description of the instructions manual/function, and operation" of the separate volume for the details of the instruction command.
-Revision history

| Date of print | Specifications No. | Details of revisions |
| :---: | :---: | :---: |
| 2018-03-01 | BFP-A3606 | - First print. <br> - Environmental conditions of electromagnetic noise was modified. |
| 2018-12-25 | BFP-A3606-A | - Added further explanation of the ACIN cable. <br> - Added a network base card for EtherCAT (2F-DQ535-EC). <br> - Added explanation of the parallel I/O interface. <br> - "3.8 Magnet contactor control connector output (AXMC) for addition axes" was modified. |
| 2019-04-19 | BFP-A3606-B | - Correction of errors. Communication interface between robot controllers was deleted. Description of connectors (EXT1, OPT1, OPT2) was modified. |
| 2019-07-18 | BFP-A3606-C | - Added the procedure for enabling the safety diagnosis function (STO function). |
| 2020-01-24 | BFP-A3606-D | - Adopted the DVD-ROM format for RT ToolBox3/RT ToolBox3 mini. <br> - Added a figure to "2.1.2 The counter-force applied to the installation surface". <br> - Correction of errors. <br> Corrected the name of a contact for NETcable-1 and the number of connectors/ contacts. (Fig. 3-24) <br> Corrected the name of a signal. (Table 7-2) |
| 2020-04-24 | BFP-A3606-E | - Now supports the robot safety option (4F-SF002-01). |
| 2020-10-30 | BFP-A3606-F | - Amended the precautions regarding the prevention of unauthorized access. <br> - Added an example of a protective circuit. (Fig. 3-5) <br> - Added information to the specifications of the earth leakage breaker. <br> - Added precautions for vertical installation of the robot controller. <br> - Corrected the battery name. (ER6 $\rightarrow$ ER6V) <br> - Corrected other mistakes and changed some sections. |
| 2021-01-22 | BFP-A3606-G | - Added "6.4 EMC installation guideline". |
| 2021-01-29 | BFP-A3606-H | - Updated contents for the optional product "MELFA-3D Vision 3.0 (3F-53UWINM)". |
| 2021-02-19 | BFP-A3606-J | - Added support for the Function expansion card option (2F-DQ510, 2F-DQ511, 2F-DQ520, 2F-DQ521). |
| 2021-04-01 | BFP-A3606-K | - Elaborated on explanations on the STO function. |
| 2021-09-30 | BFP-A3606-M | - Corrected the explanation of the parameter "SRVON". <br> - Added illustrations showing the installation position of ferrite cores. (Fig. 3-6) <br> - Revised "(6) Parallel I/O interface". <br> - Revised "(8) Parallel I/O unit". <br> - Corrected the explanation of noise in "6.2 Working environment". <br> - Corrected other mistakes and changed some sections. |
| 2022-01-31 | BFP-A3606-N | - Revised "6.4 EMC installation guideline". <br> - Corrected other mistakes and changed some sections. |
| 2022-06-30 | BFP-A3606-P | - Corrected the model name of the EtherCAT module manufactured by HMS. |
| 2022-11-30 | BFP-A3606-Q | - Changed the parallel I/O interface connector (supplied). <br> - Changed the plug of the external I/O cable for the parallel I/O interface. <br> - Corrected other mistakes and changed some sections. |
| 2023-04-17 | BFP-A3606-R | - The HMS module model was corrected. <br> - Added table about controller safety performance. (Table 3-2) <br> - Corrected other mistakes and changed some sections. |
| 2023-06-07 | BFP-A3606-S | - Added information on the fault loop impedance to "3.1.2 (2) Operating supply". <br> - Added descriptions to "6.1.1 Table 6-1: Self-diagnosis stop functions" regarding that the thermal memory function is not supported for the overload protection function and overcurrent diagnosis function. |
|  |  |  |

This series offers small-size industrial robots developed using Mitsubishi's latest technology. They are especially designed to handle and assemble mechanical parts. They are Mitsubishi's answer to the customer's need to achieve a compact manufacturing facility capable of highly flexible production, as necessitated by the diffusion of high-density product groups and the shorter product life cycles that have become common-place in recent years.
However, to comply with the target application, a work system having a well-balanced robot arm, peripheral devices or robot and hand section must be structured.
When creating these standard specifications, we have edited them so that the Mitsubishi robot's characteristics and specifications can be easily understood by users considering the implementation of robots. However, if there are any unclear points, please contact your nearest Mitsubishi branch or dealer.
Mitsubishi hopes that you will consider these standard specifications and use our robots.

Note that in this specification document the specifications related to the robot arm is described in Page 10, "2 Robot arm", the specifications related to the controller in Page 40, "3 Controller", and software functions and a command list in Page 102, "4 Software" separately.

This document has indicated the specification of the following types robot.

| Robot type | ${ }^{*}$ RH-3CRH/-S15 |
| :--- | :--- |
|  | *RH-6CRH/-S15 |

## 1 General configuration

### 1.1 Structural equipment

Structural equipment consists of the following types.

### 1.1.1 Standard structural equipment

The following items are enclosed as a standard.
(1) Robot arm
(2) Controller
(3) Machine cable
(4) Robot arm installation bolts
(5) CD-ROM (Instruction manual)

### 1.1.2 Special specifications

For the special specifications, some standard configuration equipment and specifications have to be changed before factory shipping. Confirm the delivery date and specify the special specifications at the order.
1.1.3 Options

User can install options after their delivery.
1.1.4 Maintenance parts

Materials and parts for the maintenance use.

### 1.2 Model type name of robot

This robot has arranged the type name corresponding to load mass, arm length, and environment specification. Details are shown below, please select the robot suitable for the customer's use.

\subsection*{1.2.1 How to identify the robot model <br> 

(a). RH .............................. Indicates the horizontal multiple-joint robot.
(b). $\qquad$
Example)
3: 3 kg
6: 6 kg
(c). CRH $\qquad$ Indicates the CRH series.
(d). $\qquad$ Indicates the arm length.
Example)
40: 400 mm
60: 600 mm
70: 700 mm
(e). $\Delta \Delta$ $\qquad$ Indicates the vertical stroke length.
Example)
18: 180 mm stroke
20: 200 mm stroke
(f). D $\qquad$ Indicates the controller type.

D: Stand alone type
(g). - Sxx $\qquad$ Indicates a special model. In order, limit special specification.
Example)
S15: The parallel I/O interface installed on the controller is source type (2D-TZ378). It was originally sink type (2DTZ368).
1.2.2 Combination of the robot arm and the controller

Table 1-1: Combination of robot arm and controller

| Robot (robot arm <br> controller) | Robot arm | Arm length (mm) | Vertical stroke length (mm) | Controller |
| :--- | :--- | :--- | :--- | :---: |
| RH-3CRH4018-D | RH-3CRH4018-D-A | 400 | 180 |  |
| RH-6CRH6020-D | RH-6CRH6020-D-A | 600 | 200 | CR800-CHD |
| RH-6CRH7020-D | RH-6CRH7020-D-A | 700 | 200 |  |

### 1.3 Contents of the structural equipment

### 1.3.1 Robot arm <br> The list of structural equipment is shown in below.

Fig.1-1: Structural equipment

### 1.3.2 Controller

The devices shown below can be installed on the controller.
The controllers that can be connected differ depending on the specification of the robot. (Refer to Page 2, "1.2 Model type name of robot".)

Fig.1-2: Structural equipment

### 1.3.3 Function extension device

These devices (option) are used to extend the function of the robot.

MELFA-3D Vision 3.0
-3F-53U-WINM

Fig.1-3: Function extension device

### 1.4 Contents of the Option equipment and special specification

A list of all Optional equipment and special specifications are shown below.
Table 1-2: List of the optional equipment and special specifications

| Item | Model | Specifications | $\begin{aligned} & \text { Classification } \\ & \text { Note1) } \end{aligned}$ | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| Machine cables (replacement) | 1F-ロロUCBL-42 | Fixed type | $\bigcirc$ | 3m, 10m, 15m, 20m (used as alternative cables to the standard 5m cables.) |
|  | 1F-םaLUCBL-42 | Flexed type | O | $10 \mathrm{~m}, 15 \mathrm{~m}, 20 \mathrm{~m}$ (used as alternative cables to the standard 5m cables.) |
| Simple teaching pendant | R32TB | Cable length: 7m | $\bigcirc$ | ENABLE switch (three-position switch) is equipped. IP65 compatible |
|  | R32TB-15 | Cable length: 15 m | $\bigcirc$ |  |
| Parallel I/O interface | $\begin{aligned} & \text { 2D-TZ368 (sink type)/ } \\ & \text { 2D-TZ378 (source type) } \end{aligned}$ | Input/output: 32/32 points Insulated type output signal (0.1 A/24 V output per point) Insulated type input signal ( $9 \mathrm{~mA} / 24 \mathrm{~V}$ input per point) | $\square$ | An interface that expands the number of external I/O points. The 2D-TZ368 (sink type) is installed in SLOT1 of the robot controller from the factory. <br> The 2D-TZ378 (source type) is installed in the S15 with special specifications. |

Be careful to the USB cable to apply neither the static electricity nor the noise. Otherwise, it becomes the cause of malfunction.

Use the network equipments (personal computer, USB hub, LAN hub, etc) confirmed by manufacturer. The thing unsuitable for the FA environment (related with conformity, temperature or noise) exists in the equipments connected to USB.
When using network equipment, measures against the noise, such as measures against EMI and the addition of the ferrite core, may be necessary. Please fully confirm the operation by customer. Guarantee and maintenance of the equipment on the market (usual office automation equipment) cannot be performed.

Note1) The maximum speed is the value which applied MvTune2 (high-speed movement mode).
In addition, it is the value during load conditions in which the effects of automatic speed compensation due to load mass are not being imparted.
Note2) The pose repeatability details are given in Page 14, "2.2.1 Pose repeatability".

Note3) The value with the movements and conditions below when the MvTune2 (high-speed movement mode) is applied.

- The cycle time may increase with the case where the positioning accuracy of the work etc. is necessary, or by the moving position.

(Unit: mm)

Note4) The values in parentheses are the values when the large inertia mode is enabled.
Note5) When the maximum load is installed, the downward pushing force generated at the tip of the load is obtained with $\mathrm{J} 1, \mathrm{~J} 2$, and J 4 axes stopped. The force shown above is the maximum value. When the force is applied for a long time, an overload error will be generated. Prevent errors from occurring.
Note6) The values in parentheses are the values when the large inertia mode is enabled.
Note7) The protection specification details are given in Page 21, "2.2.7 Protection specifications".
Note8) Sets the robot's operating environmental temperature as parameter OLTMX. Corresponding to the environment, the continuous control action performance and the overload-protection function are optimized. (Refers to "Optimizing the overload level" described in "Chapter 5 Functions set with parameters" of separate instruction manual/ Detailed explanations of functions and operations for details.)

## (2) RH-6CRH

Table 2-2: Standard specifications of robot arm

Note1) The maximum speed is the value which applied MvTune2 (high-speed movement mode).
In addition, it is the value during load conditions in which the effects of automatic speed compensation due to load mass are not being imparted.
Note2) The pose repeatability details are given in Page 14, "2.2.1 Pose repeatability".

Note3) The value with the movements and conditions below when the MvTune2 (high-speed movement mode) is applied.

- The cycle time may increase with the case where the positioning accuracy of the work etc. is necessary, or by the moving position.

Note4) The values in parentheses are the values when the large inertia mode is enabled.
Note5) When the maximum load is installed, the downward pushing force generated at the tip of the load is obtained with $\mathrm{J} 1, \mathrm{~J} 2$, and J 4 stopped. The force shown above is the maximum value. When the force is applied for a long time, an overload error will be generated. Prevent errors from occurring.
Note6) The values in parentheses are the values when the large inertia mode is enabled.
Note7) The protection specification details are given in Page 21, "2.2.7 Protection specifications".
Note8) Sets the robot's operating environmental temperature as parameter OLTMX. Corresponding to the environment, the continuous control action performance and the overload-protection function are optimized. (Refers to "Optimizing the overload level" described in "Chapter 5 Functions set with parameters" of separate instruction manual/ Detailed explanations of functions and operations for details.)

### 2.1.2 The counter-force applied to the installation surface

The counter-force applied to the installation surface for the strength design of the robot installation surface is shown.

Table 2-3: Value of each counter-force

|  | Unit | RH-3CRH | RH-6CRH6020 | RH-6CRH7020 |
| :--- | :---: | :---: | :---: | :---: |
| Falls moment: $\mathrm{M}_{\mathrm{L}}$ | $\mathrm{N} \cdot \mathrm{m}$ | 220 | 410 | 500 |
| Torsion moment: $\mathrm{M}_{\mathrm{T}}$ | $\mathrm{N} \cdot \mathrm{m}$ | 180 | 260 | 370 |
| Horizontal translation force: $\mathrm{F}_{\mathrm{H}}$ | N | 820 | 800 | 960 |
| Vertical translation force: $\mathrm{F}_{\mathrm{V}}$ | N | 320 | 640 | 670 |

### 2.2 Definition of specifications

The accuracy of pose repeatability mentioned in catalogs and in the specification manual is defined as follows.

### 2.2.1 Pose repeatability

For this robot, the pose repeatability is given in accordance with JIS B 8432 (Pose repeatability). Note that the value is based on 100 measurements (although 30 measurements are required according to JIS).
[Caution] The specified "pose repeatability" is not guaranteed to be satisfied under the following conditions.
[1] Operation pattern factors

1) When an operation that approaches from different directions and orientations are included in relation to the teaching position during repeated operations
2) When the speed at teaching and the speed at execution are different
[2] Load fluctuation factor
3) When work is present/absent in repeated operations
[3] Disturbance factor during operation
4) Even if approaching from the same direction and orientation to the teaching position, when the power is turned OFF or a stop operation is performed halfway
[4] Temperature factors
5) When the operating environment temperature changes
6) When accuracy is required before and after a warm-up operation
[5] Factors due to differences in accuracy definition
7) When accuracy is required between a position set by a numeric value in the robot's internal coordinate system and a position within the actual space
8) When accuracy is required between a position generated by the pallet function and a position within the actual space

### 2.2.2 Mass capacity

The robot's mass capacity is expressed solely in terms of mass, but even for tools and works of similar mass, eccentric loads will have some restrictions When designing the tooling or when selecting a robot, consider the following issues.
(1) The tooling should have the value less or equal than the smaller of the allowable moment of inertia found in Page 10, "2.1.1 Basic specifications".
(2) Fig. 2-1 and Fig. 2-2 shows the distribution dimensions for the center of gravity in the case where the volume of the load is relatively small. Use this figure as a reference when designing the tooling. Please use the robot in the allowable moment of inertia of maximum moment of inertia shown in Fig. 2-1 and Fig. 2-2.
[Caution] Depending on the operating speed and operating posture of the robot, vibration, overload, and overcurrent alarms may occur even if the mass and inertia of the hand, workpiece, etc. are within the permissible range above. In such cases, please reduce acceleration and deceleration (Accel command) speeds and movement speed (Ovrd command). Although the standard value to reduce is $50 \%$ for each command, please adjust corresponding to the movement posture. Refer to separate "Instruction Manual/Detailed Explanation of Functions and Operations" for details of each command. Furthermore, these sorts of events will occur more readily if, for example, the hand/workpiece parameters are not set correctly, or the optimum acceleration/deceleration setting is disabled.
[Caution] Refer to Page 16, "2.2.3 Relationships Among Mass Capacity, Speed, and Acceleration/ Deceleration Speed", and set the values of the mass, magnitude, and distance to the centroid of a tool and a workpiece to parameters.
If parameters are not set exactly, the lifetime of reduction gears, a belt, etc. is affected.
[Caution] The overhang amount of the load, such as the mass capacity and the allowable moment of inertia defined in this section, are dynamic limit values determined by the capacity of the motor that drives axes or the capacity of the speed reducer. Therefore, it does not guarantee the accuracy on all areas of tooling. Guaranteed accuracy is measured from the center point of the mechanical interface surface. Please note that if the point of operation is kept away from the mechanical interface surface by long and low-rigid tooling, the positioning accuracy may deteriorate or may cause vibration. Note that the allowable offset value ( $Z$ direction) from the lower edge of the shaft to the position of center of gravity is 100 mm .
[Caution] Even within the allowable range previously mentioned, an overload alarm may be generated if an ascending operation continues at a micro-low speed. In such a case, it is necessary to increase the ascending speed.
[Caution] This robot will restrict speed automatically by internal controls when the load center-of-gravity position separates from the shaft center. Refer to Page 16, "2.2.3 Relationships Among Mass Capacity, Speed, and Acceleration/Deceleration Speed" in detail. The allowance distance (allowance offset amount) from the center of the shaft to the center of gravity for loads is 150 mm .
[Caution] When the large inertia mode is enabled, it is possible to use large hands (or workpieces) that exceed the allowable inertia for the standard load mode, but if the inertia exceeds the allowable inertia for the standard load mode, the permissible value for the distance from the center of the shaft to the center of gravity of the load (the offset amount) is 10 mm .

Fig.2-1: Position of the center of gravity for loads (for loads with comparatively small volume): RH-3CRH

Fig.2-2: Position of the center of gravity for loads (for loads with comparatively small volume): RH-6CRH

### 2.2.3 Relationships Among Mass Capacity, Speed, and Acceleration/Deceleration Speed

This robot automatically sets the optimum acceleration and deceleration speeds and maximum speed, according to the load capacity and size that have been set, and operates using these automatically set speeds.
To achieve that, it is necessary to correctly set the actual load data (mass and size of hand and work) to be used. However, vibration, overheating and errors such as excessive margin of error and overload may occur, depending on the robot operation pattern or ambient temperature.
In this case, reduce the speed and the acceleration and deceleration rate before continuing to use. This is done by accessing the robot program and adjusting the speed settings (Ovrd) and the acceleration and deceleration settings (Accel).
If a setting is performed in such a way that it falls below the mounted load, the life span of the mechanism elements used in the robot may be shortened. In the case of a work requiring a high degree of accuracy, set up the load correctly and use the robot by lowering the ratios of the acceleration and deceleration speeds.
(1) Setting Load Capacity and Size (Hand Conditions)

Set up the capacity and size of the hand with the "HNDDAT*" parameter (optimum acceleration/deceleration setting parameter), and set up the capacity and size of the work with the "WRKDAT*" parameter. Numbers 0 to 8 can be used for the asterisk (*) part. Designate the "HNDDAT*" and "WRKDAT*" parameters to be used using the "LoadSet" command in a program.
For more details, refer to the separate "Instruction Manual/Detailed Explanation of Functions and Operations."
It is the same meaning as "LoadSet 0.0 " if not using the "LoadSet".
<Factory default settings>

|  | Hand mass <br> kg | size X <br> mm | size Y <br> mm | size Z <br> mm | center-of-gravity <br> position Xmm | center-of-gravity <br> position $\mathbf{Y ~} \mathrm{mm}$ | center-of-gravity <br> position $\mathbf{Z ~ m m}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| RH-3CRH series |  |  |  |  |  |  |  |
| HNDDAT $^{*}$ | 3.0 | 82.0 | 82.0 | 60.0 | 0.0 | 0.0 | 20.0 |
| WRKDAT $^{*}$ | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 |

|  | Hand mass <br> kg | size X <br> mm | size Y <br> mm | size Z <br> mm | center-of-gravity <br> position Xmm | center-of-gravity <br> position Y mm | center-of-gravity <br> position Z mm |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| RH-6CRH series |  |  |  |  |  |  |  |
| HNDDAT* | 6.0 | 82.0 | 82.0 | 60.0 | 0.0 | 0.0 | 20.0 |
| WRKDAT $^{*}$ | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 |

Note) The position of the center of gravity is located at the center of the surface at the bottom of the shaft. Set the $\mathrm{X}, \mathrm{Y}$ and Z center of gravity positions for the tool coordinate directions (the Z center of gravity position will be a plus for downward directions).

### 2.2.4 Vibrations at the Tip of the Arm during Low-Speed Operation of the Robot

Vibrations at the tip of the arm may increase substantially during the low-speed operation of the robot, depending on the combination of robot operation, hand mass and hand inertia. This problem occurs when the vibration count specific to the robot arm and the vibration count of the arm driving force are coming close to each other. These vibrations at the tip of the arm can be reduced by taking the following measures:

1) Change the robot's operating speed by using the Ovrd command.
2) Change and move the teaching points of the robot.
3) Change the hand mass and hand inertia.
2.2.5 Vibration of shaft (J3 axis) position and arm end

Vibrations at the tip of the arm may increase substantially during operation under the shaft position near the low end or the high end of the robot, depending on the combination of hand mass and hand inertia. This problem occurs according to that inertia, because the distance from the shaft support section to the shaft end becomes long. When this vibration affects the robot's operations, please change operating speed etc. like the above Page 16, "2.2.4 Vibrations at the Tip of the Arm during Low-Speed Operation of the Robot".
(1) Relationship Between Mass Capacity and Speed

A function to optimize the maximum speed of each axis according to the setting value of the load capacity will be activated (Refer to Fig. 2-3).
However, this function does not work with the load mass of 2 kg or less.
When the load mass is changed to exceed 2 kg , the maximum speed is compensated according to the load mass.
[CAUTION] Depending on the operation pattern, the speed and/or acceleration/deceleration at the front edge may not be parallel with the speed and the rate of change of acceleration/deceleration specified in a program.

Fig.2-3: Automatic compensation of speed
(2) Relationship Between Height of Shaft (J3 Axis) and Acceleration/Deceleration Speed

A function to optimize the acceleration/deceleration speed according to the height of the shaft (Refer to Fig. $2-4$, Fig. 2-5) will be activated. This function is invalid if the shaft (axis J3) operates at a position above P3 in Fig. 2-4. Acceleration/deceleration is compensated for at a position below P3 in Fig. 2-4 if the position of the center of gravity of the load is located at the front edge of the shaft.

Fig.2-4: Area in which acceleration/deceleration speed is compensated
Table 2-4: Area in which acceleration/deceleration speed is compensated

| Type | J3 axis stroke (mm) |  | Compensation <br> area |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Stroke length | P1(Upper end) | P2(Lower end) | (P2 to P3) |

RH-3CRH

RH-6CRH

Fig.2-5: Automatic compensation of acceleration/deceleration speed

## (3) Relationship Between Offset Amount and Maximum Speed

A function to optimize the maximum speed of each axis according to the offset amount will be activated. (Refer to Fig. 2-6.)

RH-3CRH

RH-6CRH

Fig.2-6: Relationship Between Offset Amount and Maximum Speed
[Supplementary explanation 1]: The setting which shortens execution time
The execution time can be improved by using the following methods.

1) Perform continuous path operation using the Cnt command.
2) Control the optimum acceleration/deceleration using the Oadl command.
3) Control the optimum speed using the Spd command.
[Supplementary explanation 2]: The setting which improves continuous control action performance in a short wait time The continuous control action performance can be improved by setting a smaller value in the optimum acceleration/ deceleration adjustment rate parameter (JADL). In this robot, the acceleration/deceleration speed is initialized for quick moves (setting of A in the Fig. 2-7).
If quick moves (short moving time) are required, such as L/UL work on machined parts, the acceleration/deceleration speed can be increased by initial setting (setting of A in the Fig. 2-7).
However, please note that some setting values of acceleration/deceleration speed tend to cause overload and overheat errors. In such a case, extend the wait time, reduce the acceleration/deceleration speed, or decrease the moving speed. This setting is suited for continuous operations that have a short tact time, such as palletizing work.

Fig.2-7: Relationship between Acceleration/deceleration Speed and Tact Time (Conceptual Drawing)
(4) Time to reach the position repeatability

When using this robot, the time to reach the position repeatability may be prolonged due to the effect of residual vibration at the time of stopping. If this happens, take the following measures:

1) Change the operation position of the $Z$ axis to the location near the top as much as possible.
2) Increase the operation speed prior to stopping.
3) When positioning the work near the bottom edge of the $Z$ axis, if no effectiveness is achieved in step "2)" above, perform operation (1) (robot path: $\mathrm{O} \rightarrow \mathrm{A} \rightarrow \mathrm{C}$ ). In the case of operation (2) (robot path: O $\rightarrow B \rightarrow C$ ), residual vibration may occur. (Refer to Fig. 2-8.)

Fig.2-8: Recommended path when positioning at the bottom edge of the $Z$ axis

### 2.2.6 Collision detection

This series have the "collision detection function" which detects the abnormalities by the collision of the robot arm, and the initial setting has set this function as the enable to suppress damage to the minimum. Although the enable/disable of this function can be changed by parameter: COL and command: ColChk, you should use in valid condition of this function for protection of the robot and of the peripheral equipment. The abnormalities are detected by the robot's kinetics model, presuming torque necessary for movement at any time. Therefore, the setting parameter (HNDDAT*, WRKDAT*) of the hand and the work piece conditions should be right. And, it may be detected as the collision in movement as speed and motor torque are changed rapidly. (for example, the movement near the place of the origin by linear interpolation, the reversal movement, the cold condition, the operation after long term stoppage)
In such a case, by adjusting the value of the setting parameter (COLLVL, COLLVLJG) of the collision detection level according to actual use environment, the sensitivity of collision detection can be optimized and the damage risk can be reduced further. And, in the operation after the low temperature or long term stoppage, please operate by accustoming at low speed (warm-up), or use the warm-up operation mode. Refer to the separate instruction manual "Detailed explanations of functions and operations" for details of related parameter.

Table 2-5: Factory-shipments condition

|  | JOG operation | Automatic |
| :--- | :---: | :---: |
| RH-3CRH/RH-6CRH | Valid | Invalid |

### 2.2.7 Protection specifications

(1) Types of protection specifications

The robot arm has protection specifications that comply with the IEC Standards. The protection specifications and applicable fields are shown in Table 2-6.

Table 2-6: Protection specifications and applicable fields

| Type | Protection <br> specifications <br> (IEC Standards <br> value) | Classification | Applicable field | Remarks |
| :--- | :--- | :--- | :--- | :--- |
| RH-3CRH | Robot arm: IP20 | General-purpose <br> environment <br> specifications | General assembly <br> Slightly dusty environment |  |
| RH-6CRH |  |  |  |  |

The IEC IP symbols define the degree of protection against solids and fluids, and do not indicate a protective structure against the entry of oil.
The IEC standard is described by the following "Information" And, the corrosion of the rust etc. may occur to the robot with the liquids.
[Information]

- The IEC IP20

It indicates the protective structure that prevents an iron ball $120^{+0.05} \mathrm{~mm}$ diameter, which is being pressed with the power of $3.1 \mathrm{~kg} \pm 10 \%$, from going through the opening in the outer sheath of the supplied equipment.

### 2.3 Names of each part of the robot

Rear view of the base section

. CAUTION
When the brake release switch is pressed, the J3 axis will drop by its own weight. For added safety, provide support or take other precaution to prevent the falling of the J3 axis.

Fig.2-9: Names of each part of the robot

### 2.5 Tooling

### 2.5.1 Wiring and piping for hand

Shows the wiring and piping configuration for a standard-equipped hand.

## Model of connector and coupling

| No. | Product <br> name | Qty. | Robot side |  | Counter side |  |  |
| :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: |
|  | Model Specifications |  | Model Specifications | Manufacturer | Remarks |  |  |
| (1) | Coupling | 4 | One-touch $\varphi 6$ pneumatic coupling | SMC | $\varphi 6$ pneumatic pipe | SMC | Customer-prepared item |
| (2) | Coupling | 2 | One-touch $\varphi 4$ pneumatic coupling | SMC | $\varphi 4$ pneumatic pipe | SMC | Customer-prepared item |
| (3) | Connector | 2 | D-sub 15-pin connector <br> 17JE-13150-02(D1)A | DDK | D-sub 15-pin connector <br> (with hoods) <br> 17JE-23150-02(D8C)-CG <br> (Fixing screw: \#4-40) | DDK | Enclosed |

Fig.2-16: Wiring and piping for hand

### 2.5.2 Internal wiring and piping

(1) General environment

1) In the robot, two lengths of $\varphi 6$ pneumatic hose and a length of $\varphi 4$ pneumatic hose are piped as the primary piping between the pneumatic inlet on the base and the top part of the No. 2 arm .
2) The pneumatic inlet ports on both the base and the No. 2 arm equip $\varphi 6$ pneumatic couplings and $\varphi 4$ pneumatic couplings as a bridge.

### 2.5.3 Internal wiring for the hand output cable

1) In the robot, a cable for the hand is wired between the base and the top part of the No. 2 arm (AWG \#24 $\left(0.2 \mathrm{~mm}^{2}\right) \times 15$ cores). The cable ends in connectors as a bridge of data.

### 2.5.4 About the Installation of Tooling Wiring and Piping (Examples of Wiring and Piping)

The customer is required to provide tooling wiring, piping and metal fixtures.
Screw holes are provided on the robot arm for the installation of tooling wiring, piping and metal fixtures.
(Refer to the Fig. 2-17.)
The length of wiring and piping and the installation position on the robot must be adjusted according to the work to be done by the robot. Please use the following example as reference.
<Precautions>

- After performing wiring and piping to the robot, operate the robot at low speed to make sure that each part does not interfere with the robot arm and the peripheral devices.
- If you install metal fixtures and a solenoid valve using the screw holes on the No. 2 arm portion, add the mass of the metal fixtures and the solenoid valve to mass of a hand then set the HNDDAT parameter. Moreover, Fix the parts, such as a solenoid valve, firmly to prevent the parts getting shaky during operation of a robot.
- Depending on the connection of a number of hand cables to a flexible tube or its connecting condition, an excessive power is applied to the flexible tube. Thus, the life of the flexible tube may be shortened or the mounting nut of the flexible tube may be loosened.

(Unit: mm)

Fig.2-17: Location of screw holes for fixing wiring/piping (RH-3CRH)

Fig.2-18: Location of screw holes for fixing wiring/piping (RH-6CRH)

### 2.5.5 Air supply circuit example for the hand

Fig. 2-19 shows an example of the pneumatic circuit of air supply for the hand.
(1) Make sure that a surge voltage protection circuit such as a diode is connected to the solenoid coil in parallel.
(2) When the factory pneumatic pressure drops, as a result of the hand clamp strength weakening, there can be damage to the work. To prevent it, install a pressure switch to the source of the air as shown in Fig. 2-19 and use the circuit described so that the robot stops when pressure drops. Use a hand with a spring-pressure clamp, or a mechanical lock-type hand, that can be used in cases where the pressure switch becomes damaged.
(3) If the air supply temperature (primary piping) used for the tool etc. is lower than ambient air temperature, the dew condensation may occur on the coupling or the hose surface.

Fig.2-19: Air supply circuit example for the hand

### 2.6 Options

■What are options?
There are a variety of options for the robot designed to make the setting up process easier for customer needs.
customer installation is required for the options.
(1) Machine cable (replacement): Fixed type
-Order type : - 1F- $\quad$ UCBL-42 Note) $\square$ represents the cable length.
-Outline

Replace the enclosed 5 m standard machine cables (fixed type) with these cables to reduce or extend the distance between the controller and the robot arm. The cables consist of a signal cable and a power cable.

## -Configuration

Table 2-7: Configuration equipment and types

| Part name | Type Note1) $^{\|c\|}$ | Qty. | Remarks |
| :--- | :--- | :--- | :--- |
| Machine cable (replacement): Fixed type | 1F- $\square \square$ UCBL-42 | 1 pcs. | $3 \mathrm{~m}, 10 \mathrm{~m}, 15 \mathrm{~m}$, or 20 m each |
| Cable ties | T18R | 3 pcs. | Incl. 2 spare pcs. |

Note1) $\quad$ represents the cable length.

## (2) Machine cable (replacement): Flexed type

■Order type: •1F-a LUCBL-42 Note) represents the cable length.
-Outline

These cables consist of flexed cables, and used for extending the distance between the controller and the robot arm. Replace the enclosed standard cables ( 5 m ) with these cables.
The cables consist of a signal cable and a power cable.

## ■Configuration

Table 2-8: Configuration equipment and types

| Part name | Type Note1) | Qty. | Remarks |
| :--- | :--- | :--- | :--- |
| Machine cable (replacement): Flexed type | 1F-םaLUCBL-42 | 1 pcs. | $10 \mathrm{~m}, 15 \mathrm{~m}$, or 20 m each |
| Nylon clamp | NK-10N | 2 pcs. | For signal cable |
| Nylon clamp | NK-16N | 2 pcs. | For power cable |
| Silicon rubber |  | 4 pcs |  |
| Cable ties | T18R | 3 pcs. | Incl. 2 spare pcs. |

Note1) represents the cable length.
-Specifications
Shows usage conditions for flexed type cables in Table 2-9.
Table 2-9: Conditions for the flexed type cables

| Item | Specifications |
| :--- | :--- |
| Minimum flexed radius | 100 mm or more |
| Cableveyor, etc., occupation rate | $50 \%$ or less |
| Maximum movement speed | $2,000 \mathrm{~mm} / \mathrm{s}$ or less |
| Guidance of life count | 7.5 million times (With silicone grease coating) |
| Environmental proof | IP20 |
| Cable configuration | Motor signal cable |
|  | $\varphi 8.5 \times 1$ |

[Caution] The guidance of life count may greatly differ according to the usage state items related to Table 29 and to the amount of silicon grease applied in the cableveyor.
Recommendation grease: G-501 (Supplier: Shin-Etsu Chemical Co., Ltd.)
[Caution] When a cableveyor is used, partitions are required to avoid overlapping or riding up of the cables. Also, adjust the cable length to eliminate tension or excessive looseness, and fix it securely.
-Cable configuration
The configuration of the flexed cable is shown in Table 2-10. Refer to this table when selecting the cableveyor.
The configuration is the same between the length difference in the cable, and extension type / direct type.
Table 2-10: Cable configuration (Flexed type)

| Item | Motor signal cable | Motor power cable |  |  |
| :--- | :---: | :---: | :---: | :---: |
| No. of cores | AWG\#24 | AWG\#16 | AWG\#18 | AWG\#24 |
|  | $\left(0.2 \mathrm{~mm}^{2}\right)-4 \mathrm{P}$ | $\left(1.25 \mathrm{~mm}^{2}\right)-4 \mathrm{C}$ | $\left(0.75 \mathrm{~mm}^{2}\right)-3 \mathrm{C}$ | $\left.(0.2 \mathrm{~mm})^{2}\right)-4 \mathrm{P}$ |
| Finish dimensions | Approx. $\varphi 8.5 \mathrm{~mm}$ | Approx. $\varphi 9 \mathrm{~mm}$ | Approx. $\varphi 6.5 \mathrm{~mm}$ | Approx. $\varphi 6.2 \mathrm{~mm}$ |
| No.of cables used | 1 cable | 1 cable | 4 cables | 1 cable |
| No. in total | 7 |  |  |  |

- Fixing the flexed cable
(1) Connect the connector to the robot arm.

The connection method to a robot arm is the same as a standard machine cable. Refer to the separate volume "Robot Arm Setup \& Maintenance" and connect.
(2) For protection of wires from external stress, see Fig. 2-20 to wrap the cable with supplied silicon rubber and fix the wires with nylon clamps in the area between the heat shrink tube on the robot arm side and the cable gland on the controller side (flexible cable area). The motor power cable is configured with multiple cables. Fix all the cables with a nylon clamp.

*1) The flexible cable area of the motor power cable is between the heat shrink tubes on the robot arm side and cable gland on the controller side. Refer to Page 29, "2.4.2 Outside dimensions of machine cables" for details of the area allowing bending cables.
$\left.{ }^{*} 2\right)$ Motor power cable and motor signal cable should be fixed at the same position.
Fig.2-20: Fixing the flexed cable

### 2.7 About Overhaul

Robots which have been in operation for an extended period of time can suffer from wear and other forms of deterioration. In regard to such robots, we define overhaul as an operation to replace parts running out of specified service life or other parts which have been damaged, so that the robots may be put back in shape for continued use. As a rule of thumb, it is recommended that overhaul be carried out before the total amount of servo-on time reaches the specified time ( 24,000 hours for the robot arm and 36,000 hours for the controller) (See Fig. 2-21.). However, the degree of the equipment's wear and deterioration presumably varies depending on their operating conditions. Especially for operation with high load and frequency, the maintenance cycle may be shorter. For details on the part selection for replacement and the timing of overhaul, contact your dealer.

Fig.2-21: Periodic inspection/overhaul periods

### 2.8 Maintenance parts

A long-term use of industrial robots causes a malfunction due to wear or deterioration of their components, as well as general machines. To prevent such a malfunction and perform smooth operation of the robot for a long term, the regular maintenance, inspection, and replacement of consumable parts are required. Refer to "Maintenance and Inspection" in the separate manual "INSTRUCTION MANUAL/ROBOT ARM SETUP \& MAINTENANCE" for details of the maintenance and inspection. The consumable parts used in the robot arm are shown in Table 2-11. Purchase these parts from the designated maker or dealer when required. Some Mitsubishi-designated parts differ from the maker's standard parts. Thus, confirm the part name, robot arm and controller serial No. and purchase the parts from the dealer.

Table 2-11: Consumable part list

| No. | Part name | Type Note1) |  | Usage place | Qty. |
| :---: | :--- | :--- | :--- | :---: | :---: |

Note1) Confirm the robot arm serial No., and contact the dealer or service branch of Mitsubishi Electric Co., for the type.

## 3 Controller

### 3.1 Standard specifications

### 3.1.1 Basic specifications

Table 3-1: Specifications of controller

| Item |  | Unit | Specification | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| Type |  |  | CR800-CHD | Note1) |
| Number of control axis |  |  | Simultaneously 4 | Additional 8 axes available. |
| Memory capacity | Programmed positions | point | 39,000 |  |
|  | No. of steps | step | 78,000 |  |
|  | Number of program |  | 512 |  |
| Robot language |  |  | MELFA-BASIC V, VI |  |
| Teaching method |  |  | Pose teaching method, MDI method Note2) |  |
| External input and output | Input/output | point | 32/32 | 2D-TZ368 (sink type) is attached at the time of shipment. The 2D-TZ378 (source type) is installed from the factory in the S15 with special specifications. |
|  | Dedicated input/output |  | Assigned with general-purpose input/output | The signal number of "STOP" input signals is fixing. |
|  | Hand open/close input/output | point | 8/8 | The sink/source type can be switched with parameters. |
|  | Emergency stop input ${ }^{\text {Note3) }}$ | point | 1 (duplicated) | Note4) |
|  | Emergency stop output | point | 1 (duplicated) |  |
|  | Mode selector switch input ${ }^{\text {Note5) }}$ | point | 1 (duplicated) |  |
|  | Mode output | point | 1 (duplicated) |  |
|  | Robot error output | point | 1 (duplicated) |  |
|  | Additional axis synchronization output | point | 1 (duplicated) |  |
|  | Door switch input | point | 1 (duplicated) |  |
|  | Ecoder input | Channel | 2 |  |
| Interface Power source | Additional axis | Channel | 1 | SSCNET III/H (Connect with MR-J4-B series) |
|  | Remote input/output | Channel | 1 | Compatible with Ver. 1.0/2.0 |
|  | USB | port | 1 | Ver. 2.0 HighSpeed device functions only. USB mini-B |
|  | Ethernet | port | 1 | For customer: 1000BASE-T/ 100BASE-TX/10BASE-T |
|  |  |  | 1 | Dedicated T/B port: 100BASE-TX/ 10BASE-T |
|  | Option slot | slot | 2 | For option interface 2D-TZ368 is installed to slot 1. The 2D-TZ378 is installed in the S15 with special specifications. Note6) |
|  | SD memory card slot | slot | 1 | For extended memory |
|  | RS-422 | port | 1 | Dedicated T/B port |
| Power source | Input voltage range | V | Single phase AC 200 to 230 | The rate of power-supply voltage fluctuation is within $10 \%$. |
|  | Power capacity | kVA | 0.5 | Does not include rush current. ${ }^{\text {Note7) }}$ |
|  | Power supply frequency | Hz | 50/60 |  |
| Outline dimensions Note8) |  | mm | 430(W) $\times 425(\mathrm{D}) \times 99.5(\mathrm{H})$ | Excluding protrusions |
| Mass |  | kg | Approx. 12.5 |  |
| Construction |  |  | Self-contained floor type, Opened type. <br> Installation vertically or horizontally | IP20 Note9) |

| Item |  | Unit | Specification | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| Ambient temperature | In use | ${ }^{\circ} \mathrm{C}$ | 0 to 40 | Without freeze |
|  | At transport/storage |  | -15 to +70 |  |
| Ambient humidity | In use | \%RH | 45 to 85 | Without dew drops |
|  | At transport/storage |  | 90 or less |  |
| Overvoltage category Note10) |  |  | 11 or less |  |
| Pollution level ${ }^{\text {Note11) }}$ |  |  | 2 or less |  |
| Altitude |  | m | 1000 or less |  |
| Grounding |  | $\Omega$ | 100 or less | 100 2 or less (class D grounding) ${ }^{\text {Note12) }}$ |
| Paint color |  |  | Dark gray | Equivalent to Munsell: 3.5PB3.2/0.8, PANTONE: 432C |

Note1) For details of the operation procedure, basic operations, and maintenance and inspection items of the controller, refer to the information on the CR800-D in the separate volume "Controller Setup, Basic Operation and Maintenance".
Note2) Pose teaching method: The method to register the current position of the robot arm. MDI method:

The method to register by inputting the numerical value Immediate.
Note3) At factory settings, the STO function activated by an external emergency stop input meets the requirements of SIL 2, Category 3, and PL d. The STO function activated by an external emergency stop input meets the requirements of SIL 3, Category 4, and PL e when the parameter setting is changed by referring to Page 127, "Appendix 3 : Safety diagnosis function (Test pulse diagnosis)".
Note4) For details on the functions using external input/output signals, always refer to Page 126, "Appendix 2 : Classification of functions using external input/output signals".
Note5) Provide a mode selector switch to change the mode (MANUAL/AUTOMATIC) of the controller. Select the switch that meets the following specifications.

- The switch can be locked in each position of the selected mode.
- The selected switch position can be clearly distinguished from each other.
- Only one mode can be selected at a time.
(Recommended switch model: HA1K-2C2A-2 manufactured by IDEC. The key switch can be locked in each position by removing its key.)
The mode can be changed by other means than the selector switch.
For example, the user can use a mode change program. In the program, provide a means to lock the selected mode with a password.
Note6) Two connectors for 2D-TZ368/2D-TZ378 are attached (FCN-360 BKO-C11465H03).
Note7) The power capacity is the recommended value. The power capacity does not include the rush current when the power is turned ON. The power capacity is a guideline and the actual operation is affected by the input power voltage. Use the short circuit breaker which operates by the current leakage under the commercial frequency domain $(50-60 \mathrm{~Hz})$. If sensitive to the high frequency ingredient, it will become the cause in which below the maximum leak current value carries out the trip.
The following lists the current values of the representative models as a reference.

| Item | Current [A] | Apparent power [kVA] | Voltage at <br> measurement [V] |
| :--- | :---: | :---: | :---: |
| At control power ON | 0.41 | 0.09 | 216.8 |
| At servo ON | 0.53 | 0.12 | 217.0 |
| In automatic operation | Effective value | 1.98 | 0.43 |

Note8) Refer to Page 46, "3.3.1 Outside dimensions" for details.
Note9) This controller is standard specification. (Refer to Page 43, "3.1.2 Protection specifications and operating supply".)
Note10) This indicates the section of the power supply to which the equipment is assumed to be connected between the public electrical power distribution network and the machinery within premises.
Category II applies to equipment for which electrical power is supplied from fixed facilities. The surge voltage withstand level for up to the rated voltage of 300 V is 2500 V .
Note11) This index indicates the degree to which conductive material is generated in terms of the environment in which the equipment is used.
Pollution level 2 is when only non-conductive pollution occurs. A temporary conductivity caused by condensing must be expected occasionally.
Note12) The robot must be grounded by the customer.

Table 3-2 : Controller safety performance

| Function | Item | Performance | Remarks |
| :---: | :---: | :---: | :---: |
| STO | Safety Level | SIL 3 (IEC 61508:2010) | Performance when: <br> - External emergency stop input when the test pulse diagnosis settings are enabled Note1) |
|  |  | Category 4, PL e (EN ISO 13849-1:2015) |  |
|  | Mean time to dangerous failure (MTTFd) | MTTFd $\geq 100$ years |  |
|  | Diagnostic coverage (DC) | DC = 99\% |  |
|  | Probability of dangerous failure per hour (PFH) Note2) | $\mathrm{PFH}=1.40 \times 10^{-8}$ [1/hour] |  |
|  | Safety Level | SIL 2 (IEC 61508:2010) | Performance when: <br> - External emergency stop input when the test pulse diagnosis settings are disabled (factory settings) <br> - Door switch input <br> - Mode selector switch input |
|  |  | Category 3, PL d (EN ISO 13849-1:2015) |  |
|  | Mean time to dangerous failure (MTTFd) | MTTFd $\geq 100$ years |  |
|  | Diagnostic coverage (DC) | DC = 90\% |  |
|  | Probability of dangerous failure per hour (PFH) Note2) | $\mathrm{PFH}=1.57 \times 10^{-8}$ [1/hour] |  |

Note1) To use this product at a performance level of SIL 3, Category 4, PL e, refer to Page 126, "Appendix 2 : Classification of functions using external input/output signals" and set the parameters accordingly.
Note2) The robot controller PFH or PFHd (Probability of Dangerous Failure per Hour). The PFH of the emergency stop switch and enable switch on the teaching pendant is shown in the table below.

| Teaching pendant | Switch | B10d <br> [cycle] | Nop <br> [cycle/year] | MTTFd <br> [year] | DC <br> [\%] | PFH <br> $[1 / \mathrm{hour]}$ |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: |
| R32TB | Emergency stop <br> switch | $1 \times 10^{6}$ | 6000 | 1667 | $\geq 99$ | $2.47 \times 10^{-8}$ |
|  | Enable switch | $1 \times 10^{6}$ | 6000 | 1667 | $\geq 99$ | $2.47 \times 10^{-8}$ |
| R56TB | Emergency stop <br> switch | $1 \times 10^{6}$ | 6000 | 1667 | $\geq 99$ | $2.47 \times 10^{-8}$ |
|  | Enable switch | $7 \times 10^{6}$ | 6000 | 11667 | $60 \leq$ DC $<90$ | $1.57 \times 10^{-7}$ |

### 3.1.2 Protection specifications and operating supply

## (1) Protection specifications

A protection method complying with the IEC Standard IP20 (Opened type) is adopted for CR800 controller.
The IEC IP symbols refer only to the degree of protection between the solid and the fluids, and don't indicated that any special protection has been constructed for the prevention against oil and water.

## [Information]

- The IEC IP20

It indicates the protective structure that prevents an iron ball $120^{+0.05} \mathrm{~mm}$ diameter, which is being pressed with the power of $3.1 \mathrm{~kg} \pm 10 \%$, from going through the opening in the outer sheath of the supplied equipment.
(2) Operating supply

The controller is supposed to be installed and used in the customer's system. Supply the primary power of the controller from the system. In addition, provide a safety device (ex. earth leakage breaker) that can shut off the power of the controller in the customer's system. When using an earth leakage breaker as a safety device, select a product with the highest sensitivity possible referring to the specifications in the table below.

| Item | Unit | Specification |
| :--- | :---: | :---: |
| Rated voltage | V | AC200 to 230 |
| Rated sensitivity current | mA | 30 or more, but as low as possible |
| Rated current | A | 10 or more, but as low as possible |

To ensure that the earth leakage breaker used with the CR800 controller meets the requirements of the shut-off time defined in EN 60364-4-41, set the fault loop impedance of the customer wiring section to the value shown below.

For TN system ${ }^{\text {Note 1) }}$

| Item |  | Unit | Specification | Remarks |
| :--- | :--- | :---: | :---: | :---: |
| $\mathrm{CB}, \mathrm{CP}$, NFB | Model name | - | NV30FAU-2P-10A-AC100-240V-30mA | - |
|  | Rated current | A | 10 | - |
|  | V | 200 to 230 VAC | - |  |
| Maximum permissible fault loop impedance | $\mathrm{m} \Omega$ | 284.9 | Note 2$)$ |  |

For TT system Note 1)

| Item |  | Unit | Specification | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| Earth leakage breaker <br> Note 3) Note 4) | Model name | - | NV30FAU-2P-10A-AC100-240V-30mA | - |
|  | Rated current | A | 10 |  |
|  | Rated sensed current (IDn) | mA | 30 | - |
| Input voltage range |  | V | 200 to 230 VAC | - |
| Maximum permissible fault loop impedance |  | $\Omega$ | 1199 | Note 2) |

Note 1) It indicates the grounding system type.
Note 2) Check that the fault loop impedance of the customer wiring section is equal to or less than the value shown in the table. This value does not include the fault loop impedance of the controller.
Note 3) For TT system, the rated sensed current and maximum permissible fault loop impedance may be specified by the authorities. Follow the instructions of the authorities.
Note 4) For TT system, use a Type B earth leakage breaker as required.
Refer to the section Page 121, "6.2 Working environment" for details on the working environment.

### 3.2 Names of each part

### 3.2.1 Controller

Controller front

Controller rear

Fig.3-1: Names of controller parts
<1> ACIN connector $\qquad$ Supplied ACIN cable connector (input voltage: AC200V).

| Number of <br> phase | ACIN cable |
| :---: | :---: |
| Single phase |  |
|  | Terminal: M5, cable length: 3 m |

<2> PE terminal .................................Terminals for grounding (M4 screw x 2).
<3> CN1 cable ...................................Machine cable connector.
<4> <5> CNUSR connector ...............Robot I/O cable connectors.
<4>: CNUSR11, <5>: CNUSR12
<6> TB connector...............................Dedicated connector for connecting T/B.
<7> LED..............................................
Four LEDs indicating the controller status.

| LED |  |
| :---: | :--- |
| POWER | Indicates the control power status. <br> On: Control power ON <br> Off: Control power OFF |
| AUTO | Indicates the controller mode. <br> On: AUTOMATIC mode <br> Off: MANUAL mode |

| LED |  |
| :---: | :--- |
| ERROR | Indicates the error status. <br> On: Error occurred. <br> Rapid flashing: High-level error occurred. <br> Off: Normal operation |
| READY | Indicates the operation status. <br> On: ON (ready) <br> Slow flashing: During operation <br> Rapid flashing: Operation suspended. |

| <8> HAND FUSE | Fuse for the hand. |
| :---: | :---: |
| <9> EXT1. | Connector for releasing the brake in an emergency. |
|  | For details on the method of releasing the brake in an emergency, refer to the separate manual, "INSTRUCTION MANUAL/ROBOT ARM SETUP \& MAINTENANCE". |
| <10> RIO. | Parallel I/O extension connector. |
| <11> OPT1 | Unused. |
| <12> OPT2. | Unused. |
| <13> AXIS | Connector for additional axis connection. |
| <14> PC | Connector for communication with a personal computer. |
| <15> EXT2 | Connector for function extension. |
| <16> LAN | Connector for Ethernet communication. |
| <17> SD CARD | SD memory card slot. |
| <18> Filter cover | Dustproof dust filter cover. An air filter is provided inside the filter cover. |
| <19> <20>Option | Option card slots (must be covered when not used). |
|  | The 2D-TZ368 (sink type) is installed in SLOT1 of the robot controller from the factory. The 2D-TZ378 (source type) can be installed in the S15 (special specifications). |
|  | <19> SLOT1, <20> SLOT2 |
| <21> FG terminal . | Option card cable terminals for grounding (M4 screw $\times 2$ ). |

<21> FG terminal Option card cable terminals for grounding (M4 screw x 2).

Use the network equipments (personal computer, USB hub, LAN hub, etc) confirmed by manufacturer. The thing unsuitable for the FA environment (related with conformity, temperature or noise) exists in the equipments connected to USB. When using network equipment, measures against the noise, such as measures against EMI and the addition of the ferrite core, may be necessary. Please fully confirm the operation by customer. Guarantee and maintenance of the equipment on the market (usual office automation equipment) cannot be performed.

### 3.3 Outside dimensions/Installation dimensions

### 3.3.1 Outside dimensions

Fig.3-2: Outside dimensions of controller

### 3.3.2 Installation dimensions

The following figures show the dimensions required installing the controller.
For the placement of the controller on its side (the horizontal installation), two stacks is permitted.

Fig.3-3: Installation dimensions

When installing the controller vertically, ensure that the air intake is at the bottom as illustrated in Fig. 3-3.

Fixing installation section sure for prevention from the fall, when using the controller placing vertically. The reference figure of the metal plate for fixing is shown in Fig. 34.

You should install the metal plate for fixation to the controller with M4 x 8 or the shorter screw. The screw projection length inside the controller (side board thickness is 1.2 mm ) surely makes 6.8 mm or less.

When storing the controller in a cabinet, etc., take special care to the heat radiating properties and ventilation properties so that the ambient temperature remains within the specification values. And, don't install the controller in the position where direct rays or the heat of lighting hits. The skin temperature of the controller may rise, and the error may occur.

Fig.3-4: Reference figure of the fixing metal plate for vertical installation

### 3.4 External input/output

### 3.4.1 Types

(1) Dedicated input/output.................... These inputs and outputs carry out the robot remote operation and status display.
(2) General-purpose input/output.......... These are inputs and outputs that the customer can program for peripheral device control.
(3) Hand input/output ........................... These are inputs and outputs related to the hand that the customer can program.
(4)Emergency stop/Door switch input ... Information on wiring the emergency stop and wiring used to ensure safety can be found on Page 53, "3.6 Emergency stop input and output etc." and on Page 116, "6.1.7 Examples of safety measures".

## <For Reference>

Linking our GOT2000 Series display equipment to the robot controller over the Ethernet permits you to control robot controller's input/output from a GOT (graphic operation terminal).

### 3.5 Dedicated input/output

Show the main function of dedicated input/output in the Table 3-3. Refer to attached instruction manual "Detailed explanations of functions and operations" in the product for the other functions. Each parameter indicated with the parameter name is used by designated the signal No., assigned in the order of input signal No. and output signal No.

Table 3-3: Dedicated input/output list

| Parameter <br> name | Input |  |  | Note1) | Output |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  | Name |  | Function | Level | Name |

| Parameter name | Input Note1) |  |  | Output |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Name | Function | Level | Name | Function |
| OUTRESET | General-purpose output signal reset | Resets the general-purpose output signal. | E | None |  |
| EMGERR |  | None |  | Emergency stop output signal | Outputs that an emergency stop has occurred. |
| $\begin{array}{\|l\|} \hline \text { S1START } \\ \vdots \\ \text { S32START } \end{array}$ | Start input | Starts each slot. | E | In operation output | Outputs the operating state for each slot. |
| $\begin{array}{\|l\|} \hline \text { S1STOP } \\ \vdots \\ \text { S32STOP } \end{array}$ | Stop input | Stops each slot. | L | In wait output | Outputs that each slot is temporarily stopped. |
| PRGSEL | Program selection input signal | Designates the setting value for the program No. with numeric value input signals. | E |  | None |
| OVRDSEL | Override selection input signal | Designates the setting value for the override with the numeric value input signals. | E |  | None |
| IODATA <br> Note2) | Numeric value input (start No., end No.) | Used to designate the program name, override value., mechanism value. | L | Numeric value output (start No., end No.) | Used to output the program name, override value., mechanism No. |
| PRGOUT | Program No. output request | Requests output of the program name. | E | Program No. output signal | Outputs that the program name is being output to the numeric value output signal. |
| LINEOUT | Line No. output request | Requests output of the line No. | E | Line No. output signal | Outputs that the line No. is being output to the numeric value output signal. |
| OVRDOUT | Override value output request | Requests the override output. | E | Override value output signal | Outputs that the override value is being output to the numeric value output signal. |
| ERROUT | Error No. output request | Requests the error No. output. | E | Error No. output signal | Outputs that the error No. is being output to the numeric value output signal. |
| JOGENA | Jog valid input signal | Validates jog operation with the external signals | E | Jog valid output signal | Outputs that the jog operation with external signals is valid. |
| JOGM | Jog mode input 2-bit | Designates the jog mode. | L | Jog mode output 2bit | Outputs the current jog mode. |
| JOG+ | $\begin{aligned} & \text { Jog feed + side } \\ & \text { for 8-axes } \end{aligned}$ | Requests the + side jog operation. | L |  | None |
| JOG- | $\begin{aligned} & \hline \begin{array}{l} \text { Jog feed - side } \\ \text { for 8-axes } \end{array} \\ & \hline \end{aligned}$ | Requests the - side jog operation. | L |  | None |
| HNDCNTL1 <br> HNDCNTL3 |  | None |  | Mechanism 1 hand output signal status <br> Mechanism 3 hand output signal status | Mechanism 1: Outputs the status of general-purpose outputs 900 to 907 . <br> Mechanism 2: Outputs the status of general-purpose outputs 910 to 917. <br> Mechanism 3: Outputs the status of general-purpose outputs 920 to 927. |
| HNDSTS1 <br> HNDSTS3 |  | None |  | Mechanism 1 hand input signal status <br> Mechanism 3 hand input signal status | Mechanism 1: Outputs the status of hand inputs 900 to 907. <br> Mechanism 2: Outputs the status of hand inputs 910 to 917. <br> Mechanism 3: Outputs the status of hand inputs 920 to 927. |

| Parameter name | Input |  | Note1) | Output |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Name | Function | Level | Name | Function |
| HNDERR1 <br> HNDERR3 | Mechanism 1 hand error input signal <br> Mechanism 3 hand error input signal | Requests the hand error occurrence. | L | Mechanism 1 hand error output signal <br> Mechanism 3 hand error output signal | Outputs that a hand error is occurring. |
| AIRERR1 <br> AIRERR3 | Pneumatic pressure error 1 input signal <br> Pneumatic pressure error 3 input signal | Request the pneumatic pressure error occurrence. | L | Pneumatic pressure error 1 output signal. <br> Pneumatic pressure error 3 output signal. | Outputs that a pneumatic pressure error is occurring. |
| M1PTEXC <br> M3PTEXC |  | None | L | Maintenance parts replacement time warning signal | Outputs that the maintenance parts have reached the replacement time. |
| USERAREA <br> Note3) |  | None |  | User-designated area 8-points | Outputs that the robot is in the userdesignated area. |

Note1) The level indicates the signal level.
L: Level signal $\rightarrow$ The designated function is validated when the signal is ON, and is invalidated when the signal is OFF.
E : Edge signal $\rightarrow$ The designated function is validated when the signal changes from the OFF to ON state, and the function maintains the original state even when the signal then turns OFF.
Note2) Four elements are set in the order of input signal start No., end No., output signal start No. and end No.
Note3) Up to eight points can be set successively in order of start output signal No. and end output signal No.

### 3.6 Emergency stop input and output etc.

Do wiring of the external emergency stop, the special stop input, the door switch, and the mode selector switch from the "special input/output" terminal connector.

Table 3-4: Special input/output terminal

| Item | Name | Function |
| :--- | :--- | :--- |
| Input | Emergency stop | Applies the emergency stop. Dual line, normal close |
| Input | Special stop input | Applies the stop. (Refer to Page 58, "3.6.2 Special stop input (SKIP)") |
| Input | Door switch | Servo-off. Dual line, normal close (Page 59, "3.6.3 Door switch function") |
| Input | Mode selector switch | Changes the mode (MANUAL/AUTOMATIC) of the controller. Dual line (Page 59, "3.6.4 Mode <br> selector switch function") |
| Output | Robot error output | Contactor is opening during error occurrence. |
| Output | Emergency stop output | The point of contact opens under occurrence of emergency stop of external input signal, <br> emergency stop of T/B. |
| Output | Mode output | MANUAL mode: contactor is opening, AUTOMATIC mode: contactor is closing. |
| Output | Additional axis <br> synchronization output | When an additional axis is used, the servo ON/OFF status of the additional axis can be <br> synchronized with the robot arm. (Page 65, "3.8 Additional axis synchronization output") |

*At the time of the power supply OFF, the output point of contact is always open.
[Note] Wire for each input terminal as shown in Fig. 3-8.
The contact capacity of each input/output terminal is $\mathrm{DC} 24 \mathrm{~V} / 100 \mathrm{~mA}$. Do not connect the equipment except for this range. Noise or other effects that overload contact capacities will lead to failure. An example of noise prevention is shown in Fig. 3-5.
In the customer's system, do not ground the + side of 24 V power supply prepared by customer for connect to the controller. (related with emergency stop and parallel input/output) If it connects with the controller under the condition that the + side is grounded, it will lead to failure of controller.
An example of connecting devices such as PLCs

Use noise prevention methods that are specific to the devices being used and the environment they are being used in.

An example of connecting devices such as relays

*1) The actual internal robot controller circuit differs from the internal robot controller circuit in the figure.
Recommended varistor

| Model | Manufacturer | Varistor voltage | Max. permissible circuit voltage |
| :--- | :--- | :---: | :---: |
| ERZV10D390 | Panasonic | 39 V | 31 V |
| 72210 S0250K101 | TDK | 39 V | 31 V |

Fig.3-5: Protection circuit example
[Note] If a stop signal or servo OFF signal is input simultaneously with a door switch open/emergency stop input, the error, H056n "Servo sys. error (A/D)" may occur.
When a door switch open/emergency stop is input, the robot turns off the servo after it stops. It is unnecessary to input a stop signal or servo OFF signal. To input a stop signal or servo OFF signal with a door switch open/emergency stop input, wait for 100 ms or more after a door switch open/ emergency stop input.

Pin number assignment of each terminal and the circuit diagram are shown in Fig. 3-8.

### 3.6.1 Connection of the external emergency stop and mode selector switch

The input terminals for the external emergency stop, door switch, and mode selector switch are arranged as shown in Fig. 3-8. Customers should be sure to prepare the external emergency stop, door switch, and mode selector switch, etc. and use the robot while these are connected. Connection procedures are shown below.
In addition, refer to Page 116, "6.1.7 Examples of safety measures" for the information on the emergency stop connection and cautions.
[Caution] The emergency stop circuit is duplicated inside the controller. The emergency stop switch uses a double contact-type switch, so please be sure to fix both of the contacts to the connector pins as shown below in order to ensure the wiring is duplicated. An error will continue to occur in the event that only one of the pins is connected.

1) Please prepare the emergency stop switch, door switch, and mode selector switch.
2) Connect the contacts of each switch to the contacts as shown below:
a) External emergency switch

CNUSR11 connector "between 7 and 23 " and "between 14 and 30 ".
b) Door switch

CNUSR11 connector "between 6 and 22" and "between 13 and 29".
c) Mode selector switch

CNUSR11 connector "between 5 and 21" and "between 12 and 28".
[Caution] Be sure to use a shield cable for the emergency stop wiring cable and dedicated stop input wiring cable. And when operating in an environment that is easily affected by noise, be sure to install the ferrite core (recommended model name: E04SR301334, manufacturer: Seiwa Electric Mfg. Co., Ltd.). Be sure to place the ferrite core in 300 mm or less from the connecting terminal section.

Fig.3-6: Installation position of ferrite cores
For information on the installation method, follow the instructions of the ferrite core being used.

Make sure there are no mistakes in the wiring. Connecting differently to the way specified in the manual can result in errors, such as the emergency stop not being released. In order to prevent errors occurring, please be sure to check that all functions (such as the teaching box emergency stop, customer emergency stop, and door switch) are working properly after the wiring setup is completed.

You should always connect doubly connection of the emergency stop, the door switch, and the mode selector switch. In connection of only one side, if the relay of customer use should break down, it may not function correctly.
The robot output contacts (error output, emergency stop output, mode output, additional axis synchronization output) are duplicated output contacts that are wired in series. As with emergency stop switches and door switches, ensure that all connections to customer devices are duplicated to achieve redundancy.

Please make sure to wire the multiple emergency stop switches so that they each function independently. Check and make sure that the emergency stop doesn't only function under an AND condition (when multiple emergency stop switches are ON at the same time).

Fig.3-7: Emergency stop cable and mode selector switch connection

Please refer to the example of safety measures of "Specifications Manual".
*1)The terminal can be used only for the external emergency stop input to the robot controller.

Fig.3-8: External emergency stop connection
$\$$ CAUTION Place the emergency stop switch in an easily operable position, and be sure to wire it to the emergency stop correctly by referencing Page 116, "6.1.7 Examples of safety measures". This is a necessary measure in order to ensure safe operation so that the robot can be stopped immediately by pressing the emergency stop switch in the event that the robot malfunctions.

Connection procedure
Wire cables to the CNUSR11 and CNUSR12 user wiring connectors (attachment), and fit them into the corresponding connectors (ports) located on the rear side of the controller.
The customer needs to prepare the following items.

- Cable: AWG24 to 16 ( 0.2 to $1.5 \mathrm{~mm}^{2}$ )
- Flathead screwdriver: The width of the tip is 2.5 mm .

1) Prepare the user wiring connector (attachment).
2) Strip off 7 mm of the cable sheath.
3) Insert the cable all the way in the insertion hole while pressing down the latch on the user wiring connector with a flatblade screwdriver.
4) When all the required wirings have been completed, fit the user wiring connector (CNUSR11/CNUSR12) into the corresponding connector (CNUSR11/CNUSR12 port) on the controller.
5) When the user wiring connector has properly fitted, the levers on both sides of the connector rise and the connector is fixed. (To dismount the connector, lower the levers.)

The connection has been completed.
Fig.3-9: Wiring method to the user wiring connector

Fully check the number of the cable insertion hole (connector pin number) for incorrect connection. Incorrect wiring may damage the robot or cause a malfunction. of the core wires. The fraying wires can come into contact with the adjacent terminal, causing a short circuit.
Do not apply solder on core wires. Doing so may cause a contact failure.

### 3.6.2 Special stop input (SKIP)

The SKIP is the input signal to stop the robot. Please connect the pin 4,13 of the CNUSR12 connector shown in Fig. 3-10.

Table 3-5: Special stop input electric specification

| Item |  | Specifications | Internal circuit |
| :---: | :---: | :---: | :---: |
| Type |  | DC input |  |
| No. of input point |  | 1 |  |
| Insulation method |  | Photo-coupler insulation |  |
| Rated input voltage |  | DC24V |  |
| Rated input current |  | Approx. 11mA |  |
| Working vo | ge range | DC 21.6 to 26.4 V (Ripple rate within 5\%) |  |
| ON voltage | N current | DC 8 V or more / 2 mA or more |  |
| OFF voltag | FF current | DC 4V or less / 1mA or less |  |
| Input resist |  | Approx. $2.2 \mathrm{k} \Omega$ |  |
| Response | OFF $\rightarrow$ ON | 1 ms or less |  |
|  | ON $\rightarrow$ OFF | 1 ms or less |  |
| Common method |  | 1 point per common |  |
| External wire connection method |  | Connector |  |

Note) In the customer's system, do not ground the + side of 24 V power supply prepared by customer for connect to the controller. (related with emergency stop and parallel input/output) If it connects with the controller under the condition that the + side is grounded, it will lead to failure of controller.

Fig.3-10: Connection of the special-stop-input

### 3.6.3 Door switch function

This function acquires the status of the switches attached on the door of the safety fence, and it turns OFF the servo to stop the robot when the door is opened. Perform wiring so that the contact opens when the door is opened
Follow the wiring example shown in Page 56 "Fig. 3-8: External emergency stop connection" and Page 116, "6.1.7 Examples of safety measures". Details of this function according to the robot status are shown below (Fig. 3-11).
*During automatic operation $\qquad$ When the door is opened, the servo turns OFF and the robot stops. An error occurs. The process of the restoration: Close the door, reset the alarm, turn on the servo, and restart.
*During teaching...........................Even when the door is opened, using a selector switch allows to turn the servo ON with the teaching pendant to operate the robot.

Fig.3-11: Door switch function

### 3.6.4 Mode selector switch function

The mode selector switch switches the mode of the controller between MANUAL mode and AUTOMATIC mode.

Table 3-6: States of input terminal

| Mode of controller | Input terminal |
| :---: | :---: |
| MANUAL (Teaching) | Open |
| AUTOMATIC (Automatic operation) | Close |

## (1) Automatic Operation/Jog Operation/Brake Release and Necessary Switch Settings

 The following is a description of various operations performed on the robot and switch settings that are required.Table 3-7: Various operations and necessary switch settings

| No | Operation | Related switch settings Note1) |  |  |  | Description |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | T/B enable/disable | T/B enable switch | Mode selector switch input terminal | Door switch input terminal |  |
| 1 | Jog operation | Enable | ON | Open <br> (MANUAL mode) | - | If the mode selector switch input is set to Open (MANUAL mode), the state of door switch input does not matter. |
| 3 | Brake release Note2) | Enable | ON | Open (MANUAL mode) | - | If the mode selector switch input is set to Open (MANUAL mode), the state of door switch input does not matter. |
| 4 | Automatic operation | Disable | - | Close <br> (AUTOMATIC mode) | Close (Door Close) | Door switch input must always be in a state of Close (Door Close). |

Note1) "-" in the table indicates that the state of switch concerned does not matter.
Refer to the following for operation of each switch.

- T/B enable/disable: ............................................................................................. Page 68, "(1) Teaching pendant (T/B)"
- T/B enable switch:

Page 68, "(1) Teaching pendant (T/B)"

- Mode selector switch input terminal: Page 116, "6.1.7 Examples of safety measures"
- Door switch input terminal:

Page 116, "6.1.7 Examples of safety measures"
Note2) T/B is used for the brake release operation. Brake release can be effected only when the T/B enable switch is placed in intermediate position (lightly gripped position). At this point, the state of door switch input does not matter.

Door in open state

## $\triangle$ caution

Upon the release of brake, the robot arm may fall under its own weight depending on the axis which has been released. To ensure safety, take appropriate measures such as supporting the axis to avoid the free fall.

Fig.3-12: Brake release operation

### 3.7 Additional Axis Function

This controller is equipped with an additional axis interface for controlling an additional axis when a traveling axis or rotary table is added to the robot. A maximum of eight axes of servo motors can be controlled at the same time by connecting a general-purpose servo amplifier (MR-J4-B series) that supports Mitsubishi's SSCNET III.
Refer to the separate "Additional axis function Instruction Manual" for details on the additional axis function.

### 3.7.1 Wiring of the Additional Axis Interface

Table 3-8 shows the connectors for additional axes inside the controller.
Fig. 3-13 shows a connection example (configuration example).
Table 3-8: Dedicated connectors inside the controller

| Name | Connector name | Details |
| :--- | :--- | :--- |
| Connector for additional axes | AXIS | The connector for connecting the general-purpose servo amplifier. |

* It cannot communicate, if connection of CN1A and CN1B is mistaken.

Fig.3-13: Example of addition axis connection

### 3.7.2 Example of the installation of the noise filter

## -EMC filter (recommended)

Please install the recommendation filter shown below according to the example of connection.
Table 3-9: Combination of a servo amplifier and filter (Soshin Electric)

| Servo amplifier | Recommended filter (Soshin Electric) |  |  |  | Mass [kg] |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Model | Rated current [A] | Rated voltage [VAC] | Leakage current [mA] |  |
| $\begin{aligned} & \hline \text { MR-J4-10B(-RJ) to } \\ & \text { MR-J4-100B(-RJ) } \end{aligned}$ | HF3010A-UN Note1) | 10 | 250 | 5 | 3.5 |
| $\begin{array}{\|l} \hline \text { MR-J4-200B(-RJ) } \\ \text { MR-J4-350B(-RJ) } \end{array}$ | HF3030A-UN Note1) | 30 |  |  | 5.5 |
| $\begin{array}{\|l\|} \hline \text { MR-J4-500B(-RJ) } \\ \text { MR-J4-700B(-RJ) } \end{array}$ | HF3040A-UN Note1) | 40 |  | 6.5 | 6 |
| $\begin{array}{\|l} \hline \text { MR-J4-11KB(-RJ) } \\ \text { MR-J4-15KB(-RJ) } \\ \text { MR-J4-22KB(-RJ) } \end{array}$ | HF3100A-UN Note1) | 100 |  |  | 12 |
| MR-J4-60B4(-RJ) MR-J4-100B4(-RJ) | TF3005C-TX | 5 | 500 | 5.5 | 6 |
| MR-J4-200B4(-RJ) <br> MR-J4-700B4(-RJ) | TF3020C-TX | 20 |  |  |  |
| MR-J4-11KB4(-RJ) | TF3030C-TX | 30 |  |  | 7.5 |
| MR-J4-15KB4(-RJ) | TF3040C-TX | 40 |  |  | 12.5 |
| MR-J4-22KB4(-RJ) | TF3060C-TX | 60 |  |  |  |
| $\begin{aligned} & \text { MR-J4-10B1(-RJ) to } \\ & \text { MR-J4-40B1(-RJ) } \end{aligned}$ | TF3010A-UN Note1) | 10 | 250 | 5 | 3.5 |

Note1) Following surge protector is separately required to use any of these EMC filters. RSPD-250-U4 (Manufacture: OKAYA Electric Industries CO., Ltd.)

Table 3-10: Combination of a servo amplifier and filter (COSEL)

| Servo amplifier | Recommended filter (COSEL) |  |  |  | Mass [kg] |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Model | Rated current [A] | Rated voltage <br> [VAC] | Leakage current <br> $[\mathrm{mA}]$ |  |
|  | FTB-100-355-L Note1) | 100 | 500 | 40 | 5.3 |
| MR-J4-22KB4(-RJ) | FTB-80-355-L Note1) | 80 | 500 | 80 | 5.3 |

Note1) Following surge protector is separately required to use any of these EMC filters.
RSPD-500-U4 (Manufacture: OKAYA Electric Industries CO., Ltd.)
-Installing an EMC noise filter

Note 1) For 1-phase 200V to 230VAC power supply, connect the power supply to L1, L2 and leave L3 open.
There is no L3 for 1 -phase 100 to 120 VAC power supply.
Note 2) The example is when a surge protector is connected.
Fig.3-14: Example of EMC noise filter installation

## (1) Line noise filter

This filter is effective in suppressing noises radiated from the power supply side and output side of the servo amplifier and also in suppressing high-frequency leakage current (zero-phase current) especially within 0.5 MHz to 5 MHz band.

Fig.3-15: Example of noise filter installation

### 3.8 Additional axis synchronization output

When an additional axis is used, the servo ON/OFF status of the additional axis can be synchronized with the servo ON/ OFF status of the robot itself by using the output contact (AXMC) provided on the rear or inside of the controller and configuring a circuit so that the power to the servo amplifier for the additional axis can be turned off when this output is open.
An example circuit is shown in Page 65, "(1) Example circuit". An image of how to connect the connector is shown in Page 66, "(2) Image of how to connect the controller connector".
When you are using an additional axis, please perform appropriate circuit connections by referring to these drawings. Refer to Page 61, "3.7 Additional Axis Function"and the separate "Additional axis function Instruction Manual" for details on the additional axis function.

Note1) you use the addition axis function as a user mechanism who became independent of the robot arm, please do not connect this output signal. Servo-on of the user mechanism may be unable.
(1) Example circuit

Note 2) This output is opened, if the robot turns off the servo by occurrence of alarm etc. <Electric specification> DC24V/10mA to 100 mA
[Note] For the input/output cable (CNUSR connector cable) that connects customer's system and the controller, prevent ground faults from occurring at the + side of the 24 V power supply prepared by customer. A ground fault may lead to a failure of the protection device in the controller.
Bending or frictional forces may be applied to the input/output cable repeatedly depending on the system configuration or layout. In this case, use a flexible cable for the input/output cable. Note that a fixed cable may be broken, resulting in a ground fault.

Fig.3-16: Example of circuit for additional axis synchronization output
(2) Image of how to connect the controller connector

* Refer to Page 57 "Fig. 3-9: Wiring method to the user wiring connector" for more details about how to wire a connector.

Fig.3-17: AXMC terminal connector

### 3.9 Options

■What are options?
There are a variety of options for the robot designed to make the setting up process easier for user needs. User installation is required for the options.

## (1) Teaching pendant (T/B)

$\begin{array}{rlrl}\bullet \text {-Order type: } & \bullet \text { R32TB } & & \text { Cable length } 7 \mathrm{~m} \\ & \bullet \text { R32TB-15 } & \text { :Cable length } 15 \mathrm{~m}\end{array}$
-Outline

This is used to create, edit and control the program, teach the operation position and for jog feed, etc. For safety proposes, a 3-position enable switch is mounted. ${ }^{* 1)}$

For multiple robots, you can operate them with just one teaching pendant by repeating the removal of it from another robot and the connection of it to the target robot.
-Configuration
Table 3-11: Configuration device

| Part name | Type | Qty. | Mass (kg) Note1) | Remarks |
| :---: | :--- | :--- | :--- | :--- |
| Teaching pendant | R32TB | Either one pc. | 1.7 | Cable length is 7m. |
|  | R32TB-15 |  | 2.8 | Cable length is 15 m. |

Note1) Mass indicates one set.

## -Specifications

Table 3-12: Specifications

| Items | Specifications | Remarks |
| :--- | :--- | :--- |
| Outline dimensions | $195(\mathrm{~W}) \times 292(\mathrm{H}) \times 106(\mathrm{D})$ (refer to outline drawing) |  |
| Body color | Dark gray | Approx. 0.9 kg (body only, excluding cables) |
| Mass | Connects with controller via connector. |  |
| Connection method | RS-422 | At $8 \times 8$ font |
| Interface | LCD method: 24 characters $\times 8$ lines, LCD illumination: with backlight |  |
| Display method | 36 keys |  |
| Operation section |  |  |

*1) <3-position enable switch>
In ISO/10218 (1992) and JIS-B8433 (1993), this is defined as an "enable device". These standards specify that the robot operation using the teaching pendant is enabled only when the "enable device" is at a specified position.
With the Mitsubishi Electric industrial robot, the above "enable device" is configured of an "Enable/Disable switch" and "Enable switch".
The 3-position enable switch has three statuses. The following modes are entered according to the switch state.
a) "Not pressed". $\qquad$ .The robot does not operate. *)
b) "Pressed lightly" The robot can be operated and teaching is possible.
c) "Pressed with force" $\qquad$ The robot does not operate. *)
*) Releasing or forcefully pressing the 3-position enable switch cuts power to the servos in the same way as when the emergency stop is input. This helps to ensure safety. Operations such as editing programs and displaying the robot's status are possible while the 3 -position enable switch is released or forcefully pressed (excludes operating the robot).

Fig.3-18: Outside dimensions of teaching pendant

- Installation method

The teaching pendant is connected to the TB connector on the front of the controller.

■Key layout and main functions

Fig.3-19: Teaching pendant key layout and main functions
(2) High efficient teaching pendant (T/B)
-Order type:
$\bullet$ R56TB :Cable length 7m
-R56TB-15
:Cable length 15 m
-Outline

This is used to create, edit and control the program, to teach the operation position, or to perform jog feed, etc. This highly efficient teaching pendant has a touchscreen graphical user interface (GUI) which allows easy operation. In addition, the 3-position enable switch ${ }^{* 1)}$ is provided for the safety use.

For multiple robots, you can operate them with just one teaching pendant by repeating the removal of it from another robot and the connection of it to the target robot.
-Configuration
Table 3-13: Configuration device

| Part name | Type | Qty. | Mass (kg) ${ }^{\text {Note1) }}$ | Remarks |
| :--- | :--- | :---: | :---: | :--- |
| High efficient teaching <br> pendant | R56TB | Either one pc. | 2.1 | Cable length is 7m. |
|  | R56TB-15 |  | 3.2 | Cable length is 15m. |

Note1) Mass indicates one set.
-Specifications
Table 3-14: Specifications

| Items | Specifications | Remarks |
| :--- | :--- | :--- |
| Outline dimensions | 252(W) $\times 240(\mathrm{H}) \times 114(\mathrm{D})$ (refer to outline drawing) |  |
| Body color | Dark gray | Approx. 1.25kg (body only, excluding cables) |
| Mass | Connects with controller via connector. |  |
| Connection method | RS-422, Ethernet (10BASE-T) | For connection with <br> robot controller |
| Interface |  | Note1) |
|  | USB host |  |
| Display | $6.5 " ~ T F T ~(640 \times 480)$ color touchscreen, with backlight |  |

Note1) The operation of the following USB memory sticks has been confirmed.
a) Kingston Data TravelerManufacture: Kingston, Type: USB 2.0 memory stick, Memory sizes: 128 MB - 1GB
b) Transcend Jet FlashManufacture: Transcend, Type: USB 2.0 memory stick, Memory sizes: 128 MB - 1GB
Notice) The operation of those other than the above is not guaranteed.
-Installation method
The teaching pendant is connected to the TB connector on the front of the controller.
*1) <3-position enable switch>
In ISO/10218 (1992) and JIS-B8433 (1993), this is defined as an "enable device". These standards specify that the robot operation using the teaching pendant is enabled only when the "enable device" is at a specified position.
With the Mitsubishi Electric industrial robot, the above "enable device" is configured of an "Enable/Disable switch" and "Enable switch".
The 3-position enable switch has three statuses. The following modes are entered according to the switch state.
a) "Not pressed" $\qquad$ The robot does not operate. *)
b) "Pressed lightly" The robot can be operated and teaching is possible.
c) "Pressed with force" $\qquad$ The robot does not operate. *)
*) Releasing or forcefully pressing the 3-position enable switch cuts power to the servos in the same way as when the emergency stop is input. This helps to ensure safety. Operations such as editing programs and displaying the robot's status are possible while the 3-position enable switch is released or forcefully pressed (excludes operating the robot).

■Outside dimensions and main functions

1) TEACH button......................... This changeover switch is used to enable or disable the T/B key operations. The
lamp (white) lights up during enabling state.
2) Wheel..................................... Move the cursor to select the menu and so on.
3) Emergency stop button ............ This stops the robot in an emergency state. The servo turns OFF. Turn to the
right to cancel.
4) Touch stylus (Integrated in housing)
The pen which operates the touch panel.
5) Power supply LED, T/B enable LED
POWER LED lights up during supplying the power supply. TB ENABLE LED
lights up during enabling state.

Fig.3-20: Teaching pendant outside dimensions and main functions
(3) Function extension card

■Order type:
$\bullet 2 F-D Q 510 \ldots \ldots \ldots . . . . . . .$. MELFA Smart Plus card pack (A-type)
$\bullet$ 2F-DQ520 .................. MELFA Smart Plus card pack (AB-type)
$\bullet$ 2F-DQ511 .................. MELFA Smart Plus card (A-type)
$\bullet$ 2F-DQ521 ................ MELFA Smart Plus card (B-type)
-Outline

This card is used to enable the MELFA Smart Plus option.
Insert this card in the option slot on the front of the controller, and enable the MELFA Smart Plus software extension function.
-Configuration
Table 3-15: Configuration device

| Part name |  | Type | Qty. | Mass (Kg) | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| MELFA Smart Plus card pack | A-type | 2F-DQ510 | 1 | 0.5 | Software version of controller: Ver. A5p or later |
|  | AB-type | 2F-DQ520 | 1 | 0.5 |  |
| MELFA Smart Plus card | A-type | 2F-DQ511 | 1 | 0.5 |  |
|  | B-type | 2F-DQ521 | 1 | 0.5 |  |

## (4) MELSOFT RT ToolBox3/MELSOFT RT ToolBox3 mini/MELSOFT RT ToolBox3 Pro

-Order type: •MELSOFT RT ToolBox3
*For windows DVD-ROM : 3F-14C-WINE
-MELSOFT RT ToolBox3 mini
*For windows DVD-ROM : 3F-15C-WINE
-MELSOFT RT ToolBox3 Pro
*For windows DVD-ROM : 3F-16D-WINE
-Outline

This is handy software that fully uses the personal computer functions. It can be used in various stages from the robot specifications study (tact study, etc.) to the design support (creation and editing of programs), start up support (execution, control and debugging of program), and maintenance (maintenance forecast).
-Configuration
Table 3-16: Product configuration

| Part name | Type | Medium | Mass (kg) Note1) | Remarks |
| :--- | :---: | :---: | :---: | :---: |
| RT ToolBox3 | 3F-14C-WINE | DVD-ROM | 0.2 |  |
| RT ToolBox3 mini | 3F-15C-WINE | DVD-ROM | 0.2 |  |
| RT ToolBox3 Pro | 3F-16D-WINE | DVD-ROM | 0.2 |  |

Note1) Mass indicates one set.
-Features
(1) Simple operation with guidance method and menu method

The Windows standard is used for windows operation, so the controller initialization and startup operations can be carried out easily by following the instructions given on the screen. Even a beginner can easily carry out the series of operations from program creation to execution.
(2) Increased work efficiency with ample support functions

The work efficiency is greatly improved with the multi-window method that carries out multiple steps and displays in parallel. The renumbering function, and copy, search, syntax check and step execution are especially sufficient, and are extremely useful when editing or debugging the program.
With the simulation function support of MELSOFT RT ToolBox3, the program can be debugged and the tact checked before starting the machine at the site. This allows the on-site startup work efficiently to be greatly improved.
MELSOFT RT ToolBox3 Pro allows a simulation of robot operation on three-dimensional CAD software SolidWorks®.
(3) The maintenance forecast function increases the efficiency of maintenance work. Analyze the load condition while the robot is actually operating. Based on this analysis, calculate the time for maintenance, such as lubrication and belt replacement. By utilizing this information, the line stop time as well as the maintenance costs can be reduced.
(4) The position recovery support function increases the recovery efficiency in the event of origin position displacement. This function compensates the origin settings and position data by just reproducing several previous teaching points when hand and/or arm displacement occurs, when replacing the motor and the belts, or when reloading the robot. This function can reduce the time required for recovery.

## -Functions

Table 3-17: Functions

Note1) The functions included with the MELSOFT RT ToolBox3 ,MELSOFT RT ToolBox3 mini, and the MELSOFT RT ToolBox3 Pro are shown below. ○: Function provided $\times$ : Function not provided Note2) Recommend corresponding to CE Marking, an FCC standard, and a VCCI standard.

## (5) Instruction Manual (bookbinding)

-Order type: •5F-BN01-PE01 $\qquad$ RH-3CRH/6CRH series

■Outline

This is a printed version of the CD-ROM (instruction manual) supplied with this product.

## -Configuration

Table 3-18: Product configuration

| Name | Type | Mass (Kg) ${ }^{\text {Note1) }}$ | Specifications |
| :---: | :---: | :---: | :---: |
| Instruction Manual | 5F-BN01-PE01 | 3.0 | The instructions manual set of RH-3CRH/6CRH. |
| Safety Manual | BFP-A3541 | - | Items relating to safety in handling the robot |
| Standard Specifications | BFP-A3606 | - | Specification of the robot arm and controller |
| Robot Arm Setup \& Maintenance | BFP-A3609 | - | Installation method of the robot arm, jog operation, and maintenance and inspection procedures |
| Controller Setup, Basic Operation and Maintenance | BFP-A3476 | - | Installation method of the controller, basic operation, and maintenance and inspection procedures |
| Detailed Explanation of Functions and Operations | BFP-A3478 | - | Functions of the controller and T/B, operation method, and explanation of MELFA-BASIC VI. |
| Troubleshooting | BFP-A3480 | - | Causes of errors occurred and their countermeasures |
| Additional axis function | BFP-A3504 | - | Function of the additional axis, operation method. |
| Tracking Function | BFP-A3520 | - | Function of the tracking, operation method. |
| GOT Direct Connection Extended Function | BFP-A3546 | - | Explains of data configuration of shared memory, monitoring, and operating procedures, between the GOT and controller. |
| Ethernet Function | BFP-A3379 | - | Ethernet communication method between personal computer and robot controller. |

Note1) Mass indicates one set.

## (6) Parallel I/O interface

-Order type : •2D-TZ368 (Sink type)/2D-TZ378 (Source type)
-Outline

This is used to expand the external inputs and outputs.

- The connecting cable with external equipment is not attached. Since we are preparing the external input-and-output cable (2D-CBL05 or 2D-CBL15) as the option, please use.
Notes)Although the combined use with the parallel input-and-output unit (2A-RZ361/ 2A-RZ371) of another option is also possible, please use the setup of the station number by the different number separately. The station number is automatically determined by the position of the option slot which installed this interface. (station number 0 to 1 )
-Configuration
Table 3-19: Configuration device

| Part name | Type | Qty. | Mass (kg) ${ }^{\text {Note1) }}$ | Remarks |

| ParalleाI/O interface | 2D-TZ368 | Either | 0.4 | Input/output 32 points/32 points <br> 2D-TZ368 is sink type. 2D-TZ378 is source type. |
|  |  |  | 2D-TZ378 |  |

Note1) Mass indicates one set.
-Specifications
Table 3-20: Electrical specifications of input circuits

| Item |  | Specification |  | Internal circuit |
| :---: | :---: | :---: | :---: | :---: |
| Type |  | DC input |  |  |
| Number of input points |  | 32 |  |  |
| Insulation method |  | Photo coupler insulation |  |  |
| Rated input voltage |  | DC12V | DC24V |  |
| Rated input current |  | Approx. 3mA | Approx.9mA |  |
| Working voltage range |  | DC10.2 to 26.4 V <br> (Ripple factor should be less than $5 \%$ ) |  |  |
| ON voltage/ON current |  | DC8V or more/2mA or more |  | <Sou |
| OFF voltage/ OFF current |  | DC4V or less/1mA or less |  |  |
| Input resistance |  | Approx. 2.7k $\Omega$ |  |  |
| Response time | OFF-ON | $10 \mathrm{~ms} \mathrm{or} \mathrm{less(DC24V)}$ |  |  |
|  | ON-OFF | $10 \mathrm{~ms} \mathrm{or} \mathrm{less( }$ |  |  |
| Common method |  | 32 points per common |  |  |
| External cable connection method |  | Connector |  |  |

Table 3-21: Electrical specifications for the output circuits

| Item |  | Specification | Internal circuit |
| :---: | :---: | :---: | :---: |
| Type |  | Transistor output | <Sink type> |
| No. of output points |  | 32 |  |
| Insulation method |  | Photo-coupler insulation | $+24 \mathrm{~V} /+12 \mathrm{~V}$ |
| Rated load voltage |  | DC12V/DC24V |  |
| Rated load voltage range |  | DC10.2 to 30V (peak voltage DC30V) | 古 $\rightarrow$ Output |
| Max. load current |  | 0.1A/point (100\%) |  |
| Leakage current at OFF |  | Within 0.1 mA | $4 \mathrm{G} / 12 \mathrm{G}$ |
| Max. voltage drop at ON |  | DC0.9V(TYP.) ${ }^{\text {Note1) }}$ |  |
| Response time | OFF-ON | 10ms or less (Resistance load) (hardware response time) | <Source type> |
|  | ON-OFF | $10 \mathrm{~ms} \mathrm{or} \mathrm{less} \mathrm{(Resistance} \mathrm{load)} \mathrm{(hardware} \mathrm{response} \mathrm{time)}$ |  |
| Fuse rating |  | Fuse 1.6A (one per common) Replacement possible (max. 3) |  |
| Common method |  | 16 points per common (common terminal: 2points) |  |
| External wire connection method |  | Connector | $\frac{1}{\gamma} \sim$ |
| External power supply | Voltage | DC12/24V(DC10.2 to 30V) |  |
|  | Current | 60 mA (TYP.DC24V per common) (base drive current) |  |

Note1) The maximum voltage drop value at signal ON.
Refer to it for the equipment connected to the output circuit.
*A voltage exceeding the rated voltage or incorrect wiring may damage the circuit.

The protection fuse of the output circuit prevents the failure at the time of the load short circuit and incorrect connection. The load connected of the customer should be careful not to exceed maximum rating current. The internal transistor may be damaged if maximum rating current is exceeded.

- Installation method

The expansion parallel input/output interface is installed in the controller. Refer to separate "Instruction Manual/ Controller setup, basic operation, and maintenance" for details on the installing method.
If it installs in the option SLOT of the controller, the station number will be assigned automatically.
SLOT1: station number 0 (0 to 31)
SLOT2: station number 1 ( 32 to 63 )
. Caution
If it uses together with parallel input-and-output unit 2A-RZ361/2A-RZ371, please do not overlap with the station number of the parallel input-and-output interface.

Fig.3-21: Parallel I/O interface installation position
-Pin layout of connector

Fig.3-22: Pin layout of connector
-Connector pin No. and signal assignment
The station number is fixed by the slot to install and the allocation range of the general-purpose input-andoutput signal is fixed.

Table 3-22: The slot number and the station number

| Slot number | Station <br> number | Range of the general-purpose input-and-output signal |  |
| :---: | :---: | :---: | :---: |
|  |  | Connector <1> | Connector <2> |
| SLOT1 | 0 | Input: 0 to 15 <br> Output: 0 to 15 | Input: 16 to 31 <br> Output: 16 to 31 |
| SLOT2 | 1 | Input: 32 to 47 <br> Output: 32 to 47 | Input: 48 to 63 <br> Output: 48 to 63 |

The connector pin number of the parallel input-and-output interface installed in SLOT1 and signal number allocation are shown in Table 3-23 and Table 3-24. If it installs in other slots, please interpret and utilize.

## (7) External I/O cable

-Order type : •2D-CBLøa[Note]The numbers in the boxesar refer to the length. ( $05: 5 \mathrm{~m}, 15: 15 \mathrm{~m}$ )
-Outline
This is the dedicated cable used to connect an external peripheral device to the
 connector on the parallel I/O interface. For parallel I/O unit is another option 2ACBL**.
One end matches the connector on the parallel input/output unit, and the other end is free. Connect the peripheral device's input/output signal using the free end. One cable correspond to the input 16 points and output 16 points. Two cables are needed to connection of (input 32 points and output 32 points) with built-in standard.

## -Configuration

Table 3-25: Configuration device

| Part name | Type | Qty. | Mass (kg) Note1) | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| External I/O cable | 2D-CBLa口 | 1 pc. | $0.7(5 \mathrm{~m})$ | 5 m or 15 m |
|  |  |  | $1.84(15 \mathrm{~m})$ |  |

Note1) Mass indicates one set.
-Specifications
Table 3-26: Specifications

| Items |  |
| :--- | :--- |
| Number of cables $\times$ cable size | AWG \#28 x 20P (40 cores) |
| Total length | $5 \mathrm{~m}, 15 \mathrm{~m}$ |

-Connector pin numbers and cable colors
Table 3-27: Connector pin numbers and cable colors

| Pin no. | Cable colors | Pin no. | Cable colors | Pin no. | Cable colors | Pin no. | Cable colors |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1A/C | Orange/Red a | 11A/C | Orange/Red c | 1B/D | Orange/Black a | 11B/D | Orange/Black c |

| 6A/C | Orange/Red b | 16A/C | Orange/Red d | 6B/D | Orange/Black b | 16B/D | Orange/Black d |
| 7A/C | Gray/Red b | 17A/C | Gray/Red d | 7B/D | Gray/Black b | 17B/D | Gray/Black d |
| 8A/C | White/Red b | 18A/C | White/Red d | 8B/D | White/Black b | 18B/D | White/Black d |
| 9A/C | Yellow/Red b | 19A/C | Yellow/Red d | 9B/D | Yellow/Black b | 19B/D | Yellow/Black d |
| 10A/C | Pink/Red b | 20A/C | Pink/Red d | 10B/D | Pink/Black b | 20B/D | Pink/Black d |

Notes) Pin number of connector<1> are 1C, 2C, $\ldots .20 \mathrm{C}, 1 \mathrm{D}, 2 \mathrm{D}, \ldots .20 \mathrm{D}$, connector<2> are 1A, 2A, ....20A, 1B, 2B, ....20B.
-Connections and outside dimensions
The sheath of each signal cable (40 lines) is color indicated and marked with dots. Refer to the cable color specifications in "Table 3-36: Connector pin numbers and cable colors" when making the connections.
(Eg.) Pin number: color indication
1 : Orange / Red / a

Fig.3-27: Connections and outside dimensions
(8) Parallel I/O unit
-Order type: 2A-RZ361(Sink type)/2A-RZ371(Source type)
-Outline

This is used to expand the external inputs and outputs.

- The connection cable is not included. .Prepare the optional external input/ output cable (2A-CBL05 or 2A-CBL15).
- Use 2A-RZ361 if the external input/output signal logic is of the sink type and 2A-RZ371 for source type signal logic.

Notes) Although the combined use with the parallel I/O interface (2D-TZ368/2D-TZ378) of another option is also possible, please use the setup of the station number by the different number separately. The station number is automatically fixed by the position of the option slot which installed the parallel I/O interface in 0-1.
-Configuration

| Robot I/O link connection connector | NETcable-1 | 2 sets | - | Connector with pins. <br> The cable must be prepared and wired by the customer. |
| Power connection connector | DCcable-2 | $\begin{gathered} \text { Each } 1 \\ \text { set } \end{gathered}$ | - | Connector with pins. <br> The cable must be prepared and wired by the customer. |
| Terminator | R-TM | 1 pc . | - | $100 \Omega$ (1/4W) |

Note1) Mass indicates one set.

## ■Specifications

1) Up to eight stations can be connected to this unit (one station occupies one unit).

The combined use with another optional parallel I/O interface (2D-TZ368/2D-TZ378) is possible, but the maximum number of stations is eight in total. In this case, set any of station numbers carefully so that they do not duplicate.
2) The power supply $(24 \mathrm{~V})$ must be prepared by the customer and connected with the power connection cable (DCcable-2)
A separate 24 V power supply is required for the input/output circuit wiring.

Table 3-29: Electrical specifications of input circuits

| Item | Specification | Internal circuit |
| :---: | :---: | :---: |
| Type | DC input | <Sink type> |
| Number of input points | 32 |  |
| Insulation method | Photo coupler insulation |  |
| Rated input voltage | 12VDC ${ }^{\text {24VDC }}$ |  |
| Rated input current | Approx 3mA $\quad$ Approx 7mA |  |
| Working voltage range | 10.2 to $26.4 \mathrm{VDC}($ Ripple factor should be less than 5\%.) |  |
| ON voltage/ON current | 8VDC or more/ 2mA or more | <Source type> |
| OFF voltage/ OFF current | 4VDC or less/ 1mA or less |  |
| Input resistance | Approx. 3.3k | 3.3K Input |
| Response time | 10 ms or less (24VDC) | --- |
| ON-OFF | 10 ms or less (24VDC) | オ~マ $\quad$ 820 |
| Common method | 8 points per common | 000 |
| External cable connection method | Connector | $24 \mathrm{G} / 12 \mathrm{G}$ |

Table 3-30: Electrical specifications for the output circuits

Note1) The maximum voltage drop value at signal ON.
Refer to it for the equipment connected to the output circuit.
*A voltage exceeding the rated voltage or incorrect wiring may damage the circuit.

The output circuit protective fuses prevent failure in case of load short-circuit and improper connections. Please do not connect loads that cause the current to exceed the maximum rated current. If the maximum rated current is exceeded, the internal transistors may be damaged.

Inputs the power supply for control (DCcable-2) then inputs the controller's power supply.

NET cable-1 (Network cable)

onnector: J21DF-06V-KX-L
DCcable-2 (Power cable)

| Pin No. | RIO1/2 |
| :---: | :---: |
| 1 | 24 V |
| 2 | $24 \mathrm{G}(\mathrm{RG})$ |
| 3 | FG(PE) |

Connector: 2-178288-3
Connected the frame ground or protect ground

R-TM (Terminator)

List of parts and manufacturer

| Type | Connector type | Contact type | Resistant | Manufacturer |
| :--- | :--- | :--- | :--- | :--- |
| NETcable-1 | $1-178288-3(2)$ | $1-175218-2(6)$ | - | Tyco Electronics |
|  | 51103-0300 (1) | $50351-8100(3)$ | - | MOLEX |
|  | J21DF-06V-KX-L (1) | SJ2F-01GF-P1.0 (4) | - | JST |
| DCcable-2 | $2-178288-3(1)$ | $1-175218-5(3)$ | - | Tyco Electronics |
| R-TM | $1-178288-3(1)$ | $1-175218-3(2)$ | $100 \Omega(1 / 4 \mathrm{~W})(1)$ | Equivalent to KOA. |

Note 1) The 24 V power supply is prepared by customer (The power consumption is approx. 0.3 A .)
In the customer's system, do not ground the + side of 24 V power supply prepared by customer for connect to the controller. (related with emergency stop and parallel input/output) If it connects with the controller under the condition that the + side is grounded, it will lead to failure of controller.
Note 2) The cable for general purpose can be used to the network cable. However, use the twisted shield cable of AWG\#22(0.3mm ${ }^{2}$ ) or more.

Fig.3-28: Specifications for the connection cable

- Installation method

The expansion parallel input/output unit is installed outside of the controller. Connect with the network connection cable (NETcable-1) from the RIO connector in the front of the controller.

Fig.3-29: Installing the parallel I/O unit

Fig.3-30: Connection method of expansion parallel I/O unit
-Pin arrangement of the connector

*2A-RZ361/2 A-RZ371 are 32/32 input-and-output units. (One-station occupancy)
Fig.3-31: Pin arrangement of the parallel I/O unit
-Assignment of pin number and signal
The assignment range of the general-purpose input-and-output signal is fixed by the setup of the station number.
Although the combined use with the parallel I/O interface (2D-TZ368/2D-TZ378) of another option is also possible, please use the setup of the station number by the different number separately.

Table 3-31: Assignment of pin number and signal

| Unit Number | Station <br> number | CN100 | CN300 |
| :---: | :---: | :---: | :---: |
| 1st set | 0 | Input: 0 to 15 <br> Output: 0 to 15 | Input: 16 to 31 <br> Output: 16 to 31 |
| 2nd set | 1 | Input: 32 to 47 <br> Output: 32 to 47 | Input: 48 to 63 <br> Output: 48 to 63 |
| 3rd set | 2 | Input: 64 to 79 <br> Output: 64 to 79 | Input: 80 to 95 <br> Output: 80 to 95 |
| 4th set | 3 | Input: 96 to 111 <br> Output: 96 to 111 | Input: 112 to 127 <br> Output: 112 to 127 |
| 5th set | 4 | Input: 128 to 143 <br> Output: 128 to 143 | Input: 144 to 159 <br> Output: 144 to 159 |
| 6th set | 5 | Input: 160 to 175 <br> Output: 160 to 175 | Input: 176 to 191 <br> Output: 176 to 191 |
| 7th set | 6 | Input: 192 to 207 <br> Output: 192 to 207 | Input: 208 to 223 <br> Output: 208 to 223 |
| 8th set | 7 | Input: 224 to 239 <br> Output: 224 to 239 | Input: 240 to 255 <br> Output: 240 to 255 |

The connector pin number of the parallel I/O unit of the station number 0 and signal number assignment are shown in Table 3-32 and Table 3-33. If it is set as other station number, please interpret and utilize.

## (9) External I/O cable

nOrder type: 2A-CBLøa Note)The numbers in the boxesau refer to the length.(05: $5 \mathrm{~m}, 15: 15 \mathrm{~m}$ )
-Outline

This is the dedicated cable used to connect an external peripheral device to the connector on the parallel input/output unit.
One end matches the connector on the parallel input/output unit, and the other end is free. Connect the peripheral device's input/output signal using the free end.
One cable correspond to the input 16 points and output 16 points.
Two cables are needed to connection of (input 32 points and output 32 points) with built-in standard.
-Configuration

-Connections and outside dimensions
The sheath of each signal cable ( 50 lines) is color indicated and marked with dots. Refer to the cable color specifications in "Table 3-36: Connector pin numbers and cable colors" when making the connections.
(Eg.) Pin number: color indication
1 : Orange / Red / A

Fig.3-36: Connections and outside dimensions

## (10) CC-Link interface

-Order type: •2D-TZ576
-Outline

The CC-Link interface is the optioninterface to not only add bit data to the robot controller, but also to add CC-Link field network function that allows cyclic transmission of word data.
-Configuration
Table 3-37: Configuration device

| Part name | Type | Qty. | Mass(kg) ${ }^{\text {Note1) }}$ | Remarks |  |

Note1) Not available for the transient transmission function and FX-series models that do not support intelligent devices.

## -Functions

(1) Communication function

- The number of usable points is 896 points maximum for bit control and 128 points maximum for word control.
(2) Easy setup
- The CC-Link interface card can be set by a rotary switch or DIP switch.
- No separate space is required to mount the CC-Link interface card as it is embedded in the robot controller (can only be mounted into slot 2).
- Easy wiring since only four terminals need to be connected.
- Dedicated commands have been added to MELFA-BASIC V, VI (robot programming language); thus, no complex interface programming is required.
(3) High-speed response
- The link scan time when connecting 64 stations is approximately 7.2 ms .
- A transmission speed can be selected from $10 \mathrm{M}, 5 \mathrm{M}, 2.5 \mathrm{M}, 625 \mathrm{~K}$ and 156 K bps according to the transmission distance.
(11) SD memory card -Order type: 2F-2GBSD
-Outline

This card is used as an extended memory.
Insert this card to the slot (SD CARD) on the front of the controller, and store robot programs, logging data, or other data.
-Configuration
Table 3-40: Configuration device

| Part name | Type | Qty. | Remarks |
| :---: | :---: | :---: | :--- |
| SD memory card | 2F-2GBSD | 1 | Memory card capacity: 2GB |

### 3.10 Maintenance parts

The consumable parts used in the controller are shown in Table 3-41. Purchase these parts from your dealer when required. Some Mitsubishi-designated parts differ from the maker's standard parts. Thus, confirm the part name, robot arm and controller serial No. and purchase the parts from your dealer.

Table 3-41: Controller consumable parts list

| No. | Name | Type Note1) | Qty. | Usage place | Supplier |
| :---: | :--- | :---: | :---: | :---: | :---: |
| 1 | Filter | BKOFA0773H42 | 1 | Inside the filter cover | Mitsubishi Electric |

Note1) Confirm the robot arm serial No., and contact the dealer or service branch of Mitsubishi Electric Co., for the type.

## 4 Software

### 4.1 Functions and specifications of $\mathrm{RH}-3 \mathrm{CRH} / \mathrm{RH}-6 \mathrm{CRH}$

### 4.1.1 Changed functions/specifications

Some functions of RH-3CRH/RH-6CRH controller and some functions/specifications of MELFA-BASIC VI programming language are changed from the functions/specifications of RH-F series. Table 4-1 shows details on the changes.

Table 4-1: List of changed functions/specifications

|  | Changed function/specification | Outline | Reference page |
| :---: | :--- | :--- | :--- |
| 1 | Definition change of component C in XYZ <br> coordinate data | The numerical value range of component C is <br> extended. | Page 102 |
| 2 | Functionality change of some commands and a <br> function in MELFA-BASIC VI | In connection with No.1 above, the functionality of <br> Mvs command, Def Plt command, and Zone function <br> are changed. | Page 103 |
| 3 | Addition of the parameter to select the component <br> C indication method | A parameter to select the indication method between <br> the one mentioned in No. 1 above and the <br> conventional one. | Page 104 |
| 4 | Method change for setting a user-defined area | In connection with No.1 above, the setting method is <br> changed. | Page 104 |
| 5 | Large inertia mode | Enabling the large inertia mode has the effect to <br> suppress vibrations of the robot arm when the hand <br> (or workpiece) with a large inertia is used. | Page 104 |

### 4.1.2 Descriptions of changed functions/specifications

-Definition change of component C in XYZ coordinate data
The definition of component C in XYZ coordinate data is changed for RH-3CRH/RH-6CRH. Refer to the following descriptions for the details.

The format of the robot position data is divided into two categories: XYZ coordinate and JOINT coordinate. XYZ coordinate format data includes position data, posture data, and associated information (flags). For a horizontal, multiple-joint type robot, the data is displayed in format such as (X, Y, Z, , , C)(FL1, FL2). The component C represents rotational angle about the Z axis.
For conventional robots (ex. RH-F, RH-SD/SQ), the component C range is defined as $-180 \leqq \mathrm{C} \leqq+180$ (Fig. $4-1$ ). For RH-3CRH/RH-6CRH, it is defined more widely (Fig. 4-2). See Fig. 4-2 to find two diagrams of (a) Forward rotation, and (b) Reverse rotation.

Fig.4-1: Definition of component C for conventional robots (within $\pm 180$ )

Fig.4-2: Definition of component C for RH-3CRH/RH-6CRH (over $\pm 180$ )
As the component $C$ covers a value less than -180 or more than +180 , an actual rotational angle can be set for the rotational angle for linear interpolation or perfect circle/circular interpolation. To move the work at a target angle in the robot programming, the rotation direction was set by specifying an operation in the argument Type or changing the multi-rotation flag (FL2) for conventional robots but is set just by specifying an angle for $\mathrm{RH}-3 \mathrm{CRH} / \mathrm{RH}-6 \mathrm{CRH}$ value of the FL2 is always 0 .

Due to this change, the robot program used for the conventional robots may malfunction. In such cases, refer to Page 103, "■ Functionality change of some commands and a function in MELFA-BASIC VI" to change the robot programming.
Or the definition of component C can be converted back into the conventional definition by setting a related parameter to maintain compatibility among the robot program or robot operations. For information on how to adjust the parameter, refer to Page 104, "■ Parameter to select the component C indication method".
-Functionality change of some commands and a function in MELFA-BASIC VI
Due to the definition change of component C in XYZ coordinate data, some commands and a function in MELFA-BASIC VI are changed. Table 4-2 shows details on the changes.

Table 4-2: List of changed commands/function for RH-3CRH/RH-6CRH

| Command/ <br> function | Descriptions |
| :--- | :--- |\(\left|\begin{array}{l}- The initial value of "constant 1" specified in the argument Type differs according to the setting value of the <br>

parameter DISPCTYP. <br>
When DISPCTYP=0 (initial value): The initial value of "constant 1 " is 1 (roundabout). <br>

When DISPCTYP=1: The initial value of "constant 1 " is 0 (shortcut) (compatible with the conventional robots).\end{array}\right|\)| - When DISPCTYP=0 (initial value) for RH-3CRH/RH-6CRH, the posture angle (component C) is checked |
| :--- |
| whether it satisfies the following formula: Position $2 \leqq$ Position $1 \leqq$ Position 3. |

-Parameter to select the component $C$ indication method
The definition of component $C$ in XYZ coordinate data is changed for RH-3CRH/RH-6CRH. However, in order to maintain operational compatibility with the conventional models (RH-F, RH-SD/SQ, etc.), it is possible to use the definition of component $C$ in $X Y Z$ coordinate data for the conventional models by setting the parameter.
Table 4-3 describes the parameter.
Table 4-3: Parameter added for RH-3CRH/RH-6CRH

| Parameter | Parameter name | Number of arrays Number of characters | Description | Factory default setting |
| :---: | :---: | :---: | :---: | :---: |
| Multi-rotation indication method | DISPCTYP | Integer 1 | Indication method for multi-rotation of component C in XYZ coordinate data. <br> 0 : Invalid (The component $C$ value is not rounded to the value within $+/-180$ degrees.) <br> 1: Valid (The component $C$ value is rounded to the value within $+/-180$ degrees to maintain compatibility with the conventional models.) <br> Turn off and on the controller's power supply after changing the setting of this parameter. <br> For using robot programs for the conventional models (RH-F, RH-SD/SQ) after introducing RH-3CRH/RH-6CRH, change the parameter setting to "1" (valid). | RH-3CRH/ RH-6CRH <br> 0 <br> Other models 1 |

-Method change for setting a user-defined area
The definition and evaluation of a user-defined area is changed for RH-3CRH/RH-6CRH.
(1) When DISPCTYP=0 (initial value) for $\mathrm{RH}-3 C R H / R H-6 C R H$, the posture angle (component C ) is checked whether it satisfies the following formula: AREAnP2 $\leq$ current position $\leq$ AREAnP3. Make sure to so define the posture angle as to satisfy the requirement of "AREAnP2 < AREAnP3". If the wrong requirement of "AREAnP3 < AREAnP2" is defined, check results are not returned correctly.
When DISPCTYP=1, the posture angle is checked, as for the conventional robots, whether it is within the area covered by the robot arm's forward rotation from AREAnP2 to AREAnP3.
(2) When the posture angle (component $C$ ) check is not performed, set the component $C$ to sufficient large values, for example, -10000 for AREAnP2, and +10000 for AREAnP3.

## -Large inertia mode

Enabling the large inertia mode has the effect to suppress vibrations of the robot arm when the hand (or workpiece) with a large inertia is used. When the hand (or workpiece) with a large inertia is used, enable the large inertia mode. Table 4-4 shows the allowable inertia when the large inertia mode is enabled. Table 4-5 describes the parameter.
When the large inertia mode is enabled, if the inertia exceeds the allowable inertia for the standard load mode, the permissible value for the distance from the center of the shaft to the center of gravity of the load (the offset amount) is 10 mm .

Table 4-4: List of the allowable inertia when the large inertia mode is enabled

| Item | Unit | Inertia mode | $\mathrm{RH}-3 C R H$ | RH-6CRH |
| :--- | :---: | :--- | :--- | :--- |
| Allowable inertia <br> (Maximum) | $\mathrm{kg} \mathrm{m} \mathrm{m}^{\wedge}$ | Standard load mode | 0.05 | 0.12 |
|  |  | Large inertia mode | 0.075 | 0.18 |

Table 4-5: Parameter added for RH-3CRH/RH-6CRH

| Parameter | Parameter name | Number of arrays Number of characters | Description | Factory default setting |
| :---: | :---: | :---: | :---: | :---: |
| Inertia mode | PYLDMODE | Integer 1 | Specify whether the large inertia mode is enabled or disabled. <br> 0 : Standard load mode <br> 1: Large inertia mode <br> Enabling the large inertia mode has the effect to suppress vibrations of the robot arm when the hand (or workpiece) with a large inertia is used. When the hand (or workpiece) with a large inertia is used, enable the large inertia mode. <br> This parameter is valid only for the RH-CRH series. It cannot be used for other series. | 0 |

### 4.1.3 Origin position adjustment of J 2 axis

When a calculated point is used for a robot's work point, the accuracy of J 2 axis is important. This paragraph "4.1.3 Origin position adjustment of J 2 axis" gives the details of an origin position adjustment by the configuration flag (RIGHT/LEFT).

Fig.4-3: Origin position adjustment
For the origin position adjustment, a reference point is an axis center of a shaft. When a center of the hand is offset from a center of the shaft, the hand must be removed before the origin position adjustment.

Origin position adjustment procedure

1) Designate any point as an origin position.
2) Match the center of the shaft with the origin position in a right hand coordinate system.
3) Perform teaching work to the joint variables JR.
4) Match the center of the shaft with the origin position in a left hand coordinate system.
5) Perform teaching work to the joint variables JL .
6) Execute the following commands in the order presented.
```
MDJNT_J2=(JR.J2+JL.J2)/2
JDJNT_Data=(0,0,0,0,0,0)
JDJNT_Data.J2=JDJNT_Data.J2-(MDJNT_J2)
PrmWrite 1,"DJNT",JDJNT_Data
```

7) Move J 2 axis to 0 degrees, and check the robot position.
[^0]
### 4.2 List of commands

The available new functions in MELFA-BASIC VI are given in Table 4-6.
Table 4-6: List of MELFA-BASIC VI commands

| Type | Class | Function | Input format (example) |
| :---: | :---: | :---: | :---: |
| Structured programming | Function procedure | Defines the Function procedure. Function procedure summarizes a series of processing enclosed by the Function statement and the FEnd statement. | $\begin{aligned} & \hline \hline \text { Function M Func(M1, M2) } \\ & \text { M3 }=\mathrm{M} 1+\mathrm{M} 2 \\ & \text { Func=M3 } \\ & \text { Exit Function } \\ & \text { FEnd } \end{aligned}$ |
| Library function | \#Include statement | Reads the designated program. | \#Include "PRG1" |
| Position and operation control | Joint interpolation | Moves to the designated position with joint interpolation. | Mov P1 |
|  | Linear interpolation | Moves to the designated position with linear interpolation. | Mvs P1 |
|  | Circular interpolation | Moves along a designated arc (start point $\rightarrow$ passing point $\rightarrow$ start point (end point)) with 3-dimensional circular interpolation (360 degrees). | Mvc P1,P2,P1 |
|  |  | Moves along a designated arc (start point $\rightarrow$ passing point $\rightarrow$ end point) with 3-dimensional circular interpolation. | Mvr P1,P2,P3 |
|  |  | Moves along the arc on the opposite side of a designated arc (start point $\rightarrow$ reference point $\rightarrow$ end point) with 3-dimensional circular interpolation. | Mvr2 P1,P9,P3 |
|  |  | Moves along a set arc (start point $\rightarrow$ end point) with 3dimensional circular interpolation. | Mvr3 P1,P9,P3 |
|  | Speed designation | Designates the speed for various interpolation operations with a percentage ( $0.1 \%$ unit). | Ovrd 100 |
|  |  | Designate the speed for joint interpolation operation with a percentage <br> (0.1\% unit). | JOvrd 100 |
|  |  | Designates the speed for linear and circular interpolation with a numerical value ( $\mathrm{mm} / \mathrm{s}$ unit). | Spd 123.5 |
|  |  | Designates the acceleration/deceleration time as a percentage in respect to the predetermined maximum acceleration/ deceleration. (1\% unit) | Accel 50,80 |
|  |  | Automatically adjusts the acceleration/deceleration according to the parameter setting value. | Oadl ON |
|  |  | Sets the hand and work conditions for automatic adjustment of the acceleration/deceleration. | Loadset 1,1 |
|  | Operation | Adds a process unconditionally to the operation. | Wth |
|  |  | Adds a process conditionally to the operation. | Wthlf |
|  |  | Designates smooth operation. | Cnt 1,100,200 |
|  |  | Performance of movement is upgraded corresponding to the application. | MvTune 4 |
|  |  | Designates the positioning completion conditions with a No. of pulses. | Fine 200 |
|  |  | Designates the positioning completion conditions with a distance in a straight line | Fine 1, P |
|  |  | Turns the servo power ON/OFF for all axes. | Servo OFF |
|  |  | Limits the operation of each axis so that the designated torque is not exceeded. | Torq 4,10 |
|  | Position control | Designates the base conversion data. | Base P1 |
|  |  | Designates the tool conversion data. | Tool P1 |
|  | Float control | The robot arm rigidity is lowered and softened. (XYZ coordinate system) | Cmp Pos ,\&B00000011 |
|  |  | The robot arm rigidity is lowered and softened. (JOINT coordinate system) | Cmp Jnt ,\&B00000011 |
|  |  | The robot arm rigidity is lowered and softened. (TOOL coordinate system) | Cmp Tool ,\&B00000011 |
|  |  | The robot arm rigidity is returned to the normal state. | Cmp Off |
|  |  | The robot arm rigidity is designated. | $\begin{aligned} & \text { CmpG } \\ & 1.0,1.0,1.0,1.0,1.0,1.0,1.0,1.0 \end{aligned}$ |

| Type | Class | Function | Input format (example) |
| :---: | :---: | :---: | :---: |
| Position and operation control | Pallet | Defines the pallet. | Def Plt 1,P1,P2,P3,P4,5,3,1 |
|  |  | Operates the pallet grid point position. | Plt 1,M1 |
|  | Singular point passage | Move to a specified position using linear interpolation passing through a singular point. | Mvs P1 Type 0,2 |
|  | Branching | Branches unconditionally to the designated place. | GoTo *LBL |
|  |  | Branches according to the designated conditions. | If M1=1 Then GoTo *L100 <br> Else GoTo *L200 <br> Endlf |
|  |  | Repeats until the designated end conditions are satisfied. | For M1=1 To 10 <br> Next M1 |
|  |  | Repeats while the designated conditions are satisfied. | While M1<10 <br> WEnd |
|  |  | Branches corresponding to the designated expression value. | On M1 GoTo *La1, *Lb2, *Lc3 |
|  |  | Executes program block corresponding to the designated |  |
|  |  | expression value. | Case 1 |
|  |  |  | Break |
|  |  |  | Case 2 |
|  |  |  | Break |
|  |  |  | End Select |
|  |  | Moves the program process to the next line. | Skip |
|  | Collision detection | Set to enable/disable the collision detection. | ColChk On/Off |
|  |  | Set the detection level of the collision detection. | ColLvl 100,80,,,,,, |
|  | Subroutine | Executes the designated subroutine. (Within program) | GoSub *L200 |
|  |  | Returns from the subroutine. | Return |
|  |  | Executes the designated program. | CallP "P10",M1,P1 |
|  |  | Defines the program argument executed with the CALLP command. | FPrm M10,P10 |
|  |  | Executes the subroutine corresponding to the designated expression value. | On M1 GoSub*La1,*La2,*La3 |
|  | Interrupt | Defines the interrupt conditions and process. | Def Act 1, M1=1 GoTo *L123 |
|  |  | Enables/disables the interrupt. | Act 1=1 |
|  |  | Defines the start line of the program to be executed when an interrupt is generated from the communication line. | On Com(1) GoSub *LABC |
|  |  | Enables the interrupt from the communication line. | Com(1) On |
|  |  | Disables the interrupt from the communication line. | Com(1) Off |
|  |  | Stops the interrupt from the communication line. | Com(1) Stop |
|  | Wait | Designates the wait time, and the output signal pulse output time. (0.01s unit) | Dly 0.5 |
|  |  | Waits until the variable becomes the designated value. | Wait M_In(20)=1 |
|  | Stop | Stops the program execution. | HIt |
|  |  | Generates an error. During program execution, continue, stop or servo OFF can be designated. | Error 9000 |
|  | End | Ends the program execution. | End |
| Hand | Hand open | Opens the designated hand. | HOpen 1 |
|  | Hand close | Closes the designated hand. | HClose 1 |
| Input/output | Assignment | Defines the input/output variables. | Def IO PORT1=Bit,99 |
|  | Input | Retrieves the general-purpose input signal. | M1=M_In (78) |
|  | Output | Calls out the general-purpose output signal. | M_Out(23) $=0$ |
| Paralle execution | Mechanism designation | Acquires the mechanism with the designated mechanism No. | GetM 1 |
|  |  | Releases the mechanism with the designated mechanism No. | RelM 1 |
|  | Selection | Selects the designated program for the designated slot. | XLoad 2,"P102" |
|  | Start/stop | Carries out parallel execution of the designated program. | XRun 3,"100",0 |
|  |  | Stops parallel execution of the designated program. | XStp 3 |
|  |  | Returns the designated program's execution line to the head and enters the program selection enabled state. | XRst 3 |

| Type | Class | Function | Input format (example) |
| :---: | :---: | :---: | :---: |
| Others | Definition | Defines the integer type or real number type variable. | Def Inte KAISUU |
|  |  | Defines the character string variable. | Def Char MESSAGE |
|  |  | Defines the layout variable. (Up to 3-dimensional possible) | Dim PDATA(2,3) |
|  |  | Defines the joint variable. | Def Jnt TAIHI |
|  |  | Defines the position variable. | Def Pos TORU |
|  |  | Defines the function. | Def FN TASU(A,B)=A+B |
|  | Clear | Clears the general-purpose output signal, variables in program, variables between programs, etc. | CIr 1 |
|  | File | Opens a file. | Open "COM1:" AS \#1 |
|  |  | Closes a file. | Close \#1 |
|  |  | Inputs data from a file. | Input \#1,M1 |
|  |  | Outputs data to a file. | Print \#1,M1 |
|  | Comment | Describes a comment. | Rem "ABC" |
|  | Label | Indicates the branching destination. | *SUB1 |

### 4.3 List of parameters

Show the main parameter in the Table 4-7.
Table 4-7: List of parameters

| Parameter |  | Details |
| :---: | :---: | :---: |
| Standard tool coordinates. | MEXTL | Set the default value for the tool data. Unit: mm or deg. |
| Standard base coordinates | MEXBS | Set the relation of the world coordinate system and robot coordinate system. Unit: mm or deg. |
| XYZ operation range | MEPAR | Designate the overrun limit value for the world coordinate system. |
| JOINT operation range | MEJAR | Set the overrun limit value for each joint axis. |
| Free plane limit |  | This is the overrun limit set with the free plane. Create a plane with the three coordinates $\mathrm{x} 1, \mathrm{y} 1, \mathrm{z} 1$ to $\mathrm{x} 3, \mathrm{y} 3, \mathrm{z} 3$, and set the outer side of the plane as the outside operation range (error). The following three types of parameters are used. |
|  | $\begin{aligned} & \text { SFC1P } \\ & : \\ & \text { SFC8P } \end{aligned}$ | Eight types of free plane limits can be set in SFC1P to SFC8P. There are nine elements, set in the order of $x 1, y 1, z 1, x 2, y 2, z 2, x 3, y 3, z 3$. |
|  | $\begin{aligned} & \text { SFC1ME } \\ & : \\ & \text { SFC8ME } \end{aligned}$ | Designate which mechanism to use eight types of set free plane limits. The mechanism No. to use is set with 1 to 3 . |
|  | $\begin{aligned} & \text { SFC1AT } \\ & : \\ & \text { SFC8AT } \end{aligned}$ | Set the validity of the eight types of set free plane limits. (Valid 1/Valid 2/invalid $=1 /-1 / 0$ ) |
| User-defined area |  | An area (cube) defined with two XYZ coordinate points can be designated and that area set as the outside operation range. Furthermore, a signal can be output when the axis enters that area. Up to 32 types of area can be designated. |
|  | AREA1CS AREA32CS | Specify the coordinate system of the user definition area *. <br> 0: Base coordinate system (conventional compatibility) <br> 1: Robot coordinate system |
|  | AREA1P1 <br> AREA32P1 | Designated the 1st point of the area. <br> There are eight elements, set in the order of $x, y, z, a, b, c, L 1, L 2$. (L1 and L2 are the additional axes.) |
|  | AREA1P2 <br> AREA32P2 | Designated the 2nd point of the area. <br> There are eight elements, set in the order of $x, y, z, a, b, c, L 1, L 2$. (L1 and L2 are the additional axes.) |
|  | AREA1ME AREA32ME | Designate which mechanism to use the 32 types of set area. The mechanism No. to use is set with 1 to 3 . |
|  | AREA1AT AREA32AT | Designate the area check type. <br> (Invalid/zone/interference $=0 / 1 / 2$ ) <br> Zone: The dedicated output signal USRAREA turns ON. Interference: An error occurs.. |
| Automatic return setting | RETPATH | Set to restart the program after returning to the interrupt position when resuming operation after an interruption. |
| Buzzer ON/OFF | BZR | Designate whether to the turn buzzer ON or OFF. |
| Jog setting | JOGJSP | Designate the joint jog and step operation speed. (Set dimension H/L amount, max. override.) |
|  | JOGPSP | Designate the linear jog and step operation speed. (Set dimension H/L amount, max. override.) |
| Jog speed limit value | JOGSPMX | Limit the operation speed during the teaching mode. Max. 250[mm/s] |
| Hand type | HANDTYPE | Set the hand type of the single/double solenoid, and the signal No. (Single/double = S/D) <br> Set the signal No. after the hand type. Example) D900 |
| Stop input B contact designation | INB | Change the dedicated input (stop) to either of normal open or normal close. |

| Parameter |  | Details |
| :--- | :--- | :--- |
| User-designated origin | USERORG | Designate the user-designated origin position. |
| Program selection memory | SLOTON | Select the program selected previously when initializing the slot. The non-selected state <br> will be entered when not set. |
| Communication setting | CBAU232 | Set the baud rate. |
|  | CLEN232 | Set the character length. |
|  | CPRTY232 | Set the parity. |
|  | CSTOP232 | Set the stop bit. |
| Slot table | SLT1 <br> $:$ <br> SLT32 | Make settings (program name, operation type, order of priority, etc.) for each slot during <br> slot initialization. |
|  | SASKMAX | Designate the No. of programs to be executed simultaneously. (Max. 32) |
|  | QMLTCPUN | At the multi CPU system, set the number of CPU units with which the standard base unit <br> is equipped. |
|  | QMLTCPUn | Sets the high-speed communication area of each CPU unit in the multi CPU system. |
|  | QMLTCPUS | Sets the input offset of each CPU unit in the multi CPU system. |
| Display language | SESNGLS <br> Select the function of <br> singular point adjacent <br> alarm | Designate the valid/invalid of the singular point adjacent alarm. (Invalid/Valid =0/1) <br> When this parameter is set up "VALID", this warning sound is buzzing even if <br> parameter: <br> BZR (buzzer ON/OFF) is set up "OFF". |

## 5 Instruction Manual

### 5.1 The details of each instruction manuals

The contents and purposes of the documents enclosed with this product are shown below. Use these documents according to the application.
For special specifications, a separate instruction manual describing the special section may be enclosed.

| Manual name | Description |
| :--- | :--- |
| Safety Manual | Explains the common precautions and safety measures to be taken for robot handling, system <br> design and manufacture to ensure safety of the operators involved with the robot. |
| Standard Specifications | Explains the product's standard specifications, factory-set special specifications, option <br> configuration and maintenance parts, etc. <br> Precautions for safety and technology, when incorporating the robot, are also explained. |
| Robot Arm Setup \& Maintenance | Explains the procedures required to operate the robot arm (unpacking, transportation, <br> installation, confirmation of operation), and the maintenance and inspection procedures. |
| Controller setup, basic operation, <br> and maintenance | Explains the procedures required to operate the controller (unpacking, transportation, <br> installation, confirmation of operation), basic operation from creating the program to automatic <br> operation, and the maintenance and inspection procedures. |
| Detailed explanations of functions <br> and operations | Explains details on the functions and operations such as each function and operation, <br> commands used in the program, connection with the external input/output device, and <br> parameters, etc. |
| Troubleshooting | Explains the causes and remedies to be taken when an error occurs. Explanations are given for <br> each error No. |
| Additional axis function | Explains the specifications, functions and operations of the additional axis control. |
| Tracking Function | Explains the control function and specifications of conveyor tracking. |
| GOT Direct Connection Extended <br> Function | Explains the detailed description of data configuration of shared memory, monitoring, and <br> operating procedures about the GOT (standalone type robot). |
| Ethernet Function | Explains the measures to perform communication with personal computers on Ethernet with the <br> TCP/IP protocol. |

## 6 Safety

### 6.1 Safety

Measures to be taken regarding safety of the industrial robot are specified in the "Labor Safety and Sanitation Rules". Always follow these rules when using the robot to ensure safety.

### 6.1.1 Self-diagnosis stop functions

This robot has the self-diagnosis stop functions shown in Table 6-1 and the stop functions shown in Table 62 for safe use.

Table 6-1: Self-diagnosis stop functions

| No. | Function | Details | Remarks |
| :---: | :--- | :--- | :--- |
| 1 | Overload protection <br> function Note 1) | Activates when the total servo current time <br> exceeds the specified value. | The drive circuit is shut off. The robot stops, <br> and an alarm displays. |
| 2 | Overcurrent diagnosis <br> function Note 1) | Activates when an overcurrent flows to the motor <br> circuit. | The drive circuit is shut off. The robot stops, <br> and an alarm displays. |
| 3 | Encoder disconnection <br> diagnosis function | Activates when the encoder cable is <br> disconnected. | The drive circuit is shut off. The robot stops, <br> and an alarm displays. |
| 4 | Deflection over diagnosis <br> function | Activates when an error occurs between the <br> command value and actual position, and the error <br> exceeds the specified amount. | The drive circuit is shut off. The robot stops, <br> and an alarm displays. |
| 5 | AC power voltage drop <br> diagnosis function | Activates when the AC power voltage drops below <br> the specified value. | The drive circuit is shut off. The robot stops, <br> and an alarm displays. |
| 6 | CPU error detection <br> function | Activates when an error occurs in the CPU. | The drive circuit is shut off. The robot stops, <br> and an alarm displays. |
| 7 | Overrun <br> prevention <br> function | Software <br> limit <br> detection | This is the limit provided by the software to enable <br> operation only in the operation range. |
| Mechanical <br> stopper | The drive circuit is shut off. The robot stops, <br> and an alarm displays. <br> the software. mechanical stopper provided outside | The robot mechanically stops, and function 1 or <br> 2 activates. |  |

Note 1) There is no thermal memory function that conforms to EN 61800-5-1:2007/A1:2017.

| Stop <br> function | Teaching <br> pendant | External <br> input | Details |
| :---: | :---: | :---: | :--- |
| Emergency <br> stop | $\bigcirc$ | $\bigcirc$ | The servo power is shut off and the mechanical brakes activate to stop the robot by <br> stopping operation in an emergency. <br> To recover, reset the alarm, and turn the servo ON with the servo ON command. |
| Stop | $\bigcirc$ | $\bigcirc$ | The robot immediately decelerates to stop by stopping operation as usual. <br> Note that the servo power is not shut off. Use this when using the collision evasion <br> sensor, etc. |

### 6.1.2 External input/output signals that can be used for safety protection measures

Table 6-3: External input/output signals that can be used for safety protection measures

| Signal | Connection <br> point | Parameter | Functions | Usage method |
| :---: | :---: | :---: | :---: | :---: | :---: |

Note1) The external emergency stop input and the door switch input have duplicate NC contacts for redundancy. Thus, if the emergency stop input circuit is opened when the robot is started up, the robot will not operate. Refer to Page 116, "6.1.7 Examples of safety measures"for details.
And, refer to Page 60, "(1) Automatic Operation/Jog Operation/Brake Release and Necessary Switch Settings"for the function of the door switch input and the mode selector switch input.

### 6.1.3 Precautions for using robot

The safety measures for using the robot are specified in the "Labor Safety and Sanitation Rules". An outline of the rules is given below.
(1) Robot installation

- Secure sufficient work space required to safely perform work such as teaching and maintenance related to the robot.
- Install the controller outside the robot's motion space. (If a safety fence is provided, install outside the fence.)
- Install the controller where the entire robot operation can be viewed.
- Install display lamps, etc., to indicate the robot's operation state.
- Securely fix the robot arm onto the fixing table with the designated bolts.
(2) Prevention of contact with operator
- Install a safety fence or enclosure so that the operator cannot easily enter the robot's motion space.
- Install an interlock function that will stop the robot if the safety fence or enclosure door is opened.
(3) Work procedures
- Create and observe work procedures for the robot teaching, operation, inspection and emergencies.
- Create hand signals to be followed when several operators are working together.
- Create displays such as "Teaching in Progress" and "Inspection in Progress" to be put up when an operator is in the robot's motion space so that other operators will not operate the operation panel (controller, control panel).

## (4) Training

- Train the operators about the operations, maintenance and safety required for the robot work.
- Only trained and registered operators must operate the robot.

Participation in the "Special training for industrial robots" sponsored by the Labor Safety and Sanitation Committee, etc., is recommended for safety training.
(5) Daily inspection and periodic inspection

- Always inspect the robot before starting daily operations and confirm that there are no abnormalities.
- Set the periodic inspection standards in view of the robot's ambient environment and operation frequency, and perform periodic inspections.
- Make records when periodic inspections and repairs have been done, and store the records for three or more years.
6.1.4 Safety measures for automatic operation
(1) Install safety fences so that operators will not enter the operation area during operation and indicate that automatic operation is in progress with lamps, etc.
(2) Create signals to be given when starting operation, assign a person to give the signal, and make sure that the operator follows the signals.
6.1.5 Safety measures for teaching

Observe the following measures when teaching, etc., in the robot's operation range.
(1) Specify and follow items such as procedures related to teaching work, etc.
(2) Take measures so that operation can be stopped immediately in case of trouble, and measures so that operation can be restarted.
(3) Take measures with the robot start switch, etc., to indicate that teaching work is being done.
(4) Always inspect that stop functions such as the emergency stop device before starting the work.
(5) Immediately stop the work when trouble occurs, and correct the trouble.
(6) Take measures so that the work supervisor can immediately stop the robot operation when trouble occurs.
(7) The teaching operator must have completed special training regarding safety. (Training regarding industrial robots and work methods, etc.)
(8) Create signals to be used when several operators are working together.
6.1.6 Safety measures for maintenance and inspections, etc.

Turn the power OFF and take measures to prevent operators other than the relevant operator from pressing the start switch when performing inspections, repairs, adjustments, cleaning or oiling.
If operation is required, take measures to prevent hazards caused by unintentional or mistaken operations.
(1) Specify and follow items such as procedures related to maintenance work, etc.
(2) Take measures so that operation can be stopped immediately in case of trouble, and measures so that operation can be restarted.
(3) Take measures with the robot start switch, etc., to indicate that work is being done.
(4) Take measures so that the work supervisor can immediately stop the robot operation when trouble occurs.
(5) The operator must have completed special training regarding safety. (Training regarding industrial robots and work methods, etc.)
(6) Create signals to be used when several operators are working together.

### 6.1.7 Examples of safety measures

The controller's dedicated I/O terminal connector has a duplicate emergency stop circuit.
The safety measure examples are shown in Fig. 6-1 to Fig. 6-4. Create a circuit as shown below for safety measures. In addition, the figure shows the normal state which is not in the emergency stop state.
[Note] • In the emergency-stop related wiring by the customer, if the coil (is not the contact points) of the relay prepared by the customer is connected to the controller, please be sure to implement the measure against the noise by the customer in the coil section. And, please also take the lifetime of noise suppression parts into consideration.

- Electric specification of the emergency-stop-related output terminal: 24V DC or less, related current 100 mA or less.
- In the customer's system, do not ground the + side of 24 V power supply prepared by customer for connect to the controller. (related with emergency stop and parallel input/output) If it connects with the controller under the condition that the + side is grounded, it will lead to failure of controller.
<Wiring example 1>: Connect the emergency stop switch of peripheral equipment to the controller.
The power supply for emergency stop input uses the power supply in the controller.
〈Operation of the emergency stop〉
If the emergency stop switch of peripheral equipment is pushed, the robot will also be in the emergency stop state.

*1) The CNUSR11 connector is a two-level terminal block, indicating that there are two circuits (channels). Two terminals (cable insertion holes) need to be used for one circuit.
*2) The T/B emergency stop button connected with the controller.
Fig.6-1: Example of safety measures (wiring example 1)
<Wiring example 2>: Connect the emergency stop switch, and door switch of peripheral equipment to the controller. The power supply for emergency stop input uses the power supply in the controller. Monitor the emergency stop state by the peripheral equipment side.
〈Operation of the emergency stop〉
If the emergency stop switch of peripheral equipment is pushed, the robot will also be in the emergency stop state.
When the controller power is OFF, the peripheral devices are in the emergency stop state.

*1) The CNUSR11 connector is a two-level terminal block, indicating that there are two circuits (channels). Two terminals (cable insertion holes) need to be used for one circuit.
*2) The T/B emergency stop button connected with the controller.
Fig.6-2: Example of safety measures (wiring example 2)
<Wiring example 3>: Connect the emergency stop switch of peripheral equipment, and the door switch to two controllers, and it interlocks. The power supply for emergency stop input uses the power supply in the controller.
Monitor the emergency stop state by the peripheral equipment side.
<Operation of the emergency stop>
If the emergency stop switch of peripheral equipment is pushed, the robot will also be in the emergency stop state.
When the controller power is OFF, the peripheral devices are in the emergency stop state.

Fig.6-3: Example of safety measures (wiring example 3)
<Wiring example 4>: Connect the controller to the safety relay
Use the controller's emergency stop button to input safety relay.

Customer power supply (DC 24V)
[Caution]

1) Setup a safety relay on the user equipment, and when using to input the emergency stop button on the controller, please only use a safety relay that functions when connecting the input to the one end of the 2 systems (i.e. QS90SR2SP (Manufacture: Mitsubishi Electric Corporation)).
2) When connecting emergency stop button output to an exterior safety relay, please take note of the polarity and make sure that the electrical current flows in the same direction as indicated by the dotted arrows in the two places in the diagram. If the polarity is setup incorrectly this function will not operate correctly. Please connect 3 and 10 terminal of CNUSR11 connector to 24 V .

Fig.6-4: Example of safety measures (wiring example 4)
(1) External emergency stop connection [supplementary explanation]
(1) Use a 2-contact type switch for all switches.
(2) Install a limit switch on the safety fence's door. With a constantly open contact (normal open), wire to the door switch input terminal so that the switch turns ON (is conducted) when the door is closed, and turns OFF (is opened) when the door is open.
(3) Use a manual-return type of normal close which have two lines for the emergency stop button.
(4) Classify the faults into minor faults (faults that are easily restored and that do not have a great effect) and major faults (faults that cause the entire system to stop immediately, and that require care in restoration), and wire accordingly.
[Caution] The emergency stop input (terminal block) on the user wiring in the controller can be used for safety measures as shown in figure above. Note that there are limits to the No. of switch contacts, capacity and cable length, so refer to the following and install.

- Switch contact .... Prepare a 2-contact type. ${ }^{* 1)}$
- Switch contact capacityRelated current of 24 VDC or higher for a no-voltage contact. ${ }^{* 1)}$
- Cable length $\qquad$ The length of the wire between the switch and terminal block must be max. 15 m or less. Please use the shield line, in case of the cable may receive the noise etc. by other equipment, such as servo amplifier. And, if it is necessary, please fix a ferrite core (recommended model name: E04SR301334, manufacturer: Seiwa Electric Mfg. Co., Ltd.) to the shielded cable. The size of the wire that fits to use is shown below. CNUSR11 connector: AWG24 to 16 ( 0.2 to $1.25 \mathrm{~mm}^{2}$ ) Electric specification of the emergency stop related output circuit is $100 \mathrm{~mA} / 24 \mathrm{~V}$ or less. Don't connect the equipment except for this range.

Be sure to perform wiring correctly. If there are mistakes in the wiring, the robot may not stop when the emergency stop button is pressed and there will be a risk of damage or personal injury occurring.
After wiring, be sure to press each of the installed emergency stop switches and check whether the emergency stop circuit works properly.

Be sure to duplicate connection of the emergency stop, door switch and mode selector switch. If not duplicated, these functions may fail due to a broken relay used by customer, etc.

[^1]
### 6.2 Working environment

Avoid installation in the following places as the equipment's life and operation will be affected by the ambient environment conditions. When using in the following conditions, the customer must pay special attention to the preventive measures.
(1) Power supply

- Where the voltage fluctuation will exceed the input voltage range.
- Where a momentary power failure exceeding 20 ms may occur.
- Where the power capacity cannot be sufficiently secured.

Please use the controller with an input power supply voltage fluctuation rate of $10 \%$ or less. In the case of 200 VAC input, for example, if the controller is used with 180 VAC during the day and 220 VAC during the night, turn the servo off once and then on again.
If this is not performed, an excessive regeneration or overvoltage error may occur.
(2) Noise

- Where a surge voltage exceeding $2000 \mathrm{~V}, 5 \mathrm{kHz}$ (equivalent to EN 61000-4-4) may be applied on the primary voltage. Locations where a strong electric field or magnetic field exists, such as near large inverters, high output frequency oscillator, large contactors and welding machines.
[Recommendation]
A noise-cut transformer; a noise filter; reinforcement of ground lines and electromagnetic shields; isolation by keeping away from noise sources; reduction of noise level of emission.
This product has undergone EMC testing for products intended for use in industrial environments (tested to standards EN 61000-6-2 and EN 61000-6-4). This product is not intended to be connected to residential, commercial, or light-industrial power supplies.
(3) Temperature and humidity
- Where the atmospheric temperature exceeds 40 degree , lower than 0 degree.
- Where the relative humidity exceeds $85 \%$ RH, lower than $45 \%$ RH, and where dew may condense.
- Where the robot will be subject to direct sunlight or near heat generating sources such as heaters.
(4) Vibration
- Where excessive vibration or impact may be applied. (Use in an environment of $34 \mathrm{~m} / \mathrm{s}^{2}$ or less during transportation and $5 \mathrm{~m} / \mathrm{s}^{2}$ or less during operation.)
(5) Installation environment
- Where strong electric fields or magnetic fields are generated.
- Where the installation surface is rough. (Avoid installing the robot on a bumpy or inclined floor.)
- Where there is heavy powder dust and oil mist present.

### 6.3 Precautions for handling

(1) This robot has brakes on J3 axes. The precision of the robot may drop, looseness may occur and the reduction gears may be damaged if the robot is moved with force with the brakes applied.
(2) Avoid moving the robot arm by hand. When unavoidable, gradually move the arm. If moved suddenly, the accuracy may drop due to an excessive backlash, or the backed up data may be destroyed.
(3) Note that depending on the posture, even when within the movement range, the shaft section could interfere with the base section. Take care to prevent interference during jog. ${ }^{*}$ )
(4) The robot arm consists of precision parts such as bearing. Lubricants such as grease are also applied on the moving parts to keep the mechanical accuracy. In a cold start under low temperature or in the first start after being stored for one month or longer, lubricants may not be spread enough. Such condition may lower the positioning accuracy, cause servo and overload alarms, and early wearing of the moving parts. To avoid such situation, perform warm-up operation of the machine at a low speed (at about 20\% of normal operation speed). Move the robot arm from the lower to the upper limit of the movable range

[^2]with the 30 degree joint angle or more for about 10 minutes. After that, speed up the operation gradually. Please use the warm-up operation. (About the details of the warm-up operation, refer to "INSTRUCTION MANUAL/Detailed explanations of functions and operations".)
(5) When the air hoses and cables are used inside the shaft (J3 axis), the grease for cable protection may ooze out or abrasion powders may be generated from the tip of the shaft while the robot is moving. However, movements and performance of the robot are not affected. Wipe off the grease or powders as required.
(6) The robot arm and controller must be grounded with $100 \Omega$ or less (class D grounding) to secure the noise resistance and to prevent electric shocks.
(7) The items described in these specifications are conditions for carrying out the periodic maintenance and inspections described in the instruction manual.
(8) When using the robot arm on a mobile axis or elevating table, the machine cables enclosed as standard configuration may break due to the fixed installation specifications. In this case, use a flexed type cable which is one of the optional machine cables (replacement).
(9) If this robot interferes with the workpiece or peripheral devices during operation, the position may deviate, etc. Take care to prevent interference with the workpiece or peripheral devices during operation.
(10) Do not attach a tape or a label to the robot arm and the controller. If a tape or a label with strong adhesive power, such as a packaging tape, is attached to the coated surfaces of the robot arm and controller, the coated surface may be damaged when such tape or label is peeled off.
(11) If the robot is operated with a heavy load and at a high speed, the surface of the robot arm gets very hot. It would not result in burns, however, it may cause secondary accidents if touched carelessly.
(12) Do not shut down the input power supply to stop the robot. If the power supply is frequently shut down during a heavy load or high-speed operation, the speed reducer may be damaged, backlash may occur, and the program data may be destroyed.
(13) During the robot's automatic operation, a break is applied to the robot arm when the input power supply is shut down by a power failure, for instance. When a break is applied, the arm may deviate from the operation path predetermined by automatic operation and, as a result, it may interfere with the mechanical stopper depending on the operation at shutdown. In such a case, take an appropriate measure in advance to prevent any dangerous situation from occurring due to the interference between the arm and peripheral devices.
Example) Installing a UPS (uninterruptible power supply unit) to the primary power source in order to reduce interference.
(14) Do not conduct an insulated voltage test. If conducted by mistake, it may result in a breakdown.
(15) Fretting may occur on the axis which moving angle or moving distance move minutely, or not moves. Fretting is that the required oil film becomes hard to be formed if the moving angle is small, and wear occurs. The axis which not moved is moving slightly by vibration etc. To make no fretting recommends to move these axes about once every day the 30 degree or more, or the 20 mm or more.
(16) The United Nations' Recommendations on the Transport of Dangerous Goods must be observed for transborder transportation of lithium batteries by air, sea, and land. The lithium batteries (ER6V) used in Mitsubishi industrial robots contain lithium and fall under the definition.
When the lithium batteries are shipped for storage, etc., they will be classified as Class 9: Miscellaneous dangerous substances and articles. Please contact your transportation company and must provide appropriate transport safety measures as the customer's consignor.
(17) If the air supply temperature (primary piping) used for the tool etc. is lower than ambient air temperature, the dew condensation may occur on the coupling or the hose surface.
(18) Collision detection function is valid condition for both of automatic and jog operation at shipping. So, the robot stops immediately if the robot's tool or arm interferes with a peripheral device, minimizing damage. Therefore, please use in the valid condition.
(19) When fumigants that contain halogen materials such as fluorine, chlorine, bromine, and iodine are used for disinfecting and protecting wooden packaging from insects, they cause malfunction when entering our products. Please take necessary precautions to ensure that remaining materials from fumigant do not enter our products, or treat packaging with methods other than fumigation (heat method). Additionally, disinfect and protect wood from insects before packing products.

### 6.4 EMC installation guideline

### 6.4.1 Outlines

Industrial robots are one of the components of automation systems as well as main components. This section introduces methods and parts to ensure electromagnetic compatibility (EMC) in automation systems. We test for EMC in the environment described in this manual, but the noise level varies depending on device types, layout, control panel structure, and wiring, etc. Please make final checks for EMC.

### 6.4.2 EMC

EMC can be broadly classified into two categories: EMI and EMS.
(1) Emission (EMI: Electromagnetic Interference)
The capacity not to generate the disturbance noise which has a bad influence outside.
(2) Immunity (EMS: Electromagnetic Susceptibility)....The capacity which does not malfunction for the disturbance noise from the outside.

Each contents are shown below.

| Item | Name | Contents |
| :--- | :--- | :--- |
| Emission <br> (EMI) | Radiative noise disturbance | The electromagnetic noise etc. which are emitted to environs. |
|  | Electrical-conduction noise disturbance | The electromagnetism noise etc. which flow out of the power- <br> supply line. |
|  | Electrostatic discharge immunity test | The noise from the electrified human body. |
|  | Radiated, radio-frequency, electromagnetic field <br> immunity test susceptibility test | The electromagnetism noise from the transceiver, the broad- <br> casting station, etc. |
|  | Electrical fast transient burst immunity test | The relay noise or the electromagnetism noise etc. which are <br> caused in power-supply ON/OFF. |
|  | Immunity to conducted distrurbances induced <br> radio-frequency fields | The electromagnetism noise etc. which flow in through the <br> power source wire and the grounding wire. |
|  | Power frequency magnetic field immunity test | The electromagnetism noise with a power supply frequency of <br> $50 / 60$ Hz etc. |
|  | Voltage dips, short interruptions and voltage varia- <br> tions immunity test | The noise in the variation of the source voltage of the power <br> dispatching, etc. |
|  | Surge immunity test | The electromagnetism noise by the thunderbolt, etc. |

### 6.4.3 EMC measures

There are mainly following items in the EMC measures.
(1) Store into the sealed metal board.
(2) Grounding all the conductor that have floated electrically (makes the impedance low).
(3) Wiring so that the power source wire and signal wire are separated.
(4) Use the shield cable for the cable which wired outside of the metal board.
(5) Install the noise filter.

To suppress the noise emitted out of the board, be careful of the following item.
(1) Ensure grounding of the equipment.
(2) Use the shield cable.
(3) Separate the metal board electrically. Narrows the distance/hole. The strength of electromagnetic noise emitted to environment is changed a lot by the shielding efficiency of cable and the distance of metal board, so it should be careful.

### 6.4.4 Example of EMC measures

Industrial robots are designed for use with other devices. We test our industrial robots for conformity with EMC standards in the following system architecture. However, it does not mean that every system meets the requirements of EMC standards.
Electromagnetic compatibility depends on the relationship between the industrial robot and devices in the system, wiring conditions, layout, or other factors. Therefore, check whether the entire machinery/system meets the requirements.

Fig.6-5: Example of EMC measures

1) Install ferrite cores $<3>$ and $<4>$ as follows.

Install the ferrite cores $<3>$ on the CN1 cable only. Install the ferrite cores <4> on both the CN1 and CN2 cables.
2) Install the ferrite cores $<5>$ on the cable of the teaching pendant.
3) Attach the noise filters <2> and surge protector <1> to the power cable.

Table 6-4: Parts for EMC measures

| No. | Item | Model | Quantity | Manufacturer | Remarks |
| :---: | :--- | :--- | :---: | :--- | :--- |
| 1 | Surge protector | LV275DI-Q4 | 1 | OKAYA ELECTRIC INDUS- <br> TRIES CO., LTD. | - |
| 2 | Noise filter | RSMN-2016 | 2 | TDK-Lambda Corporation | - |
| 3 | Ferrite core | GRFC-13 | 2 | KITAGAWA INDUSTRIES <br> CO.,LTD. | Install the ferrite cores on the <br> CN1 cable only. |
| 4 | Ferrite core | RFC-20 | 2 | KITAGAWA INDUSTRIES <br> CO.,LTD. | Install the ferrite cores on <br> both the CN1 and CN2 <br> cables. |
| 5 | Ferrite core | E04SR301334 | 2 | SEIWA ELECTRIC MFG <br> CO.Ltd | - |

### 6.4.5 Parts for EMC measures

For details on the parts for EMC measures described on Page 124, "6.4.4 Example of EMC measures", contact your nearest Mitsubishi branch or dealer.

## 7 Appendix

## Appendix 1 : Inertia calculation method

An allowable moment of inertia in the mechanical interface at the tip of the robot arm is determined. If a load exceeding the allowable moment of inertia is put, on the tip of the arm, vibration during operation and an overload alarm may occur. Therefore, consider the matching/appropriateness of the hand and load to be mounted on the tip of the arm for the robot specifications when you select a robot. The following describes the load inertia calculation method.

Calculate the total moment of inertia about the J4 axis.

$$
I=I z_{1}+I z_{2}+W_{1} L_{1}^{2}+W_{2} L_{2}^{2} \quad \text { Iz: load inertia } \quad \text { W: mass }(k g) \text { ) }
$$

Load inertia: $\mathrm{lz}=\mathrm{W} \cdot \frac{\mathrm{a}^{2}+\mathrm{b}^{2}}{12}$
Load inertia: $\mathrm{Iz}=\mathrm{W} \cdot \frac{\mathrm{r}^{2}}{2}$
[Calculation example]

Load inertia: $\begin{aligned} \mathrm{I} \mathrm{z}_{1} & =2.5 \times \frac{0.15^{2}+0.1^{2}}{12} \\ & =0.0068 \mathrm{~kg} \cdot \mathrm{~m}^{2}\end{aligned}$
Load inertia: $\mathrm{I} \mathrm{z}_{1}=1.5 \times \frac{0.04^{2}}{2}$

$$
=0.0012 \mathrm{~kg} \cdot \mathrm{~m}^{2}
$$

Total moment of inertia about the J4 axis
$\mathrm{I}=0.0068+0.0012+2.5 \times 0.05^{2}+1.5 \times 0.1^{2}$
$=0.030 \mathrm{~kg} \cdot \mathrm{~m}^{2}$
The calculation result ( $0.030 \mathrm{~kg} \cdot \mathrm{~m}^{2}$ ) is greater than the allowable inertia (rating) of $0.01 \mathrm{~kg} \cdot \mathrm{~m}^{2}$ for RH-6FRH.
However, if the center of gravity of the hand is aligned with the axis of rotation of J 4 and the workpiece is held directly below the J4 axis, both $L_{1}$ and $L_{2}$ become zero and the total inertia around the $J 4$ axis is calculated as follows.
$\mathrm{I}=0.0068+0.0012=0.008 \mathrm{~kg} \cdot \mathrm{~m}^{2}<0.01 \mathrm{~kg} \cdot \mathrm{~m}^{2}$
The result is smaller than the allowable inertia.
If the total moment of inertia exceeds the allowable inertia, consider changing the alignment or other conditions for the holding system.

Appendix 2 : Classification of functions using external input/output signals
Before using the functions, note the following.

Table 7-1: Classification of functions using external input/output signals

| Classification | Function | Description |
| :--- | :--- | :--- |
| Safety signal | Emergency stop input | Detects emergency stop inputs. The safety diagnosis function for the <br> emergency stop input circuit makes the STO function meet the requirements <br> of SIL 3, Category 4, PL e. <br> At factory settings, the STO function meets the requirements of SIL 2, <br> Category 3, PL d. To make the STO function meet the requirements of SIL 3, <br> Category 4, PL e, change the parameter setting by referring to Page 127, <br> "Appendix 3 : Safety diagnosis function (Test pulse diagnosis)". |
|  | Mode selector switch input | Switches the controller mode between MANUAL and AUTOMATIC. |

## Appendix 3 : Safety diagnosis function (Test pulse diagnosis)

This function enables diagnosis of external wiring by pulse signals output from the emergency stop ports (EXTEMG11, EXTEMG21). Changing parameter TPOEMG allows EXTEMG11 and EXTEMG21 to output off-pulses regularly. The width of output pulses is always approximately 20 ms . Checking regularly the test pulses inside the robot controller enables confirming the correct operation of the emergency stop lines.
When using this function, connect emergency stop switches by seeing Fig. 7-2.
Make sure to prevent test pulses of this function from causing faulty operation of peripheral devices.

Fig.7-1: Test pulse diagnosis
Table 7-2: Parameter details

| Item |  |
| :--- | :--- |
| Parameter name | TPOEMG |
| Function | This enables configuring the pulse output function for outputting test pulse signals <br> from emergency stop ports (EXTEMG11, EXTEMG21). |
| What parameter settings means | 0: Outputs no test pulses <br> $1:$ Outputs test pulses |
| Default | 0 |

Fig.7-2: How to wire emergency stop lines

## MITSUBISHI ELECTRIC CORPORATION

[^0]:    After the origin position adjustment, an adjusted value is stored in the parameter DJNT. For another origin position adjustment with retaining an earlier adjusted value after the first adjustment is finished, change "JDJNT_Data=( $0,0,0,0,0,0$ )" into "PrmRead 1,"DJNT",JDJNT_Data" before command execution.
    As a repeat of command execution causes an accumulation of the adjusted values, clear the parameter DJNT back to 0 before another origin position adjustment.

[^1]:    *1) The minimum load electric current of the switch is more than $5 \mathrm{~mA} / 24 \mathrm{~V}$.

[^2]:    *1) Jog operation refers to operating the robot manually using the teaching pendant.
