

Mitsubishi Electric was awarded modernization project of high-rise & high-speed elevator in France

Ascenseurs Mitsubishi France S.A.S., subsidiary of Mitsubishi Electric Corporation for elevators and escalators business, secured the contract for high-speed modernization of "TOUR CHANTECOQ" in Puteaux, a city close to La Défense business district, west of Paris. It received 100% of the vote in the general assembly of building management company "Cabinet L'Erable", finally approved by owners in March 2011.

This 53-meter-high tower was built in 1975 and equipped 4 elevators of capacity 1650kg, speed 3.5 meters per seconds and 16 stops with group control.

Ascenseurs Mitsubishi France S.A.S. and Mitsubishi Electric Corporation took this opportunity for introducing its specific range, "NexWay" modernization.

This range is specifically dedicated to the modernization of high-rise buildings, introducing some innovative features such as sophisticated group control based on latest Mitsubishi Electric's technology for traffic control, regenerative converter for maximum energy savings, and many more.

This success is due to the very best technical performance of our NexWay modernization range, perfectly fitting specifications of this building, together with high grade maintenance service offered by Ascenseurs Mitsubishi France S.A.S., which has made for long its key success and reputation on French market.

This modernization will appear as a showcase in the high-speed modernization in France, introducing the utmost sophistication of our Mitsubishi Electric's product. Modernization work is scheduled to be started in January 2012 for a completion in the same year."
