ELEVATOR MONITORING AND CONTROL SYSTEM

Eco Changes is the Mitsubishi Electric Group's environmental statement, and expresses the Group's stance on environmental management. Through a wide range of businesses, we are helping contribute to the realization of a sustainable society.

Superseding publication L-170-3-C6530-I Mar. 2015.
Specifications are subject to change without notice.

at the Inazawa Works in Japan and 12 global manufacturing factories are utilized in a worldwide network that...
In recent years, the need for monitoring systems utilizing network technologies has increased. In large-scale international airports, for example, interfacing with the building and facility management control system has proved to be essential. In order to meet these requirements, Mitsubishi Electric has developed a sophisticated monitoring system - MelEye which utilizes web-based technologies.

MelEye closely observes the operational status of elevators and escalators that handle continually changing passenger traffic. This allows building managers to rapidly respond to changing traffic patterns, thus optimizing the performance of elevators and escalators and maximizing the added value of the whole building. The application of the latest network technologies has also greatly increased the number of controllable elevators and escalators, which minimizes the cost spent on facilities such as supervisory rooms and monitors. MelEye is our solution to futuristic building traffic monitoring systems.

**Supervisory System MelEye Enhances Elevator and Escalator Operation Management with the Latest Network Technologies**

**Latest Network Technologies**

- **Application of web server and web browser.**
  Because the system configuration is hosted on a web server, the elevators and escalators can be monitored by multiple computers at any location desired within the network provided. The use of a web browser interface allows various functions.

- **Application of Ethernet.**
  The high-speed broadband network using Ethernet facilitates smooth data communication between the server and the elevators and escalators. Connecting to a special high-security network enables monitoring from anywhere in the building.

**User-friendly Screens**

- **Versatile monitoring screens.**
  The system displays the operation mode of each elevator or escalator, or the operational status of each group, on user-friendly screens.

- **Easy selection of screens.**
  Straightforward mouse operation enables speedy selection of the required information.

- **Reliable indications and alarm for safety.**
  To ensure passenger safety, indications to warn of all failures of elevators and escalators are provided. An optional alarm, which is activated for specific events such as group or individual car control failure can be added to the warning indications.

- **Option special and emergency operations.**
  For example, Floor Lockout, VIP Operation, Operation by Emergency Power Source or Fire Emergency Return.

<tr>
<td>Scheduling of operations</td>
</tr>
<tr>
<td>Statistical information</td>
</tr>
</tbody>
</table>

- **Play back information.**
  The movement of any elevator at any selected time within the past 30 days can be replayed.

- **Locations of elevators and escalators.**
  The locations within the building of the grouped elevators and escalators are displayed and any fault is highlighted in order to facilitate a timely response under emergency conditions or for troubleshooting.

---

* Ethernet is a trademark of Xerox Corporation in the U.S.A.
** A special high-security network needs to be provided in addition to the general LAN circuit.

---

* The alarm is optional and requires speakers for the computer.
Versatile Features for Elevator and Escalator Operation Management

**Monitoring screens**
MelEye’s user-friendly screens show the detailed operational status of the elevators and escalators in real time.

**Remote control**
A computer allows remote control of special and emergency operations.

**Scheduling of special operations**

**Statistical information**
The past fault logs of the elevators and escalators are recorded in addition to the operation logs of the computer.

Operational data of the elevators, such as the number of calls, the average waiting time and long wait rate, are analyzed statistically.

**Play back information**
The movement of any elevator at any selected time within the past 30 days can be replayed.

**Locations of elevators and escalators**
The locations within the building of the grouped elevators and escalators are displayed and any fault is highlighted.

Notes

1. Scheduled operation is not available for emergency operations and some of the special operations.
2. This table contains only some of the available operations. For further details, please refer to our product brochures.
3. If neither the special operation control nor the emergency operation control is applied, the operation control logs are not recorded.
4. Traffic analysis is not available when any of the elevator groups applies the following operations.
5. Uninterruptible power supply for power failure is not included.

System Configuration

- Ethernet:
  - This is a trademark of Xerox Corporation. It is a standard of bus formed LAN which was jointly developed by Xerox Corporation, Intel Corporation and DEC Corporation in 1980. It was standardized by IEEE802.3 (Institute of Electrical and Electronics Engineers Inc.).

Glossary

- Ethernet:
  - This is a trademark of Xerox Corporation. It is a standard of bus formed LAN which was jointly developed by Xerox Corporation, Intel Corporation and DEC Corporation in 1980. It was standardized by IEEE802.3 (Institute of Electrical and Electronics Engineers Inc.).

- Comma separated value (CSV) format:
  - On the premise that a file is opened by spreadsheet software, the data is separated by commas or linefeeds when it is arranged. It is used for data exchanges among application software such as spreadsheet software or database software.

Notes

1. Details in the table on the left represent the minimum specifications.
2. Depending on the monitoring functions or the number of elevators/escalators, some capacities in the table on the left will be increased.
3. Provision of power supplies is not included.
4. Workstation equipment such as desks and chairs is not included.
5. Uninterruptible power supply for power failure is not included.
State-of-the-Art Factories…
For the Environment. For Product Quality.

Mitsubishi Electric elevators and escalators are currently operating in approximately 90 countries around the globe. Built placing priority on safety, our elevators, escalators and building system products are renowned for their excellent efficiency, energy savings and comfort. The technologies and skills cultivated at the Inazawa Works in Japan and 12 global manufacturing factories are utilized in a worldwide network that provides sales, installation and maintenance in support of maintaining and improving product quality. As a means of contributing to the realization of a sustainable society, we consciously consider the environment in business operations, proactively work to realize a low-carbon, recycling-based society, and promote the preservation of biodiversity.

ISO9001/14001 certification

Mitsubishi Electric Corporation Inazawa Works has acquired ISO 9001 certification from the International Organization for Standardization based on a review of quality management. The plant has also acquired environmental management system standard ISO 14001 certification.
