

MITSUBISHI ELECTRIC Secures Bespoke Designed Panoramic Elevators in UK

MITSUBISHI ELECTRIC is pleased to have been awarded the contract to supply the elevators for the Croydon Council Urban Regeneration Vehicle's (CCURV) project, Bernard Weatherill House. The project, located in the Greater London Area, will provide a new customer access hub for residents, and office accommodation for Croydon Council staff, and will allow the council to provide a better, more co-ordinated service.

A total of 9 passenger elevators will be supplied. Of these 3 units are ELENESSE and 6 units of NexWay rated at 2.5 meters per second. These include 2 special panoramic elevators with fully glass interiors giving an unobstructed view over Croydon at the upper levels and into the main atrium at lower levels.

Mitsubishi Electric have experience for the supply and installation of special scenic elevators in London since 1998.

At the end of January 2012 the project team members consisting of: John Laing; Sir Robert McAlpine; and EPR Architects visited Inazawa Works, Mitsubishi Electric's main factory for elevators and escalators in Japan. At Inazawa Works the project team had a successful inspection of the first panoramic cab and lobby equipment. The installation commenced at the end of last year for the ELENESSE units.

CCURV is a 25-year joint venture between John Laing and Croydon Council, which will see further phases completed across the Croydon Borough throughout the life of the partnership to satisfy Croydon's regeneration objectives. Construction of the BREEAM excellent office building on the BWH site commenced in March 2010 and is due for completion in spring 2013.
