Mitsubishi Electric Group Revises Environmental Sustainability Vision 2050 and Introduces Environmental Plan 2030

Strengthening group-wide initiatives to address worsening global environmental challenges

Environmental Sustainability Vision 2050

**Protect the air, land and water with our hearts
and technologies to sustain a better future for all.**

The Mitsubishi Electric Group is committed to contributing to a sustainable future by uniting the aspirations of each individual to tackle various environmental challenges as well as create new possibilities.

Focus Areas

Through its diverse businesses, the Mitsubishi Electric Group addresses various environmental challenges across the entire value chain, including Climate Action, Resource Circulation, and Harmony with Nature.

Carbon Neutrality

Climate action

Circular Economy

Resource circulation

Nature-Positive

Harmony with nature

Revised Environmental Sustainability Vision 2050

TOKYO, June 17, 2026 – [Mitsubishi Electric Corporation](https://www.mitsubishielectric.com) (TOKYO: 6503) announced today that in response to the worsening of global environmental challenges, the company has revised its Environmental Sustainability Vision 2050, first introduced in 2019. The company has also introduced a new Environmental Plan 2030, effective from April 2026 to March 2031, which establishes medium-term targets aimed at supporting the company’s eventual realization of its 2050 Vision. Going forward, Mitsubishi Electric Group will steadily implement various environmental initiatives to achieve its new targets and contribute to a more sustainable global environment, one of its materiality.

Revision of Environmental Sustainability Vision 2050

Mitsubishi Electric Group first introduced its Environmental Sustainability Vision 2050 in 2019, positioning environmental contributions as one of the company's key priorities and clarifying its commitment to addressing environmental challenges. The environmental challenges that businesses face have become increasingly complex on a global scale. These include rising energy demand driven by increased data traffic resulting from the spread of AI, the growing importance of resource circulation due to geopolitical risks, and the loss of natural capital that underpins business activities. In response to these challenges, environmental initiatives expected of companies, such as expanding the use of renewable energy, improving resource efficiency and advancing biodiversity protection, have become even more significant.

In light of these challenges, and to advance sustainability management across the Mitsubishi Electric Group, the Environmental Sustainability Vision 2050 has been reorganized into three focus areas: Carbon Neutrality, Circular Economy and Nature-Positive.¹ The change clarifies the company's efforts to address environmental challenges. The Vision will continue to guide Mitsubishi Electric Group's creation of new value through diverse businesses and acceleration of initiatives that contribute to a more sustainable global environment.

Introduction of Environmental Plan 2030 (April 2026–March 2031)

Every few years, Mitsubishi Electric Group formulates a new Environmental Plan comprising medium-term targets and initiatives aimed at supporting the realization of its Environmental Sustainability Vision 2050. The Environmental Plan 2030 (April 2026–March 2031) follows the Environmental Plan 2025 (April 2024–March 2026). One of its new targets is achieving carbon neutrality² at group factories and offices by the fiscal year ending in March 2031. This goal is part of the pursuit of carbon neutrality, one of three focus areas established in the Environmental Vision 2050. The plan also establishes targets for improving resource circulation to contribute to a circular economy and for protecting biodiversity at business sites to support a nature-positive world.

¹ Besides reducing environmental damage, also enhancing biodiversity, improving ecosystem health and supporting the sustainable use of natural resources.

² Including carbon offsets.

Focus area	Key performance indicators (KPIs)	Targets
Carbon Neutrality	Greenhouse gas emissions (Scope 1 ³ and Scope 2 ⁴)	Achieve Carbon neutrality at factories and offices
	Greenhouse gas emissions (Scope 3 ⁵)	Reduce emissions by 30% or more compared to fiscal year ended in March 2019
Circular Economy	Resource circulation ⁶	Increase circulation by 10% or more from fiscal year ended in March 2025
	Effective utilization of plastic waste ⁷	100% ⁸
	Water intake at high-risk bases (basins)	Reduce by 6% or more from fiscal year ended in March 2025
Nature-Positive	Biodiversity protection (promotion) activities at business sites	Nationally Certified Sustainably Managed Natural Sites ⁹ (OECM ¹⁰ registration) for all green spaces managed by Mitsubishi Electric in Japan.
	Protection of natural environments around business sites through collaboration with local communities and environmental education	Japan: Continue Satoyama Woodland Preservation Project and Mitsubishi Electric Outdoor Classrooms at all business sites Overseas: Tree-planting and other environmental conservation activities
