Environmental Statement: “Eco Changes”

Eco Changes is the Mitsubishi Electric Group's environmental statement, and expresses the Group's stance on environmental management. Through a wide range of businesses for homes, offices, factories, infrastructure and even outer space, we are helping to contribute to the realization of a low-carbon society, recycling-based society and a society in harmony with nature.

In line with the Mitsubishi Electric Group’s corporate statement, “Changes for the Better,” which reflects our drive to always seek improvement and make changes accordingly, Eco Changes represents our efforts to work together with our customers to change the global environment for the better.

Behind these multifold improvements is our wish for each employee in the Group to instigate positive changes, and our strong desire to bring about a variety of changes in product development, production and shipping, in product, system and service usage, and in recycling.

Eco Changes is the Mitsubishi Electric Group’s commitment to continuously strive for a greener tomorrow through cutting-edge global environmental technologies and outstanding strength in manufacturing.
From the President

Towards Realizing Sustainable Societies Worldwide, we are drawing on strengths within and outside of the Group, and combining them to tackle various perplexing social issues.

Promoting initiatives to achieve “Environmental Vision 2021”

The subject of environmental issues such as climate change, resource depletion, chemical substances, and marine plastics is increasingly growing as a topic of conversation amongst the general public. In response to this, the international community is working to comply with the Paris Agreement on Climate Change and the 2030 Agenda for Sustainable Development, in which there are 17 sustainable development goals commonly referred to in industry as “SDGs,”*1 and to realize a circular economy.*2 Under these circumstances, we strongly feel that manufacturers such as ourselves must contribute to those agreements and goals through our products and services.

The Mitsubishi Electric Group has long been committed to contributing to the realization of an affluent society while simultaneously achieving “sustainability, safety, security, and comfort.”*3 We are currently working to reduce CO₂ emissions from manufacturing processes and product use, ensure the effective use of resources, and preserve biodiversity, for which specific targets were set to be achieved by fiscal 2021 at the time of drafting “Environmental Vision 2021.”

Then, in fiscal 2019, we set targets for the effective use of water resources taking into consideration international laws and regulations would continue to grow stricter, and that we must enforce overall environmental management at our sites overseas.

As a result of these environmental activities, CDP*3 placed Mitsubishi Electric on the A List in two categories, “Climate Change” and “Water Security,” for the third consecutive year. Additionally, five projects received the Energy Conservation Grand Prize from Japan’s Ministry of Economy, Trade and Industry, and the Power Distribution Systems Center became the first in the Group to be certified as a site engaged in distinguished greening activities by SEGES*4 for its onsite biodiversity preservation activities. It is a great honor that our various products and initiatives have been highly recognized.

Contributing to SDGs through a wide variety of businesses

As we design and execute future business activities, we must be certain to always contribute to obtaining the SDGs. The 17 goals are interrelated, and by solving the environmental issues, we can contribute to achieve SDGs that approach to other issues.

As comprehensive electrical and electronics manufacturers, the Mitsubishi Electric Group is committed to developing technologies and manufacturing products and systems that will enable greater energy savings, more effective use of water and other resources, and further contribute to creating recycling-based societies. This will not be achieved solely through manufacturing, such as reducing product size and utilizing recycled materials, but also by utilizing resources more carefully such minimizing parts replacement by improving product durability, increasing the percentage of product parts that can be recycled after use, and other initiatives.

To successfully achieve our objectives and goals, it is indispensable for us to further expand collaboration with various entities outside of the Mitsubishi Electric Group. Many of the issues societies around the world are facing cannot be solved by the Mitsubishi Electric Group, or any other group, alone. We must reach out and listen to the opinions of local residents, local administrations, customers, and other companies and sources of information, and recognize the roles we are to play and reflect these in our activities.

As stated above, our intention is to focus on contributing to the realization of all SDGs in our activities and resolve perplexing social issues, including those related to the environment.

Announcement of “Environmental Sustainability Vision 2050” – Towards the Next 30 Years

In June 2019, the Mitsubishi Electric Group announced “Environmental Sustainability Vision 2050” and made an environmental declaration to “Protect the air, land, and water. With our hearts and technologies, sustain a better future for all.” Our aim is to share ideas and technologies not only within the Mitsubishi Electric Group, but also with those outside in order to resolve issues related to air, land, and water. In doing so, we hope that all employees in the Group and those we work with outside of it will passionately take action and work towards creating a sustainable future.

Three action guidelines have been formulated to actualize the targets stipulated in Environmental Sustainability Vision 2050.

Firstly, as comprehensive electrical and electronics manufacturers, the Mitsubishi Electric Group shall utilize diverse technological assets throughout wide-ranging business areas to solve various environmental issues. Secondly, as a Group, we shall draw on internal and external strengths, combine them when required to resolve difficult issues, and take on the challenge of developing technologies and business innovations for future generations. Furthermore, we shall promote active dialogue, collaboration, and co-creation with many people and entities outside the Group, publicizing and sharing new values and lifestyles that will result in living comfortably, in harmony with nature.

In order to implement these three guidelines and steadily progress forward, we will formulate a concrete action plan by fiscal 2022, the year we officially enact Environmental Sustainability Vision 2050.

My personal goal is to ensure that the employees of the member companies in the Mitsubishi Electric Group are truly motivated to contribute to preserving the environment, and that they too acknowledge the need for all members of society to be involved.

Takeshi Sugiyama
President & CEO
Mitsubishi Electric Corporation

Environmental Sustainability Vision 2050

Environmental Declaration
Protect the air, land, and water with our hearts and technologies to sustain a better future for all.

To solve various factors that lead to environmental issues, the Mitsubishi Electric Group shall abide by the wishes of each and every person, and strive to create new value for a sustainable future.

Three Environmental Action Guidelines

1. High-echelon technologies in wide-ranging business areas to solve environmental issues
2. Challenge to creating businesses innovations for future generations
3. Promote and share new values and lifestyles

Key Initiatives

- Climate Change Mitigation
- Resource Circulation
- Understanding needs
- Co-creating, and disseminating
- Environmental Performance
- New Values
- Live in harmony with nature
- Challenge to develop technologies and manufacturing products
- Marketing Human Resources

June 28, 2019

*1 SDGs: Sustainable Development Goals: Included in the “2030 Agenda for Sustainable Development” formulated by the United Nations General Assembly in September 2015.
*2 Circular economy: New economic activities that bring sustainability to both the environment and the economy by circulating resources and products.
*3 CDP: CDP stands for Carbon Disclosure Project, international non-governmental organization promoting environmental management activities by companies and cities.
Three Environmental Action Guidelines

1. Apply diverse technologies in wide-ranging business areas to solve environmental issues

The Mitsubishi Electric Group shall utilize diverse technological assets throughout wide-ranging business areas, and across the entire value chain, to solve various environmental issues, including climate change, resource recycling and coexisting harmoniously with nature.

Key Activities

- **Climate Change Measures**
  - Promoting and disseminating outstanding energy-saving products, systems, services and renewable energy businesses, together with our stakeholders, we will contribute to reducing greenhouse gases worldwide.
  - Respecting long-term goals based on international agreements, we will promote the reduction of greenhouse gases throughout the value chain, from development, design, procurement of raw materials and production through sales, distribution, use and disposal. At present, our target is to reduce CO₂ emissions 30% by 2030 and more than 80% by 2050.
  - Observing changes in the global environment, we will provide solutions that contribute to minimizing the risks of natural disasters.

- **Resource Circulation**
  - Reducing the size and weight of products, we will consider the use of recycled materials and recyclability rate of the products and systems we produce.
  - Eliminating resource waste throughout the value chain, we will strive to maximize the effective use of resources.
  - We will work to expand the supply of safe, clean water globally, as well as to enforce water treatment that does not pollute oceans and rivers.
  - We will promote the effective use of water taking the water environment of each region into consideration.
  - We will promote resource recycling businesses globally, such as reuse, repair of products/systems and waste reduction.
  - We will aim to achieve 100% effective use of wastes, such as plastics, generated during manufacturing processes.

- **Live in Harmony with Nature**
  - Throughout the Group, we will carry out activities to preserve biodiversity in the mountains, rivers, and oceans, and at all business sites, and promote the development of local environments and human resources to be passed to future generations.
  - We will work to control, suppress, substitute, and properly dispose of harmful substances that may affect the natural environment.

2. Apply diverse technologies in wide-ranging business areas to solve environmental issues

The Mitsubishi Electric Group shall utilize diverse technological assets throughout wide-ranging business areas, and across the entire value chain, to solve various environmental issues, including climate change, resource recycling and coexisting harmoniously with nature.

Key Activities

- **Long-term Activities**
  - We will set specific indices and action items while considering future prospects in the mid-term Environmental Plan formulated every three years.
  - We will verify the validity of long-term goals approximately every five years, doing so considering international agreements, foreign affairs and business conditions.

- **Innovation**
  - We will cooperate with other companies and institutions, and use our technological assets, technologies and business synergies to create innovative technologies and solutions.
  - We will proactively adopt innovative technologies and solutions that enable us to lead manufacturing in future generations.

- **Nurturing Human Resources**
  - We will foster a corporate culture in which employees, as ordinary citizens, take the initiative on creating new lifestyles in harmony with nature.
  - We will develop highly specialized human resources who accept diverse values, and proactively work on environmental issues.

3. Publicize and share new values and lifestyles

The Mitsubishi Electric Group shall promote active dialogue, collaboration, and co-creation with all stakeholders, publicizing and sharing new values and lifestyles that will result in living comfortably, in harmony with nature.

Key Activities

- **Understanding Needs**
  - We will work to understand our customers’ needs and expectations for the environment through sales activities, exhibitions, events, and other initiatives.
  - We will hold discussions with stakeholders, and confirm the validity of our environmental targets and measures, to promote more effective environmental activities.

- **Co-create and Disseminate New Values**
  - We will propose new lifestyles that provide the pleasure of contributing to the environment through the use of our products, systems, and services.

- **Live in Harmony with the Region**
  - We will hold discussions with local residents and municipalities, and contribute to creating a better local environment, including Satoyama conservation and bio-diversity preservation activities at business sites.
We will continue to strengthen greenery biotope development, green louver installation, Landscape and Urban Green Infrastructure, with Topic 2

We have been recognized by the CDP as an outstanding company in its activities and strategies for reducing emissions and mitigating climate change, as well as its responses and strategies for water resources. In fiscal 2017, 2018, and 2019, Our Company was selected as one of the “The A list” for the highest evaluations in the “Climate change” and “Water security” categories for 3rd consecutive years. In addition, it was selected as a "CDP Supplier Engagement Leader" in the “Supply chain” this year. We continue to take active initiatives to realize a sustainable society.

* CDP is an international NGO (nongovernmental organization) that surveys, evaluates, and initiates to realize a sustainable society.

Power Distribution Systems Center (Marugame City, Kagawa Prefecture), has been certified as an Outstanding Company in Power Distribution Systems Center (Marugame Power Distribution Systems Center)

Power Distribution Systems Center (Marugame City, Kagawa Prefecture), has been certified as “SEGES Excellent Stage 1” by Organization for Landscape and Urban Green Infrastructure, with recognitions for its environmental efforts such as biotope development, green louver installation, and Satoyama conservation activities.

We will continue to strengthen greenery management activities and biodiversity conservation activities, for the highest stage of the certification.

* SEGES Excellent Stage 1: Second stage of four stages in three categories of SEGES (Social and Environmental Green Evaluation System) certification, certification in this category is given to excellent presentation and creation activities in green areas of more than 100m².

Typical patterns

Created typical patterns of power consumption for each home appliance

In January 2019, Mitsubishi Electric announced a plan to build a new test facility for net-zero energy buildings (ZEB)-related technologies at its Information Technology R&D Center in Kamakura, Japan. It is scheduled to become operational in 2020.

ZEB is a building where net annual energy consumption is zero or near zero, with the primary power consumption offset by onsite energy generation (photovoltaic power, etc.). In such a building, a comfortable indoor environment is maintained while energy-saving measures such as advanced heat insulation, solar shading, and use of natural energy and high-efficiency equipment are implemented.

With this test facility, our goal is to realize ZEBs, in particular, focusing on the ability to generate sufficient energy through equipment inside the building to cover all primary energy consumption.

"Seges: Initiative to promote urban greening and biodiversity conservation in urban areas, enhancing the biodiversity of urban areas and contributing to the realization of a sustainable society.

Note: ZEB® is a registered trademark of Mitsubishi Electric.

As an official ZEB Planner,*1 Mitsubishi Electric is contributing to the dissemination of ZEBs by offering plans and operational support for companies that aspire to create a ZEB. The construction of this test facility will help accelerate the development of ZEB-related technologies. We hope that the sequential introduction of such technologies to our businesses will contribute to further energy savings and the creation of more comfortable living spaces. Additionally, we will promote technological development based on our “ZEB+®” solution, which enables further sophistication of buildings, including services to maintain values such as productivity, comfort, user-friendliness and continual operations throughout the lifecycle of the building.

*1 Registration system set up by the Ministry of Economy, Trade and Industry (METI) in 2017 with the aim of promoting net-zero energy buildings.

*2 A solution offered by Mitsubishi Electric.

Note: ZEB® is a registered trademark of Mitsubishi Electric.

As an official ZEB Planner, Mitsubishi Electric is contributing to the dissemination of ZEBs by offering plans and operational support for companies that aspire to create a ZEB. The construction of this test facility will help accelerate the development of ZEB-related technologies. We hope that the sequential introduction of such technologies to our businesses will contribute to further energy savings and the creation of more comfortable living spaces. Additionally, we will promote technological development based on our “ZEB+®” solution, which enables further sophistication of buildings, including services to maintain values such as productivity, comfort, user-friendliness and continual operations throughout the lifecycle of the building.
Our Action for Future
What We Can Do for the Future

01 Public Utility Systems Group

Main Products
- Inverter equipment for rolling stock
- Railcar air-conditioner units
- Railway station building auxiliary power units (SWPS)
- Energy-Saving (Eco) systems
- Large-scale visual information systems
- Stone generators
- Membrane bioreactors

Focusing on the SDGs

Supporting Sustainable Progress in Society by Developing and Providing Social Infrastructure Products, Systems, and Services that Contribute to Energy Conservation

The Public Utility Systems Group manufactures a host of social infrastructure products, systems, and services that support people’s lives. Mitsubishi Electric’s activities in the areas of electric power and telecommunications have been developed in various fields, such as the onboard electrical systems for Shinkansen (bullet trains) and water treatment, among others. By integrating these technologies, we are contributing to greater efficiency and energy conservation.

For example, we are the first company in the world to successfully produce inverters equipped with all-SiC power modules for use in rolling stock. The power modules are helping to increase energy savings in railway operations, both in Japan and overseas. Additionally, we manufacture equipment and systems for ZEBs,* contributing to advancements in a safe, secure, comfortable, and affluent society.

02 Energy & Industrial Systems Group

Main Products
- Turbine generators
- Protection and control systems
- Vacuum circuit breakers and switchgear
- Transformers
- Transmission and distribution systems
- Power system stabilization systems
- Power conversion devices/systems

Focusing on the SDGs

Contributing to the Creation of a “Safe, Secure, and Comfortable Sustainable Society” by Developing Environment-Friendly Devices and Systems

The Energy & Industrial Systems Group manufactures a wide range of systems and products that play vital roles in power generation, transmission, power distribution, and power relaying. On the product side, this includes generators, transformers, switchgear, and vacuum circuit breakers, while systems include plant monitoring, grid stabilization, grid protection and control systems, and direct-current technologies. Through these products and systems, we comprehensively support the establishment and operation of electric-power infrastructures.

With the realization of a sustainable society as one of the primary global challenges, we are developing products that use less or no SF6 gas, which has high global-warming potential (GWP), as well as high-efficiency power generators, switchgear with less heat generation, and transformers with less heat loss. In addition to giving consideration to protecting the environment, we will continue to develop and produce high-performing devices and next-generation power systems capable of managing disasters, human threats and changes in the electric utility market. Our aim is to contribute to creating a “safe, secure and comfortable sustainable society.”

03 Building Systems Group

Main Products
- Elevators
- Escalators
- Building management systems
- Building security systems

Focusing on the SDGs

Providing Secure, Comfortable, and Efficient Solutions by Making the Most of the Mitsubishi Electric Group’s Advanced and Environmental Technologies

The Building Systems Group provides elevators, escalators, and building management systems. We always prioritize customer safety and security in the installation and maintenance of our products, and our mission is to achieve a comfortable, environment-friendly society. Accordingly, we are focused on the following environmental initiatives:

- Developing high-efficiency, resource-saving products, technologies and services
- Conserving energy and reducing waste emissions through the renewal of existing products
- Reducing energy used during the production and testing processes

Offering one-stop ZEB solutions

* ZEB (net Zero Energy Building): A building where the net consumption of fossil fuel energy is zero or roughly zero, offset by energy savings and the utilization of renewable energy resources.

04 Electronic Systems Group

Main Products
- Communications, broadcast, and observation satellite systems
- Ground control systems for satellite-operation
- Large telescopes
- Doppler LIDAR
- Contact image sensors
- Millimeter-wave radar modules
- Mobile mapping systems

Focusing on the SDGs

Working to Develop Products that Help Solve Various Problems Related to Global Environment Protection and Urban Development

The products of the Electronic Systems Group play a vital role in solving humankind’s shared environmental problems. This is achieved by further disseminating the use of renewable energies and contributing to the creation of cities that are more comfortable to live in.

For example, we were the primary contractor for manufacturing the “IBUKI” (IGOSAT-1) and “IBUKI-2” (IGOSAT-2), both of which are designed to observe the concentration and distribution of greenhouse gases. In addition to these two satellites, the DAICHI-2 Advanced Land Observing Satellite (ALOS-2) and geostationary meteorological satellites Himawari-8 and Himawari-9 contribute to safeguarding people’s lives and solving environmental problems by observing global warming and weather phenomena. Meanwhile, high expectations are attached to our Doppler LIDAR, which can remotely measure the moving speed of dust and particulates in the atmosphere. It is expected that this technology will contribute to the renewable energy domain through more efficient control of wind farms and extending the service life of wind turbines.

05 Communication Systems Group

Main Products
- Subscriber terminal equipment for optical access systems
- Gateway equipment
- Network camera systems

Focusing on the SDGs

Striving to Solve Social Issues, Including Reducing Environmental Impact through High Value-Added Systems

The Communication Systems Group manufactures communication infrastructure equipment that uses optical and wireless communication technologies and network camera systems that utilize imaging technologies such as video content analysis. These products are now key elements of the social infrastructure that is essential to our daily lives, the growth of industry, and solutions to various social issues. Bearing in mind the roles we play in society, we will further refine our optical and wireless communication and imaging technologies, while manufacturing high-value-added products that utilize artificial intelligence (AI) and other technologies. In doing so, we will contribute to solving social issues, including reducing negative environmental impact.

06 Living Environment & Digital Media Equipment Group

Main Products
- Room air conditioners
- Retail and office/building air conditioning
- LED lighting
- Solar power generation systems
- Heat pump hot water supply systems

Focusing on the SDGs

Providing Products that Are Helpful for Society and the Environment in Wide Areas through Creating Comfortable Living Spaces and Reducing Environmental Impact during Production

The Living Environment & Digital Media Equipment Group is pressing forward with the expansion of operations in the room and package air-conditioner segment, one of Mitsubishi Electric’s growth drivers. We are also creating new business and strengthening existing ones through synergies in technologies and business operations. We provide products and services helpful for the environment to customers over a wide-ranging area, including homes, offices, and factories. We also propose energy-saving solutions for systems as a whole, such as ZEH* and ZEB.

At our manufacturing sites, we are promoting energy conservation through the proactive introduction of energy-efficient products and improved productivity.

* ZEH (Zero Energy House): A house where the net consumption of fossil fuel is zero or roughly zero, being offset by the use of renewable energy resources or other means.
Our Action for Future
What We Can Do for the Future

07 Factory Automation Systems Group

Main Products
- Programmable controllers
- Human machine interface devices
- Supervisory control and data acquisition systems
- Industrial robot systems
- Engine control units
- Electric power steering
- Molded-case circuit breakers for DC circuits (up to 1000 VDC)

Delivering Devices, Equipment, and Solutions that Help Reduce Energy Usage in Our Customers’ Manufacturing Processes around the World

Mitsubishi Electric’s Factory Automation Systems Group provides devices and systems that possess high energy-saving capability. They are essential to adding value and enhancing the competitiveness of business through quality and productivity improvements for customers in the manufacturing industry.

In addition to providing factory automation (FA) products with high energy efficiency, we propose cutting-edge e-F@ctory solutions, which make use of the latest technologies that connect FA and IT, and contribute to keeping our customers one step ahead of the competition. By doing so, we strongly support manufacturing and management optimization, and contribute to reducing energy consumption in manufacturing processes.

Focusing on the SDGs

08 Automotive Equipment Group

Main Products
- Alternators
- Starter
- Electric power steering
- Engine control units
- Car navigation systems

Contributing to Solving Environmental Issues through the Development of Low Fuel Consumption and Electrification Technologies for Vehicles

The Automotive Equipment Group provides automotive electronic products and car multimedia devices globally. As a full-support supplier, we work together with our customers to develop cutting-edge technologies and endeavor to provide a wide range of services, from production, sales, and supply to spare parts and rebuilds. The Group is engaged in initiatives to reduce environmental impact both by installing its products in vehicles to achieve better fuel efficiency and electrification, and reducing energy consumption during manufacturing processes.

We are also working on technological innovations for automotive products that will lead to the practical use of autonomous driving in coming years, and contribute to the creation of environment-friendly, accident-free, comfortable urban spaces.

Focusing on the SDGs

09 Semiconductor & Device Group

Main Products
- Power semiconductor devices
- High-frequency devices
- Optical devices
- TFT-LCD modules

Contributing to the Realization of a Low-Carbon Society by Providing Energy-Efficient Products

In order to achieve sustainable societies, it is imperative to use generated power while minimizing power loss in the process. The Semiconductor & Device Group delivers key devices that support low-carbon societies to customers around the world.

Power semiconductor devices that are incorporated into many power electronics play a significant role in reducing power loss. In recent years, Mitsubishi Electric’s Semiconductor & Device Group has been manufacturing state-of-the-art products using silicon carbide (SiC), which can reduce power loss substantially. We also provide high-performance, high-efficiency, compact, high-frequency devices and optical devices that make full use of multiple semiconductor technologies, thereby supporting initiatives to reduce the amount of energy consumed by IT equipment. Our TFT color LCD modules provide a mercury-free, low-power consumption option owing to the LED backlight used in them.

Focusing on the SDGs

10 Information Systems & Network Service Group

Main Products
- Cloud services
- Security solutions
- ERP solutions
- Document management solutions
- RPA solutions

Focusing on the SDGs

Contributing to the Realization of a Low-Carbon Society Through the Promotion of Various IT Services

The Information Systems & Network Service Group is committed to enhancing customer satisfaction, helping achieve sustainable societies through solutions tailored to the management strategies and challenges of its customers, and developing solutions that contribute to solving social issues.

In recent years, we have been focusing on environmentally effective businesses, seeking to reduce environmental impact through the use of IT. In addition, efforts for saving energy in data centers also help companies to reduce CO2 emissions from their business activities.

Going forward, in order to achieve smarter societies, we are committed to constructing next-generation information systems using the latest IT solutions.

Focusing on the SDGs

SDGs

Sustainable development goals (SDGs) are targets to be achieved by 2030, as stipulated in "The 2030 Agenda for Sustainable Development" adopted at the United Nations Sustainable Development Summit in September 2015. SDGs are characterized by the agenda's initiative to change in how advanced countries, including Japan, should behave, as well as including the promise to ensure that "no one will be left behind" in the process.

SDGsInnovate and Transform Your Business

1. No Poverty
2. Zero Hunger
3. Good Health and Well-being
4. Quality Education
5. Gender Equality
6. Clean Water and Sanitation
7. Affordable and Clean Energy
8. Decent Work and Economic Growth
9. Industry, Innovation, and Infrastructure
10. Reduced Inequalities
11. Sustainable Cities and Communities
12. Responsible Consumption and Production
13. Life Below Water
14. Life on Land
15. Peace and Justice
16. Peace, Justice, and Strong Institutions
17. Partnerships for the Goals
For the Global Environment
Environmental Considerations for Value Chain Management

- Implementing Design for the Environment from the perspective shown below
  - Manufacturing process
  - Lifecycle assessments
  - Energy Conservation
  - Packaging
  - Product crushing
  - Service life
  - Logistics
  - Information disclosure
  - Weight reduction
  - Product safety
  - Resource reuse
  - Reusability
  - Recovery/Transport
  - Ease of dismantling/separation of materials

- Reducing Environmental Risk through Operation of the Green Accreditation System

- Promoting Emission Reduction of Four Greenhouse Gases (CO2, SF6, HFC, and PFC)

- Pursuing Reduction in Resource Inputs and Improvement in Waste Materials Final Disposal Rate

- Focusing on Reduction of Water Usage at All Business Sites in Japan and Overseas

- Recycling System
  - Recovering and Recycling Used Home Appliances at Specialized Recycling Plants
  - Promoting Self-contained Plastic Recycling System

- Reducing Use of Disposable Packaging Materials by Practicing the 3Rs: Reduce, Reuse and Recycle

- Promoting Strain-free, Waste-free, Seamless Product Transportation

- Reducing CO2 Emissions from Product Usage by Improving Product Energy Efficiency

- Providing Information and Solutions in Support of Customers’ Initiatives to Reduce Environmental Load

- Recovering and Recycling Used Home Appliances at Specialized Recycling Plants

We believe that reducing the electricity consumed by products when customers use them should lead to energy savings for society as a whole. Based on this perspective, we are committed to improving the energy efficiency of our products.

In fiscal 2019, we continued to improve the efficiency of our products, with a focus on power devices and air conditioners, as well as the sales of highly energy-efficient products. As a result, we improved our average CO2 reduction rate from the previous fiscal year, achieving 36% compared to the level in fiscal 2001.

**Contribution to Reducing CO2 from Product Usage**

- **Fiscal 2018**: 33% reduction
- **Fiscal 2019**: 36% reduction

We are also trying to expand the reduction of CO2 by visualizing the amount reduced as a result of replacing old products with their new counterparts that operate with higher energy efficiency. In fiscal 2019, contribution to reducing CO2 from product usage grew to 77 million tons.

**Contribution to Reducing CO2 from Product Usage**

In fiscal 2019, we continued to focus on reducing our final disposal ratio. Toward a target final disposal ratio of 0.5% or less, improvements were made by implementing initiatives to promote sorting, recycling, biomass processing of organic wastes, and using the methane gas extracted during the biomass process as fuel.

- The amount of waste was also reduced in Japan by making sure that hazardous wastes are appropriately disposed of according to laws and regulations while actively promoting recycling. The amount of waste overseas, however, increased.
- Contribution to reducing CO2 from production was controlled to an increase of 50,000 tons.
- The Mitsubishi Electric Group defines hazardous waste as follows: Mitsubishi Electric and affiliates in Japan, “Specially-controlled industrial wastes” specified by the Japanese Waste Disposal Law.
- Overseas affiliates: Hazardous wastes defined by local laws and regulations.

**Total Waste Output**

**Chemical Management and Reduced Disposal**

Chemical substances contained in our products are controlled using a chemical management system called MitaNet. This system incorporates materials and parts procurement information both in and outside of Japan. By December 2018, we finished conducting contents surveys and completed switching to replacement substances for all products for which six phthalate compounds will be newly restricted by the EU RoHS Directive in July 2019.

- Contribution to reducing CO2 from product usage per each year: 13 million tons.
- Contribution to reducing CO2 from product usage per each year: 269 million tons.
- Contribution to reducing CO2 from product usage per each year: 211 million tons.

**Volume of Chemicals Handled**

* Mitsubishi Electric and its affiliates in Japan: Chemical substances subject to the “PRTR Law” and “Chemical Substances Control Law”. Chemical substances of 18kg or more in handled volume that are controlled by Mitsubishi Electric.

**Reducing Resource Inputs**

- **Fiscal 2018**: 40% reduction
- **Fiscal 2019**: 45% reduction

In fiscal 2019, we carried out initiatives to save water in Japan and overseas, including reusing the water used during manufacturing processes, treating wastewater and using it for flushing toilets, and using rainwater.
