

for a greener tomorrow

A strategic partner.

“ Mitsubishi Electric share the same priorities as us; customer focus, flexibility and continuous innovation in products and services. ”

Raúl Romero, General Manager, Nexon Automation, Mexico.

Global Partner. Local Friend.

Let me tell you my story: Nexon Automation have been in the market for around 20 years. During that time we have designed, manufactured and implemented semi-automated and automated production systems and equipment for both national and international customers. Our customers are primarily from the automotive and auto parts sectors, as well as consumer and electronic goods segments. We have accumulated a great deal of experience in assembling processes, inspection and material handling. As a rule, the market not only demands asset performance but also that we provide reliable services that incorporate scalable and maintenance-friendly technology. In most cases, to find a single outright technology provider is not an easy task; however, we achieved that with Mitsubishi Electric. Working with them has been more than a great experience, indeed, strategic is the best way to describe it. When it comes to business we are of the same mind; customer focus, flexibility and continuous innovation in our products and services. Furthermore a willingness to always listen to our business and customer needs. All in all, a partnership with Mitsubishi Electric is one of a kind.
