

Poka Yoke has empowered our workers.

“ We use automation to avoid mistakes that previously occurred in the production process. Everyone must be able to work smoothly together. ”

Mrs. Miriam Berger, Production Planning, MARTINSHOF WERKSTATT BREMEN

Global Partner. Local Friend.

Let me tell you my story: Martinshof, a factory staffed by people with disabilities, uses automation to avoid mistakes that previously occurred in the production process. Poka Yoke, Mitsubishi Electric's guided operator solution, works like a filter. It is only possible to start the next step once the previous one has been completed. All processes are completed without interruption and with no chance for a mix-up. A further advantage is that we can use illustrations to provide instructions for staff members with learning disabilities. Workers can also double-check the next step and work efficiently according to plan.
