

Watching our energy savings grow.

“ By shifting the peak demand, we reduced our electricity bills by 15%. ”

Hideki Mawatari, Maintenance Manager of Aida Engineering Malaysia

Global Partner. Local Friend.

Let me tell you my story: Aida Engineering Co., Ltd. is a global leader in metal presses and forming equipment. At our Malaysian factory, reducing the huge power costs became a high priority. We needed a continual data acquisition solution to support our “peak shift” to lower rates, and Mitsubishi Electric had the answer. With EcoWebServer III, we can automatically collect, remotely monitor factory-wide power consumption data, and “see it” in real time with visualization in graphs. We not only reduced power costs by 15%, but also recovered our investment in under one year. Now we are more focused on product quality while watching our energy savings grow. Thank you Mitsubishi Electric.
