［Issue No.］ CMS-YE-0002
［Title］ Regarding Medium-Chain Chlorinated Paraffin (MCCP)
［Date of Issue］ May. 2026
［Relevant Models］ Reversible Magnetic Starters,
Reversible Magnetic Contactors,
Main Circuit Conductor Kits

We would like to inform you as follows regarding our response to the presence of Medium-Chain Chlorinated Paraffin (MCCP) in some models of the Magnetic Starters.

1. Relevant models

(1) MSO-2XT35, MSO-2XT50, MSOD-2XT35, MSOD-2XT50, MSOL-2XT35, MSOL-2XT50
MSOLD-2XT35, MSOLD-2XT50 (Reversible Magnetic Starters)
(2) S-2XT35**, S-2XT50**, SD-2XT35**, SD-2XT50** (Reversible Magnetic Contactors)
(Models with main circuit conductors, with "SD" or "SG" or "SF" or "SX" added.)
(3) UN-SD25CX, UN-SG25CX (Main Circuit Conductor Kits)
Note: (1)(2) Including special specification products to which "BC" etc. are added.

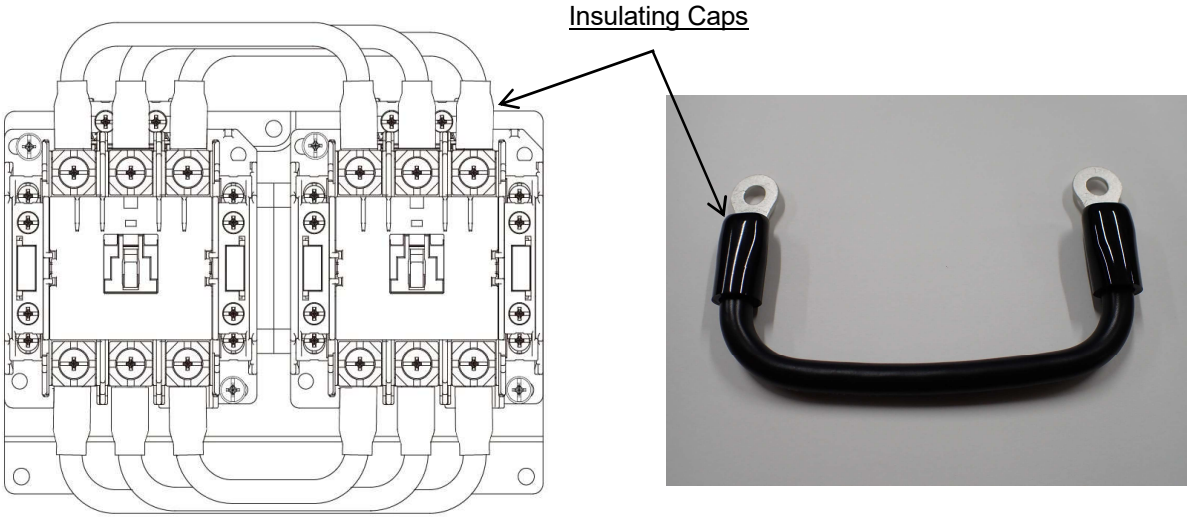

2. Response to the presence of Medium-Chain Chlorinated Paraffin (MCCP)

The insulating caps used on the main circuit conductors (shown below) contain MCCP, and we will change to products that do not contain MCCP.

The MCCP contained in these insulating caps has a chlorine content of less than 45% and is therefore not subject to regulation under the Stockholm Convention on POPs; however, according to the policy of the insulating cap manufacturer, we will change to non-MCCP-containing products.

There are no differences in appearance or product performance due to the material change.

Note: The regulated MCCPs are those with a carbon chain length of 14 to 17 and a chlorine content of 45% or more by weight.

(a) ex.) Reversible Magnetic Contactors S-2XT35SD

(b) Main Circuit Conductor

3. Future Actions

We plan to switch to non-MCCP-containing products starting from the August 2026 production. However, depending on our inventory and market stock status, MCCP-containing products manufactured prior to the changeover may continue to be shipped even after the changeover timing.
