

Smart robot enables the visualization of soldering

» Features

Connectivity

All data of soldering-related can be traced and communicate with MES network

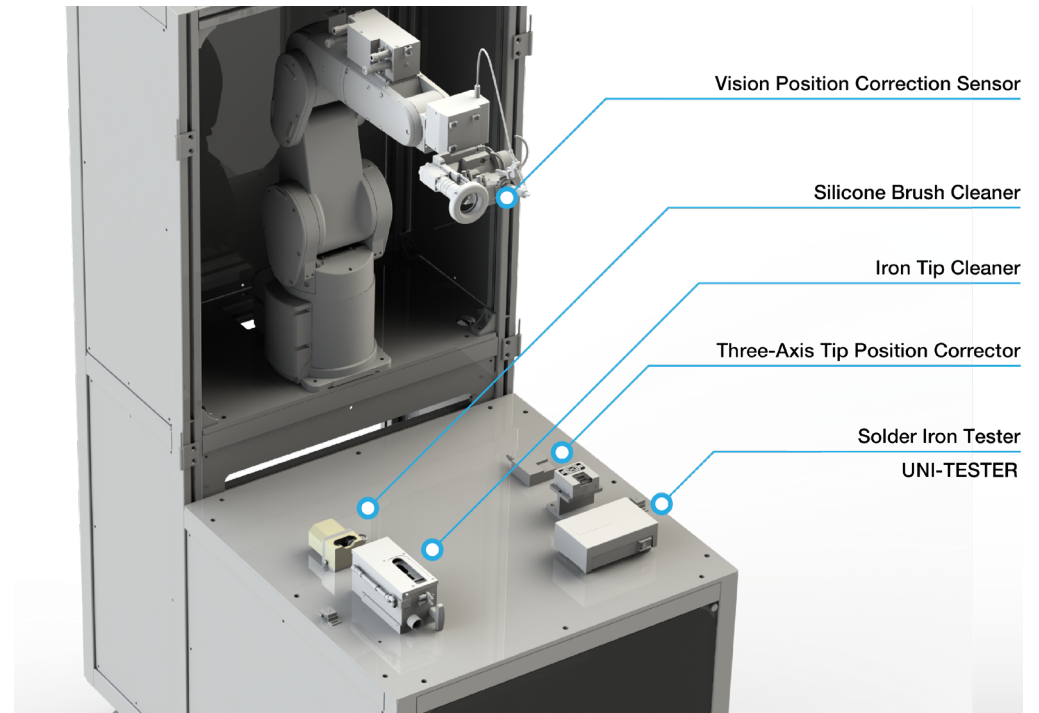

Userbility

A new integrated Robot Teaching System for soldering can be use at any level of skill

Small quantity, Large variety

Flexible motion for soldering enables more freely applications layout and space saving

Soldering Manager

» Features

New standard for soldering process control

A new PC software is connected to soldering machine to achieve highly reliable quality control and traceability control.

It can monitor not only soldering video recording, but also can trace all of soldering manufacturing data; an error history, a maintenance history, temperature and soldering feeding amount.
