M800V/M80V Series

M800V / M80V Series

Latest series for optimization to make "manufacturing" smarter

♦ Features

Outline diagram

Hardware performance improvements

Significantly improved micro line segment processing* contributes to further cycle time reduction. *Twice as fast as M800/M80 Series

Evolution of control units and display units

Industry's first control unit with built-in wireless LAN enables operation without being limited by time or space. New screen design improves visibility.

Expansion and evolution of control functions

Motion control release enables control of special mechanisms such as parallel links, etc.

M800VW Series

Separate control unit and display unit type Premium model with expandability and flexibility

♦ Features

Outline diagram

Equipped with latest PC unit compatible with Windows 10.

Can be equipped with complex applications such as 3D machining simulation, etc.

Addition of LAN connector for further expandability

Strengthened connection support with various peripheral networks

Lineup includes 19-inch vertical display unit.

Provides both stylish appearance and excellent operability.

M800VS Series

Integrated control and display unit type High-grade model ideal for high-speed, high-accuracy processing and multi-axis multi-part system control

♦ Features

Outline diagram

Lineup includes large 19-inch display unit.

Contributes to improved visibility and customization flexibility. Enables a wide variety of different types of information, such as camera images and sensor input information, to be displayed on a single screen.

Multi-CPU provides high-performance control and high-performance rendering.

Equipped with the latest control functions for high-accuracy and multi-axis multi-line control.

M800VS Series

M800V Series

Display-integrated type control unit Standard model providing high productivity and ease of use.

♦ Features

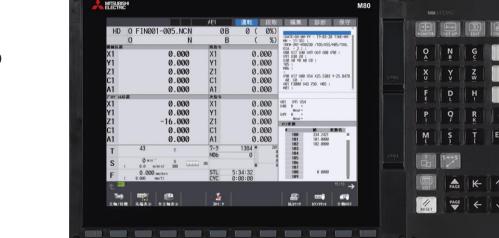

Outline diagram

Broad range of display units from 8.4-inch to 19-inch

Supports all kinds of machine needs from small-sized to large-sized, such as machining centers and lathes.

2 types of function packages (Type A, Type B)

Eliminating the need to add options makes model selection easy. Adopts package types pursuing ease of use.

M80V Series

M800VW Series

Separated-type control unit from a display Separated-type standard model with expandability and flexibility

♦ Features

Outline diagram

Combines standard model M80V control functions* with further expandability.

Equipped with latest PC unit compatible with Windows 10. 2 expansion slots provided as standard.

*Control functions correspond to those of M80V Type A.

Lineup includes 19-inch vertical/horizontal display unit.

Provides both stylish appearance and excellent operability.

M80VW Series

C80 Series

C80 Series

Innovative next-generation CNC that opens up a new era of manufacturing lines.

♦ Features

Outline diagram

Enables flexible system construction.

Supports iQ Platform. Enables flexible system construction utilizing a wide variety of PLC modules according to the customer's production scale and application.

Improved basic performance and communication speed.

Ultra-high-speed processing of iQ-R PLC and highspeed processing of C80 with the latest dedicated CPU contributes to reduced takt time.

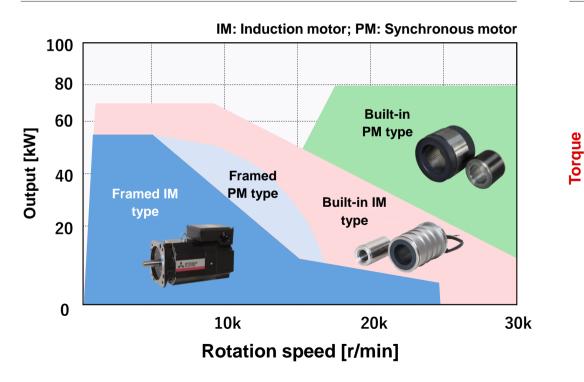

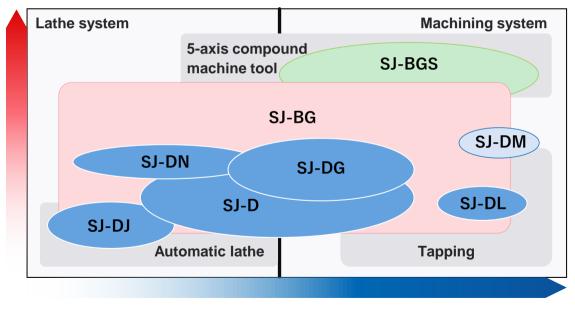

Spindle motor lineup

We offer a lineup of 8 series of spindle motors according to machine application.

Specification positioning of each series

Each series and their machine applications (image)

Acceleration/deceleration

Spindle motors

SJ-D Series

Frame-Type Spindle Motor SJ-D Series

Realizes higher performance through application of the latest design technology.

♦ Features

Outline diagram

Saves energy by reducing motor losses.

Optimization of magnetic circuit reduces motor-generated losses by approx. 25% compared to previous models.

Improved machining accuracy due to low vibration and suppression of thermal displacement.

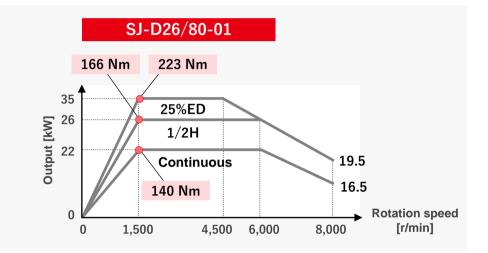

Offers lighter weight and higher rigidity to achieve low vibrations. (Vibration level: V3)

Reduced motor-generated losses and optimized cooling structure suppress motor temperature rise.

Contributes to suppressing parts deterioration and increases machine life.

Optimization of the cooling structure suppress motor temperature rise.

(Reduces temperature rise of frame surface by approx. 30% compared to previous models.)

SJ-DL Series

Frame-Type Spindle Motor SJ-DL Series

Realizes improved productivity through reduced acceleration/deceleration time.

♦ Features

♦ Outline diagram

Improved machining accuracy due to reduced vibrations.

Application of the latest design technology offers both lighter weight and higher rigidity to achieve low vibrations. (Vibration level: V3)

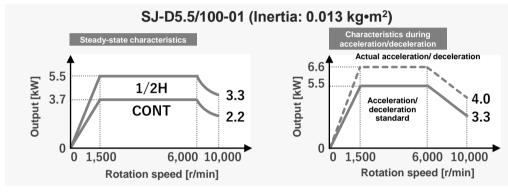

Improved surface quality due to higher speed and higher output.

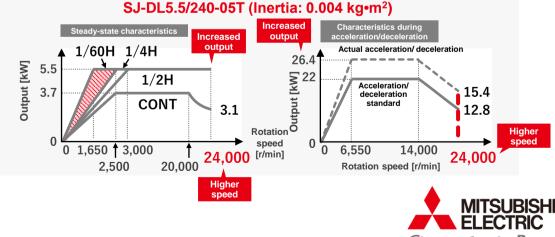

3.7/5.5 kW: 15,000 r/min ⇒ 20,000 r/min or 24,000 r/min 5.5/7.5 kW: 12,000 r/min ⇒ 15,000 r/min

*Comparison with previous models

Improved productivity through reduced acceleration/deceleration time.

Adopts low-inertia rotor and provides increased output during acceleration/deceleration.

Changes for the Better

SJ-DJ Series

Frame-Type Spindle Motor SJ-DJ Series

Achieves small size and light weight by specializing in low-speed characteristics.

♦ Features

Outline diagram

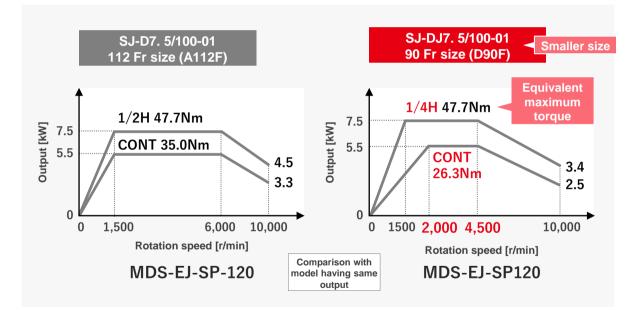

Contributes to reducing machine size and system costs.

Optimization of electrical design realizes smaller motor size (compared to SJ-D Series model with same output)

Easy machine mounting and improved maintenance characteristics

Lineup includes leg-equipped types as well as flange types. Improved maintenance characteristics for belt drives

SJ-DG Series

Frame-Type Spindle Motor SJ-DG Series

Supports a broad range of machining through high output, high torque, and increased maximum rotation speed.

♦ Features

♦ Outline diagram

Characteristics to support machining from roughing to finishing.

Realizes higher output and higher torque compared to SJ-D Series.

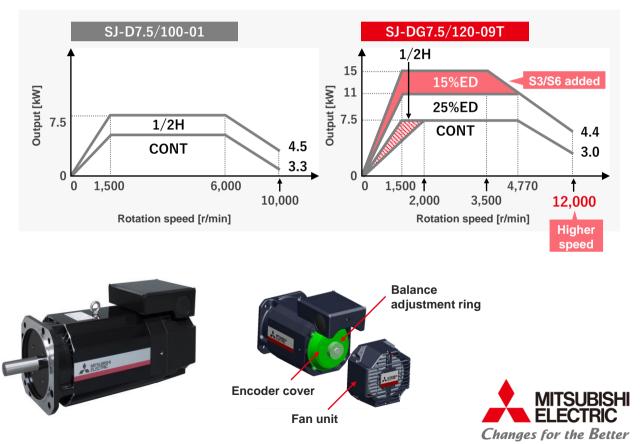

The lineup also includes coil switching models which achieve high output in a wide range of rotation speeds.

Improved finishing processing surface quality due to higher speed.

SJ-DG3.7/5.5: 10,000 r/min ⇒ 12,000 r/min SJ-DG7.5/11: 12,000 r/min ⇒ 15,000 r/min SJ-DG15: 8,000 r/min ⇒ 12,000 r/min *Compared to SJ-D Series

Makes balance adjustment work easier to reduce work time.

Add balance adjustment ring to anti-load side

SJ-DM Series

Frame-Type Spindle Motor SJ-DM Series

Achieves reduced cycle time by utilizing magnets for higher output and higher torque.

♦ Features

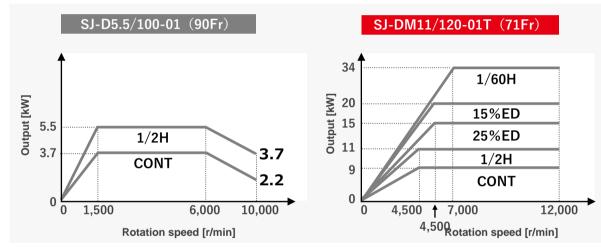

♦ Outline diagram

Improved productivity through reduced acceleration/deceleration time.

Achieves 1.6 times the acceleration/deceleration torque compared to induction motors of the same class.

Contributes to reducing machine size and system costs.

While maintaining the same torque characteristics, the frame size can be reduced by 1 rank compared to induction motors.

Saves energy.

Achieves higher efficiency through optimum electromagnetic design and utilization of magnets.

Built-in Spindle Motor SJ-BG Series

Supports improved flexibility in machine design.

Features

♦ Outline diagram

Standard (Varnished)

Mold with cooling jacket

High-speed series rotor

SJ-BG Series

Abundant lineup

General series 50 to 180 Fr (9 frame numbers)

High-speed series 100/112/160 Fr

Larger rotor inner diameter dimension contributes to increased shaft rigidity.

Contributes to smaller spindle unit size.

20% higher continuous rated torque per unit volume than previous models.

Full range of optional specifications

Lineup includes molded structure without cooling jacket in addition to molded structure with cooling jacket.

Mold without cooling jacket

Built-in Spindle Motor SJ-BGS Series

Higher-speed heavy cutting and finishing processing achieves improved productivity

♦ Features

Outline diagram

Higher output achieves heavy cutting.

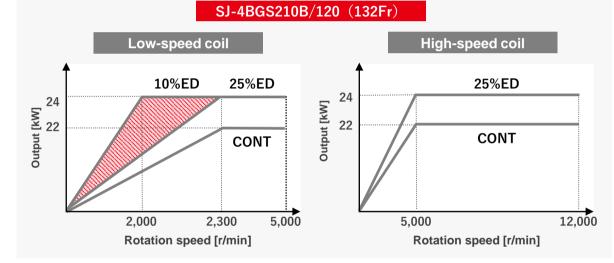

PM synchronized motor achieves support for the highoutput region that was difficult for the previous BG Series to support.

Improved finishing processing surface quality due to higher speed.

Application of new structural design technology that supports higher speeds increases maximum rotation speed.

Saves energy.

Higher efficiency through optimum electromagnetic design and utilization of magnets.

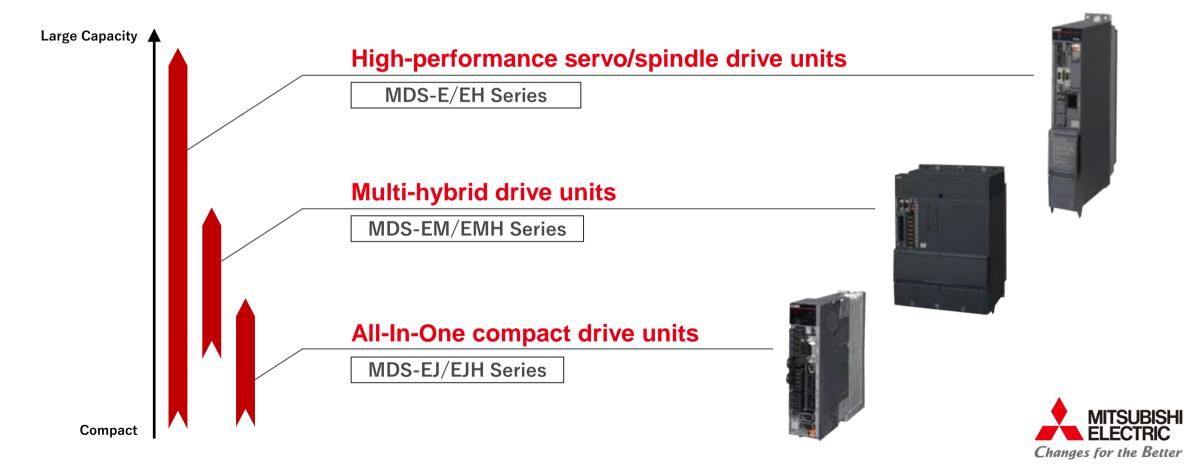

SJ-BGS Series

Drive unit

Drive unit lineup

Lineup of high-performance drive units equipped with comprehensive safety functions and diagnosis functions.

MDS-E/EH/EM/EMH Series

Functions/Performance: Product lineup

♦ Features

High-Performance Drive Units MDS-E/EH Series

- Separate power supply and drive unit type lineup with various capacities
- Employs misconnection-prevention type motor power connector
- Equipped with insulation deterioration detection function

Multi-Hybrid Drive Units MDS-EM/EMH Series

- Can perform drive control of up to 3 servo axes and 1 spindle.
- Shared busbar with MDS-E/EH Series
- Supports making machines more compact.
- Employs misconnection-prevention type motor power connector
- Equipped with our latest power modules to achieve higher output (MDS-EM-SPV3-320120)

MDS-E/EH Series

MDS-EM/EMH Series

♦ Outline diagram

MDS-EJ/EJH MDS-EX-CV/CVH Series

Functions/Performance: Product lineup

♦ Features

Outline diagram

MDS-EX-CV/CVH Series

All-In-One Compact Drive Units MDS-EJ/EJH Series

- Ultra-compact drive unit with integrated power supply
- Helps to reduce control panel size.

Power Supply Units MDS-EX-CV/CVH Series

- · Helps to reduce control panel size.
- · Improved unit maintenance/service characteristics.
- New regeneration system improves regeneration capacity.

MDS-EJ/EJH Series

Servo Motors HG/HG-H Series

Medium-inertia, high-accuracy, high-speed motors

♦ Features

Outline diagram

 Low-profile horizontally mounted connector types are added to 90 motor lineup.

Function safety support

Duplicated information redundancy inside detectors

Smooth high speed/high-torque

Detector resolution is 4 times higher for smooth machining.

HG/HG-H Series

HG-JR Series

Tool Spindle Motors HG-JR Series

Compact high-speed tool spindle motors

♦ Features

Outline diagram

- While fully utilizing the high-output compact-size characteristics of servo motors, they support high-speed rotation (8,000 r/min).
- New low-profile horizontally mounted connector types are added to lineup.

In addition to previous vertically mounted connector type, horizontally mounted connector type can be selected.

Function safety support

Duplicated information redundancy inside detectors

Horizontally mounted connector

Vertically mounted connector
