

Where Productivity Meets Protection with e-Factory

Using the MELSEC iQ-R series, aging electrical equipment and wiring in industrial plants can pose significant safety risks, particularly in environments using flammable liquids. Full replacement of outdated equipment may not always be practical due to cost and operational issues.

Enhancing safety through improved monitoring systems can be a long-term solution to manage risks associated with aging infrastructure. Implementing advanced insulation monitoring modules allows precise measurement of leakage currents in individual circuits, helping detect decreasing insulation. Swift identification and addressing of potential leakage points can significantly enhance plant safety. Targeted monitoring solutions, like those offered by the MELSEC iQ-R series, can lead to more efficient maintenance processes, reduce costs, and improve overall safety in industrial setting
