

Administering plant-wide visualization in the new normal

GENESIS64™ SCADA software offers real-time visualization with remote working capability

Let me tell you my story: Mitsubishi Electric's GENESIS64™ SCADA software is a visualization solution for the process, infrastructure and manufacturing industries. We deployed it at the Nagoya Works to administer energy infrastructure throughout the entire plant. GENESIS64™ systematically monitors the operating conditions and loads on equipment in real-time while enabling remote access and addressing the issues of working in the “new normal”. It led to significant cost savings and more flexible working practices.
