

## <Laser Diodes for Display>

# ML501P73

Lateral multi-mode φ5.6mm cap less PKG

#### **DESCRIPTION**

Mitsubishi ML501P73 is a high-power, highly efficient semiconductor laser diode which provides emission wavelength of 638 nm and standard light output of 1.0W (pulse) and 0.5W (CW).

This LD has broad-stripe structure which enables high output power.

#### **FEATURES**

• High Output Power: 1.0W (Pulse)

0.5W (CW)

• High Efficiency: 1.0mW/mA (typ.)

• Visible Light: 638nm (typ.)

φ5.6mm cap less PKG

#### **APPLICATION**

• Display system, Bio-medical

## **ABSOLUTE MAXIMUM RATINGS** (Note 1)

Symbol	Parameter	Conditions	Ratings	Unit
Po	Light output power	CW	0.5	W
		Pulse Duty≤33%, frequency≥50Hz	1.0	W
VRL	Reverse voltage	-	2	V
Tc	Case temperature	-	-5 ~ +40	°C
Tstg	Storage temperature	-	-40 ~ +100	°C

Note1: The maximum rating means the limitation over which the laser should not be operated even instant time. This does not mean the guarantee of its lifetime. As for the reliability, please refer to the reliability report issued by Quality Assurance Section, HF & Optical Semiconductor Division, Mitsubishi Electric Corporation.

## ELECTRICAL/OPTICAL CHARACTERISTICS (Tc=25°C)

Symbol	Parameter	Test conditions	Min.	Тур.	Max	Unit
lth	Threshold current	CW	90	170	210	mA
lop	Operating current	CW, Po=0.5W	500	650	800	mA
Vop	Operating voltage	CW, Po=0.5W	1.9	2.2	2.6	V
η	Slope efficiency	CW, Po=0.5W	0.8	1.0	1.4	mW/mA
λр	Peak wavelength	CW, Po=0.5W	632	638	644	nm
θ//	Beam divergence angle (parallel)	CW, Po=0.5W	1	7.5	15	0
θΤ	Beam divergence angle (perpendicular)	CW, Po=0.5W	25	35	45	0

## **OUTLINE DRAWINGS**

## Safety precaution for handling optical semiconductor devices

#### General:

Although manufacturer is always striving to improve the reliability of its products, problems and errors may occur with semiconductor devices. Hence, it is necessary that user's own products are designed with full regard to safety by incorporating redundancy, fire prevention, and error prevention, so any problems or errors with semiconductor device do not cause accidents, which might result in injury, death, fire, or environmental hazard. The following requirements must be strictly observed.

## Warning!

#### 1. Safety standard of laser devices

Please follow closely to international standard (e.g. IEC 60825-1) or standard of each country (ex. JIS C 6802 in Japan).

#### 2. Laser characteristics and its danger

When laser device is operated at over-driven condition, low temperature, pulsing mode, and so on, it could emit higher optical power than absolute maximum rating, and peak optical power might increase in conjunction with relaxation oscillation. Laser device could lase at different wavelength with different case temperature, or different output power. Laser devices are deviated on threshold current, operating current, operating voltage, slope efficiency, peak wavelength, beam divergence, and so on. Not only light output power, but also polarization or far field patterns might change as operating time goes by. If customers need more information of laser device, please contact Mitsubishi Electric.

Laser light from each device might seriously injure human eyes and skin. Customer should design and manufacture carefully their application products based on not only laser light characteristics but also LD characteristics, in order to avoid human injury. Mitsubishi Electric is not responsible for any accidents that are caused by customer's products.

If customers plan to release medical or aesthetic products with laser device, they should obtain their government's laser safety authorization.

#### 3. Avoid laser light from entering human eyes

In normal operation, semiconductor laser device emits laser light. Laser light entering eyes could cause extreme damage. Never look against laser beam direction, and never look directly through an optical system such as a lens. Use an ITV camera to observe laser light. Mitsubishi Electric recommends that customers should explicitly label their laser products with warning sign of eye injury.

#### 4. Handling of device

Gallium arsenide (GaAs) is used in laser device. To avoid danger, strictly observe the following cautions:

Never place the device in human mouth. Never burn or break the device. Never use any type of chemical treatment to reduce it to gas or powder. When disposing device, always follow any applicable laws, as well as customer's internal waste treatment regulations.

#### 5. Disposal of device

Laser device uses Gallium arsenide (GaAs). It should be disposed as a specially controlled industrial waste, and it should be separated from general industrial and household wastes, according to any "Law of Wastes and Cleaning".

#### Caution!

### 1. High temperature

During operation device may become hot, therefore do not directly touch it during operation. The device could remain hot even after power is turned off, so wait until it cools down prior to touching to avoid any burn. Never place any inflammable substance that may cause fire near the device.

# **Handling Cautions for Optoelectronic Devices**

#### 1. General

- (1-1) The products described in this specification are designed and manufactured for use in general communication systems or electronic devices, unless their applications or reliability are otherwise specified. Therefore, they are not designed or manufactured for installation in devices or systems that may affect human life or that are used in social infrastructure requiring high reliability.
- (1-2) When the customer is considering to use the products described in this specification in special applications, such as transportation systems (automobiles, trains, vessels), medical equipments, aerospace, nuclear power control, and submarine repeaters or systems, please contact Mitsubishi Electric or an authorized distributor.

#### 2. Storage Conditions

When storing the products, it is recommended to store them following the conditions described below without opening the packing. Not taking enough care in storing may result in defects in electrical characteristics, soldering quality, visual appearance, and so on. The main points are described below (if special storage conditions are given to the product in the specification sheet, they have priority over the following general cautions):

- (2-1) Appropriate temperature and humidity conditions, i.e., temperature range between  $5 \sim 35^{\circ}$  C, and humidity between  $45 \sim 75$  percent RH, should be maintained in storage locations. Controlling the temperature and humidity within this range is particularly important in case of long-term storage for six months or more.
- (2-2) The atmosphere should be particularly free from toxic gases and dust.
- (2-3) Do not apply any load on the product.
- (2-4) Do not cut or bend the leads of the devices which are to be stored. This is to prevent corrosion in the cut or bent part of the lead causing soldering problems in the customer's assembling process.
- (2-5) Sudden change in temperature may cause condensation in the product or packing, therefore, such locations should be avoided for storing. Temperature in storage locations should be stable.
- (2-6) Storage conditions for cap-less products shall be stated separately because these products require stricter controls than package sealed products.

#### 3. Design Conditions and Environment under Use

- (3-1) Operation in excess of the absolute maximum ratings can cause permanent damage to the device. The customers are requested to design not to exceed those ratings even for a short time.
- (3-2) Avoid use in locations where water or organic solvents adhere directly to the product, or where there is any possibility of the generation of corrosive gas, explosive gas, dust, salinity, or other troublesome conditions. Such environments will not only significantly lower the reliability, but also may lead to serious accidents.
- (3-3) Contamination to cap window or LD emitting point by volatile material, such as adhesive, may degrade reliability. When a customer use adhesive material, we recommend the customer to confirm possible effect before usage.
- (3-4) Quality assurance for cap-less products shall be stated separately because these products require more notice in your line and your products environment than package sealed products.

#### 4. Static Electric Safety Cautions

The optoelectronic devices are sensitive to static electricity (ESD, electro-static discharge). The product can be broken by ESD. When handling this product, please observe the following countermeasures:

<Countermeasures against Static Electricity and Surge>

To prevent break of devices by static electricity or surge, please adopt the following countermeasures in the assembly line:

- (4-1) Ground all equipments, machinery jigs, and tools in the process line with earth wires installed in them. Take particular care with hot plates, solder irons and other items for which the commercial power supplies are prone to leakage.
- (4-2) Workers should always use earth bands. Use of antistatic clothing, electric conductive shoes, and other safety equipment while at work is highly recommended.
- (4-3) Use conductive materials for this product's container, etc.
- (4-4) It is recommended that grounding mats be placed on the surfaces of assembly line workbench and the surrounding floor in work area, etc.
- (4-5) When mounting this product in parts or materials which can be electrically charged (printed wiring boards, plastic products, etc.), pay close attention to the static electricity in those parts. ESD may damage the product.
- (4-6) Humidity in working environment should be controlled to be 40 percent RH or higher.

These countermeasures are most general, and there is a need to carefully confirm the line using this product. It is extremely important to prevent surge, eliminate it rapidly, and prevent it from spreading.

# Keep safety first in your circuit designs!

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

# Notes regarding these materials

- •These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
- •Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
- •All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.

The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.

Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (http://www.MitsubishiElectric.com/).

- •When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
- •Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
- •The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
- •If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
- Any diversion or re-export contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- •Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
