<HVIC>

M81747FP

600V HIGH VOLTAGE HALF BRIDGE DRIVER

DESCRIPTION
M81747FP is high voltage Power MOSFET and IGBT gate driver for half bridge applications.
FEATURES
- Floating Supply Voltage ····· 600V
- Output Current ········ ···· +200mA/-350mA
- Half Bridge Driver
- SOP-8 Package

APPLICATIONS
MOSFET and IGBT module driver.

PIN CONFIGURATION (TOP VIEW)

Outline:SOP8

600V HIGH VOLTAGE HALF BRIDGE DRIVER

## ABSOLUTE MAXIMUM RATINGS (Ta = 25°C unless otherwise specified)

Symbol	Parameter	Test conditions	Ratings	Unit
V_B	High Side Floating Supply Absolute Voltage		$-0.5 \sim 624$	V
V_S	High Side Floating Supply Offset Voltage		$V_B - 24 \sim V_B + 0.5$	V
V_{BS}	High Side Floating Supply Voltage	$V_{BS} = V_B - V_S$	$-0.5 \sim 24$	V
V_{HO}	High Side Output Voltage		$V_S - 0.5 \sim V_B + 0.5$	V
V_{CC}	Low Side Fixed Supply Voltage		$-0.5 \sim 24$	V
V_{LO}	Low Side Output Voltage		$-0.5 \sim V_{CC} + 0.5$	V
V_{IN}	Logic Input Voltage	HIN,LIN Terminal	$-0.5 \sim V_{CC} + 0.5$	V
Pd	Package Power Dissipation	Ta = 25°C ,On Board	0.6	W
$K\theta$	Linear Derating Factor	Ta > 25°C ,On Board	4.8	mW/°C
Rth(j-c)	Junction-Case Thermal Resistance		50	°C/W
Tj	Junction Temperature		$-40 \sim 150$	°C
Topr	Operation Temperature		$-40 \sim 125$	°C
Tstg	Storage Temperature	On Board	$-40 \sim 150$	°C
TL	Solder Reflow Condition	Pb-free	255:10s, max 260	°C

RECOMMENDED OPERATING CONDITIONS

Symbol	Parameter	Test conditions	Limits			Unit
			Min.	Typ.	Max.	
V_B	High Side Floating Supply Absolute Voltage		$V_S + 10$	—	$V_S + 20$	V
V_S	High Side Floating Supply Offset Voltage	$V_B > 10V$	-5	—	500	V
V_{BS}	High Side Floating Supply Voltage	$V_{BS} = V_B - V_S$	10	—	20	V
V_{HO}	High Side Output Voltage		V_S	—	V_B	V
V_{CC}	Low Side Fixed Supply Voltage		10	—	20	V
V_{LO}	Low Side Output Voltage		0	—	V_{CC}	V
V_{IN}	Logic Input Voltage	HIN,LIN Terminal	0	—	7	V

Note：For proper operation, the device should be used within the recommended conditions

THERMAL DERATING FACTOR CHARACTERISTIC (MAXIMUM RATING)

600V HIGH VOLTAGE HALF BRIDGE DRIVER

ELECTRICAL CHARACTERISTICS (Ta=25℃, VCC=VBS (=VB–VS)=15V, unless otherwise specified)

Symbol	Parameter	Test conditions	Min.	Typ.*1	Max.	Unit
I_{FS}	Floating Supply Leakage Current	$V_B = V_S = 600V$, 25°C	—	—	1.0	uA
I_{BS}	V_{BS} Standby Current	HIN = LIN = 0V	—	0.2	0.5	mA
I_{CC}	V_{CC} Standby Current	HIN = LIN = 0V	0.2	0.6	1.0	mA
V_{OH}	High Level Output Voltage	I_O = -20mA, HO,LO Terminal	13.6	14.2	—	V
V_{OL}	Low Level Output Voltage	I_O = 20mA, HO,LO Terminal	—	0.3	0.6	V
V_{IH}	High Level Input Threshold Voltage *2	HIN,LIN Terminal	2.7	—	—	V
V_{IL}	Low Level Input Threshold Voltage *3	HIN,LIN Terminal	—	—	0.8	V
I_{IH}	High Level Input Bias Current	V_{IN} = 5V, HIN,LIN Terminal	—	5	20	uA
I_{IL}	Low Level Input Bias Current	V_{IN} = 0V, HIN,LIN Terminal	—	—	2	uA
V_{BSuvr}	V_{BS} Supply UV Reset Voltage		8.0	8.9	9.8	V
V_{BSuvt}	V_{BS} Supply UV Trip Voltage		7.4	8.2	9.0	V
V_{BSuvh}	V_{BS} Supply UV Hysteresis Voltage		0.5	0.7	—	V
t_{VBSuv}	V_{BS} Supply UV Filter Time		—	7.5	—	us
V_{CCuvr}	V_{CC} Supply UV Reset Voltage		8.0	8.9	9.8	V
V_{CCuvt}	V_{CC} Supply UV Trip Voltage		7.4	8.2	9.0	V
V_{CCuvh}	V_{CC} Supply UV Hysteresis Voltage		0.5	0.7	—	V
t_{VCCuv}	V_{CC} Supply UV Filter Time		—	7.5	—	us
I_{OH}	Output High Level Short Circuit Pulsed Current	V_O = 0V, V_{IN} = 5V, PW < 10ms *4	120	200	—	mA
I_{OL}	Output Low Level Short Circuit Pulsed Current	V_O = 15V, V_{IN} = 0V, PW < 10ms *4	250	350	—	mA
R_{OH}	Output High Level On Resistance	I_O = -20mA, R_{OH} = (V_{CC} - V_{OH}) / I_O	—	40	70	Ω
R_{OL}	Output Low Level On Resistance	I_O = 20mA, R_{OL} = V_{OL} / I_O	—	15	30	Ω
t_{dLH}(HO)	High Side Turn-On Propagation Delay	CL = 1000pF between HO-V_S	—	450	650	ns
t_{dHL}(HO)	High Side Turn-Off Propagation Delay	CL = 1000pF between HO-V_S	—	450	650	ns
t_{rH}	High Side Turn-On Rise Time	CL = 1000pF between HO-V_S	—	130	220	ns
t_{fH}	High Side Turn-Off Fall Time	CL = 1000pF between HO-V_S	—	50	80	ns
t_{dLH}(LO)	Low Side Turn-On Propagation Delay	CL = 1000pF between LO-GND	—	450	650	ns
t_{dHL}(LO)	Low Side Turn-Off Propagation Delay	CL = 1000pF between LO-GND	—	450	650	ns
t_{rL}	Low Side Turn-On Rise Time	CL = 1000pF between LO-GND	—	130	220	ns
t_{fL}	Low Side Turn-Off Fall Time	CL = 1000pF between LO-GND	—	50	80	ns
⊿tdLH	Turn-On Propagation Delay Matching	|tdLH(HO) - tdLH(LO)|	—	0	30	ns
⊿tdHL	Turn-Off Propagation Delay Matching	|tdHL(HO) - tdHL(LO)|	—	0	30	ns
tinon	Turn-On Input Filter Time	Convex Pulse, HIN,LIN Terminal	150	250	350	ns
		Concave Pulse, HIN,LIN Terminal	250	350	450	ns
tinoff	Turn-Off Input Filter Time	Convex Pulse, HIN,LIN Terminal	150	250	350	ns
		Concave Pulse, HIN,LIN Terminal	250	350	450	ns
⊿PwIO	Differences at Pulse Width between Input and Output	Pw(OUT) - Pw(IN) ,Convex Pulse	-40	0	100	ns

*1 Typ. is not specified.
*2 Please set High level input voltage more than the minimum value of limits.
*3 Please set Low level input voltage less than the maximum value of limits.
*4 The short circuit pulse cannot be continuously.

INPUT/OUTPUT TIMING DIAGRAM

FUNCTION TABLE (X:H or L)

HIN	LIN	$V_{BS}UV$	$V_{CC}UV$	HO	LO	Behavioral state
H→L	L	H	H	L	L	HO = L, LO = L
H→L	H	H	H	L	H	LO = H
L→H	L	H	H	H	L	HO = H
L→H	H	H	H	L	L	HO = L, LO = L
X	L	L	H	L	L	HO = L when $V_{BS}UV$ is detected
H→L	H	L	H	L	H	LO = H when $V_{BS}UV$ is detected
L→H	H	L	H	L	L	HO = L, LO = L when $V_{BS}UV$ is detected
H→L	X	H	L	L	L	LO = L when $V_{CC}UV$ is detected
L→H	X	H	L	L	L	HO = L, LO = L when $V_{CC}UV$ is detected

Note1 : "L" state of VBS UV, VCC UV means that VCC (VBS) Supply become under UV trip voltage.

Note2 : In the case of both input signals (HIN and LIN) are "H", output signals (HO and LO) become "L".

Note3 : X(HIN): L→H or H→L.   X(LIN):H or L.

Note4 : Output Signal (HO) is triggered by the edge of input signal.
M81747FP

600V HIGH VOLTAGE HALF BRIDGE DRIVER

FUNCTION TIMING DIAGRAM

1. Input/Output Timing Diagram

High Active, in the case of both input signals (HIN, LIN) are "H", output signals (HO, LO) become "L".

2. V_{CC} (V_{BS}) Supply Under Voltage (UV) Lockout Timing Diagram

If VCC supply voltage drops below UV trip voltage (VCCuvt) for VCC supply UV filter time, LO output signal is shut down. And then, if VCC supply voltage rises over UV reset voltage, LO will return to the usual operation mode.
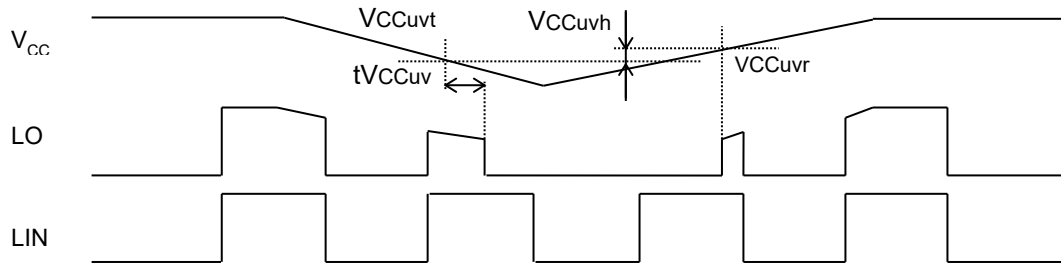

If VCC supply voltage drops below UV trip voltage (VCCuvt) for VCC supply UV filter time, HO output signal is shut down. And then, if VCC supply voltage rises over UV reset voltage, HO will return to the usual operation mode.

MITSUBISHI ELECTRIC CORPORATION
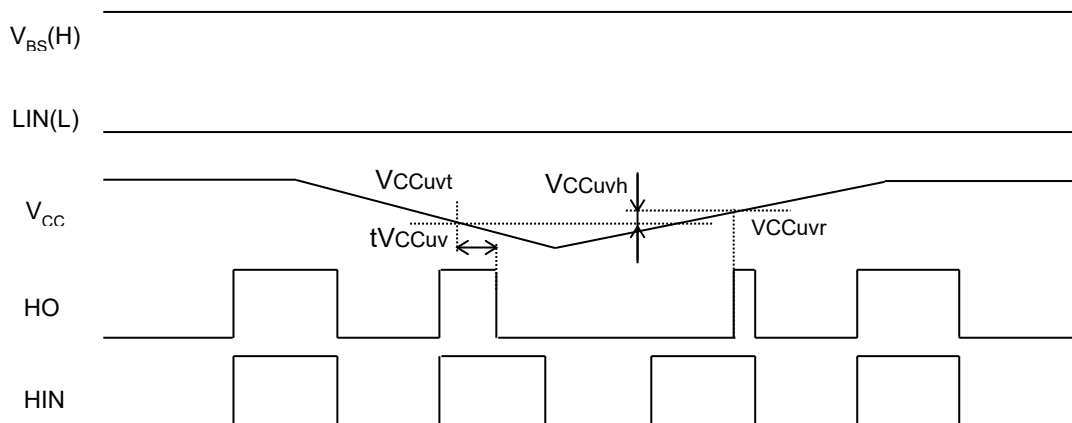

If VBS supply voltage drops below UV trip voltage (VBSuvt) for VBS supply UV filter time, HO output signal is shut down.
And then, if VBS supply voltage rises over UV reset voltage, HO will respond to the next active HIN signal(L→H).

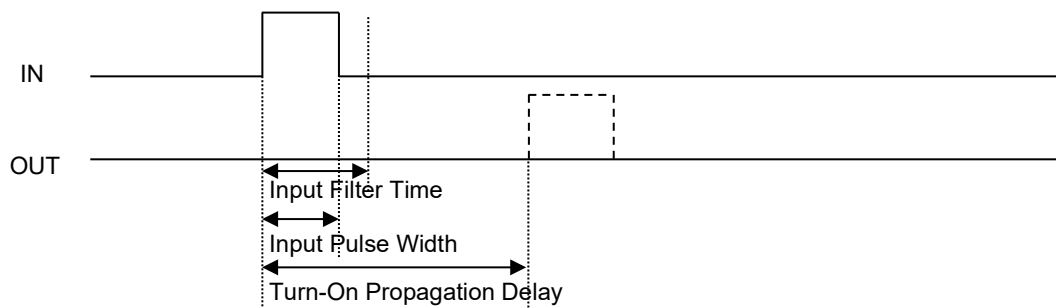

3. Input Filter Timing Diagram

If the pulse that is longer than Input Filter Time has been entered, it will output a signal corresponding to the input
after Turn-On Propagation Delay form rising edge or falling edge of the input signal.
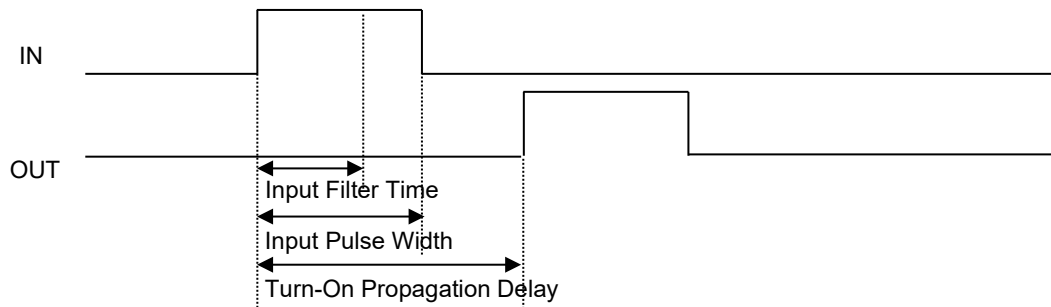

If the pulse that is shorter than Input Filter Time has been entered, output will hold the state by the input filter protection.

NOTES

1) Allowable supply voltage transient
   It is recommended to supply V_{CC} firstly and supply V_{BS} secondly. In the case of shutting off supply voltage, please shut off V_{BS} firstly and shut off V_{CC} secondly.
   When applying VCC and VBS, power supply should be applied slowly.
   If it rises rapidly, output signal (HO or LO) may be malfunction.

2) Supply voltage start up or restart after shut down
   If V_{CC} supply is less than 10V(outside of RECOMMENDED OPERATING CONDITIONS), there is some possibility that output does not change in response to input.
   Please evaluate carefully about supply start up or restart after shut down in your application systems.

3) V_B supply voltage
   Please use V_B supply voltage within RECOMMENDED OPERATING CONDITIONS (V_S +10V < V_B).
   If V_B supply voltage is used on the other conditions, output signal HO may be malfunction.
   Please evaluate carefully about V_B supply voltage in your application systems.

4) About the deadtime between HIN and LIN.
   Due to input filter circuit, the pulse width of output maybe longer than the pulse width of input. In that case, please assure that the deadtime between HIN and LIN is over 300ns, or HO and LO maybe on at the same time (shut-through).

5) Processing between IC terminals
   As for this product, the terminal of low voltage part and high voltage part are adjacent(The Fifth: LO, The Sixth: V_S).
   Therefore, if insulation space distance of those terminals cannot be enough, please coat between those terminals.

ENVIRONMENTAL CONSCIOUSNESS
   M81747FP is compliant with the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment (RoHS) directive 2011/65/EU+(EU)2015/863.

Main Revision for this Edition

Rev.	Date	Revision	
		Pages	Points
A	27 Feb. 2018	-	New
B	10 Apr. 2018	3	The test condition of parameter "Differences at Pulse Width between Input and Output" was corrected because of error.
C	4 Apr. 2019	1	"PRELIMINARY" was deleted. "This is not a final specification. Some parametric limits are subject to change." was deleted.
D	28 Apr. 2021	8 -	Add PACKAGE OUTLINE1,2 Update format.
E	10 Jan. 2023	8	Delete PACKAGE OUTLINE (Not recommended for new designs)

Important Notice

The information contained in this datasheet shall in no event be regarded as a guarantee of conditions or characteristics. This product has to be used within its specified maximum ratings, and is subject to customer's compliance with any applicable legal requirement, norms and standards.

Except as otherwise explicitly approved by Mitsubishi Electric Corporation in a written document signed by authorized representatives of Mitsubishi Electric Corporation, our products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury.

In usage of power semiconductor, there is always the possibility that trouble may occur with them by the reliability lifetime such as Thermal Cycle or others, or when having assembling stress (e.g. high temperature of reflow process, or rinse after the reflow), or when used under special operating conditions (e.g. rise/fall time of the power supply voltage, or excessive voltage/current injection), or when used under special circumstances (e.g. condensation, high humidity, dusty, salty, highlands, environment with lots of organic matter / corrosive gas / explosive gas, or situations which terminals of semiconductor products receive strong mechanical stress). Therefore, please pay sufficient attention to such circumstances. Further, depending on the technical requirements, our semiconductor products may contain environmental regulation substances, etc. If there is necessity of detailed confirmation, please contact our nearest sales branch or distributor.

The contents or data contained in this datasheet are exclusively intended for technically trained staff. Customer's technical departments should take responsibility to evaluate the suitability of Mitsubishi Electric Corporation product for the intended application and the completeness of the product data with respect to such application. In the customer's research and development, please evaluate it not only with a single semiconductor product but also in the entire system, and judge whether it's applicable. As required, pay close attention to the safety design by installing appropriate fuse or circuit breaker between a high voltage/large current power supply and power semiconductor products(e.g. IGBT, MOSFET)   to prevent secondary damage. Please also pay attention to the application note and the related technical information.

MITSUBISHI ELECTRIC CORPORATION

Keep safety first in your circuit designs!

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

- These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
- Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
- All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.
The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.
Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (http://www.MitsubishiElectric.com/).
- When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
- Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
- The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
- If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
Any diversion or re-export contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
