Mitsubishi Electric's recent initiatives to mitigate climate change include efforts to save energy at the company’s domestic and overseas manufacturing bases by installing high-efficiency equipment, incorporating internet of things (IoT) equipment, and upgrading operations at production facilities through human-resource development. Mitsubishi Electric is supporting the development of net Zero Energy Building (ZEB) by introducing environmentally minded air conditioners, ventilators, lighting fixtures, water heaters, elevators and escalators. The company also supplies photovoltaic-generation systems, electric-power distribution systems, Building Energy Management Systems (BEMSSs) and inverters for Electric Vehicles (EVs) and hybrid EVs to help reduce CO₂ emissions.
Mitsubishi Electric’s recent initiatives to preserve water resources include the effective management of water consumption and emissions at its domestic and overseas production bases, reduction of water consumption through water conservation and reuse, and the promotion of more efficient uses of water. Additional initiatives include the development of water-purification technologies utilizing ozone, etc. and the supply of water-purification systems for water-supply and sewerage systems, factories and public facilities.

Under the company’s Environmental Vision 2021 plan focused on realizing low-carbon societies, recycling-based societies and increased respect for biodiversity, Mitsubishi Electric is strengthening its environmental-management foundations and promoting environmental initiatives to become a “global, leading green company.” Mitsubishi Electric also has a long-term environmental vision for the achievement of Sustainable Development Goals (SDGs) over the next 10 to 30 years. Furthermore, the company contributes to enhanced prosperity by supporting the realization of sustainable societies and safe, reliable and comfortable lifestyles, including by minimizing the environmental impact of global production, related value chains and public infrastructure.

CDP is a not-for-profit organization working to enhance global disclosure. CDP distributes environmental questionnaires on topics such as climate change, water security, forests, supply chains and cities to companies and municipalities and then evaluates their responses to help investors make informed decisions.
